AJCC 8 and Controversies in the Assessment of Head and Neck Cancer Specimens

Martin Bullock, MD, FRCPC
Professor, Departments of Pathology and Surgery,
Dalhousie University, Halifax, NS
Pathologist, Division of Anatomical Pathology, Dept. of Pathology and Laboratory Medicine, Nova Scotia Health Authority, Halifax, NS

Martin Bullock practices Anatomical Pathology at the Queen Elizabeth II HSC in Halifax, Nova Scotia, specializing in Head and Neck Pathology. He is a Professor of Pathology and Surgery at Dalhousie University. Martin graduated from medical school at Memorial University of Newfoundland and trained in Anatomical Pathology at the University of Toronto and the University of Maryland. After several years practicing forensic pathology, he returned to surgical pathology practice at Dalhousie University in 1999. In his practice in Halifax he collaborates closely with the head and neck surgeons to develop ways to intraoperatively assess adequacy of excision for patients having laser surgery for oropharyngeal squamous cell carcinoma. This raises many questions relating to the handling and reporting of H&N cancer specimens, some of which he will address today.
