Participants needed for a research project!

Reaching, thinking, moving: virtual reality for upper limb rehabilitation

Have you had a stroke? Can you move your most affected arm with difficulty? or Are you in a good medical condition and can you move both arms without difficulty?

Individuals who have had a stroke and healthy individuals are needed to participate in a study comparing the way arm movements are made in a virtual environment and in the real-world. Your participation consists of 2 sessions of 2 hours each. Compensation will be offered for your participation.
