

Department of Family Medicine

Presents:

**Squaring of the curve: true or false? Will
our children in their old age be healthier
than we will be in our later years?**

With:

**Dr. Mark Clarfield, MD
Professor, Ben-Guiron University and Adjunct
Professor, McGill University**

This important question has huge implications for the planning of health care services both overall and specifically with respect to the elderly.

Friday December 7, 2012

From: 12:00-1:30 p.m.

Department of Family Medicine – 515 Pine Avenue West

BRING YOUR LUNCH! There will be light refreshments.

There is no parking on site and parking is limited in the area.

Taxis and public transport are advised.

Biosketch:

Dr. Clarfield was brought up and educated in Toronto, receiving his MD from the University of Toronto in 1975. He went on to specialise first in Family Medicine, then Community Medicine and Public Health and finally in Geriatrics. Together with his wife, Dr. Ora Paltiel, also a physician (haematology and clinical epidemiology), he moved to Montreal where he was with the Faculty of Medicine at McGill University from 1978 -1992.

During that period, Clarfield was Chief of Geriatrics at the Sir Mortimer B. Davis – Jewish General Hospital as well as head of the McGill University Division of Geriatric Medicine. As well, he was the Assistant Dean of Students at the Faculty from 1989-92 and reached the rank of Professor. He maintains an adjunct status at McGill University.

In 1992, he moved to Israel. From 1994-2001 he was Head of the Division of Geriatrics at the Ministry of Health in Jerusalem, after which he was appointed Head of Geriatrics at the Soroka Hospital, a 1,100 bed acute care institution and the Sidonie Hecht Professor at Ben-Gurion University in Beer-sheva where he now works. In 2009, he was appointed head of BGU's Medical School for International Health. He is the medical consultant to Eshel in Jerusalem.

Dr Clarfield's research interests include Alzheimer disease and the related dementias, the organization of health care services, medical history and ethics. In addition, he publishes medical humour, book reviews and miscellaneous pieces in various newspapers. A bit of a journalistic nudnik, he has published many letters to the editor in publications around the world.

Dr Clarfield is married with 3 children, none of whom seem to want to enter the field of medicine, despite the fact that he has insisted that they become geriatricians. He enjoys several hobbies, including performing folk music with his band, "The Unstrung Heroes".
