Master's in Dental Sciences Non-Thesis Track

A program made to match your potential.

The oral health issues society faces are great, and require collaboration among scientists, government organizations, and health industry partners. The Master's in Dental Sciences (Non-Thesis Track) is designed to empower students to make a difference.

Our graduate students do cross-disciplinary work, and are motivated by challenges in research. Small class sizes and a well-structured, stimulating curriculum help students achieve academic excellence. The MSc curriculum is constantly changing to adapt to trends in dental sciences and the challenges of the real world, all the while providing students with a solid foundation in health sciences. Students interact regularly with Faculty members who are leading researchers in their fields, in addition to industry and community partners to ensure their success.

At McGill, dental medicine goes beyond the dental chair.

The non-thesis MSc offers students a unique opportunity for gaining practical experience in applied research and professional development. For one semester, the Faculty of Dental Medicine and Oral Health Sciences provides students in the non-thesis track MSc program with experiential learning opportunities through a practicum (work placement) with various community, industry, or government partners.

Our rich network of partners allows students to complete a practicum in:

- >Community clinics
- >Urban and rural health practices
- >Health care delivery and organization
- >Indigenous health
- >Government partners
- >Maternal and child health
- >Public health research institutes
