Dialogue 5:30-7:00pm

Centre Mont-Royal, 2200 Rue Mansfield, Montréal, QC, H3A 3R8

The event is free, however seating is limited and **registration** is required

The introduction of new technologies has disrupted and transformed job markets for centuries, most notably during the industrial revolution. Today artificial intelligence, machine learning, and autonomous technology are changing most workplaces and shifting the ground beneath jobs that were once considered stable, with repercussions across all economic sectors. To provide insight into the world of deep learning, the Desautels Faculty of Management is delighted to welcome **Yann LeCun**, Director of AI at Facebook, for an Integrated Management Symposium. Professor LeCun will reflect with Prof. **Matissa Hollister** from the Organizational Behaviour Area at Desautels on the future of work and careers in the face of advancing technological capabilities.
