Subject: B.Sc.; Major in Software Engineering with IYES component.

We are writing to request that the B.Sc.; Major in Software Engineering Program be added to the lists in the Undergraduate Program Calendar that indicate IYES as an option. These lists presently appear in the 2005/06 calendar in the Engineering section on page 217, section 8.2.8 and the Science-Computer Science section on page 332.

By adding the internship component to the program, this will allow students to gain professional work experience during the course of their undergraduate studies. The Major in Software Engineering is a relatively new program and adding the IYES component at the time of its inception was inadvertently overlooked.

No additional credit will be added to the program. Successful completion of an 8 to 16-month internship will qualify the student to graduate with the Internship Program designation, which will be noted on the student’s permanent record.

We would appreciate it if the IYES component could be added to the 2006/07 University Calendar of Undergraduate Programs.

Sue Whitesides
