* Credit given for statistics courses is subject to certain restrictions, see Faculty Degree Requirements, [section 12.3.6.1 "Course Overlap"](#)

One (3 credits) from the following GIS/Remote Sensing courses:

- GEOG 306 (3) Raster Geo-Information Science
 GEOG 307 (3) Socioeconomic Applications of GIS
 GEOG 308 (3) Principles of Remote Sensing

Four courses (12 credits) from the following:

- GEOG 305 (3) Soils and Environment
 GEOG 321 (3) Climatic Environments
 GEOG 322 (3) Environmental Hydrology
 GEOG 350 (3) Ecological Biogeography
 GEOG 372 (3) Running Water Environments

One (3 credits) from the following field courses:

- GEOG 495 (3) Field Studies - Physical Geography
 GEOG 496 (3) Geographical Excursion
 GEOG 497 (3) Ecology of Coastal Waters
 GEOG 499 (3) Subarctic Field Studies

(Field course availability is determined each year in February.)

Two additional courses (6 credits) from the list of approved Geography courses, including at least one at the 400 level or above.

B.Sc. MAJOR IN GEOGRAPHY (58 credits)

The Major is designed to provide a coverage of the main elements of physical geography.

Required Courses (22 credits)

- GEOG 201 (3) Introductory Geo-Information Science
 GEOG 203 (3) Environmental Systems
 GEOG 216 (3) Geography of the World Economy
 GEOG 217 (3) The Canadian City
 GEOG 272 (3) Earth's Changing Surface
 GEOG 302 (3) Environmental Management 1
 GEOG 351 (3) Quantitative Methods
 GEOG 290 (1) Local Geographical Excursion
 (In 2008 reserve October 3 - 5)

Complementary Courses (36 credits)

3 credits of statistics*

- BIOL 373 (3) Biometry
 GEOG 202 (3) Statistics and Spatial Analysis
 MATH 203 (3) Principles of Statistics 1
 PSYC 204 (3) Introduction to Psychological Statistics
 SOCI 350 (3) Statistics in Social Research

* Credit given for statistics courses is subject to certain restrictions, see Faculty Degree Requirements, [section 12.3.6.1 "Course Overlap"](#)

3 credits of GIS techniques:

- GEOG 306 (3) Raster Geo-Information Science
 GEOG 308 (3) Principles of Remote Sensing

12 credits of systematic physical geography:

- GEOG 305 (3) Soils and Environment
 GEOG 321 (3) Climatic Environments
 GEOG 322 (3) Environmental Hydrology
 GEOG 350 (3) Ecological Biogeography
 GEOG 372 (3) Running Water Environments

3 credits of field courses:

- GEOG 495 (3) Field Studies - Physical Geography
 GEOG 496 (3) Geographical Excursion
 GEOG 497 (3) Ecology of Coastal Waters
 GEOG 499 (3) Subarctic Field Studies

(Field course availability is determined each year in February.)

15 credits from approved courses in Geography, or elsewhere in the Faculty of Science, or in the Faculty of Engineering; at least 9 credits of which are to be taken outside Geography. Students may also include any courses that are not already counted towards the GIS techniques or the systematic physical geography requirements. Admission to 500-level courses in Geography requires the instructor's permission. It is not advisable to take more than one 500-level course in a term.

Advising Note: See the Geography Website for the list of approved courses in the Faculty of Science. Some courses require the permission of the department and from the Associate Dean of Science, Student Affairs.

Geography Approved Course List – Major, Honours and Liberal Programs

- GEOG 404 (3) Environmental Management 2
 GEOG 501 (3) Modelling Environmental Systems
 GEOG 505 (3) Global Biogeochemistry
 GEOG 506 (3) Advanced Geographic Information Science
 GEOG 522 (3) Advanced Environmental Hydrology
 GEOG 523 (3) Advanced Climatology
 GEOG 535 (3) Remote Sensing and Interpretation
 GEOG 536 (3) Geocryology
 GEOG 537 (3) Advanced Fluvial Geomorphology
 GEOG 550 (3) Historical Ecology Techniques
 GEOG 555 (3) Ecological Restoration

B.Sc. HONOURS IN GEOGRAPHY (66 credits)

The Honours program is designed to provide specialized systematic training in physical geography. In addition to the Faculty requirement that Honours students maintain a minimum CGPA of at least 3.00, students who enter a Geography Honours Program on or after September 2006 must have a program GPA of 3.3.

Honours students are encouraged to participate in 500-level seminars with graduate students, but it is not advisable to take more than one in a term.

Required Courses (24 credits)

- GEOG 201 (3) Introductory Geo-Information Science
 GEOG 203 (3) Environmental Systems
 GEOG 272 (3) Earth's Changing Surface
 GEOG 302 (3) Environmental Management 1
 GEOG 351 (3) Quantitative Methods
 GEOG 381 (3) Geographic Thought and Practice
 GEOG 491D1 (3) Honours Research

GEOG 491D2 (3) Honours Research

Complementary Courses (42 credits)

6 credits of introductory courses, two of:

GEOG 210 (3) Global Places and Peoples
 GEOG 216 (3) Geography of the World Economy
 GEOG 217 (3) The Canadian City

3 credits of statistics*, one of:

BIOL 373 (3) Biometry
 GEOG 202 (3) Statistics and Spatial Analysis
 MATH 203 (3) Principles of Statistics 1
 PSYC 204 (3) Introduction to Psychological Statistics
 SOCI 350 (3) Statistics in Social Research

* Credit given for statistics courses is subject to certain restrictions, see Faculty Degree Requirements, [section 12.3.6.1 "Course Overlap"](#)

3 credits of GIS techniques:

GEOG 306 (3) Raster Geo-Information Science
 GEOG 308 (3) Principles of Remote Sensing

12 credits of systematic physical geography:

GEOG 305 (3) Soils and Environment
 GEOG 321 (3) Climatic Environments
 GEOG 322 (3) Environmental Hydrology
 GEOG 350 (3) Ecological Biogeography
 GEOG 372 (3) Running Water Environments

3 credits of field courses:

GEOG 495 (3) Field Studies - Physical Geography
 GEOG 496 (3) Geographical Excursion
 GEOG 497 (3) Ecology of Coastal Waters
 GEOG 499 (3) Subarctic Field Studies

15 credits from approved courses in Geography, or elsewhere in the Faculty of Science or the Faculty of Engineering; at least 9 credits of which are to be taken outside Geography. Students may also include any courses that are not already counted towards the GIS techniques or the systematic physical geography requirements. Admission to 500-level courses in Geography requires the instructor's permission. It is not advisable to take more than one in a term.

Advising Note: See the Geography Website for the list of approved courses in the Faculty of Science. Some courses require the permission of the department and from the Associate Dean of Science, Student Affairs.

AFRICAN FIELD STUDY SEMESTER

The Department of Geography, Faculty of Science, coordinates the 15-credit interdisciplinary African Field Study Semester, [see section 15.2.4 "Field Study Minor"](#).

PANAMA FIELD STUDY SEMESTER

The program is a joint venture between McGill University and the Smithsonian Tropical Research Institute (STRI) in Panama. For more information, see [see section 15.2.3 "Panama Field Study Semester"](#).

Geography courses of most interest to Science students:

GEOG 199 (3) FYS: Geo-Environments
 GEOG 201 (3) Introductory Geo-Information Science
 GEOG 203 (3) Environmental Systems
 GEOG 205 (3) Global Change: Past, Present and Future
 GEOG 221 (3) Environment and Health
 GEOG 272 (3) Earth's Changing Surface
 GEOG 302 (3) Environmental Management 1
 GEOG 305 (3) Soils and Environment
 GEOG 306 (3) Raster Geo-Information Science
 GEOG 308 (3) Principles of Remote Sensing
 GEOG 321 (3) Climatic Environments
 GEOG 322 (3) Environmental Hydrology
 GEOG 351 (3) Quantitative Methods
 GEOG 370 (3) Protected Areas

GEOG 372 (3) Running Water Environments
 GEOG 396 (3) Undergraduate Research Project
 GEOG 404 (3) Environmental Management 2
 GEOG 470 (3) Wetlands
 GEOG 490 (3) Geography: Independent Studies
 GEOG 495 (3) Field Studies - Physical Geography
 GEOG 496 (3) Geographical Excursion
 GEOG 497 (3) Ecology of Coastal Waters
 GEOG 499 (3) Subarctic Field Studies
 GEOG 501 (3) Modelling Environmental Systems
 GEOG 505 (3) Global Biogeochemistry
 GEOG 506 (3) Advanced Geographic Information Science
 GEOG 522 (3) Advanced Environmental Hydrology
 GEOG 523 (3) Advanced Climatology
 GEOG 535 (3) Remote Sensing and Interpretation
 GEOG 536 (3) Geocryology
 GEOG 537 (3) Advanced Fluvial Geomorphology
 GEOG 550 (3) Historical Ecology Techniques
 GEOG 555 (3) Ecological Restoration

EARTH SYSTEM SCIENCE INTERDEPARTMENTAL MAJOR, see section 12.13.11 "Earth System Science Interdepartmental Major (ESYS)".

This program is offered by the Departments of Atmospheric & Oceanic Sciences, Earth & Planetary Sciences and Geography.

Students in the Department of Geography interested in this program should contact:

– Professor Bernhard Lehner (bernhard.lehner@mcgill.ca)

12.13.17 Immunology Interdepartmental Honours

Students must obtain a U1 GPA or a U2 CGPA of 3.30 for admission to this enrolment-limited program. U1 students should inform one of the program coordinators listed below of their intent to enter the Honours Immunology Program during their U1 Winter term and confirm their intention in writing by April 1. U2 or U3 students can apply for admission at any time.

For graduation in the Honours program, the student must complete a minimum of 90 credits, and achieve a CGPA of not less than 3.30. The immunology courses (BIOC 503, MIMM 314, MIMM 414, MIMM 509, PHGY 419D1/D2, PHGY 513, PHGY 531) must all be passed with a grade not less than B.

Students who do not maintain Honours standing must transfer their registration to a program in one of the three participating Departments.

Apply to Dr. C. Piccirillo, Microbiology and Immunology, ciro.piccirillo@mcgill.ca, (514) 398-2872 or Dr. Monroe Cohen, Physiology, monroe.cohen@mcgill.ca, (514) 398-4342.

INTERDEPARTMENTAL HONOURS IN IMMUNOLOGY

(75 credits)

Required Courses (48 credits)

U1 Required Courses (20 credits)

BIOL 200 (3) Molecular Biology
 BIOL 201 (3) Cell Biology and Metabolism
 or BIOC 212 (3) Molecular Mechanisms of Cell Function
 CHEM 203 (3) Survey of Physical Chemistry
 or CHEM 204 (3) Physical Chemistry/Biological Sciences 1
 CHEM 212 (4) Introductory Organic Chemistry 1
 CHEM 222 (4) Introductory Organic Chemistry 2
 PHGY 209 (3) Mammalian Physiology 1
 or MIMM 211 (3) Introductory Microbiology

U2 Required Courses (13 credits)

ANAT 261 (4) Introduction to Dynamic Histology
 BIOC 311 (3) Metabolic Biochemistry
 BIOC 312 (3) Biochemistry of Macromolecules
 MIMM 314 (3) Immunology

U3 Required Courses (15 credits)

MIMM 414 (3) Advanced Immunology

- PHGY 419D1 (4.5) Project and Seminar in Immunology
 PHGY 419D2 (4.5) Project and Seminar in Immunology
 PHGY 513 (3) Cellular Immunology

Complementary Courses (27 credits)

U1 Complementary Courses (6 credits)

3 credits selected from:

- BIOL 373 (3) Biometry
 MATH 203 (3) Principles of Statistics 1
 PSYC 204 (3) Introduction to Psychological Statistics

plus 3 credits selected from:

- ANAT 214 (3) Systematic Human Anatomy
 ANAT 262 (3) Introductory Molecular and Cell Biology
 BIOL 202 (3) Basic Genetics
 BIOL 205 (3) Biology of Organisms
 BIOL 304 (3) Evolution
 CHEM 257D1 (2) Introductory Analytical Chemistry
 and CHEM 257D2 (2) Introductory Analytical Chemistry
 COMP 202 (3) Introduction to Computing 1
 COMP 203 (3) Introduction to Computing 2
 MATH 204 (3) Principles of Statistics 2
 MIMM 211 (3) Introductory Microbiology
 MIMM 212 (2) Laboratory in Microbiology
 PHGY 209 (3) Mammalian Physiology 1
 PHGY 210 (3) Mammalian Physiology 2

U2 Complementary Courses (12 credits)

6 credits selected from:

- BIOC 300D1 (3) Laboratory in Biochemistry
 and BIOC 300D2 (3) Laboratory in Biochemistry
 or

- MIMM 386D1 (3) Laboratory in Microbiology and
 Immunology

- and MIMM 386D2 (3) Laboratory in Microbiology and
 Immunology

or

- PHGY 212 (1) Introductory Physiology Laboratory 1
 and PHGY 213 (1) Introductory Physiology Laboratory 2
 and BIOL 301 (4) Cell and Molecular Laboratory

plus 6 credits, selected from:

- ANAT 365 (3) Cellular Trafficking
 BIOL 300 (3) Molecular Biology of the Gene
 BIOL 314 (3) Molecular Biology of Oncogenes
 CHEM 302 (3) Introductory Organic Chemistry 3
 MATH 222 (3) Calculus 3
 MATH 315 (3) Ordinary Differential Equations
 or BIOL 309 (3) Mathematical Models in Biology
 MIMM 323 (3) Microbial Physiology
 MIMM 324 (3) Fundamental Virology
 PATH 300 (3) Human Disease
 PHAR 300 (3) Drug Action
 PHAR 301 (3) Drugs and Disease
 PHAR 303 (3) Principles of Toxicology
 PHGY 311 (3) Channels, Synapses & Hormones
 PHGY 312 (3) Respiratory, Renal, & Cardiovascular
 Physiology
 PHGY 313 (3) Blood, Gastrointestinal, & Immune
 Systems Physiology
 PHGY 314 (3) Integrative Neuroscience

U3 Complementary Courses (9 credits)

3 credits selected from:

- BIOC 503 (3) Immunochemistry
 MIMM 509 (3) Inflammatory Processes
 PHGY 531 (3) Topics in Applied Immunology

plus 6 credits selected from:

- BIOL 520 (3) Gene Activity in Development
 BIOC 404 (3) Biophysical Chemistry
 BIOC 450 (3) Protein Structure and Function
 BIOC 454 (3) Nucleic Acids
 BIOC 458 (3) Membranes and Cellular Signaling

- or ANAT 458 (3) Membranes and Cellular Signaling
 BIOC 503 (3) Immunochemistry
 MIMM 413 (3) Parasitology
 MIMM 465 (3) Bacterial Pathogenesis
 MIMM 466 (3) Viral Pathogenesis
 MIMM 509 (3) Inflammatory Processes
 PHAR 503 (3) Drug Design and Development 1
 PHAR 504 (3) Drug Design and Development 2
 PHGY 531 (3) Topics in Applied Immunology
 PHGY 552 (3) Cellular and Molecular Physiology

12.13.18 Interdisciplinary Life Sciences

The Interdisciplinary Life Sciences minor will allow students from the earth, physical, math, and computational science areas to broaden their studies with some basic life sciences, health social science, and empirical technological science. The program comprises 24 credits and is very flexible. Students must take 9 credits from an extensive list of basic life science courses, 3 credits from an extensive list of health and social science courses, and 3 credits from an empirical and technological science list. The remaining 9 credits may be taken from any of the three categories.

This Minor is not open to students taking a Major, Honours, or Core Science Component in the following units: Anatomy and Cell Biology, Biochemistry, Microbiology and Immunology, Physiology.

This Minor may have restricted enrolment.

Applications and advising are available in the Science Student Affairs Office.

MINOR IN INTERDISCIPLINARY LIFE SCIENCES

(24 credits)

(Pending University Approval)

The 24 credits required for this program must satisfy the following criteria:

At least 18 credits must be new credits that are not used to satisfy any other program.

At least 18 credits must be outside the student's main discipline.

Depth requirement:

at least 6 credits must be at the 300-level or above.

Breadth requirement:

at least 9 credits must be taken from the Basic Life Sciences List,

at least 3 credits from the Health Social Sciences List,

at least 3 credits from the Empirical Science and Technology List.

The remaining 9 credits may be freely selected from any of the lists.

Complementary Courses (24 credits)

Basic Life Sciences (at least 9 credits):

- ANAT212 (3) Molecular Mechanisms of Cell Function
 or BIOC 212 (3) Molecular Mechanisms of Cell Function
 ANAT 214 (3) Systemic Human Anatomy
 ANAT 261 (4) Introduction to Dynamic Histology
 ANAT 262 (3) Introductory Molecular and Cell Biology
 ANAT 321 (3) Circuitry of the Human Brain
 ANAT 365 (3) Cellular Trafficking
 ANAT 381 (3) Basis of Embryology
 BIOC 311 (3) Metabolic Biochemistry
 BIOC 450 (3) Protein Structure and Function
 BIOC 458 (3) Membranes & Cellular Signaling
 BIOL 200 (3) Molecular Biology
 BIOL 201 (3) Cell Biology and Metabolism
 BIOL 202 (3) Basic Genetics
 BIOL 300 (3) Molecular Biology of the Gene
 BIOL 301 (4) Cell and Molecular Laboratory
 BIOL 303 (3) Developmental Biology

EDKP 498	(3)	Sport Psychology
EDKP 505	(3)	Sport in Society
EDKP 542	(3)	Environmental Exercise Physiology
EDKP 550	(3)	Analyzing Instructional Behaviors
EDKP 553	(3)	Physical Activity Assessments
EDKP 566	(3)	Muscle Mechanics
EDKP 568	(3)	Biomechanics Instrumentation

12.13.20 Management Minor Program

The Minor in Management allows Science students to include courses in their undergraduate program that will help prepare them for a career in management. Also available to Science students is the Minor in Technological Entrepreneurship for Science students, in [section 12.13.35 "Technological Entrepreneurship for Science Students"](#).

Students in the Faculty of Science who are registered in the Minor in Management must replace MGCR 271 with MATH 203.

Students registered in the Minor in Management may not take additional courses outside the Faculties of Arts and of Science.

Detailed information on this minor can be found in the Desautels Faculty of Management "[Minor in Management](#)", [section 9.10.2](#).

Donald A. Dawson; B.Sc., M.Sc.(McG.), Ph.D.(MIT)

Martin J. Gander; M.S.(ETH), M.S., Ph.D.(Stan.)

Andrew Granville; B.A., CASM(Camb.), Ph.D.(Qu.)

Ming Mei; B.Sc., M.Sc.(Jiangxi Normal University),

Ph.D.(Kanazawa)

M. Ram Murty; B.Sc.(Car.), Ph.D.(MIT), F.R.S.C.

Vladimir Remeslennikov; M.Sc.(Perm, Russia),

Ph.D.(Novosibirsk)

Robert A. Seely; B.Sc.(McG.), Ph.D.(Cant.)

Faculty Lecturers

Jose A. Correa; M.Sc.(Wat.), Ph.D.(Car.)

Axel Hundemer; M.Sc., Ph.D.(Munich)

Mathematics has evolved to a discipline that is mainly characterized by its method of proof, its concern for a progressive broadening of its concepts, and by the search for mathematical entities and operations that represent aspects of reality. It is a subject that is pursued by many for its own sake, and regarded as part of the mainstream of human culture. Mathematics pervades modern society with an impact which, already immense, is rapidly growing.

The two principal divisions of mathematics are pure mathematics and applied mathematics. The pure mathematician is interested in abstract mathematical structures and in mathematics as an intellectual enterprise. The primary concern may not be with its utilitarian aspects or with the current needs of science and technology, although many problems in pure mathematics have developed from the sciences.

The applied mathematician is more interested in how mathematics can be used to study some aspects of the world. Mathematicians are engaged in the creation, study and application of advanced mathematical methods relevant to scientific problems. Statistical science and methodology today is concerned with

phenomena in which there is a background of uncertainty arising from inherent variability and the investigator is obliged to arrive at decisions from limited data. A key tool in statistics is probability.

Some of the fields in which pure mathematicians work are algebra, analysis, geometry, topology, number theory and foundations. Applied mathematics, which once referred to the application of mathematics to such disciplines as mechanics and fluid dynamics, has currently assumed a much broader meaning and embraces such diverse fields as communication theory, theory of optimization, theory of games and numerical analysis.

Mathematics offers many vocational possibilities. Such fields as teaching, computing, applied statistics and actuarial science offer opportunities for B.Sc. graduates. Opportunities to do original research in pure and applied mathematics are available in universities and research institutions. Employment is to be found in financially or technologically oriented business firms. The Department of Mathematics and Statistics through its various programs attempts to provide courses to suit the diverse interests within mathematics and statistics.

The Honours Program demands of the student a talent for abstraction in addition to a high level of competence in the use of mathematical tools. This program is intended for students who plan to work in an area where mathematical innovations may be needed. It is almost essential for students contemplating a career in mathematical research.

The Major Program involves the same subjects as the Honours Program but is less demanding in terms of abstraction. It is designed primarily for students who will need mathematical tools in their work but whose creative activity will involve applications of mathematics to other areas. Within the framework of the Mathematics Major, various combinations of courses are suggested to meet the needs of different students. These include course suggestions for secondary school teachers, careers in management, and for careers in industry, government or actuarial sciences.

It is possible for Major students to include a number of Honours courses in their programs. This will be an advantage for those students who plan to use their mathematics in graduate studies.

Students interested in a Mathematics program linked to other disciplines are advised to consider the B.Sc. Liberal Program with a core component in Mathematics or Statistics, or our joint programs with Computer Science, Physiology and Physics.

In planning their programs students are advised to seriously consider developing some depth in another discipline – preferably one for which mathematics has some relevance and use. Mathematics has been closely linked to areas such as computer science, physics and engineering but has recently come to play an increasingly important role in fields such as biology, linguistics, management and psychology. Students should consider completing the requirements for Minor programs such as those available in Cognitive Science, Computer Science and Statistics.

Students considering programs in Mathematics and Statistics should contact the Department to arrange for academic advising.

The student's attention is called to the fact that a B.Com. degree with a Major in Mathematics is available from the Desautels Faculty of Management. In addition, the Schulich School of Music offers the B.Mus. degree with Honours in Theory with Mathematics Option.

Internship Opportunities

Students who want to get practical experience in industry before graduation are encouraged to participate in one of the following internship programs:

- The Internship Year in Science (IYS) is an academic program offered for a duration of 8, 12 or 16 months. It is reflected on the transcript and included in the program name (Bachelor of Science - Internship program). Eligible students usually take this program between their U2 and U3 years.
- The Industrial Practicum (IP) has a duration of 4 months and is usually carried out starting in May. It will appear as a 0-credit, pass/fail course on your transcript.

For more information on these programs, consult "[Industrial Practicum \(IP\) and Internship Year in Science \(IYS\)](#)", in section 12.12.4.

Note: Students entering a program listed below that has MATH 222 (Calculus 3) as a required course and who have successfully completed a course equivalent to MATH 222 with a grade of C or better may omit MATH 222 (Calculus 3) from the program, but must replace it with 3 credits of elective courses.

MINOR IN MATHEMATICS (24 credits)

The Minor may be taken in conjunction with any primary program in the Faculty of Science (other than programs in Mathematics). Students should declare their intention to follow the Minor in Mathematics at the beginning of the penultimate year and should obtain approval for the selection of courses to fulfill the requirements for the Minor from the Departmental Chief Adviser (or delegate).

It is strongly recommended that students in the Minor Program take MATH 323. The remaining credits may be freely chosen from the required and complementary courses for Majors and Honours students in Mathematics, with the obvious exception of courses that involve duplication of material. Alternatively, up to six credits may be allowed for appropriate courses from other departments.

All courses counted towards the Minor must be passed with a grade of C or better.

Generally no more than six credits of overlap are permitted between the Minor and the primary program. However, with an approved choice of substantial courses the overlap restriction may be relaxed to nine credits for students whose primary program requires 60 credits or more and to 12 credits when the primary program requires 72 credits or more.

Required Courses (9 credits)

MATH 222	(3)	Calculus 3
MATH 223*	(3)	Linear Algebra
MATH 315	(3)	Ordinary Differential Equations

*MATH 223 may be replaced by MATH 235 and MATH 236. In this case the complementary credit requirement is reduced by three.

Complementary Courses (15 credits)

To be selected from the required and complementary courses for Majors and Honours students in Mathematics, with MATH 323 strongly recommended; alternatively, up to 6 credits may be allowed for appropriate courses from other departments.

MINOR IN STATISTICS (24 credits)

The Minor may be taken in conjunction with any primary program in the Faculty of Science. Students should declare their intention to follow the Minor in Statistics at the beginning of the penultimate year and must obtain approval for the selection of courses to fulfill the requirements for the Minor from the Departmental Chief Adviser (or delegate).

All courses counted towards the Minor must be passed with a grade of C or better. Generally no more than six credits of overlap are permitted between the Minor and the primary program. However, with an approved choice of substantial courses the overlap restriction may be relaxed to nine credits for students whose primary program requires 60 credits or more and to 12 credits when the primary program requires 72 credits or more.

Required Courses (15 credits)

MATH 222	(3)	Calculus 3
MATH 223*	(3)	Linear Algebra
MATH 323	(3)	Probability
MATH 324	(3)	Statistics
MATH 423	(3)	Regression and Analysis of Variance

*MATH 223 may be replaced by MATH 235 and MATH 236. In this case the complementary credit requirement is reduced by three.

Complementary Courses (9 credits)

selected from:

CHEM 593	(3)	Statistical Mechanics
GEOG 351	(3)	Quantitative Methods
MATH 447	(3)	Stochastic Processes

MATH 523	(4)	Generalized Linear Models
MATH 525	(4)	Sampling Theory and Applications
MATH 556	(4)	Mathematical Statistics 1
MATH 557	(4)	Mathematical Statistics 2
PHYS 362	(3)	Statistical Mechanics
PHYS 559	(3)	Advanced Statistical Mechanics
SOCI 504	(3)	Quantitative Methods 1
SOCI 505	(3)	Quantitative Methods 2

No more than 6 credits may be taken outside the Department of Mathematics and Statistics.

Further credits (if needed) may be freely chosen from the required and complementary courses for Majors and Honours students in Mathematics, with the obvious exception of courses that involve duplication of material.

LIBERAL PROGRAM: CORE SCIENCE COMPONENT IN MATHEMATICS (45 credits)

Students entering the Core Science Component in Mathematics are normally expected to have completed MATH 133, MATH 140 and MATH 141 or their equivalents. Otherwise, they will be required to make up any deficiencies in these courses over and above the 45 credits required for the program.

Refer to the "Guidelines for Selection of Courses for the Major Program" for information about course selection to be discussed with the program adviser.

Required Courses (27 credits)

MATH 222	(3)	Calculus 3
MATH 235	(3)	Algebra 1
MATH 236	(3)	Algebra 2
MATH 242	(3)	Analysis 1
MATH 243	(3)	Analysis 2
MATH 314	(3)	Advanced Calculus
MATH 315	(3)	Ordinary Differential Equations
MATH 316	(3)	Complex Variables
or MATH 249	(3)	Honours Complex Variables
MATH 323	(3)	Probability

Complementary Courses (18 credits)

18 credits selected from the following list, with at least 6 credits selected from:

MATH 317	(3)	Numerical Analysis
MATH 324	(3)	Statistics
MATH 335	(3)	Computational Algebra
MATH 340	(3)	Discrete Structures 2

the remainder of the 18 credits to be selected from:

MATH 204	(3)	Principles of Statistics 2
MATH 318	(3)	Mathematical Logic
MATH 319	(3)	Introduction to Partial Differential Equations
MATH 320	(3)	Differential Geometry
MATH 326	(3)	Nonlinear Dynamics and Chaos
MATH 327	(3)	Matrix Numerical Analysis
MATH 328	(3)	Computability and Mathematical Linguistics
MATH 329	(3)	Theory of Interest
MATH 338	(3)	History and Philosophy of Mathematics
MATH 339	(3)	Foundations of Mathematics
MATH 346	(3)	Number Theory
MATH 348	(3)	Topics in Geometry
MATH 352	(1)	Problem Seminar
MATH 407	(3)	Dynamic Programming
MATH 410	(3)	Majors Project
MATH 417	(3)	Mathematical Programming
MATH 423	(3)	Regression and Analysis of Variance
MATH 430	(3)	Mathematical Finance
MATH 447	(3)	Stochastic Processes
MATH 523	(4)	Generalized Linear Models
MATH 524	(4)	Nonparametric Statistics
MATH 525	(4)	Sampling Theory and Applications

LIBERAL PROGRAM: CORE SCIENCE COMPONENT IN STATISTICS (45 credits)

Students entering the Core Science Component in Statistics are normally expected to have completed MATH 133, MATH 140 and MATH 141 or their equivalents. Otherwise, they will be required to make up any deficiencies in these courses over and above the 45 credits required for the program.

Required Courses (27 credits)

MATH 222	(3)	Calculus 3
MATH 235	(3)	Algebra 1
MATH 236	(3)	Algebra 2
MATH 242	(3)	Analysis 1
MATH 243	(3)	Analysis 2
MATH 314	(3)	Advanced Calculus
MATH 323	(3)	Probability
MATH 324	(3)	Statistics
MATH 423	(3)	Regression and Analysis of Variance

Complementary Courses (18 credits)

18 credits selected from the following list, with at least 6 credits selected from:

MATH 315	(3)	Ordinary Differential Equations
MATH 316	(3)	Complex Variables
or MATH 249	(3)	Honours Complex Variables
MATH 317	(3)	Numerical Analysis
MATH 335	(3)	Computational Algebra
MATH 340	(3)	Discrete Structures 2

at least 7 credits selected from:

MATH 447	(3)	Stochastic Processes
MATH 523	(4)	Generalized Linear Models
MATH 525	(4)	Sampling Theory and Applications

the remainder of the 18 credits to be selected from:

MATH 204	(3)	Principles of Statistics 2
MATH 318	(3)	Mathematical Logic
MATH 319	(3)	Introduction to Partial Differential Equations
MATH 320	(3)	Differential Geometry
MATH 326	(3)	Nonlinear Dynamics and Chaos
MATH 327	(3)	Matrix Numerical Analysis
MATH 328	(3)	Computability and Mathematical Linguistics
MATH 329	(3)	Theory of Interest
MATH 338	(3)	History and Philosophy of Mathematics
MATH 339	(3)	Foundations of Mathematics
MATH 346	(3)	Number Theory
MATH 348	(3)	Topics in Geometry
MATH 352	(1)	Problem Seminar
MATH 407	(3)	Dynamic Programming
MATH 410	(3)	Majors Project
MATH 417	(3)	Mathematical Programming
MATH 430	(3)	Mathematical Finance

MAJOR IN MATHEMATICS (54 credits)

Students entering the Major program are normally expected to have completed MATH 133, MATH 140 and MATH 141 or their equivalents. Otherwise they will be required to make up any deficiencies in these courses over and above the 54 credits of required courses.

Major students who have done well in MATH 242 and MATH 235 are urged to consider, in consultation with their adviser and the instructors concerned, entering the Honours stream by registering for MATH 251 and MATH 255.

Guidelines for Selection of Courses in the Major Program

The following informal guidelines should be discussed with the student's adviser. Where appropriate, Honours courses may be substituted for equivalent Major courses. Students planning to pursue graduate studies are encouraged to make such substitutions.

Students interested in computer science are advised to choose courses from the following: MATH 317, MATH 318, MATH 327,

MATH 328, MATH 335, MATH 340, MATH 407, MATH 417 and to complete the Computer Science Minor.

Students interested in probability and statistics are advised to take MATH 204, MATH 324, MATH 407, MATH 423, MATH 447, MATH 523, MATH 525.

Students interested in applied mathematics should take MATH 317, MATH 319, MATH 324, MATH 326, MATH 327, MATH 407, MATH 417.

Students considering a career in secondary school teaching are advised to take MATH 318, MATH 328, MATH 338, MATH 339, MATH 346, MATH 348.

Students interested in careers in business, industry or government are advised to select courses from the following list: MATH 317, MATH 319, MATH 327, MATH 329, MATH 407, MATH 417, MATH 423, MATH 430, MATH 447, MATH 523, MATH 525.

Required Courses (27 credits)

MATH 222	(3)	Calculus 3
MATH 235	(3)	Algebra 1
MATH 236	(3)	Algebra 2
MATH 242	(3)	Analysis 1
MATH 243	(3)	Analysis 2
MATH 314	(3)	Advanced Calculus
MATH 315	(3)	Ordinary Differential Equations
MATH 316	(3)	Complex Variables
or MATH 249	(3)	Honours Complex Variables
MATH 323	(3)	Probability

Complementary Courses (27 credits)

21 credits selected from the following list, with at least 6 credits selected from:

MATH 317	(3)	Numerical Analysis
MATH 324	(3)	Statistics
MATH 335	(3)	Computational Algebra
MATH 340	(3)	Discrete Structures 2

the remainder of the 21 credits to be selected from:

MATH 204	(3)	Principles of Statistics 2
MATH 318	(3)	Mathematical Logic
MATH 319	(3)	Introduction to Partial Differential Equations
MATH 320	(3)	Differential Geometry
MATH 326	(3)	Nonlinear Dynamics and Chaos
MATH 327	(3)	Matrix Numerical Analysis
MATH 328	(3)	Computability and Mathematical Linguistics
MATH 329	(3)	Theory of Interest
MATH 338	(3)	History and Philosophy of Mathematics
MATH 339	(3)	Foundations of Mathematics
MATH 346	(3)	Number Theory
MATH 348	(3)	Topics in Geometry
MATH 352	(1)	Problem Seminar
MATH 407	(3)	Dynamic Programming
MATH 410	(3)	Majors Project
MATH 417	(3)	Mathematical Programming
MATH 423	(3)	Regression and Analysis of Variance
MATH 430	(3)	Mathematical Finance
MATH 447	(3)	Stochastic Processes
MATH 523	(4)	Generalized Linear Models
MATH 525	(4)	Sampling Theory and Applications

6 additional credits in Mathematics or related disciplines selected in consultation with the adviser.

JOINT MAJOR IN MATHEMATICS AND COMPUTER SCIENCE (72 credits)

Students entering the Joint Major in Mathematics and Computer Science are normally expected to have completed MATH 133, MATH 140, and MATH 141 or their equivalents. Otherwise they will be required to make up any deficiencies in these courses over and above the 72 credits of courses in the program specification.

Required courses (54 credits)

COMP 202*	(3)	Introduction to Computing 1
COMP 206	(3)	Introduction to Software Systems

COMP 250	(3)	Introduction to Computer Science
COMP 251	(3)	Data Structures and Algorithms
COMP 273	(3)	Introduction to Computer Systems
COMP 302	(3)	Programming Languages and Paradigms
COMP 310	(3)	Operating Systems
COMP 330	(3)	Theoretical Aspects: Computer Science
COMP 360	(3)	Algorithm Design Techniques
MATH 222	(3)	Calculus 3
MATH 235	(3)	Algebra 1
MATH 236	(3)	Algebra 2
MATH 242	(3)	Analysis 1
MATH 315	(3)	Ordinary Differential Equations
MATH 317	(3)	Numerical Analysis
MATH 318	(3)	Mathematical Logic
MATH 323	(3)	Probability
MATH 340	(3)	Discrete Structures 2

* Students who have sufficient knowledge in a programming language do not need to take COMP 202 but can replace it with an additional Computer Science complementary course.

Complementary Courses (18 credits)

9 credits from the set of courses recommended for a Major or Honours Program in Mathematics.

9 credits selected from Computer Science courses at the 300-level or above (except COMP 364, COMP 396, COMP 400, COMP 431) and ECSE 508.

JOINT MAJOR IN STATISTICS AND COMPUTER SCIENCE (72 credits)

This program provides students with a solid training in both computer science and statistics together with the necessary mathematical background. As statistical endeavours involve ever increasing amounts of data, some students may want training in both disciplines.

Students entering the Joint Major in Statistics and Computer Science are normally expected to have completed MATH 133, MATH 140, and MATH 141 or their equivalents. Otherwise they will be required to make up any deficiencies in these courses over and above the 72 credits of courses in the program specification

Required courses (51 credits)

COMP 202*	(3)	Introduction to Computing 1
COMP 206	(3)	Introduction to Software Systems
COMP 250	(3)	Introduction to Computer Science
COMP 251	(3)	Data Structures and Algorithms
COMP 273	(3)	Introduction to Computer Systems
COMP 302	(3)	Programming Languages and Paradigms
COMP 330	(3)	Theoretical Aspects: Computer Science
COMP 350	(3)	Numerical Computing
or MATH 317	(3)	Numerical Analysis
COMP 360	(3)	Algorithm Design Techniques
MATH 222	(3)	Calculus 3
MATH 235	(3)	Algebra 1
MATH 236	(3)	Algebra 2
or MATH 223	(3)	Linear Algebra
MATH 242	(3)	Analysis 1
MATH 314	(3)	Advanced Calculus
MATH 323	(3)	Probability
MATH 324	(3)	Statistics
MATH 423	(3)	Regression and Analysis of Variance

* Students who have sufficient knowledge in a programming language do not need to take COMP 202 but can replace it with an additional Computer Science complementary course.

Complementary Courses (21 credits)

12 credits in Mathematics selected from:		
MATH 327	(3)	Matrix Numerical Analysis
MATH 340	(3)	Discrete Structures 2
or MATH 350	(3)	Graph Theory and Combinatorics
MATH 352	(1)	Problem Seminar

- MATH 410 (3) Majors Project
- MATH 447 (3) Stochastic Processes
- MATH 523 (4) Generalized Linear Models
- MATH 524 (4) Nonparametric Statistics
- MATH 525 (4) Sampling Theory and Applications
- MATH 578** (4) Numerical Analysis 1

9 credits in Computer Science selected as follows:

At least 6 credits selected from:

- COMP 423 (3) Data Compression
- COMP 424 (3) Topics: Artificial Intelligence 1
- COMP 462 (3) Computational Biology Methods
- COMP 490 (3) Introduction to Probabilistic Analysis of Algorithms
- COMP 526 (3) Probabilistic Reasoning and AI
- COMP 540** (3) Matrix Computations
- COMP 547 (4) Cryptography and Data Security
- COMP 564 (3) Computational Gene Regulation
- COMP 566 (3) Discrete Optimization 1
- COMP 567 (3) Discrete Optimization 2

** MATH 578 and COMP 540 cannot both be taken for program credit.

The remaining Computer Science credits are selected from COMP courses at the 300 level or above except COMP 396, COMP 400, and COMP 431.

JOINT MAJOR IN PHYSIOLOGY AND MATHEMATICS under "Physiology (PHGY)", in section 12.13.30.

HONOURS PROGRAMS

The minimum requirement for entry into the Honours program is that the student has completed with high standing the following courses: MATH 133, MATH 140, MATH 141, or their equivalents. In addition, a student who has not completed the equivalent of MATH 222 must take it in the first term without receiving credits towards the credits required in the Honours program.

Students who transfer to Honours in Mathematics from other programs will have credits for previous courses assigned, as appropriate, by the Department.

To remain in an Honours program and to be awarded the Honours degree, the student must maintain a 3.00 GPA in the required and complementary Mathematics courses of the program, as well as an overall CGPA of 3.00.

HONOURS IN MATHEMATICS (60 credits)

Required Courses (45 credits)

- MATH 235 (3) Algebra 1
- MATH 242 (3) Analysis 1
- MATH 248* (3) Honours Advanced Calculus
- MATH 251 (3) Honours Algebra 2
- MATH 255 (3) Honours Analysis 2
- MATH 325 (3) Honours Ordinary Differential Equations
- MATH 354 (3) Honours Analysis 3
- MATH 355 (3) Honours Analysis 4
- MATH 356 (3) Honours Probability
- MATH 357 (3) Honours Statistics
- MATH 366 (3) Honours Complex Analysis
- MATH 370 (3) Honours Algebra 3
- MATH 371 (3) Honours Algebra 4
- MATH 375 (3) Honours Partial Differential Equations
- MATH 380 (3) Honours Differential Geometry

* MATH 314 may be substituted for MATH 248 if MATH 222 had to be taken in the Fall.

Complementary Courses (15 credits)

15 credits selected from:

- MATH 350 (3) Graph Theory and Combinatorics
- MATH 352 (1) Problem Seminar
- MATH 376 (3) Honours Nonlinear Dynamics
- MATH 377 (3) Honours Number Theory

- MATH 387 (3) Honours Numerical Analysis
- MATH 397 (3) Honours Matrix Numerical Analysis
- MATH 470 (3) Honours Project (highly recommended)
- MATH 480 (3) Honours Independent Study
- MATH 487 (3) Honours Mathematical Programming
- MATH 488 (3) Set Theory

all MATH 500-level courses

Honours-level courses from related disciplines:

- COMP 250* (3) Introduction to Computer Science
- COMP 252 (3) Algorithms and Data Structures

*COMP 250 may be preceded by COMP 202

no more than 6 credits from the following courses for which no

Honours equivalent exists:

- MATH 204 (3) Principles of Statistics 2
- MATH 329 (3) Theory of Interest
- MATH 338 (3) History and Philosophy of Mathematics
- MATH 339 (3) Foundations of Mathematics
- MATH 348 (3) Topics in Geometry
- MATH 407 (3) Dynamic Programming
- MATH 437 (3) Mathematical Methods in Biology
- MATH 447 (3) Stochastic Processes

Other courses with the permission of the Department.

HONOURS IN APPLIED MATHEMATICS (68 credits)

Aside from seeking to develop a sound basis in Applied Mathematics, one of the objectives of the program is to kindle the students' interest in possible areas of application. The extra-mural courses are included to ensure that the student has some appreciation of the scope of Applied Mathematics and is familiar with at least one of the diverse areas in which applications can be found.

Required Courses (36 credits)

- COMP 252 (3) Algorithms and Data Structures
- COMP 250* (3) Introduction to Computer Science
- MATH 235 (3) Algebra 1
- MATH 242 (3) Analysis 1
- MATH 248 (3) Honours Advanced Calculus
- MATH 251 (3) Honours Algebra 2
- MATH 255 (3) Honours Analysis 2
- MATH 325 (3) Honours Ordinary Differential Equations
- MATH 356 (3) Honours Probability
- MATH 357 (3) Honours Statistics
- MATH 366 (3) Honours Complex Analysis
- or MATH 249 (3) Honours Complex Variables
- MATH 375 (3) Honours Partial Differential Equations

*COMP 250 may be preceded by COMP 202

Complementary Courses (32 credits)

at least 3 credits selected from:

- MATH 387 (3) Honours Numerical Analysis
- MATH 397 (3) Honours Matrix Numerical Analysis

at least 6 credits selected from:

- MATH 350 (3) Graph Theory and Combinatorics
- MATH 354 (3) Honours Analysis 3
- MATH 355 (3) Honours Analysis 4
- MATH 370 (3) Honours Algebra 3
- MATH 371 (3) Honours Algebra 4
- MATH 380 (3) Honours Differential Geometry

at least 9 credits selected from:

- MATH 352 (1) Problem Seminar
- MATH 376 (3) Honours Nonlinear Dynamics
- MATH 470 (3) Honours Project
- MATH 487 (3) Mathematical Programming
- MATH 490 (3) Honours Mathematics of Finance
- MATH 523 (4) Generalized Linear Models
- MATH 525 (4) Sampling Theory and Applications
- MATH 533 (4) Honours Regression and Analysis of Variance

MATH 552	(4)	Combinatorial Optimization
MATH 555	(4)	Fluid Dynamics
MATH 556	(4)	Mathematical Statistics 1
MATH 557	(4)	Mathematical Statistics 2
MATH 560	(4)	Optimization
MATH 561	(4)	Analytical Mechanics
MATH 574	(4)	Ordinary Differential Equations
MATH 575	(4)	Intermediate Partial Differential Equations
MATH 578	(4)	Numerical Analysis 1
MATH 579	(4)	Numerical Differential Equations
MATH 580	(4)	Applied Partial Differential Equations 1
MATH 581	(4)	Applied Partial Differential Equations 2

and the following, for which half credit only may be counted:

MATH 204	(3)	Principles of Statistics 2
MATH 407	(3)	Dynamic Programming
MATH 447	(3)	Stochastic Processes

12 credits of extra-mural courses:

chosen in consultation with the student's adviser from approved courses in other departments. A list of such courses is available from the Department of Mathematics and Statistics. Student initiative is encouraged in suggesting other courses that fulfill the intentions of this section as described above. Such suggestions must receive departmental approval. They must be in a field related to Applied Mathematics such as Atmospheric and Oceanic Science, Biology, Biochemistry, Chemistry, Computer Science, Earth and Planetary Science, Economics, Engineering, Management, Physics, Physiology and Psychology. At least 6 credits must be chosen from a single department other than Computer Science.

HONOURS IN PROBABILITY AND STATISTICS (64 credits)

Required Courses (46 credits)

COMP 250*	(3)	Introduction to Computer Science
MATH 235	(3)	Algebra 1
MATH 242	(3)	Analysis 1
MATH 248	(3)	Honours Advanced Calculus
MATH 251	(3)	Honours Algebra 2
or MATH 247	(3)	Honours Applied Linear Algebra
MATH 255	(3)	Honours Analysis 2
MATH 354	(3)	Honours Analysis 3
MATH 355	(3)	Honours Analysis 4
MATH 356	(3)	Honours Probability
MATH 357	(3)	Honours Statistics
MATH 523	(4)	Generalized Linear Models
MATH 533	(4)	Honours Regression and Analysis of Variance
MATH 556	(4)	Mathematical Statistics 1
MATH 557	(4)	Mathematical Statistics 2

*COMP 250 may be preceded by COMP 202

Complementary Courses (18 credits)

selected from:

MATH 325	(3)	Honours Ordinary Differential Equations
MATH 350	(3)	Graph Theory and Combinatorics
MATH 352	(1)	Problem Seminar
MATH 366	(3)	Honours Complex Analysis
MATH 375	(3)	Honours Partial Differential Equations
MATH 380	(3)	Honours Differential Geometry
MATH 387	(3)	Honours Numerical Analysis
MATH 397	(3)	Honours Matrix Numerical Analysis
MATH 470	(3)	Honours Project
MATH 490	(3)	Honours Mathematics of Finance
MATH 524	(4)	Nonparametric Statistics
MATH 525	(4)	Sampling Theory and Applications
MATH 550	(4)	Combinatorics
MATH 587	(4)	Advanced Probability Theory 1
MATH 589	(4)	Advanced Probability Theory 2

with at most 3 credits from the following courses having no Honours version:

MATH 204	(3)	Principles of Statistics 2
----------	-----	----------------------------

MATH 407	(3)	Dynamic Programming
MATH 447	(3)	Stochastic Processes

JOINT HONOURS IN MATHEMATICS AND COMPUTER SCIENCE (72 - 75 credits)

Students must consult an Honours adviser in both departments. Students entering the Joint Honours in Mathematics and Computer Science are normally expected to have completed MATH 133, MATH 140, and MATH 141 or their equivalents. Otherwise they will be required to make up any deficiencies in these courses over and above the 72 - 75 credits of courses in the program specification.

Required Courses (42 - 45 credits)

COMP 202*	(3)	Introduction to Computing 1
COMP 206	(3)	Introduction to Software Systems
COMP 250	(3)	Introduction to Computer Science
COMP 252	(3)	Algorithms and Data Structures
COMP 273	(3)	Introduction to Computer Systems
COMP 302	(3)	Programming Languages and Paradigms
COMP 310	(3)	Operating Systems
COMP 330	(3)	Theoretical Aspects: Computer Science
COMP 362	(3)	Honours Algorithm Design
MATH 235	(3)	Algebra 1
MATH 242	(3)	Analysis 1
MATH 248	(3)	Honours Advanced Calculus
MATH 251	(3)	Honours Algebra 2
MATH 255	(3)	Honours Analysis 2
MATH 350	(3)	Graph Theory and Combinatorics

* Students who have sufficient knowledge in a programming language are not required to take COMP 202.

Complementary Courses (30 credits)

18 credits in Mathematics,

at least 12 credits selected from:

MATH 354	(3)	Honours Analysis 3
MATH 355	(3)	Honours Analysis 4
MATH 356*	(3)	Honours Probability
MATH 370	(3)	Honours Algebra 3
MATH 371	(3)	Honours Algebra 4
MATH 387	(3)	Honours Numerical Analysis

The remaining credits selected from honours courses given by the Department of Mathematics and Statistics.

* Students with appropriate background in probability may substitute MATH 587 for MATH 356 and must then also register for MATH 355.

12 credits in Computer Science, selected from Computer Science courses at the 300-level or above (except COMP 364, COMP 396, COMP 431) and ECSE 508.

JOINT HONOURS IN STATISTICS AND COMPUTER SCIENCE (76 - 79 credits)

This is a challenging program providing students with a solid training in both computer science and statistics suitable for entry into graduate school in either discipline.

Students entering the Joint Honours program in Statistics and Computer Science are normally expected to have completed MATH 133, MATH 140, and MATH 141 or their equivalents. Otherwise, they will be required to make up any deficiencies in these courses over and above the 76 - 79 credits of courses in the program.

Required courses (46 - 49 credits)

COMP 202*	(3)	Introduction to Computing 1
COMP 206	(3)	Introduction to Software Systems
COMP 250	(3)	Introduction to Computer Science
COMP 252	(3)	Algorithms and Data Structures
COMP 273	(3)	Introduction to Computer Systems
COMP 302	(3)	Programming Languages and Paradigms
COMP 330	(3)	Theoretical Aspects: Computer Science

- COMP 362 (3) Honours Algorithm Design
 MATH 235 (3) Algebra 1
 MATH 242 (3) Analysis 1
 MATH 248 (3) Honours Advanced Calculus
 MATH 251 (3) Honours Algebra 2
 or MATH 247(3) Honours Applied Linear Algebra
 MATH 255 (3) Honours Analysis 2
 MATH 356 (3) Honours Probability
 MATH 357 (3) Honours Statistics
 MATH 533 (4) Honours Regression and Analysis of Variance

* Students who have sufficient knowledge in a programming language are not required to take COMP 202.

Complementary Courses (30 credits)

15 credits in Mathematics selected as follows:

Either:

- MATH 387 (3) Honours Numerical Analysis
 or MATH 397(3) Honours Matrix Numerical Analysis

At least 8 credits selected from:

- MATH 523 (4) Generalized Linear Models
 MATH 524 (4) Nonparametric Statistics
 MATH 525 (4) Sampling Theory and Applications
 MATH 556 (4) Mathematical Statistics 1
 MATH 557 (4) Mathematical Statistics 2

The remaining Mathematics credits are selected from:

- MATH 350 (3) Graph Theory and Combinatorics
 MATH 352 (1) Problem Seminar
 MATH 354 (3) Honours Analysis 3
 MATH 355 (3) Honours Analysis 4
 MATH 578** (4) Numerical Analysis 1

15 credits in Computer Science selected as follows:

At least 6 credits selected from:

- COMP 423 (3) Data Compression
 COMP 424 (3) Topics: Artificial Intelligence 1
 COMP 462 (3) Computational Biology Methods
 COMP 490 (3) Introduction to Probabilistic Analysis of Algorithms
 COMP 526 (3) Probabilistic Reasoning and AI
 COMP 540** (3) Matrix Computations
 COMP 547 (4) Cryptography and Data Security
 COMP 552 (4) Combinatorial Optimization
 COMP 564 (3) Computational Gene Regulation
 COMP 566 (3) Discrete Optimization 1
 COMP 567 (3) Discrete Optimization 2

** MATH 578 and COMP 540 cannot both be taken for program credit.

The remaining Computer Science credits are selected from COMP courses at the 300 level or above except COMP 396 and COMP 431.

JOINT HONOURS PROGRAM IN MATHEMATICS AND PHYSICS under "Physics (PHYS)", in section 12.13.29.

12.13.22 Microbiology and Immunology (MIMM)

Chair — Greg J. Matlashewski

Professors

Zafer Ali-Khan; B.Sc.(Bilar), M.Sc.(Karachi), Ph.D.(Tulane)
 Malcolm G. Baines; B.Sc., M.Sc., Ph.D.(Queen's)
 James W. Coulton; B.Sc.(Tor.), M.Sc.(Calg.), Ph.D.(W.Ont.)

John Hiscott; B.Sc., M.Sc.(W.Ont.), Ph.D.(N.Y.)
 Greg Matlashewski; B.Sc.(C'dia), Ph.D.(Ott.)
 Robert A. Murgita; B.Sc.(Me.), M.S.(Vt.), Ph.D.(McG.)
 Mark A. Wainberg; B.Sc.(McG.), M.Sc., Ph.D.(Col.)

Associate Professors

Albert Berghuis; M.Sc.(The Netherlands), Ph.D.(Br. Col.)
 Dalius J. Briedis; B.A., M.D.(Johns H.)
 Benoît Cousineau; B.Sc., M.Sc., Ph.D.(Montr.)
 Sylvie Fournier; Ph.D.(Montr.)
 M. Gotte; Ph.D.(Max Planck)
 Hervé Le Moual; Ph.D.(Montr.)
 Gregory T. Marczynski; B.Sc., Ph.D.(Ill.)
 Martin Olivier; B.Sc.(Montr.), Ph.D.(McG.)
 Silvia Vidal; Ph.D.(U. Geneve)

Assistant Professors

Samantha Gruenheid; Ph.D.(Br. Col.)
 Shan-Lu Liu; Ph.D.(Wash.)
 Ciriaco Piccirillo; B.Sc., Ph.D.(McG.)
 Donald Sheppard; M.D.(Tor.)

Associate Members

Agricultural & Environmental Sciences: Byong Lee
 Institute of Parasitology: Gaetan Faubert, Armando Jardim,
 Paula Ribeiro, Terence Spithill
 Microbiology & Immunology: Lawrence Kleiman
 Medicine: Marcel Behr, Andre Dascal, Sabah Hussain, Arnold
 Kristof, Richard Lalonde, Chen Liang, Vivian Loo, Ameer
 Manges, Jack Mendelson, Mark A. Miller, Jay Nadeau,
 Marianna Newkirk, Roger G.E. Palfree, Kostas Pantopoulos,
 Joyce E. Rauch, Michael Reed, Maya Saleh, Christos Tsoukas,
 Bernard Turcotte, Brian J. Ward
 Neuroimmunology: Amit Bar-Or
 Neurology & Neurosurgery: Jack Antel
 Oncology: Anne Gatignol, Antonis E. Koromilas, Andrew Mouland,
 Arnim Pause, Stephane Richard
 Ophthalmology: Miguel Burnier
 Surgery: Nicholas V. Christou
 Virology: Shan Cen

Adjunct Professors

Vibhuti Dave; M.Sc., Ph.D.(Bombay)
 Albert Descoteaux; B.Sc., M.Sc.(Montr.), Ph.D.(McG.)
 Elias Haddad; B.Sc., M.Sc.(Beirut), Ph.D.(McG.)
 Taff Jones; B.Sc., Ph.D.(U. College Lond.)
 George Kukolj; B.Sc., Ph.D.(McG.)
 Peter Lau; Ph.D.(Ottawa)
 Andrew Makrigiannis; B.Sc., Ph.D.(Dalhousie)
 Allan M. Matte; B.Sc., M.Sc.(Guelph), Ph.D.(Sask.)
 Clement Rioux; B.Sc., M.Sc.(Laval), Ph.D.(Guelph)
 Rafick-P. Sekaly; B.A.(Stanislas), B.Sc., M.Sc.(Montr.),
 Ph.D.(Lausanne)

Affiliated Centre:

Centre for Host Resistance, Montreal General Hospital,
 1650 Cedar Avenue, Montreal, QC H3G 1A4
 Telephone: (514) 398-8038. Director: E. Skamene

Microbiology is the study of microorganisms such as bacteria, viruses, unicellular eukaryotes, and parasites. Microorganisms play an important role in human and animal disease, food production (bread, cheese, wine), decay and spoilage, contamination and purification of water and soil. Microbiologists study these tiny, self-replicating machines to understand the basic principles of life: growth, metabolism, cell division, control of gene expression, response to environmental stimuli. Microbiologists are also concerned with controlling or harnessing microorganisms for the benefit of people, by isolating antibiotics or producing vaccines to protect against disease, and by developing and perfecting microorganisms for industrial uses.

Immunology is the study of the molecular and cellular basis of host resistance and immunity to external agents such as pathogenic microorganisms. Immunologists study the mechanisms by which the body recognizes foreign antigens, generates appropriate antibodies to an enormously diverse spectrum of antigens, and

sequesters and kills invading microorganisms. Their discoveries lead to vaccination against disease, transfusions and organ transplants, allergies, cancer, autoimmune diseases and immune-deficiency diseases such as AIDS. Antibodies may soon be used in conjunction with antibiotics or chemical agents as specific “magic bullets” to diagnose disease and attack microbes and cancers.

The disciplines of microbiology and immunology are natural partners in research, and both fields use the modern methods of cell biology, molecular biology and genetics to study basic life processes. The members of the Department of Microbiology and Immunology perform research on microbial physiology and genetics, microbial pathogenesis, molecular virology, cellular and molecular immunology, and parasitology. Students registered in the Department therefore are exposed to these related areas and receive an excellent background in basic biology and chemistry as well as in the more applied areas of biotechnology and medicine.

Many opportunities exist for careers in basic or applied microbiology and immunology, medical microbiology, environmental microbiology, and biotechnology. They include positions in industry (pharmaceutical and biotechnology), hospitals, universities, and government (environment, public health, and energy). A degree in microbiology also provides an excellent basis for entering professional and postgraduate programs in medicine, dentistry, the veterinary sciences, research, and education.

Notes on admission to Microbiology and Immunology programs. Please note that enrolment in Microbiology and Immunology programs is limited to a total of 120 students per year. Students seeking admission to the Faculty, Majors and Honours programs must have completed BIOL 112, CHEM 110, CHEM 120, MATH 112, MATH 139 or MATH 140, MATH 141, PHYS 101 and PHYS 102 or their equivalent with an overall average of at least of B+ (75%).

Students transferring from other programs may be admitted with a B+ average up to the maximum program capacity of 120 students. Applicants not admitted will be placed on a waiting list and will be considered should vacancies occur. Application deadline for U0 or transfer students from other departments and faculties is April 21. Students who want to transfer to Microbiology and Immunology should consider taking MIMM 211, or equivalent, as a complementary course.

An Undergraduate Handbook, containing detailed course descriptions, a listing of faculty research interests, and information on careers in microbiology and immunology, is available from the Student Affairs Office in Room 511 of the Lyman Duff Building and on the Web at www.mcgill.ca/microimm.

All students (U1, U2, U3) must attend an advising session. Please check www.mcgill.ca/microimm for dates.

A Science Major Concentration in Biomedical Sciences is available to students pursuing the B.A. & Sc. degree. This Major Concentration is described in the Bachelor of Arts and Science section of the Calendar; see “**Biomedical Sciences**”, in section 6.12.4 for details.

LIBERAL PROGRAM: CORE SCIENCE COMPONENT IN MICROBIOLOGY AND IMMUNOLOGY (48 credits)

U1 Required Courses (15 credits)

BIOL 200	(3)	Molecular Biology
BIOL 202	(3)	Basic Genetics
CHEM 212*	(4)	Introductory Organic Chemistry 1
MIMM 211	(3)	Introductory Microbiology
MIMM 212	(2)	Laboratory in Microbiology

*Students who have taken CHEM 212 in CEGEP are exempt and must replace these credits with an elective course(s).

U1 Complementary Courses (3 credits)

BIOC 212	(3)	Molecular Mechanisms of Cell Function
BIOL 201	(3)	Cell Biology and Metabolism

U1, U2 or U3 Required Course (3 credits)

BIOL 373	(3)	Biometry
or MATH 203	(3)	Principles of Statistics 1
or PSYC 204	(3)	Introduction to Psychological Statistics

U2 Required Courses (15 credits)

MIMM 314	(3)	Immunology
MIMM 323	(3)	Microbial Physiology
MIMM 324	(3)	Fundamental Virology
MIMM 386D1	(3)	Laboratory in Microbiology and Immunology
MIMM 386D2	(3)	Laboratory in Microbiology and Immunology

U3 Complementary Courses (6 credits)

6 credits selected from:

MIMM 387	(3)	Applied Microbiology and Immunology
MIMM 413	(3)	Parasitology
MIMM 414	(3)	Advanced Immunology
MIMM 465	(3)	Bacterial Pathogenesis
MIMM 466	(3)	Viral Pathogenesis
MIMM 509	(3)	Inflammatory Processes

U1, U2 or U3 Complementary Courses (6 credits)

6 credits selected from:

ANAT 261	(4)	Introduction to Dynamic Histology
ANAT 262	(3)	Introductory Molecular and Cell Biology
ANAT 365	(3)	Cellular Trafficking
ANAT 458	(3)	Membranes and Cellular Signalling
or BIOC 458	(3)	Membranes and Cellular Signalling
BIOC 311	(3)	Metabolic Biochemistry
BIOC 312	(3)	Biochemistry of Macromolecules
BIOC 450	(3)	Protein Structure and Function
BIOC 454	(3)	Nucleic Acids
BIOL 300	(3)	Molecular Biology of the Gene
BIOL 314	(3)	Molecular Biology of Oncogenes
BIOT 505	(3)	Selected Topics in Biotechnology
CHEM 203	(3)	Survey of Physical Chemistry
or CHEM 204	(3)	Physical Chemistry/Biological Sciences 1
CHEM 222**	(4)	Introductory Organic Chemistry 2
CHEM 302	(3)	Introductory Organic Chemistry 3
EXMD 504	(3)	Biology of Cancer
MIMM 387	(3)	Applied Microbiology and Immunology
MIMM 413	(3)	Parasitology
MIMM 414	(3)	Advanced Immunology
MIMM 465	(3)	Bacterial Pathogenesis
MIMM 466	(3)	Viral Pathogenesis
MIMM 509	(3)	Inflammatory Processes
PATH 300	(3)	Human Disease
PHAR 300	(3)	Drug Action
PHAR 301	(3)	Drugs and Diseases
PHGY 209	(3)	Mammalian Physiology 1 (Class Schedule conflict with MIMM 324, if taken should be in U1 or U3)
PHGY 210	(3)	Mammalian Physiology 2

**Students who have taken CHEM 222 in CEGEP must replace it with another complementary course.

MAJOR IN MICROBIOLOGY AND IMMUNOLOGY (67 credits)

The Major Program is designed for students who want to acquire a substantial background in microbiology and immunology and related disciplines (chemistry, biology, biochemistry) which will prepare them for professional schools, graduate education, or entry into jobs in industry or research institutes.

U1 Required Courses (25 credits)

as for the Faculty Program, plus:

CHEM 222	(4)	Introductory Organic Chemistry 2
CHEM 203	(3)	Survey of Physical Chemistry
or CHEM 204	(3)	Physical Chemistry/Biological Sciences 1

U1, U2 or U3 Required Statistics Courses (3 credits)

as for the Faculty Program

U2 Required Courses (21 credits)

as for the Faculty program, plus

- BIOC 311 (3) Metabolic Biochemistry
- BIOC 312 (3) Biochemistry of Macromolecules

U3 Required Courses (9 credits)

- MIMM 413 (3) Parasitology
- MIMM 465 (3) Bacterial Pathogenesis
- MIMM 466 (3) Viral Pathogenesis

Complementary Courses (9 credits)

9 credits selected from:

- ANAT 261 (4) Introduction to Dynamic Histology
- ANAT 262 (3) Introductory Molecular and Cell Biology
- ANAT 458 (3) Membranes and Cellular Signaling
- or BIOC 458 (3) Membranes and Cellular Signaling
- ANAT 365 (3) Cellular Trafficking
- BIOC 450 (3) Protein Structure and Function
- BIOC 454 (3) Nucleic Acids
- BIOL 300 (3) Molecular Biology of the Gene
- BIOL 314 (3) Molecular Biology of Oncogenes
- BIOT 505 (3) Selected Topics in Biotechnology
- CHEM 302 (3) Introductory Organic Chemistry 3
- EXMD 504 (3) Biology of Cancer
- MIMM 387 (3) Applied Microbiology and Immunology
- MIMM 414 (3) Advanced Immunology
- MIMM 509 (3) Inflammatory Processes
- PATH 300 (3) Human Disease
- PHAR 300 (3) Drug Action
- PHAR 301 (3) Drugs and Diseases
- PHGY 209 (3) Mammalian Physiology 1
(Class Schedule conflict with MIMM 324, if taken should be in U1 or U3)
- PHGY 210 (3) Mammalian Physiology 2

HONOURS IN MICROBIOLOGY AND IMMUNOLOGY

(73 required credits)

The Honours Program is designed to offer, in addition to the substantial background given by the Major Program, a significant research experience in a laboratory within the Department during the U3 year. Students are prepared for this independent research project by following an advanced laboratory course in U2. This Program is intended to prepare students for graduate study in microbiology and immunology or related fields, but could also be chosen by students intending to enter medical research after medical school, or intending to enter the job market in a laboratory research environment.

Students intending to apply to Honours must follow the Major program in U1 and U2 and must obtain a CGPA of at least 3.50 at the end of their U2 year. For graduation in Honours, students must pass all required courses with a C or better, and achieve a sessional GPA of at least 3.30 in the U3 year.

U1 Required Courses (25 credits)

as for the Major Program

U1, U2 or U3 Required Statistics Courses (3 credits)

as for the Faculty Program

U2 Required Courses (21 credits)

as for the Major program

U3 Required Courses (21 credits)

as for the Major Program, plus:

- MIMM 502D1 (6) Honours Research Project
- MIMM 502D2 (6) Honours Research Project

Complementary Courses (3 credits)

3 credits selected from:

- BIOL 520 (3) Gene Activity in Development

- BIOT 505 (3) Selected Topics in Biotechnology
- ANAT 458 (3) Membranes and Cellular Signaling
- or BIOC 458 (3) Membranes and Cellular Signaling
- BIOC 404 (3) Biophysical Chemistry
- BIOC 450 (3) Protein Structure and Function
- BIOC 454 (3) Nucleic Acids
- BIOC 455 (3) Neurochemistry
- MIMM 414 (3) Advanced Immunology
- MIMM 509 (3) Inflammatory Processes
- PHAR 562 (3) General Pharmacology 1
- PHAR 563 (3) General Pharmacology 2

INTERDEPARTMENTAL HONOURS IN IMMUNOLOGY, under "Immunology Interdepartmental Honours", in section 12.13.17.

This program is offered by the Departments of Biochemistry, Microbiology and Immunology, and Physiology.

Students interested in immunology may choose between this Honours program and the Honours program of the Department of Microbiology and Immunology.

Details of this program may also be obtained from Professor Piccirillo in the Department of Microbiology and Immunology, Room 510, telephone (514) 398-2872, e-mail ciro.piccirillo@mcgill.ca.

12.13.23 Music

Strathcona Music Building
555 Sherbrooke Street West
Montreal, QC H3A 1E3

Telephone: (514) 398-4535

Fax: (514) 398-8061

Website: www.mcgill.ca/music

Department of Music Research Chair — Peter Schubert

Department of Performance Chair — André Roy

Adviser (B.A./B.Sc. Music programs) — B. Minorgan
(514) 398-4535, ext. 6333

SCIENCE MINOR IN MUSIC TECHNOLOGY (24 credits)

[Program registration done by Student Affairs Office]

Enrolment in the Minor in Music Technology program is highly restricted. Application forms will be available from the Department of Music Research office of the Schulich School of Music (Strathcona Music Building, 555 Sherbrooke Street West) from February 1, 2008 and must be completed and returned to that office by May 15, 2008. No late applications will be accepted and no students will be admitted to the Minor in January.

Students will be selected on the basis of their previous background or experience in music technology and/or sound recording, their computer programming skills, their expressed interest in the program, and their Cumulative Grade Point Average. Successful applicants will be notified June 1, 2008.

Required Courses (24 credits)

- MUHL 342 (3) History of Electroacoustic Music
- MUMT 202 (3) Fundamentals of New Media
- MUMT 203 (3) Introduction to Digital Audio
- MUMT 301 (3) Music and the Internet
- MUMT 302 (3) New Media Production 1
- MUMT 303 (3) New Media Production 2
- PHYS 224 (3) Physics and Psychophysics of Music
- PHYS 225 (3) Musical Acoustics

Science students are eligible to take the Arts **Minor Concentration in Music**, see section 5.12.38 "Music (MUAR)".

Music courses listed as MUAR (see Faculty of Arts courses) are considered to be Arts courses. All other Music courses are considered by the Faculty of Science to be courses outside of Arts and Science (see section 12.3.6.2 "Courses Outside the Faculties of Arts and Science" for the relevant regulations).

12.13.24 Neurology and Neurosurgery (NEUR)

There are no B.Sc. programs in Neurology and Neurosurgery, but the NEUR course listed in the Courses section of this Calendar, which is part of the Minor in Neuroscience, is considered as a course taught by the Faculty of Science.

12.13.25 Neuroscience

Director of Neuroscience Program Committee:
Professor Ellis Cooper, Department of Physiology
McIntyre Medical Sciences Building, Room 1127
E-mail: info.neuroscience@mcgill.ca
Telephone: (514) 398-4334

Neuroscience is a multidisciplinary science devoted to the understanding of the nervous system. The brain is one of the most complex systems in the universe, and understanding how it functions is among the most challenging questions in science. Scientists are investigating the brain at many levels, from the molecules at synapses to complex forms of behaviour, and use methods of inquiry that are drawn from a number of disciplines including molecular and cellular biology, physiology, behavioural and cognitive psychology; computer science and artificial intelligence. In addition, scientists are investigating the nervous system of many different animals, from simple invertebrates to humans. These wide-ranging investigations are providing a clearer understanding of how neurons work; how they communicate with one another; how they are organized into local or distributed networks; how the connections between neurons are established and change with experience, how neuronal function is influenced by pharmacological agents, and during disease states. As a result, we are gaining deeper insights into the neural basis of mental activity, as well as developing new therapeutic approaches to alleviate neurological and psychological diseases.

MAJOR IN NEUROSCIENCE (67 - 68 credits)

(Awaiting approval of the Ministère de l'Éducation, du Loisir, et du Sport)

An interdisciplinary Major program in Neuroscience is a focused program for students interested in how the nervous system functions. Research in neuroscience is highly interdisciplinary in nature, and borrows principles from a number of subjects including: biology, biochemistry, physiology, psychology, a well as mathematics, physics and computer science. To ensure that students have the appropriate foundation, they are required to take 32 credits in lower-level courses from physiology, biology, mathematics, computer science, psychology, and ethics. While flexible, the program offers students a concentrated selection of 15 credits to be taken from one of three areas of current scientific activities in the neurosciences: Cell/Molecular, Neurophysiology/Computation, or Cognition/Behaviour. In addition, students select 21 credits from a wide array of upper-level complementary courses to obtain more specialized training in areas of neuroscience that best suit their interest.

All course selections for the Major in Neuroscience must be approved by an adviser. Contact the Student Affairs Office, Department of Physiology.

Students should consult the Calendar for restrictions for the following four courses: ANAT 321, BIOL 306, PHGY 314, PSYC 308.

Core Required Courses (19 - 20 credits)

BIOL 200	(3)	Molecular Biology
CHEM 212*	(4)	Introductory Organic Chemistry 1
NSCI 200	(3)	Introduction to Neuroscience 1
NSCI 201	(3)	Introduction to Neuroscience 2
NSCI 300	(3)	Neuroethics
NSCI 400D1/D2	(1)	Neuroscience Seminar
PSYC 311	(3)	Human Cognition and the Brain

* Note: If CHEM 212 is taken prior to the start of the program, credits must be replaced with an alternative course with approval from the program coordinator.

Core Complementary Courses (12 credits)

3 credits from:

PSYC 211	(3)	Introductory Behavioural Neuroscience
PSYC 212	(3)	Perception
PSYC 213	(3)	Cognition

3 credits from:

BIOL 373	(3)	Biometry
PSYC 305	(3)	Statistics for Experimental Design

3 credits from:

COMP 202	(3)	Introduction to Computing 1 or equivalent in Computer Science
----------	-----	--

3 credits from:

MATH 222**	(3)	Calculus 3
BIOL 309	(3)	Mathematical Models in Biology

Complementary Courses (36 credits)

15 credits from Stream A, Stream B, or Stream C.

A. Cell and Molecular Stream (15 credits)

BIOL 201	(3)	Cell Biology and Metabolism or BIOC 212
BIOC 212	(3)	Molecular Mechanisms of Cell Function.
BIOL 202	(3)	Basic Genetics
BIOL 306	(3)	Neurobiology
BIOC 311	(3)	Metabolic Biochemistry
PHGY 311	(3)	Channels, Synapses & Hormones

B. Neurophysiology/Neural Computation Stream (15 credits)

BIOL 201	(3)	Cell Biology and Metabolism or BIOC 212
BIOC 212	(3)	Molecular Mechanisms of Cell Function
ANAT 321	(3)	Circuitry of the Human Brain
MATH 222**	(3)	Calculus 3 or BIOL 309
BIOL 309	(3)	Mathematical Models in Biology or COMP 206
COMP 206	(3)	Introduction to Software Systems
PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 314	(3)	Integrative Neuroscience

C. Cognitive/Behavioural Stream (15 credits)

PSYC 318	(3)	Behavioural Neuroscience 2 and 12 credits chosen from:
PHGY 314	(3)	Integrative Neuroscience
PSYC 317	(3)	Genes and Behaviour
PSYC 342	(3)	Hormones and Behaviour
PSYC 410	(3)	Special Topics in Neuropsychology
PSYC 427	(3)	Sensorimotor Behaviour
PSYC 470	(3)	Memory and Brain
LING 390	(3)	Neuroscience of Language

* *Note: Students who have successfully completed an equivalent to MATH 222 at CEGEP or elsewhere, must substitute another 3-credit course for MATH 222.

21 credits from the list below.

At least 18 credits must be at the 400- or 500- level.

One course must be taken from the following list:

BIOL 301	(4)	Cell and Molecular Laboratory
BIOL 389	(3)	Laboratory in Neurobiology
NSCI 410	(6)	Independent Research 1 or
NSCI 420D1/D2	(9)	Independent Research 2

The remaining credits from the following list:

BIOC 311	(3)	Metabolic Biochemistry
BIOC 455	(3)	Neurochemistry
BIOL 300	(3)	Molecular Biology of the Gene
BIOL 301	(4)	Cell and Molecular Laboratory
BIOL 306	(3)	Neurobiology
BIOL 389	(3)	Laboratory in Neurobiology
BIOL 530	(3)	Neural Basis of Behaviour
BIOL 531	(3)	Neurobiology Learning Memory

BIOL 532	(3)	Developmental Neurobiology Seminar
BIOL 588	(3)	Molecular/Cellular Neurobiology
BMDE 519	(3)	Biomedical Signals and Systems
CHEM 222	(4)	Introductory Organic Chemistry 2
COMP 206	(3)	Introduction to Software Systems or equivalent 300- or 400- level Computer Science course
LING 390	(3)	Neuroscience of Language
MATH 315	(3)	Ordinary Differential Equations
MATH 323	(3)	Probability
MATH 324	(3)	Statistics
MATH 437	(3)	Mathematical Methods in Biology
or PHYS 413	(3)	Physical Basis of Physiology
NEUR 310	(3)	Cellular Neurobiology
NEUR 550	(3)	Free Radical Biomedicine
PHAR 562	(3)	General Pharmacology 1
PHAR 563	(3)	General Pharmacology 2
PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 314	(3)	Integrative Neuroscience
PHGY 451	(3)	Advanced Neurophysiology
PHGY 520	(3)	Ion Channels
PHGY 556	(3)	Topics in Systems Neuroscience
PHIL 306	(3)	Philosophy of Mind
PHIL 341	(3)	Philosophy of Science 1
PSYC 317	(3)	Genes and Behaviour
PSYC 318	(3)	Behavioural Neuroscience 2
PSYC 342	(3)	Hormones and Behaviour
PSYC 410	(3)	Special Topics in Neuropsychology
PSYC 427	(3)	Sensorimotor Behaviour
PSYC 470	(3)	Memory and Brain
PSYC 505	(3)	The Psychology of Pain
PSYC 526	(3)	Advances in Visual Perception
PSYC 532	(3)	Cognitive Science
PSYT 500	(3)	Advances: Neurobiology of Mental Disorders

MINOR IN NEUROSCIENCE (24 credits)

The Minor is composed of 24 credits, 18 of which must be selected from two of the five topic areas listed below. Twelve credits of the 18 must be at the 400/500 level and from at least two different departments. A maximum of 6 credits can be counted both for the student's primary program and for the Minor in Neuroscience, where appropriate.

All course selections for the Minor in Neuroscience must be approved by an adviser. Contact the Student Affairs Officer, Department of Physiology.

Students should consult the Calendar for restrictions for the following four courses: ANAT 321, BIOL 306, PHGY 314, PSYC 308.

Complementary Courses (24 credits)

6 credits selected from:

ANAT 321	(3)	Circuitry of the Human Brain
NEUR 310	(3)	Cellular Neurobiology
PSYC 308	(3)	Behavioural Neuroscience 1 or BIOL 306 (3) Neurobiology or PHGY 311 (3) Channels, Synapses & Hormones

18 additional credits:

9 credits each from 2 of the 5 areas listed below, 6 credits in each area must be from 400- or 500-level courses.

Neurobiology and Behaviour

BIOL 306	(3)	Neurobiology
BIOL 389	(3)	Laboratory in Neurobiology
BIOL 530	(3)	Neural Basis of Behaviour
BIOL 531	(3)	Neurobiology Learning Memory
PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 556	(3)	Topics in Systems Neuroscience
PSYC 318	(3)	Behavioural Neuroscience 2
PSYC 427	(3)	Sensorimotor Behaviour
PSYC 505	(3)	The Psychology of Pain

PSYC 522	(3)	Neurochemistry and Behaviour
PSYT 500	(3)	Advances: Neurobiology of Mental Disorders

Molecular and Developmental Neurobiology

ANAT 321	(3)	Circuitry of the Human Brain
BIOC 455	(3)	Neurochemistry
BIOL 532	(3)	Developmental Neurobiology Seminar
BIOL 588	(3)	Molecular/Cellular Neurobiology
NEUR 310	(3)	Cellular Neurobiology
PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 451	(3)	Advanced Neurophysiology

Neurophysiology

ANAT 322	(3)	Neuroendocrinology
BIOL 389	(3)	Laboratory in Neurobiology
BIOL 531	(3)	Neurobiology Learning Memory
BIOL 588	(3)	Molecular/Cellular Neurobiology
PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 451	(3)	Advanced Neurophysiology
PHGY 520	(3)	Ion Channels
PHGY 556	(3)	Topics in Systems Neuroscience
PSYC 427	(3)	Sensorimotor Behaviour

Neuropsychology

ANAT 321	(3)	Circuitry of the Human Brain
ANAT 322	(3)	Neuroendocrinology
BIOL 306	(3)	Neurobiology
PSYC 311	(3)	Human Cognition and the Brain
PSYC 318	(3)	Behavioural Neuroscience 2
PSYC 410	(3)	Special Topics in Neuropsychology
PSYC 470	(3)	Memory and Brain
PSYC 505	(3)	The Psychology of Pain
PSYC 522	(3)	Neurochemistry and Behaviour

12.13.26 Nutrition (NUTR)

The School of Dietetics and Human Nutrition offers a Minor in Human Nutrition which can be taken by Science students, see [section 13.6.4 "School of Dietetics and Human Nutrition"](#).

NUTR 307 is considered as a course taught by the Faculty of Science and is offered simultaneously on both campuses.

12.13.27 Pathology (PATH)

There are no B.Sc. programs in Pathology, but the PATH course listed in the Courses section of this Calendar is considered as one taught by the Faculty of Science.

12.13.28 Pharmacology and Therapeutics (PHAR)

McIntyre Medical Building
3655 Promenade Sir William Osler

Chair — Hans H. Zingg

Emeritus Professor

Brian Collier; B.Sc., Ph.D.(Leeds)
Theodore Sourkes; Ph.D.(C'neil)

Professors

Guillermina Almazan; Ph.D.(McG.)
 Radan Capek; M.D., Ph.D.(Prague)
 Paul B.S. Clarke; M.A.(Cant.), Ph.D.(Lond.)
 A. Claudio Cuello; M.D.(Buenos Aires), M.A., D.Sc.(Oxf.) F.R.S.C.
 Barbara Hales; M.Sc.(Phil. Coll. of Pharm. and Science),
 Ph.D.(McG.)
 Dusica Maysinger; Ph.D.(S. Calif.)
 Peter J. McLeod; M.D.(Manit.), F.R.C.P.(C.)
 Alfredo Ribeiro-da-Silva; M.D., Ph.D.(Oporto)
 Bernard Robaire; B.A.(Calif.), Ph.D.(McG.)
 Moshe Szyf; M.Sc., Ph.D.(Hebrew)
 Jacquetta Trasler; M.D.C.M., Ph.D.(McG.)
 Daya R. Varma; M.D.(Lucknow), Ph.D.(McG.)
 Hans H. Zingg; M.D., Ph.D.(McG.)

Associate Professors

Daniel Bernard; Ph.D.(Johns H.)
 Barbara Esplin; M.D.(Warsaw)
 Terence Hébert; M.Sc.(Windsor), Ph.D.(Tor.)
 Anne McKinney; Ph.D.(Ulster)
 Stanley Nattel; B.Sc., M.D., C.M.(McG.)
 Ante L. Padjen; M.D., M.Sc., D.Sc.(Zagreb)
 H. Uri Saragovi; Ph.D.(Miami)
 Betty I. Sasyniuk; B.S.P., Ph.D.(Manit.)
 Edith A. Zorychta; B.Sc.(St. FX), M.Sc., Ph.D.(McG.)

Assistant Professors

Derek Bowie; B.Sc., Ph.D.(Lond.)
 Greg Miller; Ph.D.(W. Ont.)

Associate Members

Moulay Alaoui-Jamali; Ph.D.(Sorbonne)
 Gerald Batist; M.D., C.M.(McG.)
 Giovanni Di Battista; B.Sc., Ph.D.(Montr.)
 Pierre Fiset; M.D.(Laval), F.R.C.P.S.(C.)
 Serge Gauthier; M.D.(Montr.)
 Bertrand Jean-Claude; M.Sc.(Moncton), Ph.D.(McG.)
 Sarah Kimmins; Ph.D.(Dal.)
 Stephane Laporte; Ph.D.(Sher.)
 Vassilios Papadopoulos; Ph.D.(Université Pierre et Marie Curie)
 Roger Prichard; B.Sc., Ph.D.(N.S.W.)
 Yoram Shir; M.D.(Israel), Ph.D.(Johns H.)
 Laura Stone; Ph.D.(Minn.)
 Remi Quirion; M.Sc., Ph.D.(Sher.)
 Xiang-Jiao Yang; Ph.D.(Shanghai)

Adjunct Professors

Bruce Allen; Ph.D.(Br. Col.)
 Sylvain Chemtob; M.D.(Montr.), Ph.D.(McG.)
 Yves De Koninck; Ph.D.(McG.)
 Lesley Fellows; M.D.(McG.), Ph.D.(Oxf.)
 Lorella Garofalo; Ph.D.(McG.)
 Jennifer M.A. Laird; Ph.D.(Brist.)
 Joseph Mancini; M.Sc., Ph.D.(McG.)
 Deborah Slipetz; Ph.D.(McG.)

Pharmacology is the science that deals with all aspects of drugs and their interactions with living organisms. Thus, it involves the physical and chemical properties of drugs, their biochemical and physiological effects, mechanisms of action, pharmacokinetics, and therapeutic and other uses. Since the word "drug" encompasses all chemical substances that produce an effect on living cells, it is evident that pharmacology is a very extensive subject. Pharmacology is a multidisciplinary science. It has developed its own set of principles and methods to study the mode of the action of drugs, but it has also utilized many techniques and approaches from various disciplines including biochemistry, physiology, anatomy and molecular biology, as well as others. Pharmacology encompasses a number of different areas such as pharmacogenomics, molecular biology, bioinformatics, neuropharmacology, reproductive pharmacology, endocrine pharmacology, receptor pharmacology, cardiovascular pharmacology, toxicology, developmental pharmacology, autonomic pharmacology, biochemical pharmacology, and therapeutics.

Training in pharmacology is conducted at both the undergraduate and graduate levels. Because of its breadth, students may be attracted to the subject from a variety of viewpoints; this includes those completing a Bachelor's degree in any number of basic science disciplines, such as biology, zoology, chemistry, physics, biochemistry, microbiology, anatomy and physiology. At the undergraduate level, seven lecture courses are offered. A course involving research projects in pharmacology is also available to provide the student with the opportunity to get first-hand experience in a pharmacology research laboratory. These courses provide students with knowledge concerning the actions of drugs on living systems and insight into approaches to basic pharmacological research.

A Science Major Concentration in Biomedical Sciences is available to students pursuing the B.A. & Sc. degree. This Major Concentration is described in the Bachelor of Arts and Science section of the Calendar; see "**Biomedical Sciences**", in section 6.12.4 for details. **Note:** This program will be retired at the end of the 2008-09 academic year and no new students will be accepted as of June 2009.

MINOR IN PHARMACOLOGY (24 credits)

The Minor in Pharmacology is intended for students registered in a complementary B.Sc. program who are interested in a focused introduction to specialized topics in pharmacology to prepare them for professional schools, graduate education, or entry into jobs in industry or research institutes. Students should declare their intent to enter the Minor in Pharmacology at the beginning of their U2 year. They must consult with, and obtain the approval of, the Coordinator for the Minor Program in the Department of Pharmacology and Therapeutics. (Please contact the coordinator: Dr. Terry Hébert; terence.hebert@mcgill.ca; 514-398-1398)

All courses in the Minor Program must be passed with a minimum grade C or better. Generally, no more than 6 credits of overlap are permitted between the Minor and the primary program.

Required Courses (9 credits)

PHAR 300	(3)	Drug Action
PHAR 562	(3)	General Pharmacology 1
PHAR 563	(3)	General Pharmacology 2

Complementary Courses (15 credits)

3 credits, one of:

BIOL 200	(3)	Molecular Biology
BIOL 201	(3)	Cell Biology and Metabolism
BIOC 212	(3)	Molecular Mechanisms of Cell Function

3 credits, one of:

PHGY 209	(3)	Mammalian Physiology 1
PHGY 210	(3)	Mammalian Physiology 2

9 credits, chosen from

PHAR 301	(3)	Drugs and Diseases
PHAR 303	(3)	Principles of Toxicology
PHAR 503	(3)	Drug Design and Development 1
PHAR 504*	(3)	Drug Design and Development 2
PHAR 599	(6)	Research Projects in Pharmacology

* can be taken with PHAR 503 only.

12.13.29 Physics (PHYS)

Rutherford Physics Building, Room 108
 3600 University Street
 Montreal, QC H3A 2T8

Chair — C. Gale

Emeritus Professors

Subal Das Gupta; B.A., M.Sc.(Calc.), Ph.D.(McM.) (*William C. Macdonald Emeritus Professor of Physics*)

Harry C.S. Lam; B.Sc.(McG.), Ph.D.(MIT)

M.P. Langleben; B.Sc., M.Sc., Ph.D.(McG.), F.R.S.C.
 Tommy S.K. Mark; B.Sc., M.Sc., Ph.D.(McG.) (*William C. Macdonald Emeritus Professor of Physics*)
 Douglas G. Stairs; B.Sc., M.Sc.(Qu.), Ph.D.(Harv.) (*William C. Macdonald Emeritus Professor of Physics*)
 John O. Strom-Olsen; B.A., M.S., Ph.D.(Cant.)
 Martin J. Zuckermann; M.A., D.Phil.(Oxf.), F.R.S.C. (*William C. Macdonald Emeritus Professor of Physics*)

Post-Retirement

John E. Crawford; B.A., M.A.(Tor.), Ph.D.(McG.)
 Nicholas DeTakacsy; B.Sc., M.Sc.(Montr.), Ph.D.(McG.)
 Jonathan K.P. Lee; B.Eng., M.Sc., Ph.D.(McG.)
 Robert B. Moore; B.Eng., M.Sc., Ph.D.(McG.)
 Popat M. Patel; B.Sc., M.Sc.(Manc.), Ph.D.(Harv.)

Professors

Jean Barrette; B.Sc., M.Sc., Ph.D.(Montr.)
 Robert Brandenberger; Dipl., A.M., Ph.D.(Harv.) (*Canada Research Chair*)
 James M. Cline; B.Sc.(Calif.), M.Sc., Ph.D.(Cal. Tech.)
 François Corriveau; B.Sc.(Laval), M.Sc.(Br. Col.), Docteur Sc.Nat.(Zurich)
 Charles Gale; B.Sc.(Ott.), M.Sc., Ph.D.(McG.) (*James McGill Professor*)
 Martin Grant; B.Sc.(PEI), M.Sc., Ph.D.(Tor.), F.R.S.C. (*James McGill Professor*)
 Peter Grutter; Dipl., Ph.D.(Basel) (*James McGill Professor*)
 Hong Guo; B.Sc.(Sichuan), M.Sc., Ph.D.(Pitt.), F.R.S.C. (*James McGill Professor*)
 David Hanna; B.Sc.(McG.), M.A., Ph.D.(Harv.) (*William C. Macdonald Professor of Physics*)
 Richard Harris; B.A.(Oxf.), D.Phil.(Sus.)
 Victoria Kaspi; B.Sc.(McG.), M.A., Ph.D.(Prin.) (*Canada Research Chair*) (*Lorne Trottier Chair in Astrophysics and Cosmology*)
 Shaun Lovejoy; B.A.(Cant.), Ph.D.(McG.)
 Kenneth J. Ragan; B.Sc.(Alta.), D.Sc.(Geneva) (*William C. Macdonald Professor of Physics*)
 Dominic H. Ryan; B.A., Ph.D.(Trin.Coll.)
 Mark Sutton; B.Sc., M.Sc., Ph.D.(Tor.) (*Ernest Rutherford Professor of Physics*)
 Jorge Vinals; B.Sc., M.Sc., Ph.D.(Barcelona) (*Canada Research Chair*)

Associate Professors

Michael Hilke; B.Sc., M.Sc., Ph.D.(Geneva)
 Sangyong Jeon; B.Sc.(Seoul), M.Sc., Ph.D.(Wash.)
 Steve Robertson; B.Sc.(Calg.), M.Sc., Ph.D.(Vic. (BC))
 Paul Wiseman; B.Sc.(St. FX), Ph.D.(W. Ont.) (*joint appoint. with Chemistry*)

Assistant Professors

Roland Bennewitz; Dipl., Ph.D.(Free Univ., Berlin) (*Canada Research Chair*)
 Aashish Clerk; B.Sc.(Tor.), Ph.D.(C'nell) (*Canada Research Chair*)
 Andrew Cumming; B.A.(Camb.), Ph.D.(Calif., Berk.)
 Keshav Dasgupta; B.Sc., M.Sc. (IIT), Ph.D.(Tata)
 Matt Dobbs; B.Sc.(McG.), Ph.D.(Vic. (BC)) (*Canada Research Chair*)
 Guillaume Gervais; B.Sc.(Sherb.), M.Sc. (McM), Ph.D.(North. Univ.)
 Gil Holder; B.Sc., M.Sc. (Qu.), Ph.D.(Chic.) (*Canada Research Chair*)
 Maria Kilfoil; B.Sc.(New Br.), M.Sc., Ph.D.(Nfld.)
 Alex Maloney; B.Sc., M.Sc.(Stan.), Ph.D.(Harv.)
 Guy Moore; B.Sc.(Calif.), Ph.D.(Prin.)
 Bob Rutledge; B.Sc.(S. Calif.), Ph.D.(MIT)
 Brad Siwick; B.A.Sc., M.Sc., Ph.D.(Tor.) (*Canada Research Chair*)
 Andreas Warburton; B.Sc.(Vic. (BC)), M.Sc., Ph.D.(Tor.)
 Tracy Webb; B.Sc.(Tor.), M.Sc.(McM.), Ph.D.(Tor.)
 Brigitte Vachon; B.Sc.(McG.), Ph.D.(Vic. (BC)) (*Canada Research Chair*)

Lecturers

Z. Altounian; B.Sc., M.Sc.(Cairo), Ph.D.(McM.)

F. Buchinger; Dilp.(Mainz), Ph.D.(Joh. Gutenberg U.)

Associate Members

M. Chacron (*Physiology*), B.C. Eu (*Chemistry*), K. Gehring (*Biochemistry*), P. Hayden (*Computer Science*), M. Mackey (*Physiology*), J. Nadeau (*Biomedical Engineering*), E. Podgorsak (*Radiation Oncology*), D. Ronis (*Chemistry*), J. Seuntjens (*Medical Physics*), P.S. Swain (*Physiology*), T. Szkopek (*Electrical & Computer Engineering*), F. Verhaegen (*Oncology & Medical Physics*)

Curator (Rutherford Museum and McPherson Collection)

Jean Barrette; B.Sc., M.Sc., Ph.D.(Montr.)

Physics is in many ways the parent of the other natural sciences and its discoveries and laws continually affect their development. Its range and scope extend in space and time from subnuclear particles to the universe itself. The subfields of physics such as mechanics, thermodynamics, electricity, atomic physics and quantum mechanics, to mention but a few, permeate all other scientific disciplines. People trained in physics are employed in industry, government, and educational systems where they find many challenges as teachers, researchers, administrators and in the rapidly developing area of scientific business.

The two main undergraduate programs in Physics at McGill are the Honours and the Major. The Honours program is highly specialized and the courses are very demanding. This program is appropriate for students who wish to make an in-depth study of the subject in preparation for graduate work and an academic or professional career in physics. The two joint honours, one in Mathematics and Physics and the other in Physics and Chemistry, are even more specialized and demanding. They are intended for students who wish to develop a strong basis in both physics and the other discipline and are intended as preparation for graduate work and a professional or academic career. Although these two programs have a bias for theoretical work, they are broad enough and strong enough to prepare students for further study in either experimental physics or respectively mathematics or chemistry. High standing in CEGEP or Freshman-year mathematics and physics is a requirement for admission to these Honours programs.

The Major program, on the other hand, offers a broad training in classical and modern physics and yet leaves room for the student to take a meaningful sequence of courses in other areas. It is intended primarily for students who wish to pursue careers in fields for which physics provides a basis. However, this program also provides a preparation for graduate studies.

It is possible for students to transfer from the Major program to the Honours program after the first year of studies; see comments to this effect below after the description of the Honours program.

There are also a number of other Major programs: Atmospheric Sciences and Physics, Physics and Computer Science, Physics and Geophysics, and Physiology and Physics, offered jointly with other departments, and a Minor program in Electrical Engineering, available only to students in the Physics Major program. In addition, there is a Minor in Physics and a core Physics component of the Liberal Science Program, for students less interested in a specialized education.

For those interested in a career as a high school science teacher, the concurrent program leading to both a B.Sc. and a B.Ed. degree provides several physics options. These combine physics courses from the Major and Minor programs with courses from either Biology or Chemistry and with Education courses. (For details, see "[Science or Mathematics for Teachers](#)", in [section 12.13.34](#).)

Students from outside of the Province of Quebec will ordinarily register in the Science Freshman program. Physics offers two sequences of courses for this program: they are described below.

The list of pre- and corequisites is not absolute. In many cases permission of the Department may be sought to have a specific prerequisite waived. The procedure is to ask the professor in charge of the course to review the request for such a waiver. The prerequisites of the 100-level courses are described in the following section entitled Science Freshman Program.

Students interested in any of the Physics programs should contact the Department for an adviser.

A Science Major Concentration in Physics is available to students pursuing the B.A. & Sc. degree. This Major Concentration is described in the Bachelor of Arts and Science section of the Calendar; see "**Physics (PHYS)**", in section 12.13.29 for details.

Internship Year in Science (IYS)

IYS is a pre-graduate work experience program available to eligible students and normally taken between their U2 and U3 years. For more information, see "**Industrial Practicum (IP) and Internship Year in Science (IYS)**", in section 12.12.4, under Faculty of Engineering.

The following programs are also available with an internship component:

- Major in Physics
- Honours in Physics
- Joint Honours Program in Physics and Chemistry
- Joint Honours Program in Physics and Mathematics
- Joint Major Program in Atmospheric Science and Physics
- Joint Major Program in Physics and Computer Science
- Joint Major Program in Physics and Geophysics

SCIENCE FRESHMAN PROGRAM

Students entering McGill with a Quebec CEGEP profile in Science will normally begin their programs in Physics with courses at the 200 level.

Students without this profile should normally take courses PHYS 131 and PHYS 142 if they have previously taken physics at the high school level and should be taking differential calculus concurrently with PHYS 131 and integral calculus concurrently with PHYS 142. Those students who have not previously taken physics at the high school level and who intend to do programs in the Biological Sciences may instead take courses PHYS 101 and PHYS 102. All students are expected to have reasonable fluency in algebra, geometry and trigonometry at the high school level. If this is not the case, then MATH 112 should be taken concurrently with PHYS 101. Those for whom this is not necessary are advised to take MATH 139 concurrently with PHYS 101.

PHYSICS PRE-PROGRAM REQUIREMENTS

Students entering Physics programs from the Freshman Program must have successfully completed PHYS 131/142; CHEM 110/120; either BIOL 111 or BIOL 112; MATH 133; and either MATH 140/141 or MATH 150/151; or their equivalents. Quebec students must have completed the DEC with appropriate science and mathematics courses.

MINOR IN PHYSICS (18 credits)

The 18-credit Minor permits no overlap with any other programs. It contains no Mathematics courses, although many of the courses in it have Math pre- or corequisites. It will, therefore, be particularly appropriate to students in Mathematics, but it is also available to any Science student with the appropriate mathematical background.

Students in certain programs (e.g., the Major in Chemistry) will find that there are courses in the Minor that are already part of their program, or that they may not take for credit because of a substantial overlap of material with a course or courses in their program. After consultation with an adviser, such students may complete the Minor by substituting any other physics course(s) from the Major or Honours Physics programs.

Required Course (3 credits)

PHYS 257 (3) Experimental Methods 1

Complementary Courses (15 credits)

15 credits to be selected as follows:

- PHYS 230 (3) Dynamics of Simple Systems
or PHYS 251(3) Honours Classical Mechanics 1
- PHYS 232 (3) Heat and Waves
or PHYS 253(3) Thermal Physics
- PHYS 258 (3) Experimental Methods 2
or PHYS 241(3) Signal Processing

- PHYS 271 (3) Quantum Physics
or PHYS 260(3) Modern Physics and Relativity
or PHYS 214(3) Introductory Astrophysics
or PHYS 225(3) Musical Acoustics
- PHYS 340 (3) Majors Electricity and Magnetism
or PHYS 350(3) Honours Electricity and Magnetism

LIBERAL PROGRAM: CORE SCIENCE COMPONENT IN PHYSICS (48 credits)

Required Courses (39 credits)

- MATH 222 (3) Calculus 3
- MATH 223 (3) Linear Algebra
- MATH 314 (3) Advanced Calculus
- MATH 315 (3) Ordinary Differential Equations
- PHYS 230 (3) Dynamics of Simple Systems
- PHYS 232 (3) Heat and Waves
- PHYS 241 (3) Signal Processing
- PHYS 257 (3) Experimental Methods 1
- PHYS 258 (3) Experimental Methods 2
- PHYS 333 (3) Thermal and Statistical Physics
- PHYS 340 (3) Majors Electricity and Magnetism
- PHYS 436 (3) Modern Physics
- PHYS 446 (3) Majors Quantum Physics

Complementary Courses (9 credits)

9 credits selected from:

- PHYS 328 (3) Electronics
- PHYS 331 (3) Topics in Classical Mechanics
- PHYS 339 (3) Measurements Laboratory in General Physics
- PHYS 342 (3) Majors Electromagnetic Waves
- PHYS 434 (3) Optics
- PHYS 439 (3) Majors Laboratory in Modern Physics

MAJOR IN PHYSICS (60 credits)

U1 Required Courses (21 credits)

- MATH 222 (3) Calculus 3
- MATH 223 (3) Linear Algebra
- PHYS 230 (3) Dynamics of Simple Systems
- PHYS 232 (3) Heat and Waves
- PHYS 241 (3) Signal Processing
- PHYS 257 (3) Experimental Methods 1
- PHYS 258 (3) Experimental Methods 2

U2 Required courses (24 credits)

- MATH 314 (3) Advanced Calculus
- MATH 315 (3) Ordinary Differential Equations
- PHYS 328 (3) Electronics
- PHYS 331 (3) Topics in Classical Mechanics
- PHYS 333 (3) Thermal and Statistical Physics
- PHYS 339 (3) Measurements Laboratory in General Physics
- PHYS 340 (3) Majors Electricity and Magnetism
- PHYS 342 (3) Majors Electromagnetic Waves

U3 Required Courses (15 credits)

- PHYS 434 (3) Optics
- PHYS 436 (3) Modern Physics
- PHYS 439 (3) Majors Laboratory in Modern Physics
- PHYS 446 (3) Majors Quantum Physics
- PHYS 449 (3) Majors Research Project

It is possible for students to transfer from the Major to the Honours program after the U1 year; see the conditions and courses described after the description of the Honours program.

JOINT MAJOR IN PHYSICS AND GEOPHYSICS (69 credits)

The Joint Major program in Physics and Geophysics provides a firm basis for graduate work in geophysics and related fields as well as a sound preparation for those who wish to embark on a career directly after the B.Sc.

U1 Required Courses (30 credits)

EPSC 203	(3)	Structural Geology 1
EPSC 210	(3)	Introductory Mineralogy
EPSC 231	(3)	Field School 1
MATH 222	(3)	Calculus 3
MATH 223	(3)	Linear Algebra
MATH 314	(3)	Advanced Calculus
PHYS 230	(3)	Dynamics of Simple Systems
PHYS 232	(3)	Heat and Waves
PHYS 257	(3)	Experimental Methods 1
PHYS 258	(3)	Experimental Methods 2

U2 Required Courses (18 credits)

EPSC 320	(3)	Elementary Earth Physics
EPSC 350	(3)	Tectonics
MATH 315	(3)	Ordinary Differential Equations
MATH 319	(3)	Introduction to Partial Differential Equations
PHYS 339	(3)	Measurements Laboratory in General Physics
PHYS 340	(3)	Majors Electricity and Magnetism

U2 or U3 Required Courses (6 credits)

EPSC 330	(3)	Earthquakes and Earth Structure
EPSC 510	(3)	Geodynamics and Geomagnetism

U3 Required Courses (15 credits)

PHYS 331	(3)	Topics in Classical Mechanics
PHYS 332	(3)	Physics of Fluids
PHYS 333	(3)	Thermal and Statistical Physics
PHYS 342	(3)	Majors Electromagnetic Waves
PHYS 446	(3)	Majors Quantum Physics

JOINT MAJOR IN ATMOSPHERIC SCIENCE AND PHYSICS

under "**Atmospheric and Oceanic Sciences (ATOC)**", in section 12.13.3. This program provides a firm basis for graduate work in atmospheric science and related fields as well as a sound preparation for those who wish to embark on a career directly after the B.Sc. Students should consult undergraduate advisers in both departments.

JOINT MAJOR IN PHYSICS AND COMPUTER SCIENCE

(66 credits)

The Joint Major in Physics and Computer Science is designed to give motivated students the opportunity to combine the two fields in a way that will distinguish them from the graduates of either field by itself. The two disciplines complement each other, with physics providing an analytic problem-solving outlook and basic understanding of nature, while computer science enhances the ability to make practical and marketable applications, in addition to having its own theoretical interest. Graduates of this program may be able to present themselves as being more immediately useful than a pure physics major, but with more breadth than just a programmer. They will be able to demonstrate their combined expertise in the Special Project course which is the centrepiece of the final year of the program.

U1 Required Courses (21 credits)

COMP 250	(3)	Introduction to Computer Science
MATH 222	(3)	Calculus 3
MATH 223	(3)	Linear Algebra
MATH 240	(3)	Discrete Structures 1
PHYS 230	(3)	Dynamics of Simple Systems
PHYS 257	(3)	Experimental Methods 1
PHYS 258	(3)	Experimental Methods 2

U2 Required Courses (24 credits)

COMP 206	(3)	Introduction to Software Systems
COMP 251	(3)	Data Structures and Algorithms
COMP 302	(3)	Programming Languages and Paradigms
COMP 350	(3)	Numerical Computing
MATH 314	(3)	Advanced Calculus
MATH 315	(3)	Ordinary Differential Equations
PHYS 232	(3)	Heat and Waves
PHYS 241	(3)	Signal Processing

U3 Required Courses (21 credits)

COMP 360	(3)	Algorithm Design Techniques
MATH 323	(3)	Probability
PHYS 331	(3)	Topics in Classical Mechanics
PHYS 339	(3)	Measurements Laboratory in General Physics
PHYS 340	(3)	Majors Electricity and Magnetism
PHYS 446	(3)	Majors Quantum Physics
PHYS 489	(3)	Special Project

JOINT MAJOR IN PHYSIOLOGY AND PHYSICS under "**Physiology (PHGY)**", in section 12.13.30. This program provides a firm basis for graduate work in bio-physics and other interdisciplinary fields involving the physical and biological sciences.

HONOURS IN PHYSICS (78 credits)

Students entering this program for the first time should have high standing in mathematics and physics. In addition, a student who has not completed the equivalent of MATH 222 must take it in the first term without receiving credits toward the 78 credits required in the Honours program.

A student whose average in the required and complementary courses in any year falls below a GPA of 3.00, or whose grade in any individual required or complementary course falls below a C (in both the final examination and supplemental examination if taken), may not register in the Honours program the following year, or graduate with the Honours degree, except with the permission of the Department.

U1 Required Courses (27 credits)

MATH 247	(3)	Honours Applied Linear Algebra
MATH 248	(3)	Honours Advanced Calculus
MATH 249	(3)	Honours Complex Variables
MATH 325	(3)	Honours Ordinary Differential Equations
PHYS 241	(3)	Signal Processing
PHYS 251	(3)	Honours Classical Mechanics 1
PHYS 257	(3)	Experimental Methods 1
PHYS 258	(3)	Experimental Methods 2
PHYS 260	(3)	Modern Physics and Relativity

U2 Required Courses (24 credits)

MATH 375	(3)	Honours Partial Differential Equations
PHYS 253	(3)	Thermal Physics
PHYS 350	(3)	Honours Electricity and Magnetism
PHYS 357	(3)	Honours Quantum Physics 1
PHYS 359	(3)	Honours Laboratory in Modern Physics 1
PHYS 362	(3)	Statistical Mechanics
PHYS 451	(3)	Honours Classical Mechanics 2
PHYS 457	(3)	Honours Quantum Physics 2

U3 Required Courses (6 credits)

PHYS 551	(3)	Quantum Theory
PHYS 352	(3)	Honours Electromagnetic Waves

U3 Complementary Courses (21 credits)

6 credits selected from:

PHYS 459D1	(3)	Honours Research Thesis
and PHYS 459D2	(3)	Honours Research Thesis
PHYS 469	(3)	Honours Laboratory in Modern Physics 2
PHYS 479	(3)	Honours Research Project

15 credits selected from:

PHYS 332	(3)	Physics of Fluids
PHYS 434	(3)	Optics
PHYS 479	(3)	Honours Research Project
PHYS 514	(3)	General Relativity
PHYS 521	(3)	Astrophysics
PHYS 557	(3)	Nuclear Physics
PHYS 558	(3)	Solid State Physics
PHYS 559	(3)	Advanced Statistical Mechanics
PHYS 562	(3)	Electromagnetic Theory
PHYS 567	(3)	Particle Physics
PHYS 580	(3)	Introduction to String Theory

or other 3-credit course approved by the Department of Physics.

Physics Major students may enter the Honours program after their first year if they have passed all of the following courses with a C or better, and obtained a GPA of 3.5 or better in these courses:

MATH 222	(3)	Calculus 3
MATH 223	(3)	Linear Algebra
MATH 314	(3)	Advanced Calculus
MATH 315	(3)	Ordinary Differential Equations
PHYS 230	(3)	Dynamics of Simple Systems
PHYS 232	(3)	Heat and Waves
PHYS 241	(3)	Signal Processing
PHYS 257	(3)	Experimental Methods 1
PHYS 258	(3)	Experimental Methods 2

The written permission of an adviser is required for this change of program.

JOINT HONOURS IN MATHEMATICS AND PHYSICS

(81 credits)

This is a specialized and demanding program intended for students who wish to develop a strong basis in both Mathematics and Physics in preparation for graduate work and a professional or academic career. Although the program is optimized for theoretical physics, it is broad enough and strong enough to prepare students for further study in either experimental physics or mathematics.

The minimum requirement for entry into the program is completion with high standing of the usual CEGEP courses in physics and in mathematics, or the Physics Pre-Program Requirements as explained above. In addition, a student who has not completed the equivalent of MATH 222 must take it in the first term without receiving credits toward the 81 credits required in the Joint Honours program.

A student whose average in the required and complementary courses in any year falls below a GPA of 3.00, or whose grade in any individual required or complementary course falls below a C (in both the final examination and supplemental examination if taken), may not register in this Joint Honours program the following year, or graduate with the Joint Honours degree, except with permission of both Departments.

The student will have two advisers, one from Mathematics and the other from Physics.

U1 Required Courses (27 credits)

MATH 235	(3)	Algebra 1
MATH 248	(3)	Honours Advanced Calculus
MATH 249	(3)	Honours Complex Variables
MATH 325	(3)	Honours Ordinary Differential Equations
PHYS 241	(3)	Signal Processing
PHYS 251	(3)	Honours Classical Mechanics 1
PHYS 257	(3)	Experimental Methods 1
PHYS 258	(3)	Experimental Methods 2
PHYS 260	(3)	Modern Physics and Relativity

U1 Complementary Course (3 credits)

3 credits selected from:

MATH 251	(3)	Honours Algebra 2
MATH 247	(3)	Honours Applied Linear Algebra

U2 Required Courses (27 credits)

MATH 242	(3)	Analysis 1
MATH 255	(3)	Honours Analysis 2
MATH 375	(3)	Honours Partial Differential Equations
PHYS 253	(3)	Thermal Physics
PHYS 350	(3)	Honours Electricity and Magnetism
PHYS 357	(3)	Honours Quantum Physics 1
PHYS 362	(3)	Statistical Mechanics
PHYS 451	(3)	Honours Classical Mechanics 2
PHYS 457	(3)	Honours Quantum Physics 2

U3 Required Courses (12 credits)

MATH 354	(3)	Honours Analysis 3
MATH 380	(3)	Honours Differential Geometry
PHYS 352	(3)	Honours Electromagnetic Waves
PHYS 359	(3)	Honours Laboratory in Modern Physics 1

U3 Complementary Courses (12 credits)

3 credits selected from:

MATH 355	(3)	Honours Analysis 4
MATH 370	(3)	Honours Algebra 3

6 credits selected from:

PHYS 479	(3)	Honours Research Project
PHYS 514	(3)	General Relativity
PHYS 551	(3)	Quantum Theory
PHYS 521	(3)	Astrophysics
PHYS 557	(3)	Nuclear Physics
PHYS 558	(3)	Solid State Physics
PHYS 559	(3)	Advanced Statistical Mechanics
PHYS 562	(3)	Electromagnetic Theory
PHYS 567	(3)	Particle Physics
PHYS 580	(3)	Introduction to String Theory

3 credits in Honours Mathematics

JOINT HONOURS IN PHYSICS AND CHEMISTRY (80 credits)

This is a specialized and demanding program intended primarily, although not exclusively, for students with a theoretical bias who are interested in working in fields of study at the crossroads of physical chemistry and physics. The program will prepare students for either theoretical or experimental graduate work in departments where there is an emphasis on such cross-disciplinary areas as condensed matter physics, chemical physics, or material science.

A student whose average in the required and complementary courses in any year falls below a GPA of 3.00, or whose grade in any individual required or complementary course falls below a C (in both the final examination and supplemental examination if taken), may not register in this Joint Honours program the following year, or graduate with the Joint Honours degree, except with permission of both Departments.

U1 Required Courses (30 credits)

CHEM 223	(2)	Introductory Physical Chemistry 1
CHEM 243	(2)	Introductory Physical Chemistry 2
CHEM 253*	(1)	Introductory Physical Chemistry 1 Laboratory
CHEM 263*	(1)	Introductory Physical Chemistry 2 Laboratory
MATH 247	(3)	Honours Applied Linear Algebra
MATH 248	(3)	Honours Advanced Calculus
MATH 249	(3)	Honours Complex Variables
MATH 325	(3)	Honours Ordinary Differential Equations
PHYS 241	(3)	Signal Processing
PHYS 251	(3)	Honours Classical Mechanics 1
PHYS 257	(3)	Experimental Methods 1
PHYS 258	(3)	Experimental Methods 2

*Not offered 2007-8. Students entering in Sept. 2007 will take CHEM 363 in U2 or U3 instead.

U2 Required Courses (24 credits)

CHEM 212	(4)	Introductory Organic Chemistry 1
CHEM 281	(3)	Inorganic Chemistry 1
CHEM 355	(3)	Molecular Properties and Structure 2
CHEM 365	(2)	Statistical Thermodynamics
COMP 208	(3)	Computers in Engineering
PHYS 350	(3)	Honours Electricity and Magnetism
PHYS 357	(3)	Honours Quantum Physics 1
PHYS 457	(3)	Honours Quantum Physics 2

U3 Required Courses (14 credits)

CHEM 393	(2)	Physical Chemistry Laboratory 2
CHEM 455	(3)	Introductory Polymer Chemistry
CHEM 556	(3)	Advanced Quantum Mechanics
PHYS 352	(3)	Honours Electromagnetic Waves
PHYS 558	(3)	Solid State Physics

U3 Complementary Courses (12 credits)

(with at least 3 credits in Chemistry and 3 credits in Physics)

3 credits selected from:

CHEM 593 (3) Statistical Mechanics
 PHYS 559 (3) Advanced Statistical Mechanics

9 credits selected from:

CHEM 480D1 /D2 (3) Research Project 2
 and CHEM 490D1/D2 (3) Research Project 3
 CHEM 531 (3) Chemistry of Inorganic Materials
 CHEM 575 (3) Chemical Kinetics
 CHEM 585 (3) Colloid Chemistry
 MATH 375 (3) Honours Partial Differential Equations
 PHYS 434 (3) Optics
 PHYS 451 (3) Honours Classical Mechanics 2
 PHYS 469 (3) Honours Laboratory in Modern Physics 2
 PHYS 479 (3) Honours Research Project
 PHYS 562 (3) Electromagnetic Theory

MINOR IN ELECTRICAL ENGINEERING (24 credits)

[Program registration done by Student Affairs Office]

The Minor program does not carry professional recognition. Only students who satisfy the requirements of the Major in Physics are eligible for this Minor. Students registered for this option cannot count PHYS 241 towards the requirements of the Major in Physics, and should replace this course by another Physics or Mathematics course. Students who select ECSE 334 in the Minor cannot count PHYS 328 towards the requirements of the Major in Physics, and should replace this course by another Physics or Mathematics course.

Required Courses (12 credits)

ECSE 200 (3) Fundamentals of Electrical Engineering
 ECSE 210 (3) Circuit Analysis
 ECSE 303 (3) Signals and Systems 1
 ECSE 330 (3) Introduction to Electronics

Complementary Courses (12 credits)

ECSE 305 (3) Probability and Random Sig. 1
 or ECSE 334 (3) Introduction to Microelectronics

and 9 credits of ECSE courses at the 200-, 300-, or 400-level subject to approval by the Department of Electrical and Computer Engineering.

John Milton, Chicago

Serge Rossignol, Montreal

Malmur R.I. Sairam, Montreal

Physiology has its roots in many of the basic sciences including biology, chemistry, mathematics, and physics. Physiology overlaps with other biomedical sciences such as anatomy, biochemistry, pathology and pharmacology, and with psychology and biomedical engineering, and is one of the prime contributors of basic scientific knowledge to the clinical medical sciences.

Members of the Department of Physiology at McGill are engaged in studies dealing with molecules, single cells, or entire systems in a variety of vertebrates, including man. A wide range of interest and expertise is represented, including cardiovascular, respiratory, gastrointestinal and renal physiology, the physiology of exercise, neurophysiology, endocrinology, immunology, biophysics and biomathematics. Some faculty members have formal or informal links with the departments of mathematics, physics, electrical engineering, and chemistry, and with clinical

departments (medicine, surgery, pediatrics, neurology, obstetrics, psychiatry, anesthesia), reflecting and reinforcing the close ties between physiology and other disciplines.

Graduates at the B.Sc. level have found rewarding careers in teaching, in secondary schools and CEGEPs, government service, and laboratory technical assistance, such as in pharmaceutical houses, hospitals, and institutions of higher learning. Moreover, physiology provides an excellent background for medicine, dentistry or other postgraduate work, in such fields as physiology, experimental medicine, pharmacology, biochemistry or physiological psychology.

The programs offered in Physiology differ in their orientation but they all have a common core of material covering cardiovascular, respiratory, gastrointestinal and renal physiology, neurophysiology, endocrinology and immunology. The specified U1 courses are identical for all programs except the Joint Major Programs in Physiology and Physics, Physiology and Mathematics, and the Joint Honours Program in Immunology and thus afford the student maximal flexibility before deciding on a particular program to follow in U2 and U3.

Academic advising is compulsory. All new students to the Department, Freshman and CEGEP, must see an adviser upon entering the program. Contact the Student Affairs Officer at (514) 398-3689 for more information.

Returning students are required to consult with their advisers during the advising period for returning students, and regularly throughout the year. It is important that graduating students have their record checked by their adviser at the beginning of their final year.

PLEASE NOTE: Complementary courses are not electives.

The difference between Complementary courses and Required courses is that Complementary courses are defined as offering an element of choice, however small that choice may be. Students may choose from the two (or more) courses specified within Complementary Course segments of a program description, but ONLY from those. For further information, refer to [section "Course Information, Regulations and Descriptions \(Appendix\)"](#).

A Science Major Concentration in Biomedical Sciences is available to students pursuing the B.A. & Sc. degree. This Major Concentration is described in the Bachelor of Arts and Science section of the Calendar; see ["Biomedical Sciences"](#), in [section 6.12.4](#) for details.

LIBERAL PROGRAM: CORE SCIENCE COMPONENT IN PHYSIOLOGY (50 credits)

Required Courses (38 credits)

BIOL 200	(3)	Molecular Biology
BIOL 202	(3)	Basic Genetics
BIOL 301	(4)	Cell and Molecular Laboratory
CHEM 212*	(4)	Introductory Organic Chemistry 1
CHEM 222*	(4)	Introductory Organic Chemistry 2
PHGY 209	(3)	Mammalian Physiology 1
PHGY 210	(3)	Mammalian Physiology 2
PHGY 212	(1)	Introductory Physiology Laboratory 1
PHGY 213	(1)	Introductory Physiology Laboratory 2
PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 312	(3)	Respiratory, Renal, & Cardiovascular Physiology
PHGY 313	(3)	Blood, Gastrointestinal, & Immune Systems Physiology
PHGY 314	(3)	Integrative Neuroscience

*Students who have taken CHEM 212 and/or CHEM 222 in CEGEP are exempted and must replace these credits with an elective course(s).

Complementary Courses (12 credits)

6 credits selected from:

BIOL 201	(3)	Cell Biology and Metabolism
or BIOC 212	(3)	Molecular Mechanisms of Cell Function
BIOL 373	(3)	Biometry

or BIOL 309 (3) Mathematical Models in Biology

6 credits selected from upper level physiology courses – see approved list on Department Website.

MAJOR IN PHYSIOLOGY (64-65 credits)

The Major Program includes, in addition to some intensive studies in Physiology, a strong core content of related biomedical sciences. Admission to the Major Program will be in U2, upon completion of the U1 required courses, and in consultation with the student's adviser.

If not previously taken CHEM 212 Introductory Organic Chemistry 1 must be completed in addition to the 64-65 program credits.

U1 Required Courses (18 credits)

BIOL 200	(3)	Molecular Biology
BIOL 202	(3)	Basic Genetics
CHEM 222	(4)	Introductory Organic Chemistry 2
PHGY 209	(3)	Mammalian Physiology 1
PHGY 210	(3)	Mammalian Physiology 2
PHGY 212	(1)	Introductory Physiology Laboratory 1
PHGY 213	(1)	Introductory Physiology Laboratory 2

U2 and U3 Required Courses (19 credits)

PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 312	(3)	Respiratory, Renal, & Cardiovascular Physiology
PHGY 313	(3)	Blood, Gastrointestinal, & Immune Systems Physiology
PHGY 314	(3)	Integrative Neuroscience
BIOL 301	(4)	Cell and Molecular Laboratory
BIOC 311	(3)	Metabolic Biochemistry

Complementary Courses (27-28 credits)

12-13 credits selected from:

BIOL 201	(3)	Cell Biology and Metabolism
or BIOC 212	(3)	Molecular Mechanisms of Cell Function
BIOL 373	(3)	Biometry
or BIOL 309	(3)	Mathematical Models in Biology
CHEM 203	(3)	Survey of Physical Chemistry
or CHEM 204	(3)	Physical Chemistry/Biological Sciences 1
ANAT 214	(3)	Systemic Human Anatomy
or ANAT 261	(4)	Introduction to Dynamic Histology

9 credits selected from upper level physiology courses – see approved list on Department Website.

6 credits selected from upper level science courses – see approved list on Department Website.

JOINT MAJOR IN PHYSIOLOGY AND MATHEMATICS (77 credits)

U1 Required Courses (14 credits)

PHGY 212	(1)	Introductory Physiology Laboratory 1
PHGY 213	(1)	Introductory Physiology Laboratory 2
MATH 222	(3)	Calculus 3
MATH 247	(3)	Honours Applied Linear Algebra
or MATH 223	(3)	Linear Algebra
BIOL 200	(3)	Molecular Biology
BIOL 309	(3)	Mathematical Models in Biology

U1 Complementary Courses (15 credits)

9 credits selected from:

BIOL 201	(3)	Cell Biology and Metabolism
or BIOC 212	(3)	Molecular Mechanisms of Cell Function
PHGY 209	(3)	Mammalian Physiology 1
and PHGY 210	(3)	Mammalian Physiology 2
or PHGY 201	(3)	Human Physiology: Control Systems
and PHGY 202	(3)	Human Physiology: Body Functions

6 credits selected from:

MATH 248	(3)	Honours Advanced Calculus
or MATH 314	(3)	Advanced Calculus
MATH 325	(3)	Honours Ordinary Differential Equations
or MATH 315	(3)	Ordinary Differential Equations

U2 Required Courses (24 credits)

MATH 242	(3)	Analysis 1
MATH 243	(3)	Analysis 2
MATH 323	(3)	Probability
MATH 326	(3)	Nonlinear Dynamics and Chaos
PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 312	(3)	Respiratory, Renal, & Cardiovascular Physiology
PHGY 313	(3)	Blood, Gastrointestinal, & Immune Systems Physiology
PHGY 314	(3)	Integrative Neuroscience

U2 or U3 Required Courses (6 credits)

MATH 437	(3)	Mathematical Methods in Biology
PHYS 413	(3)	Physical Basis of Physiology

U3 Required Courses (18 credits)

BMDE 519	(3)	Analysis of Biomedical Systems & Signals
MATH 319	(3)	Introduction to Partial Differential Equations
MATH 324	(3)	Statistics
PHGY 461D1	(4.5)	Experimental Physiology
PHGY 461D2	(4.5)	Experimental Physiology

JOINT MAJOR IN PHYSIOLOGY AND PHYSICS (80 credits)

This program provides a firm foundation in physics, mathematics and physiology. It is appropriate for students interested in applying methods of the physical sciences to problems in physiology and allied biological sciences.

U1 Required Courses (17 credits)

MATH 222	(3)	Calculus 3
PHGY 212*	(1)	Introductory Physiology Laboratory 1
PHGY 213*	(1)	Introductory Physiology Laboratory 2
PHYS 230	(3)	Dynamics of Simple Systems
PHYS 232	(3)	Heat and Waves
PHYS 257	(3)	Experimental Methods 1
PHYS 258	(3)	Experimental Methods 2

U1 Complementary Courses (9 credits)

MATH 223	(3)	Linear Algebra
or MATH 247	(3)	Honours Applied Linear Algebra
PHGY 209	(3)	Mammalian Physiology 1
and PHGY 210*	(3)	Mammalian Physiology 2
or PHGY 201	(3)	Human Physiology: Control Systems
and PHGY 202	(3)	Human Physiology: Body Functions

* The corequisite BIOL 200, BIOL 201 is waived for this program.

U2 Required Courses (21 credits)

MATH 326	(3)	Nonlinear Dynamics and Chaos
PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 312	(3)	Respiratory, Renal, & Cardiovascular Physiology
PHGY 313	(3)	Blood, Gastrointestinal, & Immune Systems Physiology
PHGY 314	(3)	Integrative Neuroscience
PHYS 328	(3)	Electronics
PHYS 339	(3)	Measurements Laboratory in General Physics

U2 Complementary Course (6 credits)

MATH 315	(3)	Ordinary Differential Equations
or MATH 325	(3)	Honours Ordinary Differential Equations
MATH 314	(3)	Advanced Calculus
or MATH 248	(3)	Honours Advanced Calculus

U2 or U3 Required Courses (6 credits)

MATH 437	(3)	Mathematical Methods in Biology
PHYS 413	(3)	Physical Basis of Physiology

U3 Required Courses (21 credits)

BMDE 519	(3)	Analysis of Biomedical Systems and Signals
PHGY 461D1	(4.5)	Experimental Physiology
PHGY 461D2	(4.5)	Experimental Physiology

PHYS 333	(3)	Thermal and Statistical Physics
PHYS 340	(3)	Majors Electricity and Magnetism
PHYS 446	(3)	Majors Quantum Physics

HONOURS IN PHYSIOLOGY (75 credits)

All admissions to the Honours program will be in U2, and the student must have a U1 GPA of 3.30, with no less than a B in PHGY 209 and PHGY 210. Admission to U3 requires a U2 CGPA of 3.20 with no less than a B in U2 Physiology courses. Decisions for admission to U3 will be heavily influenced by student standing in U2 courses.

The Department reserves the right to restrict the number of entering students in the Honours program. Students who do not maintain Honours standing may transfer their registration to the Major Program in Physiology.

The deadline to apply to the Honours Program is June 1. Application forms are available in McIntyre 1021. Students should include in their letters telephone numbers where they can be reached during the last week of August. Students are responsible for picking up their letters of decision in McIntyre 1021 no later than one week before classes start.

Graduation: To graduate from the Honours Physiology Program the student will have a CGPA of 3.20 with a mark no less than a B in all Physiology courses.

If not previously taken CHEM 212 Introductory Organic Chemistry 1 must be completed in addition to the 75 program credits.

Required Courses (60 credits)

ANAT 261	(4)	Introduction to Dynamic Histology
BIOC 311	(3)	Metabolic Biochemistry
BIOL 200	(3)	Molecular Biology
BIOL 202	(3)	Basic Genetics
BIOL 301	(4)	Cell and Molecular Laboratory
CHEM 222	(4)	Introductory Organic Chemistry 2
PHGY 209	(3)	Mammalian Physiology 1
PHGY 210	(3)	Mammalian Physiology 2
PHGY 212	(1)	Introductory Physiology Laboratory 1
PHGY 213	(1)	Introductory Physiology Laboratory 2
PHGY 311	(3)	Channels, Synapses & Hormones
PHGY 312	(3)	Respiratory, Renal, & Cardiovascular Physiology
PHGY 313	(3)	Blood, Gastrointestinal, & Immune Systems Physiology
PHGY 314	(3)	Integrative Neuroscience
PHGY 351	(3)	Research Techniques: Physiology
PHGY 359D1	(.5)	Tutorial in Physiology
PHGY 359D2	(.5)	Tutorial in Physiology
PHGY 459D1	(3)	Physiology Seminar
PHGY 459D2	(3)	Physiology Seminar
PHGY 461D1	(4.5)	Experimental Physiology
PHGY 461D2	(4.5)	Experimental Physiology

Complementary Courses (15 credits)

9 credits selected from:

BIOL 201	(3)	Cell Biology and Metabolism
or BIOC 212	(3)	Molecular Mechanisms of Cell Function
BIOL 373	(3)	Biometry
or BIOL 309	(3)	Mathematical Models in Biology
CHEM 203	(3)	Survey of Physical Chemistry
or CHEM 204	(3)	Physical Chemistry/Biological Sciences 1

6 credits selected from upper level physiology courses – see approved list on Department Website.

INTERDEPARTMENTAL HONOURS IN IMMUNOLOGY, under "Immunology Interdepartmental Honours", in section 12.13.17.

This program is offered by the Departments of Biochemistry, Microbiology and Immunology, and Physiology. Physiology students interested in the program should contact Dr. Julie Desbarats, julie.desbarats@mcgill.ca, (514) 398-5126.

12.13.31 Psychiatry (PSYT)

There are no B.Sc. programs in Psychiatry, but the PSYT courses listed in the Courses section of this Calendar are administered by the Faculty of Science and are open to Arts and Science students and to graduate students.

12.13.32 Psychology (PSYC)

Stewart Biological Sciences Building, Room W8/1
1205 Avenue Docteur Penfield
Montreal, QC, H3A 1B1

Telephone: (514) 398-6100
Fax: (514) 398-4896

Don C. Donderi; B.A., B.Sc.(Chic.), Ph.D.(C'neil)
Baerbel Knaeuper; Diploma, Dr. phil.(U. of Mannheim), Dr. phil.
habil.(Free Univ., Berlin)
Daniel J. Levitin; A.B.(Stan.), M.S., Ph.D.(Ore.) (*FCAR/FQRNT
Strategic Professor, Bell Professor of Psychology and E-
Commerce*)
John Lydon; B.A.(Notre Dame), M.A., Ph.D.(Wat.)
James C. Macdougall; B.A.(Car.), M.A., Ph.D.(McG.) (*part-time*)

Morton J. Mendelson; B.Sc.(McG.), A.M., Ph.D.(Harv.)
Karim Nader; B.Sc., Ph.D.(Tor.) (*William Dawson Scholar and
Alfred Sloan Fellow, CIHR New Investigator*)
Gillian A. O'Driscoll; B.A.(Welles.), M.A., Ph.D.(Harv.) (*William
Dawson Scholar*)
Debra Titone; B.A.(NY), M.A., Ph.D.(SUNY, Binghamton)
(*Canada Research Chair in Cognitive Neuroscience of
Language and Memory*)

Assistant Professors

Ian F. Bradley; B.Sc., M.Sc.(Tor.), Ph.D.(Wat.) (*part-time*)
Yogita Chudusama; B.Sc., Ph.D.(Cardiff Univ.)
Heungsun Hwang; B.A.(Chung-Ang Univ), Ph.D.(McG.)
Kristine Onishi; B.A.(Brown), M.A., Ph.D.(Ill.)
Zeev Rosberger; B.Sc.(McG.), M.A., Ph.D.(C'dia) (*part-time*)
Athena Vouloumanos; B.Sc.(McG), Ph.D.(Br. Col)

Lecturers

Rhonda Amsel; B.Sc., M.Sc.(McG.)
Jessey Bernstein; B.Sc., M.A., Ph.D.(Roch.)

Associate Members

Clinical Research Institute of Montreal: Terrance J. Coderre
Douglas Hospital: Howard Steiger
Desautels Faculty of Management (McG.): Ulf Bockenholt
Montreal Neurological Institute: Lesley Fellows, Marilyn Jones-
Gotman, Daniel Guitton, Brenda Milner, Edward Ruthazer,
Wayne Sossin, Viviane Sziklas, Robert Zatorre
Psychiatry: Frances Abbott, Marco Leyton
Vision Research Unit (Ophthalmology): Curtis Baker,
Robert Hess, Frederick A.A. Kingdom, Kathleen Mullen
Music Faculty: Stephen McAdams

Adjunct Professors

M. Bruck; B.A.(Wheaton), M.A., Ph.D.(McG.)
S. Burstein; B.Sc.(McG.), M.A., Ph.D.(Wat.)
P. Delise; B.Sc., M.Ps., Ph.D.(Montr.)
P. Gregoire; B.A.(College St. Marie), B.Ph., L.Ph., Ph.D.(Montr.)
Moon-Ho R. Ho; B.Sc., M.Phil.(Chinese Univ. of Hong Kong),
M.S., Ph.D.(Ill.)
B. Little; B.A. (Vic. (BC)), Ph.D.(Calif.)
A. Routtenberg; B.A.(McG.), M.A.(N'western), Ph.D.(Michigan)
D. Sookman; B.A.(McG.), M.A.(Guelph), Ph.D.(C'dia)
M. Spevack; B.Sc.(McG.), M.A.(Dal.), Ph.D.(McG.)
A. Surkis; Ph.D.(Montr.)
P. Zelazo; B.A.(Amer.Int'l. Coll.), M.S.(N. Carolina), Ph.D.(Wat.)

Part-time Appointments

Veronique Bohbot; B.A.(McG.), M.A., Ph.D.(Ariz.)
Pasqualina Di Dio; B.A.(McG.), M.A., Ph.D.(Roch.)
Judith LeGallais; B.A., M.A., Ph.D.(McG.)
Marco Leyton; B.Sc.(Nfld.), M.A., Ph.D.(C'dia)
Sonia Lupien; B.Sc., M.Sc., Ph.D.(Montr.)
Sazzad Nasir; B.Sc.(Dhaka), Ph.D.(Camb.)
Zbigniew Pleszewski; M.A., Ph.D.(Poznan)
Marjorie Rabiau; B.Sc.(Alta.), Ph.D.(McG.)
Maria Rajah; B.Sc., M.A., Ph.D.(Tor.)
Ronen Sigalt; B.A., M.B.A., Ph.D.(Ben-Gurion)
Christine Stich; Ph.D.(Free Univ., Berlin)
Stephen Stotland; B.A.(C'dia), M.A.(Tor.), Ph.D.(McG.)

The Department of Psychology offers programs in both Arts and Science. All B.A. programs in Psychology can be found in the Faculty of Arts entry, see section 5.12.43 "Psychology (PSYC)".

Psychology is the scientific study of mind and behaviour. It is both a social and a biological science. As a social science, psychology studies social interactions. As a biological science, it regards humans as the product of evolution and so studies them in biological perspective, comparing and contrasting human behaviour with that of other species.

The data of psychology are collected within the psychological laboratory by the use of experimental methods in the study of behaviour, and outside the laboratory by systematic observation of the behaviour of humans and animals. The aim is to formulate general principles of perception, learning, motivation, cognition and

social psychology that are relevant to different aspects of human life. Experimentation, laboratory techniques, observational procedures, measurement, and statistical methods are important tools of the psychologist.

Psychology has many interdisciplinary aspects. The study of psychological problems often involves knowledge drawn from other disciplines such as biology, physiology, linguistics, sociology, philosophy, and mathematics. For this reason a student with varied interests can frequently find a place for these in psychology.

Psychology is a young science so that explanations of the processes underlying observed phenomena are often theoretical and speculative. The major objectives of psychological study are to reduce the discrepancy between theory and fact and to provide better answers about why humans think and behave as they do.

Although a number of undergraduate courses in psychology have applied implications, applied training is not the purpose of the undergraduate curriculum. Its purpose is to introduce the student to an understanding of the basic core of psychological knowledge, theory, and method, regardless of questions of practical application.

The B.Sc. or B.A. with a Major or Honours degree in psychology is not a professional qualification. It does not qualify the individual to carry on professional work in psychology. In the Province of Quebec the minimum requirement for membership in the Order of Psychologists, the professional association governing the work of psychologists in the province, is a doctoral degree. All students planning to practise in the Province of Quebec will be examined on their proficiency in French before being admitted to the professional association. Undergraduate courses in psychology may prove of considerable value to students planning careers in professional fields other than psychology. These include but are not restricted to medicine, education, social work, human communication sciences, or business and industry.

Students who are interested in psychology as a career must pursue graduate studies. Persons who hold graduate degrees in psychology, usually the Ph.D., may find employment in universities, research institutes, hospitals, community agencies, government departments, large corporations, or may act as self-employed consultants. At the graduate level, psychology has many specialized branches including social psychology, physiological psychology, experimental psychology, clinical psychology, child psychology, industrial psychology, community psychology, educational psychology, and others.

Requirements for admission to graduate studies in psychology vary from one university to another and from one country to another. Nonetheless, both the Honours and Major degrees in psychology *may* qualify the student for admission to many graduate schools, provided that sufficiently high grades are obtained and, in some cases, that research experience has been obtained. During the U2 year, undergraduate students are strongly advised to verify the admission requirements of various graduate programs. This is to ensure that sufficient time is available for students to complete all necessary requirements for admission to their preferred graduate programs.

The essential differences between the Honours and the Major program are an emphasis on research methodology courses and practice in the Honours program, and that higher academic standards are required of Honours students. Honours students also have an opportunity to work in small groups closely with staff members.

INFORMATION MEETINGS FOR NEW STUDENTS

All new students entering the Psychology undergraduate program are required to attend an Information Meeting prior to registration. Students who have been accepted into a Bachelor of Science program in Psychology **must** attend one of these meetings. Newly admitted students from CEGEPs should attend the information session on June 18, 2008 at 10:00 a.m. in Room S3/3 of the Stewart Biological Sciences building. There will be an identical information session on August 25, 2008 in S1/3 at 1:00 p.m. in the Stewart Biological Sciences building for all other students, and for any CEGEP students who could not attend the earlier meeting. Students accepted into a Bachelor of Arts program must attend a dif-

ferent information meeting. (For details, see section 5.12.43 "Psychology (PSYC)".) At this meeting, Jessey Bernstein, the academic adviser, will explain the requirements of the Department's programs. Incoming students will have an opportunity to ask questions and receive advice on how to plan their courses. After this meeting students will make appointments for individual advising sessions, and fill out their Study Plan form for registration.

Entering students must bring their letter of acceptance and a copy of their collegial transcript(s). They will also need access to this Calendar and a preliminary Class Schedule before their individual advising session. Students will also find the Psychology Department Handbook helpful. It contains more detailed descriptions of psychology courses and provides guidelines for how students might pursue particular areas of interest. The Handbook is available on the Department Website, www.psych.mcgill.ca/ugrad/ugradm.htm.

Students entering the Psychology program in January are strongly encouraged to visit the academic adviser, Jessey Bernstein, in early December to clarify their course selections.

MINOR IN PSYCHOLOGY (24 credits)

A Minor program in Psychology is available to students registered in any B.Sc. program (other than Psychology). This program is intended to complement a student's primary field of study by providing a focused introduction to specialized topics in psychology.

A separate Minor Concentration exists for students registered in a program in the Faculty of Arts. Please see section 5.12.43 "Psychology (PSYC)" in Faculty of Arts section for more information.

The Minor program for Science students requires the completion of 24 credits, of which no more than 6 may overlap with the primary program. All courses in the Minor program must be passed with a minimum grade of C. A prerequisite to the program is PSYC 204 or equivalent, see section 12.3.6.1 "Course Overlap".

Complementary Courses (24 credits)

at least 3, but no more than 6, credits selected from:

- PSYC 211 (3) Intro Behavioural Neuroscience
- PSYC 212 (3) Perception
- PSYC 213 (3) Cognition
- PSYC 215 (3) Social Psychology

18-21 credits selected from among Psychology courses at the 300 level or above

LIBERAL, MAJOR AND HONOURS PROGRAMS IN PSYCHOLOGY

Recommended Background

It is expected that most students who enter a Major or Honours Program in Psychology will have taken introductory psychology, biology and statistics at the collegial level. Recommended CEGEP courses include Psychology 350-101 or 350-102 or equivalent, Biology CEGEP objective 00UK, 00XU or equivalent, Statistics (Mathematics) 201-307 or 201-337 or equivalent. Students must obtain a minimum grade of 75% in their CEGEP level statistics course. In the first year those students who have not taken the recommended collegial level statistics course, or those who have obtained a grade below 75%, must take Psychology PSYC 204. Those who have not taken the recommended collegial level biology must take BIOL 111 or BIOL 112, and those who have not taken Introductory Psychology in college must take PSYC 100.

Course Groups: List A and List B

The study of psychology covers many fields. To develop a breadth of understanding in psychology, students are expected to obtain knowledge beyond the introductory level in two or more areas of psychology. To ensure this requirement is met, Psychology courses are divided into two lists. List A covers the areas of behavioural neuroscience, cognition and quantitative methods. List B covers social, health and developmental psychology.

List A**(Behavioural Neuroscience, Cognition and Quantitative Methods)**

PSYC 301	(3)	Animal Learning and Theory
PSYC 308	(3)	Behavioural Neuroscience 1 * see notes
PSYC 310	(3)	Human Intelligence
PSYC 311	(3)	Human Cognition and the Brain
PSYC 315	(3)	Computational Psychology
PSYC 317	(3)	Genes and Behaviour
PSYC 318	(3)	Behavioural Neuroscience 2
PSYC 329	(3)	Introduction to Auditory Cognition
PSYC 340	(3)	Psychology of Language
PSYC 341	(3)	The Psychology of Bilingualism
PSYC 342	(3)	Hormones and Behaviour
PSYC 352	(3)	Cognitive Psychology Laboratory
PSYC 353	(3)	Laboratory in Human Perception
PSYC 403	(3)	Modern Psychology in Historical Perspective
PSYC 406	(3)	Psychological Tests
PSYC 410	(3)	Special Topics in Neuropsychology
PSYC 413	(3)	Cognitive Development
PSYC 427	(3)	Sensorimotor Behaviour
PSYC 451	(3)	Human Factors Research and Techniques
PSYC 470	(3)	Memory and Brain
PSYC 502	(3)	Psychoneuroendocrinology
PSYC 505	(3)	The Psychology of Pain
PSYC 510	(3)	Statistical Analysis of Tests
PSYC 522	(3)	Neurochemistry and Behaviour
PSYC 526	(3)	Advances in Visual Perception
PSYC 529	(3)	Music Cognition
PSYC 531	(3)	Structural Equation Models
PSYC 532	(3)	Cognitive Science
PSYC 536	(3)	Correlational Techniques
PSYC 537	(3)	Advanced Seminar in Psychology of Language
PSYC 541	(3)	Multilevel Modelling
PSYC 545	(3)	Topics in Language Acquisition
PSYC 561	(3)	Methods: Developmental Psycholinguistics
PSYC 562	(3)	Measurement of Psychological Processes

*Advising Notes Regarding PSYC 308 and NSCI 201:

PSYC 308 is not currently offered but can be substituted with the equivalent course NSCI 201.

In all cases, PSYC 308 and NSCI 201 should be considered interchangeable with respect to prerequisite, exemption, etc., requirements.

Students who have taken PSYC 308 should not take NSCI 201.

List B (Social, Health and Developmental Psychology)

PSYC 304	(3)	Child Development
PSYC 316	(3)	Psychology of Deafness
PSYC 331	(3)	Inter-Group Relations
PSYC 332	(3)	Introduction to Personality
PSYC 333	(3)	Personality and Social Psychology
PSYC 337	(3)	Introduction: Abnormal Psychology 1
PSYC 338	(3)	Introduction: Abnormal Psychology 2
PSYC 343	(3)	Language Acquisition in Children
PSYC 351	(3)	Research Methods in Social Psychology
PSYC 408	(3)	Principles of Cognitive Behaviour Therapy
PSYC 409	(3)	Positive Psychology
PSYC 412	(3)	Developmental Psychopathology
PSYC 414	(3)	Social Development
PSYC 416	(3)	Advanced Topics in Child Development
PSYC 429	(3)	Health Psychology
PSYC 436	(3)	Human Sexuality and its Problems
PSYC 471	(3)	Human Motivation
PSYC 473	(3)	Social Cognition and the Self
PSYC 474	(3)	Interpersonal Relationships
PSYC 491D1	(3)	Advanced Study: Behavioural Disorders
PSYC 491D2	(3)	Advanced Study: Behavioural Disorders
PSYC 507	(3)	Emotions, Stress, and Illness
PSYC 511	(3)	Infant Competence
PSYC 512	(3)	Advanced Personality Seminar
PSYC 528	(3)	Vulnerability to Depression

PSYC 530	(3)	Applied Topics in Deafness
PSYC 533	(3)	International Health Psychology
PSYC 535	(3)	Advanced Topics in Social Psychology

Unclassified Courses

PSYC 395	(6)	Psychology Research Project 1
PSYC 450D1	(4.5)	Research Project and Seminar
PSYC 450D2	(4.5)	Research Project and Seminar
PSYC 488D1	(1.5)	Special Topics Seminar
PSYC 488D2	(1.5)	Special Topics Seminar
PSYC 492	(3)	Special Topics Seminar 1
PSYC 493	(3)	Special Topics Seminar 2
PSYC 494D1	(4.5)	Psychology Research Project
PSYC 494D2	(4.5)	Psychology Research Project
PSYC 495	(6)	Psychology Research Project 2
PSYC 499	(1)	Reading Project

LIBERAL PROGRAM: CORE SCIENCE COMPONENT IN PSYCHOLOGY (45 credits)

The Core Science Component in Psychology requires the completion of 45 credits in Psychology, all of which need to be passed with a minimum grade of C. A prerequisite to the program is PSYC 100 or equivalent. Students completing a Liberal Program with a Core Science Component in Psychology must also complete at least one Breadth component in a second area.

Required Course (3 credits)

PSYC 204	(3)	Introduction to Psychological Statistics
----------	-----	--

Complementary Courses (42 credits)

9 credits from:

PSYC 211	(3)	Intro Behavioural Neuroscience
PSYC 212	(3)	Perception
PSYC 213	(3)	Cognition
PSYC 215	(3)	Social Psychology

6 credits in Psychology from List A

6 credits in Psychology from List B

15 credits in Psychology at the 300 level or above

6 credits in Psychology at the 400 or 500 level

B.Sc. MAJOR IN PSYCHOLOGY (54 credits)

Students majoring in Psychology must obtain a minimum grade of C in all 54 credits of the program. A grade lower than C may be made up by taking another equivalent course (if there is one), by successfully repeating the course, or by successfully writing a supplemental examination (if there is one).

U1 Required Courses (12 credits)

PSYC 211	(3)	Intro Behavioural Neuroscience
PSYC 212	(3)	Perception
PSYC 213	(3)	Cognition
PSYC 215	(3)	Social Psychology

Note: PSYC 100 may be taken as a corequisite with these basic courses.

U1 or U2 Required Course (3 credits)

PSYC 305	(3)	Statistics for Experimental Design
----------	-----	------------------------------------

Complementary Courses (39 credits)

6 credits in Psychology from List A

6 credits in Psychology from List B

6 credits in Psychology at the 300 level or above

9 credits in Psychology at the 400 or 500 level

12 credits at the 300 level or above in any of the following disciplines: Psychology (PSYC), Anatomy and Cell Biology (ANAT), Biology (BIOL), Biochemistry (BIOC), Chemistry (CHEM), Computer Science (COMP), Mathematics (MATH), Physiology (PHGY), Psychiatry (PSYT).

B.Sc. HONOURS IN PSYCHOLOGY (60 credits)

Honours in Psychology prepares students for graduate study, and so emphasizes practice in the research techniques which are used in graduate school and professionally later on. Students are accepted into Honours at the beginning of their U2 year, and the two-year sequence of Honours courses continues through U3.

Admission to Honours is selective. Students with a cumulative grade point average of 3.00 or better are eligible to apply; since enrolment is limited the usual GPA for admission to this program is 3.50 (based on a 27/30 graded credit program over two terms). Students must complete the following courses in their U1 year to be eligible to apply to the Honours Program: PSYC 204, PSYC 211, PSYC 212, PSYC 213 and PSYC 215. Students who have been exempted from PSYC 204 due to previous courses completed in CEGEP are advised to complete PSYC 305 in their U1 year. Once in the Honours Program, the student must obtain a GPA of 3.00 in the U2 year in order to continue in the program for U3. Honours students are encouraged to take at least 27 graded credits per academic year. This is usually the minimum number of credits required to be eligible for fellowships and awards.

Applications can be obtained from the Undergraduate Office of the Department of Psychology, Room N7/9A, Stewart Biological Sciences Building. The applications must be completed and returned to the Undergraduate Office by August 1 for September admission and by December 1 for January admission. Candidates will be advised of the Department's decision via e-mail and through a notice posted in front of the Undergraduate Adviser's Office, N7/9, before classes begin in September or in January.

Students should note that awarding of the Honours degree will depend on both cumulative grade point average and a minimum grade of B on PSYC 380D1/PSYC 380D2, PSYC 482. "First Class Honours" is awarded to students who obtain a minimum cumulative grade point average of 3.50 and a minimum CGPA of 3.50 and a minimum grade of A- in the required honours courses, namely PSYC 380D1/PSYC 380D2, PSYC 482. "Honours" is awarded to students with a minimum cumulative grade point average of 3.00 and a minimum program GPA of 3.00 and a minimum grade of B in the required honours courses, namely PSYC 380D1/PSYC 380D2, PSYC 482. Moreover, the awarding of the Honours degree normally requires completion of two full years of study, U2 and U3, in the Psychology Department. Students with particularly strong academic records may be admitted for the U3 year only on the basis of their marks and research experience. These students must complete all honours program requirements.

U1 Required Courses (12 credits)

- PSYC 211 (3) Intro Behavioural Neuroscience
- PSYC 212 (3) Perception
- PSYC 213 (3) Cognition
- PSYC 215 (3) Social Psychology

Note: PSYC 100 may be taken as a corequisite with these basic courses.

U1 or U2 Required Course (3 credits)

- PSYC 305 (3) Statistics for Experimental Design

U2 Required Courses (9 credits)

- PSYC 380D1 (4.5) Honours Research Project and Seminar
- PSYC 380D2 (4.5) Honours Research Project and Seminar

U3 Required Courses (3 credits)

- PSYC 482 (3) Advanced Honours Seminar

Complementary Courses (33 credits)

12 credits to be selected from*:

- PSYC 403 (3) Modern Psychology in Historical Perspective
 - PSYC 483 (3) Seminar in Experimental Psychopathology
 - PSYC 495 (6) Psychology Research Project 2
 - PSYC 496 (6) Seniors Honours Research 1
 - PSYC 497 (6) Seniors Honours Research 2
 - PSYC 498D1 (4.5) Senior Honours Research
 - PSYC 498D2 (4.5) Senior Honours Research
- Any Psychology course at the 500 level.

6 credits in Psychology from List A

6 credits in Psychology from List B

9 credits at the 300 level or above selected from: Anatomy and Cell Biology (ANAT), Biochemistry (BIOC), Biology (BIOL), Chemistry (CHEM), Computer Science (COMP), Mathematics (MATH), Physiology (PHGY), Psychiatry (PYST), Psychology (PSYC).

Director — David M. Green

Emeritus Professor

Robert L. Carroll; B.Sc.(Mich.), Ph.D.(Harv.), F.R.S.C., F.L.S.

Professor

David M. Green; B.Sc.(Br. Col.), M.Sc.,Ph.D.(Guelph), F.L.S.

Associate Professors

Brian J. Alters; B.Sc., Ph.D.(S.Calif.) (*Tomlinson Chair in Science Education, Sir William Dawson Scholar*)

Andrew Hendry; B.Sc.(Vic. (BC)), M.Sc.,Ph.D.(Wash.) (*joint appoint. with Biology*)

Anthony Ricciardi; B.Sc.(Agr.), M.Sc., Ph.D.(McG.) (*joint appoint. with MSE*)

Assistant Professors

Claire de Mazancourt; Bacc.(École des Mines), DEA, Ph.D.(Paris VI)

Hans C.E. Larsson; B.Sc.(McG.), Ph.D.(Chic.) (*CRC Tier 2 Chair in Paleontology*)

Brian Leung; B.Sc.(Br. Col.), Ph.D.(Car.) (*joint appoint. with Biology & MSE*)

Virginie Millien; Maitrise(Paris VI), DEA, Ph.D.(Montpellier II)

Faculty Lecturer

Linda Cooper; B.A.(C'dia), M.A.(McM.)

Associate Members

Biology: Graham A.C. Bell; Earth & Planetary Sciences: Jeanne Paquette

Adjunct Professors

Hendry M. Reiswig, Hans Hofmann, Robert Holmes, Michael Woloch

The Redpath Museum exists to foster the study of the history and diversity of the natural world. Its mandate includes biological, geological and cultural diversity, and science education. It conducts academic teaching and research activities and also provides academic services to other units. There are no B.Sc. Programs at the Redpath Museum but the REDM courses listed in the Courses section of this Calendar are considered as ones taught by the Faculty of Science.

12.13.34 Science or Mathematics for Teachers

Rutherford Physics Building
3600 University Street
Montreal, QC, H3A 2T8

Fax: (514) 398-8434

E-mail: bscbed@physics.mcgill.ca

Website: www.mcgill.ca/scienceforteachers

Coordinator - Science — R. Harris

Telephone: (514) 398-6522

Coordinator - Education — G. Seiler
Telephone: (514) 398-7106

The training and certification of school teachers has traditionally been the responsibility of the Faculty of Education and requires the completion of a Bachelor of Education, subject to Ministère de l'Éducation, du Loisir et du Sport (MELS) regulations. The Faculties of Education and of Science have introduced a number of programs for students who wish to combine Science or Mathematics with Education at McGill. These include the Minor in Education for Science Students, and the Concurrent B.Sc. and B.Ed.

Note: The traditional Bachelor of Education, Secondary Program, Science and Technology, or Secondary Program, Mathematics is also available within the Faculty of Education, "[Bachelor of Education Secondary Program](#)", see [section 7.6.1.1](#).

MINOR IN EDUCATION FOR SCIENCE STUDENTS (18 credits)

Program Adviser —
Student Affairs Office, Faculty of Education
www.mcgill.ca/edu-sao/minors

This Minor allows Science students to develop or explore an interest in Education without committing themselves to completing a B.Ed. degree. Science students who have taken this Minor in Education will have completed a substantial number of the necessary credits for the B.Ed. degree should they wish to enroll in that program. The Minor also allows the possibility of transferring into the Concurrent B.Sc. and B.Ed. program, since the 18 credits for the Minor, with the exception of EDEM 220, are also among the Education courses required in this dual degree program. Equally, students having completed a B.Sc. degree, including the Minor, whose content substantially matches that of one of the concurrent B.Sc. and B.Ed. combinations (see below) are likely eligible for the maximum number of 60 Advanced standing credits, as specified by the Faculty of Education "[Credit Requirements](#)", in [section 7.2.1.2](#).

Required Courses (12 credits)

EDEM 220 (3) Contemporary Issues in Education
EDEC 262 (3) Media, Technology and Education
EDPE 300 (3) Educational Psychology
EDPI 309 (3) Exceptional Students

Complementary Courses (6 credits)

3 credits from:

EDEC 260 (3) Philosophical Foundations
EDEC 261 (3) Philosophy of Catholic Education

3 credits from:

EDEC 233 (3) First Nations and Inuit Education
EDEC 248 (3) Multicultural Education

CONCURRENT B.SC. AND B.ED.

The Concurrent B.Sc. and B.Ed. is intended as a very rigorous but rewarding alternative to taking the B.Sc. and the B.Ed. in sequence. It is specifically designed to prepare teacher/scientists and is aligned with the requirements of the Quebec Ministère de l'Éducation, du Loisir et du Sport (MELS). This program has been designed to provide students with the opportunity to attain a Bachelor of Science degree and a Bachelor of Education degree after **135 credits of study (165 credits for students who have not completed the basic sciences)**. The program is highly structured and closely integrated so as to satisfy the academic requirements of both degrees.

To be admitted, candidates must satisfy the admission requirements of both faculties. Normally, students will be admitted to both components of the Concurrent B.Sc. and B.Ed. simultaneously. It is possible for students to apply for transfer into this program at any time during their B.Sc. or B.Ed. program. However, because this is a concurrent program, both degrees must be granted at the same Convocation. After admission, students should contact one of the coordinators to discuss course selection and scheduling.

Students in the Concurrent B.Sc. and B.Ed. may apply to transfer to either a conventional B.Sc. or a conventional B.Ed. program.

To do so, they must submit a Faculty Transfer Application to the appropriate Student Affairs Office. The decision will be based on their grades in the relevant component of the Concurrent Program. Students who do transfer to a conventional program may not transfer back to the Concurrent B.Sc. and B.Ed. degrees.

The two components of the Concurrent B.Sc. and B.Ed. are the B.Ed. Secondary program and one of the B.Sc. programs for teachers. These two components are described in what follows, including an identification of the elements that are counted towards the requirements of both degrees. These provisions are exceptional and apply exclusively to the Concurrent B.Sc. and B.Ed.

For more detailed information about the Concurrent Program, particularly how some elements are double-counted so as to satisfy the requirements of both the Faculty of Education and the Faculty of Science, see the program Website:

www.mcgill.ca/scienceforteachers.

BACHELOR OF EDUCATION COMPONENT OF THE CONCURRENT PROGRAM

SECONDARY PROGRAM, SCIENCE AND TECHNOLOGY OR SECONDARY PROGRAM, MATHEMATICS (120 credits)

The aim of the B.Ed. is to prepare teachers for the secondary school level through a program of academic and professional studies centred on school-based field experiences according to the specifications of the Quebec Ministère de l'Éducation, du Loisir et du Sport (MELS).

The required 60 credits of Education courses must combine with science courses and electives to total 135 (or 165) credits and fulfil all the requirements for graduation for both the Bachelor of Education and the Bachelor of Science.

See the Faculty of Education for a full description of the "[Bachelor of Education Secondary Program](#)", in [section 7.6.1.1](#). In summary, it consists of the following:

Professional Components (60 credits)

In addition to 27 credits of professional seminars and field experiences, the following 27 credits of Education courses are required as well as 6 credits of Pedagogy courses

EDEC 247* (3) Policy Issues in Quebec Education
EDEC 260* (3) Philosophical Foundations
or EDEC 261* (3) Philosophy of Catholic Education
EDEC 262* (3) Media, Technology and Education
EDEC 248* (3) Multicultural Education
or EDEC 233* (3) First Nations and Inuit Education
EDPE 300* (3) Educational Psychology
EDPI 309* (3) Exceptional Students
EDPE 304 (3) Measurement and Evaluation
EDPI 341 (3) Instruction in Inclusive Schools
EDES 350 (3) Classroom Practices (Secondary)

* The starred courses can be counted as electives toward the B.Sc. component of the Concurrent B.Sc. and B.Ed. and will count toward both degrees. (See the information about Elective courses for the B.Sc. component of the Concurrent program below.)

Pedagogy Courses (6 credits)

must include ONE of the two sets of courses below:

EDES 335 (3) Teaching Secondary Science 1 and
EDES 435 (3) Teaching Secondary Science 2
or
EDES 353 (3) Teaching Secondary Mathematics 1
EDES 453 (3) Teaching Secondary Mathematics 2

Academic components (54 credits):

These 54 credits will be selected from the B.Sc. components of the Concurrent B.Sc. and B.Ed. and will count towards both degrees. **Electives (6 credits).**

BACHELOR OF SCIENCE COMPONENT OF THE CONCURRENT PROGRAM: SCIENCE OR MATHEMATICS
(120 credits)

These B.Sc. programs, with the exception of the Major in Mathematics, are designed specifically as the Science component of the Concurrent B.Sc. and B.Ed. The general structure of these B.Sc. programs is as follows:

Basic sciences (30 credits): Quebec students with a DCS in Science are granted 30 credits advanced standing and will have normally completed the equivalent of, and are therefore exempt from, the basic science courses in biology, chemistry, mathematics and statistics, and physics. Students with satisfactory results in International Baccalaureate, French Baccalaureate and Advanced Levels, and Advanced Placement tests may be exempt from some or all of the basic science courses.

Elective courses (20-36 credits): Elective courses must be suitably chosen if the student wishes to complete the Concurrent B.Sc. and B.Ed. with the minimum of 135 credits. The following 18 Education credits can be counted as electives in the B.Sc. component of the Concurrent B.Sc. and B.Ed. and will count towards both degrees: EDEC 247, EDEC 262, EDPI 309, EDPE 300, either EDEC 260 or EDEC 261, and either EDEC 248 or EDEC 233.

Required and complementary courses (54-70 credits): The details of these programs are given below. Note that 54 of these credits can be counted towards the academic component of the B.Ed. program, but only for students in the Concurrent B.Sc. and B.Ed.

BACHELOR OF SCIENCE COMPONENT OF THE CONCURRENT PROGRAM: SCIENCE

Six combinations of Major Concentrations and Minors in Science have been specifically designed as the Science component of the Concurrent B.Sc. and B.Ed. and are aligned with the teachable subject areas in Education. The following list shows the possible Major Concentration and Minor combinations that may be chosen. Note that these are Major Concentrations, not Major programs.

Major Concentration (36-37 credits)	Minor (18-24 credits)
Biology	Chemistry
Biology	Physics
Chemistry	Biology
Chemistry	Physics
Physics	Biology
Physics	Chemistry

MAJOR CONCENTRATION IN BIOLOGY WITH A MINOR IN CHEMISTRY FOR TEACHERS (69 or 70 credits)

This program includes the 36 credits of the "MAJOR CONCENTRATION IN BIOLOGY - CELL/ MOLECULAR OPTION", under "Biology (BIOL)", in section 6.12.3 or the 37 credits of the "MAJOR CONCENTRATION IN BIOLOGY - ORGANISMAL OPTION", under "Biology (BIOL)", in section 6.12.3 and the 18 credits of the "MINOR IN CHEMISTRY", under "Chemistry (CHEM)", in section 12.13.7, as well as the 15 credits of Science courses listed below.

Additional Science courses (15 credits)

- BIOL 210 (3) Perspectives of Science
- CHEM 381 (3) Inorganic Chemistry 2
- MATH 203 (3) Principles of Statistics 1
- MATH 222 (3) Calculus 3

plus 3 credits, one of:

- CHEM 150 (3) World of Chemistry: Food
- CHEM 160 (3) World of Chemistry: Technology
- CHEM 170 (3) World of Chemistry: Drugs
- CHEM 180 (3) World of Chemistry: Environment

Note: Students must take one additional BIOL course (3 credits) to be approved by the Biology Department. This course is required because both the Major Concentration and the Minor include CHEM 212 Introductory Organic Chemistry 1.

MAJOR CONCENTRATION IN BIOLOGY WITH A MINOR IN PHYSICS FOR TEACHERS (69 or 70 credits)

This program includes the 36 credits of the "MAJOR CONCENTRATION IN BIOLOGY - CELL/ MOLECULAR OPTION", "Biology (BIOL)", in section 6.12.3 or the 37 credits of the "MAJOR CONCENTRATION IN BIOLOGY - ORGANISMAL OPTION", under "Biology (BIOL)", in section 6.12.3, and the 18 credits of the "MINOR IN PHYSICS", under "Physics (PHYS)", in section 12.13.29, as well as the 15 credits of Science courses listed below.

Additional Science courses (15 credits)

- BIOL 210 (3) Perspectives of Science
- MATH 203 (3) Principles of Statistics 1
- MATH 222 (3) Calculus 3
- MATH 223 (3) Linear Algebra
- MATH 314 (3) Advanced Calculus

MAJOR CONCENTRATION IN CHEMISTRY WITH A MINOR IN BIOLOGY FOR TEACHERS (69 credits)

This program includes the 36 credits of the "MAJOR CONCENTRATION IN CHEMISTRY", under "Chemistry (CHEM)", in section 6.12.5, the 24 credits of the "MINOR IN BIOLOGY", under "Biology (BIOL)", in section 12.13.5 and the 9 credits of Science courses listed below.

Additional Science courses (9 credits)

- BIOL 210 (3) Perspectives of Science
- MATH 203 (3) Principles of Statistics 1
- MATH 222 (3) Calculus 3

MAJOR CONCENTRATION IN CHEMISTRY WITH A MINOR IN PHYSICS FOR TEACHERS (69 credits)

This program includes the 36 credits of the "MAJOR CONCENTRATION IN CHEMISTRY", under "Chemistry (CHEM)", in section 6.12.5, the 18 credits of the "MINOR IN PHYSICS", under "Physics (PHYS)", in section 12.13.29, and the 15 credits of Science courses listed below.

Additional Science courses (15 credits)

- BIOL 210 (3) Perspectives of Science
- MATH 203 (3) Principles of Statistics 1
- MATH 222 (3) Calculus 3
- MATH 223 (3) Linear Algebra
- MATH 314 (3) Advanced Calculus

MAJOR CONCENTRATION IN PHYSICS WITH A MINOR IN BIOLOGY FOR TEACHERS (69 credits)

This program includes the 36 credits of the "MAJOR CONCENTRATION IN PHYSICS", under "Physics (PHYS)", in section 6.13, the 24 credits of the "MINOR IN BIOLOGY", under "Biology (BIOL)", in section 12.13.5, and the 9 credits of Science courses listed below.

Additional Science courses (9 credits)

- BIOL 210 (3) Perspectives of Science
 - MATH 203 (3) Principles of Statistics 1
- plus 3 credits, one additional Physics course approved by the Physics Department.

MAJOR CONCENTRATION IN PHYSICS WITH A MINOR IN CHEMISTRY FOR TEACHERS (69 credits)

This program includes the 36 credits of the "MAJOR CONCENTRATION IN PHYSICS", under "Physics (PHYS)", in section 6.13, the 18 credits of the "MINOR IN CHEMISTRY", under "Chemistry (CHEM)", in section 12.13.7 and the 15 credits of Science courses listed below.

Additional Science courses (15 credits)

- BIOL 210 (3) Perspectives of Science
 - CHEM 381 (3) Inorganic Chemistry 2
 - MATH 203 (3) Principles of Statistics 1
- plus 3 credits, one of:
- CHEM 150 (3) World of Chemistry: Food
 - CHEM 160 (3) World of Chemistry: Technology
 - CHEM 170 (3) World of Chemistry: Drugs
 - CHEM 180 (3) World of Chemistry: Environment

plus 3 credits, one additional Physics course approved by the Physics Department.

BACHELOR OF SCIENCE COMPONENT OF THE CONCURRENT PROGRAM: MATHEMATICS

MAJOR IN MATHEMATICS FOR TEACHERS (54 credits)

This program includes the 54 credits of the standard "MAJOR IN MATHEMATICS", under "Mathematics and Statistics (MATH)", in section 12.13.21. However, students taking the Major in Mathematics as part of the Concurrent Program are **required** to include the following courses as part of the Major.

COMP 202* (3) Introduction to Computing 1
 MATH 324 (3) Statistics
 MATH 338 (3) History and Philosophy of Mathematics
 MATH 348 (3) Topics in Geometry

* or equivalent

12.13.35 Technological Entrepreneurship for Science Students

Science students who wish to become entrepreneurs or to enter small to medium-sized companies in the high technology sector will find within this Minor a set of six (6) courses that cover relevant management concepts and skills.

Also available to Science students is the Minor in Management, under "Management Minor Program", in section 12.13.20.

Acceptance to the program is both competitive and restricted. Application procedures will be announced in September. Please consult Ron Critchley, Student Adviser, Desautels Faculty of Management Student Affairs Office, Bronfman 110, for details.

Students registered in the Minor in Technological Entrepreneurship for Science Students may not take additional courses outside the Faculties of Arts and of Science.

To obtain the Minor, all courses must be completed with a grade of C or better.

Please note: the courses must be taken sequentially over five terms, as follows: ACCT 210, MRKT 360 and either MGCR 320 or ORGB 321, BUSA 465, MGPO 562, BUSA 466.

MINOR IN TECHNOLOGICAL ENTREPRENEURSHIP FOR SCIENCE STUDENTS (18 credits)

Required Courses (15 credits)

ACCT 210 (3) Accounting for Managers
 MRKT 360 (3) Marketing of Technology
 BUSA 465 (3) Technological Entrepreneurship
 MGPO 562 (3) Seminar in Organizational Strategy
 BUSA 466 (3) Technological Entrepreneurship Project

Complementary Courses (3 credits)

one of the following courses:

MGCR 320 (3) Managing Human Resources
 ORGB 321 (3) Leadership

13 Faculty of Agricultural and Environmental Sciences, including School of Dietetics and Human Nutrition

13.1 The Faculty

Mission statement: The Faculty of Agricultural and Environmental Sciences is committed to excellence in teaching, research and service to ensure that humanity's present and future food, health and natural resource needs are met while protecting the environment.

13.1.1 Location

McGill University, Macdonald Campus
 21,111 Lakeshore Road
 Sainte-Anne-de-Bellevue, QC H9X 3V9
 Canada

Telephone: (514) 398-7928
 Website: www.mcgill.ca/macdonald

The Faculty of Agricultural and Environmental Sciences and the School of Dietetics and Human Nutrition are located on the Macdonald Campus of McGill University in Sainte-Anne-de-Bellevue at the western end of the Island of Montreal.

Served by public transport (STM, bus and train), it is easily reached from the McGill downtown campus and from the Pierre Elliott Trudeau International Airport. Arrangements can also be made to use the McGill intercampus shuttle bus service. The shuttle service is available to all registered students.

13.1.2 Administrative Officers

Chandra Madramootoo; B.Sc.(Agr.Eng.), M.Sc., Ph.D.(McG.),
P.Eng. (*James McGill Professor*)
**Dean, Faculty of Agricultural and Environmental Sciences,
and Associate Vice-Principal (Macdonald Campus)**

William H. Hendershot; B.Sc.(Tor.), M.Sc.(McG.), Ph.D.(U.B.C.)
Associate Dean (Academic)

Suha Jabaji; B.Sc.(AUB), M.Sc.(Guelph), Ph.D.(Wat.)
Associate Dean (Research and Graduate Education)

David J. Lewis; B.Sc., M.Sc., Ph.D.(Mem.)
Associate Dean (Student Affairs)

Silvana Pellecchia
Student Affairs Manager (Acting)

Gary O'Connell; B.Comm.(C'dia)
**Director,
Academic and Administrative Services**

William R. Ellyett; B.A.(Sir G. Wms.), B.Ed.(Phys.Ed.)(McG.)
Director of Athletics

Philip Lavoie; Dip.Agr., B.Sc.(Agr.)(McG.)
**Manager, Macdonald
Campus Farm**

Ginette Legault
Manager, Campus Housing

Peter D.L. Knox; B.Sc.(Agr.)(McG.)
**Supervisor,
Property Maintenance**

13.1.3 Programs

The Faculty of Agricultural and Environmental Sciences and the School of Dietetics and Human Nutrition offer degrees in Bachelor of Science in Agricultural and Environmental Sciences, Bachelor of Engineering in Bioresource Engineering, Bachelor of Science in Food Science, Bachelor of Science in Nutritional Sciences, Certificate in Ecological Agriculture, Diploma in Environment, and Diploma of Collegial Studies in Farm Management and Technology.

The Faculty of Agricultural and Environmental Sciences is one of the three faculties in partnership with the McGill School of Environment.

Several programs offered by the Faculty and School lead toward professional accreditation. These include Dietetics (membership in the Dietitians of Canada and the l'Ordre professionnel des diététistes du Québec); Agricultural Economics, Agricultural Sciences, Agricultural Sciences Internship, Animal Science and Plant Science (membership in the Ordre des agronomes du Québec and other provincial Institutes of Agriculture); Bioresource Engineering (membership as a professional Engineer in any province of Canada plus the Ordre des agronomes du Québec); Food Science (Accreditation by the Institute of Food Technologists and professional accreditation by the Ordre des chimistes du Québec). Professional Practice experiences to complete the dietetics practicum are provided in the McGill teaching hospitals and in a wide variety of health, education, business, government and community agencies.

The Faculty also offers M.Sc. and Ph.D. programs in the areas of Agricultural Sciences, Biological Sciences, Bioresource Engineering, Biotechnology, Environmental Sciences, Food Science, and Nutritional Sciences. M.Sc.(A) programs are offered in some disciplines. In addition, a Graduate Certificate in Biotechnology, a Graduate Diploma in Dietitian Credentialing, and a Graduate Option in Environment are offered.

13.1.3.1 Internship Opportunities and Co-op Experience

All students in agricultural programs have the opportunity to participate in a summer-long internship on a farm, related agricultural enterprise, or under the supervision of a professional agrologist. Students who register in the Agricultural Sciences Internship Program benefit from two such summers of internship experience, one on a farm and the other in industry, in research, or with an accredited agrologist.

Most undergraduate programs offered in the Faculty include the opportunity for a Co-op work experience. Internships and Co-op experience both involve a work placement of a minimum 12 weeks' duration where the student is exposed to the main areas of operation of the employer. Each work placement is unique, and the student benefits from a program developed by both the employer and the instructor exclusively for that student.

Students who register for an internship or Co-op experience benefit from practical learning arising from work-term employment in a meaningful job situation. Students also benefit from the non-tangible learning experience arising from the increased responsibilities required to obtain and successfully complete the work term. Students have the opportunity to pursue a 6 credit internship within the Barbados and Panama Field Studies semesters. For details, see [see section 15.2 "Field Studies"](#).

13.1.3.2 Exchange Programs

The Faculty of Agricultural and Environmental Sciences participates in all university-wide student exchange programs available at McGill and also has faculty-specific exchange programs. For more information, please [see section 15.3 "Exchange Programs"](#).

13.1.4 Macdonald Campus Facilities

Morgan Arboretum

The Morgan Arboretum has 245 hectares of managed and natural woodlands, fields and tree plantations used for environmental research and teaching in a wide range of courses. Groups of most Canadian native trees and many useful and important exotics are also present. The Arboretum features self-guided interpretation trails, 20 kilometres of wooded trails, a variety of forest ecosystems, conservation projects, and forest operations such as plantation management, timber harvesting and maple syrup production. A nature interpretation program is also offered.

Macdonald Campus Library

Located in the Barton Building, the Macdonald Campus Library's collection encompasses a wide variety of resources in agriculture, food and animal science, nutrition, entrepreneurship, the environment, ecology, plant science, and biotechnology. The library is a depository for many print and electronic government publications. All computers provide access to the library catalogue, databases, e-journals and other online resources. In the E-zone students can do research, complete assignments and use specialized software such as ArcGIS, SAS or EndNote. The library is a wireless zone allowing students to connect to the internet using laptops equipped with wireless network interface cards. In addition, throughout the library students can access the internet by connecting their laptops to the Virtual Private Network jacks. Students can request articles or books through the interlibrary loan service using online forms. Liaison librarians are available to assist users in obtaining necessary print or electronic resources, and library workshops are provided throughout the year. For further information about Macdonald Campus Library visit the Website at www.mcgill.ca/macdonald-library or feel free to drop by.

Macdonald Campus Computing Centre

The Macdonald Campus Computing Centre, located in the Macdonald-Stewart Building, is staffed and managed by McGill's IST Customer Services (ICS) unit. The complex is comprised of a help-desk with walk-in/phone support, offices, and a technical repair unit, open 9:00 a.m. to 5:00 p.m., Mon.-Fri. Also available, are three undergraduate labs offering the following resources (open 24/7 x 365): 48 computers running MS Office, 2 black and white printers, 1 colour printer, 3 scanners, multimedia card reader and a wheelchair-friendly workstation is available in lab MS2-028. ICS is also responsible for supporting the Faculty's computers and public E-mail stations, conveniently located across the Campus. More information is available at www.mcgill.ca/ics/labs/macdonald.

Lyman Entomological Museum and Research Laboratory

Originally established in 1914 and formerly housed in the Redpath Museum, the Lyman Entomological Museum was moved to the

Macdonald Campus in 1961. It houses the largest university collection of insects in Canada, second in size only to the National Collection. The Museum also has an active graduate research program in association with the Department of Natural Resource Sciences. Study facilities are available, on request from the Curator, to all bona fide students of entomology. Visits by other interested parties can be arranged by calling (514) 398-7914. More information is available at www.agrenv.mcgill.ca/facility/lyman.htm.

Brace Centre for Water Resources Management

The Brace Centre for Water Resources Management is located on the Macdonald Campus. It is a multidisciplinary and advanced research and training centre of McGill University, dedicated to solving problems of water management for all human and environmental uses. It brings together staff from several McGill faculties to undertake research, teaching, specialized training, and policy and strategic studies, both in Canada and internationally. The Centre draws on the wide range of facilities available within the University. More information is available at www.mcgill.ca/brace.

13.1.5 The Student Affairs Office

The Student Affairs Office, located in Laird Hall Room 106, provides a wide variety of academic services. These include information about admission (prerequisites and program requirements), academic standing, examinations (deferrals, conflicts, rereads), exchange programs, inter-faculty and intra-faculty transfers, registration (course change, withdrawals), scholarships (entrance and in-course), second degrees, second majors, minors, session away, and graduation (convocation).

www.mcgill.ca/macdonald/studentaffairs.

13.2 Summary of Academic Programs

13.2.1 Outline of Academic Programs

Programs leading to four degrees are offered on the Macdonald Campus, with Majors associated with each degree. In addition, Certificates are offered in Ecological Agriculture and in Entrepreneurship.

13.2.1.1 Major Programs

BACHELOR OF SCIENCE IN AGRICULTURAL AND ENVIRONMENTAL SCIENCES - B.SC.(AG.ENV.SC.)

Graduates of programs marked with an asterisk * are eligible for membership in the Ordre des agronomes du Québec and other provincial institutes of agriculture.

Agricultural Economics*:

Agribusiness Option, [page 406](#)

Environmental Economics Option, [page 406](#)

Agricultural Sciences*:

Agricultural Biotechnology Option, [page 413](#)

Ecological Agriculture Option, [page 413](#)

General Option, [page 412](#)

International Agriculture Option, [page 414](#)

Soils Option, [page 414](#)

Nutrition:

Food Function and Safety, [page 404](#)

Global Nutrition, [page 404](#)

Nutritional Biochemistry, [page 403](#)

Sports Nutrition, [page 404](#)

13.2.1.2 Honours Program

Environment, under McGill School of Environment, [page 441](#)

13.2.1.3 Minor Programs

Agricultural Economics, [page 407](#)

Agricultural Production, [page 411](#)

Ecological Agriculture, [page 411](#)

Minor in Environment, under McGill School of Environment, [page 423](#)

Environmental Engineering, [page 402](#)

Human Nutrition, [page 404](#)

13.2.1.4 Certificate Programs

Ecological Agriculture, [page 412](#)

Food Science, [page 405](#)

13.2.1.5 Diploma Program

Diploma in Environment, under McGill School of Environment, [page 441](#)

13.2.1.6 Diploma in Collegial Studies

Farm Management and Technology, [page 415](#)

13.2.2 Environmental Sciences Programs

McGill School of Environment (MSE)

The MSE is a joint initiative of the Faculty of Agricultural and Environmental Sciences, the Faculty of Arts, and the Faculty of Science. It offers a B.Sc.(Ag.Env.Sc.) Major in Environment, a B.Sc. Major in Environment, a B.A.&Sc. Inter-Faculty Program in Environment, a B.A. Faculty Program in Environment, a Minor in Environment and a Diploma in Environment. Many of the MSE programs allow students to choose to study exclusively on the Macdonald or downtown campuses, or to take advantage of both.

A list of the B.Sc.(Ag.Env.Sc.) Domains is given under [section 13.2.1.1 "Major Programs"](#). Further information on all programs is given under the McGill School of Environment.

Other Environmental Programs at Macdonald Campus

A number of other integrated environmental science programs are also offered on the Macdonald Campus. The objective of these interdepartmental programs is to provide the student with a well-rounded training in a specific interdisciplinary subject as well as the basis for managing the natural resource. The programs include:

Agricultural Economics Major, Environmental Economics Option
Agricultural Science Major, Ecological Agriculture Option
Agricultural Sciences Internship Major,
Ecological Agriculture Option
Applied Zoology Major
Bioresource Engineering Major,
BioEnvironmental Engineering Stream
Bioresource Engineering Major, Soil & Water
Engineering Stream
Botanical Science Major, Ecology Option
Environmental Biology Major
Microbiology Major, Ecology Option
Microbiology Major, Environment Option
Resource Conservation Major
Wildlife Biology Major

13.3 Faculty Admission Requirements

For information about the admission requirements for this faculty please refer to the *Undergraduate Admissions Guide*, found at www.mcgill.ca/applying/undergrad.

For information about inter-faculty transfers, see [section 3.3.12 "Inter-Faculty Transfer"](#).

Applications are submitted directly online at www.mcgill.ca/applying. Please note that the same application is used for all undergraduate programs at McGill and two program choices can be entered. For further information contact:

Student Affairs Office
Macdonald Campus of McGill University
21,111 Lakeshore Road
Sainte-Anne-de-Bellevue, Quebec H9X 3V9

Telephone: (514) 398-7928

E-mail: studentinfo.macdonald@mcgill.ca

Website: www.mcgill.ca/macdonald/prospective

More specific information on application deadlines and admission requirements can be found on the Web at www.mcgill.ca/applying/undergrad.

13.4 Student Information

13.4.1 Student Services

Students who study on the Macdonald Campus may make full use of all McGill "Student Services", see [section 4.2](#). The Office of the Executive Director of Services for Students offers students direct

access to several services, see ["Student Services – Macdonald Campus"](#), [section 4.2.4](#).

For further information refer to the Macdonald Campus Student Services Website, www.mcgill.ca/macdonald-studentservices, and the Student Services Website, www.mcgill.ca/studentservices.

13.4.2 Athletic Services

All students who have paid Student Services fees are also eligible to use any Athletic facility without additional expense. For further information please visit the Website, www.agrenv.mcgill.ca/society/athletic, or telephone the Stewart Athletic Complex at (514) 398-7789.

13.4.3 Macdonald Campus Residences

Students may apply for residence in either of two distinctive facilities:

Laird Hall, with a capacity of 250 students, is arranged on a co-educational basis and provides single and double room accommodation for both undergraduate and graduate students.

The EcoResidence, Canada's first ecologically friendly student residence and winner of the Prix d'excellence from the Ordre des architectes du Québec, accommodates 100 students in apartment-style living.

For further information, please refer to ["University Residences – Macdonald Campus"](#), [section 4.3.2](#), or the Faculty Website, www.mcgill.ca/macdonald-residences, or e-mail residences.macdonald@mcgill.ca.

13.4.4 Extracurricular Activities

All undergraduate, postgraduate, and Farm Management and Technology students are members of the Macdonald Campus Students' Society. The MCSS, through the 19-member Students' Council, is involved in numerous campus activities such as social events, academic affairs, and the coordination of clubs and organizations. Student life is informal and friendly and student groups range from the Outdoor Adventure Club to the Photography Society. Major social events include Orientation activities, Halloween Party and Winter Carnival. The Ceilidh, a student-run bar located in the Centennial Centre, is open every Thursday night.

The Centennial Centre is the centre of student life, offering facilities for student activities, such as meeting rooms, a Yearbook room, pool tables, great places to relax, listen to music and meet friends. Also located in the Centre are the Students' Council offices, an information desk, the Robber's Roost Campus Bookstore and cafeteria.

13.4.5 Student Rights and Responsibilities

The *Handbook on Student Rights and Responsibilities* is published jointly by the Office of the Dean of Students and the University Secretariat. A copy of the Handbook can be found on the Web at www.mcgill.ca/secretariat/handbooks/student or obtained from the Student Affairs Office or the Macdonald Campus Student Services Office.

13.4.6 Fees

The University reserves the right to make changes without notice in its published scale of tuition, residence and other fees.

Payment of student fees can be made directly on Minerva through internet banking or pre-authorized debit charges. The first fee statement is sent by regular mail followed by e-billing viewable on Minerva which students are notified of at their McGill e-mail address.

The University shall have no obligation to issue any transcript of record, award any diploma or re-register a student in case of non-payment of tuition fees, library fines, residence fees, or loans on their due date.

Tuition Fees

General information on Tuition and other fees is found under "Fees", section 3.4.

Other Expenses

In addition to tuition fees and the cost of accommodation and meals, students should be prepared to spend a minimum of \$1,000 (dependent on program) on prescribed textbooks and classroom supplies. These may be purchased at the Campus Bookstore in the Centennial Centre.

Uniforms are required for food laboratories. Students in the B.Sc.(Nutr.Sc.) program will be advised of the uniform requirements on acceptance or promotion.

13.4.7 Scholarships and Bursaries

Various entrance and in-course scholarships and bursaries are available. For full details see

www.mcgill.ca/studentaid/scholarships.

13.4.8 Immunization for Dietetics Majors

Students in the Dietetics Major are required to complete the Compulsory Immunization Program for Health Care Students prior to registration. Participation in Professional Practice (Stage) in Dietetics will only be permitted for those students who have completed all immunization requirements.

13.4.9 Language Requirement for Professions

Quebec law requires that candidates seeking admission to provincially recognized Quebec professional corporations or ordres possess a working knowledge of the French language, i.e., be able to communicate verbally and in writing in that language. Agrologists, chemists, dietitians, and engineers are among those within this group.

For additional information, see section 3.10.1 "Language Requirements for Professions".

13.5 Faculty Information and Regulations

Each student in the Faculty of Agricultural and Environmental Sciences must be aware of the Faculty Regulations as stated in this Calendar. While departmental and faculty advisers and staff are always available to give advice and guidance, the ultimate responsibility for completeness and correctness of course selection and registration, for compliance with, and completion of program and degree requirements, and for the observance of regulations and deadlines *rests with the student*. It is the student's responsibility to seek guidance if in any doubt; misunderstanding or misapprehension will not be accepted as cause for dispensation from any regulation, deadline, program or degree requirement.

13.5.1 Minimum Credit Requirement

Students must complete the minimum credit requirement for the degree as specified in the letter of admission.

Students are normally admitted to a four-year program requiring the completion of 120 credits, but advanced standing of up to 30 credits may be granted to students who obtain satisfactory results in the Diploma of Collegial Studies, International Baccalaureate, French Baccalaureate, Advanced Levels, and Advanced Placement tests.

Normally, Quebec students who have completed the Diplôme d'études collégiales (DEC) or equivalent diploma are admitted to the first year of a program requiring the completion of a minimum of 90 credits, 96 credits for Agricultural Sciences Major Internship Options, 111 credits for Bioresource Engineering, or 113 credits for Dietetics.

Students from outside Quebec who are admitted on the basis of a high school diploma enter the Freshman Major (see "Freshman Major", section 13.5.3).

Students will not receive credit towards their degree for any course that overlaps in content with a course successfully completed at McGill, at another university, at CEGEP, or Advanced Placement exams, Advanced Level results, International Baccalaureate Diploma, or French Baccalaureate.

Students in the B.Sc.(Ag.Env.Sc.) must take a minimum of two-thirds of their course credits within the Faculty of Agricultural and Environmental Sciences.

13.5.2 Minimum Grade Requirement

Students must obtain grades of C or better in any required, complementary and freshman courses used to fulfill program requirements. Students may not register in a course for which they have not passed all the prerequisite courses with a grade of C or better, except by written permission of the Departmental Chair concerned.

13.5.3 Freshman Major

Students entering university for the first time from a high school system (outside of Quebec CEGEP system) will be required to complete a freshman year of at least 30 credits in one of the four programs listed below.

Note: Students who are not certain they have adequate math &/or physics skills to commence the freshman year may wish to take two preparatory courses offered in August, prior to the normal fall semester. Students are encouraged to discuss their potential need with their academic adviser.

Preparatory courses (not required):

AEMA 100	Precalculus Mathematics	3.0
AEPH 110	Preparatory Physics	3.0
		CREDITS

B.Sc Agricultural & Environmental Sciences:

Required Courses - Fall		14.5
AEBI 120	General Biology	3.0
AEMA 101	Calculus 1	3.0
AEPH 112	Introductory Physics 1	4.0
AGRI 195	Freshman Seminar 1	0.5
FDSC 110	General Chemistry 1	4.0
Required Courses - Winter		12.5
AEMA 102	Calculus 2	4.0
AEPH 114	Introductory Physics 2	4.0
AGRI 196	Freshman Seminar 2	0.5
FDSC 111	General Chemistry 2	4.0
Elective - Winter		3.0
Elective		3.0
Total Credits		30.0

B.Sc Nutritional Sciences

Required Courses - Fall		14
AEBI 120	General Biology	3.0
AEMA 101	Calculus 1	3.0
AEPH 112	Introductory Physics 1	4.0
FDSC 110	General Chemistry 1	4.0
Required Courses - Winter		15
AEBI 202	Cellular Biology	3.0
AEMA 102	Calculus 2	4.0
AEPH 114	Introductory Physics 2	4.0
FDSC 230	Organic Chemistry	4.0
Elective - Fall/Winter		1.0
Elective		1.0
Total Credits		30.0

B.Sc Food Science

Required Courses - Fall		14.5
AEBI 120	General Biology	3.0
AEMA 101	Calculus 1	3.0
AEPH 112	Introductory Physics 1	4.0

AGRI 195	Freshman Seminar 1	0.5
FDSC 110	General Chemistry 1	4.0

Required Courses - Winter 12.5

AEMA 102	Calculus 2	4.0
AEPH 114	Introductory Physics 2	4.0
AGRI 196	Freshman Seminar 2	0.5
FDSC 111	General Chemistry 2	4.0

Elective - Winter 3.0

Elective		3.0
----------	--	-----

Total Credits 30.0

B.Eng. (Bioresource)

Required Courses - Fall 14.5

AEBI 120	General Biology	3.0
AEMA 101	Calculus 1	3.0
AEPH 113	Physics 1	4.0
BREE 187	Freshman Seminar 1	0.5
FDSC 110	General Chemistry 1	4.0

Required Courses - Winter 15.5

AEMA 102	Calculus 2	4.0
AEPH 115	Physics 2	4.0
BREE 103	Linear Algebra	3.0
BREE 188	Freshman Seminar 2	0.5
FDSC 111	General Chemistry 2	4.0

Total Credits 30.0

Normally, students registered in the Faculty of Agricultural and Environmental Sciences Freshman program may take a maximum of 8 credits outside the Faculty offerings to meet the requirements of the program. Permission to exceed this limit must be received from the Associate Dean (Student Affairs) prior to registration.

13.5.4 Academic Advisers

Before registration, all students entering the Faculty must consult with the Academic Adviser of their program for selection and scheduling of required, complementary, and elective courses. The Academic Adviser will normally continue to act in this capacity for the duration of the student's studies in the Faculty.

A Faculty Adviser is also available in the Student Affairs Office to assist students with student record related matters.

13.5.5 Categories of Students

Full-Time Students

Full-time students in satisfactory standing take a minimum of 12 credits per term.

Where students in probationary standing are not normally permitted to take more than 14 credits per term. In exceptional circumstances the Committee on Academic Standing may give permission to attempt more.

Part-time Students

Part-time students carry fewer than 12 credits per term.

13.5.6 Academic Standing

All students are required to give satisfactory evidence of mastery of the material of lectures and laboratories. Examinations are normally held at the end of each course but other methods of evaluation may also be used. The grade assigned for a course represents the standing of the student in all the work of the course.

The following rules apply to the academic standing of a student:

1. When a student's CGPA (or TGPA in the first term of the program) falls below 2.00, the student's academic standing becomes Probationary.
2. Students in Probationary standing may register for no more than 14 credits per term.
3. While in Probationary standing, students must achieve a TGPA of 2.50 to continue in Probationary standing or a CGPA of 2.00 in order to return to Satisfactory standing. Failure to meet at least one of these conditions will result in Unsatisfactory

standing. (In the case of Fall term, this will be Interim Unsatisfactory standing and the rules for Probationary standing will apply.)

4. When a student's CGPA (or TGPA in the first term of the program) falls below 1.50, the student's academic standing becomes Unsatisfactory and withdrawal is required. (In the case of Fall term, the standing will be Interim Unsatisfactory standing and the rules for Probationary standing will apply.)
5. Students in Unsatisfactory standing may not continue in their program. Application for readmission may be made only after registration has been interrupted for at least one term (not including Summer term).
6. Readmission will be in the standing Unsatisfactory/Readmit and a CGPA of 2.00 must be achieved to return to Satisfactory standing or a TGPA of 2.50 must be achieved for Probationary standing. Failure to meet at least one of these conditions will result in requirement for permanent withdrawal.

Committee on Academic Standing

The Faculty's Committee on Academic Standing, consisting of academic staff, administrative staff and a student representative, reviews special requests made by students regarding their academic life.

13.5.7 Credit System

The credit assigned to a particular course reflects the amount of effort it demands of the student. As a guideline, a one-credit course would represent approximately 45 hours total work per course. This is, in general, a combination of lecture hours and other contact hours such as laboratory periods, tutorials and problem periods as well as personal study hours.

Please refer to "Credit System", section 3.5.2.

13.5.7.1 Continuing Education Courses

Not all Continuing Education credit courses are recognized for credit within faculty degree programs. Please communicate with the Student Affairs Office before registering for such courses.

13.5.8 Academic Credit Transfer

Transfer credits based on courses taken at other institutions (completed with a grade of C or better) before entrance to this Faculty are calculated and assigned after an accepted applicant has confirmed that s/he is accepting the offer of admission.

Transfer credits may also be granted for courses taken at other institutions (completed with a grade of C or better) during a student's attendance at McGill University. Permission to apply such credits to a program in this faculty must be secured by the student before the work is undertaken. Prior Approval Forms are available in the Student Affairs Office in the Faculty. Grades obtained in such courses do not enter into calculations of grade point averages (GPA).

Exemption from a required or complementary course on the basis of work completed at another institution must be approved by both the Instructor of the appropriate McGill course and the Academic Adviser.

Full-time degree students may register, with approval of the Student Affairs Office, for course(s) at any university in the province of Quebec. These courses successfully completed with a minimum grade of C (according to the standards of the university giving the course), will be recognized for the purpose of the degree but the grades obtained will not enter into calculations of GPA. For further details, see section 3.3.5 "Quebec Inter-University Transfer Agreement (IUT)", or go to www.crepuq.qc.ca to access the online application.

13.5.9 Regulations Regarding Second Academic Majors

While registered in a Major in the Faculty of Agricultural and Environmental Sciences, a student may pursue a second set of courses of greater scope than a Minor (e.g., Faculty Program, Major, Honours Program, Major Concentration) in either this

Faculty or another faculty. Application for a Second Academic Major shall be made to the Associate Dean (Student Affairs) in the Student Affairs Office, Laird Hall, Room 106. Following are the regulations and procedures for Second Academic Majors:

1. The applicant for a Second Academic Major must be in Satisfactory academic standing with a minimum CGPA of 3.00.
2. The applicant, in consultation with the appropriate authority associated with each Major (Academic Adviser, Associate Dean) must construct a proposal showing all the courses that are to be taken to satisfy the entrance and program requirements of both the First and Second Academic Majors.
3. A minimum of 36 credits must be unique to the Second Major (i.e., not part of the Required or Complementary courses taken for the First Major).
4. Students in the Faculty of Agricultural and Environmental Sciences must obtain prior approval for all proposed Second Academic Majors from their Academic Adviser and the Student Affairs Office and from the Associate Dean, adviser or appropriate committee of the other faculty concerned.
5. Normally, proposals for Second Academic Majors will be initiated before completion of U1 year of the First Academic Major.
6. The academic standards applicable to each Major will be respected.

13.5.9.1 Procedures for Minor Programs

Students wishing to register for a Minor program must complete a Minor Approval form (usually at the beginning of their U2 year), and return it duly completed to the Student Affairs Office. The Minor program will then be added to their record and will automatically continue each year unless officially cancelled by the student in writing. Students wishing to cancel the Minor must notify both the Minor adviser and the Student Affairs Office. The Minor Approval form is available on the Faculty website and in the Student Affairs Office, Laird Hall Room 106.

13.5.10 Course Change Information

1. Courses: please refer to "[Course Change Period](#)", [section 3.3.7](#) and the Calendar of Dates.
2. Course withdrawal (Transcript notation of "W"): please refer to "[Regulations Concerning Course Withdrawal](#)", [section 3.3.8](#) and the Calendar of Dates.
3. Other changes: Information about changes may be obtained from the Student Affairs Office of the Faculty.

13.5.11 Graduate Courses Available to Undergraduates

Undergraduates wishing to take such courses must have a cumulative grade point average (CGPA) of at least 3.20. Final approval must be obtained from the Graduate and Postdoctoral Studies Office.

13.5.12 Attendance and Conduct in Class

Matters of discipline connected with, or arising from, the general arrangement for teaching are under the jurisdiction of the Dean of the Faculty.

Students may be admonished by a professor or instructor for dishonest or improper conduct or may be reported to the Associate Dean (Student Affairs) for disciplinary action.

Punctual attendance at all classes, laboratory periods, tests, etc., is expected of all students.

13.5.13 Incomplete Grades

An instructor who believes that there is justification for a student to delay submitting term work may extend the deadline until after the end of the course. In this case, the instructor will submit a grade of K (incomplete), indicating the date by which the work is to be completed. The maximum extensions for the submission of grades to the Student Affairs Office are as follows:

- Students graduating in June:
 Fall courses January 15
 Winter courses, and courses spanning Fall/Winter April 30
- Non-graduating students:
 Fall courses: January 15
 Winter courses, and courses spanning Fall/Winter May 15

Students' deadlines for submitting their work must be sufficiently in advance of these dates to ensure that the work can be graded and the mark submitted on time. It is important to note that instructors may impose earlier deadlines than those listed above.

If marks to clear Ks have not been submitted to the Student Affairs Office by the above dates, the K is automatically changed to a KF and counts as an F in the GPA.

Students with a grade of K who have serious extenuating circumstances may request an extension of the K deadline (KE) from the Associate Dean (Student Affairs). Please refer to "[Grading and Grade Point Averages \(GPA\)](#)", [section 3.5.3](#) for more information about grading and credit.

13.5.14 Examinations

Students should refer to "[Examinations](#)", [section 3.6](#) for information about final examinations and deferred examinations. Examination schedules are posted on the McGill website, www.mcgill.ca, normally one month after the start of classes for the Tentative Exam Schedule, and two months after the start of classes for the Final Exam Schedule.

Every student has a right to write essays, examinations and theses in English or in French except in courses where knowledge of a language is one of the objects of the course.

Oral presentations made as part of course requirements shall be in English.

13.5.14.1 Reassessments and Rereads

In accordance with the Charter of Student Rights, and subject to the conditions stated therein, students have the right to consult any written submission for which they have received a mark as well as the right to discuss this submission with the examiner.

If, after discussion with the instructor, students request a formal final examination reread, they must apply in writing to the Associate Dean (Student Affairs). The following conditions apply:

- grades may be either raised or lowered as the result of a reread;
- rereads in courses outside the Faculty of Agricultural and Environmental Sciences are subject to the deadlines, rules and regulations of the relevant faculty.

Application for rereads must be made by March 31 for Fall term courses and by September 30 for Winter term and Summer term courses. Students are assessed a fee for formal rereads. Any request to have term work re-evaluated must be made directly to the instructor concerned. Students should consult the Student Affairs Office for further information.

13.5.14.2 Deferred Examinations

The Faculty offers deferred exams for medical reasons and exceptional circumstances (to be approved by the Associate Dean (Student Affairs)) for the Fall and Winter period. Verify date in Calendar of Dates, apply on Minerva and provide medical documentation to the Student Affairs Office.

13.5.15 Degree Requirements

To be eligible for a B.Eng.(Bioresource), B.Sc.(Ag.Env.Sc.), B.Sc.(F.Sc.), or B.Sc.(Nutr.Sc.) degree, students must have passed, or achieved exemption, with a minimum C grade in all required and complementary courses of the program. They must have a CGPA of at least 2.00.

Students must have completed all Faculty and program requirements, "[Minimum Credit Requirement](#)", [section 13.5.1](#).

A student must complete a minimum residency requirement of 60 credits at McGill in order to qualify for a McGill degree. Students in the B.Sc.(Ag.Env.Sc.) must take a minimum of 2/3 of their course credits within the Faculty of Agricultural and Environmental Sciences.

In addition, students in the Dietetics program must have completed the Stages of professional formation requiring a CGPA of 2.5.

13.5.16 Honours and First Class Honours

Departments may recommend to the Faculty that graduating students registered in an Honours program be awarded Honours or First-Class Honours under the following conditions:

- students must complete all Honours program requirements; for Honours, the CGPA at graduation must be at least 3.00;
- for First-Class Honours, the CGPA at graduation must be at least 3.50;
- some programs may impose additional requirements, which must be met before students are recommended for Honours or First-Class Honours.

Students in an Honours program whose CGPA is below 3.00 or who did not satisfy certain program requirements must consult their academic adviser to determine their eligibility to graduate in a program other than Honours.

13.5.17 Distinction or Great Distinction

Students in Major programs whose academic performance is appropriate may be awarded their degrees with *Distinction* or *Great Distinction* under the following conditions:

- for *Distinction*, the CGPA at graduation must be 3.30 to 3.49;
- for *Great Distinction*, the CGPA at graduation must be 3.50 or greater.

13.5.18 Dean's Honour List

The designation *Dean's Honour List* may be awarded to graduating students under the following conditions:

- students must be in the top 10% of the Faculty's graduating students.

13.5.19 Medals and Prizes

Various medals, scholarships and prizes are open to graduating students. No application is required. Full details of these are set out in the *Undergraduate Scholarships and Awards Calendar*, available in the Student Affairs Office, Laird Hall, Room 106.

13.6 Academic Programs

13.6.1 Department of Agricultural Economics

Macdonald-Stewart Building – Room MS 3-040

Telephone: (514) 398-7820

Fax: (514) 398-8130

Website: www.agrenv.mcgill.ca/agrecon

Program Director — John C. Henning

Assistant Professor — Anwar Naseem

Associate Professors — John C. Henning, Paul Thomassin

See "[Department of Natural Resource Sciences](#)", section 13.6.6, for Agricultural Economics Programs.

13.6.2 Department of Animal Science

Macdonald Stewart Building - Room MS1-084

Telephone: (514) 398-7794

Fax: (514) 398-7964

E-mail: animal.science@mcgill.ca

Website: www.mcgill.ca/animal

Chair — TBA

Emeritus Professor — John E. Moxley, Roger B. Buckland

Professors — Kwet Fane Ng Kwai Hang, Flannan Hayes, Xin Zhao (*James McGill Professor*),

Associate Professors — Roger I. Cue, Humberto G. Monardes, Arif Mustafa (*William Dawson Scholar*), Leroy E. Phillip, Kevin Wade, David Zadworny

Assistant Professors — Vilceu Bordignon, Sarah Kimmins

Adjunct Professors — Hernan Baldassare, Pierre Lacasse, Daniel Lefebvre, Bruce Murphy

The Department of Animal Science offers Majors in Animal Science and Animal Biology.

ANIMAL SCIENCE MAJOR

Academic Advisers: A. Mustafa (U1), J.F. Hayes (U2), D. Zadworny (U3),

The curriculum in Animal Science involves intensive training in both the basic and applied biological sciences as related to domestic animals and qualifies the graduate for membership in the Ordre des agronomes du Québec and other professional organizations. Graduates generally enter agricultural industries, mainly sales and marketing, government service (Provincial or Federal), extension, teaching or postgraduate studies. Some students go on to study veterinary medicine.

Required Courses: 57 credits

Complementary Courses: 6 credits

Electives: 27 credits to meet the minimum credit requirement for the degree

Required Courses:	CREDITS
	57
AEMA 310 Statistical Methods 1	3
AGEC 200 Principles of Microeconomics	3
AGRI 341 Ecological Agriculture Systems	3
ANSC 250 Principles of Animal Science	3
ANSC 301 Principles of Animal Breeding	3
ANSC 312 Animal Health and Disease	3
ANSC 323 Mammalian Physiology	4
ANSC 324 Developmental Biology and Reproduction	3
ANSC 330 Fundamentals of Nutrition	3
ANSC 433 Animal Nutrition	3
ANSC 451 Dairy and Beef Production Management	3
ANSC 458 Swine and Poultry Production	3
ANSC 495 Seminar 1	1
ANSC 496 Seminar 2	1
BREE 322 Organic Waste Management	3
FDSC 211 Biochemistry 1	3
MICR 230 Introductory Microbiology	3
PLNT 211 Principles of Plant Science	3
SOIL 210 Principles of Soil Science	3
WILD 375 Issues: Environmental Sciences	3
Complementary Courses:	6
One Ethics course:	3
ENVR 203 (3) Knowledge, Ethics and Environment	
or RELG 270 (3) Religious Ethics and the Environment	
One additional Economics course	3

ANIMAL BIOLOGY MAJOR

Academic Adviser: H. Monardes

The Animal Biology Major is directed towards students who wish to further their studies in the basic biology of the larger mammals and birds. Successful completion of the program will enable students to qualify in applying to most professional schools in North America, to postgraduate schools in a variety of biological-oriented programs, and to work in most laboratory settings. The program is not intended for students wishing to become professional agronomists.

Required Courses: 34 credits

Complementary Courses: 24 credits, minimum

Electives: To meet the minimum credit requirement for the degree

	CREDITS
Required Courses:	34
AEBI 202 Cellular Biology	3
AEMA 310 Statistical Methods 1	3
ANSC 234 Biochemistry 2	3
ANSC 250 Principles of Animal Science	3
ANSC 251 Comparative Anatomy	3
ANSC 323 Mammalian Physiology	4
ANSC 330 Fundamentals of Nutrition	3
ANSC 495 Seminar 1	1
ANSC 496 Seminar 2	1
CELL 204 Genetics	4
FDSC 211 Biochemistry 1	3
MICR 230 Introductory Microbiology	3

Complementary Courses: 24

A minimum of 24 credits selected from the following list in consultation with the Academic Adviser:

ANSC 301 (3) Principles of Animal Breeding	
ANSC 312 (3) Animal Health and Disease	
ANSC 324 (3) Developmental Biology and Reproduction	
ANSC 400 (3) Eukaryotic Cells and Viruses	
ANSC 424 (3) Metabolic Endocrinology	
ANSC 433 (3) Animal Nutrition	
ANSC 560 (3) Biology of Lactation	
MICR 341 (3) Mechanisms of Pathogenicity	
ENTO 550 (3) Veterinary and Medical Entomology	
PARA 438 (3) Immunology	
WILD 307 (3) Natural History of Vertebrates	
WILD 311 (3) Ethology	
WILD 410 (3) Wildlife Ecology	
WILD 424 (3) Parasitology	
WILD 350 (3) Mammalogy	

The student may replace up to 12 credits of the complementary courses listed above by choosing, with the student adviser's approval, any course offerings (300 level or higher) in Anatomy and Cell Biology, Biochemistry, Biology, Microbiology and Immunology, Neurology and Neurosurgery, Pharmacology and Therapeutics, Physiology, and Psychology. Any prerequisites for these courses must be taken as electives.

13.6.3 Department of Bioresource Engineering

Macdonald Stewart Building – Room MS1-027

Telephone: (514) 398-7773

Fax: (514) 398-8387

E-mail: robert.kok@mcgill.ca

Website: www.mcgill.ca/bioeng

Chair — Robert Kok

Emeritus Professor — Robert S. Broughton

Professors — Suzelle Barrington, Robert Kok, Chandra Madramootoo (*James McGill Professor*), Edward McKyes, Shiv O. Prasher (*James McGill Professor*), G.S. Vijaya Raghavan (*James McGill Professor*)

Associate Professors — Robert B. Bonnell (*Brace Centre for Water Resources Management*), Michael O. Ngadi (*William Dawson Scholar*)

Assistant Professors — Grant Clark, Mark Lefsrud, Valérie Orsat

Adjunct Professors — Murray Clamen, Serge Guiot, Philippe Savoie, Clément Vigneault, Ning Wang

Faculty Lecturer — Marcia Knutt

BIORESOURCE ENGINEERING MAJOR

The Department of Bioresource Engineering collaborates with other departments and the Faculty of Engineering in providing courses of instruction for a curriculum in Bioresource Engineering. Graduates qualify to apply for registration as professional engineers in any province of Canada.

There are four streams offered within the Bioresource Engineering Major. Via the appropriate choice of elective course sets, a particular area of study may be emphasized.

In the **Bio-Environmental Engineering** stream students learn about soil and water quality management and conservation, geomatics, hydrology and water resources, organic waste treatment, use of GIS for biosystem operation, engineering for land development, climate control in buildings, ecosystem remediation, and many other related topics.

Students who follow the **Soil and Water** stream learn about hydrology, irrigation and drainage, soil and water management, environmental quality control and remediation, structural design, machinery design, artificial intelligence, GIS, and remote sensing.

In the **Food and Bioprocessing** stream students are taught about the engineering of foods and food processes, physical properties of biological materials, post-harvest technology, fermentation and bio-processing, the management of organic wastes, biotechnology, the design of machinery for bioprocessing, etc.

Students who specialize in the **Agricultural Engineering** stream will learn about machine design, machinery, robotics, structural design, environmental quality control, waste management, artificial intelligence, GIS, remote sensing, complex system simulation, and much more.

All required and complementary courses must be passed with a minimum grade of C. One term is spent taking courses from the Faculty of Engineering on the McGill downtown campus.

Students also have the opportunity to pursue a Minor. Several possibilities are: Agricultural Production, Environment, Ecological Agriculture, Biotechnology, Computer Science, Construction Engineering and Management, Entrepreneurship, and Environmental Engineering. Details of some of these Minors can be found in the Faculty of Engineering "**Minor Programs**", section 8.6. To complete a Minor, it is necessary to spend at least one extra term beyond the normal requirements of the B.Eng.(Bioresource) program.

Required Courses: 53 credits

Complementary Courses: 60 credits

	CREDITS
Required Courses:	53
BREE 205 Engineering Design 1	3
BREE 210 Mechanical Analysis and Design	3
BREE 216 Bioresource Engineering Materials	3
BREE 252 Computing for Engineers	3
BREE 301 Biothermodynamics	3
BREE 305 Fluid Mechanics	3
BREE 312 Electric Circuits and Machines	3
BREE 319 Engineering Mathematics	3
BREE 327 Bio-Environmental Engineering	3
BREE 341 Mechanics of Materials	3
BREE 481 Undergraduate Seminar 1	.5
BREE 482 Undergraduate Seminar 2	.5
BREE 483 Undergraduate Seminar 3	.5
BREE 484 Undergraduate Seminar 4	.5
BREE 485 Undergraduate Seminar 5	.5
BREE 486 Undergraduate Seminar 6	.5
BREE 490 Engineering Design 2	3
BREE 495 Engineering Design 3	3
AEMA 202 Intermediate Calculus	3
AEMA 305 Differential Equations	3
MECH 289 Design Graphics	3
MIME 221 Engineering Professional Practice	2
MIME 310 Engineering Economy	3

Complementary Courses:
Set A (6 credits):

One of the following:

- AEMA 310 (3) Statistical Methods 1
 CIVE 302 (3) Probabilistic Systems
 MATH 323 (3) Probability

One of the following:

- CHEE 315 (4) Heat and Mass Transfer
 MECH 346 (3) Heat Transfer

Set B - Basic Sciences (9 credits):

9 credits from the following,

with at least 3 credits chosen from:

- AEBI 202 (3) Cellular Biology
 FDSC 211 (3) Biochemistry 1
 MICR 230 (3) Introductory Microbiology
 PLNT 201 (3) Comparative Plant Biology
 WILD 200 (3) Comparative Zoology
 WILD 205 (3) Principles of Ecology

and the remainder, if any, chosen from:

- AGRI 340 (3) Principles of Ecological Agriculture
 ANSC 250 (3) Principles of Animal Science
 FDSC 200 (3) Introduction to Food Science
 GEOG 203 (3) Environmental Systems
 NRSC 201 (3) Introductory Meteorology
 NRSC 333 (3) Physical and Biological Aspects of Pollution
 NRSC 437 (3) Assessing Environmental Impact
 NRSC 510 (3) Agricultural Micrometeorology
 PLNT 211 (3) Principles of Plant Science
 PLNT 300 (3) Cropping Systems
 PLNT 322 (3) Greenhouse Management
 PLNT 421 (3) Landscape Plant Materials
 SOIL 210 (3) Principles of Soil Science
 SOIL 331 (3) Soil Physics
 SOIL 410 (3) Soil Chemistry

Set C - Social Sciences (9 credits):

One 3-credit course on the impact of technology on society from the following list:

- CHEE 230 (3) Environmental Aspects of Technology
 CHEE 430 (3) Technology Impact Assessment
 CIVE 469 (3) Infrastructure and Society
 ENVR 201 (3) Society and Environment
 MIME 308 (3) Social Impact of Technology
 SOCI 235 (3) Technology and Society

Two 3-credit courses in the humanities and social sciences/administrative studies and law/language courses. (Any language course which is deemed by the academic adviser to have a sufficient cultural component or, in the case of the student who is not proficient in a specific language, program credit will be given for the second of two successfully completed, academically approved 3-credit language courses.)

Set D - Engineering (36 credits, minimum):

36 credits (minimum) from the following courses:

- BREE 214 (3) Geomatics
 BREE 217 (3) Hydrology and Water Resources
 BREE 314 (3) Agri-Food Buildings
 BREE 315 (3) Design of Machines
 BREE 322 (3) Organic Waste Management
 BREE 323 (3) Properties of Biological Materials
 BREE 325 (3) Food Process Engineering
 BREE 412 (3) Machinery Systems Engineering
 BREE 416 (3) Engineering for Land Development
 BREE 418 (3) Soil Mechanics and Foundations
 BREE 419 (3) Structural Design
 BREE 501 (3) Simulation and Modelling

60

- BREE 502 (3) Drainage/Irrigation Engineering
 BREE 504 (3) Instrumentation and Control
 BREE 506 (3) Advances in Drainage Management
 BREE 509 (3) Hydrologic Systems and Modelling
 BREE 510 (3) Watershed Systems Engineering
 BREE 512 (3) Soil Cutting and Tillage
 BREE 515 (3) Soil Hydrologic Modelling
 BREE 518 (3) Bio-Treatment of Wastes
 BREE 519 (3) Advanced Food Engineering
 BREE 525 (3) Climate Control for Buildings
 BREE 530 (3) Fermentation Engineering
 BREE 531 (3) Post-Harvest Drying
 BREE 532 (3) Post-Harvest Storage
 BREE 533 (3) Water Quality Management
 CHEE 474 (3) Biochemical Engineering
 CIVE 317 (3) Structural Engineering 1
 CIVE 318 (3) Structural Engineering 2

MINOR IN ENVIRONMENTAL ENGINEERING

The Minor program consists of 27 credits in courses that are environment related. By means of a judicious choice of complementary and elective courses, Bioresource Engineering students may obtain this Minor with a minimum of 12 additional credits.

The "Environmental Engineering Minor", section 8.6.8, is administered by the Faculty of Engineering, Department of Civil Engineering and Applied Mechanics.

Courses available in the Faculty of Agricultural and Environmental Sciences (partial listing):

- BREE 322 Organic Waste Management
 BREE 416 Engineering for Land Development
 BREE 518 Bio-Treatment of Wastes
 MICR 331 Microbial Ecology

BARBADOS FIELD STUDY SEMESTER

This program takes place at Bellairs Research Institute in Barbados; it has a full 15-credit program offered each Fall semester. For more information, see section 15.2.2 "Barbados Field Study Semester".

13.6.4 School of Dietetics and Human Nutrition

Macdonald Stewart Building – Room MS2-039

Telephone: (514) 398-7840

Fax: (514) 398-7739

 E-mail: nutrition.dietetics@mcgill.ca

 Website: www.mcgill.ca/dietetics
Director — Kristine G. Koski

Professors — Luis B. Agellon, Timothy A. Johns, Harriet V. Kuhnlein

Associate Professors — Grace Egeland (*Canada Research Chair*), Katherine Gray-Donald, Kristine G. Koski, Stan Kubow, Louise Thibault, Hope Weiler (*Canada Research Chair*), Linda Wykes (*William Dawson Scholar*), Grace S. Marquis (*Canada Research Chair*)

Lecturers — Peter Bender (PT), Lynda Fraser (PT), Mary Hendrickson, Linda Jacobs Starkey, Maureen Rose, Joane Routhier, Sandy Phillips, Hugues Plourde, Heidi Ritter

Adjunct Professors — Mary l'Abbé, Marcia Cooper, Laurie Chan, Kevin A. Cockell, Edward Farnworth, Peter J.H. Jones

Cross-Appointed Staff — Food Science and Agricultural Chemistry: Selim Kermasha

Medicine: Louis Beaumier, Franco Carli, Réjeanne Gougeon, L. John Hoffer, Larry Lands, Errol Marliss, José Morais, Thomas Schricker, Jean-François Yale, Ralph Lattermann,
 Parasitology: Marilyn E. Scott
 MUHC: Sonya Page

Health and well-being of individuals in relation to food choices and physiological status prevails as the unifying theme of the programs in the School of Dietetics and Human Nutrition. The availability of food, normal metabolism and clinical nutrition, community nutrition at the local and international level, the evaluation of nutritional products and their use in nutrition, and the communication of information about food and health form the core of academic programs.

DIETETICS MAJOR

Academic Advising Coordinator: Sandy Phillips, M.Sc., R.D.

Graduates are qualified for challenging professional and leadership positions related to food and health, as dietitians, nutritionists and food administrators. The designations "Dietitian" and "Nutritionist" reserved titles associated with reserved acts in the province of Quebec. As clinical nutritionists, dietitians may work in health-care settings, nutrition counselling centres, clinics and private practice. As community nutritionists, dietitians are involved in nutrition education programs through school boards, sports centres and local and international health agencies. The dietitian in the food service sector participates in all aspects of management to assure quality food products. Postgraduate programs are available to qualified graduates. The duration of the program is three and one-half years.

Successful graduates are qualified for membership in Dietitians of Canada and the l'Ordre professionnel des diététistes du Québec. Forty weeks of supervised professional experience in clinical and community nutrition and food service systems management are included.

Required Courses: 100 credits

Note: The School firmly applies prerequisite requirements for registration in all required courses in the Dietetics Major.

All required and complementary courses must be passed with a minimum grade of C.

Complementary Courses: 6 credits

Electives: 9 credits to meet the minimum credit requirements for the degree.

Two Complementary Courses are to be selected from the following, as specified:

3 credits of Human Behavioural Science courses chosen from:

NUTR 301 (3) Psychology

or equivalent course from another faculty.

3 credits from the social sciences that may include:

AGEC 200 (3) Principles of Microeconomics

AGEC 230 (3) Agricultural and Food Marketing

ENVR 201 (3) Society and Environment

ENVR 203 (3) Knowledge, Ethics and Environment

RELG 270 (3) Religious Ethics and the Environment

or equivalent courses from another faculty.

Elective Courses:

The following courses most often fit the timetable; language courses may also be selected; elective choice is not limited to these courses.

FDSC 200 (3) Introduction to Food Science

FDSC 425 (3) Principles of Quality Assurance

NUTR 420 (3) Toxicology and Health Risks

NUTR 430 (3) Directed Studies: Dietetics and Nutrition 1

NUTR 451 (3) Analysis of Nutrition Data

NUTR 501 (3) Nutrition in Developing Countries

NUTR 503 (3) Bioenergetics and the Lifespan

NUTR 511 (3) Nutrition and Behaviour

NUTR 512 (3) Herbs, Foods and Phytochemicals

* Successful completion of all component parts of each level of Stage (Professional Practice) in Dietetics courses is a prerequisite for the next level and must be passed with a minimum grade of C. Undergraduate registration is restricted to students in the Dietetics Major, CGPA greater than or equal to 2.50. Visiting students must contact the Academic Advising Coordinator (Dietetics) regarding course registration eligibility.

Students are reminded that ethical conduct on Professional Practice (Stage) rotations is required. The Faculty reserves the right to require the withdrawal of any student at any time if it (Faculty) feels the student has displayed unprofessional conduct or demonstrates incompetence.

A compulsory immunization program exists at McGill which is required for Dietetics students to practice. Students should complete their immunization before arriving at Macdonald Campus; medical/health documentation must be received prior to commencement of Stage.

NUTRITION MAJOR

Academic Advising Coordinator: Kristine G. Koski, Ph.D., R.D. (USA)

This Major covers the many aspects of human nutrition and food and gives first, an education in the scientific fundamentals of these disciplines and second, an opportunity to focus in (a) nutritional biochemistry and metabolism, (b) global nutrition issues, (c) food function, product development and safety and/or (d) sports nutrition. Graduates are qualified for careers in pharmaceutical and/or food industries or government laboratories, the health science communications field, sports clinics and national or international

food support programs. Graduates often continue on to further studies preparing for careers in research, medicine, and dentistry or as specialists in nutrition. Aside from working as university teachers and researchers, postgraduates may be employed by government and health protection agencies, in world development programs or in the food sector.

(Currently under revision).

Required Courses: 55 credits

All required courses must be passed with a minimum grade of C.

Complementary Courses: 15/16 credits

Electives: 17/18 credits to meet the minimum credit requirement for the degree. Reciprocal agreement allows all students to take a limited number of electives at any Quebec university. With prior approval students can take electives at any Canadian or international university.

MINOR IN HUMAN NUTRITION

Academic Adviser: Linda Wykes, Ph.D.

The Minor in Human Nutrition is intended to complement a student's primary field of study by providing a focused introduction to the metabolic aspects of human nutrition. It is particularly accessible to students in Biochemistry, Biology, Physiology, Anatomy and Cell Biology, Microbiology and Immunology, Animal Science or Food Science programs. The completion of 24 credits is required, of which at least 18 must not overlap with the primary program. All courses must be taken in the appropriate sequence and passed with a minimum grade of C. Students may declare their intent to follow the Minor program at the beginning of their U2 year. They must then consult with the Academic Adviser for the Human Nutrition Minor in the School of Dietetics and Human Nutrition to obtain approval for their course selection. Since some courses may not be offered every year and many have prerequisites, students are cautioned to plan their program in advance.

The Minor program does not carry professional recognition; therefore, it is not suitable for students wishing to become nutritionists or dietitians. However, successful completion may enable students to qualify for many postgraduate nutrition programs.

Required Courses: 6 credits

Complementary Courses: 18 or 19 credits

	CREDITS
Required Courses:	6

PATH 300 (3) Human Disease	

Notes:

- Most courses listed at the 300 level and higher have prerequisites. Although instructors may waive prerequisite(s) in some cases, students are urged to prepare their program of study well before their final year.
- Some courses may not be offered every year. For information on available courses, consult Class Schedule at www.mcgill.ca/minerva; complete listings can be found in the Courses section of this Calendar.

FOOD SCIENCE MAJOR

This program is intended for those students interested in the multi-disciplinary field of food science. The courses are integrated to acquaint the student with food processing, food chemistry, quality assurance, analytical procedures, food products, standards and regulations. The program prepares graduates for employment as scientists in industry or government, in regulatory, research, quality assurance, or product development capacities.

Graduates have the academic qualifications for membership in the Canadian Institute of Food Science and Technology. Graduates can also qualify for recognition by the Institute of Food Technologists (IFT) and the Ordre des chimistes du Québec (OCQ) by selection of an appropriate option.

All options are completed to 90 credits with free elective courses.

Required Courses: 57, 66, or 81 credits

Electives: selected in consultation with Academic Adviser, to meet the minimum 90-credit requirement for the degree. A portion of these credits should be in the humanities/social sciences.

		CREDITS
Required Courses Common to all 3 Options:		51
AEMA 310	Statistical Methods 1	3
AGRI 510	Professional Practice	3
BREE 324	Elements of Food Engineering	3
FDSC 200	Introduction to Food Science	3
FDSC 211	Biochemistry 1	3

FDSC 442	Food Microbiology	3
FDSC 495	Food Science Seminar	3
MICR 230	Introductory Microbiology	3
NUTR 207	Nutrition and Health	3
* If an introductory CEGEP level Organic Chemistry course has not been completed, then FDSC 230 (Organic Chemistry) must be completed as a replacement.		
Food Chemistry Option (OCQ & IFT) Additional Required Credits		30
FDSC 233	Physical Chemistry	3
FDSC 305	Food Chemistry 2	3
FDSC 315	Separation Techniques in Food Analysis 1	3
FDSC 334	Analysis of Food Toxins and Toxicants	3
FDSC 405	Product Development	3
FDSC 410	Flavour Chemistry	3
FDSC 490	Research Project 1	3

FDSC 491	Research Project 2	3
FDSC 515	Enzyme Thermodynamics/Kinetics	3
FDSC 520	Biophysical Chemistry of Food	3

Food Science Option (IFT) Additional Required Credits **15**

FDSC 233	Physical Chemistry	3
FDSC 305	Food Chemistry 2	3
FDSC 315	Separation Techniques in Food Analysis 1	3
FDSC 334	Analysis of Food Toxins and Toxicants	3
FDSC 410	Flavour Chemistry	3

Food Industry Option Additional Required Credits **6**

AGEC 200	Principles of Microeconomics	3
AGEC 242	Management Theories and Practices	3

Complementary Courses **9**

Applicable to the Food Industry Option only.

FDSC 315	Separation Techniques in Food Analysis 1	3
FDSC 334	Analysis of Food Toxins and Toxicants	3
FDSC 410	Flavour Chemistry	3
FDSC 515	Enzyme Thermodynamics/Kinetics	3
FDSC 519	Advanced Food Processing	3
FDSC 520	Biophysical Chemistry of Food	3
FDSC 530	Advanced Analytical Chemistry	3
FDSC 535	Food Biotechnology	3
FDSC 536	Food Traceability	3
FDSC 537	Nutraceutical Chemistry	3

CERTIFICATE IN FOOD SCIENCE

Academic Adviser: Hosahalli S. Ramaswamy

This 30 credit program will appeal to mature students who have a first degree in a science-related discipline. Students must complete the Introduction to Food Science, Food Microbiology and Quality Assurance courses, at least three food chemistry/analysis courses, two processing/engineering courses, and at least one course in communication skills, ethics or business skills. Entry to this program is permitted only in September.

Required Courses: 3 credits

Complementary Courses: 27 credits

Required Course: **CREDITS** **3**

FDSC 200	Introduction to Food Science	3
----------	------------------------------	---

Complementary Courses: **27**

9 credits from the following:

FDSC 251	Food Chemistry 1	3
FDSC 300	Principles of Food Analysis 1	3
FDSC 305	Food Chemistry 2	3
FDSC 315	Separation Techniques in Food Analysis 1	3
FDSC 319	Food Commodities	3
FDSC 334	Analysis of Food Toxins and Toxicants	3
FDSC 410	Flavour Chemistry	3
FDSC 495	Food Science Seminar	3

6 credits from the following:

BREE 324	Elements of Food Engineering	3
FDSC 310	Post Harvest Fruit and Vegetable Technology	3
FDSC 330	Food Processing	3
FDSC 400	Food Packaging	3
FDSC 405	Product Development	3
FDSC 425	Principles of Quality Assurance	3

3 credits from the following:

FDSC 442	Food Microbiology	3
MICR 230	Introductory Microbiology	3
NUTR 207	Nutrition and Health	3

9 credits from the following:

Chair — Benoît Côté

Emeritus Professors — A. Clark Blackwood, Roger Knowles, Angus F. Mackenzie, Robert A. MacLeod, Peter H. Schuepp, Robin K. Stewart

Professors — David M. Bird, Peter Brown (*joint appoint. with Geography and McGill School of Environment*), James W. Fyles (*Tomlinson-Fowler Professor of Forest Ecology*), William H. Hendershot

Associate Professors — Benoît Côté, Mark A. Curtis, Brian T. Driscoll, Gary B. Dunphy, John Henning, David J. Lewis, Guy R. Mehuys, Donald F. Niven, Manfred E. Rau, Ian Strachan, Paul Thomassin, Rodger D. Titman, Joann Whalen, Terry A. Wheeler, Lyle Whyte

Assistant Professors — Elena Bennett (*joint appoint. with McGill School of Environment*), Christopher Buddle, Gordon Hickey, Murray Humphries, Anwar Naseem

Curators — Stephanie Boucher, Christina Idziak

Associate Members — Colin A. Chapman (*Anthropology*), Lauren J. Chapman (*Biology*), David Green (*Redpath Museum*), William D. Marshall (*Dept. of Food Science and Agricultural Chemistry*), Donald L. Smith (*Dept. of Plant Science*), Marilyn Scott (*Institute of Parasitology*)

Adjunct Professors — Robert Anderson, Yves Basset, Suzanne Beauchemin, Dominique Berteaux, Guy Boivin, Michel Bouchard, Jeffrey Cumming, Kimberly Fernie, Charles W. Greer, Thomas Herman, Carlos Miguez, Peter Outridge, Elizabeth Pattey, Husain Sadar, Jean-Pierre Savard, Anton Scheuhammer, Dongwon Shin, Elwin G. Smith, Geoffrey Sunahara, Charles Vincent

AGRICULTURAL ECONOMICS MAJOR

Increasingly complex economic problems facing the agriculture and food system and our natural environment have intensified the need for specialized knowledge and training in the field of agricultural economics. The curriculum is designed to provide students with the knowledge, analytical and decision-making skills required in a career in agribusiness, resource management, international development, and research. The selection of courses from the agribusiness or environmental economics options permits a degree of specialization along those lines, in conjunction with the core courses listed below.

Graduates are eligible to apply for membership in the Ordre des agronomes du Québec (OAQ) if they fulfill the agronomic course requirements (consult the academic adviser).

Core Required Courses:	CREDITS	36
One course in accounting (approved by adviser)	3	
One course in introductory statistics (approved by adviser)	3	
AGEC 200 Principles of Microeconomics	3	
AGEC 201 Principles of Macroeconomics	3	
AGEC 231 Economic Systems of Agriculture	3	
AGEC 320 Intermediate Microeconomic Theory	3	

AGRIBUSINESS OPTION

Whether one has interests in agricultural supply, production, marketing, finance, food processing or retailing, professional management skills are the key to success. The agribusiness option prepares students for managerial responsibility by drawing on the resources of both the Desautels Faculty of Management and the Faculty of Agricultural and Environmental Sciences. This special partnership provides students with not only a first-class business training but also a specialization in the field of agriculture.

Core Required and Complementary Courses: 36 credits
Option Required and Complementary Courses: 27 credits
Electives: To meet the minimum credit requirement for the degree.

	CREDITS	9
Option Required Courses:		
AGEC 242 (3) Management Theories and Practices		
AGEC 332 (3) Farm Management and Finance		
AGEC 450 (3) Agriculture Business Management		
Option Complementary Science Courses:		9
ANSC 250 (3) Principles of Animal Science		
FDSC 200 (3) Introduction to Food Science		
PLNT 201 (3) Comparative Plant Biology		
SOIL 210 (3) Principles of Soil Science		
Option Complementary Business Courses:		9
9 credits chosen from the following list:		
ACCT 361 (3) Intermediate Management Accounting 1		
AGRI 201D1 (3) Agri-Environment Internship		
AGRI 201D2 (3) Agri-Environment Internship		
BUSA 364 (3) Business Law 1		
MGCR 341 (3) Finance 1

AGRICULTURAL SYSTEMS OPTION

The Agricultural Systems option is no longer being offered. For additional information, please contact Professor Paul Thomassin, Academic Adviser.

ENVIRONMENTAL ECONOMICS OPTION

This option integrates biological sciences and environmental decision making with the economics of natural resource use and development. The environmental economics option is intended to prepare students for careers in the management of natural resources and the analysis of natural resource problems and policies.

Core Required and Complementary Courses: 36 credits
Option Required and Complementary Courses: 27 credits
Electives: To meet the minimum credit requirement for the degree.

	CREDITS	12
Option Required Science Courses:		
AEMA 306 (3) Mathematical Methods in Ecology		
NRSC 437 (3) Assessing Environmental Impact		
SOIL 210 (3) Principles of Soil Science		
WILD 205 (3) Principles of Ecology		

Option Complementary Courses:

15 credits chosen from the following list:

AGRI 201D1 (3)	Agri-Environment Internship
AGRI 201D2 (3)	Agri-Environment Internship
BREE 217 (3)	Hydrology and Water Resources
ECON 225 (3)	Economics of the Environment
ECON 326 (3)	Ecological Economics
ECON 405 (3)	Natural Resource Economics
ENVR 203 (3)	Knowledge, Ethics and Environment
MICR 331 (3)	Microbial Ecology
NRSC 201 (3)	Introductory Meteorology
NRSC 333 (3)	Physical and Biological Aspects of Pollution
NUTR 420 (3)	Toxicology and Health Risks
WILD 415 (2)	Conservation Law
WILD 421 (3)	Wildlife Conservation

MINOR IN AGRICULTURAL ECONOMICS

A Minor in Agricultural Economics will complement a student's education in four ways. First, as a social science, Economics will provide an alternative perspective for students in the Faculty. Second, the Minor will provide an excellent foundation of the workings of the economy at large. Third, it will aid students to understand the business environment surrounding the agri-food industry. Finally, it will challenge students to analyze the interaction between the agricultural economy and the natural resource base.

General Regulations:

To obtain a Minor in Agricultural Economics, students must:

- Ensure that their academic record at the University includes a C grade or higher in the courses specified in the course requirements below.
- Complete a minimum total of 24 credits from the courses given below, of which not more than 6 credits may be counted for both Major and Minor programs. This restriction does not apply to elective courses in the Major program.

Required Courses: 12 credits

Complementary Courses: 12 credits

Required Courses	CREDITS
AGEC 200 Principles of Microeconomics	3
AGEC 201 Principles of Macroeconomics	3
AGEC 231 Economic Systems of Agriculture	3
AGEC 330 Agricultural and Food Marketing	3

Complementary Courses
12

Chosen in consultation with the academic adviser for the Minor from the offerings of the Department of Agricultural Economics.

AGEC 242 (3)	Management Theories and Practices
AGEC 320 (3)	Intermediate Microeconomic Theory
AGEC 332 (3)	Farm Management and Finance
AGEC 333 (3)	Resource Economics
AGEC 343 (3)	Accounting and Cost Control
AGEC 425 (3)	Applied Econometrics
AGEC 430 (3)	Agriculture, Food and Resource Policy
AGEC 442 (3)	Economics of International Agricultural Development
AGEC 450 (3)	Agriculture Business Management
AGEC 491 (3)	Research & Methodology
AGEC 492 (3)	Special Topics in Agricultural Economics

MINOR IN ENTREPRENEURSHIP

Academic Adviser: Professor Paul Thomassin

Note: Students will no longer be admitted into the Minor in Entrepreneurship as it is being suspended. For additional information on the Minor in Entrepreneurship, consult the 2007-2008 Undergraduate Programs Calendar available at www.mcgill.ca/courses.

15
CERTIFICATE IN ENTREPRENEURSHIP

The Certificate in Entrepreneurship is no longer being offered. For Information on this program, refer to the 2006-2007 calendar.

APPLIED ZOOLOGY MAJOR

 Academic Advisers: Professors T. A. Wheeler (U2),
C. Buddle (U1, U3)

The great diversity of animals form the focus of this Major, from the invertebrates, with their many beneficial and pest insects, to vertebrates, including fish and wildlife. The interaction of animals with each other and with human populations is stressed. By careful course selection students may emphasize life in soils or water, entomology, physiology, parasitology or vertebrate biology and ecology. Career opportunities exist in both the public and private sectors in research, program development and implementation, pest control, wildlife management, etc.

Required Courses: 27 credits

Complementary Courses: 36 credits

Electives: To meet the minimum credit requirement for the degree.

¹ Downtown Campus

ENVIRONMENTAL BIOLOGY MAJOR

Academic Advisers: Professors E. Bennett (U1), G. Mehuys (U2, U3) Fall 2008, I. Strachan (U2, U3) Winter 2009

This program provides scientists with basic knowledge in Biology and strong emphasis in Ecology. As ecologists they will be equipped to investigate the scientific aspects of the relationships between organisms and their environment.

Required Courses: 27 credits

Complementary Courses: 30 credits

Electives: To meet the minimum credit requirement for the degree.

WOOD 420 (3) Environmental Issues: Forestry

With the permission of the Academic Adviser and the Committee on Academic Standing, ecological or environmental courses offered on the Downtown Campus may be substituted for those appearing in the above list of Complementary Courses.

MICROBIOLOGY MAJOR

Academic Advisers: Professors L. Whyte (U3), B. Driscoll (U1), D. Niven (U2)

Students receive training in fundamental principles and applied aspects of Microbiology, choosing one of the three options: Biotechnology, Ecology or Environment. Successful graduates are competent to work in university, government and industrial research laboratories and in the pharmaceutical, fermentation and food industries.

Required Courses: 51 credits

Complementary Courses: 12 credits, chosen from one option (Biotechnology or Ecology or Environment)

Electives: To meet the minimum credit requirement for the degree.

WILD 375 (3) Issues: Environmental Sciences

RESOURCE CONSERVATION MAJOR

Academic Adviser: Professor B. Côté

The Major prepares students to deal with problems in integrated resource management and environmental protection with the objective of making optimal use of natural resources under any given set of economic, social and ecological conditions. Students follow a series of required courses and select complementary courses on physical, biological, soil and aquatic resources from approved lists on each of these themes.

Required Courses: 26 credits

Complementary Courses: 33 credits

Electives: To meet the minimum credit requirement for the degree

Note: Other courses on the Downtown Campus may be equivalent to some required courses; consult the Academic Adviser. Course substitutions must be approved by the Committee on Academic Standing.

WILDLIFE BIOLOGY MAJOR

Academic Advisers: Professors D. Bird (U3), R. Titman (U1, U2)

This program emphasizes understanding the ecology of vertebrate animals, their biological and physical environment and the interactions that are important in the management of ecological communities and wildlife species. Employment opportunities exist in resource planning, nature interpretation, wildlife management and environmental impact assessment. By careful course selection students may meet requirements for certification by the Wildlife Society.

Chair — Donald L. Smith

Emeritus Professors — Ralph H. Estey, William F. Grant

Professors — Pierre Dutilleul, Donald L. Smith, Alan K. Watson

Associate Professors — Sylvie de Blois, Danielle J. Donnelly, Marc Fortin, Suha Jabaji, Ajjamada C. Kushalappa, Philippe Seguin, Katrine A. Stewart, Marcia J. Waterway

Assistant Professors — Jacqueline C. Bede, Martina V. Stromvik

Faculty Lecturers — Caroline Begg, Serge Lussier, David Wees

Associate Member — Gregory Brown (Department of Biology),
Timothy A. Johns (School of Dietetics and Human Nutrition)

Adjunct Professors — Todd Capson, Sylvie Jenni, Jean-François
Laliberté

The Department of Plant Science offers Majors in Botanical Science and Plant Science, and participates in administering Majors in Agricultural Sciences and the Environmetrics and Food Production and Environment Domains of the McGill School of Environment.

BOTANICAL SCIENCE MAJOR

Academic Adviser: Professor M. J. Waterway
E-mail: marcia.waterway@mcgill.ca

The Botanical Science Major offers two options for those interested in working with plants, one emphasizing the ecology of plants and their environment and the other emphasizing the physiology and molecular biology of plants. The Ecology Option emphasizes ecology, conservation, and environmental sciences. The Molecular Option emphasizes molecular genetics, plant improvement, and biotechnology. These two options form botanists prepared for exciting careers in the knowledge economy.

Graduates find employment within private industry, government services, consulting, teaching, or go on to do postgraduate research. These programs can be completed entirely on the MacDonald Campus or one term can be spent taking courses on the Downtown Campus during the final year.

Required Courses: 42 credits

Complementary Courses: 18 credits, selected from an approved list in consultation with the Academic Adviser; taken in either the Ecology or the Molecular Option.

Electives: To meet the minimum credit requirement for the degree.

Note: Courses marked with an asterisk (*) are offered on the downtown campus.

PLANT SCIENCE MAJOR

Academic Adviser: Professor J. Bede
E-mail: jacqueline.bede@mcgill.ca

The Plant Science Major offers intensive training in agricultural plant science. Comprehensive studies are offered in all aspects of biology and production practices related to important crop plant species. Studies include laboratory, greenhouse, and field exposure relating to agronomic, horticultural, or field crop development, production and management.

Graduates are eligible to apply for membership in the Ordre des agronomes du Québec (OAQ) and the Agricultural Institute of Canada (AIC). Graduates rapidly find employment in agricultural industries, government services, extension, consulting, teaching, or go on to do postgraduate research.

Required Courses: 49 credits

Complementary Courses: 18 credits

Electives: To meet the minimum credit requirement for the degree.

MINOR IN AGRICULTURAL PRODUCTION

Academic Adviser: Professor K. A. Stewart
E-mail: katrine.stewart@mcgill.ca

This Minor program is designed to allow students in non-agricultural production Majors to receive credit for courses in agricultural production and to stimulate “cross-over” studies. The Minor can be associated with existing Major programs in the Faculty, but in some instances it may require more than 90 credits to meet the requirements of both the Major and the Minor.

Students are advised to consult their Major Program adviser and the Academic Adviser of the Minor in their first year. At the time of registration for their penultimate year, students must declare their intent to obtain a Minor in Agricultural Production. With the agreement of their Major Program adviser they must submit their program of courses already taken, and to be taken in their final year, to the Academic Adviser of the Agricultural Production Minor. The Academic Adviser of the Agricultural Production Minor will then certify which courses the student will apply toward the Minor and that the student's program conforms with the requirements of the Minor.

General Regulations

To obtain a Minor in Agricultural Production, students must:

- a) ensure that their academic record at the University includes a C grade or higher in the courses as specified in the course requirements given below.
- b) offer a minimum total of 24 credits from the courses as given below, of which not more than 6 credits may be counted for both the Major and the Minor programs. This restriction does not apply to elective courses in the Major program.

Required Courses: 12 credits

Complementary Courses: 12 credits

Required Courses:		CREDITS
ANSC 250	Principles of Animal Science	3
PLNT 201	Comparative Plant Biology	3
PLNT 300	Cropping Systems	3
SOIL 210	Principles of Soil Science	3

Complementary Courses: 12

12 credits chosen from the following list in consultation with the Academic Adviser for the Minor:

- ANSC 451 (3) Dairy and Beef Production Management
- ANSC 458 (3) Swine and Poultry Production
- PLNT 302 (3) Forage Crops and Pastures
- PLNT 307 (3) Vegetable Production
- PLNT 321 (3) Fruit Production
- PLNT 331 (3) Field Crops

Notes:

1. Most courses listed at the 300 level and higher have prerequisites. Although instructors may waive prerequisite(s) in some cases, students are urged to prepare their program of study well before their final year.
2. Not all courses are offered every year. For information on available courses, consult Class Schedule at www.mcgill.ca/minerva; complete listings can be found in the Courses section of this Calendar.

13.6.8 Interdisciplinary Studies

Ecological Agriculture Program
Telephone: (514) 398-7928
Website: www.agrenv.mcgill.ca/agrecon/ecoagr

MINOR IN ECOLOGICAL AGRICULTURE

Academic Adviser: Professor J. Henning

This Minor program is designed to focus on the principles underlying the practice of ecological agriculture and is suitable for students wishing to farm, do extension and government work, and those intending to pursue postgraduate studies in this field.

The Minor can be associated with existing Major programs in the Faculty, but in some instances it may require more than 90 credits to meet the requirements of both the Major and the Minor.

Students are advised, during the U1 year, to consult their Major Program adviser and the academic adviser of the Minor. At the time of registration for the U2 year, students must declare their intent to obtain the Minor. With the agreement of their Major Program adviser they must submit their program of courses already taken, and to be taken, to the academic adviser of the Minor. The academic adviser of the Minor will then certify which courses the student will apply toward the Minor and confirm that the student's program conforms with the requirements of the Minor.

General Regulations

To obtain a Minor in Ecological Agriculture, students must:

- a) Ensure that their academic record at the University includes a C grade or higher in the courses as specified in the course requirements given below.
- b) Offer a minimum total of 24 credits from the courses as given below, of which not more than 6 credits may be counted for both the Major and the Minor programs. This restriction does not apply to elective courses in the Major program.

Required Courses: 9 credits

WILD 311 (3)	Ethology
WOOD 410 (3)	The Forest Ecosystem

CERTIFICATE IN ECOLOGICAL AGRICULTURE

Academic Adviser: Professor J. Henning

This 30-credit Certificate Program is very similar to the Minor Program and is designed to focus on the principles underlying the practice of ecological agriculture. The Certificate may be of special interest to professional agrologists who wish further training, as well as formal recognition that they have completed a coherent program of courses beyond their B.Sc. studies.

Students holding a B.Sc. in agriculture or a related area are eligible to register for this program provided that they are otherwise acceptable for admission to the University. Students who have completed the Minor in Ecological Agriculture are not permitted to register for this program.

General Regulations

To obtain a Certificate in Ecological Agriculture, students must offer a minimum total of 30 credits from the courses as given below.

[Required Courses: 9 credits

Complementary Courses: 21 credits

	CREDITS	9
Required Courses:		
AGRI 210	Agro-Ecological History	3
AGRI 340	Principles of Ecological Agriculture	3
WILD 205	Principles of Ecology	3
Complementary Courses:		
21 credits chosen from the following, in consultation with the Academic Adviser for Ecological Agriculture		
with at least 3 credits chosen from:		
SOIL 335 (3)	Soil Ecology and Management	3-6
SOIL 445 (3)	Agroenvironmental Fertilizer Use	
and the remaining credits to be chosen from:		
AGEC 333 (3)	Resource Economics	15-18
AGRI 201 D1 (3)	Agri-Environment Internship	
AGRI 201 D2 (3)	Agri-Environment Internship	
AGRI 215 (3)	Agro-Ecosystems Field Course	
AGRI 435 (3)	Soil and Water Quality Management	
ENTO 352 (3)	Control of Insect Pests	
MICR 331 (3)	Microbial Ecology	
NUTR 512 (3)	Herbs, Foods and Phytochemicals	
PLNT 302 (3)	Forage Crops and Pastures	
PLNT 312 (3)	Urban Horticulture	
PLNT 434 (3)	Weed Biology and Control	
PLNT 460 (3)	Plant Ecology	
WILD 311 (3)	Ethology	
WOOD 410 (3)	The Forest Ecosystem	

Notes:

- Most courses listed at the 300 level and higher have prerequisites. Although instructors may waive prerequisite(s) in some cases, students are urged to prepare their program of study to ensure that they have met all conditions.
- Not all courses are offered every year. For information on available courses, consult Class Schedule at www.mcgill.ca/minerva; complete listings can be found in the Courses section of this Calendar.

- Students using AGRI 491D1/AGRI 491D2 towards the requirements of the Certificate/Minor are limited to an experience on farms or other enterprises that are either organic, biodynamic, or practising permaculture. The placement must be approved by the academic adviser for the Certificate/Minor.
- SOIL 521 is an alternate year course.

AGRICULTURAL SCIENCES MAJORS

Academic Adviser: TBA
 Department of Plant Science
 Telephone: (514) 398-7851

The Agricultural Sciences Majors are designed to provide students with a broad appreciation of the scientific and applied aspects of modern agriculture and the flexibility to pursue individual interests.

During the summer months, students can gain valuable practical field experience (and obtain additional course credit) in the Agricultural Sciences Internship Major.

Both majors consist of a similar core of required courses that confer eligibility to apply for membership in the Ordre des agronomes du Québec and other provincial institutes of agrology.

Students in the Agricultural Sciences Majors can enroll in the General Option, or obtain more specialized experience by selecting the Ecological Agriculture, International Agriculture, Soil Science or Agricultural Biotechnology Options.

AGRICULTURAL SCIENCES MAJOR – GENERAL OPTION

(90 credits)

Required Courses: 49 credits

Complementary Courses: 22 credits

Electives: To meet the minimum credit requirement for the degree.

	CREDITS	49
Required Courses:		
AEMA 310	Statistical Methods 1	3
AGEC 200	Principles of Microeconomics	3
AGEC 231	Economic Systems of Agriculture	3
AGRI 210	Agro-Ecological History	3
AGRI 220	Professional Practice Seminar 1	0.5
AGRI 221	Professional Practice Seminar 2	0.5
AGRI 320	Professional Practice Seminar 3	0.5
AGRI 321	Professional Practice Seminar 4	0.5
AGRI 420	Professional Practice Seminar 5	0.5
AGRI 421	Professional Practice Seminar 6	0.5

SOIL 210	Principles of Soil Science	3
SOIL 315	Soil Fertility and Fertilizer Use	3
Complementary Courses: 22		
at least one of:		
ANSC 323 (4)	Mammalian Physiology	
PLNT 353 (4)	Plant Structure and Function	
at least one production course in Agricultural Science:		
ANSC 451 (3)	Dairy and Beef Production Management	
ANSC 458 (3)	Swine and Poultry Production	
PLNT 331 (3)	Field Crops	
at least one course in Agricultural Engineering:		
AGEC 332 (3)	Farm Management and Finance	
BREE 217 (3)	Hydrology and Water Resources	
BREE 314 (3)	Agri-Food Buildings	
BREE 322 (3)	Organic Waste Management	
BREE 327 (3)	Bio-Environmental Engineering	

plus a minimum of 12 credits **chosen in consultation with the Academic Adviser** from courses with Subject Codes BREE, AGECE, AGRI, ANSC, ENTO, NRSC, PLNT, and SOIL.

Agricultural SCIENCES INTERNSHIP MAJOR – GENERAL OPTION (96 credits)

Required Courses: 61 credits

Complementary Courses: 22 credits

Electives: To meet the minimum credit requirement for the degree.

CREDITS
61

Required Courses:

All of the required courses (49 credits) specified for the Agricultural Sciences Major – General Option, with the addition of:

AGRI 201D1	Agri-Environment Internship	3
AGRI 201D2	Agri-Environment Internship	3
AGRI 301D1	Agrology Internship	3
AGRI 301D2	Agrology Internship	3

Complementary Courses:

As described for the Agricultural Sciences Major – General Option.

22

AGRICULTURAL SCIENCES MAJOR – AGRICULTURAL BIOTECHNOLOGY OPTION (90 credits)

Required Courses: 58 credits

Complementary Courses: 19 credits

Electives: To meet the minimum credit requirement for the degree.

CREDITS
58

Required Courses:

All of the required courses (49 credits) specified for the Agricultural Sciences Major – General Option, with the addition of:

AEBI 202	Cellular Biology	3
MICR 338	Bacterial Molecular Genetics	3
ANSC 400	Eukaryotic Cells and Viruses	3

Complementary Courses:

at least one of:

ANSC 323	(4) Mammalian Physiology
PLNT 353	(4) Plant Structure and Function

at least one production course in Agricultural Science:

ANSC 451	(3) Dairy and Beef Production Management
ANSC 458	(3) Swine and Poultry Production
PLNT 331	(3) Field Crops

at least one course in Agricultural Engineering:

BREE 217	(3) Hydrology and Water Resources
BREE 314	(3) Agri-Food Buildings
BREE 322	(3) Organic Waste Management
BREE 327	(3) Bio-Environmental Engineering

and a minimum of 9 credits chosen from the following:

AEBI 306	(3) Experiments in Biotechnology
ANSC 420	(3) Animal Biotechnology
ANSC 504	(3) Population Genetics
ANSC 508	(3) Tools in Animal Biotechnology
BTEC 501	(3) Bioinformatics
BTEC 502	(3) Biotechnology Ethics and Society
CELL 500	(3) Techniques in Plant Molecular Genetics

13.6.9 Field Studies

African Field Study Semester

The Department of Geography, Faculty of Science, coordinates the 15-credit interdisciplinary African Field Study Semester, [see section 15.2.4 "Field Study Minor"](#).

Barbados Field Study Semester

This program takes place at Bellairs Research Institute in Barbados, it is a full 15 credit program offered each fall semester. For more information, [see section 15.2.2 "Barbados Field Study Semester"](#).

Panama Field Study Semester

The program is a joint venture between McGill University and the Smithsonian Tropical Research Institute (STRI) in Panama. For more information, [see section 15.2.3 "Panama Field Study Semester"](#).

13.7 Graduate Programs

Graduate work may be undertaken on the Macdonald Campus, through the Departments of Agricultural Economics, Animal Science, Bioresource Engineering, Food Science and Agricultural Chemistry, Natural Resource Sciences, and Plant Science, the Institute of Parasitology, and the School of Dietetics and Human Nutrition.

The advanced courses of study offered lead to the degrees of Master of Science, Graduate Certificate in Biotechnology, Graduate Certificate in Integrated Water Resources Management (IWRM), and Doctor of Philosophy.

Information on these programs and related fellowships is available from the Student Affairs Office, Macdonald Campus of McGill University, Sainte-Anne-de-Bellevue, QC H9X 3V9.

The *Graduate and Postdoctoral Studies Calendar* and full information regarding graduate courses, theses, registration, fellowships, etc., can be accessed on the McGill Website, www.mcgill.ca.

Director — Peter Enright

13.8.1 Program – FMT

This 3-year academic and practical program is offered on the Macdonald Campus and taught by the staff of the Faculty of Agricultural and Environmental Sciences of McGill University. The program is funded by the ministère de l'Agriculture, des Pêcheries et de l'Alimentation du Québec and authorized by the Ministère de l'Éducation, du Loisir et du Sport du Québec.

The educational goals of the program are:

1. to make our graduates competent in the exercise of their profession;
2. to help the student's integration into professional life;
3. to foster professional mobility;
4. to foster a need for continual development of professional knowledge.

Six academic terms are spent on the Macdonald Campus studying a sequence of courses in soil, plant science, animal science, engineering, economics and management. The first summer of the program includes a 13-week internship on an agricultural enterprise other than the home farm, or an agricultural business where the student learns the many skills and encounters the many problems related to modern commercial agriculture. Students prepare for their Enterprise internship during both academic semesters of Year 1 through two Farm Practice courses.

During the second summer, students are registered in Entrepreneurship 1, which involves agricultural enterprises. The students will be responsible for data collection to be used in their Farm Project and the Nutrient Management Plan 2 when they return to campus for the Fall semester. The internships and practicums will enable the students to relate their academic work to the reality of farming and the agri-food sector.

Finally, courses in English, Français, Humanities, Physical Education and two complementary courses taken during the program will entitle the student to receive a Diplôme d'études collégiales (DEC) from the Ministère de l'Éducation, du Loisir et du Sport du Québec. Students will also receive a certification from Macdonald Campus stating that they have successfully completed the requirements of the Farm Management and Technology Program.

13.8.2 Entrance Requirements – FMT

1. Students should have a good practical knowledge of farming under eastern Canadian conditions. One year of experience is recommended but under special conditions a four-month summer season is acceptable.
2. The minimum academic entrance requirements are a Quebec High School Leaving Certificate (Secondary V), or its equivalent and any other academic requirement set by the M.E.L.S.
3. All candidates for admission must make arrangements to come to the Macdonald Campus for an interview prior to admission to the program.
4. Admission to this program is only in the Fall semester.
5. We strongly encourage incoming students to acquire their driver's permit (both for cars **and** farm equipment) before

coming to Macdonald Campus. This is first for safety reasons, given that students work with farm equipment (Soil Preparation) very early on as they arrive at Macdonald. As well, most farmers require that their employees and stagiaires know how to drive and possess the appropriate driver's license.

13.8.3 Registration – FMT

Students in the Farm Management and Technology Program must register on-line using Minerva at www.mcgill.ca/minerva-students for each semester at McGill.

Note: The University reserves the right to make changes without prior notice to the information contained in this publication, including the alteration of various fees, schedules, conditions of admission and credit requirements and the revision or cancellation of particular courses. In normal circumstances, individual courses will not be offered with less than five registrants.

13.8.4 Program Outline

Administrative Unit

FMTM 001	Farm Practice 1
FMTM 007	Health and Farm Safety
FMTM 011	Farm Practice 2
FMTM 036	Enterprise Internship
FMTM 037	Entrepreneurship 1

Bioresource Engineering

FMTM 003	Soil Preparation
FMTM 004	Microcomputing
FMTM 014	Machinery Management
FMTM 018	Building Maintenance
FMTM 019	Tools and Machinery Maintenance
FMTM 021	Soil and Water Conservation
FMTM 024	Farm Building Planning
FMTM 027	Precision Farming

Agricultural Economics

FMTM 002	Introduction to Economics
FMTM 025	Farm Project
FMTM 038	Financial and Managerial Accounting
FMTM 039	Agri-Marketing
FMTM 042	Budgeting, Finance and Policies
FMTM 043	Entrepreneurship 2
FMTM 044	Management of Human Resources

Animal Science

FMTM 005	Animal Anatomy and Physiology
FMTM 008	Introduction to Animal Science

English

FMTM 080	English Upgrading
FMTM 081	Components of Discourse
FMTM 082	Literary Genres
FMTM 083	Literary Themes
FMTM 084	English for FMT

Français

FMTM 075	Langue française et communication
FMTM 098	Français agricole

Humanities

FMTM 085	Humanities 1: Knowledge
FMTM 086	Humanities 2: World Views
FMTM 087	Environmental and Organizational Issues

Natural Resource Sciences

FMTM 009	Soil Fertilization
FMTM 040	Nutrient Management Plan 1
FMTM 041	Nutrient Management Plan 2

Physical Education

FMTM 093	Health and Physical Education
FMTM 094	Physical Activity
FMTM 095	Active Living

Plant Science

FMTM 006	Agricultural Botany
FMTM 017	Pesticide Use

ELECTIVE PRODUCTION COURSES

We offer four production courses in the area of Animal Science and four production courses in the area of Plant Science. Students must take a minimum of two courses in each category for a total of four courses. Students could elect to take more than four courses if they wish, after a discussion with their academic adviser. They must take a minimum of two courses per semester.

Animal Science category

FMTM 028	Dairy Heifer Management
FMTM 029	Dairy Herd Management
FMTM 030	Swine and Poultry
FMTM 031	Beef and Sheep

Plant Science category

FMTM 032	Fruit and Vegetable Crops
FMTM 033	Greenhouse Crops
FMTM 045	Field Crop Production
FMTM 046	Field Crop Management

COMPLEMENTARY COURSES *

Students must take the following complementary courses to meet the program requirements:

FMTM 096	Forests, Forestry and Society
FMTM 097	Landscape Design

* After consultation with their academic adviser, students can substitute complementary courses taken at another collegial institution. This includes science courses which are required for further studies in a degree program. The cost associated with courses taken elsewhere must be assumed by the students.

COMPREHENSIVE ASSESSMENT

The objective of this examination is to ensure that students have attained the objectives and standards for each competency in the program. Successful completion of the Comprehensive Assessment is mandatory to obtain the D.E.C.

The passing grade is 60%. The mark indicating that the student has successfully completed the Comprehensive Assessment will appear on the student's transcript.

ENGLISH EXIT EXAMINATION

All students who wish to graduate and obtain the D.E.C. must pass the English Exit Examination that is offered by the M.E.L.S. Students must take this examination on the date selected by the M.E.L.S.

13.8.5 Academic Rules and Regulations – FMT

13.8.5.1 Sessional Dates

The number of teaching and examination days is set by the Ministère de l'Éducation, du Loisir et du Sport du Québec. The sessional dates vary from year to year. At the present time, each semester has 75 teaching days and 7 days of exams.

13.8.5.2 Last Day for Withdrawal or Course Additions

The last day to make course registration changes for Fall term courses is September 20.

The last day to make course registration changes for Winter term courses is February 15.

13.8.5.3 Academic Standing

Attendance in class is compulsory. Students with attendance of less than 80% may not be permitted to write examinations.

Examinations and other work in courses will be marked according to the percentage system. The minimum passing mark in a course is 60%.

When a student's cumulative percent average (CPA) or semester percent average (SPA) first drops below 60%, or they fail four or more courses in a semester, withdrawal is advised. Students who choose to remain in the program are on probation.

Students on probation are normally permitted to register for not more than 10 credits per semester. They are not permitted to be on probation for more than one semester unless they obtain a SPA of 70% or higher.

Students who do not raise their CPA to 60% (or obtain a SPA of 70%) while on probation are not permitted to continue. They are required to withdraw from the Program for one year. If, after this period, students wish to be readmitted, they must apply in writing to the Director of the Program.

13.8.5.4 Handbook on Student Rights and Responsibilities

This Handbook is a compendium of regulations and policies governing student rights and responsibilities at McGill University. It is published jointly by the Dean of Students' Office and the Secretariat. A copy of the Handbook can be found on the Web at www.mcgill.ca/secretariat/handbooks/student or obtained from the Student Affairs Office or the Macdonald Campus Student Affairs Office.

13.8.5.5 Institutional Policy on the Evaluation of Student Achievement

The policy has the following objectives:

- to establish and explain the principles followed in evaluating student learning;
- to describe the means of translating these principles into practice and to establish the required procedures;
- to articulate the appropriate responsibilities of students, instructors, departments, and academic administrators;
- to account to students, parents, universities and employers for the standards of learning at the campus;
- to create an environment of awareness and free discussion of pedagogical concerns within all segments of the campus community;
- to provide information which will allow students to more fully understand and participate in the educational process;
- to provide the framework within which instructors and academic administrators can exercise their professional judgment in a competent, just, and coherent fashion.

Copies are available in the Library and students are informed of it at registration.

13.8.6 Fees and Expenses – FMT

13.8.6.1 Fees

Tuition fees for all full-time students who are eligible for the Farm Management and Technology Program are paid by the ministère de l'Agriculture, des Pêcheries et de l'Alimentation du Québec. Student Services and Student Societies' fees, as well as course material fees, will be charged according to the schedule in effect for all Macdonald Campus students. At the time of printing, the fees were \$743.45 for the Fall semester and \$598.85 for the Winter semester.

* 2008-09 fees, subject to change without notice.

13.8.6.2 Textbooks and Supplies

The cost of textbooks and supplies is estimated at \$200.00 per semester.

13.8.6.3 Financial Assistance

A limited number of loans are granted on the basis of financial need to full-time students who maintain satisfactory academic standing, however, all applicants for McGill aid must apply for maximum government aid or other assistance for which they are eligible.

Applicants must arrange for an interview with the Loan Administrator for the Quebec region. During the academic year, the Administrator visits Macdonald Campus once a week to help students with financial difficulties.

For more information see "[Scholarships and Student Aid](#)", [section 3.8](#), or contact the Student Services Centre, telephone (514) 398-7992. Applications for McGill loans are available on-line. Applicants must log-in to **Minerva** and visit **Financial Aid** to complete an application.

13.8.7 Residence Accommodation – FMT

The Laird Hall Residence has a capacity of 250 students. It accommodates undergraduate, graduate, and Farm Management and Technology Program students on the Macdonald Campus. For more information, see [section 4.3.2 "University Residences – Macdonald Campus"](#).

13.9 Instructional Staff

Agellon, Luis B.; B.Sc., Ph.D. (McM.); Professor of Human Nutrition and Canada Research Chair
 Alli, Inteaz; B.Sc.(Guyana), M.Sc., Ph.D.(McG.); Professor of Food Science and Agricultural Chemistry
 Barrington, Suzelle; B.Sc.(Agr.Eng.), Ph.D.(McG.); Professor of Bioresource Engineering
 Bede, Jacqueline; B.Sc.(Calg.), M.Sc., Ph.D.(Tor.); Assistant Professor of Plant Science
 Beech, Robin N.; B.Sc.(Nott.), Ph.D.(Edin.); Associate Professor of Parasitology
 Begg, Caroline; B.Sc.(Agr.)(McG.), M.Sc.(Sask.), Ph.D.(McG.); Faculty Lecturer, Department of Plant Science
 Bennett, Elena; B.A.(Oberlin), M.Sc., Ph.D.(Wis.), Assistant Professor of Ecosystem Ecology and McGill School of Environment
 Bird, David M.; B.Sc.(Guelph), M.Sc., Ph.D.(McG.); Fellow A.O.U.; Professor of Wildlife Biology and Director, Avian Science and Conservation Centre
 Blackwood, A. Clark; B.Sc., M.Sc.(Alta.), Ph.D.(Wis.), F.R.S.C.; Emeritus Professor of Microbiology
 Bonnell, Robert B.; B.Sc.(C'dia), B.Sc.(Agr.Eng.), M.Sc., Ph.D.(McG.); Associate Professor of Bioresource Engineering (*Brace Associate Professor*)
 Bordignon, Vilceu; Ag.Tec.(EAPC), D.V.M., M.Sc., Ph.D.; Assistant Professor of Animal Science
 Broughton, Robert S.; B.S.A., B.A.Sc.(Tor.), S.M.(MIT), Ph.D.(McG.), L.L.D.(Dal.); F.A.S.A.E., F.C.S.A.E.; Emeritus Professor of Bioresource Engineering
 Brown, Peter G.; B.A.(Haver.), M.A., Ph.D.(Col.); Professor of Natural Resource Sciences (*joint appoint. with Geography and McGill School of Environment*)
 Buckland, Roger B.; B.Sc.(Agr.), M.Sc.(McG.), Ph.D.(Md.); Emeritus Professor of Animal Science
 Buddle, Christopher; B.Sc.(Guelph), Ph.D.(Alta.); Assistant Professor of Forest Insect Ecology
 Chenier, Martin R.; B.Sc., M.Sc.(Laval), Ph.D.(McG.); Assistant Professor of Food Safety
 Cherestes, Alice; B.A., M.A., Ph.D.(CUNY); Faculty Lecturer, Faculty of Agricultural and Environmental Sciences
 Clark, Grant; B.Sc. Agric. Eng.(Alta.), Ph.D.(McG.); Assistant Professor of Bioresource Engineering
 Côté, Benoît; B.Sc., Ph.D.(Laval); Associate Professor of Woodland Resources, Chair of Department of Natural Resource Sciences
 Cue, Roger I.; B.Sc.(Newcastle, UK), Ph.D.(Edin.); Associate Professor of Animal Science
 Curtis, Mark; B.Sc., M.Sc., Ph.D.(McG.); Associate Professor of Wildlife Biology
 de Blois, Sylvie; B.Sc.(Agr.)(McG.), M.Sc., Ph.D.(Montr.), Associate Professor of Plant Science and McGill School of Environment
 Donnelly, Danielle J.; B.Sc.(Agr.)(McG.), M.Sc.(Br. Col.), Ph.D.(S. Fraser); Associate Professor of Plant Science
 Driscoll, Brian T.; B.Sc., Ph.D.(McM.); Associate Professor of Microbiology

- Dunphy, Gary B.; B.Sc.(New Br.), M.Sc., Ph.D.(Nfld.); Associate Professor of Entomology
- Dutilleul, Pierre R.; B.Sc., Ph.D.(Belgium); Professor of Statistics
- Dzierszynski, Florence; Bacc.(Université de Lille I); M.Sc.(Université de Compiègne/Université de Lille I); Ph.D.(Université de Lille I); Assistant Professor of Parasitology and Canada Research Chair
- Egeland-Hovda, Grace M.; B.A.(Luther), Ph.D.(Pitt.); Associate Professor of Human Nutrition and Canada Research Chair
- Ellyett, William R.; B.A.(Sir G. Wms.), B.Ed.(P.E.)(McG.); Faculty Lecturer (PT), Farm Management and Technology Program and Director of Athletics
- Enright, Peter; B.Sc.(Agr. Eng.), M.Sc.(McG.); Faculty Lecturer, Director, Farm Management and Technology Program
- Estey, Ralph H.; B.Ed.(New Br.), M.S.(Maine), D.I.C.(Imp. Coll.), B.Sc.(Agr.), Ph.D.(McG.), F.L.S.; Emeritus Professor of Plant Pathology
- Fortin, Marc G.; B.Sc., M.Sc.(Laval), Ph.D.(McG.); Professor of Plant Science (*William Dawson Scholar*)
- Fyles, James W.; B.Sc., M.Sc.(Vic., BC), Ph.D.(Alta.); Professor of Woodland Resources (*Tomlinson-Fowler Professor of Forest Ecology*)
- Geary, Timothy G.; B.Sc.(Notre Dame), Ph.D.(Mich.); Professor of Parasitology, Director, Institute of Parasitology, Canada Research Chair in Parasite Biotechnology
- Georges, Elias; B.Sc., Ph.D.(McG.); Associate Professor of Parasitology
- Grant, William F.; B.A., M.A.(McM.), Ph.D.(Virg.), F.L.S.; Emeritus Professor of Genetics
- Gray-Donald, Katherine; B.Sc., Ph.D.(McG.); Associate Professor of Human Nutrition
- Hayes, J. Flannan; B.Agr.Sc., M.Agr.Sc.(Dublin), Ph.D.(N.Carolina St.); Professor of Animal Science
- Hendershot, William H.; B.Sc.(Tor.), M.Sc.(McG.), Ph.D.(U.B.C.); Associate Dean (Academic), Professor of Soil Science
- Hendrickson-Nelson, Mary; B.A.(College of St. Benedict), B.Sc.(Minn.), M.Sc.(Colo.St.); Faculty Lecturer (Stage), School of Dietetics and Human Nutrition
- Henning, John C.; B.Sc., Ph.D.(Guelph); Associate Professor of Agricultural Economics
- Hickey, Gordon M.; B.F.Sc.(Melb.), Ph.D.(Br. Col.); Assistant Professor of Natural Resource Sciences
- Humphries, Murray; B.Sc.(Manit.), Ph.D.(Alta.); Assistant Professor of Wildlife Biology (NSERC Northern Chair)
- Ismail, Ashraf A.; B.Sc., Ph.D.(McG.); Associate Professor of Food Science and Agricultural Chemistry
- Jabaji, Suha; B.Sc.(AUB), M.Sc.(Guelph), Ph.D.(Wat.); Associate Professor of Plant Science and Associate Dean (Research and Graduate Education)
- Jacobs Starkey, Linda; B.Sc.(H.Ec.)(Mt. St. Vin.), M.Sc., Ph.D.(McG.), RD, FDC; Faculty Lecturer, School of Dietetics and Human Nutrition
- Jardim, Armando; B.Sc., Ph.D.(Vic., BC); Associate Professor of Parasitology
- Johns, Timothy A.; B.Sc.(McM.), M.Sc.(Br. Col.), Ph.D.(Mich.); Professor of Human Nutrition
- Kermasha, Selim; B.Sc.(Baghdad), D.Sc.(Nancy); Associate Professor of Food Science and Agricultural Chemistry and Chair of Department
- Kimmins, Sarah; B.Sc.(Dal.), M.Sc.(Nova Scotia Ag.), Ph.D.(Dal.); Assistant Professor of Animal Science
- Knowles, Roger; B.Sc.(Birm.), Ph.D., D.Sc.(Lond.), F.R.S.C.; Emeritus Professor of Microbiology
- Knutt, Marcia E.; H.B.Sc.(W. Ont.), M.A., Ph.D.(Brandeis); Faculty Lecturer, Department of Bioresource Engineering
- Kok, Robert; B.E.Sc., Ph.D.(W. Ont.); Professor of Bioresource Engineering and Chair of Department
- Koski, Kristine G.; B.S., M.S.(Wash.) Ph.D.(Calif., Davis); Associate Professor of Human Nutrition and Director, School of Dietetics and Human Nutrition
- Kubow, Stan; B.Sc.(McG.), M.Sc.(Tor.), Ph.D.(Guelph); Associate Professor of Dietetics and Human Nutrition
- Kuhnlein, Harriet V.; B.S.(Penn. St.), M.S.(Ore.), Ph.D.(Calif. Berk.); Professor Human Nutrition
- Kushalappa, Ajjamada C.; B.Sc., M.Sc.(B'lore), Ph.D.(Flor.); Associate Professor of Plant Science
- Lefsrud, Mark G.; B.S.(Sask.), M.S.(Rutg.), Ph.D.(Tenn.); Assistant Professor of Bioresource Engineering
- Lewis, David J.; B.Sc., M.Sc., Ph.D.(Mem.); Associate Dean (Student Affairs) and Associate Professor of Entomology
- Lussier, Serge; B.Sc.(Agr.)(McG.); Assistant Director and Faculty Lecturer, Farm Management and Technology Program
- MacKenzie, Angus F.; B.S.A., M.Sc.(Sask.), Ph.D.(C'nell); Emeritus Professor of Soil Science
- MacLeod, Robert A.; B.A., M.A.(Br. Col.), Ph.D.(Wis.), F.R.S.C.; Emeritus Professor of Microbiology
- Madramootoo, Chandra; B.Sc.(Agr.Eng.), M.Sc., Ph.D.(McG.); P.Eng. Dean (*James McGill Professor*)
- Marquis, Grace S.; B.A.(Ind.), M.Sc.(Mich.St.), Ph.D.(C'nell); Associate Professor of Human Nutrition and Canada Research Chair
- Marshall, William D.; B.Sc.(New Br.), Ph.D.(McM.); Professor of Food Science and Agricultural Chemistry
- McClintock, Katherine; B.A.(Welles.), B.Sc.(Agr.), M.Sc. (McG.); Faculty Lecturer, Department of Plant Science
- McKyes, Edward; B.Eng., M.Eng., Ph.D.(McG.), F.C.S.A.E.; Professor of Bioresource Engineering
- Mehuys, Guy R.; B.Sc., Ing.Agron.(Gembloux), Ph.D.(Calif.); Associate Professor of Soil Science
- Moffat, Donald; B.Ed.(McG.), Grad Dip in Sports Admin.(C'dia); Faculty Lecturer (PT), Farm Management and Technology Program and Instructional Coordinator of Athletics
- Molgat, Christian; B.Sc.(Guelph), B.Sc.(Ott.); Faculty Lecturer, Farm Management and Technology Program
- Monardes, Humberto G.; B.Sc.(Concepcion, Chile), M.Sc., Ph.D.(McG.); Associate Professor of Animal Science
- Moxley, John E.; B.Sc.(Agr.), M.Sc.(McG.), Ph.D.(C'nell), F.A.I.C.; Emeritus Professor of Animal Science
- Mustafa, Arif F.; B.Sc., M.Sc.(Khartoum), Ph.D.(Sask.); Associate Professor of Animal Science (*William Dawson Scholar*)
- Naseem, Anwar; B.Sc.(McG.), M.A., M.Sc., (Penn.), Ph.D.(Mich. St.); Assistant Professor of Agricultural Economics
- Ngadi, Michael O.; B.Eng.(Nigeria), M.A.Sc., Ph.D.(Nova Scotia TC.); Associate Professor of Bioresource Engineering (*William Dawson Scholar*)
- Ng Kwai Hang, Kwet Fane; B.Sc.(Agr.), M.Sc., Ph.D.(McG.); Professor of Animal Science
- Niven, Donald F.; B.Sc., Ph.D.(Aber.); Associate Professor of Microbiology
- Orsat, Valerie; B.Sc., M.Sc., Ph.D.(McG.); Assistant Professor of Bioresource Engineering
- Phillip, Leroy E.; B.Sc.(Agr.), M.Sc.(McG.), Ph.D.(Guelph); Associate Professor of Animal Science
- Phillips, Sandra; B.A.(Qu.), B.Sc.(F.Sc.), M.Sc.(McG.); Faculty Lecturer (Stage), School of Dietetics and Human Nutrition
- Plourde, Hugues; B.Sc.(Nutr.Sci.)(McG.), M.Sc.(Nutr.)(Montr.); Faculty Lecturer (Stage), School of Dietetics and Human Nutrition
- Prasher, Shiv O.; B.Tech, M.Tech.(Punjab), Ph.D.(Br. Col.); Professor of Bioresource Engineering (*James McGill Professor*)
- Prichard, Roger K.; B.Sc., Ph.D.(N.S.W.); Professor, Institute of Parasitology (*James McGill Professor*)
- Raghavan, G.S. Vijaya; B.Eng.(B'lore), M.Sc.(Guelph), Ph.D.(Colo.St.); F.A.S.A.E., F.C.S.A.E., F.A.S.M.E.; Professor of Bioresource Engineering (*James McGill Professor*)
- Ramaswamy, Hosahalli; B.Sc.(Bangalore), M.Sc.(Mysore), M.Sc., Ph.D.(Br. Col.); Professor of Food Science and Agricultural Chemistry
- Rau, Manfred E.; B.Sc., Ph.D.(W. Ont.); Associate Professor of Parasitology in Department of Natural Resource Sciences
- Ribeiro, Paula A.; B.Sc., Ph.D.(York (Can.)); Associate Professor of Parasitology
- Ritter, Heidi; B.Sc., M.Sc.(Nutr.Sci.)(McG.); Faculty Lecturer (Stage), School of Dietetics and Human Nutrition

Rose, Maureen; B.Sc.(F.Sc.), M.Ed., Ph.D.(McG.); Faculty Lecturer (Stage), School of Dietetics and Human Nutrition
 Routhier, Joane; B.Sc.(F.Sc.)(McG.); Faculty Lecturer (Stage), School of Dietetics and Human Nutrition
 Salavati, Reza; B.A, M.A.(Calif. St.), Ph.D. (Wesl.); Assistant Professor of Parasitology
 Schuepp, Peter H.; Dipl.Sc.Nat.(Zurich), Ph.D.(Tor.); Emeritus Professor of Agricultural Physics
 Scott, Marilyn E.; B.Sc.(New Br.), Ph.D.(McG.); Associate Professor of Parasitology
 Seguin, Philippe; B.Sc.(Agr.), M.Sc.(McG.), Ph.D.(Minn.); Associate Professor of Plant Science
 Simpson, Benjamin K.; B.Sc.(Univ. Sc. & Tech., Kumasi), Ph.D.(Nfld.); Associate Professor of Food Science and Agricultural Chemistry
 Smith, Donald L.; B.Sc., M.Sc.(Acad.), Ph.D.(Guelph); Professor of Plant Science and Chair of Department (*James McGill Professor*)
 Stewart, Katrine A.; B.Sc.(Agr.)(Br. Col.), Ph.D.(Reading); Associate Professor of Horticulture
 Stewart, Robin K.; B.Sc.(Agr.), Ph.D.(Glas.); Emeritus Professor of Entomology
 Strachan, Ian; B.Sc.(Tor.), M.Sc., Ph.D.(Qu.); Associate Professor of Agrometeorology
 Stromvik, Martina V.; B.A., M.S.(Stockholm), Ph.D.(Ill-Chic.); Assistant Professor of Plant Science
 Thériault, Pascal; B.Sc.(Agr.), M.Sc.(KSU); Faculty Lecturer, Farm Management and Technology Program
 Thibault, Louise; B.Sc., M.Sc., Ph.D.(Laval); Associate Professor of Dietetics and Human Nutrition
 Thomassin, Paul; B.Sc.(Agr.)(McG.), M.S., Ph.D.(Hawaii Pac.); Associate Professor of Agricultural Economics
 Titman, Rodger D.; B.Sc.(McG.), M.Sc.(Bishop's), Ph.D.(New Br.), Fellow A.O.U.; Associate Professor of Wildlife Biology and Associate Director, Avian Science and Conservation Centre
 van de Voort, Frederik R.; B.Sc., M.Sc., Ph.D.(Br. Col.); Professor of Food Science and Agricultural Chemistry
 Vickery, Vernon R.; B.Sc.(Agr.), M.Sc., Ph.D.(McG.); Emeritus Curator of the Lyman Entomological Museum and Research Laboratory
 Wade, Kevin; B.Agr.Sc., M.Agr.Sc.(Dublin), Ph.D.(C'nell); Associate Professor of Animal Science and Interim Chair, Department of Animal Science
 Waterway, Marcia J.; B.A.(Calvin), M.S.(Wis.), Ph.D.(C'nell); Associate Professor of Plant Science and Curator, McGill University Herbarium
 Watson, Alan K.; B.Sc.(Agr.), M.Sc.(Br. Col.), Ph.D.(Sask.); Professor of Agronomy and Director, Phytarium/Biopesticide Quarantine Facility
 Wees, David D.; B.Sc.(Agr.), M.Sc.(McG.); Faculty Lecturer, Department of Plant Science
 Weiler, Hope; BASc.(Guelph), Ph.D.(McM.); Associate Professor of Human Nutrition and Canada Research Chair
 Whalen, Joann; B.Sc.(Agr.)(Dal.); M.Sc.(McG.); Ph.D.(Ohio St.); Associate Professor of Soil Science
 Wheeler, Terry; B.Sc.(Nfld.), M.Sc., Ph.D.(Guelph); Associate Professor of Entomology and Director, Lyman Entomological Museum and Research Laboratory
 Whyte, Lyle G; B.Sc.(Regina), Ph.D.(Wat.); Associate Professor of Microbiology and Canada Research Chair
 Wykes, Linda; B.Sc., M.Sc., Ph.D.(Tor.); Associate Professor of Dietetics and Human Nutrition (*William Dawson Scholar*)
 Yaylayan, Varoujan A.; B.Sc., M.Sc.(Beirut), Ph.D.(Alta.); Associate Professor of Food Science and Agricultural Chemistry
 Zadworny, David; B.Sc., Ph.D.(Guelph); Associate Professor of Animal Science
 Zhao, Xin; B.Sc., M.Sc.(Nanjing IT), Ph.D.(C'nell); Professor of Animal Science (*William Dawson Scholar*)

14.1 The School

14.1.1 Location

For advising, contact:
 Program Coordinator, Mr. Peter Barry
 Telephone: (514) 398-4306
 Fax: (514) 398-1643
 E-mail: pete.barry@mcgill.ca

Website: www.mcgill.ca/mse

Downtown Campus
 3534 University Street
 Montreal, QC H3A 2A7
 Telephone: (514) 398-2827
 Fax: (514) 398-1643

Macdonald Campus
 Rowles House
 21,111 Lakeshore Road
 Sainte-Anne-de-Bellevue, QC H9X 3V9
 Telephone: (514) 398-7559
 Fax: (514) 398-7846

14.1.2 Administrative Officers

Chandra Madramootoo; B.Sc.(Agr.Eng.), M.Sc., Ph.D.(McG.)
Dean, Faculty of Agricultural and Environmental Sciences

Christopher Manfredi; B.A. (Calg.), M.A., Ph.D.(Claremont)
Dean, Faculty of Arts

Martin Grant; B.Sc.(PEI), M.Sc., Ph.D.(Tor.)
Dean, Faculty of Science

Nigel Roulet; B.Sc., M.Sc.(Trent), Ph.D.(McM.) **Director**

Peter Barry; B.Sc.(C'dia), M.Sc.(McG.)
Program Coordinator

14.1.3 Academic Staff

Professors

Peter G. Brown; B.A.(Haver.), M.A., Ph.D.(Col.) (*joint appoint. with Geography and Natural Resource Sciences*)
 Colin Chapman; B.Sc., M.A., Ph.D.(Alta.) (*joint appoint. with Anthropology*)
 Nigel Roulet; B.Sc., M.Sc.(Trent); Ph.D.(McM.) (*joint appoint. with Geography*)

Associate Professors

Frédéric Fabry; B.Sc., M.Sc., Ph.D.(McG.) (*joint appoint. with Atmospheric and Oceanic Sciences*)
 Renée Sieber; B.Sc.(Mich. St.), M.P.A.(W. Mich.), Ph.D.(Rutg.) (*joint appoint. with Geography*)

Assistant Professors

Madhav Badami; B.Tech., M.Sc.(IIT), M.E.Des.(Calg.), Ph.D.(Br. Col.) (*joint appoint. with School of Urban Planning*)
 Elena Bennett; B.A.(Oberlin), M.Sc., Ph.D.(Wis.) (*joint appoint. with Natural Resource Sciences*)
 Sylvie de Blois; B.Sc.(Agr.)(McG.), M.Sc., Ph.D.(Montr.) (*joint appoint. with Plant Science*)
 Jaye Ellis; B.A.(Calg.), LL.B., B.C.L.(McG.), LL.M.(Br. Col.) (*joint appoint. with Law*)
 Iwao Hirose; Ph.D.(St. And.) (*joint appoint. with Philosophy*)
 Brian Leung; B.Sc.(Br. Col.), Ph.D.(Car.) (*joint appoint. with Biology*)
 Gregory Mikkelsen; B.A.(Trinity), M.S., Ph.D.(Chic.) (*joint appoint. with Philosophy*)
 Garry Peterson; B.Sc. (Wat.), M.Sc., Ph.D. (Flor.) (*joint appoint. with Geography*)
 Anthony Ricciardi; B.Sc.(Agr.), M.Sc., Ph.D.(McG.) (*joint appoint. with Redpath Museum*)
 Raja Sengupta; B.Sc.(Bombay), M.Sc.(IIT), Ph.D.(S. Illinois) (*joint appoint. with Geography*)
 Ismael Vaccaro; B.A. (Barcelona), D.E.A.(Paris), M.A., Ph.D. (Wash.) (*joint appoint. with Anthropology*)

Faculty Lecturers

Colin Duncan; B.A.(Qu.), M.A., Ph.D.(York)
 George McCourt; B.Sc., M.Sc (Alta.); M.Sc.(McG.)
 Joan Marshall; B.A.(McG.), M.A.(Tor.), Ph.D.(McG.)

Associate Members

Animal Science: Sarah Kimmins

Anthropology: Andre Costopoulos, John Galaty, Colin H. Scott
 Architecture: Avi Friedman
 Art History and Communication Studies: Darin Barney
 Atmospheric and Oceanic Sciences: Parisa Ariya, Charles Lin, Ronald Stewart
 Brace Centre for Water Resources Management: Robert Bonnell
 Biology: Lauren Chapman, Andrew Gonzalez, Martin Lechowicz, Brian McGill
 Bioresource Engineering: Suzelle Barrington, Robert Kok
 Chemical Engineering: Wayne Brown, Nathalie Tufenkji, Viviane Yargeau
 Civil Engineering and Applied Mechanics: Susan Gaskin, Subhasis Ghoshal, Van-Thanh-Van Nguyen, Jim Nicell
 Dietetics and Human Nutrition, School of: Tim Johns, Harriet Kuhnlein
 Earth and Planetary Sciences: Don Baker, Alfonso Mucci, Jeanne Paquette
 Economics: Robert Cairns, Myron Frankman, Chris Green, Franque Grimard, Tom Naylor
 Epidemiology and Biostatistics: Mark Goldberg
 Geography: Gail Chmura, Oliver Coomes, Thom Meredith, Tim Moore, Wayne H. Pollard, Nigel Roulet
 History: Myron Echenberg
 Law, Faculty of: Jane Glenn, Richard Janda
 Management, Faculty of: Steve Maguire, Vedat Verter
 Medicine, Ethics, Law: Margaret Somerville
 Mining and Materials Engineering: Jim Finch
 Natural Resource Sciences: David Bird, Benoit Côté, Mark Curtis, Jim W. Fyles, William Hendershot, John Henning, Paul Thomassin, Roger Titman, Terry Wheeler
 Parasitology, Institute of: Marilyn Scott
 Pathology: Bruce Case
 Philosophy: Philip Buckley
 Plant Science: Caroline Begg, Pierre Dutilleul, Marcia Waterway
 Political Science: Philip Oxhorn
 Redpath Museum: Graham Bell, David M. Green
 Sociology: Uli Locher
 Urban Planning, School of: Jeanne Wolfe

14.1.4 Creation of the School

McGill's Faculties of Agricultural and Environmental Sciences, Arts, and Science have forged a unique approach to the study of environment through the inter-faculty, trans-disciplinary McGill School of Environment (MSE).

The growth of technology, globalizing economies, and rapid increase in population have had dramatic and significant environmental impacts. These changes have been accompanied by an increasing awareness of the relationship between human activity and the environment. Environmental problems range from local and short-term degradation through to the perturbation observed over the entire globe and for many years. The importance of human-environment relations for environmental and social well-being, and the complexity and conflict involved in environmental analysis and decision making, requires a depth and breadth of knowledge. The MSE has developed its programs with the approach of introducing students to a broad range of ideas early in the program to provide a foundation and an openness upon which more specialized, disciplinary knowledge can be built.

14.1.5 Goals of the School

The McGill School of Environment has the following goals:

- to provide an exciting and rigorous program that allows for intellectual growth in the comprehension of environmental systems or components of the environment;
- to impart to students an understanding of current environmental concerns;
- to help students gain an understanding of the complexity and conflicts that underlie most environmental problems; and

- to give students an opportunity to apply their knowledge in the analysis of specific, contemporary environmental issues.

14.2 Admission, Registration and Regulations

14.2.1 Admission

Students may be admitted to a B.A., B.A.&Sc., B.Sc.(Ag.Env.Sc.), or a B.Sc. program, offered by the MSE on the University's two campuses: the Macdonald Campus and the Downtown Campus. They register as students within their Faculty of admission and are governed by all rules and regulations of that Faculty.

Students who have already completed a Bachelor or an equivalent degree may be admitted to the Diploma in Environment through any of the three MSE Faculties: Agricultural and Environmental Sciences, Arts, and Science. They register as students within their Faculty of admission and are governed by all rules and regulations of that Faculty relative to the Diploma.

Please see the *Undergraduate Admissions Guide*, found at www.mcgill.ca/applying/undergrad.

14.2.2 Degree Requirements

To be eligible for a B.A. degree, students must fulfill all the faculty and program requirements as indicated under Arts ([see section 5.3 "Faculty Degree Requirements"](#)).

To be eligible for a B.A.&Sc. degree, students must fulfill all the faculty and program requirements as indicated under the Bachelor of Arts and Science ([see section 6.3 "Degree Requirements"](#)).

To be eligible for a B.Sc.(Ag.Env.Sc.) degree, students must fulfill all the faculty and program requirements as indicated under Agricultural and Environmental Sciences ([see section 13.5.15 "Degree Requirements"](#)).

To be eligible for a B.Sc. degree, students must fulfill all the faculty and program requirements as indicated under Science ([see section 12.3 "Faculty Degree Requirements"](#)).

To be eligible for the Diploma in Environment, students must fulfill all program requirements as specified in [section 14.11 "Diploma in Environment"](#).

To be eligible for an Honours degree, students must fulfill all the faculty and program requirements as indicated under their home faculty. For Agricultural and Environmental Sciences, [see section 13.5.16 "Honours and First-Class Honours"](#); for Arts, [see section 5.10.1 "Honours and First-Class Honours"](#); for Arts & Science, [see section 6.10.1 "Honours and First-Class Honours"](#); for Science, [see section 12.10.1 "Honours and First-Class Honours"](#).

In addition to the requirements above, students must also fulfill the honours program requirements outlined in [Honours Program in Environment, section 14.10](#).

14.2.3 Advising in the MSE

Each Domain in the MSE has its own Mentor who is available to answer questions and offer guidance about working and learning within the particular field of the Domain. However, students with questions about program requirements or rules, transfer credits, study abroad programs, course substitutions, or any forms that need to be signed, should contact the MSE Program Coordinator, Pete Barry at peter.barry@mcgill.ca.

14.2.4 Important Information about Program Selection

The MSE uses students' program selections to identify which students are in the School's major programs (and, by extension, which students are in the McGill Environmental Students' Society).

Students in U1 who are unsure of the Domain they want to pursue may register in the Major or Faculty program in Environment

without picking a Domain. However, they must pick a Domain in their U2 year.

Note: Students must select a Domain in order to graduate; they cannot graduate without choosing a Domain.

(None of the above applies to students in the B.A.&Sc., Minor or Diploma Programs.)

14.2.5 Course Numbering System at McGill

The first four characters of a McGill course number refer to the unit offering the course. For example, MSE courses begin with the Subject Code ENVR.

The three numbers following the Subject Code refer to the course itself, with 200-level courses usually taken by U1 students, 300-level by U2 students, and 400-level by U3 students. Senior undergraduate students can also take some 500-level courses, but they should limit themselves to no more than one per term. See [Course Information, Regulations and Descriptions \(Appendix\)](#) for more information.

14.2.6 Examination Regulations

Regulations concerning the method of evaluation of any course (including those governing supplemental examinations) are those of the faculty that offers the course. Students should note that supplemental exams are available for courses taught in the Faculties of Arts, of Science, and of Education, but **not** for courses taught in the **Faculties of Agricultural and Environmental Sciences, of Engineering, or of Management**.

Note: All ENVR courses, regardless of where they are taught, are offered only by the Faculty of Science.

See [Examinations, section 3.6](#), for more information on the University regulations and procedures.

14.2.7 Courses Outside the Student's Faculty

Students in the School's B.A., B.A.&Sc., B.Sc. and B.Sc.(Ag.Env.Sc.) programs may take courses outside their faculty according to the regulations of their faculty of admission. These regulations are **not identical**:

- Arts students, see Faculty of Arts, [see section 3.6.2 "Courses outside the Faculties of Arts and of Science"](#).
- Arts and Science students, see Bachelor of Arts and Science, [see section 6.3.6.2 "Courses outside the Faculties of Arts and of Science"](#).
- Science students, see Faculty of Science, [see section 3.6.3 "Courses outside the Faculties of Arts and Science"](#).
- Agricultural and Environmental Sciences students, [see section 13.5.1 "Minimum Credit Requirement"](#).
- Faculty of Science students in particular should be aware that some courses are restricted and cannot be taken for credit. See the Science Student Affairs Website at www.mcgill.ca/artscisao. Check under Departmental Students; Course and Program Selection; Science Students; Policy for Courses Outside Arts and Science.
- Students in the Diploma of Environment follow the program as specified; [see section 14.11 "Diploma in Environment"](#).

14.3 Programs Offered

The McGill School of Environment has developed seven programs, which are offered on the Downtown and Macdonald campuses. These programs strive to offer the flexibility necessary to deal with the environment through a set of core courses that provide the general knowledge base of the program combined with a progressive series of courses in a trans-disciplinary area of environmental specialization, referred to as a Domain.

The programs are designed to prepare students for further study in environment or discipline-based graduate programs, and for employment in industry, government, and education.

The MSE offers five options for students interested in pursuing environmental studies.

1. A **Minor in Environment** is open to all undergraduate students. For more information, see [section 14.5 "Minor in Environment" on page 423](#).
2. A **Faculty Program in Environment leading to a B.A.** is open to students meeting the entrance requirements of the Faculty of Arts. For more information, see [section 14.6 "B.A. Faculty Program in Environment" on page 424](#).
3. An **Interfaculty Program in Environment leading to a B.A. & Sc.** is open to students meeting the entrance requirements for the Bachelor of Arts and of Science. For more information, see [section 14.7 "B.A. & Sc. Interfaculty Program in Environment" on page 428](#).
4. A **Major in Environment leading to a B.Sc.(Ag.Env.Sc.)** is open to students meeting the entrance requirements of the Faculty of Agricultural and Environmental Sciences. For more information, see [section 14.8 "Major in Environment – B.Sc.\(Ag.Env.Sc.\) and B.Sc." on page 429](#).
5. A **Major in Environment leading to a B.Sc.** is open to students meeting the entrance requirements of the Faculty of Science. For more information, see [section 14.8 "Major in Environment – B.Sc.\(Ag.Env.Sc.\) and B.Sc." on page 429](#).
6. An **Honours Program in Environment** is open to senior Environment students in the B.A., B.A.&Sc., B.Sc.(Ag.Env.Sc.) and B.Sc. degrees. For more information, see [section 14.10 "Honours Program in Environment" on page 441](#).
7. A **Diploma in Environment** is available only to students who have already completed a Bachelor or an equivalent degree, and who wish to return to university for further undergraduate study. The Diploma is offered by all three MSE Faculties: Agricultural and Environmental Sciences, Arts, and Science. For more information, see [section 14.11 "Diploma in Environment" on page 441](#).

14.4 Suggested Courses for Freshmen Students

The MSE does not recommend that students in their Freshman (U0) year take the ENVR Core courses. Instead, a list of courses that provide an introductory exposure to the concepts and issues in the natural and social environmental sciences can be found on the MSE website. Students in their U1 to U3 years are welcome to take selected ENVR courses, even if they are not in the Environment programs.

14.5 Minor in Environment

The Minor in Environment is intended to complement an expertise obtained through a Major, Major Concentration or a Faculty Program offered by an academic unit **other than** the MSE. Students taking the Minor in Environment are exposed to different approaches, perspectives, and world views that will help them gain an understanding of the complexity and conflicts that underlie environmental problems.

Students, after consulting with their adviser in their major program or concentration and the MSE Program Coordinator, can declare their intention to do a Minor in Environment.

To obtain a Minor in Environment, students must:

- a. register for the Minor on-line, using Minerva;
- b. submit their program of courses already taken and to be taken for the Minor in Environment to the MSE Program Coordinator

for approval (**only courses at the 200-level and above will be approved**);

- c. pass all courses counted towards the Minor with a **grade of C or higher**;
- d. complete 18 credits from the courses listed below not otherwise counted towards the student's Major program or concentration or a second Minor program; and
- e. ensure that all the credits specified in (c) above are taken outside the discipline or field of the student's Major program or concentration.

14.5.1 Minor Concentration in Environment

This 18-credit Minor is intended for Arts students in the multi-track system.

Adviser: Mr. Peter Barry, MSE Program Coordinator
E-mail: pete.barry@mcgill.ca
Telephone: (514) 398-4306

Advising note: Consultation with the program adviser for approval of course selection to meet program requirements is obligatory. Only courses at the 200-level and above will be approved.

Complementary Courses (18 credits)

12 credits selected from the MSE core courses:

ENVR 200	(3)	The Global Environment
ENVR 201	(3)	Society and Environment
ENVR 202	(3)	The Evolving Earth
ENVR 203	(3)	Knowledge, Ethics and Environment
ENVR 400	(3)	Environmental Thought

6 credits in environmentally related subjects selected with the approval of the program adviser (at least 3 credits must be in natural sciences).

A list of suggested courses is available on the MSE Website in "Undergraduate Programs: Minor". Students are also encouraged to examine the course lists of the various Domains in the Environment Program on the next few pages of the Calendar for courses that interest them.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

14.5.2 Minor in Environment

This 18-credit Minor is intended for Science and Agricultural and Environmental Science students, but is open to students from other faculties as well, except Arts.

Adviser: Mr. Peter Barry, MSE Program Coordinator
E-mail: pete.barry@mcgill.ca
Telephone: (514) 398-4306

Advising note: Consultation with the program adviser for approval of course selection to meet program requirements is obligatory. Only courses at the 200-level and above will be approved.

Complementary Courses (18 credits)

12 credits selected from the MSE core courses:

ENVR 200	(3)	The Global Environment
ENVR 201	(3)	Society and Environment
ENVR 202	(3)	The Evolving Earth
ENVR 203	(3)	Knowledge, Ethics and Environment
ENVR 400	(3)	Environmental Thought

6 credits in environmentally related subjects selected with the approval of the program adviser (at least 3 credits must be in social sciences).

A list of suggested courses is available on the MSE Website in "Undergraduate Programs: Minor". Students are also encouraged to examine the course lists of the various Domains in the Environment Program on the next few pages of the Calendar for courses that interest them.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

14.6 B.A. Faculty Program in Environment

The B.A. Faculty Program has two components: Core and Domain. Students follow three steps in their degree program.

1. **Core:** The Core consists of four introductory courses and one intermediate-level course where students are exposed to the different approaches, perspectives, and world views that will help them gain an understanding of the complexity and conflicts that underlie most environmental problems. Through the Core program students go beyond the confines of their individual views of environment.
2. **Domain:** Domains provide a trans-disciplinary study of a particular theme or component of the environment.
3. **Senior Core and Research:** In the two senior courses of the Core, students will apply the general and specialized knowledge that they have gained in the program to the analysis of some specific, contemporary environmental problems.

To obtain a B.A. Faculty Program in Environment students must:

- a. register in a Domain on-line, using Minerva;
- b. satisfy the co- / prerequisites for the program (calculus and a basic science course);
- c. pass all courses counted towards the Faculty Program with a **grade of C or higher**;
- d. confirm that their course selection satisfies the required components of the MSE Core and their chosen Domain, and that the complementary courses are approved courses in their chosen Domain; and
- e. fulfil all Faculty requirements as specified for the B.A. in the Arts, **see section 3 "Faculty Degree Requirements"**, which include meeting the minimum credit requirement as specified in their letter of admission.

B.A. FACULTY PROGRAM IN ENVIRONMENT (54 credits)

The B.A. Faculty Program requires, as either a pre- or corequisite for the first year of the program:

3 credits of calculus:

MATH 139 Calculus
or MATH 140 Calculus 1
or equivalent (e.g., CEGEP objective 00UN)

3 credits of basic science chosen from:

BIOL 111 Principles: Organismal Biology (required for the Ecological Determinants of Health in Society Domain)
or CHEM 110 General Chemistry 1
or PHYS 101 Introductory Physics - Mechanics
or their equivalents (e.g., CEGEP objectives: Biology 00UK, Chemistry 00UL, Physics 00UR).

Core: Required Courses (18 credits)

The Core courses are listed below in the Domain descriptions.

Core: Complementary Course – Senior Research Project

(3 credits)

The research courses are listed in the Domain descriptions.

Domain (33 credits)

one MSE Domain selected from those available to students in the B.A. Faculty program.

Currently available:

Ecological Determinants of Health in Society

Economics and the Earth's Environment

Environment and Development

Each Domain has different requirements which are listed below.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

14.6.1 Ecological Determinants of Health in Society Domain

This Domain (54 credits including Core) is open only to students in the B.A. Faculty Program in Environment.

Mentor: **Before December 2008:**

Professor Tim Johns

E-mail: tim.johns@mcgill.ca

Telephone: (514) 398-7847

After January 2009:

Professor Marilyn Scott

Email: marilyn.scott@mcgill.ca

Telephone: (514) 398-7559

An understanding of the interface between human health and environment depends not only on an appreciation of the biological and ecological determinants of health, but equally on an appreciation of the role of social sciences in the design, implementation, and monitoring of interventions. Demographic patterns and urbanization, economic forces, ethics, indigenous knowledge and culture, and an understanding of how social change can be effected are all critical if we are to be successful in our efforts to assure health of individuals and societies in the future. Recognizing the key role that nutritional status plays in maintaining a healthy body, and the increasing importance of infection as a health risk linked intimately with the environment, this domain prepares students to contribute to the solution of problems of nutrition and infection by tying the relevant natural sciences to the social sciences.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Prerequisite or Corequisite Courses for Program

All B.A. Environment students **must** take these courses, or their equivalents. These courses should be taken in the Freshman year if possible. Quebec students can take them in U1.

MATH 139 (4) Calculus
or MATH 140 (3) Calculus 1
or equivalent (e.g., CEGEP objective 00UN)

BIOL 111 (3) Principles: Organismal Biology
or AEBI 120 (3) General Biology (M)
or equivalent (e.g., CEGEP objective 00UK or equivalent)

Other suggested first year (U1) courses:

These courses are listed below in the program requirements. They are good courses to start out with.

ECON 208 (3) Microeconomic Analysis and Applications
or AGECE 200 (3) Principles of Microeconomics (M)
NUTR 200 (3) Contemporary Nutrition
or NUTR 207 (3) Nutrition and Health (M)
SOC 234 (3) Population and Society

Statistics: GEOG 202, PSYC 204, BIOL 373 or AEMA 310 (M)

See [section 5.3.6.1 "Course Overlap"](#) in this Calendar about statistics and restricted courses.

Program Requirements (54 credits)

NOTE: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses, but does not include the Program prerequisites or corequisites listed above.

Core: Required Courses (18 credits)

ENVR 200 (3) The Global Environment
ENVR 201 (3) Society and Environment
ENVR 202 (3) The Evolving Earth
ENVR 203 (3) Knowledge, Ethics and Environment
ENVR 301 (3) Environmental Research Design
ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

AGRI 519 (6) Sustainable Development Plans (in Barbados)
ENVR 401 (3) Environmental Research
ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (6 credits)

PARA 410 (3) Environment and Infection (M)
SOC 234 (3) Population and Society

Domain: Complementary Courses (27 credits)

12 credits of Fundamentals (maximum 3 credits from any one category):

Health and Pollution

ANTH 227 (3) Medical Anthropology
NRSC 333 (3) Physical and Biological Aspects of Pollution (M)

Economics

AGEC 200 (3) Principles of Microeconomics (M)
ECON 208 (3) Microeconomic Analysis and Applications

Nutrition

NUTR 200 (3) Contemporary Nutrition
NUTR 207 (3) Nutrition and Health (M)

Statistics

AEMA 310 (3) Statistical Methods 1 (M)
MATH 203 (3) Principles of Statistics 1
SOC 350 (3) Statistics in Social Research
or equivalent

9 credits from List A (maximum 3 credits from any one category):

Hydrology and Climate

BREE 217 (3) Hydrology and Water Resources (M)
GEOG 321 (3) Climatic Environments
GEOG 322 (3) Environmental Hydrology
NRSC 510 (3) Agricultural Micrometeorology (M)

Agriculture

AGRI 210 (3) Agro-Ecological History (M)
AGRI 340 (3) Principles of Ecological Agriculture (M)
AGRI 411 (3) International Agriculture (M)

Decision Making

AGEC 242 (3) Management Theories and Practices (M)
ECON 440 (3) Health Economics
PHIL 343 (3) Biomedical Ethics

Biology Fundamentals

BIOL 200 (3) Molecular Biology
BIOL 205 (3) Biology of Organisms
BIOL 308 (3) Ecological Dynamics
FDSC 211 (3) Biochemistry 1(M)
PHGY 202 (3) Human Physiology: Body Functions
PLNT 201 (3) Comparative Plant Biology (M)
WILD 200 (3) Comparative Zoology (M)
WILD 205 (3) Principles of Ecology (M)

Development and Ecology

- ANTH 212 (3) Anthropology of Development
- ANTH 339 (3) Ecological Anthropology
- GEOG 300 (3) Human Ecology in Geography
- SOCI 254 (3) Development and Underdevelopment

6 credits from List B (maximum 3 credits from any one category):

Advanced Ecology

- BIOL 465 (3) Conservation Biology
- BIOL 553 (3) Neotropical Environments (in Panama)
- WILD 410 (3) Wildlife Ecology (M)
- WOOD 410 (3) The Forest Ecosystem (M)

Pest Management

- BIOL 350 (3) Insect Biology and Control
- ENTO 352 (3) Control of Insect Pests (M)
- PLNT 361 (3) Pest Management and the Environment (M)

Techniques and Management

- CHEE 230 (3) Environmental Aspects of Technology
- GEOG 201 (3) Introductory Geo-Information Science
- GEOG 302 (3) Environmental Management 1
- GEOG 380 (3) Adaptive Environmental Management
- NRSC 430 (3) GIS for Natural Resource Management(M)

Social Change

- AGRI 413 (3) Globalization: Issues of Change (in Barbados)
- EDER 461 (3) Society and Change
- ENVR 465 (3) Environment and Social Change (at Bay of Fundy)

- HIST 292 (3) History and the Environment

Immunology and Infectious Disease

- MIMM 314 (3) Immunology
- MIMM 324 (3) Fundamental Virology
- MIMM 413 (3) Parasitology
- PARA 438 (3) Immunology (M)

Populations and Place

- CANS 407 (3) Regions of Canada
- GEOG 303 (3) Health Geography
- GEOG 498 (3) Humans in Tropical Environments (in Panama)
- PSYC 533 (3) International Health Psychology
- SOCI 520 (3) Migration and Immigrant Groups
- SOCI 550 (3) Developing Societies
- SOCI 565 (3) Social Change in Panama (in Panama)

14.6.2 Economics and the Earth's Environment Domain

This Domain (54 credits including Core) is open only to students in the B.A. Faculty Program in Environment.

Mentor: Professor Bruce Hart
 E-mail: hart@eps.mcgill.ca
 Telephone: (514) 398-3677

Understanding Earth's geologic processes provides us with the knowledge to mitigate many of our society's environmental impacts due to resource extraction and waste disposal. This knowledge is not always enough, as economics often plays a controlling role in how we use and abuse our environment.

This Domain educates students in the fundamentals of economics and Earth sciences. The fundamentals of economics are provided, as is their application to the effects of economic choices on Earth's environment. Examples of these applications include the economic effects of public policy towards resource industries and methods of waste disposal, and the potential effects of global warming on the global economy. Students also learn of minerals, rocks, soils, and waters that define much of Earth's environment and how these materials interact with each other and with the atmosphere. Courses in specific subdisciplines of Earth sciences combined with courses presenting a global vision of how the Earth and its environment operate provide the student with the necessary knowledge of geologic processes. Examples of this knowledge include the effects of mineral and energy extraction on the environment and how industrial waste interacts with solids and liquids in the environment. The Earth science and economics studies

merge in the final year when the students apply what they have learned in the Domain to current environmental issues.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Prerequisite or Corequisite Courses for Program

All B.A. Environment students **must** take these courses, or their equivalents. These courses should be taken in the Freshman year if possible. Quebec students can take them in U1.

3 credits of calculus:

- MATH 139 Calculus
- or MATH 140 Calculus 1
- or equivalent (e.g., CEGEP objective 00UN)

3 credits of basic science chosen from:

- BIOL 111 Principles: Organismal Biology
- or CHEM 110 General Chemistry 1
- or PHYS 101 Introductory Physics - Mechanics
- or their equivalents (e.g., CEGEP objectives: Biology 00UK, Chemistry 00UL, Physics 00UR).

Other suggested first year (U1) courses:

These courses are listed below in the program requirements. They are good courses to start out with.

- ECON 230D1 (3) Microeconomic Theory
- ECON 230D2 (3) Microeconomic Theory
- EPSC 210 (3) Introductory Mineralogy
- EPSC 212 (4) Introductory Petrology

Statistics: GEOG 202, PSYC 204, BIOL 373 or AEMA 310 (M)
 See [section 5.3.6.1 "Course Overlap"](#) in this Calendar about statistics and restricted courses.

Program Requirements (54 credits)

NOTE: Students are required to take a maximum of 34 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses, but does not include the Domain prerequisites or co-requisites listed above.

Core: Required Courses (18 credits)

- ENVR 200 (3) The Global Environment
- ENVR 201 (3) Society and Environment
- ENVR 202 (3) The Evolving Earth
- ENVR 203 (3) Knowledge, Ethics and Environment
- ENVR 301 (3) Environmental Research Design
- ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

- AGRI 519 (6) Sustainable Development Plans (in Barbados)
- ENVR 401 (3) Environmental Research
- ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (16 credits)

- ECON 230D1 (3) Microeconomic Theory
- ECON 230D2 (3) Microeconomic Theory
- ECON 405 (3) Natural Resource Economics
- EPSC 210 (3) Introductory Mineralogy
- EPSC 212 (4) Introductory Petrology

Domain: Complementary Courses (17 credits)

3 credits of ecology:

- BIOL 308 (3) Ecological Dynamics
- WILD 205 (3) Principles of Ecology (M)

3 credits of statistics:

- AEMA 310 (3) Statistical Methods 1 (M)
- GEOG 202 (3) Statistics and Spatial Analysis
- MATH 203 (3) Principles of Statistics 1
- or equivalent

6 credits of economics:

AGEC 333	(3)	Resource Economics (<i>M</i>)
ECON 326	(3)	Ecological Economics
ECON 347	(3)	Economics of Climate Change
ECON 416	(3)	Topics in Economic Development 2
ECON 525	(3)	Project Analysis

5 credits minimum of advanced courses:

AGRI 413	(3)	Globalization: Issues of Change (in Barbados)
AGRI 435	(3)	Soil and Water Quality Management
AGRI 452	(3)	Water Resources in Barbados (in Barbados)
AGRI 550	(3)	Sustained Tropical Agriculture (in Panama)
ANTH 339	(3)	Ecological Anthropology
BIOL 305	(3)	Animal Diversity
CHEE 430	(3)	Technology Impact Assessment
ECON 305	(3)	Industrial Organization
ECON 313	(3)	Economic Development 1
ECON 314	(3)	Economic Development 2
ECON 408D1	(3)	Public Sector Economics
ECON 408D2	(3)	Public Sector Economics
ECON 412	(3)	Topics in Economic Development 1
EPSC 312	(3)	Spectroscopy of Minerals
EPSC 334	(3)	Invertebrate Paleontology
ENVR 465	(3)	Environment and Social Change (at Bay of Fundy)
GEOG 302	(3)	Environmental Management 1
GEOG 322	(3)	Environmental Hydrology
GEOG 380	(3)	Adaptive Environmental Management
GEOG 404	(3)	Environmental Management 2 (in Panama)
GEOG 498	(3)	Humans in Tropical Environments (in Panama)
NRSC 437	(3)	Assessing Environmental Impact (<i>M</i>)
SOIL 410	(3)	Soil Chemistry (<i>M</i>)
WILD 415	(2)	Conservation Law (<i>M</i>)

14.6.3 Environment and Development Domain

This Domain (54 credits including Core) is open only to students in the B.A. Faculty Program in Environment.

Mentor: Prof. Garry Peterson
E-mail: garry.peterson@mcgill.ca
Telephone: (514) 398-6072

The quest for sustainable paths to economic development requires scholars and practitioners to transcend the boundaries of traditional disciplines. This Domain offers students sufficient depth and breadth of study to acquire a strong grasp of current theories, concepts, and approaches to environment and development. It prepares them for graduate study in interdisciplinary programs (e.g., development studies or environmental studies) as well as in integrative social sciences (e.g., anthropology, geography, etc.).

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Prerequisite or Corequisite Courses for Program

All B.A. Environment students **must** take these courses, or their equivalents. These courses should be taken in the Freshman year if possible. Quebec students can take them in U1.

3 credits of calculus:

MATH 139	Calculus
	or MATH 140 Calculus 1
	or equivalent (e.g., CEGEP objective 00UN)

3 credits of basic science chosen from:

BIOL 111	Principles: Organismal Biology
	or CHEM 110 General Chemistry 1
	or PHYS 101 Introductory Physics - Mechanics

or their equivalents (e.g., CEGEP objectives: Biology 00UK, Chemistry 00UL, Physics 00UR).

Other suggested first year (U1) courses:

These courses are listed below in the program requirements. They are good courses to start out with.

ECON 208	(3)	Microeconomic Analysis and Applications or AGECE 200 (3) Principles of Microeconomics (<i>M</i>)
WILD 205	(3)	Principles of Ecology (<i>M</i>)

Statistics: GEOG 202, PSYC 204, BIOL 373 or AEMA 310 (*M*)

See [section 5.3.6.1 "Course Overlap"](#) in this Calendar about statistics and restricted courses.

Program Requirements (54 credits)

NOTE: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses.

Core: Required Courses (18 credits)

ENVR 200	(3)	The Global Environment
ENVR 201	(3)	Society and Environment
ENVR 202	(3)	The Evolving Earth
ENVR 203	(3)	Knowledge, Ethics and Environment
ENVR 301	(3)	Environmental Research Design
ENVR 400	(3)	Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

AGRI 519	(6)	Sustainable Development Plans (in Barbados)
ENVR 401	(3)	Environmental Research
ENVR 451	(6)	Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (12 credits)

ANTH 339	(3)	Ecological Anthropology
ECON 313	(3)	Economic Development 1
ECON 314	(3)	Economic Development 2
GEOG 302	(3)	Environmental Management 1

Domain: Complementary Courses (21 credits)

3 credits of microeconomics:

AGEC 200	(3)	Principles of Microeconomics (<i>M</i>)
ECON 208	(3)	Microeconomic Analysis and Applications

3 credits of statistics:

AEMA 310	(3)	Statistical Methods 1 (<i>M</i>)
GEOG 202	(3)	Statistics and Spatial Analysis
MATH 203	(3)	Principles of Statistics 1
PSYC 204	(3)	Introduction to Psychological Statistics or equivalent

3 credits of ecology:

BIOL 308	(3)	Ecological Dynamics
WILD 205	(3)	Principles of Ecology (<i>M</i>)

6 credits of advanced development courses:

AGEC 442	(3)	Economics of International Agricultural Development
ANTH 418	(3)	Environment and Development
GEOG 408	(3)	Geography of Development
GEOG 410	(3)	Geography of Underdevelopment: Current Problems

3 credits of natural sciences:

AGRI 550	(3)	Sustained Tropical Agriculture (in Panama)
BIOL 465	(3)	Conservation Biology
BIOL 553	(3)	Neotropical Environments (in Panama)
GEOG 305	(3)	Soils and Environment
GEOG 322	(3)	Environmental Hydrology
NUTR 403	(3)	Nutrition in Society (<i>M</i>)
NUTR 501	(3)	Nutrition in Developing Countries (<i>M</i>)
PARA 410	(3)	Environment and Infection (<i>M</i>)

3 credits of social sciences:

AGEC 333	(3)	Resource Economics (<i>M</i>)
AGEC 442	(3)	Economics of International Development (<i>M</i>)
AGRI 210	(3)	Agro-Ecological History (<i>M</i>)
AGRI 413	(3)	Globalization: Issues of Change (in Barbados)
AGRI 452	(3)	Water Resources in Barbados (in Barbados)
ANTH 439	(3)	Theories of Development
ANTH 445	(3)	Property and Land Tenure
CANS 407	(3)	Regions of Canada
ECON 326	(3)	Ecological Economics
ECON 405	(3)	Natural Resource Economics
ENVR 465	(3)	Environment and Social Change (at Bay of Fundy)
GEOG 201	(3)	Introductory Geo-Information Science
GEOG 300	(3)	Human Ecology in Geography
GEOG 331	(3)	Urban Social Geography
GEOG 380	(3)	Adaptive Environmental Management
GEOG 404	(3)	Environmental Management 2 (in Panama or Africa)
GEOG 408	(3)	Geography of Development
GEOG 496	(3)	Regional Geographical Excursion (in Barbados)
GEOG 498	(3)	Humans in Tropical Environments (in Panama)
GEOG 510	(3)	Humid Tropical Environments
GEOG 551	(3)	Environmental Decisions
MGPO 440	(3)	Strategies for Sustainability
POLI 445	(3)	International Political Economy: Monetary Relations
POLI 472	(3)	Developing Areas/ Social Movements
SOCI 565	(3)	Social Change in Panama (in Panama)
URBP 507	(3)	Planning and Infrastructure (in Barbados)

14.7 B.A. & Sc. Interfaculty Program in Environment

To obtain a B.A. & Sc. Interfaculty Program in Environment students must:

- register in the program on-line, using Minerva;
- satisfy the co- / prerequisites for the program
- pass all courses counted towards the Interfaculty Program with a grade of C or higher;
- confirm that their course selection satisfies the required components of the program
- fulfill all requirements specified for the B.A. & Sc. in **section 6.3 "Degree Requirements"**, which include meeting the minimum credit requirement as specified in their letter of admission.

B.A. & Sc. INTERFACULTY PROGRAM IN ENVIRONMENT

This program (54 credits) is open only to students in the B.A.&Sc. degree.

Adviser: Mr. Peter Barry, MSE Program Coordinator
E-mail: pete.barry@mcgill.ca
Telephone: (514) 398-4306

The growth of technology, globalization of economies, and rapid increases in population and per capita consumption have all had dramatic environmental impacts. The Interfaculty Program in Environment for the Bachelor of Arts and Science is designed to provide students with a broad "Liberal Arts/Science" training. In combination with careful mentoring, this program offers a great degree of flexibility, allowing students to develop the skills and knowledge base required to face the myriad of environmental problems that currently need to be addressed.

- Students are required to take a maximum of 21 credits at the 200-level and a minimum of 12 credits at the 400-level or higher in this program. This includes Required courses.
- Students must complete at least 30 credits in the Faculty of Arts and at least 30 in the Faculty of Science as part of their interfaculty program and their minor or minor concentration. ENVR courses are considered courses in both Arts and Science,

and so the credits are split between the two faculties for the purpose of this regulation.

- Students are also required to complete the required integrative course BASC 201 (3) Arts and Science Integrative Topics.

Required Courses (18 credits)

ENVR 200	(3)	The Global Environment
ENVR 201	(3)	Society and Environment
ENVR 202	(3)	The Evolving Earth
ENVR 203	(3)	Knowledge, Ethics and Environment
ENVR 301	(3)	Environmental Research Design
ENVR 400	(3)	Environmental Thought

Complementary Courses (36 credits)

(3 credits*) – Senior Research Project

AGRI 519	(6)	Sustainable Development Plans (in Barbados)
ENVR 401	(3)	Environmental Research
ENVR 451	(6)	Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

3 credits of statistics:

AEMA 310	(3)	Statistical Methods 1 (<i>M</i>)
BIOL 373	(3)	Biometry
GEOG 202	(3)	Statistics and Spatial Analysis
PSYC 204	(3)	Introduction to Psychological Statistics

30 credits – students must take courses from 3 of the following areas and at least 6 credits must be at the 400-level or higher, selected either from these lists or in consultation with the program adviser

Area 1: Population, Community and Ecosystem Ecology

BIOL 308	(3)	Ecological Dynamics
BIOL 432	(3)	Limnology
BIOL 441	(3)	Biological Oceanography
ENVR 540 or	(3)	Ecology of Species Invasions
or BIOL 540	(3)	Ecology of Species Invasions
GEOG 350	(3)	Ecological Biogeography
PLNT 460	(3)	Plant Ecology (<i>M</i>)
WILD 205	(3)	Principles of Ecology (<i>M</i>)
WILD 410	(3)	Wildlife Ecology (<i>M</i>)
WOOD 410	(3)	The Forest Ecosystem (<i>M</i>)

Area 2: Biodiversity and Conservation

BIOL 305	(3)	Animal Diversity
BIOL 327	(3)	Herpetology
BIOL 341	(3)	History of Life.
BIOL 355	(3)	Trees: Ecology & Evolution
BIOL 465	(3)	Conservation Biology
ENTO 440	(3)	Systematic Entomology (<i>M</i>)
MICR 331	(3)	Microbial Ecology (<i>M</i>)
PLNT 358	(3)	Flowering Plant Diversity (<i>M</i>)
WILD 307	(3)	Natural History of Vertebrates (<i>M</i>)
WILD 350	(3)	Mammalogy (<i>M</i>)
WILD 420	(3)	Ornithology (<i>M</i>)

Area 3: Field studies in ecology and conservation

BIOL 240	(3)	Monteregian Flora (at Mont St. Hilaire)
BIOL 331	(3)	Ecology/Behaviour Field Course (at Mont St. Hilaire)
BIOL 334	(3)	Applied Tropical Ecology (in Barbados)
BIOL 553	(3)	Neotropical Environments (in Panama)
GEOG 495	(3)	Field Studies - Physical Geography (in Southern Quebec)
GEOG 499	(3)	Subarctic Field Studies (in Schefferville)
WILD 475	(3)	Desert Ecology (in Arizona)

Area 4: Hydrology and water resources

GEOG 322	(3)	Environmental Hydrology
or BREE 217	(3)	Hydrology and Water Resources (<i>M</i>)
or CIVE 323	(3)	Hydrology and Water Resources
EPSC 549	(3)	Hydrogeology
GEOG 372	(3)	Running Water Environments
GEOG 522	(3)	Advanced Environmental Hydrology

GEOG 537 (3) Advanced Fluvial Geomorphology
 NRSC 540 (3) Socio-Cultural Issues in Water (M)

Area 5: Human Health

ANSC 330 (3) Fundamentals of Nutrition (M)
 or NUTR 307 (3) Human Nutrition (M)
 PATH 300 (3) Human Disease
 PARA 410 (3) Environment and Infection (M)
 PHAR 303 (3) Principles of Toxicology
 or NUTR 420 (3) Toxicology and Health Risks (M)

Area 6: Earth and soil sciences

ATOC 215 (3) Oceans, Weather and Climate
 EPSC 201 (3) Understanding Planet Earth
 GEOG 272 (3) Earth's Changing Surface
 GEOG 305 (3) Soils and Environment
 GEOG 321 (3) Climatic Environments
 SOIL 326 (3) Soil Genesis and Classification (M)

Area 7: Economics

AGEC 333 (3) Resource Economics (M)
 ECON 208 (3) Microeconomic Analysis and Applications
 or AGECE 200 (3) Principles of Microeconomics (M)
 ECON 326 (3) Ecological Economics
 ECON 347 (3) Economics of Climate Change
 ECON 405 (3) Natural Resource Economics
 GEOG 216 (3) Geography of the World Economy

Area 8: Development and Underdevelopment

ANTH 212 (3) Anthropology of Development
 ANTH 418 (3) Environment and Development
 ECON 313 (3) Economic Development 1
 ECON 314 (3) Economic Development 2
 GEOG 408 (3) Geography of Development
 GEOG 410 (3) Geography of Underdevelopment: Current Problems
 POLI 227 (3) Developing Areas/Introduction
 POLI 445 (3) International Political Economy: Monetary Relations
 SWRK 374 (3) Community Development/Social Action

Area 9: Cultures and People

ANTH 206 (3) Environment and Culture
 ANTH 339 (3) Ecological Anthropology
 GEOG 210 (3) Global Places and Peoples

Area 10: Human Ecology and Health

ANTH 227 (3) Medical Anthropology
 GEOG 300 (3) Human Ecology in Geography
 GEOG 303 (3) Health Geography
 PHIL 343 (3) Biomedical Ethics
 SOCI 225 (3) Medicine and Health in Modern Society
 SOCI 309 (3) Health and Illness

Area 11: Spirituality, Philosophy, Thought

EDER 461 (3) Society and Change
 PHIL 220 (3) Introduction to History and Philosophy of Science 1
 PHIL 221 (3) Introduction to History and Philosophy of Science 2
 PHIL 237 (3) Contemporary Moral Issues
 PHIL 341 (3) Philosophy of Science 1
 PHIL 348 (3) Philosophy of Law 1
 RELG 270 (3) Religious Ethics and the Environment
 RELG 340 (3) Religion and the Sciences
 RELG 370 (3) Human Condition

Area 12: Environmental management

AGRI 210 (3) Agro-Ecological History (M)
 AGRI 435 (3) Soil and Water Quality Management (M)
 AGRI 452 (3) Water Resources in Barbados (in Barbados)
 ENTO 336 (3) Economic Entomology (M)
 GEOG 302 (3) Environmental Management 1
 GEOG 380 (3) Adaptive Environmental Management
 GEOG 404 (3) Environmental Management 2 (in Panama)
 NRSC 333 (3) Physical and Biological Aspects of Pollution (M)

NRSC 382 (3) Ecological Monitoring and Analysis (M)
 NRSC 383 (3) Land Use: Redesign and Planning (M)
 NRSC 437 (3) Assessing Environmental Impact (M)
 SOIL 335 (3) Soil Ecology and Management (M)
 WILD 401 (4) Fisheries and Wildlife Management (M)
 WILD 415 (2) Conservation Law (M)
 (if this course is taken, 1 additional credit of complementary courses must be taken)
 WOOD 441 (3) Integrated Forest Management (M)

14.8 Major in Environment – B.Sc.(Ag.Env.Sc.) and B.Sc.

Students in the Faculty of Agricultural and Environmental Sciences B.Sc.(Ag.Env.Sc.) program and students in the Faculty of Science B.Sc. program can register in the Major in Environment.

The Major has two components: Core and Domain. Students follow three steps in their degree program.

- Core:** The Core consists of four introductory courses and one intermediate-level course where students are exposed to the different approaches, perspectives, and world views that will help them gain an understanding of the complexity and conflicts that underlie most environmental problems. Through the Core program students go beyond the confines of their individual views of environment.
- Domain:** Domains provide a trans-disciplinary study of a particular theme or component of the environment.
- Senior Core and Research:** In the two senior courses of the Core, students will apply the general and specialized knowledge that they have gained in the program to the analysis of some specific, contemporary environmental problems.

To obtain a Major in Environment, students must:

- register in a Domain, on-line using Minerva;
- pass all courses counted towards the Major with a **grade of C or higher**;
- confirm that their course selection satisfies the required components of the MSE Core and their chosen Domain, and that the complementary courses are approved courses in their chosen Domain; and
- fulfill all faculty requirements as specified by the faculty in which they are registered: for the B.Sc.(Ag.Env.Sc.) refer to Agricultural and Environmental Sciences [section 13.5 "Faculty Information and Regulations"](#); for the B.Sc. [see section 12.3 "Faculty Degree Requirements"](#). This includes meeting the minimum credit requirement as specified in their letter of admission.

MAJOR PROGRAM IN ENVIRONMENT

(57 to 66 credits – depending upon Domain selected)

Core: Required Courses (18 credits)

The Core courses are listed below in the Domain descriptions.

Core: Complementary Course – Senior Research Project (3 credits)

The research courses are listed in the Domain descriptions.

Domain (36 to 45 credits – depending upon Domain selected)

one MSE Domain selected from those available to students in the Major.

Currently available for B.Sc.(Ag.Env.Sc.) or B.Sc.:

Biodiversity and Conservation (42 credits)
 Ecological Determinants of Health –
 Population Stream or Cellular Stream (42 credits)
 Environmetrics (42 credits)
 Food Production and Environment (42 credits)
 Land Surface Processes and Environmental Change (42 credits)
 Renewable Resource Management (42 credits)

Water Environments and Ecosystems
Physical Stream or Biological Stream (36 - 39 credits)

Currently available for B.Sc. only (see section 14.9 "Major in Environment – B.Sc.):

Atmospheric Environment and Air Quality (39 credits)
Earth Sciences and Economics (45 credits)

Each Domain has different requirements, which are listed below. Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

14.8.1 Biodiversity and Conservation Domain

This Domain (63 credits including Core) is open only to students in the B.Sc (Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Mentor: **Before July 2008:**
Professor David Green
Email: david.m.green@mcgill.ca
Telephone: (514) 398-4086 ext. 4088

After July 2008:
Professor Graham Bell
E-mail: graham.bell@mcgill.ca
Telephone: (514) 398-6458

This Domain links the academic study of biological diversity with the applied field of conservation biology. The study of biological diversity, or "biodiversity", lies at the intersection of evolution with ecology and genetics, combining the subdisciplines of evolutionary ecology, evolutionary genetics and ecological genetics. It has two main branches, the creation of diversity and the maintenance of diversity. Both processes are governed by a general mechanism of selection acting over different scales of space and time. This gives rise to a distinctive set of principles and generalizations that regulate rates of diversification and levels of diversity, as well as the abundance or rarity of different species. Conservation biology constitutes the application of these principles in the relevant social and economic context to the management of natural systems, with the object of preventing the extinction of rare species and maintaining the diversity of communities. As the impact of industrialization and population growth on natural systems has become more severe, conservation has emerged as an important area of practical endeavour.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Suggested first year (U1) courses:

These courses are listed below in the program requirements.

They are good courses to start out with.

ECON 208 (3) Microeconomic Analysis and Applications
or AGECE 200(3) Principles of Microeconomics (M)
Statistics: (Although these are 300-level courses, they can be taken in U1.)

BIOL 373 (3) Biometry
or AEMA 310(3) Statistical Methods 1 (M)

B.Sc. students see section 12.3.6.1 "Course Overlap" in this Calendar about statistics and restricted courses.

Although these are not listed in the Domain, they satisfy prerequisites for upper level biology courses:

BIOL 200 (3) Molecular Biology
or FDSC 211(3) Biochemistry 1 (M)
CHEM 212 (4) Introductory Organic Chemistry 1
or FDSC 230(4) Organic Chemistry (M)
BIOL 205 (3) Biology of Organisms
or PLNT 201 (3) Comparative Plant Biology (M)

Program Requirements (63 credits)

NOTE: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses.

Core: Required Courses (18 credits)

ENVR 200 (3) The Global Environment
ENVR 201 (3) Society and Environment
ENVR 202 (3) The Evolving Earth
ENVR 203 (3) Knowledge, Ethics and Environment
ENVR 301 (3) Environmental Research Design
ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

AGRI 519 (6) Sustainable Development Plans (in Barbados)
ENVR 401 (3) Environmental Research
ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (9 credits)

9 credits, basic courses in the biological principles of diversity, systematics and conservation:

BIOL 304 (3) Evolution
BIOL 305 (3) Animal Diversity
BIOL 465 (3) Conservation Biology

Domain: Complementary Courses (33 credits)

3 credits of ecology:

BIOL 308 (3) Ecological Dynamics
or WILD 205 (3) Principles of Ecology (M)

3 credits of statistics:

BIOL 373 (3) Biometry
or AEMA 310 (3) Statistical Methods 1 (M)

9 credits, interface between science, policy and management:

ANTH 418 (3) Environment and Development
ECON 208 (3) Microeconomic Analysis and Applications
or AGECE 200 (3) Principles of Microeconomics (M)
ECON 225 (3) Economics of the Environment
GEOG 302 (3) Environmental Management 1
or GEOG 380(3) Adaptive Environmental Management
GEOG 408 (3) Geography of Development
GEOG 410 (3) Geography of Underdevelopment: Current Problems

3 credits of field courses:

BIOL 331 (3) Ecology/Behaviour Field Course (at Mont St. Hilaire)
BIOL 334 (3) Applied Tropical Ecology (in Barbados)
BIOL 553 (3) Neotropical Environments (in Panama)
GEOG 495 (3) Field Studies - Physical Geography (at Mont St. Hilaire)
GEOG 497 (3) Ecology of Coastal Waters (at Bay of Fundy)
GEOG 499 (3) Subarctic Field Studies (in Schefferville)
WILD 475 (3) Desert Ecology (in Arizona)

6 credits of general scientific principles:

BIOL 324 (3) Ecological Genetics
BIOL 341 (3) History of Life
BIOL 432 (3) Limnology
BIOL 441 (3) Biological Oceanography
BIOL 442 (3) Marine Biology
BIOL 505 (3) Diversity and Systematics Seminar
GEOG 272 (3) Earth's Changing Surface
GEOG 321 (3) Climatic Environments
GEOG 350 (3) Ecological Biogeography
MICR 331 (3) Microbial Ecology (M)
NRSC 430 (3) GIS for Natural Resource Management (M)
or GEOG 306(3) Raster Geo-Information Science
NRSC 437 (3) Assessing Environmental Impact (M)
PLNT 460 (3) Plant Ecology (M)
WILD 313 (3) Phylogeny and Zoogeography (M)

- WILD 375 (3) Issues: Environmental Sciences (*M*)
 WILD 410 (3) Wildlife Ecology (*M*)
 WOOD 410 (3) The Forest Ecosystem (*M*)
 WOOD 420 (3) Environmental Issues: Forestry (*M*)
 (A second field course from the Domain curriculum may also be taken)

3 credits of social science:

- AGEC 333 (3) Resource Economics (*M*)
 AGRI 413 (3) Globalization: Issues of Change (in Barbados)
 ANTH 339 (3) Ecological Anthropology
 ANTH 416 (3) Environment/Development: Africa (in Africa)
 ECON 326 (3) Ecological Economics
 ENVR 465 (3) Environment and Social Change (at Bay of Fundy)
 GEOG 404 (3) Environmental Management 2 (in Panama)
 GEOG 498 (3) Humans in Tropical Environments (in Panama)
 GEOG 510 (3) Humid Tropical Environments
 WILD 415 (2) Conservation Law (*M*)
 (If this course is taken, 1 additional credit of complementary courses must be taken.)
 WILD 421 (3) Wildlife Conservation (*M*)

6 credits of organisms and diversity:

- AGRI 340 (3) Principles of Ecological Agriculture (*M*)
 ANTH 311 (3) Primate Behaviour and Ecology
 BIOL 327 (3) Herpetology
 BIOL 335 (3) Marine Mammals (at Bay of Fundy)
 BIOL 350 (3) Insect Biology and Control
 BIOL 355 (3) Trees: Ecology & Evolution
 PLNT 358 (3) Flowering Plant Diversity (*M*)
 ENTO 352 (3) Control of Insect Pests (*M*)
 ENTO 440 (3) Systematic Entomology (*M*)
 ENVR 540 (3) Ecology of Species Invasions
 or BIOL 540
 PLNT 304 (3) Biology of Fungi (*M*)
 PLNT 458 (3) Flowering Plant Systematics (*M*)
 WILD 212 (3) Evolution and Systematics (*M*)
 WILD 307 (3) Natural History of Vertebrates (*M*)
 WILD 350 (3) Mammalogy (*M*)
 WILD 420 (3) Ornithology (*M*)
 WILD 424 (3) Parasitology (*M*)

14.8.2 Ecological Determinants of Health Domain

This Domain (63 credits including Core) is open only to students in the B.Sc (Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Mentor: **Before December 2008:**

Professor Tim Johns

Email: tim.johns@mcgill.ca

Telephone: (514) 398-7847

After January 2009:

Professor Marilyn Scott

Email: marilyn.scott@mcgill.ca

Telephone: (514) 398-7559

This Domain considers the interface between the environment and human well-being, with particular focus on the triad that ties human health to the environment through the elements of food and infectious agents. Each of these elements is influenced by planned and unplanned environmental disturbances.

For example, agricultural practices shift the balance between beneficial and harmful ingredients of food. Use of insecticides presents dilemmas with regard to the environment, economics and human health. The distribution of infectious diseases is influenced by the climatic conditions that permit vectors to coexist with man, by deforestation, by urbanization, and by human interventions ranging from the building of dams to provision of potable water.

In designing interventions that aim to prevent or reduce infectious contaminants in the environment, or to improve food

production and nutritional quality, not only is it important to understand methods of intervention, but also to understand social forces that influence how humans respond to such interventions.

Students in the **Population Concentration** will gain a depth of understanding at an ecosystem level that looks at society, land and population health. Students in the **Cellular Concentration** will explore the interactions in more depth, at a physiological level.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Ecological Determinants of Health Domain – Cellular

The Cellular Concentration (63 credits) in this Domain is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Suggested first year (U1) courses:

Although not all of these are listed in the Domain, they satisfy prerequisites for upper level biology courses. They are good courses to start out with.

- BIOL 200 (3) Molecular Biology
 or FDSC 211 (3) Biochemistry 1 (*M*)
 CHEM 212 (4) Introductory Organic Chemistry 1
 or FDSC 230 (4) Organic Chemistry (*M*)
 BIOL 202 (3) Basic Genetics
 or CELL 204 (3) Genetics (*M*)
 BIOL 205 (3) Biology of Organisms
 or PLNT 201 (3) Comparative Plant Biology (*M*)
 Statistics: (Although these are 300-level courses, they can be taken in U1.)
 BIOL 373 (3) Biometry

or AEMA 310(3) Statistical Methods 1 (*M*)

B.Sc. students see [section 12.3.6.1 "Course Overlap"](#) in this Calendar about statistics and restricted courses.

Program Requirements (63 credits)

NOTE: Students are required to take a maximum of 31 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses.

Core: Required Courses (18 credits)

- ENVR 200 (3) The Global Environment
 ENVR 201 (3) Society and Environment
 ENVR 202 (3) The Evolving Earth
 ENVR 203 (3) Knowledge, Ethics and Environment
 ENVR 301 (3) Environmental Research Design
 ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

- AGRI 519 (6) Sustainable Development Plans (in Barbados)
 ENVR 401 (3) Environmental Research
 ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (6 credits)

- PARA 410 (3) Environment and Infection (*M*)
 SOCI 234 (3) Population and Society

Domain - Cellular Concentration: Complementary Courses (36 credits)

18 credits of fundamentals, maximum of 3 credits from any one category:

Toxicology

- NUTR 420 (3) Toxicology and Health Risks (*M*)
 PHAR 303 (3) Principles of Toxicology

Cellular Biology

- AEBI 202 (3) Cellular Biology (*M*)
 ANSC 234 (3) Biochemistry 2 (*M*)

BIOL 201	(3)	Cell Biology and Metabolism
<i>Genetics</i>		
BIOL 202	(3)	Basic Genetics
CELL 204	(4)	Genetics (M)
<i>Molecular Biology</i>		
BIOL 200	(3)	Molecular Biology
FDSC 211	(3)	Biochemistry 1(M)
<i>Statistics</i>		
AEMA 310	(3)	Statistical Methods 1(M)
MATH 203	(3)	Principles of Statistics 1
or equivalent		
<i>Nutrition</i>		
ANSC 330	(3)	Fundamentals of Nutrition (M)
NUTR 307	(3)	Human Nutrition (Video conference Downtown and Macdonald)
12 credits chosen from Human Health, maximum of 3 credits from any one category:		
<i>Immunology and Pathogenicity</i>		
MICR 341	(3)	Mechanisms of Pathogenicity (M)
MIMM 314	(3)	Immunology
PARA 438	(3)	Immunology (M)

Ecological Determinants of Health Domain – Population

The Population Concentration (63 credits) in this Domain is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Suggested first year (U1) courses:

Although not all of these are listed in the Domain, they satisfy prerequisites for upper level biology courses. They are good courses to start out with.

BIOL 200	(3)	Molecular Biology
or FDSC 211	(3)	Biochemistry 1 (M)
CHEM 212	(4)	Introductory Organic Chemistry 1
or FDSC 230	(4)	Organic Chemistry (M)
BIOL 202	(3)	Basic Genetics
or CELL 204	(3)	Genetics (M)
BIOL 205	(3)	Biology of Organisms
or PLNT 201	(3)	Comparative Plant Biology (M)

Statistics: (Although these are 300-level courses, they can be taken in U1.)

BIOL 373	(3)	Biometry
or AEMA 310	(3)	Statistical Methods 1 (M)

B.Sc. students see [section 12.3.6.1 "Course Overlap"](#) in this Calendar about statistics and restricted courses.

Program Requirements (63 credits)

NOTE: Students are required to take a maximum of 31 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses.

Core: Required Courses (18 credits)

ENVR 200	(3)	The Global Environment
ENVR 201	(3)	Society and Environment
ENVR 202	(3)	The Evolving Earth
ENVR 203	(3)	Knowledge, Ethics and Environment
ENVR 301	(3)	Environmental Research Design
ENVR 400	(3)	Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

AGRI 519	(6)	Sustainable Development Plans (in Barbados)
ENVR 401	(3)	Environmental Research
ENVR 451	(6)	Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (6 credits)

PARA 410	(3)	Environment and Infection (M)
SOCI 234	(3)	Population and Society

Domain - Population Concentration: Complementary Courses (36 credits)

18 credits of fundamentals, maximum of 3 credits from each category:

<i>Toxicology</i>		
NUTR 420	(3)	Toxicology and Health Risks (M)
PHAR 303	(3)	Principles of Toxicology

<i>Genetics</i>		
BIOL 202	(3)	Basic Genetics
CELL 204	(4)	Genetics (M)

<i>Biology</i>		
BIOL 200	(3)	Molecular Biology
BIOL 201	(3)	Cell Biology and Metabolism
FDSC 211	(3)	Biochemistry 1(M)

<i>Statistics</i>		
AEMA 310	(3)	Statistical Methods 1 (M)
MATH 203	(3)	Principles of Statistics 1
or equivalent		

Nutrition

- ANSC 330 (3) Fundamentals of Nutrition (M)
 NUTR 207 (3) Nutrition and Health (M)
 NUTR 307 (3) Human Nutrition (Video conference
 Downtown and Macdonald)

Advanced Ecology

- AEMA 306 (3) Mathematical Methods in Ecology (M)
 BIOL 465 (3) Conservation Biology
 BIOL 553 (3) Neotropical Environments (in Panama)
 ENVR 540 (3) Ecology of Species Invasions
 or BIOL 540 (3) Ecology of Species Invasions
 GEOG 497 (3) Ecology of Coastal Waters (at Bay of Fundy)
 MICR 331 (3) Microbial Ecology (M)
 PLNT 460 (3) Plant Ecology (M)
 WILD 410 (3) Wildlife Ecology (M)
 WOOD 410 (3) The Forest Ecosystem (M)

6 credits from the following List A, maximum of 3 credits from each category:

Hydrology, Climate, and Agriculture

- AGRI 340 (3) Principles of Ecological Agriculture (M)
 AGRI 452 (3) Water Resources in Barbados (in Barbados)
 AGRI 550 (3) Sustained Tropical Agriculture (in Panama)
 BREE 217 (3) Hydrology and Water Resources (M)
 GEOG 321 (3) Climatic Environments
 GEOG 322 (3) Environmental Hydrology
 NRSC 510 (3) Agricultural Micrometeorology (M)

Decision Making and Social Change

- AGEC 242 (3) Management Theories and Practices (M)
 AGEC 200 (3) Principles of Microeconomics
 or ECON 208 (3) Microeconomic Analysis and Applications
 AGRI 413 (3) Globalization: Issues of Change
 EDER 461 (3) Society and Change
 ENVR 465 (3) Environment and Social Change (at Bay of
 Fundy)

- GEOG 302 (3) Environmental Management 1
 GEOG 404 (3) Environmental Management 2 (in Panama)
 PHIL 343 (3) Biomedical Ethics

Development and History

- AGRI 210 (3) Agro-Ecological History (M)
 ANTH 212 (3) Anthropology of Development
 HIST 292 (3) History and the Environment
 SOCI 254 (3) Development and Underdevelopment

12 credits from the following list B, maximum of 3 credits from each category:

Techniques and Management

- CHEE 230 (3) Environmental Aspects of Technology
 GEOG 201 (3) Introductory Geo-Information Science
 NRSC 430 (3) GIS for Natural Resource Management (M)
 NRSC 437 (3) Assessing Environmental Impact (M)
 URBP 507 (3) Planning and Infrastructure (in Barbados)

Immunology and Infectious Disease

- ANSC 400 (3) Eucaryotic Cells and Viruses (M)
 MIMM 314 (3) Immunology
 MIMM 324 (3) Fundamental Virology
 MIMM 413 (3) Parasitology
 PARA 438 (3) Immunology (M)
 WILD 424 (3) Parasitology (M)

Nutrition and Agriculture

- AGRI 411 (3) International Agriculture (M)
 NUTR 403 (3) Nutrition in Society (M)
 NUTR 501 (3) Nutrition in Developing Countries (M)
 NUTR 512 (3) Herbs, Foods and Phytochemicals (Video
 conference Downtown and Macdonald)

Populations and Place

- CANS 407 (3) Regions of Canada
 GEOG 300 (3) Human Ecology in Geography
 GEOG 303 (3) Health Geography
 GEOG 498 (3) Humans in Tropical Environments (in
 Panama)

- PSYC 533 (3) International Health Psychology
Pollution and Pest Management
 BIOL 350 (3) Insect Biology and Control
 BREE 322 (3) Organic Waste Management (M)
 ENTO 352 (3) Control of Insect Pests (M)
 NRSC 333 (3) Physical and Biological Aspects of Pollution
 (M)
 PLNT 361 (3) Pest Management and the Environment (M)

14.8.3 Environmetrics Domain

This Domain (63 credits including Core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Mentor: Professor Pierre Dutilleul
 E-mail: pierre.dutilleul@mcgill.ca
 Telephone: (514) 398-7870

In view of the crucial need for sound study design and appropriate statistical methods for analyzing environmental changes and their impacts on humans and various life forms and their ecological relationships, this program is intended to provide students with a strong background in the use of statistical methods of data analysis in environmental sciences.

Graduates will be capable of effectively participating in the design of environmental studies and adequately analyzing data for use by the environmental community. Accordingly, the list of courses for the Environmetrics Domain is composed primarily of statistics courses and mathematically oriented courses with biological and ecological applications. The list is completed by general courses that refine the topics introduced in the MSE core courses by focusing on the ecology of living organisms, soil sciences or water resources, and impact assessment. These courses should allow the students to understand their interlocutors and be understood by them in their future job. Students can further develop their background in applied or mathematical statistics and their expertise in environmental sciences by taking complementary courses along each of two axes: statistics and mathematics, and environmental sciences. An internship is also offered to students to provide them with preliminary professional experience.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Suggested first year (U1) courses:

Prerequisites and equivalent courses are common with math courses, so check with your adviser when choosing your courses. Be especially careful with statistics courses, as you will receive no credit (and no warning!) for a course that is considered equivalent to one you have already taken. B.Sc. students see [section 12.3.6.1 "Course Overlap"](#) in this Calendar about statistics and restricted courses and talk to Pete Barry, the Program Coordinator.

MATH 223 (3) Linear Algebra

Statistics courses BIOL 373 OR AEMA 310 (M) can be taken in U1, but do not take them if you want to follow Option 1 (below), as they overlap with MATH 324.

Program Requirements (63 credits)

NOTE: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses.

Core: Required Courses (18 credits)

- ENVR 200 (3) The Global Environment
 ENVR 201 (3) Society and Environment
 ENVR 202 (3) The Evolving Earth
 ENVR 203 (3) Knowledge, Ethics and Environment

- ENVR 301 (3) Environmental Research Design
 ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project
 (3 credits*)

- AGRI 519 (6) Sustainable Development Plans (in Barbados)
 ENVR 401 (3) Environmental Research
 ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Course (6 credits)

- AEMA 403 (3) Environmetrics Stage (internship) (M)
 AEMA 414 (3) Temporal and Spatial Statistics (M)

Domain - Complementary Courses (36 credits, minimum)

12 credits of fundamentals (maximum 3 credits from any one category):

Ecology

- WILD 205 (3) Principles of Ecology (M)
 BIOL 308 (3) Ecological Dynamics

Impacts

- MIME 308 (3) Social and Economic Impacts of Technology
 NRSC 437 (3) Assessing Environmental Impact (M)

Modeling

- AEMA 306 (3) Mathematical Methods in Ecology (M)
 BIOL 309 (3) Mathematical Models in Biology

GIS Techniques

- GEOG 201 (3) Introductory Geo-Information Science
 NRSC 430 (3) GIS for Natural Resource Management (M)

3 credits of basic environmental science:

- BREE 217 (3) Hydrology and Water Resources (M)
 CIVE 323 (3) Hydrology and Water Resources
 GEOG 305 (3) Soils and Environment
 GEOG 322 (3) Environmental Hydrology
 GEOG 350 (3) Ecological Biogeography
 SOIL 210 (3) Principles of Soil Science (M)

6 credits of Statistics, one of the following two options:

Note: B.Sc. students should see section 12.3.6.1 "Course Overlap" of the current Calendar for info on course overlap. Several stats courses overlap (especially with MATH 324) and cannot be taken together. These rules do not apply to B.Sc.(Ag.Env.Sc.) students.

Option 1:

- MATH 323 (3) Probability
 MATH 324 (3) Statistics

Option 2:

- AEMA 310 (3) Statistical Methods 1 (M)
 or BIOL 373 (3) Biometry
 AEMA 411 (3) Experimental Designs
 or CIVE 555 (3) Environmental Data Analysis
 or GEOG 351 (3) Quantitative Methods
 or SOCI 461 (3) Quantitative Data Analysis

15 credits total chosen from the following two lists:

3 credits minimum of statistics and mathematics chosen from:

- BIOL 434 (3) Theoretical Ecology
 BREE 252 (3) Computing for Engineers (or equivalent) (M)
 BREE 319 (3) Engineering Mathematics (or equivalent) (M)
 GEOG 501 (3) Modelling Environmental Systems
 MATH 223 (3) Linear Algebra
 MATH 326 (3) Nonlinear Dynamics and Chaos
 MATH 423 (3) Regression and Analysis of Variance
 MATH 447 (3) Stochastic Processes
 MATH 525 (4) Sampling Theory and Applications
 SOCI 504 (3) Quantitative Methods 1
 SOCI 505 (3) Quantitative Methods 2
 SOCI 580 (3) Social Research Design and Practice.

3 credits, minimum of environmental sciences chosen from:

- AGRI 452 (3) Water Resources in Barbados (in Barbados)
 AGRI 550 (3) Sustained Tropical Agriculture (in Panama)

- BIOL 331 (3) Ecology/Behavior Field Course (at Mont St. Hilaire)
 BIOL 553 (3) Neotropical Environments (in Panama)
 GEOG 300 (3) Human Ecology in Geography
 GEOG 302 (3) Environmental Management 1
 GEOG 404 (3) Environmental Management 2 (in Panama)
 GEOG 494 (3) Urban Field Studies
 GEOG 497 (3) Ecology of Coastal Waters (at Bay of Fundy)
 GEOG 499 (3) Subarctic Field Studies (in Schefferville)
 NRSC 333 (3) Physical and Biological Aspects of Pollution (M)
 PLNT 460 (3) Plant Ecology (M)
 WILD 313 (3) Phylogeny and Zoogeography (M)
 WILD 401 (4) Fisheries and Wildlife Management (M)
 WOOD 300 (3) Urban Forests and Trees (M)
 WOOD 420 (3) Environmental Issues: Forestry (M)

14.8.4 Food Production and Environment Domain

This Domain (63 credits including Core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. in Environment program.

Mentor: Professor Joan Marshall
 E-mail: joan.marshall@mcgill.ca
 Telephone: (514) 398-7822

The business of food production is an area of human activity with a large and intimate interaction with the environment. Modern agriculturalists must strike a delicate balance between trying to provide food for themselves, their families and urban dwellers while trying to minimize environmental damage. When negative effects due to agricultural activities do occur, they are not usually the classic point source effects that we have come to associate with industry or large cities. Rather, the effects are over extremely large land areas cumulating, perhaps, in pollution of river systems or lakes some distance away. As world populations grow, and as diets change, potentially negative interactions between agricultural systems and other facets of the environment will become more frequent. In the same way, urban sprawl will make conflicts between agriculture and urbanites more common.

With a judicious choice of courses, graduates of this Domain may be eligible to apply for membership in the Ordre des agronomes du Québec (OAQ) and the Agricultural Institute of Canada (AIC). See the MSE Website for details at www.mcgill.ca/mse: (BSc Programs: Food Production and Environment Domain).

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Prerequisite or Corequisite Courses for Domain

- FDSC 211 (3) Biochemistry 1 (M)
 or BIOL 112 (3) Cell and Molecular Biology
 or CEGEP equivalent (e.g., CEGEP objective 00XU)
 FDSC 230 (4) Organic Chemistry (M)
 or CHEM 212 (4) Introductory Organic Chemistry 1
 or CEGEP equivalent (e.g., CEGEP objective 00XV)

Suggested first year (U1) courses:

These are prerequisites for many of the upper level courses, and are recommended to be taken in U1 if possible.

- PLNT 211 (3) Principles of Plant Science
 BIOL 202 (3) Basic Genetics
 or CELL 204 (3) Genetics
 Statistics: GEOG 202, PSYC 204, BIOL 373 or AEMA 310 (M)
 B.Sc. students see section 12.3.6.1 "Course Overlap" in this Calendar about statistics and restricted courses.

Program Requirements (63 credits)

NOTE: Students are required to take a maximum of 34 credits at the 200 level and a minimum of 15 credits at the 400 level or

higher in this program. This includes Core and Required courses, but does not include the Domain prerequisites or co-requisites listed above.

Core: Required Courses (18 credits)

ENVR 200	(3)	The Global Environment
ENVR 201	(3)	Society and Environment
ENVR 202	(3)	The Evolving Earth
ENVR 203	(3)	Knowledge, Ethics and Environment
ENVR 301	(3)	Environmental Research Design
ENVR 400	(3)	Environmental Thought

Core: Complementary Course – Senior Research Project

(3 credits*)

AGRI 519	(6)	Sustainable Development Plans (in Barbados)
ENVR 401	(3)	Environmental Research
ENVR 451	(6)	Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (9 credits)

AGRI 210	(3)	Agro-Ecological History (M)
PLNT 211	(3)	Principles of Plant Science (M)
PLNT 300	(3)	Cropping Systems (M)

Domain: Complementary Courses (33 credits)

15 or 16 credits of Basic Sciences:

AEMA 310	(3)	Statistical Methods 1 (M)
or MATH 203	(3)	Principles of Statistics 1

or equivalent

AGRI 340	(3)	Principles of Ecological Agriculture (M)
or ANSC 250	(3)	Principles of Animal Science (M)
BIOL 202	(3)	Basic Genetics
or CELL 204	(4)	Genetics (M)
GEOG 305	(3)	Soils and Environment
or SOIL 210	(3)	Principles of Soil Science (M)
WILD 205	(3)	Principles of Ecology (M)
or BIOL 308	(3)	Ecological Dynamics

12 credits of Applied Sciences:

BREE 217	(3)	Hydrology and Water Resources (M)
or GEOG 322	(3)	Environmental Hydrology
BREE 322	(3)	Organic Waste Management (M)
BREE 518	(3)	Bio-Treatment of Wastes (M)
AGRI 341	(3)	Ecological Agricultural Systems (M)
AGRI 411	(3)	International Agriculture (M)
AGRI 435	(3)	Soil and Water Quality Management (M)
AGRI 550	(3)	Sustained Tropical Agriculture (in Panama)
ANSC 501	(3)	Advanced Animal Production Systems (M)
BIOL 465	(3)	Conservation Biology
BIOL 553	(3)	Neotropical Environments (in Panama)
ENTO 446	(3)	Apiculture
FDSC 200	(3)	Introduction to Food Science (M)
or NUTR 207	(3)	Nutrition and Health (M)
FDSC 535	(3)	Food Biotechnology (M)
GEOG 302	(3)	Environmental Management 1
GEOG 380	(3)	Adaptive Environmental Management
MICR 331	(3)	Microbial Ecology (M)
NRSC 333	(3)	Physical and Biological Aspects of Pollution (M)
NRSC 437	(3)	Assessing Environmental Impact (M)
NUTR 403	(3)	Nutrition in Society (M)
NUTR 420	(3)	Toxicology and Health Risks (M)
PARA 410	(3)	Environment and Infection (M)
PHAR 303	(3)	Principles of Toxicology
PLNT 361	(3)	Pest Management and the Environment (M)
PLNT 434	(3)	Weed Biology and Control (M)
SOIL 315	(3)	Soil Fertility and Fertilizer Use (M)
SOIL 410	(3)	Soil Chemistry (M)
SOIL 445	(3)	Agroenvironmental Fertilizer Use
SOIL 521	(3)	Soil Microbiology and Biochemistry (M)
WILD 401	(4)	Fisheries and Wildlife Management (M)

6 credits in Social Sciences/Humanities:

AGEC 200	(3)	Principles of Microeconomics (M)
or ECON 208	(3)	Microeconomic Analysis and Applications
AGEC 320	(3)	Intermediate Microeconomic Theory (M)
AGEC 333	(3)	Resource Economics (M)
or ECON 405	(3)	Natural Resource Economics
AGEC 430	(3)	Agriculture, Food and Resource Policy (M)
AGEC 442	(3)	Economics of International Agricultural Development (M)
AGRI 413	(3)	Globalization: Issues of Change (in Barbados)
ANTH 418	(3)	Environment and Development
ECON 225	(3)	Economics of the Environment
ENVR 465	(3)	Environment and Social Change (at Bay of Fundy)
GEOG 404	(3)	Environmental Management 2 (in Panama)
GEOG 410	(3)	Geography of Underdevelopment: Current Problems
GEOG 498	(3)	Humans in Tropical Environments (in Panama)
GEOG 510	(3)	Humid Tropical Environments
SOCI 254	(3)	Development and Underdevelopment
SOCI 565	(3)	Social Change in Panama (in Panama)
WILD 415	(2)	Conservation Law (M)

(if this course is taken, 1 additional credit of complementary courses must be taken)

14.8.5 Land Surface Processes and Environmental Change Domain

This Domain (63 credits including Core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Mentor: **Before December 2008:**

Pete Barry

Email: pete.barry@mcgill.ca

Telephone: (514) 398-4306

After January 2009:

Professor Ian Strachan

Email: ian.strachan@mcgill.ca

Telephone: (514) 398-7935

The thin soil layer on the planet's land surfaces controls the vital inputs of water, nutrients and energy to terrestrial and freshwater aquatic ecosystems. Widespread occurrences around the globe of desertification, soil erosion, deforestation and land submergence over water reservoirs indicate that this dynamic system is under increasing pressure from population growth and changes in climate and land uses. Production of key greenhouse gases (water vapor, CO₂ and methane) is controlled by complex processes operating at the land surface, involving climate change feedbacks that need to be fully understood, given current global warming trends.

The program introduces students to the interacting physical and biogeochemical processes at the atmosphere-lithosphere interface, which fashion land surface habitats and determine their biological productivity and response to anthropogenic or natural environmental changes. Through an appropriate selection of courses, students can prepare for graduate training in emerging research areas such as earth system sciences, environmental hydrology and landscape ecology.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Suggested first year (U1) courses:

These courses are listed below in the program requirements.

They are good courses to start out with.

- GEOG 203 (3) Environmental Systems
 - ATOC 215 (3) Oceans, Weather and Climate
 - or NRSC 201(3) Introductory Meteorology (M)
 - GEOG 272 (3) Earth's Changing Surface
 - or SOIL 200 (3) Introduction to Earth Science (M)
 - GEOG 322 (3) Environmental Hydrology
 - or BREE 217(3) Hydrology and Water Resources (M)
 - GEOG 321 (3) Climatic Environments
 - Statistics: GEOG 202, PSYC 204, BIOL 373 or AEMA 310 (M)
- B.Sc. students see [section 12.3.6.1 "Course Overlap"](#) in this Calendar about statistics and restricted courses.

Program Requirements (63 credits)

NOTE: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses.

Core: Required Courses (18 credits)

- ENVR 200 (3) The Global Environment
- ENVR 201 (3) Society and Environment
- ENVR 202 (3) The Evolving Earth
- ENVR 203 (3) Knowledge, Ethics and Environment
- ENVR 301 (3) Environmental Research Design
- ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

- AGRI 519 (6) Sustainable Development Plans (in Barbados)
- ENVR 401 (3) Environmental Research
- ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Course (3 credits)

- GEOG 203 (3) Environmental Systems

Domain: Complementary Courses (39 credits)

3 credits of statistics chosen from:

- AEMA 310 (3) Statistical Methods 1 (M)
 - GEOG 202 (3) Statistics and Spatial Analysis
 - MATH 203 (3) Principles of Statistics 1
- or equivalent

3 credits of ecology chosen from:

- BIOL 308 (3) Ecological Dynamics
- WILD 205 (3) Principles of Ecology (M)

3 credits of weather and climate chosen from:

- ATOC 215 (3) Oceans, Weather and Climate
- NRSC 201 (3) Introductory Meteorology (M)

9 credits of fundamental land surface processes chosen from:

- GEOG 272 (3) Earth's Changing Surface
- or SOIL 200 (3) Introduction to Earth Science (M)
- GEOG 305 (3) Soils and Environment
- or SOIL 326 (3) Soil Genesis and Classification (M)
- GEOG 321 (3) Climatic Environments
- GEOG 322 (3) Environmental Hydrology
- or BREE 217 (3) Hydrology and Water Resources (M)

3 credits of environment and resource management chosen from:

- AGRI 435 (3) Soil and Water Quality Management (M)
- AGRI 452 (3) Water Resources in Barbados (in Barbados)
- AGRI 550 (3) Sustained Tropical Agriculture (in Panama)
- BIOL 465 (3) Conservation Biology
- CHEE 230 (3) Environmental Aspects of Technology
- CIVE 225 (4) Environmental Engineering
- GEOG 302 (3) Environmental Management 1
- GEOG 380 (3) Adaptive Environmental Management
- GEOG 404 (3) Environmental Management 2 (in Panama)
- NRSC 437 (3) Assessing Environmental Impact (M)

- WOOD 420 (3) Environmental Issues: Forestry (M)
- WOOD 441 (3) Integrated Forest Management (M)

3 credits of a field course chosen from:

- BIOL 553 (3) Neotropical Environments (in Panama)
- GEOG 495 (3) Field Studies - Physical Geography (at Mont St. Hilaire)
- GEOG 496 (3) Geographical Excursion (in Barbados)
- GEOG 497 (3) Ecology of Coastal Waters (at Bay of Fundy)
- GEOG 499 (3) Subarctic Field Studies (in Schefferville)
- NRSC 382 (3) Ecological Monitoring and Analysis (M)
- WILD 475 (3) Desert Ecology (in Arizona)

3 credits of social science issues chosen from:

- AGRI 413 (3) Globalization: Issues of Change (in Barbados)
- ANTH 339 (3) Ecological Anthropology
- ECON 225 (3) Economics of the Environment
- ECON 326 (3) Ecological Economics
- ECON 405 (3) Natural Resource Economics
- or AGECE 333 (3) Resource Economics (M)
- ENVR 465 (3) Environment and Social Change (at Bay of Fundy)
- GEOG 408 (3) Geography of Development
- GEOG 498 (3) Humans in Tropical Environments (in Panama)
- GEOG 508 (3) Resources, People and Power
- SOCI 565 (3) Social Change in Panama (in Panama)

12 credits total of advanced studies chosen from the following two lists:

3 credits minimum of advanced study of particular environments:

- PLNT 358 (3) Flowering Plant Diversity (M)
- BIOL 432 (3) Limnology
- or NRSC 315 (3) Science of Inland Waters (M)
- GEOG 350 (3) Ecological Biogeography
- GEOG 372 (3) Running Water Environments
- GEOG 536 (3) Geocryology
- GEOG 550 (3) Historical Ecology Techniques
- PLNT 460 (3) Plant Ecology (M)
- WOOD 410 (3) The Forest Ecosystem (M)

6 credits minimum of advanced study of surface processes:

- BREE 509 (2) Hydrologic Systems and Modelling (M)
- ATOC 315 (3) Water in the Atmosphere
- EPSC 549 (3) Hydrogeology
- EPSC 580 (3) Aqueous Geochemistry
- GEOG 501 (3) Modelling Environmental Systems
- GEOG 505 (3) Global Biogeochemistry
- GEOG 522 (3) Advanced Environmental Hydrology
- GEOG 537 (3) Advanced Fluvial Geomorphology
- NRSC 333 (3) Physical and Biological Aspects of Pollution (M)
- SOIL 331 (3) Soil Physics (M)
- SOIL 410 (3) Soil Chemistry (M)

14.8.6 Renewable Resource Management Domain

This Domain (63 credits including Core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Mentor: Mr. Pete Barry, MSE Program Coordinator
 E-mail: peter.barry@mcgill.ca
 Telephone: (514) 398-4306

Renewable resource management is an emerging field that focuses on the ecosystem structures and processes required to sustain the delivery, to humanity, of ecosystem goods and services such as food, clean water and air, essential nutrients, and the provision of beauty and inspiration. Renewable resource management recognizes humans as integral components of ecosystems and is used to develop goals that are consistent with sustainability and ecosystem maintenance.

The Renewable Resource Management domain provides students with an understanding of: 1) the interactions between physical and biological factors that determine the nature and dynamics of populations and entities in the natural environment; 2) the ways in which ecosystems can be managed to meet specific goals for the provision of goods and services; 3) the economic and social factors that determine how ecosystems are managed; 4) the ways in which management of natural resources can affect the capability of natural ecosystems to continue to supply human needs in perpetuity; and 5) the approaches and technologies required to monitor and analyze the dynamics of natural and managed ecosystems.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required Courses are offered on both campuses.)

Prerequisite or Corequisite Courses for Domain

FDSC 211 (3) Biochemistry 1 (M)
or BIOL 112 (3) Cell and Molecular Biology
or CEGEP equivalent (e.g., CEGEP objective 00XU)
FDSC 230 (4) Organic Chemistry (M)
or CHEM 212 (4) Introductory Organic Chemistry 1
or CEGEP equivalent (e.g., CEGEP objective 00XV)

Suggested first year (U1) courses

These courses are listed below in the program requirements.

They are good courses to start out with.

WILD 200 (3) Comparative Zoology (M)
or BIOL 205 (3) Biology of Organisms
or PLNT 201 (3) Comparative Plant Biology (M)
Statistics: (Although these are 300-level courses, they can be taken in U1.)
BIOL 373 (3) Biometry
or AEMA 310 (3) Statistical Methods 1 (M)
B.Sc. students see [section 12.3.6.1 "Course Overlap"](#) in this Calendar about statistics and restricted courses.

Program Requirements (63 credits)

NOTE: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses, but does not include the Domain prerequisites or corequisites listed above.

Core: Required Courses (18 credits)

ENVR 200 (3) The Global Environment
ENVR 201 (3) Society and Environment
ENVR 202 (3) The Evolving Earth
ENVR 203 (3) Knowledge, Ethics and Environment
ENVR 301 (3) Environmental Research Design
ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

AGRI 519 (6) Sustainable Development Plans (in Barbados)
ENVR 401 (3) Environmental Research
ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Complementary Courses (42 credits)

9 credits of basic principles of ecosystem processes and diversity
WILD 200 (3) Comparative Zoology (M)
or BIOL 305 (3) Animal Diversity
or PLNT 201 (3) Comparative Plant Biology (M)
WILD 205 (3) Principles of Ecology (M)
or BIOL 308 (3) Ecological Dynamics
GEOG 305 (3) Soils and Environment
or SOIL 210 (3) Principles of Soil Science (M)

6 credits statistics and GIS methods

AEMA 310 (3) Statistical Methods 1 (M)

or BIOL 373 (3) Biometry
NRSC 430 (3) GIS for Natural Resource Management (M)
or GEOG 201 (3) Introductory Geo-Information Science

6 credits of advanced ecosystem components

PLNT 358 (3) Flowering Plant Diversity (M)
BIOL 553 (3) Neotropical Environments (in Panama)
GEOG 372 (3) Running Water Environments
SOIL 326 (3) Soil Genesis and Classification (M)
WILD 307 (3) Natural History of Vertebrates (M)

6 credits of advanced ecological processes

BREE 217 (3) Hydrology and Water Resources (M)
or GEOG 322 (3) Environmental Hydrology
BIOL 432 (3) Limnology
or NRSC 315 (3) Science of Inland Waters (M)
BIOL 465 (3) Conservation Biology
GEOG 372 (3) Running Water Environments
GEOG 497 (3) Ecology of Coastal Waters (at Bay of Fundy)
MICR 331 (3) Microbial Ecology (M)
NRSC 333 (3) Physical and Biological Aspects of Pollution (M)

PLNT 460 (3) Plant Ecology (M)
WILD 410 (3) Wildlife Ecology (M)
WOOD 410 (3) The Forest Ecosystem (M)

6 credits of social processes:

AGEC 242 (3) Management Theories and Practices (M)
AGEC 333 (3) Resource Economics (M)
or ECON 405 (3) Natural Resource Economics
AGRI 413 (3) Globalization: Issues of Change (in Barbados)
ANTH 339 (3) Ecological Anthropology
CANS 407 (3) Regions of Canada
ENVR 465 (3) Environment and Social Change (at Bay of Fundy)
GEOG 498 (3) Humans in Tropical Environments (in Panama)
RELG 270 (3) Religious Ethics and the Environment
SOCI 565 (3) Social Change in Panama (in Panama)
WILD 415 (2) Conservation Law (M)
(if this course is taken, 1 additional credit of complementary courses must be taken)

9 credits of ecosystem components or management of ecosystems:

AGRI 435 (3) Soil and Water Quality Management (M)
AGRI 452 (3) Water Resources in Barbados (in Barbados)
AGRI 550 (3) Sustained Tropical Agriculture (in Panama)
GEOG 302 (3) Environmental Management 1
GEOG 380 (3) Adaptive Environmental Management
GEOG 404 (3) Environmental Management 2 (in Panama)
NRSC 437 (3) Assessing Environmental Impact (M)
PLNT 300 (3) Cropping Systems (M)
SOIL 335 (3) Soil Ecology and Management (M)
WILD 401 (4) Fisheries and Wildlife Management (M)
WOOD 441 (3) Integrated Forest Management (M)

14.8.7 Water Environments and Ecosystems Domain

This Domain is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

To educate students in both the ecological and physical facets of the water environment, this Domain offers two concentrations, with students choosing one or the other.

Those electing the **biological** concentrations will focus on the mechanisms regulating the different forms of life in water bodies. They will acquire, as well, a good understanding of the physical mechanisms controlling water properties.

Students interested in studying the transport and transformation mechanisms of water on the planet, from rivers to the oceans and atmosphere, will select the **physical** concentrations. They will

acquire, as well, a solid background in the biological processes taking place in water bodies.

Graduates of this Domain are qualified to enter the work force or to pursue advanced studies in fields such as marine biology, geography, physical oceanography and atmospheric science.

Water Environments and Ecosystems – Biological

This concentration (57 credits including Core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Mentor: Professor Brian Leung
E-mail: brian.leung2@mcgill.ca
Telephone: (514) 398-6460

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required Courses are offered on both campuses.)

Suggested first year (U1) courses:

These courses are listed below in the program requirements.

They are good courses to start out with.

ATOC 215 (3) Oceans, Weather and Climate

Statistics: BIOL 373 or AEMA 310 (M)

Students in this program should consider taking BIOL 373 or AEMA 310 (M) instead of MATH 203. They are more suitable for life sciences. Generally, statistics is recommended over Calculus 3 for life sciences, although if you want to take upper level oceanography courses in ATOC, you will also need Calculus 3.

B.Sc. students see [section 12.3.6.1 “Course Overlap”](#) in this Calendar about statistics and restricted courses.

Program Requirements (57 credits)

Note: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses.

Core: Required Courses (18 credits)

ENVR 200 (3) The Global Environment
ENVR 201 (3) Society and Environment
ENVR 202 (3) The Evolving Earth
ENVR 203 (3) Knowledge, Ethics and Environment
ENVR 301 (3) Environmental Research Design
ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

AGRI 519 (6) Sustainable Development Plans (in Barbados)
ENVR 401 (3) Environmental Research
ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Course (3 credits)

ATOC 215 (3) Oceans, Weather and Climate

Domain: Complementary Courses (33 credits)

6 credits chosen from:

BREE 217 (3) Hydrology and Water Resources (M)
or GEOG 322 (3) Environmental Hydrology
WILD 205 (3) Principles of Ecology (M)
or BIOL 308 (3) Ecological Dynamics

3 credits of math and statistics from:

AEMA 202 (3) Intermediate Calculus (M)
AEMA 310 (3) Statistical Methods 1 (or equivalent) (M)
MATH 203 (3) Principles of Statistics 1
MATH 222 (3) Calculus 3

3 credits chosen from:

BIOL 331 (3) Ecology/Behaviour Field Course (at Mont St. Hilaire)
GEOG 495 (3) Field Studies - Physical Geography (at Mont St. Hilaire)

GEOG 497 (3) Ecology of Coastal Waters (at Bay of Fundy) or an equivalent aquatic field course

3 credits chosen from:

AGEC 333 (3) Resource Economics (M)
AGRI 413 (3) Globalization Issues of Change
ANTH 339 (3) Ecological Anthropology
ANTH 418 (3) Environment and Development
ECON 225 (3) Economics of the Environment
ECON 326 (3) Ecological Economics
ENVR 465 (3) Environment and Social Change (at Bay of Fundy)
GEOG 404 (3) Environmental Management 2 (in Panama)
GEOG 498 (3) Humans in Tropical Environments (in Panama)
POLI 345 (3) International Organizations
POLI 466 (3) Public Policy Analysis
SOCI 565 (3) Social Change in Panama (in Panama)

18 credits, minimum, from lists A and B below.

List A, 9 to 12 credits chosen from:

AGRI 435 (3) Soil and Water Quality Management (M)
BIOL 432 (3) Limnology
BIOL 441 (3) Biological Oceanography
BIOL 442 (3) Marine Biology
BIOL 465 (3) Conservation Biology
BIOL 553 (3) Neotropical Environments (in Panama)
BIOL 570 (3) Advanced Seminar in Evolution
ENTO 535 (3) Aquatic Entomology (M)
ENVR 540 or BIOL 540 (3) Ecology of Species Invasions
GEOG 305 (3) Soils and Environment
or SOIL 210 (3) Principles of Soil Science (M)
GEOG 350 (3) Ecological Biogeography
MICR 331 (3) Microbial Ecology (M)
NRSC 315 (3) Science of Inland Waters (M)
NRSC 333 (3) Physical and Biological Aspects of Pollution (M)
PARA 410 (3) Environment and Infection (M)
WILD 401 (4) Fisheries and Wildlife Management (M)

List B, 6 to 10 credits chosen from:

ATOC 308 (3) Principles of Remote Sensing
or GEOG 308 (3) Principles of Remote Sensing
ATOC 219 (3) Introduction to Atmospheric Chemistry
or CHEM 219 (3) Introduction to Atmospheric Chemistry
ATOC 419 (3) Advances in Chemistry of Atmosphere
or CHEM 419 (3) Advances in Chemistry of Atmosphere
CHEM 257D1 (2) Introductory Analytical Chemistry
CHEM 257D2 (2) Introductory Analytical Chemistry
EPSC 220 (3) Principles of Geochemistry
GEOG 201 (3) Introductory Geo-Information Science
GEOG 372 (3) Running Water Environments
GEOG 522 (3) Advanced Environmental Hydrology
GEOG 537 (3) Advanced Fluvial Geomorphology
GEOG 550 (3) Historical Ecology Techniques
NRSC 430 (3) GIS for Natural Resource Management (M)

Water Environments and Ecosystems –Physical

This concentration (60 credits including Core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Mentor: Professor Frédéric Fabry
E-mail: frederic.fabry@mcgill.ca
Telephone: (514) 398-3652

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required Courses are offered on both campuses.)

Suggested first year (U1) courses:

These courses are listed below in the program requirements.

They are good courses to start out with.

MATH 222 (3) Calculus 3

or CEGEP 201-301 or equivalent

MATH 222 is recommended over statistics for the Physical stream of this domain.

ATOC 215 (3) Oceans, Weather and Climate

BREE 217 (3) Hydrology and Water Resources (M)

or GEOG 322 (3) Environmental Hydrology

NOTE: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses, but does not include the Domain prerequisites or corequisites listed above.

Program Requirements (60 credits)**Core: Required Courses (18 credits)**

ENVR 200 (3) The Global Environment

ENVR 201 (3) Society and Environment

ENVR 202 (3) The Evolving Earth

ENVR 203 (3) Knowledge, Ethics and Environment

ENVR 301 (3) Environmental Research Design

ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

AGRI 519 (6) Sustainable Development Plans (in Barbados)

ENVR 401 (3) Environmental Research

ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (9 credits)

ATOC 215 (3) Oceans, Weather and Climate

ATOC 315 (3) Water in the Atmosphere

GEOG 372 (3) Running Water Environments

Domain – Complementary Courses (30 credits)

6 credits chosen from:

WILD 205 (3) Principles of Ecology (M)

or BIOL 308 (3) Ecological Dynamics

BREE 217 (3) Hydrology and Water Resources (M)

or GEOG 322 (3) Environmental Hydrology

3 credits of statistics or calculus:

AEMA 310 (3) Statistical Methods 1 (or equivalent) (M)

AEMA 202 (3) Intermediate Calculus (M)

MATH 203 (3) Principles of Statistics 1

MATH 222 (3) Calculus 3

3 credits of field courses

GEOG 495 (3) Field Studies - Physical Geography (at Mont St. Hilaire)

GEOG 497 (3) Ecology of Coastal Waters (at Bay of Fundy) (or an equivalent aquatic field course)

12 credits chosen from:

BREE 416 (3) Engineering for Land Development (M)

BREE 506 (3) Advances in Drainage Management (M)

or BREE 509 (3) Hydrologic Systems and Modelling (M)

or GEOG 522 (3) Advanced Environmental Hydrology

AEMA 305 (3) Differential Equations (M)

or MATH 315 (3) Ordinary Differential Equations

AGRI 435 (3) Soil and Water Quality Management (M)

ATOC 308 (3) Principles of Remote Sensing

or GEOG 308 (3) Principles of Remote Sensing

ATOC 309 (3) Weather Radars and Satellites

ATOC 568 (3) Ocean Physics

CIVE 323 (3) Hydrology and Water Resources

EPSC 549 (3) Hydrogeology

GEOG 201 (3) Introductory Geo-Information Science

GEOG 537 (3) Advanced Fluvial Geomorphology

GEOG 305 (3) Soils and Environment

or SOIL 210 (3) Principles of Soil Science (M)

NRSC 430 (3) GIS for Natural Resource Management (M)

or GEOG 306 (3) Raster Geo-Information Science

NRSC 510 (3) Agricultural Micrometeorology

6 credits chosen from:

AGRI 452 (3) Water Resources in Barbados (in Barbados)

BIOL 432 (3) Limnology

BIOL 441 (3) Biological Oceanography

BIOL 442 (3) Marine Biology

BIOL 465 (3) Conservation Biology

BIOL 553 (3) Neotropical Environments (in Panama)

GEOG 350 (3) Ecological Biogeography

GEOG 505 (3) Global Biogeochemistry

NRSC 315 (3) Science of Inland Waters (M)

WILD 401 (4) Fisheries and Wildlife Management (M)

14.9 Major in Environment – B.Sc.

In addition to the selection of Domains available to students in the Major program in either the Faculty of Science or the Faculty of Agricultural and Environmental Sciences, "Major in Environment - B.Sc.", students in the Faculty of Science program can choose from one of the two Domains limited to Science students only:

Atmospheric Environment and Air Quality, or
Earth Sciences and Economics.

Refer to [section 14.8 "Major in Environment – B.Sc.\(Ag.Env.Sc.\) and B.Sc."](#) for the general guidelines and regulations which apply to all Domains in the Major in Environment program.

14.9.1 Atmospheric Environment and Air Quality Domain

This Domain (60 credits including Core) is open only to students in the B.Sc. Major in Environment program in the Faculty of Science.

Mentor: Professor Ronald Stewart

E-mail: ronald.stewart@mcgill.ca

Telephone: (514) 398-1380

The rapid expansion of industrialization has been accompanied with a host of environmental problems, many, if not most, involving the atmosphere. Some problems are of a local nature, such as air pollution in large urban centres, while others are global, or at least reach areas far removed from industrial activities.

The emphasis in this Domain is on the mechanisms of atmospheric flow and on atmospheric chemistry. Courses examine how the atmosphere transports pollution, lifting it to great heights into the stratosphere or keeping it trapped near the ground, moving it around the globe or imprisoning it locally, or how it simply cleanses itself of the pollution through rainfall. The Domain also gives students the training required to understand the important chemical reactions taking place within the atmosphere, as well as the know-how necessary to measure and analyze atmospheric constituents.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Suggested first year (U1) courses:

These courses are listed below in the program requirements.

They are good courses to start out with.

ATOC 214 (3) Introduction: Physics of the Atmosphere

ATOC 215 (3) Oceans, Weather and Climate

ATOC 219 (3) Introduction to Atmospheric Chemistry

or CHEM 219 (3) Introduction to Atmospheric Chemistry

CHEM 257D1 (2) Introductory Analytical Chemistry

CHEM 257D2 (2) Introductory Analytical Chemistry

or FDSC 213 (3) Analytical Chemistry 1 (M)

MATH 222 (3) Calculus 3

or AEMA 202 (3) Intermediate Calculus (*M*)

Program Requirements (60 credits)

NOTE: Students are required to take a maximum of 31 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes Core and Required courses.

Core: Required Courses (18 credits)

- ENVR 200 (3) The Global Environment
- ENVR 201 (3) Society and Environment
- ENVR 202 (3) The Evolving Earth
- ENVR 203 (3) Knowledge, Ethics and Environment
- ENVR 301 (3) Environmental Research Design
- ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

- AGRI 519 (6) Sustainable Development Plans (in Barbados)
- ENVR 401 (3) Environmental Research
- ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (18 credits)

- ATOC 214 (3) Introduction: Physics of the Atmosphere
- ATOC 215 (3) Oceans, Weather and Climate
- ATOC 219 (3) Introduction to Atmospheric Chemistry or CHEM 219 (3) Introduction to Atmospheric Chemistry
- ATOC 308 (3) Principles of Remote Sensing or GEOG 308 (3) Principles of Remote Sensing
- ATOC 315 (3) Water in the Atmosphere
- CHEM 307 (3) Analytical Chemistry of Pollutants

Domain: Complementary Courses (21 credits)
6 credits from:

- CHEM 257D1 (2) Introductory Analytical Chemistry
- CHEM 257D2 (2) Introductory Analytical Chemistry or FDSC 213 (3) Analytical Chemistry 1 (*M*)

- MATH 222 (3) Calculus 3
- or AEMA 202 (3) Intermediate Calculus (*M*)

3 credits from:

- MATH 203 (3) Principles of Statistics 1
- or AEMA 310 (3) Statistical Methods 1 (*M*)
- or equivalent

9 credits of math or physical science (at least 6 credits of which are at the 300 level or above):

- ATOC 309 (3) Weather Radars and Satellites
- ATOC 412 (3) Atmospheric Dynamics
- ATOC 419 (3) Advances in Chemistry of Atmosphere or CHEM 419 (3) Advances in Chemistry of Atmosphere
- ATOC 540 (3) Synoptic Meteorology 1
- CHEE 230 (3) Environmental Aspects of Technology
- CHEM 273 (1) Chemical Kinetics
- CHEM 377 (3) Instrumental Analysis 2
- CIVE 225 (4) Environmental Engineering
- COMP 208 (3) Computers in Engineering
- GEOG 505 (3) Global Biogeochemistry
- MATH 223 (3) Linear Algebra
- MATH 315 (3) Ordinary Differential Equations or AEMA 305 (3) Differential Equations (*M*)
- NRSC 333 (3) Physical and Biological Aspects of Pollution(*M*)
- NRSC 510 (3) Agricultural Micrometeorology (*M*)

3 credits of social science:

- ANTH 206 (3) Environment and Culture
- ANTH 418 (3) Environment and Development
- ECON 225 (3) Economics of the Environment
- ECON 347 (3) Economics of Climate Change
- ENVR 465 (3) Environment and Social Change (in Bay of Fundy)

- GEOG 302 (3) Environmental Management 1
- GEOG 380 (3) Adaptive Environmental Management
- GEOG 404 (3) Environmental Management 2 (in Panama or in Africa)
- GEOG 498 (3) Humans in Tropical Environments (in Panama)
- POLI 466 (3) Public Policy Analysis
- RELG 270 (3) Religious Ethics and the Environment

14.9.2 Earth Sciences and Economics Domain

This Domain (66 credits including Core) is open only to students in the B.Sc. Major in Environment program in the Faculty of Science.

Mentor: Professor Bruce Hart
E-mail: hart@eps.mcgill.ca
Telephone: (514) 398-3677

The resources necessary for human society are extracted from the Earth, used as raw materials in our factories and refineries, and then returned to the Earth as waste. Geological processes produce resources humans depend on, and they also determine the fate of wastes in the environment. Understanding Earth's geologic processes provides us with the knowledge to mitigate many of our society's environmental impacts due to resource extraction and waste disposal. Additionally, economics frequently affects what energy sources power our society and how our wastes are treated. Earth sciences and economics are essential for our understanding of the many mechanisms, both physical and social, that affect Earth's environment.

This Domain includes the fundamentals of each discipline. Students learn of minerals, rocks, soils, and waters and how these materials interact with each other and with the atmosphere. Fundamental economic theory and the economic effects of public policy towards resource industries, methods of waste disposal, and the potential effects of global warming on the global economy are also explored.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

Courses offered at Macdonald Campus are marked with an (M). (Core Required courses are offered on both campuses.)

Suggested first year (U1) courses:

These courses are listed below in the program requirements.

- They are good courses to start out with.
- ECON 230D1 (3) Microeconomic Theory
- ECON 230D2 (3) Microeconomic Theory
- EPSC 210 (3) Introductory Mineralogy
- EPSC 212 (4) Introductory Petrology
- EPSC 220 (3) Principles of Geochemistry
- Statistics: GEOG 202, PSYC 204, BIOL 373 or AEMA 310 (*M*)
- See [section 12.3.6.1 "Course Overlap"](#) in this Calendar about statistics and restricted courses.

Program Requirements (66 credits)

NOTE: Students are required to take a maximum of 34 credits at the 200 level and a minimum of 15 credits at the 400 level or higher in this program. This includes Core and Required courses.

Core: Required Courses (18 credits)

- ENVR 200 (3) The Global Environment
- ENVR 201 (3) Society and Environment
- ENVR 202 (3) The Evolving Earth
- ENVR 203 (3) Knowledge, Ethics and Environment
- ENVR 301 (3) Environmental Research Design
- ENVR 400 (3) Environmental Thought

Core: Complementary Course – Senior Research Project (3 credits*)

- AGRI 519 (6) Sustainable Development Plans (in Barbados)
- ENVR 401 (3) Environmental Research
- ENVR 451 (6) Research in Panama (in Panama)

* Only 3 credits will be applied to the program; extra credits will count as electives.

Domain: Required Courses (22 credits)

ECON 230D1	(3)	Microeconomic Theory
ECON 230D2	(3)	Microeconomic Theory
ECON 405	(3)	Natural Resource Economics
EPSC 210	(3)	Introductory Mineralogy
EPSC 212	(4)	Introductory Petrology
EPSC 220	(3)	Principles of Geochemistry
EPSC 425	(3)	Sediments to Sequences

Domain: Complementary Courses (23 credits)

3 credits of statistics from:

AEMA 310	(3)	Statistical Methods 1 (M)
or GEOG 202	(3)	Statistics and Spatial Analysis
or MATH 203	(3)	Principles of Statistics 1

or equivalent

12 credits from List A:

AGEC 333	(3)	Resource Economics (M)
BIOL 308	(3)	Ecological Dynamics
or WILD 205	(3)	Principles of Ecology (M)
CHEE 430	(3)	Technology Impact Assessment
or NRSC 437	(3)	Assessing Environmental Impact (M)
ECON 326	(3)	Ecological Economics
ECON 347	(3)	Economics of Climate Change
ECON 416	(3)	Topics in Economic Development 2
ECON 525	(3)	Project Analysis

8 credits minimum, from List B:

AGRI 435	(3)	Soil and Water Quality Management (M)
ANTH 339	(3)	Ecological Anthropology
BIOL 305	(3)	Animal Diversity
BIOL 553	(3)	Neotropical Environments (in Panama)
ECON 305	(3)	Industrial Organization
ECON 313	(3)	Economic Development 1
ECON 314	(3)	Economic Development 2
ECON 408D1	(3)	Public Sector Economics
ECON 408D2	(3)	Public Sector Economics
ECON 412	(3)	Topics in Economic Development 1
EPSC 312	(3)	Spectroscopy of Minerals
EPSC 334	(3)	Invertebrate Paleontology
EPSC 483D1	(1.5)	Independent Studies 2
EPSC 483D2	(1.5)	Independent Studies 2
EPSC 519	(3)	Isotope Geology
EPSC 542	(3)	Chemical Oceanography
EPSC 549	(3)	Hydrogeology
EPSC 580	(3)	Aqueous Geochemistry
EPSC 590	(3)	Applied Geochemistry Seminar
GEOG 302	(3)	Environmental Management 1
GEOG 322	(3)	Environmental Hydrology
GEOG 497	(3)	Ecology of Coastal Waters (at Bay of Fundy)
SOIL 410	(3)	Soil Chemistry (M)

14.10 Honours Program in Environment

Adviser: Mr. Peter Barry, MSE Program Coordinator
E-mail: pete.barry@mcgill.ca
Telephone: (514) 398-4306

This Program is open only to students in the B.Sc. Major in Environment, B.Sc.(Ag.Env.Sc.) Major in Environment, B.A. Faculty Program in Environment, and the B.A.&Sc. Interfaculty Program in Environment.

The Honours Program in Environment offers students the opportunity to undertake a year-long research project in close association with a professor. Honours research provides excellent preparation for graduate studies, but is not required for such studies. The Honours in Environment **adds 6 credits of research to the regular Environment program**. Since the Honours research is carried out in the final year at the same time as the regular courses, it does not add to the length (duration) of the degree.

Students simply have 6 credits less of electives. If, for some reason, students cannot complete the Honours requirements, they may still graduate with the regular Environment program.

To be eligible for Honours, students must satisfy the requirements set by their degree (B.A., B.Sc., B.Sc.(Ag.Env.Sc.), or B.A.&Sc.).

In addition, students must satisfy the following:

1. Students apply for the Honours program in March of their U2 year. See Peter Barry for details.
2. Applicants must have a minimum Program GPA (GPA of all required and complementary courses for the program in Environment taken at McGill) of 3.3 to enter the Honours program.
3. Students must earn a B grade (3.0) or higher for the Honours Research course (ENVR 495 or ENVR 496 & ENVR 497).
4. Students are required to achieve a minimum overall CGPA of 3.0 at graduation, and a minimum Program GPA of 3.3 to obtain Honours.
5. Arts (B.A.) students must complete a Minor Concentration in a program other than Environment. See **Minor Concentrations**, see **section 5.11.5** for options open to B.A. students.
6. B.A.&Sc. students must complete at least 30 credits in the Faculty of Arts and at least 30 in the Faculty of Science as part of their Honours program and their Minor Concentration or Minor program. See **section 6.11.5 "Minor Concentrations or Minors"** for options open to B.A.&Sc. students.

Note that the Honours Research course number is different for the B.Sc.(Ag.Env.Sc.) degree.

B.A., B.Sc., B.A.&Sc.

Honours - Required Courses (6 credits)

ENVR 495 D1/N1	(3)	Honours Research
ENVR 495 D2/N2	(3)	Honours Research

Students in the B.A. or B.Sc. Honours programs complete the Core and Domain courses (54 to 66 credits) according to their chosen Domain as well as the Honours required courses. (Note, courses vary with each Domain.)

Students in the B.A. & Sc. Honours program complete the coursework (54 credits) for the Interfaculty Program in Environment as well as the Honours required courses.

B.Sc. (Ag.Env.Sc.)

Honours - Required Courses (6 credits)

ENVR 496	(3)	Honours Research Part 1
ENVR 497	(3)	Honours Research Part 2

Students in the B.Sc.(Ag.Env.Sc.) Honours program complete the Core and Domain courses (57 to 63 credits) according to their chosen Domain as well as the Honours required courses. Note: courses vary with each Domain.

In addition to completing the Honours Research course, all students must present their results to the MSE at the end of the second semester. They must also give the MSE a complete, clean (after corrections) copy of their thesis.

14.11 Diploma in Environment

Adviser: Mr. Peter Barry, MSE Program Coordinator
E-mail: pete.barry@mcgill.ca
Telephone: (514) 398-4306

The Diploma is designed for students with an undergraduate degree who wish to enrich or reorient their training, supplementing their specialization with additional undergraduate-level coursework. The Diploma requires 30 credits of full-time or part-time studies at McGill; it may be started in either January or September. The Diploma is a one-year program if taken full-time.

Students holding a B.Sc. or a B.A. degree or equivalent in good standing will be permitted to register for the Diploma through the Faculty of Agricultural and Environmental Sciences, the Faculty of

Arts, or the Faculty of Science, provided they are otherwise acceptable for admission to the University.

Students must have a **grade of C or higher** in all courses for the Diploma.

Advising note: Consultation with the program adviser for approval of course selection to meet program requirements is obligatory. Only courses at the 200 level and above will be approved.

DIPLOMA IN ENVIRONMENT (30 credits)

Required Courses (18 credits)

ENVR 200	(3)	The Global Environment
ENVR 201	(3)	Society and Environment
ENVR 202	(3)	The Evolving Earth
ENVR 203	(3)	Knowledge, Ethics and Environment
ENVR 301	(3)	Environmental Research Design
ENVR 400	(3)	Environmental Thought

Complementary Courses (12 credits)

3 credits must be taken with the approval of the program adviser in an area outside of the student's previous degree (e.g., those with a B.A. or equivalent degree must take 3 credits in the natural sciences; those with a B.Sc. or equivalent degree must take 3 credits in the social sciences). A list of suggested courses is available from the program adviser, and on the MSE Website in "Undergraduate Programs: Diploma".

9 credits must be taken in an area of focus chosen by the student with the approval of the program adviser. At least 6 credits must be taken at the 400 level or higher.

Course descriptions and prerequisites can be found in the Courses section. The most up-to-date information on courses being offered this academic year is available on Class Schedule at www.mcgill.ca/minerva.

14.12 Field Studies

Field study semesters are available in Africa, Barbados, and Panama. See [section 15.2 "Field Studies"](#) of this Calendar for details.

 - 15.7.9 Music, page 448
 - 15.7.10 Sociology, page 448

Besides the many academic resources McGill offers on campus, there are also unparalleled opportunities to enrich your educational experience through exchange programs, internships, field study programs and McGill courses taught abroad.

15.1 Study Abroad Options

There are four types of Study Abroad options available:

15.1.1 Bilateral Student Exchanges

Bilateral student exchange agreements are tuition exchange agreements that exist between McGill University and one other institution, which have been reviewed and approved by McGill. McGill University has bilateral agreements in many countries including: Australia, Austria, Belgium, Canada, China, Czech Republic, Denmark, Finland, France, Germany, Hong Kong, Hungary, Ireland, Italy, Japan, Korea, Mexico, the Netherlands, New Zealand, Norway, Russia, Singapore, Spain, Sweden, Switzerland, Thailand, Turkey, the United Kingdom, and the United States of America. Exchange programs can be university-wide or faculty-specific. Faculty-specific agreements are only open to students in the specified faculty.

The full listing of bilateral partners can be found at www.mcgill.ca/studyabroad.

15.1.2 CRÉPUQ Exchanges

The Conférence des recteurs et principaux des universités du Québec has established tuition exchange agreements in which all Quebec university students may participate, regardless of whether or not they are Quebec residents. The listing of CRÉPUQ partners is accessible from www.echanges-etudiants.crepuq.qc.ca.

15.1.3 Field Study Semesters and Off-Campus Courses

McGill offers students a chance to put theory into practice through local, regional, and international field study semesters and individual courses. Field studies provide practical experience and a chance to integrate and apply knowledge gained in the classroom. In many cases, field courses can be counted towards major program requirements. Students should see their adviser for details.

Field Study Semesters are packages of McGill courses aimed at upper year students which focus on the physical and social aspects of the environment. They are offered in various regions around the world in either the Fall or Winter Term. Currently, Field Study Semesters are offered in East Africa (Kenya, Uganda and/or Tanzania), Barbados, and Panama. Enrolment is limited, and application deadlines and costs vary, so students should consult the relevant sections of the Calendar for details. Students who are interested in participating should begin planning their courses well in advance of the Field Study semester, as some of the field courses require prerequisites.

Off-campus McGill courses are also offered to students, and sometimes require separate departmental application. The courses are typically offered during the summer months and can be offered in places as varied as Italy, Mexico, Brazil or China and in disciplines in Arts, Engineering, Science, Management or Music.

15.1.4 Study Away On Your Own

Students who wish to study as a Visiting student at a university with which McGill does not have a student exchange agreement must consult the Student Affairs Office of their McGill faculty, as well as the Admissions Office of the university to which they are applying regarding application requirements. Students pay tuition to the host institution.

15.2 Field Studies

15.2.1 African Field Study Semester

Website: www.mcgill.ca/africa

The African Field Study Semester (AFSS) is run through McGill's Canadian Field Study in Africa Program (CFSIA).

The AFSS provides one term of integrated field study in East Africa, with emphasis on environmental conservation, culture change and sustainable development. Students investigate challenges of sustaining biological diversity and social justice in African environments subject to cultural change, economic development and environmental stress. Cultural and ecological variation is examined in highland, montane, rangeland, desert, riverine, salt and fresh water lake, coastal, and urban settings.

McGill students should note that although the AFSS is not a degree program (such as a Minor or Minor Concentration), its 15 credits constitute a full single-term credit load that can be counted towards certain McGill degrees with the permission of program advisers.

Students from other universities are eligible to apply to the McGill CFSIA and must also meet the criteria for admission to McGill as a Visiting Student. Please see the AFSS Website for details.

The AFSS comprises 15 credits of field study courses. Two courses (6 credits) in the natural and social sciences provide interdisciplinary academic context for field study. The other 9 credits are taken from course offerings in two thematic areas and Special Topics.

Visit the AFSS Website www.mcgill.ca/africa, or go to www.mcgill.ca (Course Calendars) in July for details of program updates.

Offered: Winter term

Location: East Africa

Enrolment Limit: 38 students

Fees: In addition to the regular McGill fees, students will be required to pay the additional costs associated with delivering the courses in the field. These costs include airfare, local travel, all food and accommodation, special admission fees for parks and museums as well as other field costs. Airfares and currency fluctuation will determine the amount of this charge. The 2008 trip cost is \$12,250. The actual cost for 2009 will be determined by September 2008.

Quebec residents may be eligible for a financial subsidy from the Ministère de l'Éducation, du Loisir et du Sport (MELS), see section 15.3.3.2 "Quebec Ministère de l'Éducation, du Loisir et du Sport (MELS) Travel Awards for Quebec Residents".

Application Deadline: April 30, 2008. Depending on space, there will be a second intake with a deadline date of November 1, 2008.

Application Details: Students must submit a letter of intent, a CV, a copy of their transcript and two reference letters to Martine Dolmière in the Faculty of Science, Dawson Hall, Room 211. See the Website for details: www.mcgill.ca/africa.

Prerequisites: The AFSS is intended for students in their final two years.

AFRICAN FIELD STUDY SEMESTER

(15 credits)

Required Courses (6 credits)

GEOG 416 (3) Africa South of the Sahara
NRSC 300 (3) Natural History: East Africa

Complementary Courses (9 credits)

9 credits from thematic areas:

Courses include:

Area A - Biodiversity and conservation in Africa

BIOL 328 (3) Biological Diversity in Africa

NUTR 403* (3) Nutrition in Society

WILD 420* (3) Ornithology

WILD 421* (3) Wildlife Conservation

* Offered on a rotational basis, at least 3 credits annually

Area B - Environment and development in Africa

Courses include:

ANTH 416 (3) Environment/Development Africa

GEOG 404* (3) Environmental Management 2

ANTH 315 (3) Society/Culture: East Africa

* Offered on a rotational basis, at least 3 credits annually

15.2.2 Barbados Field Study Semester

Website: www.mcgill.ca/mse -> Programs

The Barbados Field Study Semester (BFSS) provides one term of integrated field study for students with an interest in global issues related to natural resource use as affected by socio-economic, management, urban and physical constraints. Offered at the Bellairs Research Institute in Barbados, this program challenges students to be more effective environmental decision makers, policy makers and managers. There is a growing need for professionals with such skills at all levels of government, within NGOs, and in the private sector. The overall goal of the BFSS is to equip future leaders to address the complexity of issues associated with the formulation and implementation of organizational strategies compatible with the societal goal of sustainable use and development of our natural resources.

The BFSS is intended for senior undergraduate students from across the University. Students must apply to participate in the program. Selection will be based on the student's academic standing and demonstrated interests and involvement in international issues related to natural resource use.

The semester is not a degree program, but credits can be counted toward certain McGill degrees with the permission of program advisers.

Offered: Fall Term

Location: Bellairs Research Institute in Barbados

Enrolment Limit: 25 students

Fees: In addition to the regular McGill fees, students will be required to pay the additional costs associated with delivering the courses in the field. These costs include airfare, accommodation and most food, as well as other field costs. Fees for 2007 were \$6,050 CDN, this does not include airfare.

Quebec residents may be eligible for a financial subsidy from the Ministère de l'Éducation, du Loisir et du Sport (MELS), see section 15.3.3.2 "Quebec Ministère de l'Éducation, du Loisir et du Sport (MELS) Travel Awards for Quebec Residents".

Application Deadline: March 17, 2008

Application Details: Students must submit a letter of intent, a CV and a copy of their transcript to the Department of Bioresource Engineering, c/o susan.gregus@mcgill.ca. Further details are available at www.mcgill.ca/mse.

Prerequisites: None

BARBADOS FIELD STUDY SEMESTER

(15 credits)

Required Courses (6 credits)

URBP 507 (3) Planning and Infrastructure

URBP 520 (3) Globalization: Planning and Change

Complementary Courses (9 credits)

one of the following cross-listed courses:

AGRI 452 (3) Water Resources in Barbados

CIVE 452 (3) Water Resources in Barbados

and one of the following cross-listed project courses:
 AGRI 519 (6) Sustainable Development Plans
 CIVE 519 (6) Sustainable Development Plans
 URBP 519 (6) Sustainable Development Plans

15.2.3 Panama Field Study Semester

Website: www.mcgill.ca/pfss

This program is offered in Panama with the support of the Smithsonian Tropical Research Institute (STRI).

Hands-on experience is gained through research projects organized around multidisciplinary environmental issues. The nature of these projects will centre on practical environmental problems/questions important for Panama. Students will form teams that will work with Panamanian institutions (NGO, governmental or research).

There is one week of transition and 12 weeks of course attendance in Panama. Field trips will be integrated into each of the courses offered.

Offered: Winter Term

Location: Smithsonian Tropical Research Institute (STRI) in Panama

Enrolment Limit: 25 students

Fees: Students will be required to pay the additional costs associated with delivering the courses in the field. The cost of the program is approximately \$4,300 CDN. This amount **does not** include airfare, tuition, insurance, or food. A \$1000 deposit is required and is non-refundable.

Quebec residents may be eligible for a financial subsidy from the Ministère de l'Éducation, du Loisir et du Sport (MELS), see section 15.3.3.2 "Quebec Ministère de l'Éducation, du Loisir et du Sport (MELS) Travel Awards for Quebec Residents".

Application Deadline:

March 25, 2008 for January 2009 (Winter Term of the academic year 2008-09)

Application Details: Students must submit a letter of intent, CV, and copy of their transcript to: Martine Dolmière, in the Faculty of Science, Dawson Hall, Room 211. See the Website for details: www.mcgill.ca/pfss.

Prerequisites: HISP 218 Spanish Language Elementary or equivalent proficiency, and MATH 203 Principles of Statistics 1 or equivalent. A GPA of 3.00 and higher is recommended. The program is aimed at undergraduate students in their final year.

PANAMA FIELD STUDY SEMESTER

(15 credits)

Required Courses (9 credits)

BIOL 553 (3) Neotropical Environments

ENVR 451 (6) Research in Panama

Complementary Courses (6 credits)

One of the following sets:

Offered in Winter 2008 –

AGRI 550 (3) Sustained Tropical Agriculture

GEOG 498 (3) Humans in Tropical Environments

Offered in Winter 2009 –

GEOG 404 (3) Environmental Management 2

SOCI 565 (3) Social Change in Panama

15.2.4 Field Study Minor

Field Study Coordinator:

Martine Dolmière (martine.dolmiere@mcgill.ca)

Faculty of Science, Dawson Hall Room 211

African Field Study Minor Advisor:

Professor Thom Meredith

(Website: www.mcgill.ca/africa/afss/minor)

Students participating in any one of the Field Study Semesters i.e., the African Field Study Semester, the Barbados Field Study Semester or the Panama Field Study Semester may complete the 18 credit Minor in Field Study.

The minor consists of the 15 credits of the Field Study Semester plus three additional complementary credits approved by the student's departmental program adviser in consultation with the student's Field Study Semester adviser.

For students in the B.Sc. Liberal Program, the Minor in Field Study can serve as the breadth component.

15.3 Exchange Programs

15.3.1 Eligibility

Student exchange programs are open to McGill students of all nationalities. To participate, applicants must be currently registered as full-time, degree-seeking McGill students, meet the criteria of their faculty at McGill, and have a minimum CGPA of 3.0. Applicants must have completed at least one year of full-time study by the start of the exchange. Students can participate in exchanges for one term or for a full academic year (two terms).

The annual Study Abroad Fair will be held on Wednesday, October 1, 2008. Please check www.mcgill.ca/studyabroad for up-to-date information on the Study Abroad Fair.

15.3.2 Applying for an Exchange

Applications must be submitted on Minerva. Complete application details are found in the Student Exchanges and Study Abroad how-to guide, "Steps to a Successful Exchange", available on the Web at www.mcgill.ca/studyabroad.

15.3.2.1 Deadlines

The deadline to submit an application to participate in a student exchange for one or two terms of the 2009-2010 academic year is Monday, February 2, 2009. **Your Faculty Approval** deadline to participate in an exchange is at least five (5) business days prior to this deadline.

Detailed information on the application process and deadlines is contained in the how-to guide, "Steps to a Successful Exchange".

15.3.2.2 Bilateral or CRÉPUQ

If a university appears on both the Bilateral and CRÉPUQ listings of exchange partners, you must apply under the bilateral agreement. Your two exchange destination choices must be from the same type of agreement, either bilateral or CRÉPUQ.

15.3.3 Awards and Financial Assistance

15.3.3.1 Travel Awards

A number of travel awards are available for eligible candidates. Complete information on available travel awards can be found in the how-to guide, Steps to a Successful Exchange. Questions may be directed to studentexchanges@mcgill.ca.

15.3.3.2 Quebec Ministère de l'Éducation, du Loisir et du Sport (MELS) Travel Awards for Quebec Residents

The Quebec Government has made awards available for Quebec residents (as defined by the rules established by the Ministère de l'Éducation, du Loisir et du Sport (MELS)) pursuing an Exchange or Study Abroad Program outside of the province of Quebec.

Undergraduate students must have completed 24 McGill credits with a minimum CGPA of 2.7 prior to the start of their Exchange or Study Abroad Program to be eligible to apply for the Award.

15.3.3.3 Universitas 21 Travel Awards

A limited number of Universitas 21 Travel Awards are available for McGill students who apply and are accepted to participate in a student exchange with one of McGill University's Universitas 21 partners.

15.3.3.4 McGill Scholarships and Awards

For students who are pursuing an approved program of study, renewable scholarships and awards may be retained for up to one year while on exchange. However, they will not be eligible for McGill's yearly in-course awards.

15.4 Financial Assistance

Students participating in an official McGill University exchange program are eligible to apply for government student assistance as a McGill student, but are not eligible for McGill Student Aid. Students who "study away on their own" are not eligible to receive government student loans through McGill because they are not registered at McGill. Students should verify with the institution they will be attending whether or not they will be eligible to receive government student assistance.

15.4.1 Transfer of Credits from Host Institution

Grades received from the host institution do not appear on the McGill transcript nor are they calculated in the McGill CGPA. The McGill transcript includes a notation of participation in an exchange, the number of transfer credits granted by McGill, and where applicable, McGill course exemptions.

The transfer of credits process must be initiated by the student immediately upon return from exchange with the faculty Student Affairs office, and be completed no later than four months after the return.

Before leaving the host institution, students should order two (2) copies of the official transcript for their files, and ensure that the institution sends an official version of the transcript to the Student Exchanges and Study Abroad Office at McGill.

15.4.2 Universitas 21

The Universitas 21 Consortium is an international network of leading research-intensive universities whose objective is to assist members' plans for internationalisation, particularly in facilitating student exchanges and short-term research visits. McGill University currently has bilateral student exchange agreements with the following institutions within the U21 Consortium: National University of Singapore, Lund University, University of Birmingham, University of Auckland, University of Edinburgh, University of British Columbia, University of Hong Kong, University of Glasgow, University of New South Wales, University of Melbourne, University of Queensland, University of Nottingham, and University of Virginia.

15.4.3 The Killam Fellowships Program

McGill University participates in The Killam Fellowships Program which provides exceptional undergraduate students from universities in Canada and the United States with the opportunity to study in the neighbouring country for either one semester or for a full academic year. Established in 2002 through a partnership between the Foundation for Educational Exchange between Canada and the United States of America and the American Killam Trusts, the goal of the program is to increase mutual understanding between Canada and the United States through academic exchange.

15.4.4 Further Information and the Student Exchanges and Study Abroad (SESA) Service Desk

Additional details regarding study abroad, including application procedures, application forms, eligibility criteria, travel awards,

etc., are contained in the must-have document, "Steps to a Successful Exchange", on the Web at www.mcgill.ca/studyabroad, or from the Student Exchanges and Study Abroad (SESA) Service Desk located in:

James Administration Building, Room 206
845 Sherbrooke Street West
Montreal, Quebec H3A 2T5
Telephone: (514) 398-8342
Fax: (514) 398-5268

E-mail: studentexchanges@mcgill.ca

In person: Student Exchanges and Study Abroad Service Desk located in the James Administration Building, Room 206.

15.5 Internships and Co-op Programs

For information on Internships and Co-op Programs, see [section 3.7.1 "Internships and Co-op Programs"](#).

15.6 Off-Campus Summer Programs

15.6.1 Peking University Summer Chinese Program

The Department of East Asian Studies offers three levels of Chinese language at Peking University in China. The courses run from May 8 to July 24, 2008.

Location: Beijing, China

Application Details: For inquiries about the program, please contact the program coordinator Bill Wang at 514-398-6743 or e-mail pkusummerchinese.eas@mcgill.ca. Applications are available at www.mcgill.ca/eas/peking.

Courses:

First Level Chinese
Second Level Chinese
Third Level Chinese

15.6.2 McGill Summer Courses in Italy

The Department of Italian Studies at McGill University offers up to 12 credits of courses given at the Centro Linguistico Dante Alighieri in Florence, Italy, during the months of May, June and July, 2008.

Location: Florence, Italy

Application Deadline: April 4, 2008

Application Details: Students must fill out the application form and speak to either of the program coordinators, Ms. Vanna Fonsato or Dr. Enrica Quaroni, before registering. Applications are available at www.mcgill.ca/italian.

Courses:

ARTH 367	(3)	Italian Renaissance Art 2
CLAS 347	(3)	Special Topics in Classics
ITAL 206	(6)	Beginners' Italian Intensive
ITAL 216	(6)	Intermediate Italian Intensive
ITAL 306	(6)	Advanced Reading and Composition
ITAL 307	(3)	Topics in Italian Culture
ITAL 308	(3)	Business Italian 1
ITAL 309	(3)	Perspectives on Italy
MUAR 387	(3)	The Opera
SOCI 320	(3)	Topics in Sociology 2

15.6.3 Desautels Faculty of Management

Courses are given abroad in the summer session and cover essentially the same ground as the equivalent courses given in

Montreal. They will, however, be heavily influenced by the local business environment. Courses are offered in various locations.

For the most up-to-date information concerning Summer Abroad courses, please visit the Minerva class schedule at www.mcgill.ca/minerva-students.

Application Details: For registration and/or advising, please contact the Department at (514) 398-4068.

15.7 Off-Campus Courses

15.7.1 Architecture

Course:

ARCH 324 (1) Sketching School 1 (Summer-Section 001 (21-Aug-2008/29-Aug-2008)) (Prerequisite: ARCH 218) An eight-day supervised field trip in the late summer to sketch places or things having specific visual characteristics. Students are required to include Sketching School 1 in the B.Sc.(Arch.) program.

Course:

ARCH 379 (3) Summer Course Abroad (Summer-Section 001 (01-May-2008/21-May-2008)) (Prerequisite: ARCH 202 or permission of instructor) (Restriction: Departmental permission required) Studies in-situ of key buildings, landscapes and urban settings; techniques of graphic documentations, analysis of physical configuration, constructional details and present use. Excursions to neighbouring sites of architectural interest.

Course:

ARCH 519 (3) Field Course Abroad (Summer-Section 001 (01-May-2008/21-May-2008)) (Prerequisite: ARCH 304 or permission of instructor) (Restrictions: Limited enrolment; departmental permission required) (Note: Excursions to neighbouring sites of architectural interest) Advanced and comprehensive studies in-situ of key buildings, landscapes and urban settings; techniques of graphic documentations, analysis of physical configuration, constructional details and present use. Excursions to neighbouring sites of architectural interest.

15.7.2 Art History & Communication Studies

Course:

ARTH 367 (3) Italian Renaissance Art 2

Summer 2008: The course syllabus will cover the exploration of the art history of Renaissance Florence, focusing particularly on the role played by the Medici in fostering the arts as patrons. Study of the development of Florentine art and architecture against the backdrop of the complex social and economic forces that shaped humanist culture and Renaissance taste. Visits to many of the key monuments and museums in Florence (the Duomo and other important churches, the Uffizi, the Palazzo della Signoria, the Bargello, etc.) and other cities are planned. For specific details about the course content, please consult Prof. L. Massey, Dept. of Art History and Communication Studies.

Offered: Section 001 05-May-2008/30-May-2008

Location: Florence, Italy

Application Deadline: April 4, 2008

Application Details: Prior to registration, students must contact E. Quaroni or V. Fonsato at (514) 398-3956. Applications are available at www.mcgill.ca/italian.

15.7.3 Biology

The Faculty of Science offers the following biology courses off-campus.

BIOL 240 (3) Monteregian Flora
BIOL 331 (3) Ecology/Behaviour Field Course
BIOL 334D1/D2 (3) Applied Tropical Ecology

BIOL 335 (3) Marine Mammals
BIOL 573 (3) Vertebrate Palaeontology Field Course

15.7.4 Classics

Course:

CLAS 347 (3) Special Topics in Classics

Topic for Summer 2008: City Life in Ancient Italy. Exploration of various aspects of city life and urbanism in ancient Italy through literary texts, monuments, and architecture. Course includes site visits to Rome and Pompeii. For specific details about course content, please see Prof. M. Fronza, Department of History.

Offered: Section 001 05-May-2008/30-May-2008

Location: Florence, Italy

Application Deadline: April 4, 2008

Application Details: Prior to registration, students must contact E. Quaroni or V. Fonsato at (514) 398-3956. Applications are available at www.mcgill.ca/italian.

15.7.5 Earth & Planetary Sciences

Two-week field studies (May) in selected branches of the geosciences to examine processes in geology.

EPSC 231 (3) Field School 1
EPSC 331 (3) Field School 2
EPSC 341 (3) Field School 3

15.7.6 East Asian Studies

The Department of East Asian Studies offers three levels of Chinese language at Peking University in China. The courses run from May 8 to July 24, 2008.

Location: Beijing, China

Application Details: For inquiries about the program, please contact the program coordinator Bill Wang at 514-398-6743 or e-mail pkusummerchinese.eas@mcgill.ca. Applications are available at www.mcgill.ca/eas/peking.

Courses:

First Level Chinese
Second Level Chinese
Third Level Chinese

15.7.7 Geography

The Faculty of Science offers the following geography courses off-campus.

GEOG 290 (1) Local Geographical Excursion
GEOG 495 (3) Field Studies - Physical Geography
GEOG 496 (3) Geographical Excursion
GEOG 499 (3) Subarctic Field Studies

15.7.8 Italian Studies

The Department of Italian Studies at McGill University offers up to 12 credits of courses given at the Centro Linguistico Dante Alighieri in Florence, Italy.

Courses:

ITAL 206 (6) Beginners' Italian Intensive
ITAL 216 (6) Intermediate Italian Intensive
ITAL 306 (6) Advanced Reading and Composition
ITAL 307* (3) Topics in Italian Culture
ITAL 308 (3) Business Italian 1
ITAL 309** (3) Perspectives on Italy

* Topic July 2008: Leonardo and the Scientific Thought of the Renaissance. Taught in English. For specific details on course content, please consult Prof. D. Laurenza, domlar@libero.it.

** Topic May 2008: Florence and the Shaping of the Modern Imagination. Taught in English. For specific details on course content, please consult Prof. R. Castro, School of Architecture.

Offered: Please consult Class Schedule on Minerva at www.mcgill.ca/courses.

Location: Florence, Italy

Application Deadline: April 4, 2008

Application Details: Prior to registration, students must contact E. Quaroni or V. Fonsato at (514) 398-3956. Applications are available at www.mcgill.ca/italian.

15.7.9 Music

Course:

MUAR 387 (3) The Opera

Summer 2008: The course syllabus will cover a survey of Italian opera from Mozart to Puccini with special attention to how music theatre was crafted from source spoken plays. Study of constraints faced by Italian librettists and composers in creating their adaptations, and the resulting losses and gains. Site visits and attendance at opera performances are planned.

Available as elective credit to arts students and as music history elective credit to music majors.

For specific details about course content, please see Prof. S. Huebner, Faculty of Music.

Offered: Section 001 30-June-2008/25-July-2008

Location: Florence, Italy

Application Deadline: April 4, 2008

Application Details: Prior to registration, students must contact E. Quaroni or V. Fonsato at (514) 398-3956. Applications are available at www.mcgill.ca/italian.

15.7.10 Sociology

Course:

SOCI 320 (3) Topics in Sociology 2

Prerequisite:

SOCI 210 or permission of the instructor

Topic for Summer 2008: From Dangerous "Other" to Fellow Citizen: Challenges of Diversity in Italy (Europe) and Canada (North America). Comparative overview of the problems of diversity and its challenges in Europe, especially Italy, and in Canada. Italian diversity includes north-south regionalism, as well as groups such as Jews, Roma, Muslims, and other recent immigrants. Political and social dimensions will be assessed, with particular reference to racism and discrimination, reasonable accommodation, social and cultural integration, security issues, and other tensions of the post 9-11 environment. Relevant site visits are planned. For specific details about course content, please see Prof. M. Weinfeld, Department of Sociology.

Offered: Section 001 05-May-2008/30-May-2008

Location: Florence, Italy

Application Deadline: April 4, 2008

Application Details: Prior to registration, students must contact E. Quaroni or V. Fonsato at (514) 398-3956. Applications are available at www.mcgill.ca/italian.

- * Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

COURSE INFORMATION, REGULATIONS AND DESCRIPTIONS (APPENDIX)

1 Course Information and Regulations

Students are advised to refer also to the General Information and Regulations section of this Calendar, in particular "Registration", section 3.3 and "Student Records", section 3.5.

The University reserves the right to make changes without prior notice to the information contained in this publication, including the revision or cancellation of particular courses or programs.

At the time this Calendar went to press, new courses and modifications to some existing courses were under consideration. Students preparing to register are advised to consult Class Schedule on the Web at www.mcgill.ca/courses for the most up-to-date information on courses to be offered in 2008-09.

Not all courses listed are offered every year.

1.1 Course Numbering

Each McGill course is assigned a unique seven-character course "number".

The first four characters (Subject Code) refer to the unit offering the course.

These codes were implemented in September 2002, replacing the three-number Teaching Unit Codes previously used. A complete list of Teaching Unit Codes and their Subject Code equivalents can be found on the Web at www.mcgill.ca/student-records/transcripts.

The three numbers following the Subject Code refer to the course itself, with the first of these indicating the level of the course.

- Courses numbered at the 100, 200, 300, and 400 levels are intended for undergraduate students. In most programs courses at the 300 level and 400 level are normally taken in the student's last two years.
- Courses at the 500 level are intended for graduate students, but may also be open to qualified senior undergraduate students.
- Courses at the 600 and 700 level are intended for graduate students only.

Two additional characters (D1, D2, N1, N2, J1, J2, J3) at the end of the seven-character course number identifies multi-term courses.

1.2 Multi-term Courses

Most courses at McGill are single term (Fall or Winter or Summer) courses with final grades issued and any credits earned recorded at the end of that term. Single term courses are identified by a seven-character course number.

A unit may, however, decide that the material to be presented cannot be divided into single term courses or it is preferable that the work to be done is carried out over two, or three, terms. Under such circumstances, courses are identified by a two-character extension of the course number.

In some cases, the same course may be offered in various ways: as a single term and/or in one or more multi-term versions. The course content and credit weight is equivalent in all modes, the only difference being the scheduling, and students cannot obtain credit for more than one version.

Courses with numbers ending in D1 and D2 are taught in two consecutive terms (most commonly Fall and Winter). Students must register for the same section of both the D1 and D2 components. When registering for a Fall term D1 course on Minerva, the student will automatically be registered for the Winter term D2 portion. No credit will be given unless both components (D1 and D2)

are successfully completed in consecutive terms, e.g., Fall 2008 and Winter 2009.

Courses with numbers ending in N1 and N2 are taught in two non-consecutive terms (Winter and Fall). Students must register for the same section of both the N1 and N2 components. No credit will be given unless both components (N1 and N2) are successfully completed within a twelve (12) month period.

Courses with numbers ending in J1, J2 and J3 are taught over three consecutive terms. Students must register for the same section of all three components (J1, J2, J3). No credit will be given unless all three components are successfully completed.

IMPORTANT CONDITIONS FOR MULTI-TERM COURSES

1. Students must be registered for each component of the multi-term course. Students must ensure that they are registered in the same section in each term of the multi-term course.
2. Students must successfully complete each component in sequence as set out in the multi-term course. Credit is granted only at the end of the multi-term course; no credit is given for partial completion.

1.3 Course Terminology

Prerequisite: Course A is prerequisite to course B if a satisfactory pass in course A is required for admission to course B.

Corequisite: Course A is corequisite to course B if course A must be taken concurrently with (or may have been taken prior to) course B.

Credits: The credit weight of each course is indicated in parentheses beside the course title. For D1 and D2 courses the credit weight is indicated after the course number. For further information refer to section 3.5.2 "Credit System".

COURSE NOMENCLATURE IN PROGRAM DESCRIPTIONS:

Required Courses: Courses that must be completed to fulfill the requirements of a major, minor, etc., unless the student receives exemptions. Students have no choices among required courses.

Complementary Courses: A set of alternative courses that can be taken to fulfill the requirements of a major, minor, etc. Students choose a specified number of courses from the set.

Elective Courses: Courses that do not count toward the fulfillment of the requirements of a major, minor, etc. They are often, but need not be, selected from outside a student's program of study. Some restrictions may apply, but students have the most choice in selecting elective courses. Some faculties also permit students to take elective courses using the satisfactory/unsatisfactory option. Consult your faculty regulations concerning elective courses.

1.4 First-Year Seminars

First-Year Seminars (FYS) are limited-enrolment credit courses offered by the Faculties of Arts and Science to students in their first year of undergraduate study at McGill, i.e., newly admitted students in U0 or U1. Students in any faculty can enrol in an FYS, subject to the conditions and/or restrictions of the program in which they are registered. Students may take only one FYS.

FYS classes are limited to a maximum of 25 students and are designed to provide closer interaction with the professor and better working relations with peers than are available in large introductory courses. The seminars endeavour to teach the latest scholarly developments and expose participants to advanced research methods. Registration is on a first-come, first-served basis.

COURSE INFORMATION, REGULATIONS AND DESCRIPTIONS (APPENDIX)

For a listing of First-Year Seminars, see Faculty of Arts, [section 5.12.1 "First-Year Seminars"](#), and Faculty of Science, [section 12.5.2.1 "Registration for First-Year Seminars"](#).

1.5 Faculty/School-Specific Information

All students **must** comply with the regulations and requirements contained in their Faculty section of this Calendar.

Agricultural and Environmental Sciences

Students should note that there are no supplemental examinations in Agricultural and Environmental Sciences, and that the final examination period timetable for the term is posted before the commencement of classes.

Arts

All Arts courses have limited enrolment.

Term(s) offered (Fall, Winter, Summer) may appear after the course credit weight to indicate when a course would **normally** be taught.

For Faculty specific program and course Information, refer to:

- [section 5.3.5 "Program Requirements"](#),
- [section 5.3.6 "Course Requirements"](#),
- [section 5.5.2 "Course Registration"](#)

Education

Some courses will be available in the evenings only, through the Centre for Continuing Education, or will be offered during the Summer term.

Students should give particular notice prerequisite and corequisite courses and registration for Field Experience courses.

Engineering

Most courses offered by the Faculty of Engineering are limited to Engineering students only. Non-Engineering students should obtain permission from the Associate Dean of their Faculty, and the Faculty Student Adviser in the Faculty of Engineering Student Affairs Office, to register for Engineering courses.

A limited number of School of Architecture (ARCH) courses are open to students not registered in the School. Please refer to individual course descriptions.

The average division of time for a course is indicated in hours in the course listing after the course credit. For example, (3) (3-0-6) indicates a three-credit course consisting of three lecture hours per week, no other contact hours and six hours of personal study per week.

Management

Management students should give particular notice to: [section 9.4 "BCom Degree Requirements"](#), [section 9.5 "BCom Program Credit Structure"](#) and, especially for students new to the program, [section 9.7 "Management Core"](#).

Science

All Science courses have limited enrolment.

Term(s) offered (Fall, Winter, Summer) may appear after the course credit weight to indicate when a course would **normally** be taught.

For Faculty specific program and course Information, refer to:

- [section 12.3.5 "Program Requirements"](#),
- [section 12.3.6 "Course Requirements"](#),
- [section 12.5.2 "Course Registration"](#).

1.6 Course Symbols

The symbols listed below may appear in front of courses described in this Calendar. When used, they represent the following information:

- ★ Denotes courses taught only in alternate years.
- ◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.
- Denotes courses with limited enrolment.

Faculties of Arts and Science symbol:

- Denotes courses not offered in 2008-09.

Faculty of Education symbols:

- † Denotes courses not available as Education electives.
- ▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.
- * Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

School of Dietetics and Human Nutrition symbol:

- ‡ Professional Practice (Stage) in Dietetics involving special prerequisites.

Please consult the Class Schedule on the Web at www.mcgill.ca/minerva for the most up-to-date information about courses that are being offered in a given term.

- † Denotes courses not available as Education electives.
- Denotes courses with limited enrolment.
- Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.
- ▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.
- *: Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

Agricultural and Environmental Sciences

AEBI-Biology

Offered by: Parasitology, Natural Resource Sciences, Plant Science

AEBI 120 General Biology.

(3) (Fall) (2 lectures and one 3-hour lab) (Restriction: Not open to students who have passed CEGEP objective 00UK or equivalent (formerly Biology 301)) An introduction to the structure, function and adaptation of plants and animals in the biosphere.

AEBI 202 Cellular Biology.

(3) (Winter) (3 hours of lectures per week) Organization and function of intercellular organelles in eukaryotic cells. Protein synthesis and control of protein transport within the cell. Cell division and DNA replication. Energy metabolism and electron transport. Signal transduction and transmembrane signalling. Differentiation of cells and cancer. Function and components of the immune system.

AEBI 306 Experiments in Biotechnology.

(3) (One lecture and one 5-hour lab.) (Prerequisites: AEBI 202 and CELL 204 or permission of the instructor.) Practical laboratory-based research experience. Techniques in cellular and molecular biology, designing experiments and developing skills in interpretation and communication of experimental results.

AEHM-English

Offered by: Agricultural & Env.Sc.-Dean

AEHM 300 ESL: High Intermediate 1.

(3) (3 hours) (Prerequisite: placement test) (Restrictions: open to full-time, non-anglophone students. Not eligible for ESL courses are: 1. non-anglophone students who, for a period of more than four years, have attended secondary institutions (high school and CEGEP) where the primary language of instruction was English, and 2. students who have taken university-level courses judged to be equivalent to the McGill courses AEHM 300 and ESLN 300; AEHM 301 and ESLN 301. These courses are equivalent and mutually exclusive.) (Students too weak in English for AEHM 300 should inquire about the ESLN 200 and ESLN 201 courses offered on the Downtown Campus by the Faculty of Arts.) Improves proficiency of general writing skills while developing reading, oral and aural skills. Focuses on the structure of the English language and the process required to produce coherent short papers. Emphasis on the English of food, agriculture, and the environment.

AEHM 301 ESL: High Intermediate 2.

(3) (3 hours) (Prerequisite: AEHM 300 or placement test) (Restrictions: open to full-time, non-anglophone students. Not eligible for ESL courses are: 1. non-anglophone students who, for a period of more than four years, have attended secondary institutions (high school and CEGEP) where the primary language of instruction was English, and 2. students who have taken university-level courses judged to be equivalent to the McGill courses AEHM 300 and ESLN 300; AEHM 301 and ESLN 301. These courses are equivalent and mutually exclusive.) (Students too weak in English for AEHM 300 should inquire about the ESLN 200 and ESLN 201 courses offered on the Downtown Campus by the Faculty of Arts.) A continuation of AEHM 300. Further improves proficiency of general writing skills while developing reading, oral and aural skills. Focuses on the structure of the English language and the process required to produce coherent short papers. Emphasis on

the English of food, agriculture, and the environment.

AEHM 330 Academic and Scientific Writing.

(3) (3 hours) (Prerequisite: entrance test.) The object of the course is to enable students who have previously mastered the basic elements of written English to produce well-written, well-researched, and well-documented scientific papers for an academic audience.

AEMA-Mathematics

Offered by: Parasitology, Bioresource Engineering,

Animal Science, Plant Science

AEMA 100 Precalculus Mathematics.

(3) (Note: This course is given during a three to four week period prior to commencement of the normal Fall semester) A review of fundamentals in; algebra concepts. functions and graphs, polynomials and rational functions, exponential and logarithmic functions, graphs and equations, trigonometry, analytic trigonometry, systems of linear equations, and an introduction to sequences and series. This course does not count as credit towards students degree program.

AEMA 101 Calculus 1.

(3) (3 lectures) (Prerequisite: a course in functions) A review of functions and graphs. Limits, continuity, derivatives. Differentiation of elementary functions. Anti-differentiation. Applications.

AEMA 102 Calculus 2.

(4) (3 lectures) (Prerequisite: Calculus 1 or equivalent) Integration, the indefinite and definite integral. Trapezoidal and Simpson's Rule approximations for the integral. Applications to areas between curves, distance, volume, length of a curve, work, area of a surface of revolution, average values, moments, etc. Improper integrals and infinite series.

AEMA 202 Intermediate Calculus.

(3) (Fall) (3 lectures and 1 conference) (Restrictions: Not open to students who have taken MATH 222) (Prerequisites: BREE 103 and AEMA 102 or equivalent CEGEP objectives 00UP and 00UQ or permission of instructor) Partial differentiation; multiple integrals; vector calculus; infinite series; and introduction to the use of computer-based mathematical tools in applications.

AEMA 305 Differential Equations.

(3) (Winter) (Restrictions: Not open to students who have taken MATH 315) (Prerequisite: AEMA 202 or equivalent) First and second order differential equations, Laplace transforms, numerical solutions, systems of differential equations, series solutions, applications to biological, chemical and engineering systems, use of computer-based mathematical tools.

AEMA 306 Mathematical Methods in Ecology.

(3) (Winter) (3 hours of lectures per week) (Prerequisite: WILD 205 (formerly AEBI 205) or permission.) (Corequisite: AEMA 310 or permission.) An introduction to mathematical and graphical tools for use in ecology. Representation and interpretation of data and associated statistics in graphs and tables; theoretical modelling in plant and animal ecology, including difference and differential equation models. Introduction to stability analysis and probability theory. Emphasis is placed on graphical techniques.

AEMA 310 Statistical Methods 1.

(3) (Two 1.5-hour lectures and one 2-hour lab) Measures of central tendency and dispersion; binomial and Poisson distributions; normal, chi-square, Student's t and Fisher-Snedecor F distributions; estimation and hypothesis testing; simple linear regression and correlation; analysis of

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

variance for simple experimental designs.

AEMA 403 Environmetrics Stage.

(3) (Limited enrolment: Registration by application - Deadline December 15; the first seven applications received will have priority) (Prerequisite: Permission of the instructor based on satisfactory completion of the U2 year of the Environmetrics Domain in the McGill School of Environment) Summer stage of at least four weeks, including a report. Provides students with professional experience in statistical analyses of environmental data. Can be undertaken at federal or provincial research stations and university research laboratories.

★AEMA 411 Experimental Designs 01.

(3) (2 1.5-hour lectures) (Prerequisite: AEMA 310 or equivalent) (Offered in alternate years with AEMA 414) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) General principles of experimental design, split-plot designs, spatial heterogeneity and experimental design, incomplete block designs and unbalanced designs, analysis of repeated measures, multivariate and modified univariate analyses of variance, central composite designs.

★AEMA 414 Temporal and Spatial Statistics 01.

(3) (2 1.5-hour lectures) (Prerequisite: AEMA 310 or equivalent) (Offered in alternate years with AEMA 411) Temporal statistics: analysis in the time domain, Box-Jenkins forecasting methodology, analysis in the frequency domain, periodogram analysis. Spatial statistics: mapping, autocorrelation analysis, geostatistics. Statistical inference with autocorrelated sample data.

AEPH-Agricultural Physics

Offered by: Bioresource Engineering

AEPH 110 Preparatory Physics.

(3) (Note: This course is given during a three to four week period prior to commencement of the normal Fall semester.) An introduction to properties of matter, heat and temperature, light, magnetism, electric circuits, optics and kinematics. This course does not count as credit towards students' degree program.

AEPH 112 Introductory Physics 1.

(4) (Fall) (3 lectures and one 2-hour lab) Accelerated motion. Newton's Laws. Force, work and energy, power; momentum. Conservation principles. Circular motion. Simple harmonic motion. Waves and sound.

AEPH 113 Physics 1.

(4) (3 lectures, one 2-hour lab and tutorial) (Prerequisite: Precalculus Mathematics AEMA 100 or equivalent. Preparatory Physics AEPH 110 or equivalent) (Corequisite: AEMA 101) (Note: Not open to students who have taken AEPH 112, PHYS 101 or PHYS 131, and open to students in Bioresource Engineering) The basic laws and principles of Newtonian mechanics - oscillations and waves. Includes calculus-based applications.

AEPH 114 Introductory Physics 2.

(4) (Winter) (3 lectures and one 2-hour lab) Electric and magnetic properties of matter: electrostatics, electric currents, the link between electric and magnetic phenomena, geometrical optics, interference diffraction.

AEPH 115 Physics 2.

(4) (3 lectures, one 2-hour lab and tutorial) (Prerequisites: AEPH 113, AEMA 101) (Corequisite: AEMA 102) (Note: Not open to students who have taken AEPH 114, PHYS 102 or PHYS 142, and open only to students in Bioresource Engineering) The basic laws of electricity and magnetism - geometrical and physical optics. Includes calculus-based applications.

AGEC-Agricultural Economics

Offered by: Natural Resource Sciences, Agricultural

Economics

AGEC 200 Principles of Microeconomics.

(3) (Fall) (3 lectures) The field of economics as it relates to the activities of individual consumers, firms and organizations. Emphasis is on the application of economic principles and concepts to everyday decision making and to the analysis of current economic issues.

★AGEC 201 Principles of Macroeconomics.

(3) (Winter) (3 lectures) (Prerequisite: AGECE 200 or equivalent) The overall economic system, how it works, and the instruments used to solve social problems. Emphasis will be on decision-making involving the entire economic system and segments of it.

AGEC 231 Economic Systems of Agriculture.

(3) (Winter) (3 lectures) (Prerequisite: AGECE 200 or equivalent) The structure and organization of Canada's agriculture-food system, the operation, financing, linkages, and functions of its components. Focus to be on management of the various components and the entire system, types of problems confronted now and in the future.

AGEC 242 Management Theories and Practices.

(3) (Fall) (3 lectures) An introduction to contemporary management theories and practices in organizations of the food sector.

AGEC 320 Intermediate Microeconomic Theory.

(3) (Winter) (3 lectures) (Prerequisite: AGECE 200 or equivalent) An intermediate theory course in agricultural economics, dealing with economic concepts as applied to agricultural production and cost functions. Includes theory and application of linear programming as related to production decisions.

★AGEC 330 Agriculture and Food Markets.

(3) (Prerequisite: AGECE 200 or equivalent) (Restriction: Not open to students who have taken AGECE 440) Nature and organization of agricultural and food markets as economic institutions, including the application of economic theory to problems within the agri-food marketing chain. Spatial and temporal price relationships, and the role of market structure.

AGEC 332 Farm Management and Finance.

(3) (Fall) (Prerequisite: AGECE 200 or equivalent) (Restriction: Not open to students who have taken AGECE 331 or AGECE 350) Managing and financing a farm business. Topics include: the decision making process, farm management and economic concepts, the analysis of financial statements, farm planning and budgeting, input management, investment analysis, risk in financial management, the acquisition and cost of capital.

AGEC 333 Resource Economics.

(3) (Fall) (Prerequisites: AGECE 200 or equivalent) The role of resources in the environment, use of resources, and management of economic resources within the firm or organization. Problem-solving, case studies involving private and public decision-making in organizations are utilized.

AGEC 343 Accounting and Cost Control.

(3) (Fall) (3 lectures) An introduction to the basic principles and concepts of responsibility accounting and cost control, analysis and utilization of financial statements and control system data for decision making.

★AGEC 425 Applied Econometrics.

(3) (Fall) (3 lectures) (Prerequisites: AEMA 310, AGECE 200 and AGECE 201 or equivalents) The theory and application of econometrics to empirical issues in agriculture and environment. Diagnosis and treatment of standard violations of the assumptions underlying ordinary least squares.

AGEC 430 Agriculture, Food and Resource Policy.

(3) (Winter) (3 lectures) (Prerequisites: AGECE 200 or equivalent) Examination of North American and international agriculture, food and resource policies, policy instruments, programs and their implications. Economic analysis applied to the principles, procedures and objectives of various policy actions affecting agriculture, and the environment.

AGEC 442 Economics of International Agricultural Development.

(3) (Winter) (3 lectures) (Prerequisites: AGECE 200 or AGECE 201 or equivalent) The course deals with economic aspects of international development with emphasis on the role of food, agriculture and the resource sector in the economy of developing countries. Topics will include, world food analysis, development project analysis and policies for sustainable development. Development case studies will be used.

★AGEC 450 Agriculture Business Management.

(3) (Winter) (3 lectures) (Prerequisites: AGECE 230 and AEMA 310) Management of operations in agribusiness firms. The use of computer models to make decisions on output mix, facility location, expansion, inventory management and production and strategy.

AGEC 491 Research & Methodology.

(3) (Fall) (3 lectures) (Prerequisites: AGECE 201 or equivalent, and AGECE 320) Conceptual and philosophical foundations of research methodology, and the procedural aspects of planning, designing and conducting research in applied economics.

AGEC 492 Special Topics in Agricultural Economics 01.

(3) (Fall, Winter) (Prerequisite: AGECE 201 or equivalent) Students will pursue topics that are not otherwise available in formal courses. An individual course of study will be followed under the supervision of a member of the staff qualified in the appropriate discipline or area.

AGEC 493 Special Topics in Agricultural Economics 02.

(3) Presentation and discussion of current problems in agricultural economics by staff and/or special guests. This course is offered on an irregular basis under special circumstances.

AGEC 503 Location & Spatial Development.

(3) (Winter) (Prerequisite: GEOG 216 and GEO 202, or one course in each of microeconomics and macroeconomics, or permission of instructor.) (Not open to students who have taken GEOG 503) Patterns of regional economic growth or decline explained in terms of the competitive behaviour of profit-maximizing firms and utility-maximizing households. Ideas, models and evidence developed in competitive location theory.

AGRI-Agriculture

Offered by: Bioresource Engineering, Natural Resource Sciences, Animal Science, Food Science & Agr-Chemistry, Plant Science

AGRI 195 Freshman Seminar 1.

(0.5) (Fall) (Restriction: Freshman students.) Members of the Faculty will present seminars on topical issues about their area of research.

AGRI 196 Freshman Seminar 2.

(0.5) (Winter) (Restriction: Freshman students) Member of the Faculty will present seminars on topical issues about their area of research.

AGRI 201D1 (3), AGRI 201D2 (3) Agri-Environment Internship.

(Restriction: Not open to students who have taken AGRI 301D1/D2/N1/N2, except for those enrolled in an Internship Program.) (Students must register for both AGRI 201D1 and AGRI 201D2.) (No credit will be given for this course unless both AGRI 201D1 and AGRI 201D2 are successfully completed in consecutive terms) Internship on working farms or in other appropriate businesses of the agri-food/environment industries.

AGRI 210 Agro-Ecological History.

(3) (3 lectures) Introduction to the environmental consequences of agriculture through time, relating the cultural diversity of agronomic practices to regionally varied ecological processes.

AGRI 215 Agro-Ecosystems Field Course.

(3) (Restriction: Not open to students who have taken PLNT 215.) Through case studies and field trips, students will examine the problems and constraints within the Canadian agro-ecosystem, including the interrelationships among food production, the environment, agricultural policy and social issues. Research in this field of study will also be introduced.

AGRI 220 Professional Practice Seminar 1.

(0.5) Experiences and responsibilities of Agrologists; legal and ethical aspects of the profession.

AGRI 221 Professional Practice Seminar 2.

(0.5) Experiences and responsibilities of Agrologists; legal and ethical aspects of the profession.

AGRI 301D1 (3), AGRI 301D2 (3) Agrology Internship.

(Restriction: Not open to students who have taken AGRI 201D1/D2, except for those enrolled in an Internship Program.) (Students must register for both AGRI 301D1 and AGRI 301D2.) (No credit will be given for this course unless both AGRI 301D1 and AGRI 301D2 are successfully completed in consecutive terms) Agrology internship in industry, government or related fields.

AGRI 301N1 (3), AGRI 301N2 (3) Agrology Internship.

(Restriction: Not open to students who have taken AGRI 201D1/D2, except for those enrolled in an Internship Program.) (Students must also register for AGRI 301N2) (No credit will be given for this course unless both AGRI 301N1 and AGRI 301N2 are successfully completed in a twelve month period) Agrology internship in industry, government or related fields.

★AGRI 305 Barbados Agro-Ecosystems.

(3) Complexities affecting sustainable agriculture of a small island nation. Social, economic and physical factors that influence environmental choices. Includes lectures at Macdonald campus and a 12-day stay at Bellairs, Barbados.

AGRI 320 Professional Practice Seminar 3.

(0.5) Experiences and responsibilities of Agrologists; legal and ethical aspects of the profession.

AGRI 321 Professional Practice Seminar 4.

(0.5) Experiences and responsibilities of Agrologists; legal and ethical aspects of the profession.

AGRI 340 Principles of Ecological Agriculture.

(3) (3 lectures and one 2-hour seminar) (Restriction: Not open to students who have taken AGRI 250) Focus on low-input, sustainable, and organic agriculture: the farm as an ecosystem; complex system theory; practical examples of soil management, pest control, integrated crop and livestock production, and marketing systems.

AGRI 341 Ecological Agriculture Systems.

(3) (2 lectures and 1 conference) (Restriction: Not open to students who have taken AGRI 430) An overview and presentation of alternative agricultural production systems including low-input, organic, biodynamic, community supported agriculture, the agroecosystem concept, historical overview, ecological basis, key characteristics and functioning, impact of policies, and the transition process.

AGRI 411 International Agriculture.

(3) (Winter) (3 lectures and 1 conference) A study of the climate, soils and major economic plant and animal species in tropical and sub-tropical regions; cropping and agro-forestry systems; pest and disease problems; soil and water management; environmental, health and nutrition, and economic issues in rural development; energy and technology for developing

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

- ★ Denotes courses taught only in alternate years.
- ‡ Professional Practice (Stage) in Dietetics involving special prerequisites
- ◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.
- † Denotes courses not available as Education electives.
- Denotes courses with limited enrolment.

- Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.
- ▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.
- * Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

countries; the role of international aid and development agencies; case studies on various aspects of food and agricultural systems in developing countries will be presented.

AGRI 420 Professional Practice Seminar 5.

(0.5) Experiences and responsibilities of Agrologists; legal and ethical aspects of the profession.

AGRI 421 Professional Practice Seminar 6.

(0.5) Experiences and responsibilities of Agrologists; legal and ethical aspects of the profession.

AGRI 435 Soil and Water Quality Management.

(3) (Fall) (3 lectures and one 3-hour lab) Management of soil and water systems for sustainability. Cause of soil degradation, surface and groundwater contamination by agricultural chemicals and toxic pollutants. Human health and safety concerns. Water-table management. Soil and water conservation techniques will be examined with an emphasis on methods of prediction and best management practices.

AGRI 452 Water Resources in Barbados.

(3) (Corequisites: None.) (Restrictions: Enrolment in full "Barbados Field Study Semester". Not open to students who have taken CIVE 452.) Physical environment challenges, centered on water, being faced by an island nation. Guest speakers, field study tours and laboratory tests. Private, government and NGO institutional context of conservation strategies, and water quantity and quality analyses for water management specific to Barbados.

AGRI 480 Special Topics 1.

(1)

AGRI 481 Special Topics 2.

(2)

AGRI 482 Special Topics 3.

(3)

AGRI 490 Agri-Food Industry Project.

(3) Interdisciplinary team project in the agri-food industry.

AGRI 491D1 (1.5), AGRI 491D2 (1.5) Co-op Experience.

(Students must register for both AGRI 491D1 and AGRI 491D2.) (No credit will be given for this course unless both AGRI 491D1 and AGRI 491D2 are successfully completed in consecutive terms) A co-op experience program of at least 12 weeks duration. Students will be exposed to the main areas of operation of their employer. The cooperating employer and the Instructor (or designate) will develop an individualized co-op experience for each student. Students will be supervised by staff of their employer who will be in contact with the instructor (or designate). A site visit by the Instructor (or designate), a report by the student's employer and a final written and oral report by the student will form the basis for evaluation.

AGRI 495 Seminar and Assignment 1.

(1) (Restriction: Not open to students registered in, or who have taken AGRI 495D1, AGRI 495D2, AGRI 495N1 or AGRI 495N2) Preparation, presentation and discussion of reports upon approved agricultural subjects chosen in consultation with staff members involved in the subject concerned.

AGRI 496 Seminar and Assignment 2.

(1) (Restriction: Not open to students registered in, or who have taken AGRI 495D1, AGRI 495D2, AGRI 495N1 or AGRI 495N2) Preparation, presentation and discussion of reports upon approved agricultural subjects chosen in consultation with staff members involved in the subject concerned.

AGRI 510 Professional Practice.

(3) (Restriction: Course restricted to senior undergraduate and graduate students.) The ethical issues that face a professional in the workplace; professional ethics and deontology, professional responsibilities as related to the laws of labour, health, safety and risks to the environment, risk management and communication.

AGRI 519 Sustainable Development Plans.

(6) (Restrictions: Enrolment in full "Barbados Field Study Semester". Not open to students who have taken CIVE 519 or URBP 519.) Geared for solving real-world environmental problems related to water at the local, regional and

international scale in Barbados. Projects to be designed by instructors in consultation with university, government and NGO partners and to be conducted by teams of 2 to 4 students in collaboration with them.

★AGRI 550 Sustained Tropical Agriculture.

(3) (Prerequisites: HISP 218 or equivalent; MATH 203 or AEMA 310 or equivalent) (Restriction: Restricted Enrolment. Location in Panama. Student must be registered for a full semester of studies in Panama) Contrast theory and practice in defining agricultural environmental "challenges" in the Neotropics. Indigenous and appropriate technological means of mitigation. Soil management and erosion, water scarcity, water over-abundance, and water quality. Explore agro-ecosystem protection via field trips and project designs. Institutional context of conservation strategies, NGO links, and public participation.

ANSC-Animal Science

Offered by: Animal Science

ANSC 234 Biochemistry 2.

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisite: FDSC 211) Metabolism in humans and domestic animals. The chemistry of alimentary digestion, absorption, transport, intermediary metabolism and excretion.

ANSC 250 Principles of Animal Science.

(3) (Fall) (3 lectures and one 2-hour lab) Introduction to the scientific principles underlying the livestock and poultry industries. Emphasis will be placed on the breeding, physiology and nutrition of animals raised for the production of food and fibre.

ANSC 251 Comparative Anatomy.

(3) (Winter) (3 lectures and one 3-hour lab) Study of the macroscopic anatomy of mammals based on detailed dissection of the dog. Comparison with other domestic species will be emphasized.

ANSC 301 Principles of Animal Breeding.

(3) (Winter) (3 lectures and one 2-hour lab) (Prerequisite: AEMA 310 or equivalent) The qualitative and quantitative aspects of genetics as they apply to the economic improvement of domestic mammals and birds. Topics include: animal domestication, animal cytology, Mendelian traits of economic importance, principles of population genetics, statistical tools to describe populations, environmental effects, selection and mating systems.

ANSC 303 Farm Livestock Internship.

(2) (Prerequisite: ANSC 250 (or equivalent, or permission).) Practical experience in the day-to-day management of a major livestock species (dairy, swine, poultry, or specific combination) on the Macdonald Campus Farm. Interaction with personnel and training in the operations of a farm-animal enterprise.

ANSC 312 Animal Health and Disease.

(3) (Winter) (3 lectures and one 2-hour conference) An introduction to the pathogenesis and control of diseases in farm animals. Immune response and other protective mechanisms. Implications of animal diseases and drug therapy for product safety and public health.

ANSC 323 Mammalian Physiology.

(4) (Fall) (3 lectures and one 3-hour lab) (Prerequisite: FDSC 211 and one of the following; ANSC 250 or AEBI 202 or equivalent) A study of the organization, functions and regulation of various organ systems in mammals. The nervous, endocrine, muscular, cardiovascular, respiratory, urinary, digestive and reproductive systems are discussed.

ANSC 324 Animal Reproduction.

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisites: ANSC 250, FDSC 211 and ANSC 323) Reproduction in domestic animals integrated with management techniques to improve reproductive efficiency. Laboratory training includes anatomy, semen collection and evaluation, oestrus detection and control, artificial insemination and embryo transfer.

ANSC 324 Animal Reproduction.

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisites: ANSC 250, FDSC 211 and ANSC 323) Reproduction in domestic animals integrated with management techniques to improve reproductive efficiency. Laboratory training includes anatomy, semen collection and evaluation, oestrus detection and control, artificial insemination and embryo transfer.

ANSC 330 Fundamentals of Nutrition.

(3) (Fall) (3 lectures) (Prerequisite: FDSC 211, ANSC 234 (ANSC 234 pre-req applies to students in B.Sc. Nutritional Sciences only).) A discussion of the nutrients; water, carbohydrates, lipids, proteins, minerals and vitamins, with particular emphasis on their functions in and essentially for the animal organism.

ANSC 400 Eukaryotic Cells and Viruses.

(3) (Winter) (Prerequisite: CELL 204) (Restrictions: Not open to students who have taken PARA 400) The basic principles of molecular biology and the underlying molecular basis for various methodologies in molecular biology are covered. The molecular genetic basis for viral infections and tumorigenesis will be covered as examples of the use of molecular genetic approaches to address biological problems.

ANSC 420 Animal Biotechnology.

(3) (Fall) (Prerequisites: AEBI 202, MICR 230) Applications of animal biotechnology in agriculture, biomedicine and environmental preservation, including culture, manipulation and transformation of somatic cells, isolation of stem cells, reproductive biotechnologies, animal cloning by nuclear transplantation, production of transgenic animals, and cell and gene therapies.

ANSC 424 Metabolic Endocrinology.

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisite: ANSC 323) A detailed study of the endocrine system and its role in the maintenance of homeostasis in higher vertebrates, including the endocrine regulation of energy balance.

ANSC 433 Animal Nutrition.

(3) (Winter) (3 lectures and one 1-hour lab) (Prerequisites: ANSC 250 and ANSC 330) Critical discussion of nutrient utilization by farm animals, an assessment of nutritive value of feeds. Recent developments in nutritional manipulation are discussed.

ANSC 450 Dairy Cattle Production.

(3) (Fall) (3 lectures and one 2-hour lab) (Prerequisite: ANSC 250) The application and integration of biological principles of genetics, physiology, nutrition and pathology and of economics and engineering for the maximum production efficiency of milk and meat by dairy cattle. Emphasis on recent developments. Trips to dairy farms and related enterprises included as laboratory work.

ANSC 451 Dairy and Beef Production Management.

(3) (Prerequisite: ANSC 250 - Principles of Animal Science, or permission of instructor.) (Restrictions: Not open to students having taken ANSC 450 or ANSC 452. Restricted to U2 or higher.) Overview of the Canadian Dairy and Beef industries with emphasis on products, environment, management systems, reproductive technologies, health, genetic improvement, automation, information recording and use of housing facilities and equipment. Field trips to dairy and beef farms as well as processing units included for illustration and application of concepts.

ANSC 455 Special Topics: Animal Science.

(3) (Fall or Winter) Topics that are not otherwise available in formal courses. Investigation of a particular topic will be carried out under the supervision of a staff member who has expertise in the area of study chosen by the student.

ANSC 457 Special Topics 2.

(3) Special topics in animal science.

ANSC 458 Swine and Poultry Production.

(3) (Prerequisite: ANSC 250 - Principles of Animal Science, or permission of instructor.) (Restrictions: Not open to students having taken ANSC 454 or ANSC 456. Restricted to U2 or higher.) Application and integration of biological principles of genetics, physiology, anatomy, nutrition, and health of poultry and swine production systems in Canada. Major factors and practices affecting productivity at the different stages of swine and poultry production. Field trips to farms and related enterprises.

ANSC 490 Project.

(3) A project to be completed under the supervision of a staff member of the Department of Animal Science. An agreement between student and the involved staff member must be reached prior to registration.

ANSC 495 Seminar 1.

(1) (Restriction: Not open to students who have taken ANSC 495D1/D2 or ANSC N1/N2.) Preparation, presentation and discussion of critical reviews.

ANSC 496 Seminar 2.

(1) (Restriction: Not open to students who have taken ANSC 495D1/D2 or ANSC N1/N2.) Preparation, presentation and discussion of critical reviews.

ANSC 504 Population Genetics.

(3) (Fall) (3 lectures) Considerations of the basic principles of Mendelian genetics dealing with the genetic properties of populations and extension to the simultaneous segregation of genes at many loci, polygenic inheritance and an introduction to quantitative genetics, including mechanisms of transmission, segregation, linkages between genes and the effect of natural and artificial selection.

ANSC 506 Advanced Animal Biotechnology.

(3) (Prerequisites: AEBI 202, ANSC 400.) New concepts and applications of animal biotechnology in agriculture, biomedicine, environmental preservation.

ANSC 508 Tools in Animal Biotechnology.

(3) (Fall) (Restriction: Permission of instructor.) Essential laboratory techniques in animal biotechnology: extraction of nucleic acids, PCR technology, gel electrophoresis, construction of gene expression vectors, transformation of bacterial and mammalian cells and monitoring gene expression using reporter genes.

ANSC 551 Carbohydrate and Lipid Metabolism.

(3) (Winter) (3 lectures) Comparative aspects of nutrition and metabolism of carbohydrate and lipid from the cellular level through the multi-organ of the whole organism. Main topics will include biothermodynamics, calorimetry, cellular metabolism and functions of carbohydrate and lipid, digestion, absorption and utilization of dietary carbohydrate and lipid.

ANSC 552 Protein Metabolism and Nutrition.

(3) (Fall) (3 lectures) Comparative aspects of nutrition and metabolism of amino acids and proteins from the cellular level on through the multisystem operation of the whole organism. Main topics include cellular metabolism and functions of amino acids and proteins, digestion, absorption and utilization of dietary protein. Comparison between farm animals and humans.

ANSC 560 Biology of Lactation.

(3) (Restriction: Not open to students who have taken ANSC 460.) An interdisciplinary approach to the study of mammary development, the onset of lactation and its cessation, comparing the differences in mammalian species in mammary development from embryological, pre- and post-pubertal and pre- and post-partum aspects. Lactation at the cellular and biochemical levels.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

ANSC 565 Applied Information Systems.

(3) (Winter) (3 lectures and one 2-hour lab) (Prerequisite: ABEN 251 or demonstrated equivalency) Introduction to concepts of an Information System and subsequent application to various scenarios in agriculture. Industry analysis in terms of users, goals, available data/information, communication, delivery structure, decision making, feedback, exploitation of technology and possible improvements using the Internet. Individual case studies and familiarisation with cutting-edge computer applications.

BINF-Bioinformatics

Offered by: Plant Science

BINF 511 Bioinformatics for Genomics.

(3) (Prerequisite: Understanding of cell and molecular biology (equivalent to a cell or molecular biology course) or permission from instructor.) Bioinformatics methods and reasoning in relation to genomics, proteomics and metabolomics strategies with an emphasis on functional genomics data. The course will cover introduction to UNIX, Perl programming, data processing and integration, file parsing, relational database design and implementation, angled towards solutions relevant for genomics.

BREE-Bioresource Engineering

Offered by: Bioresource Engineering

BREE 103 Linear Algebra.

(3) (3 lectures and 1 conference) (Restriction: Not open to students who have taken Math 133 or CEGEP objective 00UQ or equivalent) (Prerequisite: AEMA 100 or equivalent course in functions/precalculus) Vectors: equality and inequality, geometric representation, polar form, addition, unit vectors, dot product, cross product, triple scalar and vector products, use of vectors in 3-D. Matrices: definition, equality and inequality, addition, multiplication, null matrix, identity matrix, triangular and diagonal matrices, determinants, matrix inverse, matrix applications. Introduction to computer-based mathematical tools.

BREE 187 Freshman Seminar 1.

(0.5) (Restrictions: Open to Freshman intending to enrol in B.Eng. Bioresources Engineering Major.) (Not open to students who have taken ABEN 187.) Departmental seminar series.

BREE 188 Freshman Seminar 2.

(0.5) (Restrictions: Open to Freshman intending to enrol in B.Eng. Bioresources Engineering Major. Not open to students who have taken ABEN 188.) Departmental seminar series.

BREE 205 Engineering Design 1.

(3) (Restriction: Not open to students who have taken ABEN 205.) Engineering philosophy and the role of the bioresource engineer in society; introduction to engineering analysis and design; the role of the engineer in the design, construction, and operation of bio-based facilities and industries and the environment.

BREE 210 Mechanical Analysis & Design.

(3) (3 lectures and 2 hours lab or problems) (Restriction: Not open to students who have taken ABEN 210.) Non-concurrent force systems; analysis of simple trusses and multiframe frames; friction, shearing forces and bending moments in beams and frames; centres of gravity; solution of problems by energy methods.

BREE 214 Geomatics.

(3) (2 lectures and one 3-hour lab) (Restriction: Not open to students who have taken ABEN 214.) The engineer's level and the theodolite are used to perform benchmark circuits, profile levelling, topographic maps and straight line extensions. A total station, computer programs and use of GPS are introduced.

BREE 216 Bioresource Engineering Materials.

(3) (2 lectures and one 2-hour lab) Introduction to the composition and mechanical constitution of materials used in bioresource engineering, including metals, plastics, concrete, wood, composite, plant and food materials. Crystal structure, alloys, phase diagrams, stresses and strains, elasticity, plasticity, yield, fracture, ductility, heat treatments, cold

work, corrosion, composite materials, concrete chemistry, polymers.

BREE 217 Hydrology and Water Resources.

(3) (3 lectures, one 2 hour lab) (Restriction: Not open to students who have taken ABEN 217.) Measurements and analysis of components of the water cycle. Precipitation, evaporation, infiltration and groundwater. Analysis of hydrologic data. Hydrograph theory. Hydrologic estimations for design of water control projects; flood control and reservoir routing. Integrated watershed management and water conservation. Water management systems for environmental protection.

BREE 252 Computing for Engineers.

(3) (3 lectures and one 2-hour lab) (Restriction: Not open to students who have taken ABEN 252.) A user level computer programming course in Fortran-90 language. The pros and cons of computerization, differences between mainframe and microcomputers, network basics, discussion of the use of Fortran-90 and C languages to solve engineering problems, electronic spreadsheet analysis and the use of other software packages will be studied from an engineering point of view.

BREE 301 Biothermodynamics.

(3) (3 lectures and one 2-hour lab) (Restriction: Not open to students who have taken ABEN 301.) Classical thermodynamic analysis of pure and simple compressible systems. The course covers the first and second laws of thermodynamics. It deals with basic concepts of thermodynamics and thermochemistry in biological systems.

BREE 305 Fluid Mechanics.

(3) (3 lectures and one 2-hour lab or problems) (Prerequisites: BREE 210, AEMA 202) (Restriction: Not open to students who have taken ABEN 305.) Properties of fluids; fluid statics; principles of flow of incompressible and compressible fluids; dimensional analysis boundary layers; conduit and open channel systems; simple applications to turbo machinery.

BREE 312 Electric Circuits and Machines.

(3) (3 lectures and one 2-hour lab or problems) (Prerequisite: AEMA 305 (formerly AEMA 205).) (Restriction: Not open to students who have taken ABEN 312.) General circuit laws and d.c. circuits; electromagnetic circuits; inductance and capacitance, natural and forced response of circuits; analysis of single phase and three phase networks; transformers, AC and DC motors/generators.

BREE 314 Agri-Food Buildings.

(3) (3 lectures and 2-hour lab) (Restriction: Not open to students who have taken ABEN 314.) Analysis and design of structures to house animals and plants and to process and store animal and plant products. Introduction to environmental control systems and animal waste management.

BREE 315 Design of Machines.

(3) (3 lectures, 2 hours problems) (Prerequisite: BREE 341 (formerly ABEN 341)) (Restriction: Not open to students who have taken ABEN 315.) Design of shafting, bearings, gear, belt and chain drives, clutches, brakes, vibrations, fasteners, welded joints, frames. Principles and practices of Engineering Drawing will be adhered to in laboratory submissions.

BREE 319 Engineering Mathematics.

(3) (3 lectures, 2-hour lab, conference) (Prerequisite: AEMA 305 or equivalent and BREE 252) (Restriction: Not open to students who have taken ABEN 319.) Advanced topics in engineering mathematics, including special functions, orthogonal functions and Fourier series, boundary value problems in various coordinate systems, integral transforms, partial differential equations and introduction to complex variable theory. The use of computer-based mathematical tools will be an integral part of the course.

BREE 322 Organic Waste Management.

(3) (2 lectures and one 2-hour lab) (Restriction: Not open to students who have taken ABEN 322.) An introduction to engineering aspects of handling, storage and treatment of all biological and food industry wastes. Design criteria will be elaborated and related to characteristics of wastes. Physical, chemical and biological treatment systems.

BREE 323 Properties of Biological Materials.

(3) (2 lectures and one 2-hour lab) (Prerequisite: BREE 341 (formerly ABEN 341)) (Restriction: Not open to students who have taken ABEN 323.) An engineering analysis of the structure, physical attributes, mechanical and rheological properties of biological materials, emphasizing the relationship of these properties to production and processing of agricultural products and food. Mathematical models considering size, shape, volume, surface area, density, quasistatic and dynamic viscoelastic behaviour; non-Newtonian fluid models; optical properties; behaviour of granular materials.

BREE 324 Elements of Food Engineering.

(3) (3 lectures) (Pre/Co-requisite: FDSC 330) (Restriction: Not open to students in the B.Eng.(Bioresource) program) (Restriction: Not open to students who have taken ABEN 324.) A course in basic food engineering for non-engineering students, covering heat transfer, mass and energy balances, food process unit operations, material transport/ steam/refrigeration systems.

BREE 325 Food Process Engineering.

(3) (3 lectures and one 3-hour lab) (Restriction: Not open to students who have taken ABEN 325.) Heat and mass transfer, enthalpy and mass balances, sterilizing, freezing, fluid flow, pipes, steam, refrigeration, pumps and valves.

BREE 327 Bio-Environmental Engineering.

(3) (Restrictions: U2 students and above. Not open to students who have taken ABEN 305.) Introduction to principles of bio-engineering in solving environmental problems related to the domains of water, soil and air; the capability of each domain to absorb, recycle or treat contaminants.

BREE 341 Mechanics of Materials.

(3) (3 lectures and one 3-hour lab) (Prerequisite: BREE 210 (formerly ABEN 210)) (Restriction: Not open to students who have taken ABEN 341.) Stress, strain, resilience, elastic and plastic properties of materials; bending moment and shear force diagrams; bending and shear stress; deflections; simple, fixed and continuous beams, torsion and helical springs, reinforced concrete beams; columns, bending and direct stress; general case of plane stress; Mohr's circle.

BREE 412 Machinery Systems Engineering.

(3) (3 lectures and one 3-hour lab) (Restriction: Not open to students who have taken ABEN 412.) Study and analysis of machines for tillage, harvesting, crop processing and handling. Field tests, load studies, design requirements; design of machines and components for agricultural applications.

BREE 416 Engineering for Land Development.

(3) (3 lectures and one 2-hour lab or design problems) (Prerequisite: BREE 217 (formerly ABEN 217)) (Restriction: Not open to students who have taken ABEN 416.) The engineering aspects of soil and water conservation, irrigation, water conveyance structures and canals, use of geosynthetics for soil protection, seepage and uplift. Students will produce an integrated development project.

BREE 418 Soil Mechanics and Foundations.

(3) (3 lectures and one 3-hour lab) (Prerequisite: BREE 341 (formerly ABEN 341)) (Restriction: Not open to students who have taken ABEN 418.) The exploration of subsoils, strength theories, granular and cohesive soils, foundation design, settlement calculation, consolidation, slope stability, Atterberg limits, triaxial testing, direct shear testing, compaction, soil freezing, frost heaving.

BREE 419 Structural Design.

(3) (3 lectures and one 3-hour lab or design problems) (Prerequisite: BREE 341 (formerly ABEN 341)) (Restriction: Not open to students who have taken ABEN 419.) Structural Design in steel and timber; application of complete

design procedures to working stress design; plastic design for ultimate loading.

BREE 481 Undergraduate Seminar 1.

(0.5) (Restrictions: Not open to students who have taken ABEN 491D/N or ABEN 481.) Attendance and participation in departmental seminars.

BREE 482 Undergraduate Seminar 2.

(0.5) (Restrictions: Not open to students who have taken ABEN 492D/N or ABEN 482.) Attendance and participation in departmental seminars.

BREE 483 Undergraduate Seminar 3.

(0.5) (Restrictions: Not open to students who have taken ABEN 493D/N or ABEN 483.) Attendance and participation in departmental seminars.

BREE 484 Undergraduate Seminar 4.

(0.5) (Restriction: Not open to students who have taken ABEN 484.) Attendance and participation in departmental seminars.

BREE 485 Undergraduate Seminar 5.

(0.5) (Restriction: Not open to students who have taken ABEN 485.) Attendance and participation in departmental seminars.

BREE 486 Undergraduate Seminar 6.

(0.5) (Restriction: Not open to students who have taken ABEN 486.) Attendance and participation in departmental seminars.

BREE 490 Engineering Design 2.

(3) (1 lecture) (Prerequisites: CHEE 315 or MECH 346, BREE 205.) (Restriction: Not open to students who have taken ABEN 490.) The student is expected to develop a professional design project proposal with due considerations to executive summary, synthesis, methodology, milestones, budget, etc.

BREE 495 Engineering Design 3.

(3) (1 lecture) (Prerequisite: BREE 490 (formerly ABEN 490)) (Restriction: Not open to students who have taken ABEN 490.) The student is expected to implement, physically or virtually, the project proposed in the Design 1 course. The student is expected to present project outcome, in both written and oral forms and learn to be critical about their own work and those of others.

BREE 501 Simulation and Modelling.

(3) (Restrictions: U3 students and above. Not open to students who have taken ABEN 612 or ABEN 501.) Modelling, physical and virtual models of linear, chaotic and stochastic systems, simulation techniques and methods for static and dynamic models, steady and unsteady state. Examples from various areas such as machine design, population dynamics, food processing, biological control, farm management, ecological system design. Mathematics and computer oriented - students must be familiar with microcomputer operation.

BREE 502 Drainage/Irrigation Engineering.

(3) (Prerequisite: BREE 217 (formerly ABEN 217)) (Restrictions: U3 students and above. Not open to students who have taken ABEN 611 or ABEN 502.) Benefits and importance of drainage; types of drainage systems; design and construction of main, surface and subsurface drainage systems; drainage materials. Crop water requirements; evapotranspiration models; design and layout of surface, sprinkler and drip irrigation systems; pipe hydraulics; pumps.

BREE 504 Instrumentation and Control.

(3) (3 lectures and one 2-hour lab) (Prerequisite (Undergraduate): BREE 312 (formerly ABEN 312) or ECSE 281) (Restriction: Not open to students who have taken ABEN 504.) Principles and operation of instrument systems used for measurement and control in agricultural processes and research.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

BREE 506 Advances in Drainage Management.

(3) (3 weeks intensive course) (Restriction: Not open to students who have taken ABEN 506.) Land drainage in relation to soils and crops. Design of regional drainage systems, stability of ditches, ice problems. Design of subsurface drainage systems. Theories of flow into drain tubes. Hydraulics of wells. Drainage of irrigated lands. Water table control.

BREE 509 Hydrologic Systems and Modelling.

(3) (3 hour lectures) (Restriction: Not open to students who have taken ABEN 509.) Use of deterministic and stochastic models to analyze components of the hydrologic cycle on agricultural and forested watersheds, floods frequency analysis, hydrograph analysis, infiltration, runoff, overland flow, flood routing, erosion and sediment transport. Effects of land-use changes and farm and recreational water management systems on the hydrologic regime.

BREE 510 Watershed Systems Engineering.

(3) (3-1-5) (Restrictions: U3 students or above.) (Note: Case studies and a project.) An examination and application of methodologies, tools and algorithms used in environmental systems engineering with an emphasis on allocation of resources within a watershed. Skills addressed include systematic evaluation of alternatives, identification of tradeoffs and assessment of the degree of optimality of design or alternatives.

BREE 512 Soil Cutting and Tillage.

(3) (2 lectures and one 2-hour lab) (Prerequisite (Undergraduate): BREE 341 (formerly ABEN 341)) (Restriction: Not open to students who have taken ABEN 512.) Soil mechanics applied to cutting, tillage and drain installation tools. Soil cutting forces for two and three dimensional implements. Soil loosening, inversion, sorting and manipulation. Selection of traction machines to match soil cutting and tillage requirements. Depth and grade control systems. Analysis of drainage machines, wheel trenchers, chain trenchers and trenchless plows.

BREE 515 Soil Hydrologic Modelling.

(3) (3 lectures and one 3-hour lab) (Restriction: Not open to students who have taken ABEN 515.) A review of computer simulation models for designing subsurface drainage systems. Use of CAD systems for designing and drafting drainage plans.

BREE 518 Bio-Treatment of Wastes.

(3) (One 3 hour lecture) (Restriction: Not open to students who have taken ABEN 518.) Special topics concerning control of pollution agents from the agricultural industry; odour control, agricultural waste treatment including biological digestion, flocculants, land disposal and sedimentation, pesticide transport.

BREE 519 Advanced Food Engineering.

(3) (3 lectures and one 2-hour lab) (Prerequisites: BREE 325 (formerly ABEN 325) and MECH 426, or permission of instructor) (Restriction: Not open to students who have taken ABEN 519.) Advanced topics in food engineering. Concepts of mathematical modeling and research methodologies in food engineering. Topics include heat and mass transfer in food systems, packaging and distribution of food products, thermal and non-thermal processing, rheology and kinetics of food transformations.

BREE 525 Climate Control for Buildings.

(3) (3 lectures and one 3-hour lab) (Prerequisite: BREE 301 (formerly ABEN 301)) (Restriction: U3 students or above. Not open to students who have taken ABEN 525.) The analyses of heat and water vapour transfer through the structure of buildings are used to design heating, ventilation and refrigeration systems. Heat conduction and convection as well as radiation are included in the analysis of heat transfer. Ventilation systems are designed for livestock shelters, produce storages and greenhouses.

BREE 530 Fermentation Engineering.

(3) (3 lectures and one 3-hour lab) (Prerequisite (Undergraduate): BREE 325 (formerly ABEN 325) or equivalent) (Graduate courses available to senior undergraduates with permission of the instructor) (Restriction: Not open to students who have taken ABEN 530.) Advanced topics in food and fermentation engineering are covered, including brewing,

bioreactor design and control and microbial kinetics.

BREE 531 Post-Harvest Drying.

(3) (Restrictions: U3 students or above. Not open to students who have taken ABEN 621 or ABEN 531.) Heat and moisture transfer with respect to drying of agricultural commodities; techniques of enhancement of heat and mass transfer; drying efficiency and scale-up problems.

BREE 532 Post-Harvest Storage.

(3) (Restrictions: Not open to students who have taken ABEN 622 or ABEN 532.) Active, semi-passive and passive storage systems; environmental control systems; post-harvest physiology and pathogenicity; quality assessment and control methodology; economic aspects of long-term storage.

BREE 533 Water Quality Management.

(3) (Restriction: Not open to students who have taken BREE 625 (formerly ABEN 625).) Management of water quality for sustainability. Cause of soil degradation, surface and groundwater contamination by agricultural chemicals and toxic pollutants. Screening and mechanistic models. Human health and safety concerns. Water table management. Soil and water conservation techniques will be examined with an emphasis on methods of prediction and best management practices.

BTEC-Biotechnology

Offered by: Parasitology

BTEC 501 Bioinformatics.

(3) (2 lectures and 1 tutorial per week) This course introduces the application of computer software for analysis of biological sequence information. An emphasis is placed on the biological theory behind analytical techniques, the algorithms used and methods of developing a statistical framework for various types of analysis.

BTEC 502 Biotechnology Ethics and Society.

(3) (Restriction: U3 and over.) Examination of particular social and ethical challenges posed by modern biotechnology such as benefit sharing, informed consent in the research setting, access to medical care worldwide, environmental safety and biodiversity and the ethical challenges posed by patenting life.

BTEC 535 Functional Genomics in Model Organisms.

(3) (Prerequisite: 300-level course in genetics, molecular biology, biochemistry or permission of instructor.) (Restriction: Limited to 30 students.) An overview of strategies used to understand the function of genes, especially those identified through genome sequencing and bioinformatics. Use of model organisms that have proved particularly valuable for this purpose.

BTEC 555 Structural Bioinformatics.

(3) (Prerequisite: 300-level undergraduate course in molecular biology, biochemistry or permission of instructor.) Fundamentals of protein structure and the application of tools for structure determination, how protein structure allows us to understand the complex biological functions, and how knowledge of protein structure can contribute to drug discovery.

CELL-Genetics

Offered by: Plant Science

CELL 204 Genetics.

(4) (3 lectures, one 3-hour lab, one 1-hour tutorial) The course integrates classical, molecular and population genetics of animals, plants, bacteria and viruses. The aim is to understand the flow of genetic information within a cell, within families and in populations. Emphasis will be placed on problem solving based learning. The laboratory exercises will emphasize the interpretation of genetic experimental data.

★CELL 500 Techniques Plant Molecular Genetics.

(3) Plant biotechnology, recombinant DNA techniques, transgenic plant generation (genetically modified plants) as well as gene and gene product analysis.

★CELL 501 Plant Molecular Biology and Genetics.

(3) Photosynthesis, plant development, plant genome mutagenesis and analysis, and plant stress are discussed. Journal articles and reviews on all aspects of plant molecular biology and genetics.

ENTO-Entomology

Offered by: Natural Resource Sciences

★ ENTO 330 Insect Biology.

(3) (Fall) (2 lectures and one 2-hour lab) (Restriction: Not open to students who have taken NRSC 330) Insect structure and function, development and specialization, ecology, behaviour, diversity, evolution, classification and management.

★ ENTO 336 Economic Entomology.

(3) (Fall) (Prerequisites: WILD 200 (formerly AEBI 200) or ENTO 330 (formerly NRSC 330) or permission of instructor.) Comparison of the economic impact of insect pests in agricultural crops and forests with the social and economic value of insects. Principles of pest management theory, emphasizing insect monitoring, sampling, and economic decision levels.

ENTO 350 Insect Biology and Control.

(3) (Winter) (3 hours lecture) (Prerequisite: BIOL 205 or permission of instructor) (Restriction: Not open to students who have taken or are taking ENTO 330 or BIOL 350) (Note: Offered on the downtown campus. This course is also offered as BIOL 350 in the fall term) Introduction to insect structure, physiology, biochemistry, development, systematics, evolution, ecology and control. Stress on interrelationships and integrated pest control.

ENTO 352 Control of Insect Pests.

(3) (Winter) (Restriction: Not open to students who have previously taken ENTO 452) (3 lectures) Modern concepts of integrated control techniques and principles of insect pest management, with emphasis on biological control (use of predators, parasites and pathogens against pest insects), population monitoring, and manipulation of environmental, behavioral and physiological factors in the pest's way of life. Physical, cultural, and genetic controls and an introduction to the use of non-toxic biochemical controls (attractants, repellents, pheromones, antimetabolites).

★ ENTO 425 Insect Ecology.

(3) (Winter) (Restriction: Not open to students who have taken ENTO 525) (Prerequisites: WILD 205 (formerly AEBI 205) or BIOL 215 or permission of instructor) Study of how insects and their relatives interact with their environment, each other, and other plants and animals. Emphasis on population and community ecology, biodiversity and conservation, plant-insect interactions, and applied insect ecology. Relationships between insects and ecosystem function.

★ ENTO 440 Systematic Entomology.

(3) (Winter) (1 lecture, 1 lab and project) (Prerequisite: ENTO 330 (formerly NRSC 330).) Classification of principal orders, suborders and superfamilies of insects; use of keys; collecting methods.

ENTO 446 Apiculture.

(3) Theory and practice of beekeeping. Social insects; development of social behaviour; co-evolution of flowering plants and social insects; life and behaviour of honeybees; insect pollination; honey production; properties of honey; practical beekeeping. Demonstrations and written assignments essential.

★ ENTO 515 Parasitoid Behavioural Ecology.

(3) (Winter) (Prerequisite: ENTO 330 (formerly NRSC 330) or equivalent) (Restriction: Not open to students who have taken NRSC 515) The origin and diversity of parasitoid species will be presented. Aspects of behavioural ecology that pertain to host selection, optimal allocation of progeny and sex and host-parasitoid interactions are examined. The importance of these processes is discussed in a biological control

perspective.

ENTO 520 Insect Physiology.

(3) (Winter) (Prerequisite: Permission of instructor) (Restriction: Not open to students who have taken NRSC 520) Organismal approach to insects, emphasizing the physiology and development, and the physiological relations of insects to their environment.

★ ENTO 535 Aquatic Entomology.

(3) (Winter) Diversity, biology, ecology and recognition of the main groups of aquatic insects.

ENTO 550 Veterinary and Medical Entomology.

(3) (Winter) (Prerequisite: Permission of instructor) (Restriction: Not open to students who have taken NRSC 550) Environmental aspects of veterinary and medical entomology. An advanced course dealing with the biology and ecology of insects and acarines as aetiological agents and vectors of disease, and their control. Integrated approaches to problem solving.

FDSC-Food Science

Offered by: Parasitology, Food Science &

Agr-Chemistry

FDSC 110 General Chemistry 1.

(4) (Winter) (3 lectures and one 3-hour lab) The course will be a study of the fundamental principles of atomic structure, valence theory and the periodic table.

FDSC 111 General Chemistry 2.

(4) (Prerequisite: FDSC 110.) (Note: This course is not intended to be equivalent to CHEM 120, General Chemistry 2.) Bonding theories and major functional groups such as hydrocarbons, alcohols, amines, carbonyl compounds and their derivatives. Organic chemistry related to biochemistry including amino acids, proteins, enzymes, carbohydrates and lipids. Introduction to various laboratory techniques such as purification distillation, re-crystallization and extraction.

FDSC 200 Introduction to Food Science.

(3) (Fall) (3 lectures) (This course is scheduled for video-conferencing.) This course enables one to gain an appreciation of the scope of food science as a discipline. Topics include introductions to chemistry, processing, packaging, analysis, microbiology, product development, sensory evaluation and quality control as they relate to food science.

FDSC 211 Biochemistry 1.

(3) (3 lectures) (Corequisite: FDSC 230) Biochemistry of carbohydrates, lipids, proteins, nucleic acids; enzymes and coenzymes. Introduction to intermediary metabolism.

FDSC 213 Analytical Chemistry 1.

(3) (Fall) (3 lectures and one 3-hour lab) Theoretical aspects of wet chemical techniques including gravimetric and volumetric analyses, redoximetry, and separation techniques.

FDSC 230 Organic Chemistry.

(4) (Fall) (3 lectures and one 3-hour lab) Atomic and molecular structure, modern concepts of bonding, overview of functional groups, conformational analysis, stereochemistry, mechanisms and reactions of aliphatic compounds.

FDSC 233 Physical Chemistry.

(3) (Winter) (3 lectures) Introduction to kinetic theory, thermodynamics, properties of liquids and solids, chemical equilibrium and the law of mass action, phase rule, properties of solutions, chemical kinetics.

FDSC 251 Food Chemistry 1.

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisite: FDSC 211) A study of the chemistry and functionality of the major components comprising food systems, such as water, proteins, carbohydrates and lipids. The relationship of these components to food stability will be studied in terms of degradative

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

reactions and processing.

FDSC 300 Principles of Food Analysis 1.

(3) (Fall) (3 lectures and one 3-hour lab) (Prerequisite: FDSC 251 or permission of instructor.) (Corequisite: FDSC 251 or permission of instructor.) The fundamentals of food analysis are presented with the emphasis on the major components of foods. Topics include: food components, sampling, method selection, official methods, proximate analysis, moisture, protein, fat, ash, fiber, carbohydrates, vitamins and nutraceutical compounds.

FDSC 305 Food Chemistry 2.

(3) (Fall) (3 lectures and one 3-hour lab) (Prerequisite: FDSC 251) A study of the chemistry and functionality of the minor components comprising food systems, such as enzymes, anthocyanins, carotenoids, additives, vitamins and essential oils. The relationship of these components to food stability in terms of degradative reactions and processing.

FDSC 310 Post Harvest Fruit and Vegetable Technology.

(3) (Fall) (3 lectures and one 3-hour lab) The post harvest chemistry and physiology of horticultural crops as they affect quality and marketability, handling methods pre and post harvest, principles and practices in cooling, storage, transportation and packaging.

FDSC 315 Separation Techniques in Food Analysis 1.

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisite: FDSC 300 or permission of instructor.) A detailed treatment on the principal chromatographic and electrophoretic techniques that are associated with the analysis of carbohydrate, lipid, protein constituents of food.

FDSC 319 Food Commodities.

(3) (Winter) (2 lectures and one 3-hour lab) (Prerequisite: FDSC 251 or permission of instructor) The relationship between the chemistry of food constituents present in common commodities, such as milk, meat, eggs, cereals, oilseeds etc. and the common processing technologies associated with their transformation into stable food products.

FDSC 330 Food Processing.

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisite: FDSC 251) The principles and practices of food processing with an emphasis on canning, freezing, and dehydration. A survey of the newer methods of food preservation such as irradiation, reverse osmosis etc.

FDSC 334 Analysis of Food Toxins and Toxicants.

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisite: FDSC 213 or permission of instructor.) Toxins and toxicant residues in food including heavy metals, persistent organic pollutants (POPs) and microbial toxins are explored from an analytical perspective; new methods and strategies of analysis are emphasized.

FDSC 400 Food Packaging.

(3) (Fall) (3 lectures and one 3-hour lab) (Prerequisite: FDSC 305) An integrated approach to the materials used for the packaging of food products, considering the physical, chemical and functional characteristics of such materials and their utility, relative to the chemistry of the food system they are designed to enclose and preserve.

◆FDSC 405 Product Development.

(3) (Fall or Winter) (3 lectures and one 3-hour lab) (Pre-/Co-requisite: FDSC 305) The chemical, technological and procedural aspects of product development. An understanding of the role and functionality of food ingredients such as acidulants, phosphates, modified starches, gums, emulsifiers, food additives and other functional components in relation to the formulation of food products.

FDSC 410 Flavour Chemistry.

(3) (Winter) (3 lectures) (Prerequisite: FDSC 305) The chemistry of the flavour constituents of foods, synthesis, modification, extraction and use.

FDSC 425 Principles of Quality Assurance.

(3) (Winter) (3 lectures) (Prerequisite: AEMA 310) The principles and practices required for the development, maintenance and monitoring of systems for food quality and food safety. The concepts and practices of Hazard Analysis Critical Control Point; ISO 9000; Total Quality Management; Statistical Sampling Plans, Statistical Process Control; Tools of Quality;

Government Regulations.

FDSC 442 Food Microbiology.

(3) (Fall) (Prerequisite: MICR 230 or permission of instructor.) (Restriction: Not open to students who have completed MICR 442.) Topics in Food Microbiology including an overview of the natural flora and microbiological spoilage of food products, methods of control and shelf-life extension, methods of detection and control food-borne pathogens and the use of suitable microorganisms in the production of a variety of food products.

◆FDSC 490 Research Project 1.

(3) (Fall or Winter) A course designed to give final year undergraduate students research experience.

◆FDSC 491 Research Project 2.

(3) (Fall or Winter) (Pre-/Co-requisite: FDSC 490.) (Restriction: Registration by Department permission only.) A laboratory research project.

FDSC 495D1 (1.5), FDSC 495D2 (1.5) Food Science Seminar.

(Fall) (2 lectures) (Students must register for both FDSC 495D1 and FDSC 495D2.) (No credit will be given for this course unless both FDSC 495D1 and FDSC 495D2 are successfully completed in consecutive terms) Two 20-minute presentations (1 per term) on an assigned or selected topic. The purpose is to research a subject and present to a peer audience the essence of the subject investigated. Development of presentation and communication skills at a professional level is stressed and rapport with the industry will be established through guest speakers.

FDSC 495N1 (1.5), FDSC 495N2 (1.5) Food Science Seminar.

(Winter) (Students must also register for FDSC 495N2) (No credit will be given for this course unless both FDSC 495N1 and FDSC 495N2 are successfully completed in a twelve month period) Two 20-minute presentations (1 per term) on an assigned or selected topic. The purpose is to research a subject and present to a peer audience the essence of the subject investigated. Development of presentation and communication skills at a professional level is stressed and rapport with the industry will be established through guest speakers.

★FDSC 515 Enzyme Thermodynamics/Kinetics.

(3) (Winter) (Prerequisites: FDSC 211 and FDSC 233 or instructor's permission) (Course offered in odd years. Check with Graduate adviser.) Selected advanced topics on the biophysical and kinetic aspects of enzymatic reactions, particularly the fundamentals and applications of laws of biothermodynamics, biochemical equilibrium, electrochemistry and biochemical kinetics as related to the enzymatic reactions.

★FDSC 519 Advanced Food Processing.

(3) (Winter) (3 lectures) (Prerequisite: FDSC 330) (Course offered in even years (check with Graduate Advisor)) Advanced technologies associated with food processing studied in more detail. Topics include food irradiation, reverse osmosis, super critical fluid extraction and extrusion.

★FDSC 520 Biophysical Chemistry of Food.

(3) (Fall) (3 lectures) (Prerequisite: FDSC 233) (Course offered in odd years. Check with Graduate Advisor.) This course will cover recent advances in the application of spectroscopic techniques, including infrared, Raman, near-infrared, circular dichroism, and fluorescence spectroscopy, to the study of biomolecules of relevance to food. Particular emphasis will be placed on the molecular basis of structure-function and structure-functionality relationships.

★FDSC 530 Advanced Analytical Chemistry.

(3) (Fall) (3 lectures) (Prerequisite: FDSC 213) (Course offered in odd years (check with Graduate Advisor)) Selected instrumental methodologies including advances in automated chromatography, wide band NMR, chemical sensors, and the application of other spectroscopic techniques to the analysis of food constituents.

★FDSC 535 Food Biotechnology.

(3) (Fall) (3 lectures) (Prerequisite: MICR 230) Developments in biotechnology as it relates to food production and processing concerning traditional food fermentations as well as novel food biotechnology enzymes, ingredients, genetic engineering, plant tissue culture and developments for microbiological and food analysis.

★FDSC 536 Food Traceability.

(3) (Winter) (Prerequisite: FDSC 425 or by Instructor's permission.) Concepts and processes associated with the identification, tracking and tracing food forward and backward through the food continuum.

★FDSC 537 Nutraceutical Chemistry.

(3) (Fall) (Prerequisites: FDSC 230, FDSC 233, FDSC 211 or by Instructor's permission.) The origin, classification, mechanism of action and chemical properties of potential and established nutraceutical compounds and their applications in functional foods.

FDSC 538 Food Science in Perspective.

(3) (Restriction: Not open to students with an undergraduate degree in Food Science or currently majoring in Food Science. Open to U3 students and above.) Food industry, food properties, nutritive aspects, quality factors, and key preservation processes, with self-study linking these elements directly to specific commodities and product groups, their characteristics, chemistry and distinct manufacturing processes.

MICR-Microbiology

Offered by: Natural Resource Sciences

MICR 230 Introductory Microbiology.

(3) (Winter) (3 lectures and one 3-hour lab) The occurrence and importance of microorganisms (especially bacteria) in the biosphere. Principles governing growth, death and metabolic activities of microorganisms. An introduction to the microbiology of soil, water, plants, food, man and animals.

★MICR 300 Microbial Physiology Laboratory.

(3) (Fall) (Prerequisite: MICR 230.) (Restriction: Not open to students who have taken MICR 200.) Application of microbiological techniques relating to physiology, culturing, and characterization of microorganisms. Topics include bacterial growth curves, bacterial metabolic requirements, enzymatic assays.

MICR 311 Microbiology Seminar 1.

(1) (Fall and Winter) (Prerequisite: MICR 230.) Introductory seminar on a selected topic in microbiology.

MICR 331 Microbial Ecology.

(3) (Winter) (Restriction: Not open to students who have successfully completed NRSC 331) The ecology of microorganisms, primarily bacteria and archaea, and their roles in biogeochemical cycles will be discussed. Microbial interactions with the environment, plants, animals and other microbes emphasizing the underlying genetics and physiology. Diversity, evolution (microbial phylogenetics) and the application of molecular biology in microbial ecology.

★MICR 338 Bacterial Molecular Genetics.

(3) (Fall) (Prerequisites: FDSC 211 and CELL 204) (Restriction: Not open to students who have successfully completed NRSC 338.) Basic bacterial genetics, DNA damage and repair, mutagenesis, gene cloning, mapping and regulation, molecular biology. Laboratory sessions will provide the student with practical experience in the genetic manipulation of microbes and in molecular biology techniques.

★MICR 341 Mechanisms of Pathogenicity.

(3) (Fall) (3 lectures, one 3-hour lab) (Prerequisite: MICR 230) A study of the means by which bacteria cause disease in animals and humans. Includes response of host to invading bacteria, bacterial attachment and penetration processes, and modes of actions of exotoxins and endotoxins.

MICR 412 Microbiology Seminar 2.

(1) (Fall and Winter) (Prerequisite: MICR 311.) Advanced seminar on a selected topic in microbiology.

★MICR 450 Environmental Microbiology.

(3) (Winter) (Prerequisite: MICR 230.) (Pre/Corequisite: MICR 331.) Focus on microbes in the environment. Topics include extreme environments, polar microbiology, biotechnology and bioremediation. Emphasis will be on population studies based upon molecular biological methods.

MICR 481 Microbiology Project 1.

(3) (Fall and Winter) (Pre/Corequisite: MICR 300 (formerly MICR 200).) (Restriction: Enrolment in Microbiology Major program or permission of instructor.) A research project on a topic relevant to the field of microbiology.

MICR 482 Microbiology Project 2.

(3) (Fall and Winter) (Prerequisite: MICR 481.) (Restriction: Enrolment in Microbiology Major program or permission of instructor.) Continuation of the project begun in MICR 481 on a topic relevant to the field of microbiology.

MICR 492 Research Project 1.

(2) (Fall and Winter) (Restrictions: Not open to students who have successfully completed MICRO 492D,N. Instructor's approval required.) A research project involving laboratory work. Preparation of a project progress report and a literature review pertinent to the research area.

MICR 493 Research Project 2.

(3) (Fall and Winter) (Restrictions: Not open to students who have successfully completed MICRO 492D,N. Instructor's approval required.) A continuation of the project begun in MICR 492. Laboratory work, preparation of a project report and journal article, and an oral presentation.

MICR 495 Seminar 1.

(1) (Fall and Winter) (Restriction: Instructor's approval required.) Presentation on a selected topic.

MICR 496 Seminar 2.

(2) (Fall and Winter) (Restrictions: Not open to students who have successfully completed MICR 495,D, N. Instructor's approval required) Advanced presentation on a selected topic.

NRSC-Natural Resource Sciences

Offered by: Natural Resource Sciences

NRSC 201 Introductory Meteorology.

(3) (Fall) (3 lectures) (Restriction: Not open to students who have taken AEPH 201) The atmosphere - its properties (structure and motion), and thermodynamics (stability, dry and moist). Clouds and precipitation. Air masses and fronts. Radiation and the global radiation budget. Interactions between the atmosphere and the biosphere.

★NRSC 221 Environment and Health.

(3) (Restriction: Not open to students who are taking or have taken GEOG 221.) (Note: This course is also offered as GEOG 221. Students enrolled in main campus programs register as GEOG 221; students enrolled in Macdonald campus programs register as NRSC 221.) Introduction to physical and social environments as factors contributing to the production of human health, with emphasis on the physical properties of the atmospheric environment as they interact with diverse human populations in urban settings.

NRSC 300 Natural History of East Africa.

(3) (Winter) (Restriction: Limited to students in AFSS) (Corequisite: ANTH 315) Introduction to natural features and ecological interactions involving flora and fauna of East Africa. A science context course taking advantage of the biological opportunities presented by habitats at various locations, examining conservation issues related to these situations.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

★NRSC 315 Science of Inland Waters.

(3) (Fall) (2 lectures and one 3-hour lab) (Restriction: Not open to students who have taken ZOO 315) Nature and history of limnology; divisions of inland waters; properties of fresh water; habitats; zones; nutrient cycles; biota; adaptations; seasonal variation; distributions; pollution; succession and evolution of fresh water environments. Includes field excursions.

NRSC 333 Physical and Biological Aspects of Pollution.

(3) (Fall) (3 lectures) (Restriction: Not open to students who have taken WILD 333) The environmental contaminants which cause pollution; sources, amounts and transport of pollutants in water, air and soil; waste management.

★NRSC 340 Global Perspectives on Food.

(3) (Winter) (3 lectures) (Prerequisite: A 200-level course in food science, food resources or dietetics, or permission of instructor.) Issues of community and global change in relation to environment and the production of food. Contrasts between developed and developing countries will highlight impacts of colonialism, political structures, and cultural systems related to gender, class and ethnicity.

NRSC 370 Special Topics 01.

(1) (Fall and Winter) (Restriction: Departmental approval required.) Students will pursue topics that are not otherwise available in formal courses. An individualized course of studies will be followed under the supervision of a member of staff qualified in the appropriate discipline or area.

NRSC 371 Special Topics 02.

(1) (Fall and Winter) (Restriction: Departmental approval required.) Students will pursue topics that are not otherwise available in formal courses. An individualized course of studies will be followed under the supervision of a member of staff qualified in the appropriate discipline or area.

NRSC 372 Special Topics 03.

(2) (Fall and Winter) (Restriction: Departmental approval required.) Students will pursue topics that are not otherwise available in formal courses. An individualized course of studies will be followed under the supervision of a member of staff qualified in the appropriate discipline or area.

NRSC 373 Special Topics 04.

(2) (Fall and Winter) (Restriction: Departmental approval required.) Students will pursue topics that are not otherwise available in formal courses. An individualized course of studies will be followed under the supervision of a member of staff qualified in the appropriate discipline or area.

NRSC 374 Special Topics 05.

(3) (Fall and Winter) (Restriction: Departmental approval required.) Students will pursue topics that are not otherwise available in formal courses. An individualized course of studies will be followed under the supervision of a member of staff qualified in the appropriate discipline or area.

NRSC 375 Special Topics 06.

(3) (Fall and Winter) (Restriction: Departmental approval required.) Students will pursue topics that are not otherwise available in formal courses. An individualized course of studies will be followed under the supervision of a member of staff qualified in the appropriate discipline or area.

NRSC 382 Ecological Monitoring and Analysis.

(3) (Summer) Students use a variety of methods to sample physical, biological and human systems, to analyse and interpret these data to assess ecosystem health. Methods include GIS, population sampling, land use, resource and biodiversity mapping.

NRSC 383 Land Use: Redesign and Planning.

(3) (Summer) (Prerequisite: 24 credits of university training in a field relating to the environment, including one course in statistics, AEMA 310, or equivalent, or permission of instructor) Issues related to historical and modern land use, environmental impacts, current structures of governance. Needs assessment, and the redesign of human systems of organization and decision making according to ecological principles. Land use in peri-urban and rural settings, and the use of participatory action research.

NRSC 384 Field Research Project.

(3) (Summer) (Prerequisite: 24 credits of university training in a field relating to the environment, including one course in statistics, AEMA 310, or equivalent, or permission of instructor) Small group field research project.

NRSC 391 Scientific Communication.

(2) (Fall and Winter) (1 1/2 hours weekly) (Note: English is language of instruction) (Restrictions: Not open to students who have taken NRSC 491, NRSC 492, WILD 491, D, N or AEBI 495D, N. Enrolment limited to 25 students per semester.) Preparation and presentation of scientific information in both oral and written formats, including synthesis and interpretation.

NRSC 430 GIS for Natural Resource Management.

(3) (Winter) (Prerequisites: At least one environmental science course and one ecology course or permission of instructor) (Restriction: U2 students and above. Not open to students who have taken GEOG 201, 306 or 307 or BREE/ABEN 430. Limited to 32 students.) Applications of Geographic Information Systems (GIS) and spatial analysis techniques to the presentation and analysis of ecological information, including sources and capture of spatial data; characterizing, transforming, displaying spatial data; and spatial analysis to solve resource management problems.

NRSC 437 Assessing Environmental Impact.

(3) (Winter) (2 lectures) (Restriction: Not open to students who have taken WILD 437) (Restrictions: U2 students and above) Theories and procedures of assessing environmental impact. An examination of the environmental impact of existing programs and projects to examine their accuracy in predicting consequences and attenuating undesirable effects.

NRSC 497 Research Project 1.

(2) (Restriction: Not open to students who have taken NRSC 496 D,N or NRSC 497 D,N) (Fall and Winter) Independent research project in consultation with a faculty supervisor. Selection of a research problem, formulation of hypotheses and objectives, research design and a comprehensive review of the pertinent literature.

NRSC 498 Research Project 2.

(3) (Fall and Winter) (Restriction: Not open to students who have taken NRSC 496 D,N or NRSC 497 D,N) (Prerequisite: NRSC 497) Continuation of the independent research project begun in NRSC 497. Data collection and analysis, testing of hypotheses, discussion of results.

★NRSC 510 Agricultural Micrometeorology.

(3) (Fall) (3 lectures) (Restriction: Not open to students who have taken AEPH 510) Interaction between plant communities and the atmosphere. The physical processes governing the transfer of heat, mass and momentum as they relate to research and production in agricultural and environmental systems. Experimental techniques for measuring fluxes of heat, water-vapour, CO₂ and natural and man-made pollutants.

NRSC 512 Water: Ethics, Law and Policy.

(3) (Fall) The various legal expressions of the relationship between humanity and water such as those grounded in markets, basic rights, First Nations traditions, utilitarianism and cost/benefit analysis. Public, private and international law, and intergovernmental institutions relevant to the protection and management of water resources.

NRSC 514 Freshwater Ecosystems.

(3) (Fall) Origin, diversity, structure, function and evolution of freshwater ecosystems; fauna, flora and biotic communities of freshwater habitats; indicator organisms; biotic indices; human impact on freshwater ecosystems.

★NRSC 540 Socio-Cultural Issues in Water.

(3) (Winter) (Prerequisite: A 300- or 400-level course in water or permission of instructor.) (3-hour seminar) Discussion of current debates and problems related to water, especially in developing countries. Topics include: gender relations and health in the context of cultural and economic systems, and the impacts of new technologies, market structures and population growth.

NUTR-Nutrition and Dietetics

Offered by: Dietetics & Human Nutrition

NUTR 200 Contemporary Nutrition.

(3) (Restriction: Not open for credit to students with a biology or chemistry course in their program, or to students registered in the School of Dietetics and Human Nutrition, or to students who take NUTR 207) Provides students without a biology/chemistry background with the fundamental tools to critically assess nutrition related information, to evaluate their own diets, and to implement healthy changes. Emphasis is on current issues and maximizing health and disease prevention at different stages of the lifecycle.

NUTR 207 Nutrition and Health.

(3) (Fall) (3 lectures) (Corequisites: BIOL 401 or FDSC 230) (Restriction: Not open to students who take NUTR 200 or NUTR 307 or who have taken PHGY 311 or BIOC 311) (Restriction: Science students in physical science and psychology programs who wish to take this course should see the Arts and Science Student Affairs Office for permission to register.) Provides students who have a basic biology/chemistry background with the fundamental information on how macronutrients, vitamins and minerals are metabolized in the body, followed by application to evaluate current issues of maximizing health and disease prevention at different stages of the lifecycle.

‡ NUTR 208 Stage in Dietetics 1.

(1) (Winter) (Prerequisites: all Required courses in Term 1 of the Dietetics Major.) (Corequisites: All Required courses in Term 2 of the Dietetics Major) (Restriction: Dietetics Major or Special Students (professional credentialing)) Introduction to the dietetics profession; principles and policies in food and nutrition essential to entry-level dietetics experiences; practice in dietary interviewing, problem solving and report writing related to Level 1 Professional Practice placements.

‡ NUTR 209 Professional Practice Stage 1B.

(3) Directed, supervised experiences in nutrition services and food service operations management; integration into the professional team.

NUTR 214 Food Fundamentals.

(3) (Fall) (2 lectures and one 4-hour lab) (Prerequisite: FDSC 230 or corequisite with instructor's permission.) (Corequisite FDSC 211.) Study of composition, structure and chemical and physical properties of foods. To understand the scientific principals underlying chemical and physical phenomena that occur during the preparation of food. Laboratory emphasis on developing skills in handling and preparing food, and food assessment by sensory evaluation.

NUTR 217 Application: Food Fundamentals.

(3) (Winter) (2 lectures and one 4-hour lab) (Prerequisite: NUTR 214) A more intensive study of food and complex food mixtures, including their chemical and physical properties. Learning how to control the changes that take place during the preparation of food to obtain palatable, nutritious and safe food. An introduction to culturally determined food habits. Laboratory emphasis on acquiring new knowledge and application to basic food preparation and cooking principles.

NUTR 301 Psychology.

(3) (Fall) (2 lectures and 1 conference) A study of the general characteristics of physical, social, emotional and intellectual development, the psychology of learning, and the growth and development of personality.

NUTR 307 Human Nutrition.

(3) (Fall) (Prerequisites: BIOL 201 or AEBI 202, CHEM 212 or FDSC 230 or permission of the instructor.) (Corequisite: BIOC 311 or PHGY 202 or PHGY 210 or NUTR 207.) (3 lecture hours and 1 tutorial/conference hour.) Nutrition in human health and disease from the molecular to the organismal level. Nutrigenomics, the impact of genotype on nutrient metabolism, health and disease risk, and the role of nutrients in metabolic regulation.

‡ NUTR 310 Stage in Dietetics 2A.

(1) (Winter) (One 2-hour conference/week) Human food intake assessment and evaluation will be practiced including modules on dietary interviewing, nutrition education teaching plans and documentation for the medical record. Practical aspects of health and food service administration will be addressed.

‡ NUTR 311 Stage in Dietetics 2B.

(5) Two interrelated modules of directed experience in normal and clinical nutrition and foodservice management, in health care settings and the private sector.

NUTR 322 Applied Sciences Communication.

(2) (Fall) (2 lectures, 1 lab) (Prerequisite: Completion of 15 credits in a B.Sc. program) The principles and techniques of communicating applied sciences to individuals and groups in both the professional and public milieu. Effective public speaking and group interaction techniques. Communication materials selection, development, use, and evaluation. Writing for the media. Balancing risk and reason in communicating scientific findings.

NUTR 337 Nutrition Through Life.

(3) (Winter) (3 lectures, 1 conference) (Prerequisite: ANSC 330 or NUTR 307) Emphasis on applied quantitative aspects of human nutrition. Nutrient utilization, evaluation and requirements, as related to dietary standards.

NUTR 344 Clinical Nutrition 1.

(4) (Winter) (Two 2-hour lectures) (Prerequisite: ANSC 323.) (Corequisite: NUTR 337.) Clinical nutrition assessment and dietary modification of pathological conditions including hypertension, lipid disorders and cardiovascular disease, obesity, diverticulosis, cancer, COPD, anorexia nervosa and bulimia.

NUTR 345 Food Service Systems Management.

(2) (Fall) (Prerequisite: NUTR 209.) An introductory course applying the principles of organizational management within the healthcare foodservice industry. Emphasis on understanding standards of quality control, customer relations and sanitation. Budget preparation, scheduling and cost control as well as menu preparation, recipe standardization and costing.

NUTR 346 Quantity Food Production.

(2) (Winter) (Prerequisite: NUTR 345) Quantity food planning, costing, and evaluation. Laboratory experience with quantity food production following principles of food sanitation and safety, food quality and cost-evaluation.

NUTR 403 Nutrition in Society.

(3) (Fall) (3 hour conference) (Prerequisite: NUTR 337) Sociocultural and economic influences on food choice and behaviour; health promotion and disease prevention through nutrition, particularly in high risk populations; the interaction of changing environment, food availability and quality as they affect health.

‡ NUTR 409 Stage in Dietetics 3.

(8) (Winter: 10 weeks) Four interrelated modules of directed experience in clinical nutrition, foodservice management, normal nutrition education and community nutrition, in health care settings and the private sector.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

NUTR 420 Toxicology and Health Risks.

(3) (Fall) (3 lectures) (Prerequisite: FDSC 211, BIOL 201 or BIOC 212) (Restriction: This course is not open to students who have taken NUTR 361) Basic principles of toxicology, health effects of exposure to environmental contaminants such as heavy metals, pesticides and radionuclides and ingestion of food toxicants such as food additives and preservatives; natural toxins in plants and marine foods, human health, ecosystem health, safety evaluation, risk assessment, and current Canadian regulations.

NUTR 430 Directed Studies: Dietetics and Nutrition 1.

(3) (Fall and Winter) An individualized course of study in dietetics/human nutrition under the supervision of a staff member with expertise on a topic not otherwise available in a formal course. A written agreement between student and staff member must be made before registration and filed with the Program Coordinator.

NUTR 431 Directed Studies: Dietetics and Nutrition 2.

(3) (Fall or Winter) An individualized course of study in dietetics/human nutrition under the supervision of a staff member with expertise on a topic not otherwise available in a formal course. A written agreement between student and staff member must be made before registration and filed with the Program Coordinator.

NUTR 431D1 (1.5), NUTR 431D2 (1.5) Directed Studies: Dietetics and Nutrition 2.

(Students must register for both NUTR 431D1 and NUTR 431D2.) (No credit will be given for this course unless both NUTR 431D1 and NUTR 431D2 are successfully completed in consecutive terms) (NUTR 431D1 and NUTR 431D2 together are equivalent to NUTR 431) An individualized course of study in dietetics/human nutrition under the supervision of a staff member with expertise on a topic not otherwise available in a formal course. A written agreement between student and staff member must be made before registration and filed with the Program Coordinator.

NUTR 432 Directed Studies: Dietetics and Nutrition 3.

(3) (Fall and Winter) An individualized course of study in dietetics/human nutrition under the supervision of a staff member with expertise on a topic not otherwise available in a formal course. A written agreement between student and staff member must be made before registration and filed with the Program Coordinator.

NUTR 433 Directed Studies: Dietetics and Nutrition 4.

(5) (Fall or Winter or Summer) (Limited enrolment) (Prerequisite: registration in NUTR 409 or equivalent.) (Restriction: students in the Dietetics Major or documentation of requirement for professional registration) An individualized course of study in dietetics and human nutrition not available through other courses in the School. Emphasis will be placed on application of foods and nutrition knowledge, analytic and synthesis skills, and time management. A written agreement between student and instructor must be made before registration. A "C" grade is required to pass the course.

NUTR 436 Nutritional Assessment.

(2) (Winter) (Prerequisite: NUTR 337) (2 lectures) An intense 4-week course focused on resolving clinically based case studies. The objectives: to develop skills in clinical problem solving, learn principles and methods for assessing the nutritional status of patients and to become skilled at interpreting clinical data relevant to assessing nutritional status and prognosis of hospitalized patients.

NUTR 438 Interviewing and Counselling.

(2) (Winter) (Two 2-hour conferences) (Prerequisite: NUTR 344 and NUTR 311) Theories of behaviour change. Techniques and skills as applicable to the dietitian's role as communicator, interviewer, counsellor, educator, motivator and nutrition behaviour change specialist.

NUTR 445 Clinical Nutrition 2.

(5) (Fall) (Two 2.5-hour lectures) (Prerequisite: NUTR 344 and ANSC 424) Clinical nutrition intervention for gastrointestinal and liver disease, hypermetabolic states, diabetes mellitus, renal disease and inborn errors of metabolism, enteral/parenteral nutrition management.

NUTR 446 Applied Human Resources.

(3) (Fall) (3 lectures, 1 conference) (Prerequisite: AGE 242) The management of people at work. Employee development and the leadership role. The nature of collective bargaining, the role of unions and management.

NUTR 450 Research Methods: Human Nutrition.

(3) (Fall) (2 lectures, 3 hours research, 4 hours other) (Prerequisite: NUTR 337, AEMA 310 or BIOL 373) Introduction to methods of clinical, community, international, and laboratory-based nutrition research. Lectures, readings and assignments will cover basic research concepts. Students undertake a computer directed literature search and analysis.

NUTR 451 Analysis of Nutrition Data.

(3) (Fall) (Prerequisite: NUTR 337.) (Corequisite: NUTR 450) An applied course in analysis and interpretation of nutrition data sets. Introduction to specialized dietary and anthropometric computer programs. Written and oral presentation of results.

NUTR 501 Nutrition in Developing Countries.

(3) (Fall) (2 lectures and one seminar) (Prerequisite: For undergraduate students, consent of instructor required) This course will cover the major nutritional problems in developing countries. The focus will be on nutrition and health and emphasize young children and other vulnerable groups. The role of diet and disease for each major nutritional problem will be discussed.

NUTR 503 Bioenergetics and the Lifespan.

(3) (Fall) (Prerequisites: Undergraduate Basic Biochemistry (3 credits), Undergraduate Mammalian Physiology (EDKP 331 or PHGY 202 or PHGY 210 or ANSC 323), Undergraduate Introductory Nutrition (EDKP 392 or NUTR 207 or NUTR 307).) Multidisciplinary approach that integrates principles of bioenergetics with nutrition through the lifespan.

‡ NUTR 510 Professional Practice - Stage 4.

(14) (Fall: 16 weeks) (Prerequisite: NUTR 409) (Restriction: Undergraduate registration is restricted to students in the Dietetics Major, CGPA greater than, or equal to 2.50) Interrelated modules of directed experience in clinical nutrition, foodservice management, nutrition education and community nutrition, in health care setting and in the private sector.

NUTR 511 Nutrition and Behaviour.

(3) (2 lectures and one seminar) (Prerequisite: NUTR 445 for undergraduate students or consent of instructor) Discussion of knowledge in the area of nutrition and behaviour through lectures and critical review of recent literature; to discuss the theories and controversies associated with relevant topics; to understand the limitations of our knowledge. Topics such as diet and brain biochemistry, stress, feeding behaviour and affective disorders will be included.

NUTR 512 Herbs, Foods and Phytochemicals.

(3) (3 lectures and a project) (Prerequisite (Undergraduate): FDSC 211 or BIOL 201 or BIOC 212) An overview of the use of herbal medicines and food phytochemicals and the benefits and risks of their consumption. The physiological basis for activity and the assessment of toxicity will be presented. Current practices relating to the regulation, commercialization and promotion of herbs and phytochemicals will be considered.

PARA-Parasitology

Offered by: Parasitology

PARA 410 Environment and Infection.

(3) (2 lectures per week) (Prerequisite: BIOL 111 or AEBI 120 or equivalent) Infectious pathogens of humans and animals and their impact on the global environment are considered. The central tenet is that infectious pathogens are environmental risk factors. The course considers their impact on the human condition and juxtaposes the impact of control and treatment measures and environmental change.

PARA 438 Immunology.

(3) (3 lectures per week) (Prerequisite: AEBI 202 or permission of instructor) An in-depth analysis of the principles of cellular and molecular immunology. The emphasis of the course is on host defense against infection and on diseases caused by

abnormal immune responses.

PARA 515 Water, Health and Sanitation.

(3) The origin and types of water contaminants including live organisms, infectious agents and chemicals of agricultural and industrial origins. Conventional and new technological developments to eliminate water pollutants. Comparisons of water, health and sanitation between industrialized and developing countries.

PLNT-Plant Science

Offered by: Plant Science

PLNT 201 Comparative Plant Biology.

(3) (3 lectures plus 1-hour conference) Comparative study of the ways in which photosynthetic organisms acquire resources, develop and grow, reproduce, and interact with various groups of fungi and herbivores. Comparisons will be made among the following major groups: cyanobacteria, algae, liverworts, mosses, seedless vascular plants, gymnosperms, and angiosperms.

PLNT 203 Economic Botany.

(3) Study of plants which are useful or harmful to humans, their origins and history, botanical relationships, chemical constituents which make them economically important; their roles in prehistoric and modern cultures and civilization and possible impact in the future.

PLNT 211 Principles of Plant Science.

(3) (3 lectures and one 2-hour lab) A study of major world crop species with emphasis on their adaptation and distribution in relation to the economic botany of the plants.

PLNT 221 Introduction to Fungi.

(1) (Four 4-hour field labs, given during the second 4 weeks of semester) (Second 4 weeks of term only) Field and laboratory survey of local representatives of the major groups of fungi, including edible and poisonous mushrooms. The role of each group in terrestrial and aquatic ecological niches will be studied with respect to saprophytism, parasitism and symbiosis. Economic importance of fungi in medicine and biotechnology will be introduced.

PLNT 300 Cropping Systems.

(3) (3 lectures and one 3-hour lab) (Prerequisite: PLNT 211) Application of plant science and soil science to production of agronomic and horticultural crops. Use and sustainability of fertilization, weed control, crop rotation, tillage, drainage and irrigation practices.

PLNT 302 Forage Crops and Pastures.

(3) (Prerequisite: PLNT 201 or permission of instructor) (Restriction: Not open to students who have taken PLNT 331.) Ecology, management, and physiology of forage crops with emphasis on establishment, growth, maintenance, harvesting, and preservation; value as livestock feed in terms of nutritional composition and role in environmental conservation.

PLNT 304 Biology of Fungi.

(3) (3 lectures and one 3-hour lab) This course describes the various groups of fungi and explores in depth their biology and physiology, their ecological niches and the role in various ecosystems and their benefits and uses in industry and biotechnology.

PLNT 305 Plant Pathology.

(3) (3 lectures and one 3-hour lab) The theory and concepts of plant pathology, including the disease cycle, infection, symptoms, resistance, epidemiology and control. The biology and taxonomy of pathogens will be studied, including fungi, bacteria, viruses and nematodes. Techniques of inoculation, isolation of pathogens from diseased plants, disease diagnosis and pathogen identification will be demonstrated.

PLNT 307 Vegetable Production.

(3) (Prerequisites: PLNT 201, PLNT 300.) (Restrictions: Not open to students who have taken PLNT 341, PLNT 342, PLNT 343, PLNT 344, PLNT 345 or PLNT 348.) Vegetable production with emphasis on cultural considerations, harvest, and handling of selected vegetable crops; integrates principles of plant growth and vegetable physiology into conventional and ecological vegetable production schemes.

PLNT 310 Plant Propagation.

(3) (3 lectures and one 3-hour lab) Principles and practical aspects of plant propagation are examined. The course consists of two parts. The first third deals with sexual propagation; the production, processing storage certification and analysis of seeds. The remaining two-thirds deals with vegetative propagation; cutting, budding, grafting, layering, and tissue culture.

★PLNT 312 Urban Horticulture.

(3) Selection, use and care of plants in urban environments for the benefit of urban populations: landscape design, turf and green space management, green roofs, design and management of community gardens.

★PLNT 315 Herbs and Medicinal Plants.

(3) (Prerequisite: PLNT 211 or PLNT 201 or permission of instructor.) Biochemistry and ecophysiology of the active ingredients in medicinal plants. Links between cultivation practices and plant compounds. The effect of propagation and environmental factors on active compounds are examined using greenhouse experiments, followed by quantification of active ingredients by analytical techniques and analysis of bioactivity.

★PLNT 321 Fruit Production.

(3) (3 credits; 3 lectures and 1 3-hr lab) (Prerequisite: PLNT 201 or PLNT 211.) Botany, physiology and management practices of the major temperate-zone fruit crops. Includes field work, laboratory experimentation and field trips.

★PLNT 322 Greenhouse Management.

(3) (3 lectures and one 3-hour lab) Greenhouse design and operation, including environmental regulation, fertilization and pest management. Focus will be on the production of major floricultural and vegetable crops.

PLNT 331 Field Crops.

(3) (Restriction: Not open to students who have taken PLNT 333 and/or PLNT 332) (3 lectures and one 3-hour lab period) (Prerequisite: PLNT 211 or PLNT 201) A study of economically important field crops (cereals, forages, oilseeds and crops grown for fibre and other industrial products), historical development, botany, distribution and adaptation, cultural practices and factors that affect the utilization of crop products. Laboratories emphasize morphological study of major field crop species.

PLNT 353 Plant Structure and Function.

(4) (3 lectures and one 3-hour lab) (Prerequisites: PLNT 211 or PLNT 201 and FDSC 211.) The general anatomy and physiology of vascular plants with emphasis on the cells, tissues, organs, chemical components of plants and the physiological processes associated with their function.

PLNT 358 Flowering Plant Diversity.

(3) (2 lectures, one 3-hour lab, plus a 4-day field week held the week preceding the start of classes) (Prerequisites: PLNT 201 or PLNT 211 or ENVR 202 or permission of instructor) Principles of classification and identification of flowering plants and ferns, with emphasis on 35 major families of flowering plants and the habitats in which they grow.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

PLNT 361 Pest Management and the Environment.

(3) (3 lectures) Pests, pest impacts on the global food system and strategies for pest management. Pest management methods, models and programs, and how to reduce pest management impacts on the environment.

★**PLNT 421 Landscape Plant Materials.**

(3) (2 lectures and one 3-hour lab) (Prerequisites: PLNT 211 or PLNT 201) A study of the major types of woody and herbaceous ornamental plants used in landscaping and how the landscaping industry uses plants to improve the environment. Laboratory includes a specimen collection of landscape plants widely used in Québec.

★**PLNT 424 Cellular Regulation.**

(3) (Prerequisites: FDSC 211, AEBI 202 or permission of the instructor.) An overview of the cellular mechanisms used by prokaryotes and eukaryotes to regulate biosynthetic pathways. Topics covered range from control of gene transcription to the regulation of enzyme activity to the role of signal transduction pathways in the control of metabolic flux through cellular pathways.

PLNT 434 Weed Biology and Control.

(3) (3 lectures and one 3-hour lab) (Prerequisite: PLNT 211 or PLNT 201) A study of the biology of undesirable vegetation as related to the principles of prevention and physical, biological, managerial and chemical control. Emphasis on the environmental impact of the different methods of weed control.

PLNT 450 Special Topics: Plant Science.

(2) A course of independent study by the student with the guidance of a professor of recognized competence in the area of the chosen topic.

PLNT 451 Special Topics: Plant Science 2.

(3) A course of independent study by the student with the guidance of a professor of recognized competence in the area of the chosen topic.

PLNT 458 Flowering Plant Systematics.

(3) (1 lecture plus one 3-hour lab plus required summer plant collection) (Prerequisite: PLNT 358 or BIOL 358 or permission of instructor) Principles and methods of phylogenetic analysis of flowering plants with emphasis on new classification systems resulting from analysis of DNA sequence data. Laboratory sessions will focus on 40 temperate and tropical families not covered in PLNT 358 as well as on identification techniques for difficult plant families.

PLNT 460 Plant Ecology.

(3) (3 lectures and one 3-hour lab) (Prerequisite: AEMA 310 or permission of instructor.) Theory and practice of plant ecology with an emphasis on the interaction between patterns and ecological processes and the dynamics, conservation and management of plant populations and communities over a range of temporal and spatial scales.

PLNT 489 Project Planning and Proposal.

(1) (Restriction: Not open to students who have taken PLNT 490D1, PLNT 490D2, PLNT 490N1 or PLNT 490N2.) Preparation of a literature review and research plan for the project course (PLNT 490).

PLNT 490 Research Project.

(2) (Prerequisite: PLNT 489) (Restriction: Not open to students who have taken PLNT 490D1, PLNT 490D2, PLNT 490N1 or PLNT 490N2.) Directed study on approved research project requiring both oral and written presentation.

PLNT 495 Seminar 1.

(1) (Restriction: Not open to students registered in, or who have taken PLNT 495D1, PLNT 495D2, PLNT 495N1 or PLNT 495N2) .

PLNT 496 Seminar 2.

(1) .

PLNT 525 Advanced Micropropagation.

(3) (One 3-hour lecture) A detailed study of the principles and techniques of plant micro propagation. Includes lectures, laboratories, discussion sessions and visits to local laboratories. Evaluation is based on contribution to discussions, laboratory reports and an individualized project.

★**PLNT 535 Plant Breeding.**

(3) (Prerequisite (Undergraduate): CELL 204, PLNT 201 or PLNT 211) (Given in alternate years) Principles and practices of plant breeding, including reproduction of crop plants; plant hybridization; sources of genetic variation; selection methods used for self- and cross-pollinated crops and for clonally reproduced crops; breeding for diseases and pest resistance; applications of biotechnology in plant breeding.

SOIL-Soil Science

Offered by: Natural Resource Sciences

SOIL 200 Introduction to Earth Science.

(3) (Winter) (3 lectures, one 3-hour lab) Introductory concepts of geology and geomorphology will be presented including: rocks and minerals, surface deposits, history and structure of the earth.

SOIL 210 Principles of Soil Science.

(3) (Fall) (3 lectures and one 3-hour lab) Soil formation; examination of chemical, physical and biological properties of soils, interaction between soils, plants and the environment; function of soils in ecosystems with an emphasis on soil nutrients and fertility, and water quality.

SOIL 315 Soil Fertility and Fertilizer Use.

(3) (Winter) (3 lectures and one lab) (Prerequisite: SOIL 210 or permission of instructor) Plant nutrients in the soil, influence of soil properties on nutrient absorption and plant growth, use of organic and inorganic fertilizers.

★**SOIL 326 Soil Genesis and Classification.**

(3) (Fall) (3 lectures and one 3-hour lab) (Prerequisite: SOIL 200 or equivalent) Theories and processes of soil genesis. Canadian classification system and effect of pedogenesis on soil properties.

★**SOIL 331 Soil Physics.**

(3) (Winter) (3 lectures and one 3-hour lab) Soil structure; fluxes of water, heat, gases and solids in soils; physical properties and plant growth; applications to soil dynamics.

★**SOIL 335 Soil Ecology and Management.**

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisites: SOIL 210 and WILD 205 (formerly AEBI 205).) The physical and chemical environment of soil organisms; survey of soil microflora and fauna; processes and optimal agronomic systems of management consistent with the goals of ecological agriculture.

★**SOIL 410 Soil Chemistry.**

(3) (Winter) (1 lecture, 1 tutorial, problem sets) (Prerequisite: SOIL 210 or GEOG 305 or permission of instructor) Soil chemical principles are presented in a series of problem sets covering basic concepts as well as applications to environmental and agricultural situations.

★**SOIL 445 Agroenvironmental Fertilizer Use.**

(3) (Fall) (Prerequisite: SOIL 315.) A sustainable, agroenvironmental approach to nutrient management planning at the farm scale, consistent with guidelines and laws governing fertilizer use in Quebec and other jurisdictions.

SOIL 521 Soil Microbiology and Biochemistry.

(3) (Winter) (Restriction: Not open to students who have taken NRSC 521) Soil environments, soil microorganisms and their function in the biogeochemical cycles of C, N, P and S. Basics of soil bioremediation.

WILD-Resource Development

Offered by: Parasitology, Natural Resource Sciences

WILD 200 Comparative Zoology.

(3) (Fall) (3 lectures and 1 lab) (Restriction: Not open to students who have taken AEBI 200) Animal diversity from an evolutionary/phylogenetic perspective. Classification, biology and evolution of animals; morphology and recognition of animals.

WILD 205 Principles of Ecology.

(3) (Winter) (2 lectures and 1 conference) (Restriction: Not open to students who have taken AEBI 205) The interactions of organisms and the physical environment. Ecological principles will be discussed at the level of the individual, the population and the community.

WILD 212 Evolution and Systematics.

(3) (Fall) (3 lectures, and assignments) (Restriction: Not open to students who have taken ZOO 312) Evolution by natural selection; Neo-Darwinism and alternatives. Myths and misconceptions in evolution. Species and speciation, patterns in phylogenetic trees. Taxonomic hierarchy, principles of classification. Schools of taxonomy, cladistic methods. Character analysis in phylogenetic systematics. Predictive power of phylogenetic hypotheses; applications of systematics to comparative biology.

WILD 307 Natural History of Vertebrates.

(3) (Fall) (Lectures and modules) (Restriction: Not open to students who have taken ZOO 307) Review of higher taxonomic groups of vertebrates and prochordates, emphasizing diagnostic characters evolution and distribution.

WILD 311 Ethology.

(3) (Winter) (2 lectures, one 3-hour lab) (Restriction: Not open to students who have taken ZOO 311) Invertebrate and vertebrate behaviour; innate behaviour, learning, motivation, agonistic behaviour, rhythms, social organization, mating systems and communication.

***WILD 313 Phylogeny and Zoogeography.**

(3) (Winter) (2 lectures, 1 conference and project) (Restriction: Not open to students who have taken ZOO 313) (Prerequisite: WILD 212 or ZOO 312) Patterns of animal diversity in time and space; use of present patterns to reconstruct past events. Major milestones in animal evolution and diversification. Overview of biogeographic realms. Abiotic and biotic events affecting global distribution patterns. Hypothesis testing and analysis in historical biogeography. Applications to ecology, conservation.

WILD 350 Mammalogy.

(3) (Winter) (2 lectures and one 3-hour lab) (Prerequisites: WILD 200 (formerly AE 200) and WILD 307 (formerly ZOO 307)) This course focuses on the evolution, classification, ecology and behaviour of mammals and relations between humans and mammals. Also structure, systematics and identification of local and world mammals, as well as field methods will be emphasized.

WILD 375 Issues: Environmental Sciences.

(3) (Winter) (3 lectures) Principles and trends in global ecology as they pertain to agricultural and natural ecosystems and the impact of environmental change on food production.

***WILD 382 Fish and Wildlife Propagation.**

(3) (Fall) (2 lectures and field trips) (Enrollment limited to 20) An overview of the care and reproduction of wildlife species in captivity for commercial, scientific, conservation, and educational purposes through field trips, lectures, and class discussions.

WILD 401 Fisheries and Wildlife Management.

(4) (Fall) (3 lectures, one 2-hour lab and one week field laboratory prior to fall term) (Prerequisite: PLNT 358) Principles of fisheries and wildlife management are considered and current practices of research and management are discussed.

WILD 410 Wildlife Ecology.

(3) (Winter) (3 hours of lectures per week) (Prerequisite: WILD 205 (formerly AE 205) or permission.) Ecological processes and theories in animal populations. Interrelationships among biological processes, biotic and abiotic factors, and life history strategies. Topics include population dynamics, optimization strategies, predation, habitat selection, risks and decision making, and social behaviour. Application of problem-solving approach to wildlife ecology through individual and group work.

WILD 415 Conservation Law.

(2) (Fall) (2 lectures) A study of the various federal, provincial and municipal laws affecting wildlife habitat. Topics include: laws to protect wild birds and animals; the regulation of hunting; legal protection of trees and flowers, sanctuaries, reserves, parks; techniques of acquiring and financing desirable land, property owner rights.

WILD 420 Ornithology.

(3) (Fall and Winter) (3 lectures and occasional field trips) (Prerequisite: WILD 307 (formerly ZOO 307) or permission of instructor) (This course is scheduled for video-conferencing.) Taxonomic relationships and evolution of birds are outlined. Reproduction, migration and population processes of North American birds are examined.

WILD 421 Wildlife Conservation.

(3) (Winter) (3 lectures) (Restriction: Not open to students who have taken NRSC 421.) Study of current controversial issues focusing on wildlife conservation. Topics include: animal rights, exotic species, ecotourism, urban wildlife, multi-use of national parks, harvesting of wildlife, biological controls, and endangered species.

WILD 424 Parasitology.

(3) (Winter) (2 lectures and one 3-hour lab) (Restriction: Not open to students who have taken WILD 424 (formerly ZOO 424).) Systematics, morphology, biology and ecology of parasitic protozoa, flatworms, roundworms and arthropods with emphasis on economically and medically important species.

***WILD 475 Desert Ecology.**

(3) (Winter) (Field course) (Prerequisites: PLNT 460, WILD 307 (formerly ZOO 307), WILD 420) (Enrollment limited to 20) This course deals with adaptations to heat and drought. Representative areas of Coastal Bend, Chihuahuan and Sonoran deserts are visited over a two-week period. In the third week, emphasis is on the high desert and historical and cultural aspects of desert life observed in at the Mesa Verde cliff dwellings. A pre-trip analysis of an area to be visited and field notes are the principal bases of evaluation. Students must bear transportation costs.

WOOD-Woodland Resources

Offered by: Natural Resource Sciences

***WOOD 300 Urban Forests and Trees.**

(3) (Fall) (3 lectures and one 3-hour lab) (Prerequisites: PLNT 201 and SOIL 210) The effects of environmental factors such as soil fertility, soil contamination and compaction, extremes of temperature and air pollutants on trees and forests growing in an urban environment, and means to increase their tolerance will be discussed. Emphasis in the laboratory will be on diagnosis and solving of tree problems in urban environments.

WOOD 410 The Forest Ecosystem.

(3) (Fall) (3 lectures and one 3-hour lab) (Prerequisites: PLNT 201 and SOIL 210 or permission of instructor) Interactions among biotic and abiotic components of forests, and their direct and indirect control of productivity and nutrient cycling in forest ecosystems. The laboratory involves a series of 3-hour field trips to local forests during September and October, followed by analysis of data collected.

***WOOD 420 Environmental Issues: Forestry.**

(3) (Winter) (3 lectures and one 2-hour tutorial) (Prerequisites: PLNT 201 and SOIL 210 or permission of instructor) The science behind current environmental issues relating to forests including the effects of management on productivity and biodiversity, conservation of old-growth forests and endangered species, pesticide use, and industrial pollution. The role of scientific knowledge, relative to social

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

and economic forces, in forest resource decision-making is discussed.

WOOD 441 Integrated Forest Management.

(3) (Winter) (3 lectures and one 3-hour lab) (Prerequisite: WILD 205 (formerly AEBI 205) or permission of instructor) The study of silviculture and silvics and their application to forest management to sustain the production of wood and other resources such as wildlife, water and landscape in natural forests and rural environments (agroforestry). Acquisition of practical skills in forest survey and computer simulation of forest growth.

Faculty of Arts

AFRI-African Studies

Offered by: Arts - Dean's Office

AFRI 401 Swahili Language and Culture.

(3) (Note: Priority to students in the African Studies Program and/or participants of the Canadian Field Studies in Africa program and to students with a demonstrable need related to internship or research. Approval by African Studies Program required.) Basic knowledge of the Swahili language and culture with emphasis on handling circumstances that might be encountered in field research: everyday conversation, developing aural and oral skills and mastering basic grammar rules, understanding cultural norms and practices, issues of culture sensitivity and appropriateness.

AFRI 480 Special Topics 01.

(3) (Prerequisite: the completion of all available courses relevant to the topic, and permission of the instructor and Program Coordinator prior to registration) Supervised reading in advanced special topics in African Studies under the direction of a member of staff.

AFRI 481 Special Topics 02.

(3) (Prerequisite: the completion of all available courses relevant to the topic, and permission of the instructor and Program Coordinator prior to registration) Supervised reading in advanced special topics in African Studies under the direction of a member of staff.

AFRI 499 Arts Internships: African Studies.

(3) (Note: U-2 and U-3 students in good standing, normally after completing 30 credits of a 90-credit program or 45 credits of a 96-120 credit program, a minimum CGPA of 2.7, and permission from the departmental Internship Adviser. This course will normally not fulfill program requirements for seminar or 400-level courses.) Internship with an approved host institution or organization.

AFRI 598 Research Seminar in African Studies.

(3) (Prerequisite: an introductory course in any of the disciplines studying Africa) (Restriction: Open to final year Program students, and to others by permission of Program Coordinator) An interdisciplinary research seminar on topics of common interest to staff and students of the African Studies Program. As part of their contribution, students will prepare a research paper under the supervision of one or more members of staff.

ANTH-Anthropology

Offered by: Anthropology

ANTH 201 Prehistoric Archaeology.

(3) (Fall) Examination of the origin of cultural behaviour and culture as an adaptive mechanism from the earliest times to the rise of the first civilizations in the Old and New Worlds. The implications of these data concerning the nature of humans and their future development will be considered.

ANTH 202 Comparative Cultures.

(3) (Fall) An introduction to different cultures and societies. Aspects of social life, such as economics, gender, family, kinship, politics and beliefs are explored in diverse settings. Different social systems such as those centered on foraging, farming, and urbanism are illustrated and compared.

ANTH 203 Human Evolution.

(3) (Winter) An examination of evolutionary theory and the fossil and archaeological record for human origins, emphasizing the interaction between physical and cultural evolution. The use of primate behaviour in reconstructing early human behaviour.

The origin and meaning of human variation.

● ANTH 204 Anthropology of Meaning.

(3) (Winter) Through the analysis of language, symbols and cultural constructions of meaning, this course explores how people in different societies make sense of their world, and the ways in which they organise that knowledge, and how ideologies represent the different interests present in a society.

ANTH 206 Environment and Culture.

(3) (Winter) Introduction to ecological anthropology, focusing on social and cultural adaptations to different environments, human impact on the environment, cultural constructions of the environment, management of common resources, and conflict over the use of resources.

● ANTH 207 Ethnography Through Film.

(3) This course will investigate and discuss cultural systems, patterns, and differences, and the ways in which they are observed, visually represented, and communicated by anthropologists using film and video. The visual representation of cultures will be critically evaluated by asking questions about perspective, authenticity, ethnographic authority and ethics.

ANTH 208 Evolutionary Anthropology.

(3) (Winter) The basic elements and mechanisms of evolutionary theory; the place of evolutionary theory in anthropology, including social anthropology, archaeology, physical anthropology and anthropological linguistics. Emphasis on the debates in each sub-discipline in which evolutionary theory has played an important role.

● ANTH 209 Anthropology of Religion.

(3) (Fall) Nature and function of religion in culture. Systems of belief; the interpretation of ritual. Religion and symbolism. The relation of religion to social organization. Religious change and social movements.

● ANTH 212 Anthropology of Development.

(3) Processes of developmental change, as they affect small communities in the Third World and in unindustrialized parts of developed countries. Problems of technological change, political integration, population growth, industrialization, urban growth, social services, infrastructure and economic dependency.

ANTH 214 Violence, Warfare, Culture.

(3) (Fall) Cultural diversity and comparative perspectives on violence and warfare; sociological, political, materialist, psychological, and ideological explanations of conflict. Examines historical and contemporary cases of warfare in state and pre-state societies; 'ethnic', civil, nationalist secessionist and genocidal forms of conflicts; processes of conflict avoidance and resolution, peace-making and -keeping.

ANTH 222 Legal Anthropology.

(3) (Winter) Exploration of dispute resolutions and means of social cohesion in various societies of the world. Themes: dichotomy between law and custom, local definitions of justice and rights, forms of conflict resolution, access to justice, gender and law, universality of human rights, legal pluralism.

ANTH 227 Medical Anthropology.

(3) (Fall) Beliefs and practices concerning sickness and healing are examined in a variety of Western and non-Western settings. Special attention is given to cultural constructions of the body and to theories of disease causation and healing efficacy. Topics include international health, medical pluralism, transcultural psychiatry, and demography.

● ANTH 301 Nomadic Pastoralists.

(3) (Winter) (Prerequisite: ANTH 202, or ANTH 205, or ANTH 206, or ANTH 212) Variations in herding systems over a wide range of habitats and involving a variety of species

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

of domestic livestock. Comparative perspectives on the prehistory of pastoral systems, on the ideologies, cultures, and social and economic systems of nomadic pastoralists. Relations with non-pastoralists and the effects of change and development will also be examined.

ANTH 302 New Horizons in Medical Anthropology.

(3) (Winter) (Prerequisite: ANTH 227) (Restriction: Anthropology program students.) Using recent ethnographies as textual material, this course will cover theoretical and methodological developments in medical anthropology since the early 1990's. Topics include a reconsideration of the relationship between culture and biology, medical pluralism revisited, globalization and health and disease, and social implications of new biomedical technologies.

● **ANTH 303 Ethnographies of Post-socialism.**

(3) (Fall) (Prerequisites: ANTH 202 and one other 200-level anthropology course, U2 standing or above, or permission of instructor.) Understanding postsocialism through engagement with ethnography that explores how markets interact with political rule, social forms, and the production of cultural values across different geographies and histories. This course focuses primarily on the former Soviet Union, East Germany, and China.

● **ANTH 304 Chinese culture in ethnography and film.**

(3) (Prerequisites: ANTH 202 or 204 or 209 and another 200 level anthro course, U2 standing or above, or permission of the instructor.) (Restriction: U2 standing or above.) Uses both ethnography and film to examine 20th century Chinese society and popular culture in the context of the revolution and its aftermath.

● **ANTH 305 Arctic Prehistory.**

(3) (Prerequisite: ANTH 201.) (Restriction: Not open to students who have taken ANTH 319.) Comparative study of prehistoric Arctic hunter-gatherer cultures in Northern Canada, Alaska, Greenland and eastern Siberia. Emphasis will be placed on interpretation of cultural continuity and change in the context of contemporary hunter-gatherer theory.

● **ANTH 306 Native Peoples' History in Canada.**

(3) (Prerequisites: HIST 202 or HIST 203 or ANTH 202 or ANTH 205 or ANTH 206, or permission of instructor) A survey of the Canadian policies that impinged on native societies from the fur trade to W.W. II, and the native peoples' responses, looking at their involvement in the fur trade, the emergence of the Métis, types of resistance, economic diversification, development of associations, and cultural distinctiveness.

ANTH 307 Andean Prehistory.

(3) (Winter) (Prerequisites: ANTH 201 and 1 other course in Social/Cultural Anthropology.) (Restriction: Students must be U2 or U3 standing.) Questions related to social inequality, ritual practice, monumental space, and urban landscapes within the context of the Pre-Columbian Andes and sections on the Inkas, as well as earlier groups, such as the Nazca, Wari, Moche, Tiwanaku, and Chimú.

● **ANTH 308 Political Anthropology 01.**

(3) (Fall) (Prerequisite: ANTH 202, or ANTH 205, or ANTH 206, or ANTH 212, or permission of instructor) The study of political systems and political processes. Conflict and its resolution. The emphasis of the course will be on local-level politics and non-industrial societies.

● **ANTH 309 Prehistory of Northern Europe.**

(3) (Fall) (Prerequisite: ANTH 201.) Survey of the prehistory of northern Europe from the end of the last glaciation to the early iron age.

ANTH 311 Primate Behaviour and Ecology.

(3) (Fall) (Prerequisite: Any 200 level course in a social or biological science.) Critical evaluation of theories concerning primate behaviour with emphasis on the importance of ecological factors in framing behaviour, including mating behaviour, parent care, social structures, communication, as well as various forms of social interaction such as dominance, territoriality and aggressive expression.

● **ANTH 312 Zooarchaeology.**

(3) (Winter) (Prerequisites: ANTH 201 and Honours/Major status in Anthropology) A systematic investigation into current methodological and theoretical concerns in archaeological faunal

analysis. Topics to be examined include sampling and quantification, butchery, seasonality, subsistence, taphonomy, and paleoecology.

● **ANTH 313 Early Civilizations.**

(3) (Winter) (Prerequisite: ANTH 201 or ANTH 202) Comparison of similarities and differences in the economic, social, political institutions and the religious beliefs and values of the ancient Egyptians, Sumerians, Shang Chinese, Aztecs, Classic Mayas, Inkas, and precolonial Yorubas. Extent to which cross-cultural regularities and historically-specific factors have shaped their development.

ANTH 314 Psychological Anthropology 01.

(3) (Fall) (Prerequisite: ANTH 204 or permission of instructor) (Restriction: Not open to students who have taken ANTH 214) A survey of current theories and methods employed in psychological anthropology. Some areas considered are: cross-cultural studies of socialization and personality development; cultural factors in mental illness; individual adaptations to rapid socio-cultural change.

● **ANTH 315 Society/Culture: East Africa.**

(3) (Winter) (Restriction: Open only to students in the Study in Africa program, a full-term field study program in East Africa) Overview of the history, languages and cultures of the region. Examination of the social institutions, cultural patterns, subsistence practices and environmental settings of major social groups, including hunter-foragers, fishers, pastoralists, agro-pastoralists, and cultivators. Discussion of current theoretical and ethnological issues in the study of culture and social change.

ANTH 317 Prehistory of North America.

(3) (Fall) (Prerequisites: ANTH 201 or 203 or equivalent) Peopling of the New World; cultural adaptations of grasslands, woodland, desert and maritime environments; factors that favoured the shifts in subsistence activities, settlement patterns and social organization.

● **ANTH 319 Inka Archaeology & Ethnohistory.**

(3) (Winter) (Prerequisite: ANTH 201 or ANTH 202 or HISP 225 or permission of instructor.) In-depth study of material and symbolic manifestations of power and identity in the Pre-Columbian Inka state, drawing on both archaeological and ethnohistoric sources.

● **ANTH 320 Social Evolution.**

(3) (Fall) (Prerequisites: ANTH 202, or ANTH 205, or ANTH 206, or ANTH 208, and Honours/Major/Minor status in Anthropology, or permission of instructor.) The evolution of human social organization, with a focus on pre-industrial societies (hunter-gatherers, small-scale sedentary societies, complex chiefdoms and small scale states).

ANTH 322 Social Change in Modern Africa.

(3) (Winter) (Prerequisite: ANTH 202, or ANTH 204, or ANTH 205, or ANTH 206, or ANTH 209, or ANTH 212, or ANTH 227 or permission of instructor) The impact of colonialism on African societies; changing families, religion, arts; political and economic transformation; migration, urbanization, new social categories; social stratification; the social setting of independence and neo-colonialism; continuity, stagnation, and progressive change.

ANTH 326 Peoples of Central and South America.

(3) (Fall) (Prerequisites: ANTH 202 or 204 or 205 or 206 or 209 or 212 or permission of instructor) Ethnographic survey of the peoples of Central and South America and discussion of some of the major ethnological issues/themes including the present political situation of the native peoples.

ANTH 327 Peoples of South Asia.

(3) (Fall) (Prerequisite: ANTH 202, or ANTH 205, or ANTH 206, or ANTH 212, or permission of instructor) An exploration of the dominant social institutions, cultural themes and perspectives, and psychological patterns found in India and greater South Asia.

ANTH 329 Modern Chinese Society and Change.

(3) (Winter) (Prerequisites: ANTH 202, or ANTH 205, or ANTH 206, or ANTH 212, or East Asian Studies Honours/Major, or permission of instructor) A study of 20th Century Chinese economic, social and cultural institutions, their transformations and continuities. Topics include village

economic development and social change; gender, family and kinship organization, regional differences and minority groups; urban-industrial change; and the effects of revolution and reform.

● **ANTH 331 Prehistory of East Asia.**

(3) (Fall) (Prerequisite: ANTH 201 or permission of instructor) Comparative study of prehistoric hunting and gathering cultures in China, Japan, Korea, Mongolia and Eastern Siberia; origins and dispersal of food production; cultural processes leading to the rise of literate civilizations in certain regions of East Asia.

● **ANTH 333 Class and Ethnicity.**

(3) (Prerequisite: ANTH 202, or ANTH 205, or ANTH 206, or ANTH 212, or permission of instructor) Social, economic, political, symbolic and ideological aspects of ethnicity. Development of ethnic groups. Interplay between social class and ethnicity.

● **ANTH 335 Ancient Egyptian Civilization.**

(3) (Winter) (Prerequisite: ANTH 201, or ANTH 202, or permission of instructor) A study of changing ecological, economic, social, political, and religious factors influencing the development of ancient Egyptian civilization from prehistoric times to the early Christian era. The unique characteristics of Egyptian civilization are compared to the structural features common to all early civilizations.

● **ANTH 338 Native Peoples of North America.**

(3) (Fall) (Prerequisite: ANTH 202, or ANTH 204, or ANTH 205, or ANTH 206, or ANTH 209, or ANTH 212, or GEOG 336, or permission of instructor) Ethnographic survey of Native cultures in North America. Conditions arising from European colonization and their social, economic and political impact. Contemporary situation of indigenous peoples.

● **ANTH 339 Ecological Anthropology.**

(3) (Winter) (Prerequisite: ANTH 204, or ANTH 206, or SOCI 328, or GEOG 300 or permission of instructor) Intensive study of theories and cases in ecological anthropology. Theories are examined and tested through comparative case-study analysis. Cultural constructions of "nature" and "environment" are compared and analyzed. Systems of resource management and conflicts over the use of resources are studied in depth.

● **ANTH 340 Middle Eastern Society and Culture.**

(3) (Winter) (Prerequisite: U2 or U3 standing; and ANTH 202, or ANTH 204, or ANTH 205, or ANTH 206, or ANTH 209, or ANTH 212, or ANTH 227, or permission of instructor.) Exploration of daily life, culture and society in the Middle East, through examination of ethnographic accounts.

● **ANTH 341 Women in Cross-cultural Perspective.**

(3) (Fall) (Prerequisites: ANTH 202 or ANTH 205, or ANTH 206, or ANTH 342, or Women's Studies Minor, or permission of instructor) A wide range of anthropological studies are examined and compared, along with theoretical models regarding changes in women's positions. The impact of colonialism, women and social change, and problems of women in developing societies are examined.

● **ANTH 342 Gender, Inequality and the State.**

(3) (Winter) (Prerequisite: ANTH 202, or ANTH 205, or ANTH 206, or ANTH 341, or Women's Studies Minor, or permission of instructor) Comparative studies of gender in stratified societies: Asia, the Mid-East, Latin and North America. Economic, political and social manifestations of gender inequality. Oppressive and egalitarian ideologies. State and institutional policies on gender, and male-female strategies. Sexual apartheid and integration.

● **ANTH 344 Quantitative Approaches to Anthropology.**

(3) (Fall) (Prerequisite: ANTH 201 or ANTH 202 or ANTH 205 or permission of instructor.) (Restriction: Limited to students in Anthropology programs.) A non-statistics course designed to understand and critically evaluate quantitatively based arguments encountered in the literature of all branches of Anthropology.

● **ANTH 345 Prehistory of Africa.**

(3) (Winter) (Restriction: Open only to students in the Study of Africa program, a full-term study program in East Africa.) Archaeological evidence for the evolution of culture in Africa from the beginning of the Paleolithic through the Iron Age, including changes in economic, social and political organization as reflected in selected archaeological sites.

● **ANTH 348 Early Prehistory: New World.**

(3) (Winter) (Prerequisite: ANTH 201 or ANTH 203, or permission of instructor) Consideration of major issues regarding the initial arrival(s) of human groups in the New World, and their subsequent adaptation to the changing environmental conditions at the end of the Ice Age.

● **ANTH 352 History of Anthropological Theory.**

(3) (Fall) (Prerequisites: one 200-level anthropology course and one other anthropology course at any level) (Restriction: Honours, Joint Honours, Major and Minor students in Anthropology, U2 standing or above) Exploration in the history of anthropological theory; schools, controversies, intellectual history, sociology of knowledge.

● **ANTH 355 Theories of Culture and Society.**

(3) (Winter) (Prerequisites: one 200-level anthropology course and one other anthropology course at any level) (Restriction: Honours, Joint Honours, Major and Minor students in Anthropology, U2 standing or above) Contributions to contemporary anthropological theory; theoretical paradigms and debates; forms of anthropological explanation; the role of theory in the practice of anthropology; concepts of society, culture and structure; cultural evolution and relativity; interpretive anthropology, post-modernism.

● **ANTH 357 Archaeological Methods.**

(3) (Fall) (Prerequisite: ANTH 201 and one other course in archaeology) (Restriction: Honours, Joint Honours and Major students in Anthropology, U2 standing or above) The collection of materials in field investigations and their analysis to yield cultural information. The processes of inference and reconstruction in archaeological interpretation.

● **ANTH 358 The Process of Anthropological Research.**

(3) (Winter) (Prerequisites: one 200-level anthropology course and one other anthropology course at any level) (Restriction: Honours, Joint Honours, Major and Minor students in Anthropology, U2 standing or above) The nature of anthropological research as evidenced in monographs and articles; processes of concept formation and interpretation of data; the problem of objectivity.

● **ANTH 359 History of Archaeological Theory.**

(3) (Winter) (Prerequisite: ANTH 201 or ANTH 203, and one additional course in archaeology, or permission of instructor) A systematic investigation of the theories that have guided the interpretation of prehistoric archaeological data since the Middle Ages; the relationship between these theories and theoretical developments in the other social sciences.

● **ANTH 380 Special Topic 1.**

(3) (Fall) (Prerequisite: Permission of instructor) Supervised reading in special topics under the direction of a member of the staff.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

* Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

ANTH 381 Special Topic 2.

(3) (Winter) (Prerequisite: Permission of instructor) Supervised reading in special topics under the direction of a member of the staff.

ANTH 382 Special Topic 3.

(3) (Fall) (Prerequisite: Permission of instructor) Supervised reading in special topics under the direction of a member of the staff.

ANTH 383 Special Topic 4.

(3) (Winter) (Prerequisite: Permission of instructor) Supervised reading in special topics under the direction of a member of the staff.

● **ANTH 401 Comparative Anthropology.**

(3) (Restriction: U3 students in Anthropology) Past use of comparative anthropology and potential future use.

● **ANTH 402 Topics in Ethnography 1.**

(3) (Fall) (Restriction: U3 students in Anthropology or permission of instructor) An exploration of selected ethnographic case material. Investigation of a regional literature or survey of significant contributions to ethnography or examination of an ethnological issue.

● **ANTH 403 Current Issues in Archaeology.**

(3) (Winter) (Prerequisite: ANTH 357 or preferably ANTH 359, or permission of instructor) Current issues in archaeological interpretation, in particular, those relating to processual and postprocessual archaeology.

● **ANTH 405 Topics in Ethnography 2.**

(3) (Fall) (Prerequisite: One 300-Level Anthropology course) (Restriction: U3 students in Anthropology or permission of instructor) An exploration of selected ethnographic case material. Investigation of a regional literature, or survey of significant recent contributions to ethnography, or examination of a current ethnological issue.

ANTH 407 Anthropology of the Body.

(3) (Winter) (Prerequisite: ANTH 227 and Honours/Major/Minor status in Anthropology or permission of instructor) This course will survey theoretical approaches used over the past 100 years, and then focus on contemporary debates using case studies. The nature/culture mind/ body, subject/object, self/other dichotomies central to most work of the body will be problematized.

ANTH 411 Primate Studies & Conservation.

(3) (Winter) (Prerequisite: One course in Anthropology, Geography or Environmental Studies, Introductory Biology, or permission of the instructor.) (Restriction: Students must have completed at least two full semesters at their home university. Only open to students in the Canadian Field Studies in Africa program.) Critical evaluation of theories in primate behaviour, ecology, and conservation that emphasizes direct observations, research design, and developing field methods.

● **ANTH 412 Topics: Anthropological Theory.**

(3) (Winter) (Restriction: U3 students in Anthropology and ANTH 355 or permission of instructor) A concentrated examination of selected theoretical literature. A current theoretical issue will be examined, or the work of a major anthropological theorist or school will be explored and assessed.

ANTH 413 Gender in Archaeology.

(3) (Fall) (Prerequisite: ANTH 201 or ANTH 331 or ANTH 345 or ANTH 347 or ANTH 348 or permission of instructor) Relationship between the structure of the archaeological discipline and construction of gender roles in past human societies; division of tasks between men and women in subsistence activities, organization of the household and kin groups; and creation of power and prestige in a larger community.

ANTH 416 Environment/Development: Africa.

(3) (Winter) (Restriction: Open only to students in the Study in Africa program, a full-term field study program in East Africa) (Prerequisite: One prior course in Anthropology, Geography or Environmental Studies) Study of environmental effects of development in East Africa, especially due to changes in traditional land tenure and resource use across diverse ecosystems. Models, policies and cases of pastoralist, agricultural, fishing, wildlife and tourist development will be examined, across savanna, desert, forest, highland and coastal

environments.

● **ANTH 418 Environment and Development.**

(3) (Fall) (Prerequisite: ANTH 339, or ANTH 349, or SOCI 328, or GEOG 300, or GEOG 302, or permission of instructor) Advanced study of the environmental crisis in developing and advanced industrial nations, with emphasis on the social and cultural dimensions of natural resource management and environmental change. Each year, the seminar will focus on a particular set of issues, delineated by type of resource, geographic region, or analytical problem.

● **ANTH 419 Archaeology of Hunter-Gatherers.**

(3) (Winter) (Prerequisite: ANTH 357 or permission of instructor) A systematic investigation into current theoretical and methodological concerns in hunter-gatherer archaeology. Examples will be drawn from around the world.

● **ANTH 420 Lithic Technology and Analysis.**

(3) (Winter) A survey of current literature on the analysis of stone tools and laboratory sessions illustrating how they were produced and used. Topics to be covered include: fracture mechanics; manufacturing techniques; typological systems; experimental replication; identification of tool functions through microscopic analysis of use-wear.

ANTH 422 Contemporary Latin American Culture & Society.

(3) (Winter) (Prerequisites: ANTH 355, or ANTH 352, or HISP 226, or permission of the instructor.) (Restriction: U3 students.) Themes central to the culture and society of contemporary Latin America and the Caribbean, including globalization, questions of race and ethnicity, (post)modernity, social movements, constructions of gender and sexuality, and national and diasporic identities.

● **ANTH 423 Mind, Brain and Psychopathology.**

(3) (Prerequisites: ANTH 227 and Honours/Major/Minor status in Anthropology or Minor Concentration in Social Studies of Medicine or permission of instructor) (Restrictions: U3 students in Anthropology or Social Studies of Medicine. Not open to students who have taken ANTH 443 under this topic.) Evolutionary origins of the human mind and the 'social brain', and the psychopathologies that are said to provide access to this evolutionary history, through the perspective of the anthropology of science and psychiatry.

● **ANTH 430 Symbolic Anthropology 01.**

(3) (Fall) (Prerequisite: ANTH 204, or ANTH 355, or permission of instructor) Advanced topics in the use of symbolic theory within anthropology, including culturology and structuralism; the use of semiotic models of society, the relation of structure to process, culture to praxis, and ideology to society; the relevance of epistemology, phenomenology and linguistic philosophy for the study of socio-cultural phenomena.

● **ANTH 431 Problems in East Asian Archaeology.**

(3) (Prerequisite: ANTH 331 or permission of instructor) Critical examination of major issues in East Asian archaeology. Focus may change from year to year. Possible topics include: origins and evolution of Asian population; processes of plant domestication; development of complex societies based on hunting-gathering-fishing; and rise of civilizations and state formation in China, Japan, and Korea.

ANTH 436 North American Native Peoples.

(3) (Fall, Winter) (Prerequisite: ANTH 338, or ANTH 336, or permission of instructor) A detailed examination of selected contemporary problems.

ANTH 438 Topics in Medical Anthropology.

(3) (Fall) (Prerequisite: ANTH 227 or permission of instructor) Conceptions of health and illness and the form and meaning that illness take are reflections of a particular social and cultural context. Examination of the metaphoric use of the body, comparative approaches to healing, and the relationship of healing systems to the political and economic order and to development.

● **ANTH 440 Cognitive Anthropology.**

(3) (Fall) (Prerequisite, two of the following: ANTH 204, ANTH 314, ANTH 352, ANTH 355, or ANTH 430, or permission of instructor.) The problem of knowledge; the nature of perception; the concept of mind; the relation between thought and language. The concept of meaning: communication,

interpretation and symbolism. Social aspects of cognition; ideology.

● **ANTH 443 Medical Anthropological Theory.**

(3) (Fall) (Prerequisites: ANTH 227 and Honours/Major/Minor status in Anthropology or permission of instructor.) This course is intended to provide a comprehensive survey of the literature that constitutes the theoretical and conceptual core of medical anthropology. Emphasis is given to (1) the ethnographic sources of these ideas, (2) their epistemology, and (3) their methodological implications.

● **ANTH 451 Research in Society and Development in Africa.**

(3) (Prerequisite: Open to U2 or later students in the AFSS.) (Corequisite: NRSC 452.) (Restriction: Open only to AFSS students during the year of participation in the field. Not open to students who have taken GEOG 451.) Instruction focuses on three goals: 1) existing research in selected core thematic areas, 2) participating in interdisciplinary team research, 3) developing powers of observation and independent inquiry. Students will be expected to develop research activities and interdisciplinary perspectives, and to become conversant with advances in local research in their field.

● **ANTH 460 Archaeological Field Studies.**

(3) (Fall) (Prerequisites: ANTH 201 and ANTH 357) (Restriction: Anthropology Majors; students must be in U2, entering U3) On site excavation of elephant bones at Parc Safari. Individual study in an archaeological field setting under staff supervision. Requirements consist of a) research proposal outlining objectives, methodology, and adherence to ethical code of archaeological research, b) field investigations, and c) project report. The project must be arranged with a supervisor before registration.

● **ANTH 461 Research Techniques.**

(3) (Winter) (Prerequisite: ANTH 358 or permission of instructor) (Restriction: U3 student only) Field techniques, interviewing, participant observation, projective, and other testing techniques such as genealogies and life histories, problems of field work, rapport, contact, role definition, culture shock, etc.

● **ANTH 480 Special Topic 5.**

(3) (Fall) (Prerequisite: Completion of all available courses relevant to the topic and consent of the instructor) Supervised reading in advanced special topics under direction of a member of staff.

● **ANTH 481 Special Topic 6.**

(3) (Winter) (Prerequisite: Completion of all available courses relevant to the topic and consent of the instructor) Supervised reading in advanced special topics under direction of a member of staff.

● **ANTH 482 Special Topic 7.**

(3) (Fall) (Prerequisite: Completion of all available courses relevant to the topic and consent of the instructor) Supervised reading in advanced special topics under direction of a member of staff.

● **ANTH 483 Special Topic 8.**

(3) (Winter) (Prerequisite: Completion of all available courses relevant to the topic and consent of the instructor) Supervised reading in advanced special topics under direction of a member of staff.

● **ANTH 484 Special Topic 9.**

(3) (Fall) (Prerequisite: Completion of all available courses relevant to the topic and consent of the instructor) Supervised reading in advanced special topics under direction of a member of staff.

● **ANTH 485 Special Topic 10.**

(3) (Winter) (Prerequisite: Completion of all available courses relevant to the topic and consent of the instructor) Supervised reading in advanced special topics under direction of a member of staff.

● **ANTH 490 Honours Thesis 1.**

(6) (Fall) (Prerequisites: U3 Honours status and permission of instructor) Supervised reading and preparation of a research report under the direction of a member of staff.

● **ANTH 491 Honours Thesis 2.**

(6) (Winter) (Prerequisites: U3 Honours status and permission of instructor) Supervised reading and preparation of a research report under the direction of a member of staff.

● **ANTH 492 Honours Thesis.**

(6) (Prerequisites: U3 Honours status and permission of instructor) Supervised reading and preparation of a research report under the direction of a member of staff.

● **ANTH 492D1 (3), ANTH 492D2 (3) Honours Thesis.**

(Fall) (Students must register for both ANTH 492D1 and ANTH 492D2.) (No credit will be given for this course unless both ANTH 492D1 and ANTH 492D2 are successfully completed in consecutive terms) (ANTH 492D1 and ANTH 492D2 together are equivalent to ANTH 492) Supervised reading and preparation of a research report under the direction of a member of staff.

● **ANTH 492N1 (3), ANTH 492N2 (3) Honours Thesis.**

(Winter) (Students must also register for ANTH 492N2) (No credit will be given for this course unless both ANTH 492N1 and ANTH 492N2 are successfully completed in a twelve month period) (ANTH 492N1 and ANTH 492N2 together are equivalent to ANTH 492) Supervised reading and preparation of a research report under the direction of a member of staff.

● **ANTH 499 Internship: Anthropology.**

(3) (Fall and Winter) (Prerequisite: Permission of the departmental Internship Advisor.) (Restriction: Open to U2 and U3 students normally after completing 30 credits of a 90 credit degree program or 45 credits of a 69-120 credit program, a minimum CGPA of 2.7, and permission of the departmental Internship Advisor. This course will normally not fulfill program requirements for seminar or 400- level courses.) Internship with an approved host institution or organization.

● **ANTH 500 Chinese Diversity and Diaspora.**

(3) (Winter) (Restrictions: Reserved for U3 Anthropology undergraduate students or graduate students, any other students by permission of instructor.) (Enrolment Limit: 25 students.) Explores ethnic diversity within mainland China, as well as the diversity of Chinese cultures of diaspora, living outside the mainland, often as minorities subject to other dominant cultures.

● **ANTH 502 Social Life of Death.**

(3) (Winter) Theoretical and methodological approaches of attitudes, beliefs, and ritual practices surrounding death and mortuary practices. Topics covered include material manifestations of status and identity; symbolic dimensions of dead bodies; ancestors, kinship, and kingship; emotions, mourning, and memory; and ritual violence.

● **ANTH 511 Computational Approaches to Prehistory.**

(3) (Winter) (Prerequisites: ANTH 357 or ANTH 359.) (Restriction: Restricted to U3 and graduate students in the Anthropology Department.) Covers the application of computational methods to archaeological problems and the modeling and simulation of prehistoric populations.

● **ANTH 512 Political Ecology.**

(3) (Fall) Historical, theoretical and methodological development of political ecology as a field of inquiry on the interactions between society and environment, in the context of

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

conflicts over natural resources.

● **ANTH 522 Issues in Biological Anthropology.**

(3) Recent developments in biological anthropology, such as the evolution of social systems in primates, foraging strategies, and emerging infectious diseases.

ANTH 540 Topics in Anthropological Theory.

(3) (Winter) (Restriction: This course is restricted to U3 Honours students in the Anthropology Department or permission of the instructor.) Examination and discussion of topics of current theoretical interest.

ANTH 551 Advanced Topics: Archaeological Research.

(3) (Fall) Examination and discussion of topics of current theoretical or methodological interest in archaeology. Topics will be announced at the beginning of term.

ANTH 555 Advanced Topics in Ethnology.

(3) (Winter) (Restriction: Honours students at the U3 level in the Anthropology Department or with permission of instructor) Examination and discussion of topics of current theoretical or methodological interest in ethnology. Topics will be announced at the beginning of term.

ANTH 575 Concepts of Race.

(3) (Winter) (Prerequisites: ANTH 201, or ANTH 202, or ANTH 203, and ANTH 352 or ANTH 359.) (Restriction: U3 students and graduate students in Anthropology programs.) Examination of the evolution of the idea of race within anthropology, and the impact which the discipline's debates have had on society.

ARLE-Arts Legacy

Offered by: Arts - Dean's Office

ARLE 101 Ancient Worlds.

(6) (Corequisite: ARLE 102.) (Restriction: Freshmen with U0 status.) Study of the ancient worlds, emphasizing social, political, intellectual, scientific and aesthetic innovations in ancient Greek, Roman and Chinese civilizations. Key texts are examined through lectures, seminars and tutorials, complemented by a performance module in literary, artistic, musical and architectural creativity.

ARLE 102 Medieval Mediterranean Worlds.

(6) (Corequisite: ARLE 101.) (Restriction: Freshmen with U0 status. Freshmen who have passed ARLE 101.) Study of the distinct yet interacting Christian, Judaic and Islamic cultures of the "Middle" Ages. Emphasis on social, political, intellectual, scientific and aesthetic innovations in the worlds surrounding the Mediterranean Sea. Key texts are examined, complemented by a performance module in literary, artistic, musical and architectural creativity.

ARLE 103 Early Modern Atlantic Worlds.

(6) (Prerequisites: ARLE 101, ARLE 102.) (Corequisite: ARLE 104.) (Restriction: Freshmen with U0 status. Students who have passed ARLE 101 & ARLE 102.) Study of social, political, intellectual, scientific and aesthetic innovations, examining the transatlantic worlds of Early modern Europe and the Americas. Key texts are examined through lectures, seminars and tutorials, complemented by a performance module in literary, artistic, musical and architectural creativity.

ARLE 104 Global Modern Worlds.

(6) (Prerequisites: ARLE 102, ARLE 102.) (Corequisite: ARLE 103.) (Restriction: Freshmen with U0 status. Freshmen who have passed ARLE 101, ARLE 102 & ARLE 103.) Study of the emergence and multiple forms of modernity, emphasizing social, political, intellectual, scientific and aesthetic innovations in Europe and North America, and the developing world of Africa, Asia and America. Key texts are examined, complemented by a performance module in literary, artistic, musical and architectural creativity.

ARTH-Art History

Offered by: Art History & Communication St

● **ARTH 201 Introduction to Art History 2.**

(3) (Restriction: Not open to students in Art History programs; or students who have taken ARTH 200 prior to Fall 1991.) An introductory survey of the major figures, monuments and movements in Western painting, sculpture and architecture from the 15th century to the present. The underlying goal of course is to develop the student's awareness of the relation of form to content in a work of art.

● **ARTH 204 Introduction to Medieval Art and Architecture.**

(3) Surveys the arts from late Antiquity to the fourteenth century in Western Europe. Focuses on the body and space to introduce artistic and architectural concepts, practices, and styles from the late Roman, Byzantine and Carolingian empires to monastic and royal patronage of the French Kings.

ARTH 205 Introduction to Modern Art.

(3) (Restriction: Not open to students who have taken ARTH 337 or ARTH 338) The course is an introduction to the modern period in art history which begins around 1750. It examines the development in both painting and sculpture and relates to changes in the social and political climate of the times.

ARTH 207 Early Modern Art (1400-1700).

(3) Survey of the visual culture of early modern Europe (1400-1700), including selected works in their historical context and explore the uses of visual forms in the formation of identities across various social spheres and geographical locations.

ARTH 209 Introduction to Ancient Art and Architecture.

(3) Survey of ancient art and architecture: pre-historic Europe, ancient Egypt, Greece and Rome. Focus is on issues of political power, gender, sexuality, race, the formation of individual and group identities, and the relation between the body and social space.

● **ARTH 215 Introduction to East Asian Art.**

(3) (Restriction: Not open to students taking or who have taken EAST 215.) Introductory survey of some of the major developments in the visual arts of Japan, China, and Korea. Emphasis will be placed on the diversity of artistic traditions in East Asia and the intersections among these traditions.

ARTH 223 Introduction to Italian Renaissance Art.

(3) Surveys artistic production in Italy from the new urban institutions of the communes to the demise of the Florentine republic (c. 1250-1512). Introduces art historical concepts through an exploration of the uses of visual imagery to forge civic, religious, political, and social identities.

● **ARTH 300 Canadian Art to 1914.**

(3) Canadian art from the pre-contact period through the colonial and nation-building centuries until the onset of the First World War. Emphasis will be placed on the diverse cultural influences that have been brought into contact in Canada.

● **ARTH 301 Canadian Art 1914 - Present.**

(3) (Restriction: Not open to students who have taken 123-225) Canadian art from early 20th century formulations of national identity through the regional, national, and international movements that define Canadian Modernism, Postmodernism, to new trends emerging in the 21st century.

● **ARTH 302 Aspects of Canadian Art.**

(3) An examination of selected subjects relevant to a specific period of art in Canada.

ARTH 305 Methods in Art History 01.

(3) (Prerequisite: Any 200-level Art History course, or by permission of the instructor.) (Restriction: Not open to students who have taken ARTH 203.) An introduction to the main methodologies used in the analysis of the work of art: formalism, iconography/iconology, semiotics, structuralism, post-structuralism, deconstruction, psychoanalysis, Marxism, feminism and postcolonialism.

● **ARTH 310 Postcolonialism.**

(3) Examines selected art historians who respond to postcolonial theorists and analyse how paintings, sculpture, buildings, and visual culture participated in or resisted European imperialism

in the nineteenth and twentieth centuries.

● **ARTH 314 The Medieval City.**

(3) Towns and cities in the Middle Ages as architectural entities, their urban planning and development; main building types, profane and ecclesiastical: castle, defence works, town halls, houses, cathedrals, churches and monasteries; the role architecture played in forming a society.

● **ARTH 320 Seventeenth Century Art of Court and Church.**

(3) (Restriction: Not open to students who have taken 123-334D) Seventeenth century Italian, Spanish, French, Flemish and British art in connection with aristocratic and courtly interests, monarchical power and the aims of the post-Reformation church.

● **ARTH 321 Visual Culture of the Dutch Republic.**

(3) (Restriction: Not open to students who have taken 123-334D) Examination of the functions of visual culture in merchant capitalist society, and the changing status of art, artists and patrons after the Protestant reformation. A wide range of visual imagery (from Rembrandt and Vermeer to popular culture) will be linked with 17th-century economic, historic, religious, colonial, scientific and literary developments.

● **ARTH 323 Realism and Impressionism.**

(3) The course is an investigation into Realism and Impressionism, the principal artistic movements between ca. 1840 - 1880.

● **ARTH 324 High Renaissance Art in Italy.**

(3) (Restriction: Not open to students who have taken 123-224) The work of the masters of the Italian High Renaissance will be treated in depth. Emphasis will also be placed on the intricate relationship of the art of the period to contemporary religious and intellectual issues and political controversies.

● **ARTH 325 Visual Culture Renaissance Venice.**

(3) (Prerequisite: one 200-level Art History course recommended, or by permission of the instructor.) Distinctive visual culture in the context of Venice's singular topography and reputation for licentiousness and toleration.

● **ARTH 326 Print Culture and the City.**

(3) (Prerequisite: one 200-level Art History course or by permission of the instructor.) Positing a dynamic relationship between print culture and social experience, the course focuses on new forms and uses for printed imagery in the context of urban life before the electronic age.

● **ARTH 332 Italian Renaissance Architecture.**

(3) The Italian architecture of the 15th and 16th centuries witnessed a revival of architectural forms from Roman antiquity. According to their different social as well as political status, the centres of Italy - Florence, Rome, Venice, Mantua etc. - developed individual approaches in dealing with the reception of classical forms which was to influence the architecture of Europe.

● **ARTH 333 Italian Baroque Architecture.**

(3) (Restriction: Not open to students who have taken 123-333D) Italian architecture in the 17th and 18th centuries. While the development of ecclesiastical architecture will form the main focus of this course, palace building and urban planning will also receive their due attention. One additional aspect will be the reception of Italian Baroque Architecture in Central and Western Europe. Architectural design is studied in the context of contemporary painting, sculpture and theories of art.

● **ARTH 334 Eighteenth Century European Art.**

(3) A study of European painting and sculpture within the climate of social, economic, philosophical and political change in 18th-century Europe. The focus is on France, Italy, Germany and England from the last days of the Baroque to the Age of Revolution.

● **ARTH 335 Art in the Age of Revolution.**

(3) The course deals primarily with European painting from the late 18th to the middle of the 19th century. Emphasis is placed on the relation of art to the political, social and intellectual transformations of the time. Major figures, such as David, Goya, Canova, Friedrich and Delacroix are considered.

● **ARTH 336 Art Now.**

(3) (Prerequisite: One 200-level Art History course or by permission of the instructor.) Recent art practices from the 1980's to the present - installation art, new media arts (video, digital and internet art), recent developments in performance, photography, and painting. Introduces students to the key fields of research of current art: postmodernism, representation, visibility, identity, embodiment, sexuality, memory, (bio)technology, intermedia, and globalization.

● **ARTH 337 Modern Painting and Sculpture, Post-Impress to WWI.**

(3) (Restriction: Not open to students who have taken 123-337D) The beginnings of modern art in Europe. Major figures and movements from Cézanne to Picasso are considered.

● **ARTH 338 Modern Art and Theory: WWI - WWII.**

(3) (Prerequisite: one 200-level Art History course recommended, or by permission of the instructor.) (Restriction: Not open to students who have taken 123-337D) An examination of the historical avant-garde (dada, soviet constructionism, and surrealism), Duchamp, and abstraction up to Abstract Expressionism. Examines how post-WWI art practices negotiate the intertwining of aesthetics and revolution, art and mass culture, modernism and modernity, imagined and material space, gender and sexuality, horizontality and verticality.

● **ARTH 339 Critical Issues - Contemporary Art.**

(3) (Prerequisite: one 200-level Art History course recommended, or by permission of the instructor.) A critical examination of contemporary art from Abstract Expressionism to Pop art, Minimalism, Conceptual art, Land art, and Body art. Focuses on the development and critique of modernism, the dematerialization of art, the blurring of art and popular culture, the artist as shaman, temporality, and aesthetic redefinitions of subjectivity.

● **ARTH 340 The Gothic Cathedral.**

(3) Prerequisite: reading knowledge of French.) An introduction to the Gothic cathedral: architecture, sculpture, and stained glass. Also considered is its genesis, its construction and its historical environment. Although main emphasis will be on French cathedrals of the 12th and 13th centuries, their development in England, Germany and Spain will also be represented.

● **ARTH 347 19th Century Architecture.**

(3) The historicism of the 19th century in Europe and North America gives with its reception of several different styles - medieval as well as classical - an important insight into the meaning of architectural form, the creation of an architectural language and its use in a politically and economically rapidly changing society.

● **ARTH 351 Vision and Visuality in Art History.**

(3) An interdisciplinary investigation on how works of art construct the visual experience and on how they are received by the viewer.

● **ARTH 352 Feminism in Art and Art History.**

(3) A consideration of the impact of feminism on recent art history, focusing on the examination of gender constructions in art and theory.

● **ARTH 353 Selected Topics in Art History 1.**

(3) (Fall) Fall 08: Aspects of Popular Culture Study of a special field in the History of Art and Architecture taught by a visiting scholar.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

ARTH 354 Selected Topics Art History 2.

(3) (Fall) F08: Century Western Sculpture Study of a special field in the History of Art and Communications.

ARTH 356 Modern & Contemporary Chinese Art.

(3) (Restrictions: Not open to students taking or who have taken EAST 356.) Examination of modern Chinese art and visual culture from the 1920's to the present. Emphasis will be placed on the formation of the artistic avant-garde in the 20th century and its relation to socialist and post-socialist mass culture.

ARTH 357 Early Chinese Art.

(3) (Prerequisite: One 200-level Art History or East Asian Studies course, or by permission of instructor.) (Restriction: Not open to students taking or who have taken EAST 357.) Survey of Chinese art and visual culture during the pre-imperial and early imperial periods (1500BCE-900CE). A wide range of visual images and media (painting, architecture, inscription, funerary art) will be examined in the historical context of the rise and development of the empire.

● **ARTH 360 Photography and Art.**

(3) The course provides an introduction to the history of photography while considering its relation to major movements in the history of painting from the time of the invention of photography, in 1839, to the present day.

● **ARTH 365 Studies in Later Medieval Art.**

(3)

● **ARTH 367 Italian Renaissance Art 2.**

(3) (This course will be given in Florence, Italy, as part of McGill's Summer Study in Italy Program. For specific details about the course content, please consult Prof. B. Wilson, Dept. of Art History and Communication.) Urban growth, new religious and political institutions, powerful families, factionalism and civic identity provided new patrons and uses for artworks between 1300-1600. This course compares the function of visual imagery and artistic practices in Florence with developments in other centres in Italy during study abroad. Taught in Florence.

● **ARTH 379 Studies: Modern Art and Theoretical Problems 02.**

(3)

ARTH 400 Selected Methods in Art History.

(3) (Prerequisites: ARTH 208, ARTH 305.) (Required for Honours students, students must have completed ARTH 208 and ARTH 305 before taking ARTH 400, or with special permission of the department.) (Restriction: Not open to students who have taken ARTH 500.) A seminar course dealing with methodological issues in Art History.

ARTH 401 Honours Research Paper.

(3) (Prerequisite: At least 6 credits in Art History at the 300 level.) (Corequisite: ARTH 400.) (Restrictions: For Honours and Joint Honours Art History students only.) An Honours research paper written in consultation with an academic advisor.

● **ARTH 406 German Architecture.**

(3) (Prerequisite: At least one 300-level course in architectural history.) (Restriction: Not open to students who have taken ARTH 345.) The German architectural tradition from the early Middle Ages to the present, the impact neighbouring countries had on its development, and the influence it exercised on them. The construction of an imperial tradition, and its use (and abuse) by different political systems.

● **ARTH 415 Late Medieval & Renaissance Architecture in Northern Europe.**

(3) This course is to show the diversity of architectural practice in France, England, Germany and Central Europe from 1400 to 1600, covering ecclesiastical and secular architecture. The stylistic spectrum ranges from late Gothic over the reception of forms of the Italian Renaissance, to the revival of late Gothic forms, reaching its climax around 1600.

ARTH 420 Selected Topics in Art and Architecture 1.

(3) (Fall) Fall 08: Art and Society of France 1870-1914. W09: Chinese Art and Cosmology An advanced study of selected topics in the History of Art and Architecture.

ARTH 421 Selected Topics in Art and Architecture 2.

(3) (Fall) Fall 08: Museum Studies W09: Canadian Art and Race

● **ARTH 422 Selected Topics in Art and Architecture 3.**

(3) (Winter)

● **ARTH 435 Early Modern Visual Culture.**

(3) (Prerequisite: one 300-level Art History course recommended, or by permission of the instructor.) Selected topics in early modern visual culture (c. 1500-1750).

ARTH 447 Independent Research Course.

(3) (Prerequisite: permission of instructor)

● **ARTH 457 Brushwork in Chinese Painting.**

(3) (Prerequisite: At least one EAST or ARTH course or permission of instructor.) (Restriction: Not open to students taking or who have taken EAST 457.) The seminar takes an in-depth look at the function and meaning of the brushwork in traditional Chinese painting. Analysis of paintings will be combined to close readings of theoretical texts in translation.

● **ARTH 473 Studies in 17th and Early 18th Century Art 04.**

(3) (Winter)

● **ARTH 474 Studies in Later 18th and 19th Century Art 03.**

(3)

ARTH 490 Museum Internship.

(3) The Museum Internship is intended to provide direct exposure to museum collections and practical experience in the museum setting for students interested in museum professions. Individually designed in consultation with the professor in charge of internships and the appropriate personnel at one of the Montreal museums.

CANS-Canadian Studies

Offered by: Institute for Study of Canada

CANS 200 Introduction to the Study of Canada.

(3) (3 lecture hours) An overview of approaches to the study of Canada, including economic, political, historical and cultural dimensions.

CANS 202 Canadian Cultures: Context and Issues.

(3) (Prerequisite: ability to read French) A survey course which traces the history of Canadian cultures from the middle of the 19th century to the present. It surveys the diversity of Canadian cultural identities through literature, drama, art and the mass media. The course features guest lecturers. Some course material will be in French.

CANS 300 Topics in Canadian Studies 1.

(3) (Prerequisite: CANS 200 or permission of instructor) In 2008/09 the topic is "Canadian Film and Television." An interdisciplinary course on a Canadian Studies topic.

CANS 301 Topics in Canadian Studies 2.

(3) (Prerequisite: CANS 200 or permission of instructor) In FALL 2008 the Topic is Women of Colour in Canada. This course will explore the lives and experience of women of colour in Canada. We will investigate both historical and contemporary themes, in an interdisciplinary fashion. Students registering in this course may not register in WMST 302 (CRN 5323) Winter 09 Topic: Provinces in Canada. The effect of regional and provincial culture on the operation of political parties and the institutions of government; the effect of institutional modernization on provincial governments; the role of provincial sub-systems within the Canadian political system. Students registering in this course may not register in POLI 326. An interdisciplinary course on a Canadian Studies topic.

CANS 303 Topics in Canadian Studies 3.

(3) (Prerequisite: CANS 200 or permission of instructor) In 2008/09, the topic is Geography of Canada. An introduction to the geography of Canada. A comprehensive geographical interpretation of Canada's salient physical and human characteristics, including landscapes and their evolution, climate, vegetation, society/land relationship and socioeconomic attributes of the population. An interdisciplinary course on a Canadian Studies topic.

CANS 304 Nationalism in Canada.

(3) (Restriction: Not open to students who have taken or are taking CANS 300, CANS 301, or CANS 303.) Canadian experience of nationalism over the past two centuries.

CANS 305 Canadian Modernity.

(3) Forms of modernity in Canada, including modern technology, communications, and aesthetics, and their convergence with nationalism.

CANS 306 Issues in Native Studies.

(3) (Restrictions: Not open to students who have taken or are taking CANS 300, CANS 301, or CANS 303.) Past and present achievements and concerns within Native societies across Canada.

CANS 307 Canada in the World.

(3) In 200901 the topic is Canada's Experience of Empire. Canada's interaction with other countries and regions.

CANS 308 Sex and Gender in Canada.

(3) In 200809 the topic is The History of Sexuality in Canada. Sex and gender in Canada in the past and the present.

CANS 401 Canadian Studies Seminar 1.

(3) (Topic will vary from year to year depending on staff interests.) (Prerequisite: CANS 200 or permission of instructor) In 200809 the topic is Travel and Tourism in Canada. An interdisciplinary seminar on a Canadian Studies topic.

CANS 402 Canadian Studies Seminar 2.

(3) (Prerequisite: CANS 200 or permission of instructor) In 200901 the topic is Montreal-Toronto: Exchanges In Art and Literature. An interdisciplinary seminar on a Canadian Studies topic.

CANS 403 Canadian Material Culture.

(3) (Restriction: U2 and U3 students.) In 200809 the topic is First Nations Material Culture. Exhibitions that address Canadian history and contemporary identities through material culture, art, and other media, including the place of material culture in everyday life, through personal collections, and unconventional exhibition spaces.

CANS 404 Canadian Studies Seminar 4.

(3) (Prerequisite: CANS 200 or permission of instructor) In 200901 the topic is Canadian Ethnic Studies Seminar An interdisciplinary seminar focusing on current social sciences research and public policies in areas relating to Canadian ethnic studies. Topics will include ethnic and racial inequalities, prejudice and discrimination, ethnic identities and cultural expressions, the structure and organization of minority groups. Students registering in this course may not register in SOCI 475. An interdisciplinary seminar on a Canadian Studies topic.

● CANS 405 Canadian Studies Seminar 5.

(3) (Prerequisite: CANS 200 or permission of instructor) An interdisciplinary seminar on a Canadian Studies topic.

● CANS 406 Canadian Studies Seminar 6.

(3) (Prerequisite: CANS 200 or permission of instructor.) An interdisciplinary seminar on a Canadian Studies topic.

CANS 407 Regions of Canada.

(3) (Prerequisite: CANS 200 or permission of instructor) In 200809 topic is The Canadian North: Past and Present. Canadian regionalism and its manifestations in literature and the media, as well as in social and public policy, focusing on one region in Canada.

CANS 408 Individual Reading Course.

(3) (Restrictions: Reserved for final-year students enrolled in the Canadian Studies major or minor concentration. Permission must be obtained from the Canadian Studies advisor and from the supervising professor before registration.) Supervised reading on an explicitly multidisciplinary topic under the direction of a professor working in the field of Canadian Studies.

CANS 409 Canadian Studies Seminar 9.

(3) (Prerequisite: CANS 200 or permission of instructor) In 200901 the topic is Health Care in Canada. This course analyzes the theory and politics of health policy and institutions, comparing provincial models and contextualizing Canadian systems with international perspectives from the U.S. and Europe. Current health reform debates will be explored, particularly those involving federal-provincial relations, sustainable financing and the role of the state in social protection. Students registering in this course may not register in POLI417. An interdisciplinary seminar on a Canadian Studies topic.

● CANS 410 Canadian Studies Seminar 10.

(3) (Topic will vary from year to year depending on staff interests.) (Prerequisite: CANS 200 or permission of instructor.) An interdisciplinary seminar on a Canadian Studies topic.

CANS 412 Canada and Americas Seminar.

(3) (Prerequisites: Cans 200 or permission of the Instructor) In 200809 the topic is Canada-Quebec-Americas Relationships in Literature, Films, Performances Canada and the Americas.

CANS 413 Canada and Quebec Seminar.

(3) (Prerequisites: Cans 200 or permission of the Instructor) (Note: A reading knowledge of French is required) Comparison of Canada and Quebec.

CANS 480 Honours Thesis 1.

(3) (Restriction: Students in the Honours Program in Canadian Studies.) Supervised research for and preparation of the Honours Thesis Proposal.

CANS 481 Honours Thesis 2.

(3) (Prerequisite: CANS 480.) (Restriction: Students in the Honours Program in Canadian Studies.) Supervised writing of Honours thesis.

CANS 492 Joint Honours Thesis.

(3) (Restriction: Open to students in the Joint Honours Program.) Honours thesis research to be carried out under the supervision of a faculty member.

CANS 492D1 (1.5), CANS 492D2 (1.5) Joint Honours Thesis.

(Restriction: Open to students in the Joint Honours Program.) (Students must register for both CANS 492D1 and CANS 492D2.) (No credit will be given for this course unless both CANS 492D1 and CANS 492D2 are successfully completed in consecutive terms) (CANS 492D1 and CANS 492D2 together are equivalent to CANS 492) Honours thesis research to be carried out under the supervision of a faculty member.

CANS 501 Interdisciplinarity & Canadian Studies.

(3) (Prerequisite: For undergraduate students CANS 200 or permission of instructor.) (Restriction: Course will be restricted to final year students and graduate students.) In 200809 the topic is The Left in Canada. An interdisciplinary seminar in Canadian studies.

CATH-Catholic Studies

Offered by: Arts - Dean's Office

CATH 200 Introduction to Catholicism.

(3) (Fall) An interdisciplinary study of the Roman Catholic tradition in its changing contexts. Traces major themes in the Catholic tradition. Emphasis will vary from year to year on spiritual, intellectual, institutional, cultural and historical dimensions.

CATH 310 Catholic Intellectual Traditions.

(3) Life and society in the Roman Empire as reflected in contemporary authors of varying genres (epic, history, philosophy, satire and the novel).

● **CLAS 210 Introductory Latin 1.**

(6) A course for beginners.

● **CLAS 210D1 (3), CLAS 210D2 (3) Introductory Latin 1.**

(Students must register for both CLAS 210D1 and CLAS 210D2) (No credit will be given for this course unless both CLAS 210D1 and CLAS 210D2 are successfully completed in consecutive terms) (CLAS 210D1 and CLAS 210D2 together are equivalent to CLAS 210) A course for beginners.

● **CLAS 212 Introductory Latin 2.**

(3) (Winter) (Restriction: Permission of instructor required) A refresher course. Review of grammar and syntax; reading of simple sentences and connected passages.

● **CLAS 220D1 (3), CLAS 220D2 (3) Introductory Ancient Greek.**

(Students must register for both CLAS 220D1 and CLAS 220D2.) (No credit will be given for this course unless both CLAS 220D1 and CLAS 220D2 are successfully completed in consecutive terms) A course for beginners.

● **CLAS 230D1 (3), CLAS 230D2 (3) Introductory Modern Greek.**

(Restriction: Not open to students who have taken CLAS 236, CLAS 237 or CLAS 238.) (Students must register for both CLAS 230D1 and CLAS 230D2.) (No credit will be given for this course unless both CLAS 230D1 and CLAS 230D2 are successfully completed in consecutive terms) A course for beginners.

● **CLAS 300 Greek Drama and the Theatre.**

(3) A study of the Greek dramatists, both tragic and comic, in the light of their plays, with special emphasis on the theatrical techniques of the authors and the means of production in the Greek theatre.

● **CLAS 309 The Greek and Roman Novel.**

(3) A study of the ancient novel, including Petronius, The Satyricon, Apuleius, The Golden Ass and Longus, Daphnis and Chloe.

● **CLAS 310 Reading Latin.**

(3) (Prerequisite: CLAS 210 or permission of instructor) Morphology, syntax, and vocabulary of the language.

● **CLAS 311 Catullus/Ovid.**

(3) (Prerequisite: CLAS 210 or CLAS 211 or CLAS 212 or permission of the Department)

● **CLAS 312 Intermediate Latin: Poetry.**

(3) (Prerequisite: CLAS 210 or CLAS 211 or CLAS 212 or permission of the Department)

● **CLAS 313 Intermediate Latin: Cicero.**

(3) (Prerequisite: CLAS 210 or CLAS 211 or CLAS 212 or permission of the Department)

● **CLAS 314 Intermediate Latin: Historians.**

(3) (Prerequisite: CLAS 210 or CLAS 211 or CLAS 212 or permission of the Department)

● **CLAS 315 Intermediate Latin: Selections.**

(3) (Prerequisite: CLAS 210 or CLAS 211 or CLAS 212 or permission of the Department)

● **CLAS 316 Intermediate Latin: Medieval.**

(3) (Prerequisite: CLAS 210 or CLAS 211 or CLAS 212 or permission of the Department) Selection.

● **CLAS 321 Intermediate Greek: Plato/Xenophon.**

(3) (Prerequisite: CLAS 220 or permission of the instructor)

● **CLAS 322 Intermediate Greek: Orators.**

(3) (Prerequisite: CLAS 220 or permission of the instructor)

● **CLAS 323 Intermediate Greek: Homer.**

(3) (Prerequisite: CLAS 220 or permission of the instructor) (Selections)

● **CLAS 324 Intermediate Greek: Poetry.**

(3) (Prerequisite: CLAS 220 or permission of the instructor)

● **CLAS 325 Intermediate Greek: Later Prose.**

(3) (Prerequisite: CLAS 220 or permission of the instructor)

● **CLAS 326 Intermediate Greek: Selections.**

(3) (Prerequisite: CLAS 220 or permission of instructor)

● **CLAS 331 Intermediate Modern Greek Language.**

(3) (Prerequisite: CLAS 230 or CLAS 235 or CLAS 237 or permission of the instructor) Competence in the language at the intermediate level through the study of grammar, vocabulary and derivatives. Excerpts in prose and poetry introducing the civilization of modern Greece.

● **CLAS 332 The Modern Greek Novel.**

(3) (Prerequisite: CLAS 220 or permission of instructor)

● **CLAS 333 Modern Greek Poetry.**

(3) (Prerequisite: CLAS 230 or permission of the instructor) Selected works of 20th Century Greek poets - Kavafy, Seferis, Elytis, and others.

● **CLAS 335 Language and Civilization/Modern Greece 2.**

(3) (Prerequisites: CLAS 237 or permission of the instructor) A continuation of CLAS 331.

● **CLAS 347 Special Topics in Classics.**

(3)

● **CLAS 370 Women in Greek Drama.**

(3) Each of four Greek tragedies (e.g. Oedipus, Antigone, Bacchae, Medea) analyzed along with its modern interpretations. The heroines of fiction as related to real Greek women by comparing myth transformation in tragedy with documentary material.

● **CLAS 380 Ancient Greek Religion.**

(3) (Prerequisite: CLAS 203 or HIST 205 or permission of instructor.) Focuses on the history of Greek religion in the Classical Period. Particular attention will be paid to the Greek concept of divinity, local pantheons, civic festival calendars, the topography of myth and ritual, ideas concerning the afterlife, mystery cults, oracles and games and the literary representations of religion.

● **CLAS 404 Classical Tradition.**

(3) (Prerequisite: 3 credits in Classics or related courses; or permission of instructor) Some episodes from the long history of the transmission and reception of the Classics in later times. Students will choose periods or times for special study.

● **CLAS 411 Advanced Latin: Epic.**

(3) (Prerequisites: 9 credits of Intermediate Latin or permission of instructor) The reading of selected texts in Roman Epic Poetry in the original Latin.

● **CLAS 413 Advanced Latin: Satire.**

(3) (Prerequisite: 9 credits of Intermediate Latin or permission of instructor) The reading of selected texts in Roman Satire Poetry in the original Latin.

● **CLAS 414 Advanced Latin: History.**

(3) (Prerequisite: 9 credits of Intermediate Latin or permission of instructor) The reading of selected texts in Roman History Prose in the original Latin.

● **CLAS 416 Advanced Latin: Philosophy.**

(3) (Prerequisite: 9 credits of Intermediate Latin or permission of instructor) The reading of selected texts in Roman Philosophy Prose in the original Latin.

● **CLAS 418 Advanced Latin: Special Topics.**

(3) (Prerequisite: 6 credits of intermediate Latin or permission of the instructor) (Note: All ancient texts will be read in the original) Themes in Roman literature, culture, and history.

● **CLAS 423 Advanced Ancient Greek: Drama.**

(3) (Prerequisite: 9 credits of Intermediate Ancient Greek or permission of instructor) The reading of selected texts in Greek Drama Poetry in the original Ancient Greek.

● **CLAS 424 Advanced Greek: History.**

(3) (Prerequisites: 9 credits of Intermediate Ancient Greek or permission of instructor) The reading of selected texts in Greek History Prose in the original Ancient Greek.

● **CLAS 425 Advanced Greek: Oratory.**

(3) (Prerequisite: 9 credits of Intermediate Greek or permission of instructor) The reading of selected texts in Greek Oratory Prose in the original Ancient Greek.

● **CLAS 427 Advanced Ancient Greek: Documents.**

(3) (Prerequisite: 6 credits of intermediate Latin or permission of the instructor) Ancient Greek epigraphical or papyrological sources. Textual criticism and interpretation of selected literary and non-literary ancient texts and documents written on stone, metal, terracotta, wood, bone, or papyrus.

● **CLAS 428 Advanced Ancient Greek: Special Topics.**

(3) (Prerequisite: 6 credits of intermediate Latin or permission of the instructor) (Note: All ancient texts will be read in the original) Themes in ancient Greek literature, culture, and history.

● **CLAS 449 Seminar: Natural Law.**

(3) (Prerequisite: a relevant course in political or legal philosophy or in ancient history) The origin, development and criticism of theories of natural law in the Greek and Roman

thinkers. Attention will be paid to the influence of these theorists on conceptions of natural law in the modern world. Original sources to be read in translation.

● **CLAS 490 Greek and Roman Historiography.**

(3) (Prerequisite: 3 credits in Classics at the 300 level or up or permission of instructor.) Seminar on the works of the Greek and Roman historians (in translation) who founded a new literary genre for the exploration of past and present events; interpretation of their approaches towards history and theories for their study.

● **CLAS 515D1 (3), CLAS 515D2 (3) Latin Authors and Texts.**

(Prerequisite (Undergraduate): 9 credits in Intermediate Latin or equivalent) (Restriction: Honours and Graduate students) (Students must register for both CLAS 515D1 and CLAS 515D2.) (No credit will be given for this course unless both CLAS 515D1 and CLAS 515D2 are successfully completed in consecutive terms) Completion of a Reading List in Latin, with Faculty supervision, to be tested by written examination.

● **CLAS 525D1 (3), CLAS 525D2 (3) Ancient Greek Authors & Texts.**

(Prerequisite (Undergraduate): 9 credits in Intermediate Greek or equivalent) (Restriction: Honours and Graduate students) (Students must register for both CLAS 525D1 and CLAS 525D2.) (No credit will be given for this course unless both CLAS 525D1 and CLAS 525D2 are successfully completed in consecutive terms) Completion of a Reading List in Greek, with Faculty supervision, to be tested by written examination.

COMS-Communication Studies

Offered by: Art History & Communication St

● **COMS 200 History of Communication.**

(3) (Restriction: Not open to students who have ENGC 200.) The social and cultural implications of major developments in communications from prehistory to the electronic era. Thematic and conceptual introduction to the underlying media technologies and to some key issues and practices of historical thinking about their role in society.

● **COMS 210 Introduction to Communication Studies.**

(3) (Restriction: Not open to students who have taken ENGL 278) The social and cultural implications of media. Surveys theory and case studies relevant key issues such as the ownership, structure and governance of media industries; the significance of emergent media technologies; and the roles of media as cultural forms and practices.

Impact of feminist and queer theory on media studies; current issues about gender in the media. Emphasis will be placed on critical analysis of media representations of gender in relation to other social differences, such as race, class and sexuality.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

COMS 320 Media and Empire.

(3) (Prerequisite: one 200-level COMS course, or permission of the instructor.) The relationship between mass media and empire-building, as well as the role of mass and alternative media in anti-imperialism movements. Topics may include: Print technologies and the British Empire; shipping technologies, industrialization and the slave trade; new media and the anti-war and anti-globalization movements.

COMS 330 Media in Cultural Life.

(3) (Prerequisite: 3 credits of COMS coursework at the 200-level, or permission of the instructor.) Introduction to a range of theories and qualitative methods in communication studies for the critical analysis of media practices in cultural life.

●COMS 340 New Media.

(3) (Prerequisite: 3 credits at the 200-level in a COMS course, or permission of the Instructor) Critical analysis of new media from cultural, philosophical, technological and institutional perspectives.

●COMS 350 Sound Culture.

(3) (Prerequisite: 3 credits at the 200-level in a COMS course, or permission of the Instructor) Analysis of sound culture, including sonic and audiovisual media, sound art and architecture, sound in everyday life, sonic institutions and theoretical accounts of the role of sound in communication.

●COMS 400 Critical Theory Seminar.

(3) (Prerequisite: COMS 210 and a 300-level COMS course, or permission of the instructor.) The tradition of critical social theory as it has influenced the field of media and communication studies. Strains of critical theory studies may include: Marxism; the Frankfurt school; poststructuralism, deconstruction and postmodernism; feminism; cultural studies, postcolonialism and critical race theory.

●COMS 410 Cultures in Visualization.

(3) (Prerequisites: COMS 210, and a 300-level COMS course or permission of instructor.) Analysis of imaging technologies in their cultural contexts. Focus on different traditions of visual representation through the investigation of artistic and scientific visualization practices.

COMS 490 History and Theory of Media.

(3) (Prerequisites: COMS 210, 3 additional credits in a 300-level COMS course, or permission of instructor.) Emergent themes in media history and media theory, and their application to current issues in communications studies.

COMS 491 Media, Communication & Culture.

(3) (Prerequisites: COMS 210, 3 additional credits in a 300-level COMS course, or permission of instructor.) W09: Urban Culture Emergent themes and issues in cultural approaches to media and communication studies.

●COMS 492 Power, Difference and Justice.

(3) (Prerequisites: COMS 210, 3 additional credits in a 300-level COMS course, or permission of instructor.) Media systems and their role in social relations of power and difference that are maintained and challenged through communication practices.

●COMS 510

(3) (Course intended for senior undergraduates and graduate students with a specialized interest in Canadian broadcasting policy.) (Prerequisites: 3 credits of COMS coursework at the 200-level, 3 credits of COMS coursework at the 300 or 400-level, or permission of instructor.) Key issues in the history and evolution of radio, television and new media in Canada. The legislative and regulatory framework of Canadian broadcasting, the relationship between public and privately-owned media, the emergence of new media, and the efforts of interest groups to influence the direction of the Canadian media system.

●COMS 521 Communications in History.

(3) North American communication studies have undergone five discernible changes in the definition and focus of the field. The major "schools" of thought to be covered are the Chicago and Lazarsfeld heritages, the institutionalization of communication science in the academy, and the post-modern period.

●COMS 541 Cultural Industries.

(3) The convergence of computerized technologies and cultural industries and how these have produced entire new forms of cultural expression in film, TV, and the Internet.

●COMS 560 Communications and Development.

(3)

EAPR-English for Academic Purposes

Offered by: English&French Language Centre

★EAPR 250 Research Essay & Rhetoric.

(3) (3 hours) (Intended for native speakers of English. For students in all years and faculties.) (Entrance test: Short essay first day of class.) (Restrictions: Not open to students who have taken or are taking ESLN 500. Not open to students who have taken EFRL 250.) Principles and use of academic research and genres, rhetorical strategies, and general editing skills.

EAST-Asian Language & Literature

Offered by: East Asian Studies

EAST 211 Introduction: East Asian Culture: China.

(3) This course provides a critical introduction to central themes in Chinese culture. The course will also examine the changing representations of the Chinese cultural tradition in the West. Readings will include original sources in translation from the fields of literature, philosophy, religion, and cultural history.

●EAST 220 First Level Korean.

(9) (Summer) Introduction to the basic structures of the standard Korean language. The aim of this course is to give students a basic knowledge of the Korean language. Special emphasis is put on handling everyday conversation, reading and writing short texts, and mastering basic grammar rules.

EAST 220D1 (4.5), EAST 220D2 (4.5) First Level Korean.

(Students must register for both EAST 220D1 and EAST 220D2.) (No credit will be given for this course unless both EAST 220D1 and EAST 220D2 are successfully completed in consecutive terms) (EAST 220D1 and EAST 220D2 together are equivalent to EAST 220) Introduction to the basic structures of the standard Korean language. The aim of this course is to give students a basic knowledge of the Korean language. Special emphasis is put on handling everyday conversation, reading and writing short texts, and mastering basic grammar rules.

●EAST 230 First Level Chinese.

(9) (Requires departmental approval.) Introduction to the basic structures of Mandarin Chinese, Pin-yin romanization and 750 characters for reading and writing. Emphasis on developing aural

and oral skills through communication games and interaction activities. Animated films are used as part of teaching materials.

EAST 230D1 (4.5), EAST 230D2 (4.5) First Level Chinese.

(Requires departmental approval.) (Students must register for both EAST 230D1 and EAST 230D2.) (No credit will be given for this course unless both EAST 230D1 and EAST 230D2 are successfully completed in consecutive terms) (EAST 230D1 and EAST 230D2 together are equivalent to EAST 230) Introduction to the basic structures of Mandarin Chinese, Pin-yin romanization and 750 characters for reading and writing. Emphasis on developing aural and oral skills through communication games and interaction activities. Animated films are used as part of teaching materials.

● **EAST 240 First Level Japanese.**

(9) (Requires departmental approval.) Introduction to the basic grammar and sentence patterns of the Japanese language in both oral and written forms. In reading and writing skills students will be introduced to katakana, hiragana and kanji.

EAST 240D1 (4.5), EAST 240D2 (4.5) First Level Japanese.

(Requires Departmental approval) (Students must register for both EAST 240D1 and EAST 240D2.) (No credit will be given for this course unless both EAST 240D1 and EAST 240D2 are successfully completed in consecutive terms) (EAST 240D1 and EAST 240D2 together are equivalent to EAST 240) Introduction to the basic grammar and sentence patterns of the Japanese language in both oral and written forms. In reading and writing skills students will be introduced to katakana, hiragana and kanji.

EAST 303 Current Topics: Chinese Studies 1.

(3) (Fall) (Restriction: Departmental approval required) Consideration of important issues in Chinese Studies. Content of the course will vary from year to year.

EAST 304 Current Topics: Chinese Studies 2.

(3) (Winter) (Restriction: Departmental approval required) Consideration of important issues in Chinese Studies. Content of the course will vary from year to year.

EAST 305 Current Topics: Japanese Studies 1.

(3) (Fall) (Restriction: Departmental approval required) Consideration of important issues in Japanese studies. The content of the course will vary from year to year.

EAST 306 Current Topics: Japanese Studies 2.

(3) (Winter) (Restriction: Departmental approval required) Consideration of important issues in Japanese studies. The content of the course will vary from year to year.

EAST 307 Topics: Chinese Language and Literature 1.

(3) (Fall) (Prerequisite: EAST 211 or permission of instructor) (Restriction: Departmental approval required) Consideration of selected topics and aspects of Chinese literature and/or language. The content of the course may vary from year to year.

EAST 308 Topics: Chinese Language and Literature 2.

(3) (Winter) (Prerequisite: EAST 211 or permission of instructor) (Restriction: Departmental approval required) Consideration of selected topics and aspects of Chinese literature and/or language. The content of the course may vary from year to year.

EAST 313 Current Topics: Korean Studies 1.

(3) (Fall) (Restriction: Departmental approval required.) Consideration of important issues in Korean Studies. Content of the course will vary from year to year.

EAST 314 Current Topics: Korean Studies 2.

(3) (Winter) (Restriction: Departmental approval required) Consideration of important issues in Korean Studies. Content of the course will vary from year to year.

● **EAST 320 Second Level Korean.**

(9) (Summer) (Prerequisite: EAST 220 or equivalent) The aim of this course is to give students a fluent speaking ability in daily conversation, advanced grammar knowledge, improved reading and writing skills. Special emphasis is put on the efficient use of grammar, enrichment of vocabulary, and mastering useful expressions encountered in everyday life.

EAST 320D1 (4.5), EAST 320D2 (4.5) Second Level Korean.

(Prerequisite: EAST 220 or equivalent) (Students must register for both EAST 320D1 and EAST 320D2.) (No credit will be given for this course unless both EAST 320D1 and EAST 320D2 are successfully completed in consecutive terms) (EAST 320D1 and EAST 320D2 together are equivalent to EAST 320) The aim of this course is to give students a fluent speaking ability in daily conversation, advanced grammar knowledge, improved reading and writing skills. Special emphasis is put on the efficient use of grammar, enrichment of vocabulary, and mastering useful expressions encountered in everyday life.

● **EAST 330 Second Level Chinese.**

(9) (Summer) (Prerequisite: Chinese EAST 230 or equivalent or permission of the instructor) The same communicative approach as in EAST 230 is used to develop aural and oral skills on daily topics. In addition to textbooks, Chinese films on videotapes will be incorporated as teaching materials.

EAST 330D1 (4.5), EAST 330D2 (4.5) Second Level Chinese.

(Prerequisite: EAST 230 or equivalent or permission of the instructor) (Students must register for both EAST 330D1 and EAST 330D2.) (No credit will be given for this course unless both EAST 330D1 and EAST 330D2 are successfully completed in consecutive terms) (EAST 330D1 and EAST 330D2 together are equivalent to EAST 330) The same communicative approach as in EAST 230 is used to develop aural and oral skills on daily topics. In addition to textbooks, Chinese films on videotapes will be incorporated as teaching materials.

● **EAST 340 Second Level Japanese.**

(9) (Summer) (Prerequisite: Japanese EAST 240 or equivalent or permission of instructor.) Continuation of the study of oral and written Japanese.

EAST 340D1 (4.5), EAST 340D2 (4.5) Second Level Japanese.

(Prerequisite: EAST 240 or equivalent or permission of instructor) (Restriction: Departmental approval required) (Students must register for both EAST 340D1 and EAST 340D2.) (No credit will be given for this course unless both EAST 340D1 and EAST 340D2 are successfully completed in consecutive terms) (EAST 340D1 and EAST 340D2 together are equivalent to EAST 340) Continuation of the study of oral and written Japanese.

● **EAST 350 Gender and Sexuality in Chinese Literature.**

(3) (Prerequisite: EAST 211 or permission of instructor.) (Note: Readings in English translation.) Gender and sexuality in modern and/or premodern Chinese literature with emphasis on representation of gender relations, notions of masculinity and femininity, morality and sexuality. Readings from fiction, drama, poetry, and/or other genres are approached from a variety of critical perspectives.

(3) (Core course for the Women's Studies program) (Prerequisite: EAST 211 or permission of instructor.) A study of fiction, drama, and poetry by women writers in imperial, modern, and/or contemporary China.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

● **EAST 352 Critical Approaches to Chinese Literature.**

(3) (Prerequisite: EAST 211.) This course will examine traditional and/or modern genres of Chinese literature with a focus on different forms of Chinese and Western literary analysis.

EAST 353 Approaches to Chinese Cinema.

(3) (Prerequisite: EAST 211.) Development of Chinese film in the 20th century, with an emphasis on both critical approaches to film as well as film history.

● **EAST 354 Taoist and Buddhist Apocalypses.**

(3) Visions of the end of the world in Medieval Chinese Buddhist and Taoist literature will be contrasted with Western apocalyptic materials. The course will trace the development of Buddhism and Taoism in China, focusing on millennialist movements, soteriology, public worship, and ritual.

EAST 356 Modern & Contemporary Chinese Art.

(3) (Restriction: Not open to students taking or who have taken ARTH 356.) Examination of modern Chinese art and visual culture from the 1920's to the present. Emphasis will be placed on the formation of the artistic avant-garde in the 20th century and its relation to socialist and post-socialist mass culture.

EAST 357 Early Chinese Art.

(3) (Prerequisite: One 200-level Art History or East Asian Studies course, or by permission of instructor.) (Restriction: Not open to students taking or who have taken ARTH 357.) Survey of Chinese art and visual culture during the pre-imperial and early imperial periods (1500BCE-900CE). A wide range of visual images and media (painting, architecture, inscription, funerary art) will be examined in the historical context of the rise and development of the empire.

EAST 362 Japanese Cinema.

(3) This course will study the development of film in Japan during the 20th century with a particular focus on the analysis of film form, genres and history.

● **EAST 363 Aesthetics and Politics of Vision Premodern Japan.**

(3) (Prerequisite: EAST 212 or permission of instructor) This course examines cultural production in early and medieval Japan, focusing on calligraphy, painting, picture scrolls, gestures and their relation to textual production. Readings explore various classic texts, taboos against seeing and narrative modes of cognition.

EAST 364 Mass Culture and Postwar Japan.

(3) (Prerequisite: Any introductory course in literature or cultural studies, or permission of instructor) This course addresses a number of analytic approaches to mass culture in order to examine the culture industry of post-war Japan. Emphasis on narrative strategies in popular or consumer fiction and on the problems of marginalized writers.

● **EAST 370 History of Sexuality in Japan.**

(3) Social and cultural history of sexuality in Japan. Possible topics include pre-modern sexuality and relations to court, religion and anthropology; pre-modern sex and gender relations; modern sexuality and gender identities; sexuality and the rise of science; relation to nationalism; feminism and queer movements.

● **EAST 385 Society and Community in Korea.**

(3) This course will analyze topics in colonial and contemporary Korean life with a focus on the social institutions of family, school and workplace.

● **EAST 390 The Chinese Family in History.**

(3) (Prerequisite: EAST 211 or HIST 208 or HIST 218 or permission of the instructor.) Exploration of the Chinese family in history both as an institution - in its religious, legal, economic, political aspects - and as a lived reality.

● **EAST 420 Third Level Korean 1.**

(3) (Restriction: Not open to students who have taken or are taking EAST 420D1/D2.) grammar, enhancing written and oral comprehension and improving writing and speaking skills.

● **EAST 421 Third Level Korean 2.**

(3) (Prerequisite: EAST 420 or equivalent or permission of instructor.) (Restriction: Not open to students who have taken or are taking EAST 420D1/D2.) Advanced grammar, enhancing written and oral comprehension and improving writing and speaking skills.

● **EAST 430 Third Level Chinese.**

(6) (Summer) (Prerequisite: EAST 330 or equivalent or permission of instructor) A communicative approach will be used to provide students with skills to communicate in various situations, express their ideas and feelings, and discuss various aspects of culture and life in China and in Canada. Teaching materials include Chinese movies on videotape and slides depicting Chinese life and culture.

EAST 430D1 (3), EAST 430D2 (3) Third Level Chinese.

(Prerequisite: EAST 330 or equivalent or permission of instructor) (Students must register for both EAST 430D1 and EAST 430D2.) (No credit will be given for this course unless both EAST 430D1 and EAST 430D2 are successfully completed in consecutive terms) (EAST 430D1 and EAST 430D2 together are equivalent to EAST 430) A communicative approach will be used to provide students with skills to communicate in various situations, express their ideas and feelings, and discuss various aspects of culture and life in China and in Canada. Teaching materials include Chinese movies on videotape and slides depicting Chinese life and culture.

EAST 440D1 (3), EAST 440D2 (3) Third Level Japanese.

(Prerequisite: EAST 340 or equivalent or permission of instructor) (Students must register for both EAST 440D1 and EAST 440D2.) (No credit will be given for this course unless both EAST 440D1 and EAST 440D2 are successfully completed in consecutive terms) More advanced study of the Japanese language. Emphasis will be placed on reading.

EAST 453 Topics: Chinese Literature.

(3) (Prerequisite: A 300-level course in any literature.) Advanced seminar in selected genres, themes and issues in Chinese literature.

● **EAST 454 Topics: Chinese Cinema.**

(3) (Prerequisites: EAST 353, a 300-level film studies course, or permission of the instructor.) Advanced seminar in selected themes and issues in Chinese film.

EAST 456 Chinese Drama and Popular Culture.

(3) (Prerequisite: EAST 211 or permission of instructor) This course will examine the regional background of popular culture in Late Imperial China, focusing on the development of distinct traditions of regional drama. The levels of texts and audiences and the social and ritual contexts of theatrical performance in pre-modern China will also be considered.

● **EAST 457 Brushwork in Chinese Painting.**

(3) (Prerequisite: At least one EAST or ARTH course or permission of instructor.) (Restriction: Not open to students taking or who have taken ARTH 457.) The seminar takes an in-depth look at the function and meaning of the brushwork in traditional Chinese painting. Analysis of paintings will be combined to close readings of theoretical texts in translation.

EAST 461 Inventing Modern Japanese Novel.

(3) (Prerequisite: Any course in literature or cultural studies above the introductory level, or permission of instructor) An examination of the modern Japanese novel as a form which both affirms and resists the form of the European novel. Readings explore the particular problems of the Japanese novel in the context of modernization, westernization, and colonialism.

● **EAST 462 Japan in Asia.**

(3) (Prerequisite: Any East Asian Studies course above the introductory level, or permission of the instructor) This course introduces theories of cultural interaction, interpellation, and intertextuality in order to reconsider Japanese modes of reception and selection of Chinese texts and technologies. Readings range from early Japanese to 20th century texts. Readings in translation.

EAST 464 Image, Text, Performance.

(3) (Prerequisite: Any East Asian Studies course above the introductory level, or permission of the instructor) Drawing on theoretical approaches from a variety of media studies, including cinema, performance and performativity, and elsewhere, this course looks at cultural production in premodern and modern Japan. Topics to be addressed range from calligraphy and writing, to theatre, and film.

● EAST 466 Feminism and Japan.

(3) (Prerequisite: Any East Asian Studies course above the introductory level, or permission of instructor) Seminar dealing with issues relating to gender, the feminine, especially in the context of Japan. The course will draw on a range of theoretical frameworks, and may include the analysis of literature, film, art and popular culture.

EAST 467 Topics: Japanese Cinema.

(3) (Prerequisites: EAST 214, EAST 362 or permission of the instructor.) Topics in the study of Japanese cinema.

● EAST 490 Confucius and the Classics.

(3) (Prerequisite: EAST 211 or HIST 208 or HIST 218 or permission of instructor.) This course will examine the Five Classics and their relation to the figure of Confucius. It will survey various interpretations of Confucius and the Classics and the role these played in various periods of Chinese history.

EAST 491 Tutorial: East Asian Languages and Literatures 1.

(3) (Fall) (Restriction: Departmental approval required) Advanced reading course in language or literature.

EAST 492 Tutorial: East Asian Languages and Literatures 2.

(3) (Winter) (Restriction: Departmental approval required) Advanced reading course in language or literature.

EAST 493 Special Topics: East Asian Studies 1.

(3) (Fall) (Prerequisite: Any EAST course at the 300-level or above or permission of instructor) (Restriction: Departmental approval required) Advanced reading course under supervision of instructor on certain aspects of East Asian Studies. Topics will vary from year to year.

EAST 494 Special Topics: East Asian Studies 2.

(3) (Winter) (Prerequisite: Any EAST course at the 300-level or above or permission of instructor) (Restriction: Departmental approval required) Advanced reading course under supervision of instructor on certain aspects of East Asian Studies. Topics will vary from year to year.

EAST 495D1 (1.5), EAST 495D2 (1.5) Joint Honours Thesis: East Asian Studies.

(Prerequisite: U3 Joint Honours status and permission of instructor) (Restriction: Departmental approval required) (Students must register for both EAST 495D1 and EAST 495D2.) (No credit will be given for this course unless both EAST 495D1 and EAST 495D2 are successfully completed in consecutive terms) Supervised reading and preparation of an Honours thesis under the direction of a member of staff.

EAST 495N1 (1.5), EAST 495N2 (1.5) Joint Honours Thesis: East Asian Studies.

(Restriction: Departmental approval required) (Students must also register for EAST 495N2) (No credit will be given for this course unless both EAST 495N1 and EAST 495N2 are successfully completed in a twelve month period) Supervised reading and preparation of an Honours thesis under the direction of a member of staff.

EAST 498D1 (3), EAST 498D2 (3) Honours Thesis: East Asian Studies.

(Prerequisite: U3 Honours status and permission of the instructor) (Restriction: Departmental approval required) (Students must register for both EAST 498D1 and EAST 498D2.) (No credit will be given for this course unless both EAST 498D1 and EAST 498D2 are successfully completed in consecutive terms) Supervised reading and preparation of an Honours thesis under the direction of a member of staff.

EAST 498N1 (3), EAST 498N2 (3) Honours Thesis: East Asian Studies.

(Restriction: Departmental approval required) (Students must also register for EAST 498N2) (No credit will be given for this course unless both EAST 498N1 and EAST 498N2 are successfully completed in a twelve month period) Supervised

reading and preparation of an Honours thesis under the direction of a member of staff.

EAST 499 Internship: East Asian Studies.

(3) (Restriction: Open to U2 and U3 students with a minimum CGPA of 2.7, and permission of the departmental Internship Advisor. This course will not normally fulfill program requirements for seminar or 400-level courses.) Internship with an approved host institution or organization.

EAST 501 Advanced Topics in Japanese Studies 1.

(3) (Fall) (Prerequisite (Undergraduate): permission of instructor) (Restriction: Departmental approval required) Consideration of selected topics and aspects of Japanese culture and society.

EAST 502 Advanced Topics in Japanese Studies 2.

(3) (Winter) (Prerequisite (Undergraduate): permission of instructor) (Restriction: Departmental approval required) Consideration of selected topics and aspects of Japanese culture and society.

EAST 503 Advanced Topics in Chinese Studies 1.

(3) (Fall) (Prerequisite (Undergraduate): permission of instructor) (Restriction: Departmental approval required) Consideration of selected topics and aspects of Chinese culture and society.

EAST 504 Advanced Topics in Chinese Studies 2.

(3) (Winter) (Prerequisite (Undergraduate): permission of instructor) (Restriction: Departmental approval required) Consideration of selected topics and aspects of Chinese culture and society.

EAST 515 Seminar: Beyond Orientalism.

(3) (Prerequisite (Undergraduate): any EAS course at the 300-level or above or permission of instructor) Examines the cultural stakes and ethical implications of applying Western European models of understanding to East Asian societies. Provides background on interdisciplinary debates around "otherness", "cultural appropriation", and "postcolonialism", focusing on their history within East Asian Studies and their impact on that field's methodological assumptions, self-definition, and institutional practices.

● EAST 520 Fourth Level Korean 1.

(3) (Prerequisite: EAST 421 or permission of instructor.) (Restriction: Not open to students who have taken or are taking EAST 520D1/D2.) Continuation of EAST 421 (Third Level Korean 2) with more emphasis on writing and reading skills.

● EAST 521 Fourth Level Korean 2.

(3) (Prerequisite: EAST 520 or equivalent or permission of instructor.) (Restriction: Not open to student who have taken or are taking EAST 520D1/D2.) Continuation of EAST 520. The main focus and the course organization remain the same with more advanced content.

● EAST 530 Fourth Level Chinese.

(6) (Summer) (Prerequisite (Undergraduate): EAST 430 or equivalent) Development of skills required to conduct academic discussions in oral as well as in written forms. Teaching materials include original texts from Chinese newspapers, Chinese literature and videos.

EAST 530D1 (3), EAST 530D2 (3) Fourth Level Chinese.

(Prerequisite (Undergraduate): EAST 430 or equivalent) (Students must register for both EAST 530D1 and EAST 530D2.) (No credit will be given for this course unless both EAST 530D1 and EAST 530D2 are successfully completed in consecutive terms) (EAST 530D1 and EAST 530D2 together are equivalent to EAST 530) Development of skills required to conduct academic discussions in oral as well as in written forms. Teaching materials include original texts from Chinese newspapers, Chinese literature and videos.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

EAST 533 Classical Chinese 1.

(3) (Prerequisite: EAST 330 or equivalent.) (Restriction: Not open to students who have taken EAST 433.) An introduction to the grammar and syntax of classical Chinese. Readings are selected from well-known Confucian and Taoist classics, and philosophical and historical writings from premodern China.

EAST 534 Classical Chinese 2.

(3) (Prerequisite: EAST 330 or equivalent.) (Restriction: Not open to students who have taken EAST 434.) Continuation of EAST 533 at a more advanced level.

● **EAST 535 Chinese for Business 1.**

(3) (Prerequisite: EAST 330 or equivalent or permission of instructor) This course aims to provide advanced students of Chinese with training in the terminology and syntax necessary for business communications. Topics will include many different aspects of business negotiations, such as price negotiation, methods of payment, etc.

● **EAST 536 Chinese for Business 2.**

(3) (Prerequisite: EAST 535 or equivalent or permission of instructor) This course is a continuation of EAST 535. It is designed to further develop students' linguistic competence for business communication, and to provide students with some knowledge on China's trade policies as well as on different methods of trading with China.

EAST 537D1 (3), EAST 537D2 (3) China Today Through Translation.

(Prerequisite (Undergraduate): students with native or near native proficiency may register directly, other students require permission of instructor) (Restriction: Not open to students who have taken EAST 437) (Students must register for both EAST 537D1 and EAST 537D2.) (No credit will be given for this course unless both EAST 537D1 and EAST 537D2 are successfully completed in consecutive terms) A course to develop practical translation skills and understanding of contemporary China, focusing on Sino-Canadian and multi-lateral political, cultural and trade issues. Interpretive skills will be enhanced through translation exercises and discussion in class. Course materials include original documents and videos from the business communications and other fields.

EAST 540D1 (3), EAST 540D2 (3) Fourth Level Japanese.

(Prerequisite (Undergraduate): EAST 440 or equivalent or permission of instructor) (Students must register for both EAST 540D1 and EAST 540D2.) (No credit will be given for this course unless both EAST 540D1 and EAST 540D2 are successfully completed in consecutive terms) Advanced study of Japanese, with emphasis on reading Japanese newspapers. Classes will be conducted entirely in Japanese.

● **EAST 543 Classical Japanese 1.**

(3) (Prerequisite (Undergraduate): EAST 440 or permission of instructor) The course will offer an introduction to the grammar and syntax of classical Japanese. Readings of well-known pre-modern writings.

● **EAST 544 Classical Japanese 2.**

(3) (Prerequisite (Undergraduate): EAST 543 or permission of instructor) The grammar and syntax of classical Japanese. Readings in well-known writings of pre-modern Japan.

EAST 546 Advanced Reading: Japanese.

(3) (Prerequisite: EAST 440 or permission of instructor.) (Restriction: Departmental approval required) in-depth reading and analysis of advanced Japanese texts. Readings will be selected from a variety of prose genres ranging from fiction to journalistic writing.

EAST 547 Advanced Translation in Japanese.

(3) (Prerequisite (Undergraduate): EAST 440 or equivalent or permission of the instructor) (Restriction: Departmental approval required) Translation of Japanese texts into English or French. Materials will be selected from a variety of prose genres ranging from fiction to journalistic writing.

● **EAST 550 Classical Chinese Poetry Themes and Genres.**

(3) (Prerequisite (Undergraduate): EAST 433 or permission of instructor) A study of major themes and genres of classical Chinese poetry from its beginnings to the Yuan dynasty (14th century), with emphasis on critical analysis of text and context. Readings of poems in the original.

● **EAST 551 Technologies of Self in Early China.**

(3) (Prerequisite (Undergraduate): One advanced course in EAS or permission of the instructor) Readings on self-cultivation drawn from Confucian, Legalist, and Taoist philosophic texts of early China (5th-2nd centuries B.C.) in translation will be compared with historical and archaeological materials on the evolving construction of the "individual" in Chinese social structure, military organization, political and ritual codes.

● **EAST 552 The Yijing (Book of Changes).**

(3) (Prerequisite: Any 300-level or above EAST course or permission of instructor.) (Note: No prior knowledge of Chinese required.) In-depth examination of the Yijing, known in the West as the Book of Changes. The course will combine a close reading of this pivotal text and its numerous commentaries with a social and cultural analysis of the diverse functions it fulfilled through Chinese history - philosophical, political, religious, aesthetic and cosmological.

● **EAST 556 Advanced Reading in Chinese.**

(3) (Prerequisite: EAST 430 or permission of instructor) (Restriction: Departmental approval required) In-depth reading and analysis of advanced Chinese texts. Readings will be selected from variety of prose genres ranging from fiction to journalistic writing.

EAST 557 Advanced Translation: Chinese.

(3) (Prerequisite: EAST 430 or equivalent or permission of instructor) (Restriction: Departmental approval required) Translation of Chinese texts into English or French. Materials will be selected from a variety of prose genres ranging from fiction to journalistic writing.

EAST 559 Advanced Topics: Chinese Literature.

(3) (Prerequisite (Undergraduate): one advanced course in EAST or permission of instructor) (Restriction: Departmental approval required) Consideration of selected topics and aspects of Chinese literature. The content of the course may vary from year to year, ranging from contemporary to modern to pre-modern literature.

● **EAST 562 Japanese Literary Theory and Practice.**

(3) (Prerequisite (Undergraduate): Any course in EAS above the 200-level and at least a year of an East Asian Language, or permission of instructor) This course examines Japanese theories of literary production and practice with an emphasis on 20th century thought.

● **EAST 563 Images, Ideograms, Aesthetics.**

(3) (Prerequisite (Undergraduate): EAST 320 or EAST 330 or EAST 340 or equivalent, or permission of instructor) This course explores theories and usage of ideograms and images in Asian texts, both modern and premodern.

● **EAST 564 Structures of Modernity: Japan.**

(3) (Prerequisite (Undergraduate): Any East Asian Studies course above the introductory level, or permission of the instructor) This course explores relations between some of the principal sites which structure the experience of "modernity" in Japan (and elsewhere) - from bodies and cities, to the urban context in general. Along with general approaches (e.g. the idea of everyday life; questions of time), specific topics may include speed, music, architecture, crime, etc.

● **EAST 569 Advanced Topics: Japanese Literature.**

(3) (Prerequisite: one advanced course in EAS or permission of instructor) (Restriction: Departmental approval required) Consideration of selected topics and aspects of Japanese literature. The content of the course may vary from year to year from contemporary to modern to pre-modern literature.

EAST 576 Advanced Reading in Korean.

(3) (Prerequisite: EAST 420 or permission of instructor) (Restriction: Departmental approval required) In-depth reading and analysis of advanced Korean texts. Readings will be selected from a variety of prose genres ranging from fiction to journalistic writing.

EAST 577 Advanced Translation: Korean.

(3) (Prerequisite: EAST 420 or permission of instructor.) (Restriction: Departmental approval required) Translation of Korean texts into English or French. Materials will be selected from a variety of prose genres ranging from fiction to journalistic writing.

● **EAST 582 Japanese Culture and Society.**

(3)

ECON-Economics

Offered by: Economics

● **ECON 199 FYS: Aspects of Globalization.**

(3) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25) A guided discussion of the many and varied aspects of economic globalization.

● **ECON 205 An Introduction to Political Economy.**

(3) (Restriction: Not open to students who have taken 154-205D) (Restriction: This course does not count for credit toward the Major or Honours degree in Economics) A critical study of the insights to be gained through economic analysis of a number of problems of broad interest. The focus will be on the application of economics to issues of public policy.

● **ECON 208 Microeconomic Analysis and Applications.**

(3) (Restriction: Not open to students who have taken or are taking ECON 230 or ECON 250) A university-level introduction to demand and supply, consumer behaviour, production theory, market structures and income distribution theory.

● **ECON 209 Macroeconomic Analysis and Applications.**

(3) (Prerequisites: ECON 208 or permission of the instructor) (Restriction: Not open to students who have taken or are taking ECON 330 or ECON 352) A university-level introduction to national income determination, money and banking, inflation, unemployment and economic policy.

● **ECON 219 Current Economic Problems: Topics.**

(3) (This course will also be of interest to students outside of Economics) This course will deal with topical issues of importance to the Canadian economy.

● **ECON 221 Economic History.**

(3) (Corequisites: ECON 208 and ECON 209 or ECON 230D1/D2 or ECON 250D1/D2.) (Restrictions: Not open to students who have taken ECON 201 or ECON 221D1/D2.) Survey of economic development. The evolution of economic institutions and the process of economic growth. Topics include demographic change, agrarian institutions, financial and industrial organization, technological change and the expansion of trade and markets.

● **ECON 223 Political Economy of Trade Policy.**

(3) (Prerequisite: ECON 208) The course introduces students to the economics of international trade, what constitutes good trade policy, and how trade policy is decided. The course examines Canadian trade policy since 1945, including the GATT, Auto Pact, the FTA and NAFTA, and concludes with special topics in trade policy.

● **ECON 225 Economics of the Environment.**

(3) (Restriction: Not open to students who have taken 154-325 or 154-425) A study of the application of economic theory to questions of environmental policy. Particular attention will be given to the measurement and regulation of pollution, congestion and waste and other environmental aspects of specific economies.

● **ECON 227 Economic Statistics.**

(6) (Summer) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) Distributions, averages, dispersions, sampling, testing, estimation, correlation, regression, index numbers, trends and seasonals.

● **ECON 227D1 (3), ECON 227D2 (3) Economic Statistics.**

(Students must register for both ECON 227D1 and ECON 227D2.) (No credit will be given for this course unless both ECON 227D1 and ECON 227D2 are successfully completed in consecutive terms) (ECON 227D1 and ECON 227D2 together are equivalent to ECON 227) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) Distributions, averages, dispersions, sampling, testing, estimation, correlation, regression, index numbers, trends and seasonals.

● **ECON 230D1 (3), ECON 230D2 (3) Microeconomic Theory.**

(Students must register for both ECON 230D1 and ECON 230D2.) (No credit will be given for this course unless both ECON 230D1 and ECON 230D2 are successfully completed in consecutive terms) The introductory course for Economics Major students in microeconomic theory. In depth and critical presentation of the theory of consumer behaviour, theory of production and cost curves, theory of the firm, theory of distribution, welfare economics and the theory of general equilibrium.

● **ECON 250D1 (3), ECON 250D2 (3) Introduction to Economic Theory: Honours.**

(MATH 139 and MATH 141 are corequisites) (Students must register for both ECON 250D1 and ECON 250D2.) (No credit will be given for this course unless both ECON 250D1 and ECON 250D2 are successfully completed in consecutive terms) An intermediate level microeconomics course. Includes theory of exchange, theory of consumer behaviour, theory of production and cost curves, theory of the firm, theory of distribution; general equilibrium and welfare economics. The assumptions underlying the traditional neo-classical approach to economic theory will be carefully specified.

● **ECON 257D1 (3), ECON 257D2 (3) Economic Statistics - Honours.**

(Corequisites: MATH 141 and MATH 133 and ECON 250) (Restriction: Not open to students who have taken 154-357 or are taking ECON 217 or ECON 227.) (Students must register for both ECON 257D1 and ECON 257D2.) (No credit will be given for this course unless both ECON 257D1 and ECON 257D2 are successfully completed in consecutive terms) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) Stochastic phenomena; probability and frequency distributions, introduction to probability theory. Statistical inference about proportions, means and variances; analysis of variance; nonparametric statistics; index numbers and time series; economic forecasting; regression and correlation analysis; introduction to general linear models, its uses and limitations; uses and misuses of statistics.

● **ECON 295 Macroeconomic Policy.**

(3) (Corequisite: MGCR 293) (Restriction: For B.Com. students) (Restriction: Not open to students who have taken or are taking ECON 330 or ECON 352) (Continuing Education: requirement for CMA, CGA, I.C.B., the EA of AACI, and the CRA) (Continuing Education: not open to full-time day students) This applied macroeconomics course focuses on current and recurrent macroeconomic issues important in understanding the public policy environment in which firms make their decisions. Topics include national accounts; national income determination; economic growth and fluctuations; money, monetary policy and financial markets; international trade and finance.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

ECON 301 Economics of the Arts.

(3) (Prerequisites: ECON 208 or MGCR 293 or ECON 230D1/ECON 230D2 or ECON 250D1/ECON 250D2) Economic analysis of performing and visual arts, the nature of contracts and of markets in arts. Public policy issues, globalization and trade in cultural goods and services.

ECON 302D1 (3), ECON 302D2 (3) Money and Banking.

(Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) (Students must register for both ECON 302D1 and ECON 302D2.) (No credit will be given for this course unless both ECON 302D1 and ECON 302D2 are successfully completed in consecutive terms) (ECON 302D1 and ECON 302D2 together are equivalent to ECON 302) Principles of money, banking and central banking covering the nature of money, measurement of money supply, determination of quantity of money; sources of bank funds, uses of bank funds, nature of central banking, monetary policy and the international payments system.

●ECON 303 Canadian Economic Policy.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above.) (Restriction: Not open to students who have taken ECON 303D1/D2 or ECON 403.) Major theories of how economic policy is made and goes on to use economic tools of analysis to investigate selected policy problems of current interest.

ECON 305 Industrial Organization.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) (Restriction: Not open to students who have taken ECON 305) The course analyzes the structure, conduct, and performance of industries, particularly but not exclusively in Canada. Topics include effects of mergers, barriers to entry, product line and promotion policies, vertical integration, and R & D policies of firms.

ECON 306D1 (3), ECON 306D2 (3) Labour Economics and Institutions.

(Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) (Students must register for both ECON 306D1 and ECON 306D2.) (No credit will be given for this course unless both ECON 306D1 and ECON 306D2 are successfully completed in consecutive terms) Key features of the Canadian labour sector effects and its historical development are described. Economists' ideas about the labour sector are sketched. The labour sector of various public programs, unemployment, and the labour movement are examined. Much attention is given to the status of women in the labour sector.

ECON 308 Governmental Policy Towards Business.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) (Restriction: Not open to students who have taken 154-305D) Covers the major public policies toward business in Canada, such as competition policy, regulation, public ownership and privatization, industrial policies, and trade policies. Includes comparison with policies of other countries, especially the U.S. Readings will include some legal decisions.

ECON 310 Introduction to Behavioural Economics.

(3) (Prerequisites: ECON 208 and a statistics course or permission of the instructor.) An introduction to economic decision-making in markets and strategic environments, including bounded rationality, individual decision-making under uncertainty, and behavioural game theory.

●ECON 311 United States Economic Development.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) A survey of economic growth and institutional change in the United States. Emphasis will be placed on the use of analytical methods and categories and theories economists have developed for such studies.

ECON 313 Economic Development 1.

(3) (Prerequisite: ECON 208 and either ECON 209 or one development course.) (Restriction: Not open to students who have taken 154-313D.) Microeconomic theories of economic development and empirical evidence on population, labour, firms, poverty. Inequality and environment.

ECON 314 Economic Development 2.

(3) (Prerequisite: ECON 313) (Restriction: Not open to students who have taken 154-313D) Macroeconomic development issues, including theories of growth, public finance, debt,

currency crises, corruption, structural adjustment, democracy and global economic organization.

ECON 316 The Underground Economy.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) The origins, structure and operation of the "underground" sectors of modern economies around the world. Topics include the causes of black marketeering in Western economies; international contraband trade in guns and drugs; money laundering through the world financial system.

ECON 318 The Criminal Economy.

(3) (Prerequisite: ECON 316.) (Restriction: Departmental approval required) A seminar course focusing on the nature and operation of criminal enterprise in markets for goods, services and factors of production within advanced industrial economies. Topics include the debate over "organized" crime; the structure of the criminal firm; labour racketeering; and crime in the money and capital markets.

●ECON 321 The Quebec Economy.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) A study of the economic development of Quebec and contemporary economic problems in the province. Topics include: economic history since 1900; industrial structure, trade and foreign ownership; unemployment, poverty, and the labour market; government finance and federal-provincial economic relations; independence and the economic program of the Parti Quebecois.

ECON 326 Ecological Economics.

(3) (Prerequisites: ECON 208 and ECON 209 or consent of instructor) Macroeconomic and structural aspects of the ecological crisis. A course in which subjects discussed include the conflict between economic growth and the laws of thermodynamics; the search for alternative economic indicators; the fossil fuels crisis; and "green" fiscal policy.

ECON 330D1 (3), ECON 330D2 (3) Macroeconomic Theory.

(Prerequisite: ECON 230 or ECON 250. If a student has already taken 154-200 or 154-203 and 154-204 or ECON 208 and ECON 209, it may be concurrently taken with ECON 230 with the permission of the instructor) (Students must register for both ECON 330D1 and ECON 330D2.) (No credit will be given for this course unless both ECON 330D1 and ECON 330D2 are successfully completed in consecutive terms) A review of basic economic concepts and tools with an in depth and critical presentation of the fundamental areas of macroeconomic theory. Topics include: the determination of output, employment and price level; money and banking and business cycles; stabilization policy; international finance and growth theory.

●ECON 331 Economic Development: Russia and USSR.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) Introduction to Russian and former Soviet economic development, structure, planning, management and performance. The former Soviet economy, attempted reforms, and the collapse of the U.S.S.R.

ECON 334 History of Economic Doctrines.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) The course surveys the development of economics, how the discipline and the thinking of economists evolved, and the significance of some of the analytical tools used.

ECON 335 The Japanese Economy.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) The first part of the course covers the economic institutions in, changing structure of, and public policies employed by the Japanese economy. The second part probes the economic "logic" of the Japanese capitalist system, explores its relationship to the ideas of Joseph Schumpeter, and makes comparisons with the American economy.

ECON 336 The Chinese Economy.

(3) (Prerequisites: ECON 208 and ECON 209 (or ECON 230D1/D2 or 250D1/D2).) Examination of the growth and transformation of the Chinese economy and the domestic and international implications.

ECON 337 Introductory Econometrics 1.

(3) (Prerequisite: a grade of 65% or better in ECON 227 or ECON 257 or ECON 317 or ECON 357 or an equivalent qualification in statistics. Familiarity with matrix algebra is highly recommended) The practical application of quantitative methods in statistical investigations.

ECON 338 Introductory Econometrics 2.

(3) (Prerequisite: ECON 337) Estimation and forecasting using simultaneous equation systems, dynamic simulation, time series analysis.

ECON 344 The International Economy 1830-1914.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) Examines the processes of economic growth and industrialization in Europe and their effect on the development of the world economy. Particular emphasis is placed on the economic history of major European nations and their overseas extensions. Topics include technological change, the demographic transition and the gold standard.

ECON 345 The International Economy since 1914.

(3) (Prerequisites: ECON 208 and ECON 209, or MGCR 293 and ECON 295, or ECON 230D1/D2, or ECON 250D1/D2) Studies the history of economic adjustments in the 20th century, with particular reference to the industrialized countries. Topics include: the economic impact of WWI, the attempts to revive the international economy in the 1920s, the causes and consequences of the Great Depression of the 1930s, and the economic problems and subsequent economic boom following WWII.

ECON 347 Economics of Climate Change.

(3) (Prerequisites: ECON 208 and ECON 209 or those listed under Prerequisites above) The course focuses on the economic implications of, and problems posed by, predictions of global warming due to anthropogenic emissions of greenhouse gases. Attention is given to economic policies such as carbon taxes and tradeable emission permits and to the problems of displacing fossil fuels with new energy technologies.

ECON 348 Urban Economics.

(3) (Prerequisite: ECON 208.) (Restriction: For U2 or U3 students only.) Economic explanations for the rise of cities; their economic benefits and externalities. Economic challenges to cities in the modern context. Examination of municipal policies and of economic, legal and political constraints on cities.

ECON 352D1 (3), ECON 352D2 (3) Macroeconomics-Honours.

(Prerequisite: ECON 250D1/ECON 250D2) (Corequisite: ECON 257D1) (Students must register for both ECON 352D1 and ECON 352D2) (No credit will be given for this course unless both ECON 352D1 and ECON 352D2 are successfully completed in consecutive terms) Basic macroeconomic theory, emphasizing the Classical and Keynesian ideas for the short-run determination of output, employment, interest rates and prices in the economy. Elements of international economics, money and banking and growth theory. The structure of the Canadian economy.

ECON 399 Internship: Economics.

(3) (Restriction: Open to U2 and U3 students with a minimum CGPA of 3.0 and permission of the departmental Internship Advisor. This course will not normally fulfill program requirements for honours, major or minor programs. A letter from a supervisor at the institution must attest to the successful completion of the student's tenure. The topic must fall within the student's program in economics and have the prior approval of a faculty member in the department.) Internship with an approved host institution or organization.

ECON 405 Natural Resource Economics.

(3) (Prerequisite: ECON 230 or ECON 250) Topics include: Malthusian and Ricardian Scarcity; optimal depletion of renewable and non-renewable resources; exploration, risk and industry structure, and current resources, rent and taxation. Current public policies applied to the resource industries, particularly those of a regulatory nature.

●ECON 406 Topics in Economic Policy.

(3) (Prerequisites: ECON 230 or ECON 250 and one of ECON 227, ECON 257) Selected policy issues are investigated using economic theory. For details on topics covered in the current year, consult the instructor.

ECON 408 Public Sector Economics 1.

(3) (Prerequisite: ECON 230D1/D2 or 250D1/D2 or permission of the instructor.) Theoretical and empirical economic analysis of the public sector with an emphasis on public goods and government spending. Study of Canadian institutions in international perspective.

ECON 409 Public Sector Economics 2.

(3) (Prerequisite: Econ 408 or permission of the instructor) (Restriction: Not open to students who have taken ECON 408 D1/D2) Theoretical and empirical economic analysis of the public sector with an emphasis on taxation. Study of Canadian institutions in international perspective.

ECON 410 Economic Development: Selected World Area.

(3) (Prerequisites: ECON 230 or ECON 250 and one semester of economic development) An advanced course in the economic development of this region with emphasis on the legacy of history and the interaction of political and economic factors in the analysis of the crisis of the 1980s.

ECON 411 Economic Development: A World Area.

(3) (Prerequisites: ECON 230 or ECON 250 and one semester of economic development) An advanced course in the economic development of a pre-designated underdeveloped country or a group of countries.

●ECON 416 Topics in Economic Development 2.

(3) (Prerequisite: ECON 230 or ECON 250 or permission of the instructor) This course gives students a broad overview of the economics of developing countries. The course covers micro and macro topics, with particular emphasis on the economic analysis at the micro level.

ECON 420 Topics in Economic Theory.

(3) (Prerequisite: ECON 230 or ECON 250) The course discusses selected topics in micro or macroeconomic theory at an advanced level. Possible topics include welfare economics, general equilibrium, theories of firms, consumer behaviour, intertemporal choice, uncertainty, game theory, etc.

ECON 423D1 (3), ECON 423D2 (3) International Trade and Finance.

(Prerequisite: ECON 230D1/ECON 230D2 or ECON 250D1/ECON 250D2.) (Corequisite: ECON 330D1 or ECON 352D1.) (Students must register for both ECON 423D1 and ECON 423D2.) (No credit will be given for this course unless both ECON 423D1 and ECON 423D2 are successfully completed in consecutive terms) Theoretical and policy approach to the study of international economic relations. Topics examined include: trade theory; tariff theory; trade and growth; balance of payments; adjustment; international monetary system.

●ECON 426 Labour Economics.

(3) (Prerequisite: ECON 230D1/D2 or ECON 250D1/D2 or ECON 306D1/D2.) The determinants of labour supply, demand and the structure of earnings are considered. The economic effects of government policies, such as minimum wage laws, unemployment insurance, welfare and training programs and subsidies to higher education are analyzed. A rigorous theoretical and "hands on" empirical approach is emphasized.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

●ECON 434 Current Economic Problems.

(3) (Prerequisite: ECON 230 or ECON 250.) (Corequisite: ECON 330 or ECON 352) A discussion of contemporary economic problems. Topics will reflect economic issues of current interest.

ECON 440 Health Economics.

(3) (Prerequisites: ECON 208 and ECON 227 or comparable courses or consent of the instructor) The organization and performance of Canada's health care system are examined from an economist's perspective. The system is described and its special features analyzed. Much attention is given to the role of government in the system and to financing arrangements for hospital and medical services. Current financial problems are discussed.

●ECON 447 Economics of Information and Uncertainty.

(3) (Prerequisite: ECON 230 or ECON 250) This course considers how uncertainty can be incorporated into the standard model of consumer and producer choice central to explaining or analysing a number of different economic phenomena. Topics include the information approach to explaining unemployment and problems in controlling health care costs.

ECON 450D1 (3), ECON 450D2 (3) Advanced Economic Theory - Honours.

(Prerequisites: ECON 250D1/ECON 250D2 and ECON 352D1/ECON 352D2) (Students must register for both ECON 450D1 and ECON 450D2.) (No credit will be given for this course unless both ECON 450D1 and ECON 450D2 are successfully completed in consecutive terms) Selected topics in economic theory from recent periodical and monograph literature.

●ECON 451 Seminar in Economic History.

(3) (Prerequisites: one of ECON 227, ECON 317, ECON 257 or ECON 357 and either ECON 330 or ECON 352) In this course economic theory is explicitly employed to elucidate issues in economic history. The topics will be announced at the beginning of the academic year.

ECON 453D1 (3), ECON 453D2 (3) International Economics - Honours.

(Prerequisites: ECON 250D1/ECON 250D2 and ECON 352D1/ECON 352D2) (Students must register for both ECON 453D1 and ECON 453D2.) (No credit will be given for this course unless both ECON 453D1 and ECON 453D2 are successfully completed in consecutive terms) The pure theory of trade; Ricardian, Heckscher-Ohlin-Samuelson models; tariff theory and policy; the Canadian balance of payments; balance of payments disequilibrium analysis and policy; the exchange rate, international monetary economics, international policy coordination.

ECON 459 Topics in Monetary Economics - Honours.

(3) (Prerequisite: ECON 230 or ECON 250, and knowledge of calculus.) (Restriction: For Honours in Economics) (Restriction: Not open to students who have taken ECON 458) An advanced treatment of selected topics in monetary economics, including the theory and practice of monetary policy.

ECON 460 History of Thought 1 - Honours.

(3) (Prerequisite: ECON 250.) (Corequisite: ECON 352) The evolution of economic thought prior to the close of the 19th century, as reflected in the writings of prominent economists from the time of Adam Smith to the emergence of marginalism and neoclassical economics.

ECON 461 History of Thought 2 - Honours.

(3) (Prerequisite: ECON 250.) (Corequisite: ECON 352) The evolution of economic thought in the 20th century, as reflected in the writings of prominent economists on equilibrium, dynamics, games, expectations, econometrics, industrial structure, economic policy and other primary areas of interest.

ECON 467D1 (3), ECON 467D2 (3) Econometrics - Honours.

(Prerequisites: MATH 222 and ECON 257D1/ECON 257D2 or consent of instructor. MATH 223 is recommended, but not required as a prerequisite.) (Students must register for both ECON 467D1 and ECON 467D2.) (No credit will be given for this course unless both ECON 467D1 and ECON 467D2 are successfully completed in consecutive terms) Special emphasis on statistical tests of economic theories, the construction of econometric models, and problems in estimation methods.

●ECON 473 Income Distribution.

(3) (Prerequisite: ECON 230 or ECON 250. Equivalent of a full year course in statistics as the requirement applicable to Majors and Honours in economics, and calculus 1 and 2) Theory and measurement of income distribution, disparities and poverty. The course examines intertemporal dynamics affecting individuals and socioeconomic groups. The incidence of (costs and benefits from) fiscal and restrictive programmes, inflation and unemployment is evaluated.

ECON 480 Research Project.

(3) (Restrictions: Open to U3 students only. Students must complete a Research Project Registration Form, have it signed by the professor who has agreed to supervise the research project, countersigned by an advisor, and submit it to the Department Office in Leacock 443 prior to registering in this course. A student cannot take this course more than once for credit.) In this course students must undertake a research project under close supervision. They must also do such special reading and research as their advisers direct.

ECON 481 Research Project.

(3) (Restrictions: Open to U3 students only. Students must complete a Research Project Registration Form, have it signed by the professor who has agreed to supervise the research project, countersigned by an advisor, and submit it to the Department Office in Leacock 443 prior to registering in this course. A student cannot take this course more than once for credit.) In this course students must undertake a research project under close supervision. They must also do such special reading and research as their advisers direct.

ECON 510 Experimental Economics.

(3) (Prerequisites: ECON 230 or ECON 250 or permission of the instructor.) (Restrictions: For U3 students.) Experimental methodology, current topics in experimental economics, and market design.

ECON 525 Project Analysis.

(3) (Restriction: Open to advanced undergraduate students. Prerequisite: ECON 250, ECON 352 or equivalent) A course in cost benefit analysis for graduate and advanced undergraduate students.

ECON 531 Historical Experience of Economic Development.

(3) (Prerequisite: ECON 230 or ECON 250 or equivalent.) (Restriction: Not open to students who have taken ECON 631.) Examination of historical patterns of economic development.

ECON 534 Pension Crisis.

(3) The consequences of commitments made by governments in the area of old age pensions and the implications of the resulting tax burden. An international perspective will be adopted.

ECON 546 Game Theory.

(3) (Prerequisite: ECON 230 or ECON 250) (Restriction: Not open to students who have taken ECON 446. Open to advanced undergraduate students) This course introduces students to game theory, the branch of the social sciences that focuses on the formal modelling and analysis of human interactions and strategic behaviour. Basic concepts in cooperative and non-cooperative games are applied to economic models.

ECON 567 Complex and Interactive Systems.

(3) (Prerequisites: ECON 250, ECON 352) (Restrictions: For Honours and Graduate students in Economics. Permission of the instructor.) Behaviour in open (incomplete) economic systems as they relate to nonlinearities, chaos, adaptiveness, networks, externalities, dynamic competition, computable economics, simulation-driven analogies, disequilibrium dynamics, lock-in phenomena and path dependence, quasi-rationality with uncertainty and fuzzy constraints, evolutionary processes, genetic algorithms, etc.

ECON 577 Mathematical Economics 1.

(3) (Prerequisites: MATH 133, MATH 139 and MATH 141 or equivalent) A mathematical treatment of basic economic theory.

ENGL-English

Offered by: English

ENGL 100 English Literature and Composition.

(6) (Restriction: Course is open to Inuit students only.)

●ENGL 100D1 (3), ENGL 100D2 (3) English Literature and Composition.

(Students must register for both ENGL 100D1 and ENGL 100D2.) (No credit will be given for this course unless both ENGL 100D1 and ENGL 100D2 are successfully completed in consecutive terms) (ENGL 100D1 and ENGL 100D2 together are equivalent to ENGL 100)

●ENGL 199 FYS: Literature and Democracy.

(3) (Restriction: Open only to newly admitted students in U0 or U1. Students may take only one First Year Seminar. Students who register for more than one will be removed from all but one of them.) (Maximum 25)

ENGL 200 Survey of English Literature 1.

(3) (Fall) (Restriction: Not open to students in English programs)

ENGL 201 Survey of English Literature 2.

(3) (Winter) (Prerequisite: ENGL 200 or permission of instructor) (Restriction: Not open to students in English programs)

ENGL 202 Departmental Survey of English Literature 1.

(3) (Fall) (Restriction: Limited to students in English programs only) (Restriction: Not open to students who have taken ENGL 200)

ENGL 203 Departmental Survey of English Literature 2.

(3) (Winter) (Prerequisite: ENGL 202 or permission of instructor.) (Restriction: Limited to students in English programs only) (Restriction: Not open to students who have taken ENGL 201)

●ENGL 204 English Literature and the Bible.

(3) This course will examine the literary dimensions of the Bible including structure, style, and meaning as well as its status as Sacred Book. The influence of the Bible-as-metatext on the secular literature of the West will be the focus of the discussion.

ENGL 215 Introduction to Shakespeare.

(3) (Fall) A study of a selection of plays, in their intellectual and theatrical context, with an emphasis on the interplay of text and performance.

★ENGL 225 American Literature 1.

(3) (Winter) A study of the literary works of earlier American writers.

★ ● ENGL 226 American Literature 2.

(3) A study of the literary works of later American writers.

●ENGL 227 American Literature 3.

(3) A study of literary works which may be thematic or may deal with a special group of authors.

★ ● ENGL 228 Canadian Literature 1.

(3) A chronological survey of Canadian literature, Part 1.

★ENGL 229 Canadian Literature 2.

(3) (Fall) A chronological survey of Canadian literature, Part 2. A continuation of ENGL 228.

ENGL 230 Introduction to Theatre Studies.

(3) (Fall) An introduction to dramatic literature, text analysis, textual and performance theory, and theatre history.

●ENGL 237 Introduction to Study of a Literary Form.

(3) An introduction to literary study through a survey of a literary genre, mode, or form.

ENGL 269 Introduction to Performance.

(3) (Winter) (Restriction: Permission of instructor required.) The focus of this course is on the actor as communicator, and on those things (material, physical, and textual) which are inescapably central to the theatrical performance.

ENGL 275 Introduction to Cultural Studies.

(3) (Fall) (Required of all U1 Cultural Studies students) A survey of cultural studies, its history and subject matter, presenting key interpretive and analytic concepts, the aesthetic and political issues involved in the construction of sign systems, definitions of culture and cultural values conceptualized both as a way of life and as a set of actual practices and products.

ENGL 276 Methods of Cultural Analysis.

(3) (Winter) (Prerequisite: ENGL 275) A study of basic methodologies found in cultural studies, such as forms of historicism, Marxism, psychoanalysis, philosophical materialism, feminism, gender theory. Topics such as aesthetics and film theory, authorship and spectatorship, modernism and postmodernism will be considered. Examples to be drawn from film, television, popular culture, and traditional literature.

ENGL 277 Introduction to Film Studies.

(3) (Fall) (Restriction: Cultural Studies Major and Honours program students.) An introduction to key concepts in film studies. Exemplary works from the history of film will be studied to introduce students to such topics as the aesthetics of film; sound's production of meaning; film as narrative; film and genre; period and national cinemas; film's role in culture.

●ENGL 279 Introduction to Film as Art.

(3) An introduction to film aesthetics, with emphasis on narrative, style and genre throughout the history of cinema.

●ENGL 280 Introduction to Film as Mass Medium.

(3) (Students will be required to pay a screening fee.) An introduction to film's social, historical, and technological contexts, including its relationships to other mass media.

●ENGL 297 Special Topics of Literary Study.

(3) .

●ENGL 301 Earlier 18th Century Novel.

(3) Study of the English novel to c. 1750.

★ENGL 302 Restoration and 18th C. English Literature 1.

(3) (Winter) A study of the major writers of the late 17th and earlier 18th centuries.

★ ● ENGL 303 Restoration and 18th C. English Literature 2.

(3) A study of the major writers of the later 18th century.

ENGL 304 Later Eighteenth Century Novel.

(3)

ENGL 305 Renaissance English Literature 1.

(3) (Winter) A study of major non-dramatic works of the earlier Renaissance in England.

●ENGL 306 Mediaeval and Tudor Drama.

(3)

●ENGL 307 Renaissance English Literature 2.

(3) A study of major non-dramatic works of the later Renaissance in England.

●ENGL 308 English Renaissance Drama 1.

(3) An overview of some major authors and issues in English Renaissance Drama.

ENGL 309 English Renaissance Drama 2.

(3) (Winter) (In 2008/2009: Jacobean Theatre History) An overview of some major authors and issues in English Renaissance Drama.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

ENGL 310 Restoration and 18th Century Drama.

(3) (Fall)

ENGL 311 Poetics.

(3) (Fall) (Restriction: Limited to students in English Major Concentration, Literature Option.) Discussion and application of basic critical tools for analysis of literature. Study of such features of poetry and prose fiction as prosody, diction, voice, tone, imagery, figurative language, point of view, narrative form, and character.

ENGL 314 20th Century Drama.

(3) (Winter) A study of selected representative works in modern drama and theatre.

ENGL 315 Shakespeare.

(3) (Fall) A study of the major works of Shakespeare.

● ENGL 316 Milton.

(3)

ENGL 317 Theory of English Studies 1.

(3) (Winter) (Restriction: Limited to students in English Major and Honours Programs) Philosophical approaches.

ENGL 318 Theory of English Studies 2.

(3) (Fall) (Restriction: Limited to students in English Major and Honours Programs) Socio-Historical approaches.

● ENGL 319 Theory of English Studies 3.

(3) (Restriction: Limited to students in English Major and Honours Programs) Issues in interpretation: authorship, performance, reception.

ENGL 320 Postcolonial Literature.

(3) (Winter)

● ENGL 321 Caribbean Fiction.

(3)

● ENGL 322 Theories of the Text.

(3) (Restriction: Limited to students in English Major and Honours Programs.) A course focussing on textuality (as opposed to, say, intentionality and interpretation) and on how specific effects are made - how texts work and produce meaning, including rhetoric and form.

ENGL 323 20th Century American Poetry.

(3) (Fall)

● ENGL 324 20th Century American Prose.

(3)

● ENGL 325 Modern American Fiction.

(3)

ENGL 326 19th Century American Prose.

(3) (Fall) A study of some of the major prose writers of the 19th Century.

★ ENGL 327 Canadian Prose Fiction 1.

(3) (Winter) A survey of Canadian prose fiction in English, from 19th century historical romance and realist fiction to the emergence of the modernist novel in the decades following the Second World War.

★ ● ENGL 328 Development of Canadian Poetry 1.

(3) A survey of Canadian poetry in English from the 18th century to the end of the Second World War.

● ENGL 329 English Novel: 19th Century 1.

(3) A study of representative novelists of the earlier 19th century.

ENGL 330 English Novel: 19th Century 2.

(3) (Winter) A study of representative novelists of the later 19th century.

★ ENGL 331 Literature Romantic Period 1.

(3) A study of the major figures of the first generation of romantic writers, focusing on Blake, Wordsworth and Coleridge.

★ ENGL 332 Literature Romantic Period 2.

(3) (Fall) A study of the major figures of the second generation of romantic writers, focusing on Byron, Keats and Shelley.

★ ENGL 333 Development of Canadian Poetry 2.

(3) (Fall) A survey of Canadian poetry in English from the end of the Second World War to the present.

ENGL 334 Victorian Poetry.

(3) (Winter) A study of the major Victorian poets.

ENGL 335 The 20th Century Novel 1.

(3) (Winter) The Novel from the last years of the 19th century to World War II.

ENGL 336 The 20th Century Novel 2.

(3) (Winter)

● ENGL 337 Theme or Genre in Medieval Literature.

(3) Study of a particular theme or genre of significance to the development of medieval literature.

● ENGL 338 Short Story.

(3)

★ ● ENGL 339 Canadian Prose Fiction 2.

(3) A survey of contemporary Canadian prose fiction in English, from modernism to post-modernism and beyond.

● ENGL 340 History of the English Language.

(3)

● ENGL 341 Canadian Radio and Television.

(3) Histories of Canadian radio and television, with attention to the aesthetic, semiotic and generic developments of public and private broadcasting and cable channels, as well as aboriginal and multi-ethnic broadcasting.

ENGL 342 Introduction to Old English.

(3) (Fall) (Restriction: Not open to students who have taken ENGL 351.) An introduction to grammar and basic vocabulary in Old English.

● ENGL 343 Literature and Science 1.

(3)

● ENGL 345 Literature and Society.

(3) An examination of issues relating to literature and its social contexts, such as implications of gender, race, ethnicity.

ENGL 346 Materiality and Sociology of Text.

(3) (Winter) (Restriction: Limited to students in English Major and Honours Programs.) Writing, printing, distribution, marketing, and placement within canon-making institutions; the influence of material forms of production and transmission on the creation and reception of literature, film, and theatre.

ENGL 347 Great Writings of Europe 1.

(3) (Winter) (In 2008/2009: Homer, Virgil, Ovid) A study of selected texts that significantly enhance understanding of English literature.

ENGL 348 Great Writings of Europe 2.

(3) (Fall) (In 2008/2009: Arthurian Legends) A study of selected texts that significantly enhance understanding of English literature.

● ENGL 349 English Literature and Folklore 1.

(3) A study of representative texts from Beowulf to the late Renaissance period in relation to their background in folk tradition. A focus on the origin and development of folklore motifs.

● ENGL 350 Studies in the History of Film 1.

(3) Developments in proto-cinema and early cinema through the silent era.

● ENGL 351 Studies in the History of Film 2.

(3) Developments in the Hollywood Studio Era, including rivals, imitators, and alternatives.

ENGL 352 Theories of Difference.

(3) (Fall) (Restriction: Limited to students in English Major and Honours Programs.) Introduction to a selection of theories that have influenced thinking about difference across the humanities and social sciences, including gender, sexuality, race, class and hierarchical structures, language, religion, ethnicity, and personal identity.

● ENGL 353 Interdisciplinary Approaches to Literary Research.

(3) (Priority will be given to English Major/Honours students in second year of program) Examination of interdisciplinary connections between literary criticism and another discipline, such as anthropology, linguistics, history, philosophy or psychology, which has had significant impact on literary study.

ENGL 354 Sexuality and Representation.

(3) (Fall) (Priority will be given to English Major/Honours students in second year of program) (In 2008/2009: Cultural Technologies of Masculinity) Topics on representations of sexuality with reference to its cultural contexts.

ENGL 355 The Poetics of Performance.

(3) (Fall) (Restriction: Limited to students in the English Major Concentration, Drama and Theatre Option) This course, normally taken in tandem with ENGL 230, examines and tests theories of acting, directing, and design through scene work and practical exercises.

ENGL 356 Middle English.

(3) (Winter)

*** ● ENGL 357 Chaucer - Canterbury Tales.**

(3)

*** ENGL 358 Chaucer - Troilus and Criseyde.**

(3) (Winter)

ENGL 359 The Poetics of the Image.

(3) (Winter) (Restriction: Limited to students in the English Major Concentration, Cultural Studies Option) This course, normally taken in tandem with ENGL 276, examines contemporary debates about the aesthetic dimensions as well as social roles of pictorial, theatrical, cinematic, and other representations, the meanings, effects, and aesthetic significance of which depend on their having visually recognizable features.

ENGL 360 Literary Criticism.

(3) (Fall) (Prerequisite: at least 3 credits of ENGL 200, ENGL 201, ENGL 202, ENGL 203. Pre-/Co-requisite: ENGL 311. Required for but not restricted to Literature Honours students) Principles of literary criticism.

ENGL 361 Poetry of the 20th Century 1.

(3) (Fall) A critical survey of major British and North American poetry, c. 1890 - 1940.

● ENGL 362 Poetry of the 20th Century 2.

(3) (Prerequisite: ENGL 311) A critical survey of contemporary British and North American poetry, c. 1930 - 1980.

● ENGL 363 Studies in the History of Film 3.

(3) Developments in post-1958 cinema, from the European New Waves to contemporary global and independent cinemas.

● ENGL 364 Creative Writing: Fiction 2.

(3) (Restriction: Permission of instructor required.) Advanced seminar on writing prose fiction; admission subject to application, with writing sample.

ENGL 365 Costuming for the Theatre 1.

(3) (Fall) (Restriction: Permission of instructor required.) (Restriction: Not open to students enrolled in ENGL 368) Introduction to costume-making for the theatre, covering fabrics, textiles and costume decoration.

● ENGL 366 Film Genre.

(3) A discussion of an individual genre of cinema; concept of genre.

● ENGL 367 Acting 2.

(3) (Prerequisite: ENGL 269 and permission of instructor.) (Restriction: Not open to students who have taken 110-469D) The actor as analyzer of scripts and characters; textual analysis, practice in character development through improvisations, mask work and physical training.

ENGL 368 Stage Scenery and Lighting 1.

(3) (Fall) (Restriction: Permission of instructor required.) (Restriction: Not open to students enrolled in ENGL 365) An introduction to the technical aspects of stage settings and theatrical lighting.

● ENGL 369 Creative Writing: Playwriting.

(3) (Restriction: Permission of instructor required.)

● ENGL 370 History of the Theatre 1.

(3) A survey including ritual, non-Western dramatic forms; classical antiquity; the medieval stage; the Golden Ages in Spain, France and England to the Restoration.

ENGL 371 History of the Theatre 2.

(3) (Winter) An overview of dramatic forms and theatrical practice from the 18th century through the development of 19th century realistic traditions, to 20th century reactions against realism.

ENGL 372 Stage Scenery and Lighting 2.

(3) (Winter) (Restriction: Not open to students enrolled in ENGL 377.)

ENGL 373 Voice and Speech 2.

(3)

● ENGL 374 Film Movement or Period.

(3) Study of a significant movement or period in film history.

ENGL 375 Interpretation Dramatic Text.

(3) (Fall) (Prerequisites: ENGL 230 and ENGL 269 or permission of the instructor) A study of the dramatic text as literature, and as a basis for theatre production. Emphasis on character and character development, on structure and motivational units, and on the visualization of the play in performance.

● ENGL 376 Scene Study.

(3)

ENGL 377 Costuming for the Theatre 2.

(3) (Winter) (Prerequisite: permission of instructor.) (Restriction: Not open to students enrolled in ENGL 372.) Advanced topics in costume-making for the theatre, including millinery, dyeing, costume breakdown, and silk painting techniques.

ENGL 378 Media and Culture.

(3) (Fall) (Prerequisite: ENGL 275) (Media Ethics) An introduction to the study of television and its distinctive aesthetic, generic, and discursive features.

● ENGL 379 Film Theory.

(3) (Winter) (In 2008/2009: Alfred Hitchcock) Introduction to major schools in the historical development and current practice of film theory.

● ENGL 380 Non-Fic Media: Cinema, Television, Radio

(3) Historical, formal, and thematic analysis of non-fictional and documentary works within cinema, television, and radio.

ENGL 381 A Film-Maker 1.

(3) (Winter) (Restriction: Limited to students in English Major programs) Introduction to the works, career, and legacy of a notable film-maker.

ENGL 382 International Cinema 1.

(3) A study of a significant national cinema, or a thematic, formal, and/or historical study of film in an international context.

● ENGL 383 Studies in Communications 1.

(3) (Restriction: Permission of instructor required) Studies in the relationships between the media and culture.

● ENGL 384 Semiotics of Advertising.

(3) Semiotic analysis of the ways in which advertisements mean and work. Relevant theories include those of de Saussure, Peirce, Eco, Barthes, and Freud.

● ENGL 385 Topics in Literature and Film.

(3) .

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

(3) Analyse des techniques de composition des récits et des recueils. Étude de recueils de nouvelles d'expression française aux XIXe et XXe siècles.

● FREN 394 Théorie de la traduction.

(3) Survol des conceptions de la traduction depuis les «Belles Infidèles». Étude des principales théories qui ont marqué l'activité traduisante au XXe siècle. Étude des liens entre la théorie et la pratique. Lecture de textes et discussions.

FREN 395 Travaux pratiques 1.

(3) (Fall) (Restrictions: Cours réservé aux étudiants du Département de l'Option Lettres. Autorisation départementale requise.) (Cours conjoints: FREN 250, FREN 352) Étude détaillée de textes appartenant à la littérature française des origines à la fin du XVIIIe siècle.

FREN 396 Travaux pratiques 2.

(3) (Winter) (Préalables: FREN 250, FREN 352, FREN 395.) (Cours conjoints: FREN 251, FREN 353.) Cours réservé aux étudiants du Département de l'Option Lettres. Étude détaillée de textes appartenant à la littérature française des XIXe et XXe siècles.

FREN 397 Travaux pratiques 3.

(3) (Fall) (Préalables: FREN 251, FREN 353, FREN 396.) (Cours conjoints: FREN 374, FREN 252.) (Restriction: Cours réservé aux étudiants du Département de l'Option Lettres.) Étude détaillée de textes appartenant à la littérature québécoise des origines à nos jours.

FREN 431 Traduction 4.

(3) (Winter) (Restriction: Cours réservé aux étudiants de l'Option Lettres et traduction.) (Préalable: FREN 349 ou test. Autorisation départementale requise) (Les étudiants qui ont suivi le cours 125-446 ne seront pas admis) Suite du cours FREN 349. Révision de textes; principes et pratiques de la révision unilingue et bilingue: critères, méthode, mode de notation. Initiation au contrôle de la qualité. Code typographique et correction d'épreuves. La profession de réviseur. Travaux pratiques.

● FREN 433 Sémantique et lexicologie.

(3) (Préalable: FREN 231 ou permission du professeur) (Les étudiants qui ont suivi le cours 125-333 ne seront pas admis) Théories contemporaines de sémantique et de lexicologie. Notions de lexicographie. Changements sémantiques, idiotismes, néologismes, etc.

● FREN 434 Sociolinguistique du français.

(3) (Les étudiants qui ont suivi le cours 125-334 ne seront pas admis) Éléments de sociolinguistique et leur application aux pays francophones. Rapports entre les aspects phonologiques, grammaticaux et lexicologiques du parler et le milieu social. Langues en contact, planification linguistique.

FREN 440 Atelier de création littéraire.

(3) (Effectifs contingentés.) Le but de cet atelier est de permettre à l'étudiant d'avoir une meilleure compréhension du processus de création littéraire et de faire en sorte que son écriture obéisse à des exigences formelles de plus en plus rigoureuses.

FREN 441 Traduction français-anglais.

(3) (Préalable: FREN 244, 125-345 ou permission du professeur. Autorisation départementale requise. Effectifs contingentés) Traduction de textes généraux du français vers l'anglais.

FREN 443 Traduction littéraire.

(3) (Préalable: FREN 431, FREN 446 ou permission du professeur.) (Restriction: Les étudiants qui ont suivi le cours 125-510 ne seront pas admis.) Étude des problèmes pratiques que pose la transposition en français de qualité d'un texte originellement rédigé en anglais littéraire. Traduction de textes et discussion.

FREN 453 Poésie du 20e siècle.

(3) Les principaux courants de la poésie en France depuis Apollinaire.

● FREN 454 Le théâtre au 20e siècle.

(3) Introduction à la sémiotique théâtrale et étude de pièces contemporaines présentant des analogies avec les mouvements poétiques et artistiques de l'époque, dont le surréalisme, l'existentialisme, le théâtre de l'absurde.

● FREN 455 La littérature médiévale 1.

(3) Initiation au système de la langue médiévale ainsi qu'à la production en langue française des origines au XIIIe siècle. Survol des différents genres littéraires (littérature épique et hagiographique, conte courtois, roman, fabliaux, théâtre) et de textes significatifs.

● FREN 456 La littérature médiévale 2.

(3) Analyse du système de la langue des XIVe et XVe siècles (moyen français vs français moderne). Étude de la production littéraire dans son devenir entre les «classiques» du XIIIe siècle et la Renaissance.

FREN 457 La littérature de la Renaissance 2.

(3) (Les étudiants qui ont suivi le cours 125-367 ne seront pas admis) Évolution de la pensée humaniste et guerres de religion, d'après l'étude de textes.

FREN 458 La littérature du 17e siècle 2.

(3) (Les étudiants qui ont suivi le cours 125-363 ne seront pas admis) La littérature de l'époque classique, point culminant d'une longue évolution et habituellement reconnue comme étant la plus pure expression du génie et du goût français.

● FREN 459 La littérature du 18e siècle 2.

(3) (Les étudiants qui ont suivi le cours 125-365 ne seront pas admis) Étude des courants d'idées et du développement de la sensibilité en France après 1750.

● FREN 461 Questions de littérature 1.

(3) (Restriction: Cours réservé aux étudiants en Spécialisation du Département.) (Préalables: Options Lettres: FREN 251, FREN 353, FREN 396; Option Lettres et traduction: FREN 251, FREN 353.) Cours à contenu variable: un thème (auteur, genre, période, question, etc.) de littérature ou de civilisation française ou francophone.

FREN 464D1 (3), FREN 464D2 (3) Mémoire de spécialisation.

(Fall) (Restriction: Cours réservé aux étudiants en Spécialisation du Département. Autorisation départementale requise.) (Préalables: Options Lettres: FREN 490, FREN 493, FREN 497; Option Lettres et traduction: FREN 490, FREN 493) (Les étudiants doivent s'inscrire aux cours FREN 464D1 et FREN 464D2) (Aucun crédit ne sera accordé pour ce cours à moins de réussir les deux cours FREN 464D1 et FREN 464D2 suivis en séquence) Travail sur un sujet spécialisé de critique littéraire, de théorie, de traduction ou de création.

● FREN 470 Poésie québécoise.

(3) Évolution de la poésie et des idées poétiques au Québec du XIXe siècle à nos jours: l'École de Québec, l'École de Montréal, la querelle de «l'exotisme», les courants modernistes, la «poésie du pays», la «nouvelle écriture». Étude de quelques textes marquants.

● FREN 472 Questions de littérature 2.

(3) (Préalables: Options Lettres: FREN 251, FREN 353, FREN 396; Option Lettres et traduction: FREN 251, FREN 353.) (Restriction: Cours réservé aux étudiants en Spécialisation du Département.) Cours à contenu variable: un thème (auteur, genre, période, question, etc.) de littérature ou de civilisation québécoise.

● FREN 480 Roman québécois 3.

(3) (Les étudiants qui ont suivi le cours 125-383 ne seront pas admis) Histoire du roman québécois depuis 1980. Analyse des techniques romanesques. Étude des relations entre la forme romanesque et le contexte historique et idéologique à l'aide d'oeuvres représentatives.

● FREN 481 Littérature et antiquité.

(3) Le cours vise à préciser la fortune en France aux XVIe et XVIIe siècles de quelques grands auteurs grecs et latins de l'Antiquité, en suivant l'évolution historique des interprétations. Initiation au maniement des bons dictionnaires et des ouvrages de références.

● FREN 482 La littérature du 19e siècle 2.

(3) (Restrictions: Permission du professeur. Les étudiants qui ont suivi le cours 125-361 ne seront pas admis.) Étude de l'évolution de la littérature à partir de 1850, et notamment de la fiction romanesque dans le contexte du développement de la

modernité et de l'esthétique réaliste.

● FREN 483 Le roman depuis Sartre.

(3) (Les étudiants qui ont suivi le cours 125-358 ne seront pas admis) Le roman d'après-guerre. Techniques de composition; relations entre l'univers imaginaire des romanciers et leur époque.

● FREN 484 La littérature du 19e siècle 3.

(3) (Restrictions: Permission du professeur. Les étudiants qui ont suivi le cours 125-356 ne seront pas admis.) Étude, à travers tout le XIXe siècle, de thèmes ou de questions d'esthétique parmi les plus importants dans le développement de la littérature moderne.

FREN 486 L'Institution littéraire.

(3) Introduction à la nouvelle histoire littéraire, ce cours explore les conditions socioculturelles qui rendent possibles le «champ littéraire» et la littérature dans une société. Le processus d'institutionnalisation inclut l'étude de la production de la littérature, sa diffusion, sa consommation, sa réception et ses formes de consécration.

● FREN 487 L'essai québécois.

(3) Étude du genre et de sa spécificité en regard de la littérature personnelle et du pamphlet. Analyse des aspects formels de l'essai et du contenu traité comme trajectoire de l'histoire des idées de 1840 à nos jours.

FREN 490 Critique et théorie 1.

(3) (Winter) (Préalables: pour les étudiants hors-département: 1 cours d'histoire littéraire. Option Lettres: FREN 374, FREN 252, FREN 397; Option Lettres et traduction: FREN 374, FREN 252. Cours conjoints: Option Lettres: FREN 497) (Note: Not open to students who are taking or have taken FREN 490 prior to Fall 2006.) Étude de l'émergence des grands courants critiques et théoriques en France.

FREN 493 Critique et théorie 2.

(3) (Fall) (Restriction: Cours réservé aux étudiants du Département.) (Préalables: Option Lettres: FREN 374, FREN 252, FREN 397; FREN 490, FREN 497; Option Lettres et traduction: FREN 374, FREN 252, FREN 490.) (Note: Not open to students who are taking or have taken FREN 493 prior to Fall 2006.) Étude de l'évolution récente de la critique et de la théorie.

FREN 494 Séminaire: Traduction spécialisée.

(3) (Préalable: FREN 431, 125-446 ou permission du professeur) Ce séminaire a pour but d'approfondir les connaissances dans une perspective d'exercice pratique de la traduction. Il ne s'agit pas de former les étudiants dans une langue de spécialité quelconque, mais plutôt de faciliter la compréhension de textes portant sur les différentes disciplines ou faisant intervenir les notions propres à celles-ci.

FREN 497 Travaux pratiques 4.

(3) (Winter) (Restriction: Cours réservé aux étudiants du Département de l'Option Lettres.) (Préalables: FREN 374, FREN 252, FREN 397. Cours conjoints: FREN 490) Analyse descriptive des textes littéraires selon les méthodes, notions et modèles théoriques.

FREN 498 Questions de littérature 3.

(3) (Restriction: Cours réservé aux étudiants en Spécialisation du Département) (Préalables: Options Lettres: FREN 251, FREN 353, FREN 396; Option Lettres et traduction: FREN 251, FREN 353.) Cours à contenu variable: un thème de théorie ou de critique.

FREN 499 Questions de littérature 4.

(3) (Restriction: Cours réservé aux étudiants en Spécialisation du Département.) (Cours à contenu variable: un thème de création littéraire) (Préalables: Options Lettres: FREN 251, FREN 353, FREN 396; Option Lettres et traduction: FREN 251, FREN 353.)

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

● **FRSL 207D1 (3), FRSL 207D2 (3) Elementary French 01.**

(3 hours, plus language laboratory) (Prerequisite: Placement test) (Restriction: Not open to students who have taken Grade 12 or 13 French in Canada, or equivalent) (Students must register for both FRSL 207D1 and FRSL 207D2.) (No credit will be given for this course unless both FRSL 207D1 and FRSL 207D2 are successfully completed in consecutive terms) (FRSL 207D1 and FRSL 207D2 together are equivalent to FRSL 207) Review and further training in basic structures, with emphasis on oral expression and listening comprehension. Awareness of French culture developed through audio-visual material and selected readings.

● **FRSL 208 Intensive Elementary French.**

(6) (6 hours, plus language laboratory) (Prerequisite: Placement test) (Restriction: Not open to students who have taken Grade 12 or 13 French in Canada, or equivalent or FRSL 207) Review and further training in basic structures, with emphasis on oral expression and listening comprehension.

● **FRSL 211 Oral and Written French 1.**

(6) (Language laboratory) (Prerequisite: Placement test. Open to students in any degree program having an elementary knowledge of French and to those who have completed FRSL 207) (Restriction: Not open to students from Québec) Language lab attendance required. Grammar review, comprehension, vocabulary development, selected readings and group discussions.

● **FRSL 211D1 (3), FRSL 211D2 (3) Oral and Written French 1.**

(3 hours, plus language laboratory) (Prerequisite: Placement test. Open to students in any degree program having an elementary knowledge of French and to those who have completed FRSL 207) (Restriction: Not open to students from Québec) (Students must register for both FRSL 211D1 and FRSL 211D2.) (No credit will be given for this course unless both FRSL 211D1 and FRSL 211D2 are successfully completed in consecutive terms) (FRSL 211D1 and FRSL 211D2 together are equivalent to FRSL 211) Language lab attendance required. Grammar review, comprehension, vocabulary development, selected readings and group discussions.

● **FRSL 212 Oral and Written French 1.**

(3) (Fall) (3 hours, plus language laboratory) (Prerequisite: Placement test) Equivalent to the first half of FRSL 211. Only with special permission of the Department.

● **FRSL 215 Oral and Written French 1 - Intensive.**

(6) (Fall) (6 hours, plus language laboratory) (Prerequisite: Placement test. Open to students in any degree program having an elementary knowledge of French and to those who have completed FRSL 207) (Restriction: Not open to students from Québec) Language lab attendance required. Grammar review, comprehension, vocabulary development, selected readings and

group discussions.

FRSL 216 Découvrons Montréal en français.

(3) (3 hours) (Prerequisite: Placement test. Priority given to Freshman students) The course introduces students to various aspects of the French culture of the Montreal area through the exploration of pre-selected sites on the Internet. Students will do research and rallies on-line, followed by evaluated email exchanges, oral discussions, presentations in class, and field trips.

FRSL 302 Listening Comprehension and Oral Expression 1.

(3) (Fall) (3 hours, plus language laboratory) (Prerequisite: Placement test. For students who have reached a good standard in grammar and written French but who have difficulty in understanding spoken French and therefore cannot communicate effectively) Focus on oral discrimination, global comprehension and corrective phonetics.

FRSL 303 Listening Comprehension and Oral Expression 2.

(3) (Winter) (3 hours, plus language laboratory) (Prerequisite: Placement test. Continuation of course FRSL 302) Emphasis will be on the development of oral communication skills, laboratory exercises, vocabulary building, discussions.

●FRSL 321 Oral and Written French 2.

(6) (Summer) (Prerequisite: Placement test. For those having taken FRSL 211 or equivalent) Oral work involving discussion and exposés, cultural and literary readings, grammar review. Methodological component integrated in classwork and developed in frequent workshop sessions.

FRSL 321D1 (3), FRSL 321D2 (3) Oral and Written French 2.

(3 hours) (Prerequisite: Placement test. For those having taken FRSL 211 or equivalent) (Students must register for both FRSL 321D1 and FRSL 321D2.) (No credit will be given for this course unless both FRSL 321D1 and FRSL 321D2 are successfully completed in consecutive terms) (FRSL 321D1 and FRSL 321D2 together are equivalent to FRSL 321) Oral work involving discussion and exposés, cultural and literary readings, grammar review. Methodological component integrated in classwork and developed in frequent workshop sessions.

FRSL 322 Oral and Written French 2.

(3) (Fall) (3 hours) Equivalent to the first half of FRSL 321. Only with special permission of the Department.

FRSL 325 Oral and Written French 2 - Intensive.

(6) (Winter) (6 hours) (Prerequisite: Placement test. Priority to students who have taken FRSL 215) The program of FRSL 321 will be covered in one semester.

FRSL 326 Découvrons le Québec en français.

(3) (3 hours) (Prerequisite: Placement test. Priority given to Freshman students) (Course co-listed with Québec Studies.) An introduction to the history and culture of Québec.

FRSL 332 Intermediate French: Grammar 01.

(3) (Fall) (3 hours) (Prerequisite: Placement test. For those who have attained relative fluency but lack accuracy in speaking and writing) Grammar review, using both a theoretical and a practical approach. Reading materials, in addition to their cultural interest, are selected to illustrate grammatical usage, provide models of writing techniques and aid in vocabulary development.

FRSL 333 Intermediate French: Grammar 02.

(3) (Winter) (3 hours) (Prerequisite: FRSL 332 or Placement test) Second part of FRSL 332.

FRSL 407 Compréhension et expression orales.

(3) (Fall) (3 heures par semaine) (Préalable: test de classement. S'adresse aux étudiants qui ont déjà une bonne maîtrise du français écrit) Identification des niveaux de langue et prononciation du français familier; amélioration de la compréhension auditive par l'écoute d'une variété de documents audio-visuels du Québec et d'ailleurs.

FRSL 408 Français oral: Textes et expressions.

(3) (3 heures par semaine) (Préalable: test de classement) Suite du cours FRSL 407. Cours de perfectionnement de l'expression orale et écrite: amélioration de la production orale (intonation, débit, spontanéité); enrichissement du vocabulaire idiomatique relié à des fonctions socio-culturelles de la langue par le biais de techniques orales (jeux de rôles, discussions, simulations) et d'un journal.

●FRSL 431 Français fonctionnel avancé.

(6) (Summer) (Préalable: test de classement) (Les étudiants qui ont suivi le cours FRSL 400, FRSL 402 ou FRSL 432 ne seront pas admis) Destiné aux étudiants de niveau avancé qui veulent approfondir leurs connaissances lexicales, syntaxiques et culturelles afin de pouvoir exprimer avec clarté leurs opinions sur une variété de sujets. Par l'étude de journaux, revues et textes littéraires, les étudiants se familiariseront avec la réalité québécoise contemporaine.

FRSL 431D1 (3), FRSL 431D2 (3) Français fonctionnel avancé.

(3 heures par semaine) (Préalable: test de classement) (Les étudiants qui ont suivi le cours FRSL 400, FRSL 402 ou FRSL 432 ne seront pas admis) (Students must register for both FRSL 431D1 and FRSL 431D2.) (No credit will be given for this course unless both FRSL 431D1 and FRSL 431D2 are successfully completed in consecutive terms) (FRSL 431D1 and FRSL 431D2 together are equivalent to FRSL 431) Destiné aux étudiants de niveau avancé qui veulent approfondir leurs connaissances lexicales, syntaxiques et culturelles afin de pouvoir exprimer avec clarté leurs opinions sur une variété de sujets. Par l'étude de journaux, revues et textes littéraires, les étudiants se familiariseront avec la réalité québécoise contemporaine.

FRSL 432 Français fonctionnel.

(3) (Fall) (3 heures par semaine) (Préalable: test de classement) Première moitié du programme du cours FRSL 431. Seulement avec la permission spéciale du département.

FRSL 445 Français fonctionnel, écrit 1.

(3) (Fall) (3 heures par semaine) (Préalable: test de classement) Destiné aux étudiants dont le français oral est d'un niveau fonctionnel, mais dont le français écrit est nettement inférieur. Travaux écrits hebdomadaires, analyse de textes divers, exercices et tests en classe. But: corriger l'orthographe, la grammaire et les anglicismes, enrichir le vocabulaire, améliorer l'expression écrite.

FRSL 446 Français fonctionnel, écrit 2.

(3) (Winter) (3 heures par semaine) (Préalable: test de classement) (Prépare aux cours du Département de langue et littérature françaises. Même format que le cours FRSL 445, à un niveau plus avancé) Rédactions de types variés. But: améliorer le style, développer les compétences telles que l'organisation et la présentation d'arguments ou l'identification des registres de langue.

FRSL 449 Le Français des médias.

(3) (3 heures par semaine) (Préalable: test de classement) Cours de perfectionnement mettant l'accent sur l'enrichissement de la langue à l'oral comme à l'écrit. Analyse d'émissions de télévision ou de radio et lecture d'articles de journaux ou de revues. Activités variées portant sur des sujets d'actualité (reportages, débats, etc.) qui reflètent la société et la culture du Québec d'aujourd'hui.

FRSL 455 Grammaire et création.

(3) (3 heures par semaine) (Préalable: test de classement) Perspective analytique et approche inductive et visuelle se combinent pour permettre une meilleure maîtrise du code grammatical. L'étude de textes de niveau soutenu met en relief la richesse des ressources lexicales et stylistiques du français et rend accessible la création littéraire aux étudiants non

●GERM 202 German Language, Beginners'.

(6) (Summer) (3 hours, plus 1 hour laboratory) A comprehensive first level course designed to develop communicative skills.

GERM 202D1 (3), GERM 202D2 (3) German Language, Beginners'.

(Fall, Winter) (Students must register for both GERM 202D1 and GERM 202D2.) (No credit will be given for this course unless both GERM 202D1 and GERM 202D2 are successfully completed in consecutive terms) A comprehensive first level course designed to develop communicative skills.

GERM 203D1 (3), GERM 203D2 (3) German for Reading.

(Fall, Winter) (Restriction: Not open to students who have taken or are taking beginning level courses.) (Students must register for both GERM 203D1 and GERM 203D2) (No credit will be given for this course unless both GERM 203D1 and GERM 203D2 are successfully completed in consecutive terms) Reading German.

GERM 259 Introduction to German Literature 1.

(3) (Fall) (Given in English) Introduction to the major authors, genres, and topics of German literature from the Middle Ages to the Age of Goethe, including the Nibelungenlied, Faust, classical tragedy, and the rise of the novel.

GERM 260 Introduction to German Literature 2.

(3) (Winter) (Given in English) Introduction to the major authors, genres, and topics of German literature from the 19th century to the present.

GERM 300 German Language Intensive Intermediate.

(6) (Fall) (6 hours, plus 1 hour laboratory) (Prerequisite: GERM 200 or GERM 202, 202D1/D2 or equivalent, or permission of Department) (Required for program students) Continuation of GERM 200; covers the second level (GERM 307D1/GERM 307D2) in one term.

GERM 307D1 (3), GERM 307D2 (3) German Language - Intermediate.

(Fall, Winter) (Prerequisite: GERM 200 or GERM 202, 202D1/D2, or equivalent, or permission of Department.) (Students must register for both GERM 307D1 and GERM 307D2.) (No credit will be given for this course unless both GERM 307D1 and GERM 307D2 are successfully completed in consecutive terms) Review of grammar, further development of basic skills; literary and cultural readings.

GERM 325 German Language - Intensive Advanced.

(6) (Fall or Winter) (6 hours) (Prerequisite: GERM 300 or GERM 307D1/D2, or equivalent, or permission of Department.) (Required for program students.) This course aims at developing post-intermediate proficiency in listening, speaking, reading, and writing skills, with emphasis on oral and written expression. Special attention is given to word formation and to the proper choice of grammatical structures, vocabulary, and phraseology.

●GERM 330 Landeskunde.

(3) (Winter) (Given in German) (Prerequisite: GERM 325 or equivalent, or permission of Department.) Introduction to images of modern Germany, perceptions and conceptions of Germany since the Second World War.

●GERM 331 Germany after Reunification.

(3) (Winter) (Given in German) (Prerequisite: GERM 325 or equivalent, or permission of the Department) The events which led to the fall of the Berlin Wall, the reunification of Germany in 1990 and the changing cultural, social, political and economic landscape of the 'New Germany'. Highlighting issues of cultural and social politics, texts discussed include historical, literary and film material.

GERM 336 German Grammar Review.

(3) (Winter) (Given in German) This advanced-level course offers a comprehensive review of basic German grammar. The course can be taken concurrently with a language course at the third level.

●GERM 341 Essay Writing.

(3) (Fall) (Given in German) (Prerequisite: GERM 325 or equivalent, or permission of Department) This course is designed to further develop the writing skills of students having attained the 325-level. The rhetorical strategies of writing will be studied and analyzed with different text genres: letters, curriculum vitae, summaries, book reviews, expository and argumentative essays, minutes, feature stories, term papers, etc. Particular attention will be paid to argumentation, vocabulary, and style.

GERM 342 Translation.

(3) (Fall) (Given in German) (Prerequisite: GERM 325 or equivalent, or permission of Department) An introductory course, emphasizing practice more than theory. It covers mainly written translation (from German into English), i.e. reading and writing, and teaches to analyze, and to manipulate, grammatical/syntactical structures and to get a sense of semantic accuracy. The course is designed to familiarize students with basic technical terminology and to enable them to observe, analyze and produce accurate and appropriate translations. Vocabulary building is not a main issue.

●GERM 345 Business German 1.

(3) (Fall) (Given in German) (Prerequisite: GERM 325 or equivalent, or permission of the Department) This course introduces students to the terminology and syntax of Business German in contrast with English to ensure a sound basis for business communication.

●GERM 346 Business German 2.

(3) (Winter) (Given in German) (Prerequisite: GERM 345 or equivalent, or permission of the Department) This course is designed to develop oral and written skills for competence in German for business communication as well as cross-cultural awareness by discussing current materials from various sources.

●GERM 352 German Literature - 19th Century 3.

(3) (Fall) This course offers an introduction to the literary movements of *iz*Biedermeier, *iz* Junges Deutschland, *iz* Vormarz, *iz* Poetic Realism, and Naturalism in connection with the political and social developments in 19th century Germany. Tests by major authors such as Buchner, Heine and Fontane will be discussed.

●GERM 353 19th Century Literary Topics.

(3) (Winter) (Given in German) (Prerequisite: GERM 325, or equivalent, or permission of the Department) Varying topics of 19th century literature.

●GERM 354 Literary Approach to Song.

(3) (Fall) (Prerequisite(s): No official prerequisite, but students should have GERM 307D1/D2 or equivalent.) (Given in English.) Examination of the original cultural/historical background of texts and their settings by composers such as Schubert, Schumann, Wagner, Mahler and the New Vienna School.

●GERM 355 Nietzsche and Wagner.

(3) (Fall) (Given in English) This course examines the relationship between the philosopher Friedrich Nietzsche and the composer Richard Wagner. It explores their intellectual kinship, their view of art, music, and philosophy in the context of Nietzsche's critique of modernity and decadence and analyzes the Third Reich's and Hollywood's appropriation of Nietzsche and Wagner.

GERM 358 Franz Kafka.

(3) (Winter) (Given in English) This course will look at the works on Franz Kafka, a "classic" modernist author, in three characteristic genres: the story, the novel, and the short prose piece. A selection of Kafka's letters and diary entries as well as critical approaches to his work will also be studied.

● GERM 359 Bertolt Brecht.

(3) (Fall) (Given in English) This course provides an overview of Brecht's development as a dramatist and as a theorist, advocate and practitioner of a new form of theater. Attention will also be given to Brecht as a poet and to film versions of Brecht's works.

● GERM 360 German Literature 1890 to 1918.

(3) (Fall) (Given in German) (Prerequisite: Germ 325 or equivalent) The course deals with various genres of literature and forms of culture associated with Naturalism and Expressionism from the turn of the century to the Weimar Republic. Writers studied may include: Hauptmann, Wedekind, Schnitzler, Heinrich Mann, Sternheim, Kaiser, Thomas Mann, Kafka, Rosa Luxemburg.

● GERM 361 German Literature 1918 to 1945.

(3) (Winter) (Given in German) (Prerequisite: Germ 325 or equivalent) The course deals with the culture, literature and society of the Weimar Republic and the period of the Third Reich and the Holocaust. Writers studied will include: Brecht, Seghers, Fleisser, Kästner, Tucholsky, Benn, Kolmar, and Lasker-Schüler.

GERM 362 20th Century Literature Topics.

(3) (Fall) (Given in German) (Prerequisite: Germ 325 or equivalent) Introduction to selected topics and genres in twentieth century literature and culture.

● GERM 363 German Postwar Literature.

(3) (Fall) (Given in German) (Prerequisite: Germ 325 or equivalent) The course deals with the literature and culture of the Federal Republic of Germany, the former German Democratic Republic and unified Germany since 1945. It treats major authors and trends. Topics addressed include issues of nationalism and gender, multiculturalism, and other concerns of contemporary German society.

● GERM 364 German Culture: Gender and Society.

(3) (Fall) (Given in English) In connection with notions of identity, nationhood, political change, and cultural difference, this course investigates concepts and issues of gender in contemporary German Society. The readings include critical essays and literary texts by writers, scholars, philosophers, journalists, politicians, and political activists.

GERM 365 Language of Media from Manuscript to Hypertext.

(3) (Winter) (Given in English) The history of communications media and their impact on our language and thought discussions of literary works in a variety of media (book, radio, film, television, hypertext) by authors such as Goethe, Kafka, Borges, Brecht, Beckett, Sontag and DeLillo.

● GERM 366 Postwar German Literature/Film.

(3) (Fall) (Given in English) The course is a study of postwar German literature and film, focusing on the cinematic representation of literary texts. The emphasis is on the representation of German history in both media, on historical memory and gender relations.

GERM 367 Topics in German Thought.

(3) (Fall) (Given in English) A variety of issues significant to the development of German cultural and intellectual life.

● GERM 369 German Cinema from 1895.

(3) (Note: Given in English.) Historical survey of German film from 1895 to the present. Movements and periods covered include Wilhelmine cinema, expressionism, Nazi cinema, New German Cinema and post-wall film. Filmmakers include Fritz Lang, F.W. Murnau, Leni Riefenstahl, R.W. Fassbinder, Wim Wenders, Tom Tykwer and Fatih Akin.

GERM 370 Special Topics in German Film.

(3) (Fall) (Note: Given in English) Intensive study of selected topics and periods in German film history.

GERM 380 18th Century German Literature.

(3) (Winter) (Given in German) (Restriction: Not open to students who have taken GERM 380 and/or GERM 381) (Prerequisite: Germ 325 or equivalent) An introduction to German literature of the 18th century: Enlightenment and Sturm und Drang. The course will follow a socio-historical approach, i.e. it will attempt to delineate some of the relations that exist between the texts and their social, political, and cultural context.

● GERM 382 Faust: Chapbook to Horror Film.

(3) (Winter) (Given in English.) This course will explore why the story of a mathematician who sold his soul to the devil has remained one of the most enduring myths in western culture. Works discussed will include plays by Marlowe, Goethe, and Valery and films by Murnau, Kurosawa, and others.

GERM 397 Individual Reading Course 01.

(3) (Fall) Given solely at the discretion of the instructor.

GERM 398 Individual Reading Course 02.

(3) (Winter) Given solely at the discretion of the instructor.

GERM 400 Interdisciplinary Seminar: Contemporary German Studies.

(3) (Winter) (Given in English) An interdisciplinary, team-taught seminar, for third-year students on a single topic or theme. Topics may vary from year to year.

● GERM 412 Heroes, Lovers and Crusaders.

(3) Representations of the hero in medieval German literature, his socio-political, cultural, and religious roles.

● GERM 450 Classical Period in German Literature.

(3) (Winter) (Given in German) (Prerequisite: Germ 325 or equivalent) For the most part, the works of Goethe and Schiller are discussed.

● GERM 451 German Romanticism.

(3) (Fall) (Given in German) (Prerequisite: Germ 325 or equivalent) This course deals with German literary texts of the Romantic period, studied in their literary, historical, cultural and sociological context. References will be made to the other arts, in particular to music. Writers studied will include: Hoffmann, Eichendorff, Novalis, Hoffmann, Kleist, and Tieck.

GERM 455 Women of the Romantic Era.

(3) (Fall) (Prerequisite: GERM 325 or equivalent.) (Course is given in German for advanced undergraduate program students.) This course places at its centre the life-worlds, biographies, and forms of self-expression by German women of the Romantic Era.

GERM 498 Individual Reading Course 04.

(3) (Winter) Given solely at the discretion of the instructor.

GERM 499 Internship: German Studies.

(3) (Fall or Winter) (Prerequisite: Permission of the departmental Internship Advisor.) (Open to U2 and U3 students after completing 30 credits of a 90 credit degree program or 45 credits of a 69-120 credit program, a minimum CGPA of 2.7, and permission of the departmental Internship Advisor. This course can only be taken as an elective course. German language proficiency required.) Internship with an approved host institution or organization.

● GERM 511 Middle High German Literature.

(3) (Fall) (Given in German) (Prerequisite: Germ 325 or equivalent) This seminar course will acquaint students with the German courtly literature of the 12th and 13th century, its concepts, concerns and its sociology. The knightly romances of Hartmann von Aue (Erec), Wolfram von Eschenbach (Parzival), Gottfried von Straßburg (Tristan), and the heroic epic (Nibelungenlied) will be read and discussed in class, Hartmann's Erec in the original MHG language as well as in translation, to give students a basic acquaintance with the Middle High German literary language. Writers studied will include: Hartmann von Aue, Gottfried von Straßburg, Wolfram von Eschenbach.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

● **HISP 460 Golden Age Literature: Baroque.**

(3) (Fall) (Prerequisite: Successful completion of any Survey of Literature (HISP 241, HISP 242, HISP 243, HISP 244) or permission of the instructor. Note: Course taught in Spanish.) (Given in alternate years) (Restriction: Not open to students who have taken HISP 421, 458 or 460 prior to September 2004.) A comprehensive examination of the poetry, prose and drama of the Baroque period in Spain through representative authors.

HISP 470 Tutorial 01.

(3) (Fall)

HISP 471 Tutorial 02.

(3) (Winter)

HISP 490 Honours Thesis.

(6) (Winter) (Restriction: Reserved for Honours and Joint Honours students who will present their honours thesis on a theme in Hispanic Studies written under the direction of a member of staff during their final year of study) .

HISP 490D1 (3), HISP 490D2 (3) Honours Thesis.

(Fall, Winter) (Students must register for both HISP 490D1 and HISP 490D2.) (No credit will be given for this course unless both HISP 490D1 and HISP 490D2 are successfully completed in consecutive terms) (HISP 490D1 and HISP 490D2 together are equivalent to HISP 490)

HISP 499 Internship: Hispanic Studies.

(3) (Fall or Winter) (Prerequisite: Permission of the departmental Internship Advisor.) (Restriction: Open to U2 and U3 students after completing 30 credits of a 90 credit degree program or 45 credits of a 69-120 credit program, a minimum CGPA of 2.7, and permission of the departmental Internship Advisor. This course will normally not fulfill program requirements for seminar or 400- level courses. Spanish language proficiency required.) Internship with an approved host institution or organization.

● **HISP 501 History of the Spanish Language.**

(3) (Taught in Spanish) (Prerequisite: Permission of the instructor) The development of Spanish from its beginnings to the Modern Period, including usage in Spanish America and Judeo-Spanish.

● **HISP 505 Seminar in Hispanic Studies 01.**

(3) (Winter) (Taught in Spanish) A team-taught seminar examining major issues in Hispanic letters that transcend national literatures and historical periods. Although the specific topics will vary, each will address broad questions of a diachronic nature, thereby permitting an understanding of literary schools and movements, genres or ideologies present throughout the Hispanic world.

HIST-History

Offered by: History

● **HIST 194 FYS: Jewish Concepts of Others.**

(3) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25.) (For first year students only.) A survey, using translated primary and selected secondary sources, of the ways in which Jews represented Christians from late antiquity to the present. Legal, liturgical, literary and other sources are examined with the focus on the Medieval and Early Modern periods.

● **HIST 195 FYS: Sources of World History.**

(3) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25) (Restriction: For first year students only) An introduction to the constitutive intellectual traditions of world history.

● **HIST 197 FYS: Race in Latin America.**

(3) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25) This seminar explores what it meant to be native, black, or white in Latin America from the colonial period to the present. It explores how conceptualisations of

race and ethnicity shaped colonialism, social organisation, opportunities for mobility, visions of nationhood, and social movements.

● **HIST 198 FYS: Nation Building and Nationalism**

(3) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25) An introduction to some of the major theories of nationalism; an exploration of the many varieties of nationalism and forms of nation-building; a particular focus on the historical background to three case studies of current interest: Yugoslavia, Ireland and Québec.

● **HIST 199 FYS: Medieval Women and Men.**

(3) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25) This course examines the life choices available to women and men of the Middle Ages: how opportunities and restrictions of medieval society affected personal autonomy, careers, and relations between the sexes. Topics include: sexuality, religious life, marriage, work. Emphasis on learning techniques for reading and writing about primary sources (in translation).

HIST 200 Introduction to African History.

(3) (Restriction: Not open to students who have taken 101-200D) This course stresses the interactions of the peoples of Africa with each other and with the worlds of Europe and Islam from the Iron Age to the European Conquest in 1880.

HIST 201 Modern African History.

(3) (Restriction: Not open to students who have taken 101-200D) While covering the general political history of Africa in the twentieth century, this course also explores such themes as health and disease, gender, and urbanization.

HIST 202 Survey: Canada to 1867.

(3) (Fall) A survey of the development of Canada, from the pre-Columbian explorations until the Confederation period. Social, economic and political history will be examined in a general way.

HIST 203 Survey: Canada since 1867.

(3) A survey of the development of Canada from Confederation to the present day. Social, economic and political history will be examined in a general way.

● **HIST 204 History of Great Britain to 1688.**

(3) A survey of the development of Britain from the Middle Ages to the Glorious Revolution. Emphasis on political changes, seen in relation to the economic, social and intellectual background.

HIST 205 Ancient Mediterranean History.

(3) (Restriction: Not open to students who have taken HIST 209 prior to September 2006.) A survey of Mediterranean history from the Bronze Age until the 6th century AD, focusing on Greek and Roman civilization.

● **HIST 206 Africa and the Indian Ocean World.**

(3) Examines the rise and development of an Indian Ocean World "global" economy from the first millennium C.E. and Africa's role within it.

HIST 207 Jewish History: 400 B.C.E. to 1000.

(3) (Restrictions: Not open to students who have taken JWST 216) An overview of Jewish history from the period of Ezra and Nehemiah to the death of Hai Gaon, c. 1035. Focus on the experience of the Jews in Hellenistic and Islamic civilizations. Topics include Jewish sects, rabbinic literature in its various genres, the Karaite schism, and the rise of the Gaonate.

HIST 208 Introduction to East Asian History.

(3) (Restriction: Not open to students who have taken 101-208D) An introduction to the history of East Asian civilization from earliest times to 1600, with emphasis on China and Japan, including social, intellectual, and economic developments as well as political history.

● **HIST 211 American History to 1865.**

(3) (Fall) Introduction to the history of colonial North America and the United States up to the Civil War, in their Atlantic context.

●HIST 212 Science and Medicine in Canada.

(3) The social and intellectual history of science and medicine in Canada, from early exploration, through the rise of learned societies, universities and professional organizations, to the present age of big science and biotechnology.

HIST 213 World History, 1300-2000.

(3) A thematic and comparative approach to world history, beginning with the rise of the Mongols in the thirteenth century, and ending with globalization in the late twentieth century. Trade diasporas, technology, disease and imperialism are the major themes addressed.

HIST 214 Introduction to European History.

(3) (Restriction: Not open to students who have taken 101-215D) The course covers European History from the Ancient Greeks to the first part of the seventeenth century. The object of the course is two-fold, to provide students with: 1) a number of essential canons of pre-modern history; 2) hands-on experience in the reading, interpretation and writing of history.

HIST 215 Modern European History.

(3) (Restriction: Not open to students who have taken 101-215D) A social, economic, political and cultural survey of European History from the early seventeenth century to the present.

●HIST 216 History of Russia to 1801.

(3) A survey of Russian history, from the origin of the Slavs to the establishment of the Kievan State, the coming of the Mongols, the emergence of Muscovy, and the rise of the Russian Empire.

HIST 218 Modern East Asian History.

(3) (Winter) An introduction to the history of China and Japan from the seventeenth century to the present, including modernization, nationalism, and the interaction of the two countries.

HIST 219 Jewish History: 1000-2000.

(3) The Jewish experience from the rise of the European centres to the present.

HIST 221 United States since 1865.

(3) (Winter) Examines the defining moments and movements in the U.S. since Reconstruction, including populism, progressivism, the World Wars, the New Deal, the Cold War, the sixties and its consequences. Emphasis on the political, social and ideological transformations that ensued.

●HIST 224 Britain Since 1688.

(3) (Prerequisites: HIST 204 or consent of instructor) A survey of the development of Britain from the Glorious Revolution to the present day. Emphasis on political, social, economic and intellectual change against a background of Britain's evolving imperial and world role.

●HIST 225 History of France to 1789.

(3) Survey of French society from the fall of the Roman Empire to the outbreak of the French Revolution. Emphasis on the construction of the French state in the medieval period, religious conflicts of the 16th century, social and economic structures under absolutism, intellectual and economic changes in the 18th century.

HIST 226 Eastern Europe in 20th Century.

(3) Introductory survey of east central and southeastern European history from the twilight of nineteenth-century imperialism to the most recent expansion of the European Union. Consideration will be given to the two world wars and their consequences; nationalism, fascism, and socialism; and the revolutions of 1989.

●HIST 231 Archaeology of the Ancient World.

(3) A survey of the history of classical archaeology in the Graeco-Roman Mediterranean through the study of material evidence and literary texts.

●HIST 236 Russia from 1801 to 1991.

(3)

HIST 240 Modern History of Islamic Movements.

(3) Islamic revival in the Middle East which led to the rise of different versions of Islamic traditions and beliefs. Emphasis on the nature and character of leading nationalist and Islamic movements and their ideologues since the late 19th century.

HIST 249 Health and the Healer in Western History.

(3) (Restriction: Not open to students who took HIST 349 prior to Winter 2006.) (Note: Also available to first-year medical students in their options program.) The natural history of health and disease and the development of the healing arts, from antiquity to the beginning of modern times. The rise of "western" medicine. Health and healing as gradually evolving aspects of society and culture.

●HIST 292 History and the Environment.

(3) Sketch of the history of the material aspects of human interaction with the rest of nature. Included will be a historian's view of the social, technical, and ecological implications of the great variety of activities devised by our species. Though global in outlook, this course will emphasize the relevant historiography of France, England and North America.

●HIST 300 Nationalisms in Canada.

(3) (Prerequisite: HIST 203 or permission of instructor.) (Restriction: Not open to students who took CANS 300 (106-300A) before September 2002.) An historical explanation of the Canadian experience of nationalism from the Patriotes to the First Nation, with reference to politics, economics, iconography, ideology and multicultural experience.

HIST 301 U.S. Presidential Campaigning.

(3) (Prerequisite: any course in U.S. history or consent of instructor) The history of presidential campaigning in the U.S. will be considered against the backdrop of party change, technological development and the growth of American democracy.

●HIST 302 International Relations History 1: 1750-1950.

(3) (Prerequisite: one course in post-1800 History or permission of instructor.) The history of international relations during the era of the four global wars, the expansion of the West in world affairs, the changes in the balance of power in Europe, the rise and fall of the colonial empires, and the ascendancy of the flank powers, Russia and the United States.

HIST 303 History of Quebec.

(3) (Prerequisite: HIST 202/HIST 203) (The ability to read French is helpful but not mandatory) Covering Quebec history from New France to contemporary times, this course will include themes like ethnic relations, citizenship, gender and material culture. It is of particular interest to students in Education who foresee teaching about Quebec.

HIST 304 International Relations History 2: Cold War.

(3) (Prerequisite: HIST 302 or HIST 215 or a 20th C. history course or permission of instructor.) The history of the Cold War. Special attention will be paid to the different viewpoints and experiences of the Cold War participants by studying the historiography and archival materials released in the Eastern Block and Western World.

●HIST 305 Ancient Warfare and Imperialism.

(3) (Prerequisite: HIST 205 or HIST 231 or permission of instructor.) (Restriction: Not open to students who have taken 101-305D. Not open to UO students) Comparative study of ancient military history, warfare and imperial strategies.

HIST 306 East Central Europe Since 1944.

(3) (Prerequisite: HIST 215 or HIST 226 or permission of instructor) An examination of important problems in the postwar history of east central Europe. Topics include: the

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

establishment of Communist regimes; Stalinism and de-Stalinization; everyday life under Communism; the Hungarian Revolution of 1956, the Prague Spring, and Solidarity; political opposition; culture; and the revolutions of 1989.

● **HIST 307 Jews in Poland.**

(3) (Prerequisite: any course in Jewish history or East European History) (Restriction: Not open to students who have taken 101-307D) Analyses of primary sources (in translation) related to the social, economic and institutional history of the Jews in Poland and their place in the East European Jewish community. Topics include: the Jews during "The Flood" (1648 - 1667), the communal crisis of the late 17th century, the Frankist movement, and Hasidism.

● **HIST 308 Formation of Chinese Tradition.**

(3) (Restriction: Not open to students who have taken 101-308D) An examination of the multiple sources of the Chinese imperial system from the period of the neolithic culture interaction sphere to the fall of the Han dynasty in 220 C.E. Special attention is paid to socio-economic developments as well as to the evolution of philosophy, ideology, and social practice. The sequel to this course is HIST 358.

HIST 309 History of Latin America to 1825.

(3) (Fall) The social, cultural, and economic aspects of Latin America and the Caribbean in the colonial period. Topics include: pre-Columbian and hispanic cultures in conflict, plantation empires, and the transition to independence. The sequel to this course is HIST 360.

● **HIST 310 Knowledge and Atlantic Empire.**

(3) (Prerequisites: HIST 211 or permission of instructor.) The role of knowledge in British colonization and imperialism in the early modern Atlantic world. Explores the notion of an Atlantic "information order" (and its problems) by examining the polics of knowledge from England and Ireland to British America, and ultimately the early United States and British India.

● **HIST 311 The Gilded Age and The Progressive Era.**

(3) (Prerequisite: any course in U.S. history or consent of instructor) The social, economic, and political consequences of industrialization in the history of the United States between 1877 and 1914. Emphasis on the rise of mass production, urbanization, immigration, rural protest, the labour movement, social and political reform.

● **HIST 312 East-Central Europe: 1453-1740.**

(3) Developments from the fall of Constantinople to the accession of Maria Theresa; the Ottoman impact; the Renaissance in Hungary and Poland; the emergence of the Hapsburg Empire; the Reformation and Counter-Reformation; the Thirty Years' War; the imposition of serfdom; the decline of Poland-Lithuania and the collapse of the Ottoman system. East Central Europe as a frontier region between Catholicism, Orthodoxy and Islam.

● **HIST 313 Eastern Europe, 1740-1914.**

(3) (Prerequisite: A course in European history or permission of instructor.) History of the Habsburg Empire, Poland, and the Balkans from the accession of Maria Theresa to the Great War. Special consideration will be given to the Enlightenment, the partitions of Poland, the revolutions of 1848, the rise of nationalism, and fin-de-siècle society and culture.

HIST 314 Reformation in Britian & Ireland.

(3) (Prerequisite: HIST 204 or HIST 214 or HIST 215 or permission of instructor.) Survey of British and Irish history from c. 1450 to 1660. Focus will be on the origins and consequences of the Protestant and Catholic Reformations of the Tudor and early Stuart dynasties. These religious changes will be approached from a variety of perspectives including political, social, intellectual, economic and religious history.

● **HIST 315 Themes in World History.**

(3) (Prerequisite: HIST 213 or Permission of Instructor.) Historical phenomena that transcend the boundaries of nation-status and contributed to the long-term development of globalization.

● **HIST 316 Russia: Revolutions 1905 and 1917.**

(3) (Prerequisite: A course in Russian, Soviet or European history) Reform and Revolutions: a comparison of the collapse of the Soviet Union in 1991 and of the Tsarist Empire and Provisional Government in 1917, with some discussion of the

reforms that anticipated each cataclysm.

● **HIST 317 War and Society 2.**

(3) (Prerequisite: one general course in European history or HIST 305) (Restriction: Not open to students who have taken 101-305D. Not open to U0 students) The rise of permanent armies and navies, military institutions of Eastern Europe; Warfare from Wallenstein to Napoleon; emergence of the national army in Russia; the Western military tradition after Clausewitz, total War in the twentieth century.

HIST 318 History of Japan 1.

(3) (Restriction: Not open to students who have taken 101-318D or 101-293A) A survey of Japanese history and culture from earliest times to the 17th century, this course aims to provide students with a broad understanding of important themes in Japanese history.

HIST 319 The Scientific Revolution.

(3) (Prerequisite: a 200-level course in early modern history, or a survey course in philosophy, or permission of the instructor) The shift from the medieval to the modern view of man's place in the universe that took place between Copernicus and Newton and its intellectual and social implications.

● **HIST 320 European Thought and Culture 1.**

(3) (Prerequisite: HIST 214 or HIST 215) (Restriction: Not open to students who have taken 101-320D) The cultural and intellectual history of Europe from the late Middle Ages to the 18th century traces the origins of the modern sense of self in popular culture and in the texts of Erasmus, Luther, Calvin, Descartes, Pascal, Voltaire and Rousseau.

● **HIST 321 European Thought and Culture 2.**

(3) (Prerequisite: HIST 320 or consent of the instructor) (Restriction: Not open to students who have taken 101-320D) A cultural and intellectual history of Europe from the French Revolution to the present which traces the origins of the modern sense of self in popular culture and in the texts of Goethe, Comte, Marx and Engels, Nietzsche, Dostoevsky.

● **HIST 322 Canada: American Presence since 1939.**

(3) (Prerequisite: HIST 202 and HIST 203 or consent of instructor) An examination of Canada's relationship with the United States in the modern era. Emphasis will be placed upon diplomatic, military, cultural, and economic facets of this relationship.

HIST 323 History and Sexuality 1.

(3) Antiquity to Early Modern Europe. The cultural meanings and social institutions that create the historical context for sexual behaviours. Possible topics include: Greek homosocial and homosexual culture; sex and citizenship; wives and concubines in the ancient world; Christianity and aestheticism; misogyny and gender in Medieval Europe; adultery and lineage.

HIST 324 History of Ireland.

(3) A history of Ireland from the pre-Norman period to 1691. The emphasis will be placed on political developments, but these will be considered in the light of their social, economic and intellectual background.

HIST 325 Renaissance-Reformation Europe.

(3) (Prerequisite: HIST 214 or consent of instructor) (Restriction: Not open to students who have taken 101-325D) An examination of Western Europe from the late 15th to the mid-17th century. Topics will include the Renaissance outside Italy, the Reformations, popular religion and culture, the religious wars and the Scientific Revolution.

HIST 326 Russia from 1905 to Present.

(3) (Prerequisite: one 200-level course in History or political theory) 20th Century Russia, with particular attention to the rise and fall of the Soviet regime, Gorbachev's Perestroika, and the problems and accomplishments of post-Soviet society under Yeltsin and Putin.

HIST 327 Jews in the Orbit of Islam.

(3) (Prerequisite: HIST 207 and HIST 237 or consent of instructor) Overview of the history of the Jews in the Islamic world from 622 to the present. Emphasis on the classical period (to 1250), and on institutional and cultural themes. Comparative perspectives on the experience of Jews and other minorities under Islam.

HIST 328 China in Revolution 1: 1840-1921.

(3) (Prerequisite: One previous course in Chinese or Asian history or permission of instructor) An examination of political, economic and social developments in China in the 19th century, a period when internal crises and Western imperialism wrought cataclysmic changes. Topics include the Opium War, the Taiping Rebellion, the Boxers, and the Republican Revolution. The sequel to this course is HIST 338.

●HIST 330 Science in the Medieval West.

(3) (Prerequisite: HIST 214 or HIST 380 or permission of instructor.) (Restriction: Not open to students who have taken HIST 356 prior to W06.) The history of ideas about the physical world and its content, the nature of scientific thinking, and the possibilities of human intervention in the natural world held in Western Europe in the Middle Ages (ca. AD300-1500), with particular attention to their social, intellectual, cultural and religious context.

HIST 331 The United States Between the Wars.

(3) (Prerequisite: A course in U.S. history or permission of instructor.) The history of the United States from the Great War to the end of the 1940s. Social change and conflict, political conservatism, economic prosperity and the culture of consumption during the 1920s; the consequences of the Great Depression and the New Deal.

●HIST 332 Constitutional History: Canada - 1867.

(3) (Prerequisite: one course in Canadian history or consent of instructor) A survey course of the development of constitutional arrangement in Canada from the Royal Proclamation of 1763 until Confederation.

HIST 333 History of New France: Part 1.

(3) (Prerequisite: HIST 202 or consent of instructor) The development of the French Empire in North America, with particular emphasis on French-Native encounters arising through missions, trade, and military alliances.

HIST 334 History of New France: Part 2.

(3) (Prerequisite: HIST 202 or consent of instructor) Social and cultural history of France's ancien régime settlement colonies in North America. Topics include the links between the absolutist colonial state and society; family history; the Church, gender, and popular religion.

HIST 336 France, 1789 to 1914.

(3) (Prerequisite: HIST 214 and HIST 215) A study of the history of France from the Revolution to World War I.

HIST 337 Japanese Intellectual History 1.

(3) (Restriction: Not open to students who have taken 101-337D) An overview of the history of Japanese thought and mentality from earliest times to 1700. By examining not only texts of representative thinkers but also other (especially literary) materials, it aims at elucidating changing and continuing characteristics of the Japanese intellectual history. The sequel to this course is HIST 352.

HIST 338 China in Revolution 2: 1921-1997.

(3) (Prerequisite: one previous course in Chinese or Asian history or permission of instructor) The history of China from the establishment of the Chinese Communist Party to the present. Contents: origins and development of the Chinese Communist movement; the War of Resistance against Japan; The People's Republic, the Cultural Revolution, Deng era reforms.

HIST 339 Arab-Israeli Conflict.

(3) (Restriction: Open to U2 or U3 students only or permission of instructor.) The political, military, and diplomatic history of the Arab-Israeli conflict, with a focus on a number of historiographical debates over specific issues, such as the 1948 and 1967 wars, and the failures of the various peace initiatives.

HIST 342 Canada: External Relations since 1867.

(3) (Prerequisite: HIST 202 and HIST 203) This course will examine the historical development of Canadian external relations before WW II. Particular emphasis will be placed on Canadian-American relations, Canadian-Imperial relations, the growth of Canadian diplomatic autonomy and participation in the League of Nations.

HIST 343 Women in Post-Confederation Canada.

(3) (Prerequisite: HIST 203) This course examines women's contribution to the economic and social development of Canada as well as the changes in the image and status of women. Special emphasis will be on the relationship between women's roles in the private sphere and the public domain.

●HIST 344 Police Institutions.

(3) (Prerequisite: One course in British, Canadian or American history) The origins of law enforcement from Saxon juries through Norman justices of the peace, to Scotland Yard and the London Metropolitan police. Focus on the Royal Irish Constabulary and its influence on the growth of rural police in Commonwealth countries.

HIST 345 History of Italian Renaissance.

(3) (Prerequisite: HIST 214 or consent of instructor) An introduction to the economy, society, politics and intellectual developments in Italy from approximately 1300 to the early 16th century.

HIST 346 France, 1914 to the Present.

(3) (Prerequisite: HIST 214 and HIST 215 or written consent of instructor) A study of the history of France from World War I to the present.

●HIST 347 History and Sexuality 2.

(3) 1700 to the present, with a particular focus on Europe and North America. Possible topics include: patterns of fertility and sexual practice; prostitution; religion and sexuality; the medical and legal construction of sexualities; the rise of sexuality; gay liberation movements; queer politics.

HIST 348 China: Science-Medicine-Technology.

(3) (Prerequisite: HIST 208 or HIST 218 or permission of instructor) An introduction to traditional Chinese ideas about human beings and their relationship with heaven and earth. Special emphasis on the history of medicine and the body, alchemy, geomancy and divination techniques, agriculture and sericulture, astronomy, and engineering and their relation to changing social and cultural formations.

●HIST 350 Science and the Enlightenment.

(3) (Prerequisite: HIST 215 or permission of instructor.) Explores the relationship between the natural sciences and the eighteenth-century Enlightenment. Examination of works in post-Newtonian science as well as their broader cultural meaning, the history of material practices, the origins of social science, and the role of geography and international context beyond Western Europe.

HIST 351 Themes in U.S. History since 1865.

(3) (Prerequisite: any course in U.S. history or consent of instructor) Aspects of American history from the gilded Age through the Cold War era.

HIST 352 Japanese Intellectual History 2.

(3) (Prerequisite: one previous course in East Asian history, including Japanese history and Chinese history, or permission of instructor) (Restriction: Not open to students who have taken 101-337D) An overview of the history of Japanese thought and mentality from 1700 to the present. By examining not only texts of representative thinkers but also other (especially literary) materials, it aims at elucidating changing and continuing characteristics of the Japanese intellectual history.

(3) (Prerequisite: HIST 202 and HIST 203) (Restriction: Not open to students who have taken 101-469) This course explores religious history of French and English Canada. The growth of various denominations, popular religion, Church/State relations, sectarian education, Protestant and Catholic cultures, missions among the Natives, forces of secularization. A reading knowledge of French is recommended.

●HIST 358 Medieval to Early Modern China.

(3) (Prerequisite: HIST 208 or permission of instructor) (Restriction: Not open to students who have taken 101-308D) This course studies the changes in Chinese society from the age of the aristocracy to the dominance of the literati; the rise of Buddhism and religious Daoism, the resurgence of Confucianism; and the impact of foreign conquests on the development of Chinese traditional culture.

HIST 359 History of Japan 2.

(3) (Restriction: Not open to students who have taken 101-294B or 101-318D) A survey of Japanese history and culture from the 17th century to the present, this course aims to provide students with a broad understanding of important themes in Japanese Civilisation.

HIST 360 Latin America since 1825.

(3) Themes in the political, economic, and social development of Latin America since the wars of independence. Emphasis on the domestic history of the region, with some attention to relations with the United States and Europe.

●HIST 361 The Canadian West to 1905.

(3) (Prerequisite: HIST 202 and HIST 203) The development of what is now the Canadian West from the 17th century to the entry of Saskatchewan and Manitoba into confederation. Topics include: culture contact between native and European, the fur trade, entry of the West into confederation and its evolution from colonial to provincial status.

●HIST 362 The Canadian West since 1905.

(3) (Prerequisite: HIST 203 or consent of instructor) An examination of significant themes in the history of British Columbia and the Prairie Provinces since 1905. Topics include immigration, economic development, regional protest movements and class conflict within the West itself.

HIST 363 Canada 1870-1914.

(3) (Prerequisite: HIST 202 and HIST 203 or permission of instructor) This course will examine social, economic, political and cultural aspects of Canadian society between 1870 and 1914. Topics covered will include aboriginal peoples, European settlement of the West, provincial rights, the national policy, social reform movements, industrialization, immigration and the rise of cities.

●HIST 364 Canada 1914-1945.

(3) (Prerequisite: HIST 202 and HIST 203 or permission of instructor) This course will examine Canada and Canadian society between 1914 and 1945. It will focus on the social, political, economic and cultural impact of the two World Wars and the economic crisis of the 1930s. Among the topics will be Canadian external relations, political and social protest, popular culture, demographic changes and prohibition.

●HIST 365 17th - 18th C. Western Europe.

(3) (Prerequisite: HIST 214 or consent of instructor) (Restriction: Not open to students who have taken 101-325D) A comparative analysis of the major states of Western Europe: Absolutism and its alternatives; religious and scientific thought; classical and enlightenment cultures; international and colonial rivalries. Special attention will be placed on social and economic changes between the 1630s and the late 18th century.

HIST 366 Themes in Latin American History 1.

(3) (Prerequisite: HIST 309 or HIST 360 or permission of the instructor.) (Note: Topics will vary from year to year.) Exploration of a specific topic in the history of Latin America and the Caribbean, 1492 to the present.

●HIST 367 Canada since 1945.

(3) (Prerequisite: HIST 202, HIST 203) Elements of Canada's political, social, economic, and cultural history since World War II. Topics will include constitutional questions, gender and class issues, the role of the state, regionalism, consumer society, the Quiet Revolution, and nationalism in Canada.

HIST 368 Greek History: Classical Period.

(3) (Prerequisite: HIST 205 or HIST 231 or permission of instructor.) The Classical period of Greek history, from the end of the Persian wars to the death of Alexandra the Great (479-323 B.C.).

●HIST 369 Greek History: Early Greece.

(3) (Prerequisite: HIST 205 or HIST 231 or permission of instructor.) Historical study of the period from the Mycenaean Age to the end of the Archaic Age.

HIST 370 Canadian Party Politics 1867-2000.

(3) (Prerequisite: HIST 203 or consent of the instructor) An examination of how politics evolved in Canada's parliamentary system from campaigns to media management, including party systems, ideology, the role of leadership and the growing role of the state.

●HIST 371 American Civil Rights 1877-1940.

(3) (Prerequisite: any course in U.S. history or consent of instructor) The social, economic, political, and constitutional history of citizenship and civil rights in the United States from the end of Reconstruction through the 1930s. Emphasis on segregation and disfranchisement; immigration restrictions, americanization and national identities; civil rights movements and organizations; women's suffrage; voting rights and representation.

●HIST 373 Canadian Labour History.

(3) (Prerequisite: HIST 203 or equivalent or consent of instructor) (Restriction: Not open to students who have taken HIST 353) This course explores themes in labour and working class history in Canada.

HIST 375 Roman History: Early Empire.

(3) (Prerequisite: HIST 205 or HIST 231 or permission of instructor.) The history of the Roman Empire from Augustus to Marcus Aurelius.

●HIST 376 Roman History: Later Empire.

(3) (Prerequisite: HIST 205 or HIST 231 or permission of instructor.) The history of the Roman Empire from Marcus Aurelius to Justinian.

●HIST 377 The United States, 1940-1965.

(3) (Prerequisite: any course in U.S. history or consent of instructor) Major events in politics and international affairs, culture and society, and the economy in the U.S. during and after World War II. Topics include: The War and American society; the first years of the Cold War; economic prosperity and social change; the civil rights movement; Vietnam to 1965.

●HIST 378 Roman & Greek Social History.

(3) (Prerequisite: HIST 205 or HIST 231 or permission of instructor.) Roman and Greek social history including the family and domestic space, economic structures, and religious beliefs.

●HIST 379 Greek History: Hellenistic Period.

(3) (Prerequisite: HIST 205 or HIST 231 or permission of instructor.) The Hellenistic Greek world from Alexander the Great to the period of the Roman conquest.

HIST 380 Western Europe: The Middle Ages.

(3) (Restriction: Not open to students who have taken 101-380D) History of Western Europe from the later Roman Empire through the 15th century: sub-roman and Carolingian civilization, feudal monarchy; the Church and the laity; domestic life and social institutions; cultural developments.

HIST 381 Colonial Africa: Health/Disease.

(3) (Prerequisite: HIST 200 and HIST 201 or HIST 349 or permission of the instructor) A study of the impact of disease on African societies over the last three centuries. Topics include: the efforts of Africans to control their ecology, and to maintain their own medical traditions; the wider African responses to Western bio-medicine, and the relationship of disease to nutrition, demography, and public health.

●HIST 382 History of South Africa.

(3) (Prerequisite: HIST 200 and HIST 201) History of South Africa from precolonial times to the present. Topics include: precolonial societies; British and Dutch colonialism; slavery in colonial South Africa; the Zulu kingdom; mining capitalism; the Boer War; Afrikaner nationalism; apartheid; the anti-apartheid struggle; music, religion, and art; challenges of the post-apartheid state.

HIST 383 Eighteenth-Century Britain.

(3) (Prerequisite: HIST 215 or permission of instructor.) (Restriction: Not open to students who have taken HIST 383 and HIST 384 prior to 2005.) Cultural, intellectual, political, economic and social history of Britain and Ireland in the eighteenth century; the era of the creation of the United Kingdom and the rise of a great commercial and imperial power.

HIST 384 Nineteenth-Century Britain.

(3) (Prerequisite: HIST 215 or permission of instructor) (Restriction: Not open to students who have taken HIST 384 prior to 2005.) Cultural, intellectual, political, economic and social history of Britain and Ireland in an era of unprecedented economic and cultural change as the United Kingdom became the world's first industrial nation and leading imperial power.

●HIST 386 Twentieth-Century Britain.

(3) (Prerequisite: HIST 215 or permission of instructor) (Restriction: Not open to students who have taken HIST 385 and HIST 386 prior to 2003) From a range of perspectives, including cultural, intellectual, political, economic and social history, this course examines Britain from the height of its power, through two world wars, the building of a welfare state, the dissolution of Empire and entry into Europe, to the start of the 21st century. consensus, decolonisation, immigration, culture and society, Northern Ireland, Scottish and Welsh nationalism, Thatcherism, the European Union.

HIST 387 The First World War.

(3) A world-wide political, social, economic, cultural and military survey, from the origins of the Great War to the Treaty of Versailles.

HIST 388 The Second World War.

(3) A world-wide political, social, economic, cultural and military survey, from the Treaty of Versailles to the first years of the Cold War.

HIST 390 France in the Ancien Régime.

(3) (Prerequisite: HIST 214 or HIST 225 or permission of instructor) (Restriction: Not open to students who have taken 101-425D) The history of France from the end of the Thirty Year's War to the eve of the French Revolution. A reading knowledge of French is recommended.

HIST 391 Roman History: Republic.

(3) (Prerequisite: HIST 205 or HIST 231 or permission of instructor.) (Restriction: Not open to students who have taken 101-451) History of the Roman Republic from its foundation through the death of Julius Caesar.

●HIST 392 The United States since 1965.

(3) (Prerequisite: any course in U.S. history or consent of the instructor) Major events in politics and international affairs, culture and society, and economy in the U.S. since 1965. Topics include: social and political upheaval 1965 - 1975; Vietnam to 1975; conservative politics; Nixon and Watergate; economic change in the 1970s and 1980s; presidential leadership from Carter on.

●HIST 393 Civil War and Reconstruction.

(3) (Prerequisite: any course in U.S. history or permission of instructor) (Restriction: Not open to students who have taken 101-431) The causes of the American Civil War; the social, economic, political and military forces that shaped the conflict, attempts to restructure race relations, Southern and American societies after the war.

HIST 394 Stuart Britain and Ireland.

(3) (Prerequisite: HIST 204 or HIST 214 or permission of instructor) A study of Britain and Ireland during the seventeenth and early eighteenth centuries; topics include the nature of early British society, the outbreak of the civil wars of the 1640s, the Restoration of the monarchy, and the changes in political ideas over the period.

●HIST 395 Canadian Military Experience.

(3) (Prerequisite: CANS 200 or HIST 203 or permission of instructor.) (Restriction: Not open to students who have taken 106-406) Canada's military experience since European contact. The course explores social, economic, technological and political themes as well as more traditional themes of military history.

HIST 396 Disease in Africa Since 1960.

(3) (Prerequisite: HIST 200 and HIST 201 or HIST 349 or permission of the instructor) This course examines the negatives and positives of African health since independence: the rise of new pathogens, especially HIV/AIDS, and the revitalization of old ones, such as drug resistant tuberculosis and malaria. Also examined are the growth of health infrastructure, and international successes such as the eradication of smallpox.

●HIST 397 Canada: Ethnicity, Migration.

(3) (Prerequisite: HIST 202 and HIST 203 or permission of the instructor) (Restriction: Not open to students who have taken HIST 423) Immigration, ethnicity and race in Canada in the nineteenth and twentieth centuries. Topics will include the migration process, government policy and legislation, urban and rural migration, acculturation, nativism and multiculturalism.

●HIST 398 Topics in Italian History.

(3) (Prerequisite: HIST 214)

HIST 399 History and Historical Methods.

(3) (Prerequisite: 6 credits of History) The nature and functions of history; changing conceptions of time and of the past; techniques historians use to find and appraise evidence; methods of reconstructing the past. Emphasis will be given not only to documentary sources but also to the range of techniques used by historians to find and appraise evidence.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

● **HIST 399D1 (1.5), HIST 399D2 (1.5) History and Historical Methods.**

(Students must register for both HIST 399D1 and HIST 399D2.) (No credit will be given for this course unless both HIST 399D1 and HIST 399D2 are successfully completed in consecutive terms) (HIST 399D1 and HIST 399D2 together are equivalent to HIST 399) The nature and functions of history; changing conceptions of time and of the past; techniques historians use to find and appraise evidence; methods of reconstructing the past. Emphasis will be given not only to documentary sources but also to the range of techniques used by historians to find and appraise evidence.

● **HIST 401 Topics: Medieval Culture and Society.**

(3) (Prerequisite: HIST 214 or HIST 380 or consent of instructor) Selected topics in the intellectual and cultural history of the Middle Ages. Emphasis on modern critical approaches to medieval culture, including literature, the supernatural, religious experience.

HIST 403 History of Quebec Institutions.

(3) (Prerequisite: HIST 203 or consent of instructor) Analysis of institutional structures in Quebec with emphasis on the 19th century. Particular attention will be given to legal and property institutions in transition.

● **HIST 406 Petrine and Catherinian Russia.**

(3) (Prerequisite: A prior course in Russian or European history) The transformation of Russian society by Peter the Great and the problems and achievements of Russia's Golden Age under the enlightened despotism of Catherine II and of her son.

HIST 407 Topics in Ancient History.

(3) (Prerequisite: 3 credits in Ancient history at the 300-level or permission of instructor.) (Restriction: Not open to Honours students in History.) An in-depth look at various topics in ancient history.

● **HIST 408 Colonialism and Native Peoples.**

(3) (Prerequisite: HIST 202) (Restriction: Not open to students who have taken 101-580D) The nature and consequences of encounters between American native peoples and Europeans.

● **HIST 409 Themes in Latin American History 2.**

(3) (Prerequisites: HIST 309 or HIST 360 and at least one other course in the Latin America area or permission of instructor.) (Note: Topics will vary from year to year.) In-depth discussion and research on a circumscribed topic in the history of Latin America and the Caribbean, 1492 to the present.

● **HIST 412 Women and Gender in Modern Britain.**

(3) (Prerequisite: HIST 215 or a course in British history or permission of instructor) Women and gender in modern Britain (1850 on). Topics include early feminist political agitation, including the suffrage movement; working-class women; changing notions of gender, sexuality and women's role; women and empire.

HIST 413 Independent Reading.

(3) (Prerequisite: Written permission) (Restriction: Open to History Major Concentration students only. Students may register in this course only once) Exceptionally, and under the direction of a member of staff, advanced and highly qualified students who have an extensive background in the proposed area of study, may pursue this independent study.

● **HIST 414 Canadian Cultural History.**

(3) (Prerequisite: HIST 202 or HIST 303 or permission of the instructor.) A cultural history of Canada, with culture defined in both the anthropological sense as comprising an entire way of life-, material, intellectual and spiritual- and in the familiar sense of embodying the life of the intellect and the arts.

● **HIST 415 European Cultural History 2.**

(3) (Prerequisite: HIST 214 and HIST 215 or a course in European intellectual history or written consent of instructor) A survey of 20th century French and European cultural/intellectual history.

● **HIST 416 British and French Identity.**

(3) (Prerequisite: A 300-level course in British or French History or permission of instructor.) Examines the close yet conflicting histories of Britain and France through the way each formed and projected national identities, the way in which those identities changed over time, and the wider impact these various

identities have had.

● **HIST 417 The Celtic Fringe.**

(3) (Prerequisite: At least one course in Modern British History) Social, economic, political and cultural topics in the modern history of Wales, Scotland and Ireland.

● **HIST 418 Topics: Atlantic World.**

(3) (Prerequisites: any two of the following: HIST 200, HIST 202, HIST 211, HIST 214, HIST 309 or permission of instructor.) (Restriction: Enrollment limit 25.) Exploration of a specific theme in Atlantic history, 1500 to 1850.

● **HIST 419 Central America.**

(3) (Prerequisite: HIST 309, HIST 360 or permission of instructor) (Restriction: Not open to students who have taken 101-419D) The study of historical roots of the regional crisis of the 1980s, with particular attention to Nicaragua, El Salvador and Guatemala.

● **HIST 420 Gender and Sexuality in Modern China.**

(3) (Prerequisite: A 300-level course in the History of China or Gender/Sexuality or permission of instructor.) The history of gender and sexuality in modern China. Topics include Chinese femininities and Chinese masculinities, theories of sexuality, and changing conceptions of gender identity under Confucianism, Western Imperialism, and socialism.

● **HIST 421 Topics in Early Modern Europe.**

(3) (Prerequisite: a course in Early Modern Europe) Varying subjects of topical interest regarding early-modern Europe.

HIST 423 Topics: Migration and Ethnicity.

(3) (Prerequisite: HIST 397 or permission of instructor) The study of various topics and themes in the area of migration, ethnicity and race in Canada. Topics vary from year to year.

● **HIST 424 Gender, Sexuality & Medicine.**

(3) (Prerequisite: A 300-level course History course in gender, sexuality or medicine or permission of instructor.) Gender, sexuality, and medicine since the colonial era, with a focus on North American experience. Topics will include reproductive medicine (puberty, childbirth, fertility control, menopause), changing perceptions of men's and women's health needs and risks, and ideas about sexual behaviour and identity.

● **HIST 425 European Food History.**

(3) (Prerequisite: HIST 215 or permission of instructor.) A history of food and drink in European history. Topics include: feasts and famines; the introduction of new foods and drinks from Asia and the Americas; table manners and the origins of the restaurant.

HIST 426 Topics: British Cultural History.

(3) (Prerequisite: HIST 215 or a course in British history or permission of instructor) Selected topics in intellectual and cultural history of Britain and Ireland, focusing on discussion of primary texts.

● **HIST 427 The Hasidic Movement.**

(3) (Prerequisite: HIST 307 or a course in East-European history or consent of instructor) A historical examination of the history of the Hasidic Movement from its beginnings in 18th-century Poland to the present. Although emphasis will be placed on the social history of the movement, doctrinal developments will be examined as well.

● **HIST 428 History of the Book in Britain.**

(3) (Prerequisite: A 300-level course in British history or permission of instructor.) The theory and the practice of using books, manuscripts and periodicals in Early Modern British history. Topics include literacy and orality; the print revolution; censorship; readers and reading practices; newspapers and journalism; the origins of scientific persuasion and intellectual property rights.

● **HIST 429 Topics: Canadian Family History.**

(3) (Prerequisite: HIST 202 or HIST 203 or permission of instructor) This course will examine themes in the history of the Canadian family from 1850. Historical study reveals the family as a diverse, changing, social institution. Marriage, childhood, sexuality, and the state will come under examination and the Canadian experience will be compared to that of the U.S.

● **HIST 430 Topics in Modern Medicine.**

(3) (Prerequisites: HIST 249 (or HIST 349 prior to Winter 2006) or permission of the instructor.) Selected topics in the history of medicine in the 19th, 20th and/or 21st

centuries will be explored through discussion of primary and secondary historical sources.

HIST 431 Topics in U.S. History.

(3) (Prerequisite: By permission of instructor.) Various topics in United States history.

HIST 432 The Atlantic Provinces.

(3) (Prerequisite: HIST 202 and HIST 203 or consent of the instructor) Themes and topics in the history of the Canadian Atlantic Provinces from the European settlement to Present.

●HIST 433 British Queer History.

(3) (Prerequisites: HIST 215 or a course in British History or permission of instructor.) (Restrictions: Not open to students who have taken HIST 426 in 200209.) An investigation of the changing historical construction of "deviant" and "normal" sexualities in Britain since 1700, and how queer women and men discovered ways of surviving and perhaps even flourishing in the face of persecution and hostility from the state, the churches and the medical profession.

●HIST 434 British North America 1760-1867.

(3) (Prerequisite: An introductory course in history or consent of instructor) This course will study the social-cultural and political development of British North American colonies.

●HIST 435D1 (3), HIST 435D2 (3) Germany in the 20th Century.

(Prerequisite: HIST 234 and HIST 235 or a European survey course or consent of instructor) (Students must register for both HIST 435D1 and HIST 435D2.) (No credit will be given for this course unless both HIST 435D1 and HIST 435D2 are successfully completed in consecutive terms) First World War: national and international aspects; Weimar: economic crisis, and nationalism; rise of Hitler; structure of the National Socialist state; blue-print for World Power; Second World War; attempts to overthrow Hitler; the revolt of conscience; defeat; the Cold War and German unity; the post-War era.

HIST 436 Topics: European History.

(3) (Prerequisite: Permission of instructor.) An in-depth look at particular aspects of European history.

HIST 438 The Vietnam Wars 1945-1975.

(3) (Prerequisite: one course in 20th Century history or permission of instructor.) The history of the Vietnam Wars stands at the intersection of classical diplomatic-military history and multi-national, social history. The viewpoints of all participants in the conflict will be considered.

●HIST 439 History of Women in China.

(3) (Prerequisite: a previous course in Chinese history) This course examines the changing roles of women in traditional and modern China. Topics include political, social, and legal status, sexuality and medicine, religion and culture.

HIST 440 Fiction and History.

(3) (Prerequisite: 6 credits at the 300 level in either history or literature) This course examines why and how books are classified as fiction or history. Topics include: social expectations and uses of literature; evidence and verification; the author as authority. Readings include history and fiction from various historical periods, and relevant scholarship.

●HIST 441 Topics: Culture and Ritual in China.

(3) (Prerequisite: HIST 208 and HIST 218 and permission of instructor) An examination of selected aspects of the cultural and intellectual life of China. Topics vary from year to year, but include the history of popular religion, Chinese science and medicine, the esoteric arts including divination practices, law, and the influence of ideas in the production of Chinese culture.

●HIST 442 Asian Diaspora: Chinese Overseas.

(3) (Prerequisite: One previous course in Chinese or Asian history or permission of instructor) The contexts and causes of Chinese emigration; historical patterns of migration; Overseas Chinese communities on five continents, with emphasis on Southeast Asia and North America; alienation and identity in Chinatown; relations between the Overseas Chinese and China.

●HIST 445 Late Imperial China.

(3) (Prerequisite: HIST 208 or HIST 218) An introduction to the social and economic history of Late Imperial China, focusing on the Ming and early to mid Qing Dynasties (1368 - 1800), and current interpretations thereof. Was this a discrete period in Chinese history? If so, why.

●HIST 447 The Natural History of America.

(3) (Prerequisites: HIST 211 or permission of the instructor.) Examination of the ways in which interpretations of the natural world in the Americas were constructed by European travellers, colonial settlers and others. Emphasis primarily on natural histories of colonial British America, but coverage includes comparison across national and regional boundaries within the early modern Atlantic world.

●HIST 448 Women, Gender and Sexuality in the Middle East.

(3) (Prerequisite: A course on women, gender or sexuality or permission of instructor.) A focus on women in the history of the late-19th- and 20th-Century Middle East, and on the ways in which gender analysis and sexuality illuminate the history of national and religious communities. Topics such as: education, masculinity, sexuality, Western representations of Middle Eastern women, and gender and the nation.

●HIST 449 Medicine in the Ancient World.

(3) (Prerequisite: HIST 349 or an introductory course in Ancient Greek or Roman history) (Restriction: Not open to students who have taken HIST 452 and HIST 453) The evolution of ideas about the human body, disease, and therapeutics, and the diverse practices of medicine in Graeco-Roman antiquity (ca 800BC - ca 600CE), with particular attention given to their social, political, cultural and religious context.

●HIST 450 Ancient History Methods.

(3) (Prerequisite: 3 credits at the 300-level in Ancient history or permission of the instructor.) Different methods and strategies employed by Ancient historians, including numismatics, epigraphy, and papyrology.

●HIST 451 The Ancient Mediterranean City.

(3) (Prerequisite: 3 credits at the 300-level in Ancient history or permission of instructor.) Advanced study of ancient Mediterranean city-states, focusing on their urban setting and political, social, economic, and cultural institutions.

●HIST 452 Medicine in Europe 1500-1700.

(3) (Prerequisites: HIST 214 or HIST 249 and a 300-level course in History or permission of instructor.) (Priority is given to students in Honours History, students registered for the Minor in Social Studies of Medicine, and graduate students in History, Medical Anthropology, and Medical Sociology) The history of the evolution of ideas about the human body, disease and therapeutics and the diverse practices of medicine in Western Europe in the 16th and 17th centuries, with particular attention to their social, political, cultural and religious context.

●HIST 453 History of Revolution in Europe.

(3) (Prerequisite: HIST 215 or permission of instructor) The evolution of the concept and phenomenon of revolution from the 1640s in England to 1989 in eastern Europe. How the experiences of 1789, 1848, and 1917 changed the theory and practice of revolution.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

● **HIST 456 Russian Intellectual History 1825-1917.**

(3) (Prerequisite: HIST 236 or a course in European intellectual history, or consent of instructor) Sequel to HIST 446, from the year of the Decembrist insurrection to the Bolshevik Revolution. Discussion of the Russian influence on European and American intellectuals in the 19th century.

● **HIST 457 Topics in Medical History.**

(3) (Prerequisite: HIST 349 or HIST 356 or permission of instructor) This course explores different topics in medical history. Topics to be explored include the role of medicine from ancient to modern times.

● **HIST 458 Modern Medicine: Seminar.**

(3) (Restriction: Not open to students who have taken 101-459D) The emergence of scientific medicine, medical professionalization, the development of public health and the process of medical specialization since 1700.

HIST 459 Modern Medicine: Research.

(3) (Prerequisite: HIST 458) (Restriction: Not open to students who have taken 101-459D) (Priority given to students in Honours History and students registered for the Minor in Social Studies of Medicine.) Supervised design, research, writing, and discussion of a major research paper on a theme in the history of modern medicine since 1700.

HIST 460 Milton in Myth and History.

(3) (Prerequisite: a 200-level course on modern English or European history or literature, or permission of instructor) The great poet-revolutionary as construed or caricatured by contemporaries, and posthumous fans and foes such as Voltaire, Dr Johnson, the Romantics, Whigs, Unitarians, Victorian feminists, Marxists, Bolsheviks, and ex-Marxists.

HIST 461D1 (3), HIST 461D2 (3) Topics in Modern U.S. History.

(Prerequisite: any course in American History or consent of instructor) (Students must register for both HIST 461D1 and HIST 461D2.) (No credit will be given for this course unless both HIST 461D1 and HIST 461D2 are successfully completed in consecutive terms)

● **HIST 462D1 (3), HIST 462D2 (3) Topics: Canadian Conservatism.**

(Prerequisite: HIST 202 and HIST 203. Reading knowledge of French is required) (Students must register for both HIST 462D1 and HIST 462D2.) (No credit will be given for this course unless both HIST 462D1 and HIST 462D2 are successfully completed in consecutive terms) A critical examination of political, intellectual and institutional manifestations of conservatism in Canada from New France to Reform Party.

● **HIST 463D1 (3), HIST 463D2 (3) Topics: History of Women in Canada.**

(Prerequisite: HIST 203 or consent of instructor) (Restriction: Not open to students who have taken HIST 493) (Students must register for both HIST 463D1 and HIST 463D2.) (No credit will be given for this course unless both HIST 463D1 and HIST 463D2 are successfully completed in consecutive terms) A research seminar on the history of women in Canada since Confederation. Students will get familiar with primary sources and are expected to produce a major research paper in the second term.

● **HIST 464D1 (3), HIST 464D2 (3) Topics: Latin American History.**

(Prerequisite: HIST 309 or consent of instructor) (Restriction: Not open to students who have taken HIST 360 or HIST 419.) (Students must register for both HIST 464D1 and HIST 464D2.) (No credit will be given for this course unless both HIST 464D1 and HIST 464D2 are successfully completed in consecutive terms) This seminar counts as part of the North American concentration for Honours students.

● **HIST 465D1 (3), HIST 465D2 (3) Seminar: Italian Renaissance.**

(Prerequisite: HIST 214 or consent of instructor) (Students must register for both HIST 465D1 and HIST 465D2.) (No credit will be given for this course unless both HIST 465D1 and HIST 465D2 are successfully completed in consecutive terms)

● **HIST 466 Seminar: Medieval Medicine**

(3) Models of the body, disease and medical intervention current in western Europe between 400 and 1500 AD will be examined through analysis of primary sources in translation, and modern

historical scholarship. The sequel to this course is HIST 496.

● **HIST 467 Indian Ocean World Slave Trade.**

(3) (Prerequisites: HIST 200 or HIST 206 or HIST 213 or permission of instructor.) The origins, structure and impact of the Indian Ocean World slave trade from early times to the present day. Enslavement, the trading structure, slave functions, reactions to slavery, emancipation and 'slave' diaspora. Comparisons will be made to the Atlantic slave system.

● **HIST 469D1 (3), HIST 469D2 (3) Topics in Canadian Religious History.**

(Prerequisite: HIST 202 and HIST 203, plus HIST 357. A reading knowledge of French is highly recommended) (Students must register for both HIST 469D1 and HIST 469D2.) (No credit will be given for this course unless both HIST 469D1 and HIST 469D2 are successfully completed in consecutive terms)

● **HIST 470D1 (3), HIST 470D2 (3) Topics: Historical Interpretation.**

(Students must register for both HIST 470D1 and HIST 470D2.) (No credit will be given for this course unless both HIST 470D1 and HIST 470D2 are successfully completed in consecutive terms)

HIST 474 History of the GULAG 1918-1991.

(3) (Prerequisites: A 200- or 300-level course in Russian or East European history or permission of instructor.) The Soviet concentration camps, set up as a system of repression after the 1917 October Revolution, lasted until the collapse of the USSR.

● **HIST 476D1 (3), HIST 476D2 (3) Seminar: Topics in Russian History.**

(Students must register for both HIST 476D1 and HIST 476D2.) (No credit will be given for this course unless both HIST 476D1 and HIST 476D2 are successfully completed in consecutive terms)

HIST 477D1 (3), HIST 477D2 (3) Seminar in Jewish History.

(Students must register for both HIST 477D1 and HIST 477D2.) (No credit will be given for this course unless both HIST 477D1 and HIST 477D2 are successfully completed in consecutive terms)

HIST 478 Pre-modern Chinese Law and Society.

(3) (Prerequisite: Any 300-level course in Chinese history or permission of the instructor.) The history of Chinese law and society from early pre-imperial to late imperial times. Themes include the philosophical basis of Chinese law; development of different forms of legislation; practice of pre-modern law; law and social and political change; military law; legal cases translated from primary sources.

HIST 482D1 (3), HIST 482D2 (3) Seminar: Antiquity to Reformation.

(Students must register for both HIST 482D1 and HIST 482D2.) (No credit will be given for this course unless both HIST 482D1 and HIST 482D2 are successfully completed in consecutive terms)

● **HIST 483D1 (3), HIST 483D2 (3) History of Montreal.**

(Prerequisite: HIST 202 and HIST 203 and other courses on French Canada or consent of instructor) (Students must register for both HIST 483D1 and HIST 483D2.) (No credit will be given for this course unless both HIST 483D1 and HIST 483D2 are successfully completed in consecutive terms)

● **HIST 485D1 (3), HIST 485D2 (3) Seminar in Japanese History.**

(Prerequisite: HIST 208 or HIST 218 or consent of instructor) (Students must register for both HIST 485D1 and HIST 485D2.) (No credit will be given for this course unless both HIST 485D1 and HIST 485D2 are successfully completed in consecutive terms) Particular attention will be paid to Japanese responses to the impact of Western culture from the sixteenth century, and to aspects of Japanese intellectual history.

● **HIST 486D1 (3), HIST 486D2 (3) Topics: African Social History.**

(Prerequisite: HIST 200 or consent of instructor) (Students must register for both HIST 486D1 and HIST 486D2.) (No credit will be given for this course unless both HIST 486D1 and HIST 486D2 are successfully completed in consecutive terms)

HIST 489D1 (3), HIST 489D2 (3) Topics: Germany.

(Students must register for both HIST 489D1 and HIST 489D2.) (No credit will be given for this course unless both HIST 489D1 and HIST 489D2 are successfully completed in consecutive terms)

HIST 490D1 (3), HIST 490D2 (3) Honours Tutorial 1.

(Students must register for both HIST 490D1 and HIST 490D2.) (No credit will be given for this course unless both HIST 490D1 and HIST 490D2 are successfully completed in consecutive terms)

HIST 491D1 (3), HIST 491D2 (3) Honours Tutorial 2.

(Students must register for both HIST 491D1 and HIST 491D2.) (No credit will be given for this course unless both HIST 491D1 and HIST 491D2 are successfully completed in consecutive terms) (HIST 491D1 and HIST 491D2 together are equivalent to HIST 491)

HIST 493D1 (3), HIST 493D2 (3) Topics: Canadian Social History.

(Students must register for both HIST 493D1 and HIST 493D2.) (No credit will be given for this course unless both HIST 493D1 and HIST 493D2 are successfully completed in consecutive terms)

●HIST 496 Research: Medieval Medicine.

(3) (Restriction: Open only to students who have taken HIST 466) Supervised design, research, writing, and discussion of a theme in the history of western European medicine, 400 - 1500 AD.

HIST 497D1 (3), HIST 497D2 (3) Topics in Chinese History.

(Prerequisite: HIST 208 and HIST 218 and a 300-level course in Chinese History or permission of instructor) (Students must register for both HIST 497D1 and HIST 497D2.) (No credit will be given for this course unless both HIST 497D1 and HIST 497D2 are successfully completed in consecutive terms) A research seminar on aspects of Chinese history from early time to the present, with emphasis on social history.

HIST 498D1 (3), HIST 498D2 (3) Seminar in Eastern Europe.

(Prerequisite: a course in European history or permission of instructor) (Students must register for both HIST 498D1 and HIST 498D2.) (No credit will be given for this course unless both HIST 498D1 and HIST 498D2 are successfully completed in consecutive terms) Particular attention will be paid to problems confronting the contemporary historian.

HIST 499 Internship: History.

(3) (Prerequisite: Permission of the departmental Internship Advisor.) (Restriction: Open to U2 and U3 students with a minimum CGPA of 2.7, and permission of the departmental Internship Advisor.) Internship with an approved host institution or organization.

HIST 525 Women, Work and Family in Global History.

(3) (Prerequisite: A 300 or 400-level course in women's history or labour history or permission of instructor.) (Restriction: Restricted to students in History and Women's Studies.) The shifting historical context of female labour and family in selected western and non-western countries; the interaction between labour and gender relations with special focus on women's experiences on the shop floor and in the family.

●HIST 530 U.S. Foreign Relations.

(3) (Prerequisite: one course in U.S. history or permission of instructor.) (Restriction: Enrollment limit 25.) The history and historiography, approaches and interpretations, of American foreign relations from the pre-Revolutionary era to the present.

●HIST 550 Ancient History: Seminar.

(3) (Fall) (Prerequisite (Undergraduate): 6 credits at the 300 or 400-level in Ancient history or permission of instructor.) (Restriction: Honours students or advanced undergraduates who have permission of the instructor. Also open to graduate students.) Topics in ancient Mediterranean History, focusing on

Greek and/or Roman society.

HIST 551 Ancient History: Research.

(3) (Winter) (Prerequisite: HIST 550) (Restriction: Honours students or advanced undergraduates who have permission of the instructor. Also open to graduate students.) Research paper on a theme in ancient Mediterranean history.

●HIST 552 International Relations: Seminar.

(3) (Prerequisite: Permission of instructor.) (Restrictions: Restricted to Graduate students and Honours students or advanced students who have permission of the instructor.) Readings on and discussion of a theme in the history of international relations.

HIST 553 International Relations: Research.

(3) (Prerequisite: HIST 552) (Restrictions: Open only to students who have taken HIST 552 in the previous semester.) Supervised design of, research for and writing of a substantial paper on a theme in the history of international relations.

●HIST 556 Colonial America: Seminar 1.

(3) (Prerequisite: Permission of instructor.) (Restrictions: Restricted to Honours students or advanced undergraduates who have permission of the instructor. Not open to students who have taken HIST 481D1/D2.) Readings in and discussion of a theme in the history of Colonial America. Topics will change from year to year.

●HIST 557 Colonial America: Seminar 2.

(3) (Prerequisite: HIST 556) (Restrictions: Open only to students who have taken HIST 556 in the previous semester. Not open to students who have taken HIST 481D1/D2.) Supervised design, research and writing of a substantial research paper on a theme in the history of Colonial America.

HIST 560 World History: Seminar.

(3) (Prerequisite: Permission of instructor.) (Restrictions: Restricted to Graduate students and Honours students or advanced students who have permission of the instructor) Readings on and discussion of a theme in world history.

●HIST 561 World History: Research.

(3) (Prerequisite: HIST 560) (Restrictions: Open only to students who have taken HIST 560 in the previous semester.) Supervised design of, research for and writing of a substantial paper on a theme in world history.

●HIST 565 Modern Britain: Seminar 1.

(3) (Prerequisite: Permission of the instructor.) (Restrictions: Honours students or advanced undergraduates. Not open to students who have taken HIST 484D1/D2 and/or HIST 634D1/D2.) Readings in and discussion of a theme in Modern British history.

HIST 566 Modern Britain: Seminar 2.

(3) (Prerequisite: HIST 565) (Restrictions: Not open to students who have taken HIST 484D1/D2 and/or HIST 634D1/D2.) Supervised design, research and writing of a substantial research paper on a theme in modern British history.

HIST 579 The Arts of Healing in China.

(3) (Prerequisite (Undergraduate): At least two courses at the 300-level or above in East Asian history or permission of instructor) An historical perspective on the diverse arts of healing in China focusing on Key formations such as popular traditions, the emergence of classical medicine, the creation of Traditional Chinese medicine in modern China. Emphasis on healing as part of social, historical, intellectual, and cultural processes.

●HIST 580D1 (3), HIST 580D2 (3) European and Native-American Encounters.

(Prerequisite (Undergraduate): Permission of instructor. Priority is given to Graduate students) (Students must register for both HIST 580D1 and HIST 580D2.) (No credit will be given for this course unless both HIST 580D1 and HIST 580D2 are successfully completed in consecutive terms) This

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

seminar will examine European and Native encounters throughout the Americas, from the late 15th century to the mid-nineteenth century. The aim is to introduce students to key primary sources related to contact, and to the methods used to interpret them.

● **HIST 581 The Art of War in China.**

● **HIST 582 European Intellectual History.**

(3) (Prerequisite (Undergraduate): a previous course in European History or permission of instructor) A study of selected topics in 20th century French and European intellectual and cultural history and popular culture.

HIST 590 Topics: The British Empire.

(3) (Prerequisite (Undergraduate): permission of instructor) Topics in the history of British formal and informal imperialism and the colonial encounter from the eighteenth to the twentieth centuries.

● **HIST 594D1 (3), HIST 594D2 (3) Seminar in Early Modern Britain.**

(Prerequisite: any university course in British history or consent of instructor) (Note: Topics will vary from year to year.) (Restriction: Undergraduate Honours students or Masters students in history.) (Students must register for both HIST 594D1 and HIST 594D2.) (No credit will be given for this course unless both HIST 594D1 and HIST 594D2 are successfully completed in consecutive terms) Topics in early modern British history.

● **HIST 595D1 (3), HIST 595D2 (3) Seminar: Early Modern Western Europe.**

(Prerequisite (Undergraduate): permission of instructor) (Students must register for both HIST 595D1 and HIST 595D2.) (No credit will be given for this course unless both HIST 595D1 and HIST 595D2 are successfully completed in consecutive terms) This course is intended to offer advanced analytical and research training in a selected theme in western European history during the period from the Italian Renaissance to the French Revolution.

HMST-Humanistic Studies

Offered by: Arts - Dean's Office

HMST 296 Western Humanistic Tradition 1.

(3) (Restriction: students registering in Humanistic Studies.) (Restriction: Not open to students who have taken HMST 200.) Implicit and explicit responses in selected texts (philosophical, literary, theological, historical) in the western tradition from 750 BCE to 1600 to the question, "What is it to be human?"

HMST 297 Western Humanistic Tradition 2.

(3) (Prerequisite: HMST 296.) (Restriction: students registering in Humanistic Studies.) (Restriction: Not open to students who have taken HMST 200.) Implicit and explicit responses in selected texts (philosophical, literary, theological, historical) in the western tradition from 1600 to the present to the question, "What is it to be human?"

HPSC-Hist & Phil of Science

Offered by: Arts - Dean's Office

HPSC 300 Independent Studies: History and Philosophy of Science.

(3) (Restriction: Permission of Director and History & Philosophy of Science Committee) Offered by special arrangement between students in Arts or Science and a professor in either a Science or a Social Science Department. The purpose is to enable a student to undertake for credit the study of a special topic in the History or the Philosophy of Science.

HPSC 500 Interdisciplinary Seminar: History & Philosophy of Science.

(3) (Restriction: Permission of Instructor) At least one topic will be chosen from each of the four major areas: the mathematical, the physical, the biological, the social sciences.

HSEL-Health Science Electives

Offered by: Nursing

HSEL 308 Issues in Women's Health.

(3) (Fall) (Prerequisite: Introductory Psychology or Sociology or permission of the instructor) (Complementary course for the Women's Studies and Social Studies of Medicine Concentrations) Exploration of a wide range of topics on the health of women. Topics include use of health care system, poverty, roles, immigration, body image, lesbian health, and violence against women. Additional topics vary by year. A Health Science elective open to students in the Faculties of Arts, Science, and Medicine.

HSEL 309 Women's Reproductive Health.

(3) (Winter) (Prerequisite: Introductory Psychology or Sociology or permission of the instructor) (Restriction: not open for credit to students who have taken HSEL 308 prior to September 1997) (Complementary course for the Women's Studies and Social Studies of Medicine Concentrations) Concepts of health and medicalization. Canadian and international perspectives. Topics include contraception, abortion, infertility, menstruation, menopause, new reproductive technologies, prenatal care, childbirth. Additional topics vary by year. A Health Science elective open to students in the Faculties of Arts, Science, and Medicine.

INTD-International Development

Offered by: Arts - Dean's Office

INTD 200 Introduction to International Development.

(3) An interdisciplinary introduction to the field of International Development Studies focusing on the theory and practice of development. It examines various approaches to international development, including past and present relationships between developed and underdeveloped societies, and pays particular attention to power and resource distribution globally and within nations.

INTD 490 Development Field Research.

(3) (Prerequisite: completion of ECON 313 and 3 credits of IDS Group A Complementary Courses) (Restriction: Open only to students enrolled in International Development Studies Concentrations with prior approval of IDS program advisor and project supervisor) Supervised reading, field work and research project in international development. Requirements consist of previously approved project proposal, field component (usually carried out during the summer), and research report based on field work to be completed upon return.

INTD 491 Research Project.

(3) (Restriction: Open only to U3 Honours and Joint Honours students.) Supervised reading and preparation of a research project under the direction of a member of staff.

INTD 492 Honours Thesis.

(6) (Restriction: Open only to U3 Honours and Joint Honours students.) (Restriction: Permission of an appropriate supervising instructor and program adviser required.) Supervised reading and preparation of a research report under the direction of a member of staff.

INTD 492D1 (3), INTD 492D2 (3) Honours Thesis.

(Students must register for both INTD 492D1 and INTD 492D2.) (No credit will be given for this course unless both INTD 492D1 and INTD 492D2 are successfully completed in consecutive terms) (INTD 492D1 and INTD 492D2 together are equivalent to INTD 492) Supervised reading and preparation of a research report under the direction of a member of staff.

INTD 492N1 (3), INTD 492N2 (3) Honours Thesis.

(Students must also register for INTD 492N2) (No credit will be given for this course unless both INTD 492N1 and INTD 492N2 are successfully completed in a twelve month period) (INTD 492N1 and INTD 492N2 together are equivalent to INTD 492) Supervised reading and preparation of a research report under the direction of a member of staff.

INTD 497 Research Seminar on International Development.

(3) (Restriction: Open only to students in final year of an IDS Concentration) An interdisciplinary research seminar on topics of common interest to staff and students of the International Development Studies programs. See <http://www.mcgill.ca/ids/courseinfo/intd497>

INTD 499 Internship: International Development Studies.

(3) (Restriction: Open to U2 and U3 students with a minimum CGPA of 2.7, and permission of the departmental Internship Advisor. This course will not normally fulfill program requirements for seminar or 400-level courses. A letter from a supervisor at the institution must attest to successful completion of the student's tenure.) Internship with an approved host institution or organization.

ISLA-Islamic Studies

Offered by: Islamic Studies

ISLA 200 Islamic Civilization.

(3) (Note: All readings are in English.) An introduction to, and survey of, the religious, literary, artistic, legal, philosophical and scientific traditions that constituted Islamic civilization from the 7th Century until the mid-19th Century.

ISLA 210 Muslim Societies.

(3) An introduction to the different, often disparate, ways in which Muslims live and think in the modern world (19th-21 centuries). Muslim social contexts across the globe and cyberspace.

● ISLA 415 Modern Iran: Anthropological Approach.

(3) (Prerequisite: ISLA 210 or permission of instructor.) The modern history, social, and cultural anthropology of contemporary Iran.

● ISLA 420 Indo-Islamic Civilization: Medieval.

(3) (Prerequisite: ISLA 200 or permission of instructor.) The rise of Islam in South Asia in the 8th Century and its subsequent expansion; evolution of Indo-Islamic civilization and its apogee during Mughal rule up to 1707. Themes include state and religion; ruling institutions; political theory, Sufism and the process of conversion, as well as the formation of a composite culture.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

● ISLA 421 Islam in South Asia: 1757 to Present.

(3) (Prerequisite: ISLA 420 or permission of instructor.) Pre-colonial eighteenth century; colonial disruption: "ulama" and litterateurs as reformers, protagonists of modernism and traditionalism, and social activists; the challenges of modernity and search for Islamic solutions; minority identity and political separatism; Pakistan, Bangladesh, and Indian Muslims.

● ISLA 501 The Qur'an: Text and History.

(3) A study of the Qur'an's teachings, structures, style, and history in the light of classical and modern scholarship.

● ISLA 505 Islam: Origin and Early Development.

(3) (3 hours) The Qur'an, Hadith, the Shari'a and their major themes. The early development of law, theology and Sufism. The development and formation of an Islamic "orthodoxy", the development and nature of competing interpretations of Islam during the Classical Period. Topics: God, revelation, prophecy, the community and the individual and the meaning of history.

● ISLA 506 Islam: Later Developments.

(3) (3 hours) How the basic elements of Islam have been understood in the course of later Islamic history up to the present day. The nature and development of Shi'ism, Sufi brotherhoods, major intellectual trends, Islam in a world of nation states, diaspora. The challenges of modernity and the contemporary world.

● ISLA 510D1 (3), ISLA 510D2 (3) History: Islamic Civilization - Classical.

(Fall and Winter) (3 hours) (Students must register for both ISLA 510D1 and ISLA 510D2.) (No credit will be given for this course unless both ISLA 510D1 and ISLA 510D2 are successfully completed in consecutive terms) The origins of the early Islamic state in Arabia and the Umayyad Caliphate. The growth of an Islamic civilization, and the "Abbasid Empire" until the Seljuk period. The rise of the Fatimids. The Caliphate of Cordoba.

ISLA 511D1 (3), ISLA 511D2 (3) History: Islamic Civilization - Mediaeval Era.

(Fall and Winter) (3 hours) (Students must register for both ISLA 511D1 and ISLA 511D2.) (No credit will be given for this course unless both ISLA 511D1 and ISLA 511D2 are successfully completed in consecutive terms) The Seljuks, and the medieval synthesis. The Moors in Spain and North Africa. The Crusades. The Mongols and the destruction of the Baghdad Caliphate. The Mamluk, Persian, Turkish and Indian Empires until 1700.

ISLA 521D1 (4.5), ISLA 521D2 (4.5) Introductory Arabic.

(Fall and Winter) (5 lecture hours and laboratory) (Students must register for both ISLA 521D1 and ISLA 521D2.) (No credit will be given for this course unless both ISLA 521D1 and ISLA 521D2 are successfully completed in consecutive terms) Modern Standard Literary Arabic (non-spoken).

● ISLA 522 Lower Intermediate Arabic.

(6) (3 hours and laboratory) (Prerequisite: ISLA 521 or equivalent)

ISLA 522D1 (3), ISLA 522D2 (3) Lower Intermediate Arabic.

(Fall) (3 hours and laboratory) (Prerequisite: ISLA 521 or equivalent) (Students must register for both ISLA 522D1 and ISLA 522D2.) (No credit will be given for this course unless both ISLA 522D1 and ISLA 522D2 are successfully completed in consecutive terms) (ISLA 522D1 and ISLA 522D2 together are equivalent to ISLA 522)

ISLA 523D1 (3), ISLA 523D2 (3) Higher Intermediate Arabic.

(Fall and Winter) (3 hours) (Prerequisite: ISLA 522 or equivalent) (Formerly 397-623) (Students must register for both ISLA 523D1 and ISLA 523D2.) (No credit will be given for this course unless both ISLA 523D1 and ISLA 523D2 are successfully completed in consecutive terms)

● ISLA 531D1 (3), ISLA 531D2 (3) Survey Development of Islamic Thought.

(Fall) (3 hours) (Students must register for both ISLA 531D1 and ISLA 531D2.) (No credit will be given for this course unless both ISLA 531D1 and ISLA 531D2 are successfully completed in consecutive terms) A survey of the development of the major intellectual traditions of Islamic civilization in medieval and modern times.

ISLA 532D1 (3), ISLA 532D2 (3) Introductory Turkish.

(Fall and Winter) (3 lecture hours plus conference and laboratory) (Students must register for both ISLA 532D1 and ISLA 532D2.) (No credit will be given for this course unless both ISLA 532D1 and ISLA 532D2 are successfully completed in consecutive terms)

ISLA 533D1 (3), ISLA 533D2 (3) Lower Intermediate Turkish.

(Fall and Winter) (3 lecture hours plus conference and laboratory) (Prerequisite: ISLA 532 or equivalent) (Students must register for both ISLA 533D1 and ISLA 533D2.) (No credit will be given for this course unless both ISLA 533D1 and ISLA 533D2 are successfully completed in consecutive terms)

ISLA 541D1 (3), ISLA 541D2 (3) Introductory Persian.

(Fall and Winter) (3 hours) (Students must register for both ISLA 541D1 and ISLA 541D2.) (No credit will be given for this course unless both ISLA 541D1 and ISLA 541D2 are successfully completed in consecutive terms)

ISLA 542D1 (3), ISLA 542D2 (3) Lower Intermediate Persian.

(Fall and Winter) (3 hours) (Prerequisite: ISLA 541 or equivalent) (Students must register for both ISLA 542D1 and ISLA 542D2.) (No credit will be given for this course unless both ISLA 542D1 and ISLA 542D2 are successfully completed in consecutive terms)

ISLA 551D1 (3), ISLA 551D2 (3) Introductory Urdu.

(Fall and Winter) (3 hours) (Students must register for both ISLA 551D1 and ISLA 551D2.) (No credit will be given for this course unless both ISLA 551D1 and ISLA 551D2 are successfully completed in consecutive terms) Introduction to the basic grammatical structures and vocabulary of the Urdu language, including drills in pronunciation and sentence structures.

ISLA 552D1 (3), ISLA 552D2 (3) Intermediate Urdu.

(Fall and Winter) (3 hours) (Prerequisite: ISLA 551 or equivalent) (Students must register for both ISLA 552D1 and ISLA 552D2.) (No credit will be given for this course unless both ISLA 552D1 and ISLA 552D2 are successfully completed in consecutive terms) Assuming a knowledge of basic grammar and vocabulary, this course continues with the study of more complex grammatical structures. Reading and composition exercises in Urdu script are designed to give intermediate competency in the language.

● ISLA 553 Advanced Urdu 1.

(3)

● ISLA 581 Special Topics 1.

(3) (Note: Subject matter will vary year to year, according to the instructor. Topic will be announced at the beginning of the term.) Selected topics in Islamic studies.

ISLA 585 Arab Women's Literature.

(3) (Prerequisite: ISLA 392 or permission of instructor.) (Note: Readings in English translation.) Explorations of writings by Arab women. Issues include: translation/reception, gender and genre, categories of knowledge about Arab women, feminist and post-colonial theories/methodologies.

ITAL-Italian

Offered by: Italian Studies

ITAL 199 FYS: Italy's Literature in Context.

(3) (Fall) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25) (Given in English) The purpose of this seminar is to re-visit, problematically, the commonsense notion that literature "reflects" reality (or society). Classics of twentieth-century Italian writing shall be analyzed as the response of that nation's literary imagination to the contradictions of its turbulent political and social history.

ITAL 205D1 (3), ITAL 205D2 (3) Italian for Beginners'.

(Fall, Winter) (3 hours and laboratory) (Students must register for both ITAL 205D1 and ITAL 205D2.) (No credit will be given for this course unless both ITAL 205D1 and ITAL 205D2 are successfully completed in consecutive terms) Grammar, reading, dictation. Intensive practice in speech

patterns and written structures. Conversation and composition. Visual material and selected readings will be used in describing the making of contemporary Italy.

ITAL 206 Beginners' Italian Intensive.

(6) (Fall or Winter) (6 hours and 1 hour laboratory) (Restriction: Not open to students who have taken ITAL 205D1/ITAL 205D2) Designed to cover in one term the same material as ITAL 205D1/ITAL 205D2. The Summer term will also be given in Florence, Italy, as part of McGill's Summer courses in Italy program.

ITAL 210D1 (3), ITAL 210D2 (3) Elementary Italian.

(Fall, Winter) (3 hours and laboratory) (Restriction: Not open to students who have taken ITAL 205D1/ITAL 205D2 or ITAL 206) (Students must register for both ITAL 210D1 and ITAL 210D2.) (No credit will be given for this course unless both ITAL 210D1 and ITAL 210D2 are successfully completed in consecutive terms) The course is intended for students who have never studied Italian but who have had some informal exposure to the language. Grammar, reading, conversation and composition. An outline of Italian civilization, oral presentations and discussions.

ITAL 215D1 (3), ITAL 215D2 (3) Intermediate Italian.

(Fall, Winter) (Students must register for both ITAL 215D1 and ITAL 215D2.) (No credit will be given for this course unless both ITAL 215D1 and ITAL 215D2 are successfully completed in consecutive terms) Direct continuation of ITAL 205D1/ITAL 205D2. Grammar, literary readings, conversation. Grammar exercises and composition. Reading of selected literary works, oral presentations and group discussion.

ITAL 216 Intermediate Italian Intensive.

(6) (6 hours) (Prerequisite: ITAL 205D1/ITAL 205D2 or ITAL 206 or permission of the Department) (Restriction: Not open to students who have taken ITAL 210) Course designed to cover in one term the same material as ITAL 215D1/ITAL 215D2. Direct continuation of ITAL 206. The Summer term will be given in Florence, Italy, as part of McGill's Summer courses in Italy program.

ITAL 300 Italian Literary Composition.

(3) (Fall) (3 hours seminar) (Prerequisite: ITAL 215D1/ITAL 215D2, ITAL 216, or equivalent) Analysis and discussion of selected 19th and 20th century literary texts with a view to improving language and composition skills. Review of major grammatical difficulties.

●ITAL 306 Advanced Reading and Composition.

(6) (Prerequisite: ITAL 215D1/ITAL 215D2, ITAL 216, or equivalent) Course is only given in Florence, Italy, as part of McGill's Summer Study in Italy program. The understanding of grammatical structures through a variety of exercises; paraphrasing, translating, composition and discussion. Particular emphasis will be placed on syntax through the study of contemporary texts.

●ITAL 307 Topics in Italian Culture.

(3) (Given in Italian) (Prerequisite: ITAL 215D1/ITAL 215D2 or ITAL 216, or equivalent) Selected topics in Italian culture (topics may vary and may concentrate on one or more of the following areas: geography, history, music, art history, political science and/or literature).

●ITAL 308 Business Italian 1.

(3) (Prerequisite: ITAL 215D1/ITAL 215D2 or ITAL 216 or equivalent) Course is given in Florence, Italy, as part of McGill's Summer Study in Italy program. It focuses on the terminology, idiomatic expressions and syntax of Italian business language. Topics, such as workplace in Italy, credit institutions, chamber of commerce and its role, industrial associations, will be used to help develop and improve written

and oral communication skills as they relate to the business world.

●ITAL 309 Perspectives on Italy.

(3) Course is given in Florence, Italy, as part of McGill's Summer Study in Italy program. A study of various topics relating to the perception of Italy, the country, its people and their culture as seen by foreign and/or Italian writers. Course to be taught in English.

ITAL 311 Twentieth Century Texts.

(3) (Winter) (Given in Italian) A selection of narrative and theatrical works by 20th century authors, illustrating different facets of this century's social and literary experience.

ITAL 320 Manzoni: Novel and Nationhood.

(3) (Winter) (Given in Italian) (Prerequisite: ITAL 215D1/ITAL 215D2, ITAL 216, or equivalent) An analysis of the historical novel "I promessi sposi", by Alessandro Manzoni: its political, social and intellectual role in the evolution of Italy towards nationhood (Risorgimento).

●ITAL 325 Masterpieces of Italian Literature 1.

(3) (Fall) (Given in Italian) (Prerequisite: ITAL 215D1/ITAL 215D2, ITAL 216 or equivalent) A survey of Italian literature focused on the Middle Ages and the Renaissance. Interdisciplinary approach.

●ITAL 326 Masterpieces of Italian Literature 2.

(3) (Winter) (Given in Italian) (Prerequisite: ITAL 215D1/ITAL 215D2, ITAL 216, or equivalent) A survey of Italian literature from Renaissance to the 20th century. Interdisciplinary approach.

●ITAL 327 A Literary Map of Italy.

(3) (Winter) (Given in Italian) (Prerequisite: ITAL 215 or 216) An introduction to Italian literary and cultural history. Sicily, Florence, Rome, Naples, Venice and Milan, studied as centres of cultural innovation at critical moments from the late Middle Ages to the Enlightenment.

●ITAL 328 Contemporary Italy.

(3) (Fall) (Given in Italian) (Prerequisite: ITAL 215 or 216) A cultural studies approach to contemporary Italian society. Focus on distinctive traits of Italian popular culture through literature, film, television and other media.

ITAL 329 Contemporary Italian Cinema.

(3) (Fall) (Prerequisite: ITAL 210, 215 or ITAL 216.) (Note: Course taught in Italian.) Contemporary Italian films in original language. Films are examined from a wide historical and cultural perspective. Introduction to issues and preoccupations central to contemporary Italy and rooted in the Italian cultural tradition.

ITAL 330 Commedia Dell'Arte.

(3) (Fall) (Given in Italian) (Prerequisite: ITAL 215D1/ITAL 215D2, ITAL 216, or equivalent) Playhouses, actors, stage techniques, masks and scenarios of the "Commedia dell'Arte".

●ITAL 341 The Art of Essay Writing.

(3) (Winter) (Given in Italian) (Prerequisites: ITAL 300 or permission of the Department) Word formation in the Italian language. Syntactic and stylistic aspects of texts by Italian essayists.

ITAL 355 Dante and the Middle Ages.

(3) (Fall) (Given in English) An introduction to the work of Dante Alighieri, a pillar of medieval European literature. The times in which he lived, the institutions and cultural shifts of that era, the influence exercised by Dante's work, as well as how it has been perceived in our time.

(3) (Fall) Focuses on either a period, a current of thought or the work of a thinker in the history of Jewish thought from Antiquity to the Middle Ages, paying particular attention to the relationship of Jewish thinkers to intellectual trends in their respective cultural contexts. contemporary Muslim and Christian theologians and philosophers.

JWST 338 Jewish Philosophy and Thought 2.

(3) (Winter) Topic 2008-09: TBA. Focuses on either a period, a current of thought or the work of a thinker in the history of Jewish thought from the Middle Ages to Modern Times, paying particular attention to the relationship of Jewish thinkers to intellectual trends in their respective cultural contexts. themes and concerns of Jewish theology and on Jewish responses to contemporary trends in European thought.

JWST 340D1 (3), JWST 340D2 (3) Advanced Hebrew.

(Prerequisite: JWST 200 or JWST 320 or permission of the Hebrew Language Coordinator) (Students must register for both JWST 340D1 and JWST 340D2.) (No credit will be given for this course unless both JWST 340D1 and JWST 340D2 are successfully completed in consecutive terms)

JWST 345 Introduction to Rabbinic Literature.

(3) (All readings in English) An introduction to the study of Rabbinic texts.

● **JWST 348 Modern Jewish Studies.**

(3) Topics in Jewish Studies. Semesters will be devoted to specific issues and periods of the Jewish Experience since 1500 and the literature produced by Jews during this period.

JWST 349 Modern Jewish Studies.

(3) Topic 2008-09: The American Jewish Experience: An analysis of key issues of immigration and integration of Jews in American society as seen through the prisms of literature and history. The attempts to create new art forms in Yiddish and English to express these problems will be discussed. All literary texts will be in English. Topics in Jewish Studies. Semesters will be devoted to specific issues and periods of the Jewish Experience since 1500 and the literature produced by Jews during this period.

JWST 351 Studies in Modern Jewish Literature.

(3) (All texts will be read in English) Topic 2008-09: This course will look at representative texts covering the inter-war period (1919-1939) in Europe and America. The primary focus will be the Yiddish Novel in English translation. Historical and cultural sources will also be examined.

● **JWST 355 The Yiddish Canon.**

(3) (Prerequisite: Any literature course) This course will focus on the Classical Period (1860 - 1915) in Yiddish literature. We will be reading landmark texts in English translation.

JWST 356 Jewish Labour Movement/Eastern Europe.

(3) The development of the Jewish labor and socialist movement in Eastern Europe from the last quarter of the 19th century to the Bolshevik Revolution.

JWST 357 Jewish Labour Movement/North America.

(3) The development of the Jewish labor and socialist movement in North America from the last quarter of the 19th century to WW I.

● **JWST 358 Topics in Jewish Philosophy 1.**

(3) (All texts in English)

JWST 361 The Shtetl: 1500-1897.

(3) Using historical, sociological, literary and cultural sources, this course will examine various aspects of communal and individual life in the shtetl, the Jewish - or largely Jewish - town in Eastern Europe.

● **JWST 362 The Shtetl: 1897-1939.**

(3) (Recommended: JWST 361)

● **JWST 365 Modern Jewish Ideologies.**

(3) The rise and development of the various ideologies which attempt to define the Jews in historical, national and socio-cultural terms will be analyzed within the context of modern European nationalism. Selected texts of the Jewish Enlightenment, Science of Judaism, Peretz Smolenskin, Leon Pinsker, Simon Dubnow, Chaim Zhitlowsky and Ahad Ha-Am.

● **JWST 366 History of Zionism.**

(3) (Recommended: JWST 365) An examination of the development of the Zionist idea, the most influential expression of modern Jewish nationalism, which led to the creation of the Jewish state. The transformation of elements of traditional Jewish messianism into a modern political ideology. Hibbat Zion, Political Zionism, Cultural and Synthetic Zionism will be discussed.

● JWST 367 Studies in Hebrew Language and Literature.

(3) (Fall) To expand knowledge of grammar, and vocabulary and idioms in order to enhance reading comprehension and facility in writing and speaking. Of value to those interested in all aspects of Hebrew literature, classical and modern.

● JWST 368 Studies in Hebrew Language and Literature.

(3) (Winter) To expand knowledge of grammar, and vocabulary and idioms in order to enhance reading comprehension and facility in writing and speaking. Of value to those interested in all aspects of Hebrew literature, classical and modern.

JWST 369 Studies in Hebrew Language and Literature.

(3) (Fall) To expand knowledge of grammar, and vocabulary and idioms in order to enhance reading comprehension and facility in writing and speaking. Of value to those interested in all aspects of Hebrew literature, classical and modern.

JWST 370 Studies in Hebrew Language and Literature.

(3) (Winter) To expand knowledge of grammar, and vocabulary and idioms in order to enhance reading comprehension and facility in writing and speaking. Of value to those interested in all aspects of Hebrew literature, classical and modern.

● JWST 371D1 (3), JWST 371D2 (3) Jews and the Modern City.

(Students must register for both JWST 371D1 and JWST 371D2.) (No credit will be given for this course unless both JWST 371D1 and JWST 371D2 are successfully completed in consecutive terms) In the forefront of the development of modern society in Europe and North America, the Jews have shown a distinct preference for the metropolis. The influence of Vienna and New York on the socio-cultural development of the Jews and on the Jewish contribution to general culture. The contributions of Schnitzler, Freud, Herzl and the New York intellectuals.

● JWST 374 Talmud and Law 1: Bava Kamma.

(3) An introduction to Bava Kamma, in particular to Talmudic dialectic and interpretation; Talmudic law of torts; damages committed by one's self or one's property; negligence and absolute liability.

JWST 375 Talmud and Law 2: Bava Metzia.

(3) An introduction to Bava Metzia. Talmudic texts covering a wide range of subjects.

JWST 380D1 (3), JWST 380D2 (3) Intermediate Yiddish.

(Prerequisite: JWST 280 or permission of instructor) (Students must register for both JWST 380D1 and JWST 380D2.) (No credit will be given for this course unless both JWST 380D1 and JWST 380D2 are successfully completed in consecutive terms) Intermediate level of study of structures of standard Yiddish. Emphasis on reading, composition and conversation. Selected readings and visual materials to expand knowledge of Yiddish culture.

● JWST 383 Holocaust Literature.

(3) (Restriction: Not open to students who have taken this topic under JWST 381) Readings from Holocaust literature in English translation. Writers include Primo Levi, Aharon Appelfeld, Elie Wiesel, Dan Pagis, Paul Celan, Nelly Sachs, U.Z. Greenberg and others.

● JWST 387 Modern Jewish Authors.

(3) Introduction to representative novels written in America by Jews from the 1950s to the present. Issues of Jewish identity, ethnicity will inform our discussions. Focus on contemporary Jewish authors; consideration of the ways in which the complexities of American life are re-scripted in these novels.

● JWST 403 Contemporary Hebrew Literature.

(3) (Prerequisite: Proficiency in Hebrew.) Israeli literature in its original language with emphasis on in-depth literary analysis. Texts read in Hebrew; assignments may be written in English.

● JWST 445 The Poetry of Nationalism.

(3) An introduction to the work of various modern 'national poets' - i.e. poets closely linked to national movements who expressed (or constructed) a particular national identity and whose work has lasting artistic value. These will include Mickiewicz of Poland, Tagore of India, Yeats of Ireland, and Bialik of pre-state Israel.

● JWST 474 Maimonides' Mishneh Torah.

(3) Study of the Moses Maimonides' Mishneh Torah, including such subjects as idolatry, repentance, and sacrifices, to torts, contracts, and public law.

JWST 480 Advanced Yiddish 1.

(3) (Fall) (Prerequisite: JWST 380 or permission of the instructor) (Restriction: Not open to students who have taken JWST 480D1 and JWST 480D2) Development of advanced Yiddish language skills in conversation and discussion, composition, and oral presentation. Particular emphasis will be placed on the reading and paraphrasing of a variety of literary texts.

JWST 481 Advanced Yiddish 2.

(3) (Winter) (Prerequisite: JWST 380D1 and JWST 380D2; or permission of the instructor.) (Restriction: Not open to students who have taken JWST 480D1 and JWST 480D2) Additional development of advanced Yiddish language skills in conversation and discussion, composition, and oral presentation. Particular emphasis will be placed on the reading and paraphrasing of a variety of literary texts.

JWST 485 Tutorial in Yiddish Literature.

(3)

JWST 486 Tutorial in Yiddish Literature.

(3)

JWST 487 Tutorial in Yiddish Literature.

(3)

● JWST 488 Tutorial in Yiddish Literature.

(3)

JWST 491 Honours Thesis 1.

(3) (Restriction: Open only to Honours and Joint Honours students.) A tutorial for the preparation of an Honours Thesis.

JWST 492 Honours Thesis 2.

(3) (Restriction: Open only to Honours and Joint Honours Students.) A tutorial for the preparation of an Honours Thesis.

JWST 499 Internship: Jewish Studies.

(3) (Restriction: Open to U2 and U3 students pursuing a Majors or Honours program in Jewish Studies with a minimum CGPA of 2.7, and permission of the departmental Internship Advisor. This course will not normally fulfill program requirements for seminar or 400-level courses. A letter from a supervisor at the institution must attest to successful completion of the student's tenure.) Internship with an approved host institution or organization.

● JWST 502 Modern Israeli Literature.

(3) (Prerequisite: JWST 340 or permission of instructor) (Knowledge of Hebrew required) A review of the mastertexts of Israeli literature from the modern period.

JWST 510 Jewish Bible Interpretation 1.

(3) (Restriction: Not open to students who have taken JWST 512) The issues, approaches, and texts of Jewish Bible interpretation between the Biblical and talmudic eras: Bible interpretation in the Bible; in Greco-Roman Jewish literature; in the Mishnah, Tosefta, Targumim, and Talmudim; early Samaritan interpretation, Bible interpretation in ancient synagogue art, and in the massoretic literature.

Not all readings are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

* Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

JWST 511 Jewish Bible Interpretation 2.

(3) (Restriction: Not open to students who have taken JWST 512) The issues, problems, approaches, and texts of Jewish Bible interpretation in medieval, renaissance, early modern, and modern times. Interpretation in the Geonic, Ashkenazi, Sefardic, North African, Italian, European, Yemenite, North American and Israeli centres of Jewish Learning.

JWST 523 Ancient Bible Interpretation.

(3) Advanced level work in one aspect of Jewish Bible interpretation in ancient times.

● JWST 530 Topics in Yiddish Literature.

(3) Supervised research in Yiddish literature. Work will focus on one genre, literary school or author.

JWST 531 Topics in Yiddish Literature.

(3) Supervised research in Yiddish literature. Work will focus on one genre, literary school or author.

JWST 539 Biblical Interpretation 1.

(3) Close readings in one or more texts of early rabbinic Bible interpretation: Mishnah, Tosefta, Halakhic and Aggadic Midrashim, Talmud.

● JWST 548 Medieval Parshanut.

(3) Advanced level work in one aspect of Jewish Bible interpretation in medieval times.

JWST 551 20th Century Parshanut.

(3)

● JWST 552 Judaism and Poverty.

(3) (Prerequisite: One course in Jewish Studies, Sociology or Social Work.) An introduction to the subject of poverty in Jewish literature and its influence on religions such as Christianity and Islam, and on modern, secular ideologies, especially socialism, and creative literature.

JWST 558 Topics: Modern Jewish Thought.

(3) Topic 2008-09: The writings and thought of Rabbi Abraham Isaac Kook, the noted theologian, mystic, ideologist of religious Zionism, and communal leader.

JWST 562 Medieval Islamic and Jewish Philosophy.

(3) (Prerequisite: one course in Greek, Islamic or Jewish Philosophy, or permission of instructor.) Deals with the manifold points of contact between medieval Muslim and Jewish intellectual history. Muslim and Jewish philosophers, theologians and mystics belonged to the same currents of thought, used the same language and studied the same sources in translation, proposing similar answers to questions that arose in the context of their respective religious traditions.

● JWST 575 Topics in Parshanut.

(3) Advanced level work in one aspect of Jewish Bible Interpretation that cuts across all periods of Jewish Bible interpretation.

● JWST 576 Jewish Family Law.

(3) Study of the complex interaction between Jewish law and both Canadian and American law in the area of marriage and divorce.

JWST 581 Aramaic Language.

(3) (Requires Departmental approval) (Restriction: Not open to students who have taken JWST 506)

JWST 585 Tutorial: Eastern European Studies 1.

(3)

JWST 586 Tutorial: Eastern European Studies 2.

(3)

JWST 587 Tutorial in Yiddish Literature.

(3)

JWST 588 Tutorial in Yiddish Literature.

(3)

JWST 589 Tutorial in Jewish Literature.

(3) Supervised research in Modern Jewish history.

JWST 590 Tutorial in Jewish Literature.

(3) Supervised research in Modern Jewish history.

LACS-Latin American & Caribbean St

Offered by: Arts - Dean's Office

LACS 497 Research Seminar: Latin America and the Caribbean.

(3) (Restriction: Open to Program students and to others with permission of the Program Advise.) (Ordinarily offered in alternate years) An interdisciplinary research seminar on topics of common interest to staff and students of the Latin-American and Caribbean Studies Program.

LACS 498 Independent Research Project.

(3) (Prerequisite: LACS 497 and permission of the Program Adviser) This course is designed to allow students to pursue interdisciplinary research projects under close supervision.

LING-Linguistics

Offered by: Linguistics

LING 200 Introduction to the Study of Language.

(3) (Fall and Winter) (No prerequisite) General interest course; intended for students in all fields. Topics include: linguistic competence vs performance, language and the brain, language acquisition, sociolinguistics, historical linguistics, language universals, pragmatics.

LING 201 Introduction to Linguistics.

(3) (Fall and Winter) (No prerequisite.) (Note: This course is a prerequisite for all other courses in Linguistics except LING 200, LING 301 and LING 350) Primarily for students intending to take further courses in linguistics. Topics include: phonetics, phonology, morphology, syntax, and semantics. Students will be introduced to techniques of linguistic analysis.

● LING 301 Structure of English.

(3) (Winter) (Prerequisite: LING 200 or LING 201) (Students who have taken LING 371 are strongly encouraged not to take LING 301) A linguistic investigation of the grammar of Modern English, focusing on the structural characteristics of English sentence types, words and sounds.

LING 320 Sociolinguistics 1.

(3) (Winter) (Prerequisite: LING 201.) A survey of language in its social context. The main focus will be on the influence of social factors like age, gender, social class and speech style on linguistic variation and change. Contact amongst languages (e.g. in Montreal) and the birth and death of languages will also be discussed.

LING 330 Phonetics.

(3) (Winter) (Restriction: Not open to students who have taken LING 230.) Intensive training in the identification and production of speech sounds. Phonemic analysis. The investigation of how sounds function within a system.

LING 331 Phonology 1.

(3) (Fall) (Prerequisite: LING 330.) Introduction to phonological theory and analysis.

LING 350 Linguistic Aspects of Bilingualism.

(3) (Winter) (Prerequisite: LING 200 or LING 201) Linguistic competence and performance in bilinguals: the organization of the bilingual's grammar. Syntactic constraints on code mixing: How many grammars are involved? Unidirectional and bidirectional grammatical interference. Structural distance between genetically related and unrelated languages and its effect on the organization of the bilingual's grammar.

LING 355 Language Acquisition 1.

(3) (Fall) (Prerequisite: LING 201.) A critical study of the application of linguistic theory and description to first and second language learning. Topics include: the acquisition of sounds, syntax and word meanings; acquisition strategies; properties of the input; theories of first and second language acquisition.

LING 360 Introduction to Semantics.

(3) (Fall) (Restriction: Not open to students who have taken LING 370.) Introduction to the rudiments of semantics, focusing on those aspects of meaning that are invariant across contexts and the ways in which the meaning of a complex expression is determined by the meanings of its constituents.

LING 371 Syntax 1.

(3) (Winter) (Prerequisite: LING 201.) Introduction to the study of generative syntax of natural languages, emphasizing basic concepts and formalism: phrase structure rules, transformations, and conditions on rules.

LING 390 Neuroscience of Language.

(3) (Fall) (Prerequisite: An introductory course in Linguistics, Psychology or Neuroscience at the 200 level or above.) The neurobiological study of the human language faculty. Theoretical and experimental approaches to neurolinguistics, focusing on linguistic capacity in the healthy and damaged brain.

LING 410 Structure of a Specific Language 1.

(3) (Winter) (Prerequisites: LING 330 and LING 331 and LING 371, or permission of instructor.) Application and refinement of analytical methods in phonology, morphology, and syntax to phenomena from a specific language. One focus will be the identification of empirical generalizations which form the basis for the development of the theory. The language of study will vary from year to year.

★LING 415 Field Methods of Linguistics.

(3) (Winter) (Prerequisites: LING 330, LING 331 and LING 371.) Elicitation, recording and analysis of linguistic data under simulated field conditions; consideration of typical problems confronting the field analyst, preparation of a descriptive statement.

LING 417 Topics at the Interfaces 1.

(3) (Fall) (Prerequisites: LING 360 and LING 371 and permission of instructor.) Topics relevant to a linguistic interface, rotating between syntax/semantics interface and morphology/syntax interface.

●LING 418 Topics at the Interfaces 2.

(3) (Prerequisites: LING 331 and LING 371.) Topics relevant to a linguistic interface, rotating between phonology/syntax interface and morphology/phonology interface.

LING 419 Linguistic Theory.

(3) (Winter) (Prerequisites: Two of LING 331, LING 360, LING 371, LING 440.) This course looks at the nature and structure of linguistic theory.

●LING 425 Historical Linguistics.

(3) (Prerequisites: LING 330 and LING 320 or permission of instructor.) An examination of how languages change over time and the methods that allow us to study linguistic history. Topics include: types of language change (sound change, analogy, etc.) linguistic reconstruction, the origins of modern languages.

LING 440 Morphology.

(3) (Fall) (Prerequisite: LING 330 or LING 371, or permission of the instructor.) An introduction to the study of the internal structure of words. Topics will include the different ways words are formed in languages, how sound changes take place within words, how words are used in sentences.

●LING 451 Acquisition of Phonology.

(3) (Prerequisite: LING 331; a course in language acquisition highly recommended.) Exploration of the development of prosodic and segmental structure in children, with an emphasis on current theoretically-informed work in this area.

LING 455 Second Language Syntax.

(3) (Winter) (Prerequisite: LING 301 or LING 371.) The nature of the linguistic knowledge acquired by second language learners, focusing on description and explanation of second language syntax and morphology.

LING 480D1 (3), LING 480D2 (3) Honours Thesis.

(Students must register for both LING 480D1 and LING 480D2.) (No credit will be given for this course unless both LING 480D1 and LING 480D2 are successfully completed in consecutive terms) (LING 480D1 and LING 480D2 together

are equivalent to LING 480.) Honours thesis.

LING 480N1 (3), LING 480N2 (3)

(Students must also register for LING 480N2.) (No credit will be given for this course unless both LING 480N1 and LING 480N2 are successfully completed in the same calendar year.) Honours thesis.

LING 481D1 (1.5), LING 481D2 (1.5) Joint Honours Thesis.

(Students must register for both LING 481D1 and LING 481D2.) (No credit will be given for this course unless both LING 481D1 and LING 481D2 are successfully completed in consecutive terms) .

LING 483 Special Topics 1.

(3) (Fall or Winter) (Restriction: Permission of instructor.) Intensive study of a selected field or topic.

●LING 484 Special Topics 2.

(3) (Fall or Winter) (Restriction: Permission of instructor.) Intensive study of a selected field or topic.

●LING 485 Special Topics 3.

(3) (Prerequisite: LING 331 or LING 370 or LING 371 or permission of instructor.) Intensive study of a selected field or topic.

LING 488 Independent Study 1.

(3) (Fall or Winter) (Restriction: Permission of instructor.) Independent study of a selected field or topic.

LING 489 Independent Study 2.

(3) (Fall or Winter) (Restriction: Permission of instructor.) Independent study of a selected field or topic.

LING 499 Internship: Linguistics.

(3) (Restrictions: Limited to U-2 and U-3 students, with a minimum CGPA of 2.7, and permission of the department.) Internship with a host institution or organization.

★LING 520 Sociolinguistics 2.

(3) (Fall) (Prerequisite: LING 320 or permission of instructor.) A seminar on variationist "micro-sociolinguistics", including a survey of the most important primary literature on sociolinguistic variation and introduction to sociolinguistic fieldwork.

★ ● LING 521 Dialectology.

(3) (Fall) (Prerequisites: LING 330 and LING 320.) An introduction to the theory and methods of dialectology (the study of regional variation in language) with an emphasis on connections with linguistic theory. Students will also acquire a practical knowledge of major differences among dialects of English, and will gain hands-on experience in the planning, implementation and analysis of a dialect survey.

★ ● LING 531 Phonology 2.

(3) (Prerequisites: LING 331 and permission of instructor.) Exploration of current issues in phonology.

LING 555 Language Acquisition 2.

(3) (Winter) (Prerequisites: LING 355 and LING 371 and permission of instructor) A detailed overview of recent experimental work on first language acquisition of syntax within the principles and parameters framework, concentrating on both theoretical and methodological issues.

LING 560 Formal Methods in Linguistics.

(3) (Fall) (Prerequisites: LING 360 and permission of instructor.) (Restriction: Not open to students who have taken MATH 240.) This course presents the formal methods used in the study of language (namely, the theories of sets, relations, functions, partial orders, and lattices, as well as the principle of mathematical induction).

LING 565 Pragmatics.

(3) (Winter) (Prerequisites: LING 360 and PHIL 210 or permission of the instructor.) Study of the relationship between language and its contexts of use. Topics to be examined include deixis, presupposition and implicature.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

LING 571 Syntax 2.

(3) (Fall) (Prerequisite: LING 371) This course extends and refines the theory of grammar developed in LING 371, while introducing some primary literature and developments (in certain modules of the grammar such as phrase structure, wh-movement, and binding).

●LING 583 Special Topics 4.

(3) (Restriction: Not open to students who have taken LING 486) Intensive study of a selected field or topic.

LING 590 Language Acquisition and Breakdown.

(3) (Fall) (Prerequisites: LING 371 and either LING 355 or LING 390.) Theoretical and experimental perspectives on an imperfect language faculty, in the context of current linguistic theory and state-of-the-art experimental methods and techniques. Comparison of linguistic abilities of normally developing children, children with language disorders (e.g., SLI), and adults with disrupted linguistic abilities (e.g., aphasic patients).

MEST-Middle East Studies

Offered by: Arts - Dean's Office

MEST 496 Independent Reading and Research.

(3)

MUAR-Music-Arts Faculty

Offered by: Music Research

MUAR 201 Basic Materials: Western Music.

(3) (3 Hours) A combination of elementary theory and ear training (sightsinging and aural recognition), and basic piano skills. Topics include: notation of pitch and rhythm, intervals, scales and modes, concept of key, triads and seventh chords, introductory melody and accompaniment writing.

MUAR 202 Basic Materials: Western Music 2.

(3) (3 hours) (Prerequisite: MUAR 201 or permission of instructor) Integrated course in music theory with creative applications of acquired skills. Analysis and writing: concepts of melodic organization, elementary harmonic progressions, two-part contrapuntal techniques, fundamental formal procedures, examination of popular song and jazz. Development of individual skills: intermediate sightsinging, aural recognition, keyboard techniques, small group performance in class.

MUAR 211 The Art of Listening.

(3) (3 Hours) An introduction to the major forms and styles in Western music from the baroque to the present, with emphasis on guided listening in the classroom. The ability to read music is not a prerequisite.

●MUAR 260 Basic Materials of Jazz.

(3) Study of contemporary and traditional jazz improvisation. Exploration of harmonic framework of music from the jazz repertoire (melody, voice leading, traditional jazz writing). Characteristic sounds of predominant scales and modes and their potential uses. Common song forms and their harmonic devices.

MUAR 374 Special Topics in Music.

(3) (3 hours) A course whose topics will correspond to special historical events and their associated musical, political, and cultural contexts.

●MUAR 381 Music in Gothic and Renaissance Culture.

(3) In introduction to European music in late Medieval and Renaissance society: the Crusades, the age of Columbus, the Reformation, Shakespeare's England. Music in the daily lives of courtiers, clergy and commoners - music as courtly pastime, music for devotion in cathedrals, domestic music in towns and cities. Selected masterworks will be studied.

●MUAR 384 Romanticism and the Piano.

(3) (3 hours) (Prerequisite: MUAR 201 or MUAR 211 or permission of instructor) A survey of nineteenth-century European piano music: the piano virtuoso as cult figure, the social functions of the piano, women and the piano, and developing Romantic sensibilities as expressed in piano music throughout the century. Repertoire may include works by Beethoven, Chopin, Liszt, and Rachmaninoff, among others.

●MUAR 385 Music of the Avant-Garde.

(3) (3 hours) (Prerequisite: MUAR 201 or MUAR 211) Explorations into post-1945 sound environments; new timbres (Berio and Crumb); "technological" music (electronic and computer music); minimalism (Glass); new aesthetics (Cage); the World Soundscape Project (Schafer); global trends (cross-cultural influences); the New Romanticism; multi-media; protest music).

MUAR 387 The Opera.

(3) (3 hours) (Prerequisite: MUAR 201 or MUAR 211) A survey of opera from c.1600 to the present. Opera as ritual, opera as spectacle, opera as catharsis, opera as business, opera and its literary models. The continuing relevance of the operatic experience today.

MUAR 389 The Symphony and Concerto.

(3) (3 hours) (Prerequisite: MUAR 201 or MUAR 211) An historical overview of two major genres in the current concert repertoire: baroque foundations, the Viennese achievement, Beethoven's influence, visionaries and nationalists after 1850, cross-currents in the twentieth century.

MUAR 392 Popular Music after 1945.

(3) (3 hours) (Prerequisite: MUAR 201 or MUAR 211 or permission of instructor) An historical survey of major artists, genres, and styles in the most widespread traditions of postwar commercial music. The course will include practice in techniques of listening, discussion of the shaping institutions of commercial music, and consideration of the interaction of musical style and culture.

MUAR 393 Introduction to Jazz.

(3) (3 hours) (Prerequisite: MUAR 201 or MUAR 211 or permission of instructor.) (Restriction: Open only to non-Music majors) A survey of the development of jazz from its late 19th-century origins in America to the present day, with an introduction to musical concepts relevant to the genre and consideration of sociocultural issues.

●MUAR 399 Music and Queer Identity.

(3) (Prerequisite: MUAR 201 or MUAR 211 or permission of instructor.) (Restriction: Open only to non-music majors.) A survey of notable lesbian, gay, bisexual, transgender, queer composers and musicians in both art music and popular music, and an exploration of musical meaning from queer perspectives, covering topics such as coded expression, subcultural music-making, the value of mainstream visibility, and minority versus 'universal' aesthetics.

NAST-North American Studies

Offered by: Arts - Dean's Office

NAST 471 Topics in North American Studies 1.

(3) (See Adviser)

NAST 472 Topics in North American Studies 2.

(3)

NAST 499 Arts Internships: North American Studies.

(3) (Note: U-2 and U-3 students in good standing, normally after completing 30 credits of a 90-credit program or 45 credits of a 96-120 credit program, a minimum CGPA of 2.7, and permission from the departmental internship Adviser. This course will normally not fulfill program requirements for seminar or 400-level courses.) Internship with an approved host institution or organization.

PHIL-Philosophy

Offered by: Philosophy

PHIL 200 Introduction to Philosophy 1.

(3) (Philosophy students may use either PHIL 200 or PHIL 201 towards their program requirements, but not both. Students may, however, take both for credit (using the second as an elective), as the content in PHIL 201 does not overlap with PHIL 200) A course treating some of the central problems of philosophy: the mind-body problem, freedom, scepticism and certainty, fate, time, and the existence of God.

PHIL 201 Introduction to Philosophy 2.

(3) (Philosophy students may use either PHIL 200 or PHIL 201 towards their program requirements, but not both. Students may, however, take both for credit (using the second as an elective), as the content in PHIL 201 does not overlap with PHIL 200) An introduction to some of the major problems of philosophy. This course does not duplicate PHIL 200.

PHIL 210 Introduction to Deductive Logic 1.

(3) (Restriction: Not open to students who are taking or have taken MATH 318) An introduction to propositional and predicate logic; formalization of arguments, truth tables, systems of deduction, elementary metaresults, and related topics.

●PHIL 220 Introduction to History and Philosophy of Science 1.

(3) A survey of the rise of the scientific outlook from the ancient Greeks to the Scientific Revolution in the Seventeenth Century.

PHIL 221 Introduction to History and Philosophy of Science 2.

(3) A survey of the development of modern science since the Eighteenth Century.

PHIL 230 Introduction to Moral Philosophy 1.

(3) A survey of a number of historically important and influential theories. Philosophers to be discussed may include Aristotle, Hume, Kant, Bentham, Mill, and Moore.

PHIL 237 Contemporary Moral Issues.

(3) An introductory discussion of central ethical questions (the value of persons, or the relationship of rights and utilities, for example) through the investigation of currently disputed social and political issues. Specific issues to be discussed may include pornography and censorship, affirmative action, civil disobedience, punishment, abortion, and euthanasia.

PHIL 240 Political Philosophy 1.

(3) An introduction to contemporary philosophy of politics by concentrating on a number of contested concepts, such as freedom, justice and equality, in contemporary political philosophy and practice.

PHIL 242 Introduction to Feminist Theory.

(3) An introduction to feminist theory as political theory. Emphasis is placed on the plurality of analyses and proposals that constitute contemporary feminist thought. Some of the following are considered: liberal feminism, marxist and socialist feminism, radical feminism, postmodern feminism, francophone feminism, and the contributions to feminist theory by women of colour and lesbians.

PHIL 301 Philosophical Fundamentals.

(3) (Prerequisites: two previous courses in philosophy, one of which must be PHIL 210 or written consent of the Department) (Restriction: Open only to and required of Philosophy Honours and Joint Honours students) An intensive study of basic philosophical skills; reading, writing, analysis, and argumentation.

●PHIL 304 Chomsky.

(3) Philosophical aspects of Chomsky's contribution to psychology, linguistic theory, theories of human nature, and to politics.

PHIL 306 Philosophy of Mind.

(3) A survey of major positions of the mind-body problem, focusing on such questions as: Do we have minds and bodies? Can minds affect bodies? Is mind identical to body? If so, in what sense "identical"? Can physical bodies be conscious.

PHIL 310 Intermediate Logic.

(3) (Prerequisite: PHIL 210 or equivalent) A second course in Logic. NB. The course will be technical in nature, and some mathematical aptitude is essential. The emphasis is on the expressive properties of standard logical systems, including implications for the philosophy of mathematics. We will study

the Completeness of First-Order Logic, then the 'limitative' theorems of Tarski and Gödel.

PHIL 332 Philosophy of Religion 1.

(3)

PHIL 334 Ethics 1.

(3) (Prerequisite: one of PHIL 230, PHIL 237, PHIL 242, or written permission of the instructor) A course focusing on such central questions of ethical theory as: Why be moral? Are moral judgments subjective? On what is morality based? What is the nature of the good.

●PHIL 336 Aesthetics.

(3) An introduction to issues central to aesthetic theory; the nature of aesthetic judgment, perception of the aesthetic object, the nature of the art object.

PHIL 340 Philosophy of the Social Sciences 1.

(3) An introduction to foundational issues in the social sciences and to the broader implications of these issues for both philosophy and science. Topics to be discussed may include methodology in natural and social science, objectivity in the social sciences, and cultural relativism.

●PHIL 341 Philosophy of Science 1.

(3) A discussion of philosophical problems as they arise in the context of scientific practice and enquiry. Such issues as the philosophical presuppositions of the physical and social sciences, the nature of scientific method and its epistemological implications will be addressed.

PHIL 343 Biomedical Ethics.

(3) An investigation of ethical issues as they arise in the practice of medicine (informed consent, e.g.) or in the application of medical technology (in vitro fertilization, euthanasia, e.g.)

PHIL 345 Greek Political Theory.

(3) (Restriction: Not open to students who have taken POLI 333) An examination of the ethical and political theories of ancient Greece, especially those of Plato and Aristotle.

PHIL 348 Philosophy of Law 1.

(3) (Restriction: This course is intended for students with a non-professional interest in law, as well as for those considering law as a profession) A discussion of the nature of justice and law, and of the relationship between them.

PHIL 350 History and Philosophy of Ancient Science.

(3) Topics in ancient pure mathematics (geometry and number theory), "mixed mathematics" (astronomy, music theory, optics, mechanics), and/or natural science (including medicine), studied with a view to philosophical issues raised by the content of ancient science and/or by the logic of scientific argument.

PHIL 353 The Presocratic Philosophers.

(3) An examination of the surviving fragments of the presocratic philosophers and schools of philosophy, as well as later reports of their views.

PHIL 354 Plato.

(3) An examination of some of the philosophical problems (those in logic, epistemology, metaphysics, and ethics, e.g.) found in a selection of Plato's dialogues.

PHIL 355 Aristotle.

(3) An examination of selected works by Aristotle. The course considers issues in moral philosophy as well as those found in the logical treatises, the Physics and Metaphysics, and in the philosophy of mind.

PHIL 356 Early Medieval Philosophy.

(3) An examination of selected works in the Christian, Islamic and Jewish traditions. Topics in moral and political philosophy, logic and metaphysics, philosophical psychology and epistemology, philosophy of science, and philosophical theology may be discussed.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

PHIL 360 17th Century Philosophy.

(3) An examination of the work of such seventeenth-century philosophers as Descartes, Hobbes, Gassendi, Malebranche, Leibniz, and the Cambridge Platonists.

PHIL 361 18th Century Philosophy.

(3) A survey of eighteenth century philosophy, especially British philosophy. Attention is given to fundamental metaphysical, epistemological, and moral issues as reflected in the work of such philosophers as Locke, Shaftesbury, Berkeley, Hutcheson, Butler, Hume and Reid.

PHIL 366 18th and Early 19th Century German Philosophy.

(3) (Prerequisite: PHIL 360 or PHIL 361 is recommended) An examination of the works of such philosophers as Kant, Fichte, Jacobi, Schelling, and Hegel.

PHIL 367 19th Century Philosophy.

(3) (Prerequisite: A previous course in philosophy is recommended) An examination of the works of such 19th century philosophers as Mach, Helmholtz, Dedekind, Frege, Marx, Kierkegaard, Schopenhauer, Nietzsche, Mill and Bradley.

PHIL 370 Problems in Analytic Philosophy.

(3) An introduction to the central questions in the analytic tradition, through the works of important early figures in that tradition. Philosophers to be discussed may include: Frege, Russell, Wittgenstein, Ramsay, Carnap and the "logical positivists".

PHIL 375 Existentialism.

(3) (Prerequisite: one course in philosophy) This course will examine the nature of existentialist thought as represented in various philosophical and literary texts. Particular themes to be examined include freedom, alienation, responsibility and choice, and the nature of self.

PHIL 397 Tutorial 01.

(3) (Restriction: Open to second year Full Honours students in Philosophy and to other students, with consent of the Department)

PHIL 398 Tutorial 02.

(3) (Restriction: Open to second year Full Honours students in Philosophy and to other students, with consent of the Department)

●PHIL 410 Advanced Topics in Logic 1.

(3) (Prerequisite: PHIL 310 or equivalent) A course focusing on central results in logic that are of philosophical significance.

PHIL 411 Topics in Philosophy of Logic and Mathematics.

(3) (Prerequisites: PHIL 210 or the equivalent, and one intermediate course in philosophy) A course focusing on some philosophical issue (e.g., the nature of numbers or the relation of truth to provability) as it arises in the study of mathematics and logic.

PHIL 415 Philosophy of Language.

(3) (Prerequisites: PHIL 210 or equivalent and one intermediate course in philosophy) An examination of central notions in the philosophy of language (reference, meaning, and truth, e.g.), the puzzles these notions give rise to, and the relevance of these notions to such questions as: What is language? How is communication possible? What is understanding? Is language rule-governed.

PHIL 419 Epistemology.

(3) (Prerequisite: PHIL 210 or equivalent and one intermediate course in philosophy) A discussion of central topics in the theory of knowledge. The questions addressed in the course may include: What is knowledge? Do we have any knowledge? What is the relation between knowledge and belief? When is belief justified? Is all knowledge conscious knowledge.

PHIL 421 Metaphysics.

(3) (Prerequisites: PHIL 210 or equivalent and one intermediate course in philosophy) An examination of central questions in metaphysics in their historical and contemporary forms. Topics may be chosen from such issues as: personal identity, the nature of space and time, the nature of events and properties, possible worlds, and the problem of realism.

●PHIL 432 Philosophy of Religion 2.

(3)

PHIL 434 Ethics 2.

(3) (Prerequisite: PHIL 334 or written permission of the instructor) Advanced discussion of one or more themes in ethics. Topics will vary from year to year but may include such issues as the nature of rights and duties, moral realism and anti-realism, or the place of reason in morality.

PHIL 436 Aesthetics 2.

(3) (Prerequisite: PHIL 336 or written permission of the instructor) An advanced discussion of issues in aesthetics.

●PHIL 440 Philosophy of Social Sciences 2.

(3) (Prerequisite: PHIL 340 or written permission of the instructor) An advanced course on such topics as methodology of, or explanation, in the social sciences or models of rationality. Topics will vary from year to year.

●PHIL 441 Philosophy of Science 2.

(3) (Prerequisite: PHIL 341 or written permission of the instructor) An analysis of some key philosophical ideas in science and technology, e.g. problem, explanation, forecast, testability and truth.

PHIL 442 Topics in Feminist Theory.

(3) (Prerequisite: PHIL 242 and one intermediate course in philosophy) Advanced discussion of topical and central themes in feminist theory.

●PHIL 444 Early Modern Political Theory.

(3) (Prerequisite: at least one course in political philosophy) A survey of political and moral theory from the Reformation to the French Revolution including Luther, Montaigne, Descartes, Hobbes, Locke, Rousseau and Smith.

PHIL 445 19th Century Political Theory.

(3) (Prerequisite: at least one course in political philosophy) (Restriction: Not open to students who have taken POLI 434) An examination of various strands of political theory since Rousseau, concentrating on such themes as the understanding of modernity and theories of liberal society.

PHIL 450 Major Philosophers 1.

(3) (Prerequisite: one intermediate course in philosophy) This seminar will give detailed attention to the work of one philosopher or to a single philosophical theme addressed by several philosophers. Emphasis will be placed on understanding how the metaphysical, epistemological, and moral views of a figure or figures are internally related. Topic will vary from year to year.

PHIL 452 Later Greek Philosophy.

(3) (Prerequisite: PHIL 354 or PHIL 355) (Restriction: Not open to students who have taken POLI 351) An examination of some of the major post-Aristotelian schools of philosophy. Texts from the Peripatetic, Stoic, Epicurean, Sceptical, Platonic, and medical traditions may be considered. Problems in logic, ethics, physics, epistemology, and metaphysics will be addressed.

●PHIL 453 Ancient Metaphysics and Natural Philosophy.

(3) An examination of central themes of ancient metaphysics and/or natural philosophy as treated by two or more contrasting philosophers or philosophical traditions - probably including Plato and/or Aristotle, and possibly including some Hellenistic or post-Hellenistic schools.

PHIL 454 Ancient Moral Theory.

(3) An examination of central themes of ancient moral theory as treated by two or more contrasting philosophers or philosophical traditions - probably including Plato and/or Aristotle, and possibly some Hellenistic or post-Hellenistic schools.

PHIL 460 Major Philosophers 2.

(3) This seminar will give detailed attention to the work of one philosopher or to a single philosophical theme addressed by several philosophers. Emphasis will be placed on understanding how the metaphysical, epistemological, and moral views of a figure or figures are internally related.

PHIL 470 Topics in Contemporary Analytic Philosophy.

(3) (Prerequisite: PHIL 370, PHIL 415 or written permission of instructor) An advanced discussion of major themes in the analytic tradition.

PHIL 474 Phenomenology.

(3) (Prerequisite: one intermediate course in philosophy) A study of phenomenology from a historical and thematic perspective. The course will typically involve the study of

central thinkers such as Husserl, Heidegger, or Merleau-Ponty, with an examination of the nature and development of the phenomenological movement.

PHIL 475 Topics in Contemporary European Philosophy.

(3) (Prerequisite: one intermediate course in philosophy) Advanced discussion of selected themes in contemporary European philosophy.

● **PHIL 480 Topics in the History of Philosophy.**

(3) (Prerequisite: one intermediate course in philosophy) An advanced discussion of some theme and/or problem in the history of philosophy.

PHIL 481 Topics in Philosophy.

(3)

PHIL 497 Tutorial 04.

(3) Open to third year Full Honours students in Philosophy, and to other students, with consent of the Department.

● **PHIL 497N1 (1.5), PHIL 497N2 (1.5) Tutorial 04.**

(Students must also register for PHIL 497N2) (No credit will be given for this course unless both PHIL 497N1 and PHIL 497N2 are successfully completed in a twelve month period) (PHIL 497N1 and PHIL 497N2 together are equivalent to PHIL 497) Open to third year Full Honours students in Philosophy, and to students in Philosophy, and to Department.

PHIL 498 Tutorial 05.

(3) Open to third year Joint Honours students in Philosophy, and to other students, with consent of the Department.

● **PHIL 498N1 (1.5), PHIL 498N2 (1.5) Tutorial 05.**

(Students must also register for PHIL 498N2) (No credit will be given for this course unless both PHIL 498N1 and PHIL 498N2 are successfully completed in a twelve month period) (PHIL 498N1 and PHIL 498N2 together are equivalent to PHIL 498) Open to third year Joint Honours students in Philosophy, and to other students, with consent of the Department.

● **PHIL 499 Tutorial 06.**

(6) Open to third year Full Honours students in Philosophy, and to other students, with consent of the Department.

PHIL 499D1 (3), PHIL 499D2 (3) Tutorial 06.

(Students must register for both PHIL 499D1 and PHIL 499D2.) (No credit will be given for this course unless both PHIL 499D1 and PHIL 499D2 are successfully completed in consecutive terms) (PHIL 499D1 and PHIL 499D2 together are equivalent to PHIL 499) Open to third year Full Honours students in Philosophy, and to other students, with consent of the Department.

PHIL 499N1 (3), PHIL 499N2 (3) Tutorial 06.

(Students must also register for PHIL 499N2) (No credit will be given for this course unless both PHIL 499N1 and PHIL 499N2 are successfully completed in a twelve month period) (PHIL 499N1 and PHIL 499N2 together are equivalent to PHIL 499) Open to third year Full Honours students in Philosophy, and to other students, with consent of the Department.

PHIL 506 Seminar: Philosophy of Mind.

(3) (Prerequisite: PHIL 306.) (Restriction: Open only to students as indicated above and to Cognitive Science Minors) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department.) An advanced course devoted to specific topics in the philosophy of mind.

● **PHIL 507 Seminar: Cognitive Science.**

(3) (Prerequisites: PHIL 306, PHIL 415 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors,

Honours and Joint Honours students, except by written permission of the Department) An advanced discussion of a topic of philosophical interest arising from contemporary empirical work in cognitive science.

PHIL 511 Seminar: Philosophy of Logic and Mathematics.

(3) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department)

● **PHIL 515 Seminar: Philosophy of Language.**

(3) (Prerequisite: PHIL 415 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course devoted to a topic in the philosophy of language.

● **PHIL 519 Seminar: Epistemology.**

(3) (Prerequisite: PHIL 420 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course devoted to a topic in the theory of knowledge. Subject varies from year to year.

PHIL 521 Seminar: Metaphysics.

(3) (Prerequisite: PHIL 421 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course devoted to a topic in metaphysics.

PHIL 534 Seminar: Ethics.

(3) (Prerequisite: PHIL 334 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department)

PHIL 536 Seminar: Aesthetics.

(3) (Prerequisite: PHIL 336 or PHIL 436 or permission of the instructor.) (Restriction: Open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department.) An advanced course devoted to a specific topic in the area of aesthetics and/or the philosophy of art.

PHIL 540 Seminar: Philosophy and Social Sciences.

(3)

PHIL 541 Seminar: Philosophy of Science.

(3) (Prerequisite: PHIL 441 or other requirements specified by the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course devoted to a topic in the philosophy of science.

PHIL 543 Seminar: Medical Ethics.

(3) (Prerequisite: PHIL 343 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course devoted to a particular philosophical problem as it arises in the context of medical practice or the application of medical technology.

PHIL 544 Political Theory.

(3) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department)

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

PHIL 548 Seminar: Philosophy of Law.

(3) (Prerequisite: PHIL 348 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course devoted to a particular topic in the philosophy of law. Subject varies from year to year.

PHIL 550 Seminar: Ancient Philosophy 1.

(3)

●**PHIL 551 Seminar: Ancient Philosophy 2.**

(3) (Prerequisite: at least one course in ancient philosophy and the specific requirements of individual instructors)

(Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course on a philosopher or philosophical issue articulated in antiquity.

PHIL 556 Seminar: Medieval Philosophy.

(3) (Prerequisite: PHIL 345 or PHIL 357 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course devoted to a particular topic in medieval philosophy. Subject varies from year to year.

●**PHIL 561 Seminar: 18th Century Philosophy.**

(3) (Prerequisite: PHIL 361 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course on an eighteenth-century philosopher or philosophical issue.

PHIL 567 Seminar: 19th Century Philosophy.

(3) (Prerequisite: PHIL 366 or PHIL 367 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course on 19th-century philosophy or philosophical issue.

PHIL 570 Seminar: Contemporary Analytic Philosophy.

(3) (Prerequisite: PHIL 370 or PHIL 415 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course on some major analytic philosopher, or some issue of central importance in the analytic tradition. Subject varies from year to year.

PHIL 575 Seminar: Contemporary European Philosophy.

(3) (Prerequisite: PHIL 475 or written permission of the instructor) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) An advanced course on contemporary European philosophy or some important issue in the Continental tradition.

●**PHIL 580 Seminar: Problems of Philosophy 1.**

(3) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department)

●**PHIL 581 Seminar: Problems of Philosophy.**

(3) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department)

●**PHIL 590 Seminar: Special Topics in Philosophy.**

(3) (Prerequisites: one course in philosophy) (Restriction: Seminars are open only to graduate students and final year Philosophy Majors, Honours and Joint Honours students, except by written permission of the Department) Psychoanalysis: a critical examination. Depending on the interests of the class, areas covered would include: psychoanalytic epistemology, psychoanalysis and the pre-socratics, psychoanalysis and tragedy, reasons versus causes in psychoanalysis, hermeneutics, psychoanalytic truth, self-deception, irrationality, paradox, creativity, internal object world and its relation to external objects.

PHWR-Philosophy & Western Religions

Offered by: Arts - Dean's Office

PHWR 300 Philosophy & Western Religions 1.

(3) (Restrictions: Open to students in Philosophy & Western Religions, Islamic Studies, Jewish Studies, Philosophy, Religious Studies, and to students of other units with permission of the instructor.) Introduction to the encounter between philosophy and the Abrahamic religions, Judaism, Christianity, and Islam, from Antiquity to the 12th Century, covering the philosophical sources (Plato to Neoplatonism), the religious sources (Bible to Qu'ran), and their manifold syntheses in the thought of theologians, philosophers and mystics within the three religious traditions.

●**PHWR 301 Philosophy & Western Religions 2.**

(3) (Prerequisite: PHWR 300 or permission of the instructor.) (Restrictions: Open to students in Philosophy & Western Religions, Islamic Studies, Jewish Studies, Philosophy, Religious Studies, and to students of other units with permission of the instructor.) Introduction to the encounter between philosophy and the three Abrahamic religions, Judaism, Christianity, and Islam, from the 13th Century to the Enlightenment, covering the manifold syntheses of philosophical and religious ideas in thinkers from the Later Middle Ages, the Renaissance, the 17th Century and the Enlightenment.

PHWR 400 Joint Honours/Honours Tutorial.

(3) (Restrictions: Open to Joint Honours and Honours students in Philosophy & Western Religions in their final year.) Guided reading and research for Joint Honours and Honours students in their final year.

PHWR 401 Honours Thesis Tutorial 1.

(3) (Restrictions: Open to Honours students in Philosophy & Western Religions in their final year.) Initial guided reading and research for Honours students in their final year.

PHWR 402 Honours Thesis Tutorial 2.

(3) (Prerequisite: PHWR 401) (Restrictions: Open to Honours students in Philosophy & Western Religions in their final year.) Final guided reading and research for Honours students in their final year.

●**PHWR 500D1 (1.5), PHWR 500D2 (1.5) Interdisciplinary Seminar.**

(Prerequisite: PHWR 300 or permission of an advisor.) (Restrictions: Open to Major, Joint Honours and Honours students in Philosophy & Western Religions in their final year, as well as students of related units with permission of an advisor.) (Students must register for both PHWR 500D1 and PHWR 500D2.) (No credit will be given for this course unless both PHWR 500D1 and PHWR 500D2 are successfully completed in consecutive terms) Advanced undergraduate students and faculty members and graduate students conducting research in relevant areas of the academic field will discuss a specific topic (e.g. Platonism, Aristotelianism, Renaissance, Mysticism, God, Prophecy, Exegesis etc.) in an interdisciplinary perspective.

POLI-Political Science

Offered by: Political Science

●**POLI 211 Comparative Government and Politics.**

(3) (Fall) (Note: The area in the field of Comparative Politics is Developed Areas.) Introduction to the study of comparative politics as it applies both to the developed world and developing countries. The course presents the basic concepts and approaches used in the field of comparative politics and it focuses on patterns of similarity and difference in a way political institutions and processes are structured in a wide variety of national contexts.

POLI 212 Government and Politics - Developed World.

(3) (Note: The area in the field of Comparative Politics is Developed Areas.) The nature of politics in a few selected nations of the industrialized world, applying the concepts introduced in POLI 211 to specific national contexts. Countries studied will be drawn principally from Europe and North America.

POLI 221 Government of Canada.

(3) (Fall) (Note: The field is Canadian Politics.) An examination of the central governmental institutions, including parliament, federalism, and the judiciary.

POLI 222 Political Process and Behaviour in Canada.

(3) (Winter) (Note: The field is Canadian Politics.) An introduction to contemporary political life in Canada that examines how demands are identified and transmitted through the political systems. Emphasis will be placed on: the Canadian political culture; socialization and political participation; the electoral system; elections and voting; the role and structure of political parties; and the influence of organized interest.

POLI 226 La vie politique québécoise.

(3) (Restriction: An ability to understand and read French is required; writing and speaking ability are not.) (This course is offered in English and French in alternate years. For 2008-09 it will be offered in French) (Note: The field is Canadian Politics.) Une introduction à la vie politique québécoise à travers l'étude des institutions, des idéologies et des comportements politiques. Une attention particulière sera accordée à la structure et aux changements dans le système politique québécoise.

POLI 227 Developing Areas/Introduction.

(3) (Note: The area in the field of Comparative Politics is Developing Areas.) An introduction to Third World politics. A comparative examination of the legacies of colonialism, the achievement of independence, and contemporary dynamics of political and socio-economic development in Africa, Asia and Latin America. Topics include modernization, dependency, state-building and national integration, revolution, the role of the military, and democratization.

POLI 231 Introduction to Political Theory.

(3) (Note: The field is Political Theory.) The course introduces students to political theory through critical examination of classic texts in the history of political thought. In addition to gaining an understanding of several different traditions of political thought, students are encouraged to develop their skills in textual interpretation, critical reasoning, and essay-writing.

POLI 232 Modern Political Thought.

(3) (Note: The field is Political Theory.) The course introduces students to modern political thought through a critical examination of some of the key political ideologies and concepts of contemporary political discourse. Themes vary from year to year, and may include liberalism, conservatism, socialism, feminism, democracy, power, justice, and freedom.

POLI 243 International Politics of Economic Relations.

(3) (Winter) (Note: The field is International Politics.) An introduction to international relations, through examples drawn from international political economy. The emphasis will be on the politics of trade and international monetary relations.

POLI 244 International Politics: State Behaviour.

(3) (Note: The field is International Politics.) Offers a comprehensive introduction to the behaviour of nation states. Explores how states make foreign policy decisions and what motivates their behaviour. Other covered topics include the military and economic dimensions of state behaviour, conflict, cooperation, interdependence, integration, globalisation, and change in the international system.

●POLI 300D1 (3), POLI 300D2 (3) Developing Areas/Revolution.

(Prerequisite: A basic course in Comparative Politics or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developing Areas.) (Students must register for both POLI 300D1 and POLI 300D2.) (No credit will be given for this course unless both POLI 300D1 and

POLI 300D2 are successfully completed in consecutive terms) The post WW II revolutionary process in the third world. Attention to the nature of the revolutionary process in the struggle for national liberation both where this approach succeeded and failed. Examples drawn from Asia, Africa and Latin America. Students will be required to do a thorough case study.

POLI 311 Techniques of Empirical Research.

(3) An introduction to empirical political research. Among the topics considered are the formulation of research problems, the selection of samples, interviewing, questionnaire construction, and the analysis and interpretation of data.

●POLI 315 Approaches to Political Economy.

(3) (Prerequisite: POLI 211 or POLI 212 and one preferably university-level economics course) (Note: The area in the field of Comparative Politics is Developed Areas.) Influential traditions in political economy. Focus on how these attempted to integrate the economic and political. Application of economic analysis to social and political phenomena ("social choice"). Recent efforts to combine the deductive logic of economics with comparative empirical analysis of actors in different institutional settings. Extension to the international political economy.

●POLI 318 Comparative Local Government.

(3) (Prerequisite: POLI 211 or POLI 212 or written permission of instructor) (Note: The area in the field of Comparative Politics is Developed Areas; also in the field of Canadian Politics.) An examination of the organization and conduct of local government in Canada, the United States, and selected European countries. Attention to theories of local government, the criteria for comparative analysis, the provision of public goods and bads, urban political patterns and the constitution of new institutional arrangements to deal with "urban crises" in North America.

POLI 319 Politics of Latin America.

(3) (Prerequisite: A basic course in Comparative Politics or a course on the region or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developing Areas.) This course will deal with the dynamics of political change in Latin America today.

●POLI 320 Issues in Canadian Democracy.

(3) (Prerequisite: At least one other course in Canadian or Comparative Government and Politics or permission of instructor) (Note: The field is Canadian Politics.) Critical analysis of selected issues and debates in Canadian politics, including citizen participation, electoral system effects, party financing, office-seeking, approaches to representation, and direct democracy and non-party alternatives. Topics are examined from both the perspective of the general population and the specific experience of women and ethno-racial minorities.

●POLI 321 Issues: Canadian Public Policy.

(3) (Prerequisite: at least one other course in Canadian or Comparative Politics) (Note: The field is Canadian Politics.) The Canadian political process through an analysis of critical policy issues in community development, welfare state, education, and institutional reforms in public service delivery systems. Diagnostic and prescriptive interpretations of public choices in a federal-parliamentary regime.

POLI 322 Political Change in South Asia.

(3) (Prerequisite: A basic course in Comparative Politics or a course on the region or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developing Areas.) Political change in South Asia in late colonial and post-colonial periods. Issues covered include social and cultural history; colonial rule, nationalism and state formation; democratic and authoritarian tendencies; economic policies and consequences; challenges to patterns of

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

dominance and national boundaries; prospects for democracy, prosperity and equality.

●POLI 323 Developing Areas/China and Japan.

(3) (Winter) (Prerequisite: A basic course in Comparative Politics or a course on the region or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developing Areas.) A survey of traditional and modern political society in China and Japan. Special emphasis is placed on governmental policy and institutions in relation to ideology in the Peoples' Republic of China and post-1945 Japan.

POLI 324 Developing Areas/Africa.

(3) (Prerequisite: A basic course in Comparative Politics or a course on the region or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developing Areas.) The government and politics of African states south of the Sahara with reference to the ideological and institutional setting as influenced by the forces of tradition and the impact of Western colonialism.

POLI 325D1 (3), POLI 325D2 (3) Government and Politics: United States.

(Prerequisite: POLI 211 or POLI 212 or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developed Areas.) (Students must register for both POLI 325D1 and POLI 325D2.) (No credit will be given for this course unless both POLI 325D1 and POLI 325D2 are successfully completed in consecutive terms) A survey of the American political system, with emphasis on the constitutional and philosophical setting, the institutions and their interactions, the political process, public policy issues, and political change.

POLI 326 Provincial Politics.

(3) (Prerequisite: A basic course in Canadian Government or Politics or permission of the instructor) (Note: The field is Canadian Politics.) The effect of regional and provincial culture on the operation of political parties and the institutions of government; the effect of institutional modernization on provincial governments; the role of provincial sub-systems within the Canadian political system.

POLI 328 Modern Politics in Western Europe.

(3) (Prerequisites: POLI 211 or POLI 212, or POLI 227) (Note: The area in the field of Comparative Politics is Developed Areas.) This course seeks an understanding of the similarities and differences between the political systems of contemporary Western Europe by examining the different ways in which these systems have taken shape over time. The political development of Western Europe will be conceptualized as a series of critical phases beginning with the formation of the modern dynastic state in the 15th Century and concluding with the "postwar settlement" of the late 1940s.

POLI 329 Russian and Soviet Politics.

(3) (Prerequisite: POLI 211, POLI 212, or written consent of instructor; Soviet history helpful but not required) (Note: The area in the field of Comparative Politics is Developed Areas.) This course explores the institutions of the Soviet system and pressures to reform this system. Examines specific changes made to the system through democratization and market reform. Compares these changes to similar transitions in other countries to assess possible twists in Russian's political future.

POLI 330 Law and Courts in Europe.

(3) (Prerequisite: POLI 211 or POLI 212) (Restrictions: Not open to students who have taken POLI 339 in 2006-2007 or 2007-2008) students who have taken POLI 339 in 2006-07 or 2007-08 may not take POLI 330 Judicial politics in continental Europe, including theoretical accounts of the rule of law, judicial independence, power, and accountability, and the judicialization of politics. Empirical examples will be drawn from both Western and Eastern Europe countries, as well as the constitutional and the ordinary judiciaries.

POLI 333 Western Political Theory 1.

(3) (Prerequisite: POLI 231 or POLI 232 or PHIL 240 or at least two political science courses at the 300 level; or permission of the instructor) (Note: The field is Political Theory.) The major themes and writers in the political theory of classical antiquity. The political ideas of Thucydides, Plato,

Aristotle, and the Hellenistic philosophers will be explored through the significant texts of this period.

POLI 334 Western Political Theory 2.

(3) (Prerequisite: POLI 333 or written permission of the instructor. POLI 333 should be taken before this course) (Note: The field is Political Theory.) Medieval and renaissance political philosophy, from Saint Augustine to Sir Thomas More. Scholastic and neo-scholastic political thought, natural law and natural rights, as well as civic and northern humanism, republicanism and liberty. Twentieth century work on similar concepts will be used.

POLI 336 Le Québec et le Canada.

(3) (Restrictions: An ability to understand and read French is required; writing and speaking ability are not. Not open to students who have taken QCST 336.) (Note: The field is Canadian Politics.) Comment les Canadiens anglais et les Québécois se perçoivent-ils? Les différences culturelles entre les deux groupes. Les relations politiques et économiques entre les deux groupes. L'impact de la Révolution Tranquille. La place des francophones et des anglophones dans la vie collective. Les projets de réaménagement du cadre politique.

●POLI 337 Canadian Public Administration.

(3) (Prerequisite: at least one other course in Canadian government or politics) (Note: The field is Canadian Politics.) Organization and practice of public administration at the federal provincial and local level in Canada. Contrasting theories/techniques of public administration and policy, organization of field offices for delivery of essential public services, governments as employers, and institutional and policy changes to resolve crisis inherent in "the paradoxical view of bureaucracy".

●POLI 339 Comparative Developed: Topics 1.

(3) (Prerequisite: a basic course in Comparative Politics or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developed Areas.) Selected aspects of politics in developed countries.

POLI 340 Developing Areas/Middle East.

(3) (Prerequisite: A basic course in Comparative Politics or a course on the region or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developing Areas.) An examination of the societies, political forces and regimes of selected countries of the Eastern Arab world (Egypt, Syria, Lebanon, Jordan, Palestine, Saudi Arabia).

POLI 341 Foreign Policy: The Middle East.

(3) (Prerequisite: A 200- or 300- level course in International Relations or Middle East politics or permission of the instructor) (Note: The field is International Politics.) An examination of the changing regional security environment and the evolving foreign policies and relationships of Arab states in three areas - relations with non-Arab regional powers (Israel, Iran), inter-Arab relations, Great Power relations. The course will focus particularly on Egypt, Syria, Iraq and Saudi Arabia.

POLI 342 Canadian Foreign Policy.

(3) (Prerequisite: A basic course in Canadian Government and Politics or International Politics or written consent of instructor) (Note: The fields are International Politics and Canadian Politics.) The development and articulation of Canadian foreign policy. Theoretical approaches. The environmental setting. Historical perspectives. Trans-Atlantic linkages. The American connection. The Common Market. The United Nations. Military security. Developing relations with Asia, Africa, Latin America. Canada in global society.

POLI 344 Foreign Policy: Europe.

(3) (Prerequisite: A basic course in International or European Politics or written consent of instructor. POLI 346 would be a helpful preparation for this course) (Note: The field is International Politics.) An examination of the evolution of the European system since 1945.

POLI 345 International Organizations.

(3) (Prerequisite: A basic course in International Politics or written consent of instructor) (Note: The field is International Politics.) Examination of significant organizations in world politics such as the United Nations, the European Union, and the World Trade Organization.

POLI 346 American Foreign Policy.

(3) (Prerequisite: POLI 244 or a course in American history) (Note: The field is International Politics.) An exploration of American foreign policy from 1945 to the present. Topics to be addressed are the origins of the Cold War, deterrence, strategy and arms control, American intervention in Latin America and Vietnam, U.S. policy in the Post Cold War era - Gulf War, Haiti, Somalia, Yugoslavia and relations with Japan.

POLI 347 Arab-Israel Conflict, Crisis, Peace.

(3) (Prerequisite: 160-243 prior to 1997-98; or POLI 244) (Note: The field is International Politics.) Concepts - protracted conflict, crisis, war, peace; system, subsystem; Conflict-levels of analysis; historical context; images and issues; attitudes, policies, role of major powers; Crises-Wars - configuration of power; crisis models; decision-making in 1956, 1967, 1973, 1982 crisis-wars; conflict- crisis management; Peace-Making - pre-1977; Egypt-Israel peace treaty; Madrid, Oslo, Israel-Jordan peace; prospects for conflict resolution.

POLI 349 Foreign Policy-Asia Pacific.

(3) (Prerequisites: Poli 243 or 244, or permission of the instructor.) (Note: The field is International Politics.) A study of the international relations of the Asia Pacific region, including China, Korea, Japan, and Southeast Asia, as well as Australia and New Zealand. Focuses on security and economic issues, foreign policy, and regional institutions.

POLI 351 The Causes of Major Wars.

(3) (Prerequisite: Poli 243, Poli 244 or permission of the instructor.) (Note: The field is International Politics.) Examination of the competing theoretical explanations for major wars; application of the theories to the outbreak of World War I.

POLI 354 Approaches to International Political Economy.

(3) (Prerequisite: A basic course in International Relations and an introductory course in Macro Economics) (Note: The field is International Politics.) The course presents theoretical approaches to understanding change in the international political economy.

POLI 357 Politics: Contemporary Europe.

(3) (Prerequisite: POLI 212 or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developed Areas.) An examination of political institutions and processes in today's Europe, concentrating on the member-states of the European Union and on the Union itself. The course is organized thematically rather than on a country-by-country basis.

●POLI 359 Topics in International Politics 1.

(3) (Prerequisites: A basic course in International Relations) (Note: The field is International Politics.) A specific problem area in International Relations.

POLI 360 Security: War and Peace.

(3) (Prerequisite: A basic course in International Relations or written permission of the instructor) (Note: The field is International Politics.) Focuses on international security and strategies of war and peace in historical and comparative frameworks. Topics include case studies of 20th century wars, conventional and nuclear strategy, and various approaches to peace.

POLI 361 Political Participation in Comparative Perspective.

(3) (Prerequisite: POLI 211 or POLI 212.) (Note: The area in the field of Comparative Politics is Developed Areas.) Exploration of how citizens engage in politics. Theories and examples of current forms of political participation and mobilization will be introduced, including voting, party membership, transnational movements, political consumerism, culture jamming and internet activism. Examples are drawn from Europe and North America and sometimes from the developing

world.

POLI 362 Political Theory and International Relations.

(3) (Prerequisites: A 200 or 300-level course in political theory, and POLI 243 or POLI 244) (Note: The fields are International Politics and Political Theory.) Key contributions of political theory to the study and practice of international relations. Three prevailing theoretical traditions will be examined: realism, 'international society', and cosmopolitanism. Key practical issues to be explored from these perspectives include war, humanitarian intervention, economic globalization, environment, and gender.

●POLI 363 Contemporary Political Theory.

(3) (Prerequisite: A 200 or 300 level course in political theory) (Note: The field is Political Theory.) This course explores fundamental currents of thought in political philosophy. Topics will vary from year to year, and may include issues such as classical liberalism and its opponents, the foundations of socialism and Marxism, rational choice theory and its critics.

POLI 364 Radical Political Thought.

(3) (Prerequisite: A 200- or 300-level course in political theory) Radical themes in contemporary political thought and action.

POLI 365 Democratic Theory.

(3) (Prerequisite: Prerequisite: A 200- or 300-level course in political theory) (Note: The field is Political Theory.) A series of lectures and seminars on democratic theory.

POLI 366 Topics in Political Theory 1.

(3) (Prerequisites: A 200- or 300-level course in political theory) (Note: The field is Political Theory.) A specific problem area in Political Theory.

POLI 367 Liberal Political Theory.

(3) (Prerequisite: POLI 231, 232 or POLI 333) The development of liberal political thought and theories of justice, including a selection of authors from: Locke, Montesquieu, Smith, Constant, Kant, Mill, Tocqueville, Berlin, Hayek, Rawls, Nozick, Walzer, and Kymlicka, as well as some of their critics.

POLI 369 Politics of Southeast Asia.

(3) (Prerequisite: 200 level course in comparative politics (POLI 211, POLI 212, or POLI 227).) Topics covered include: colonialism, nationalism, democracy, authoritarianism, war, economic development, social development, overseas Chinese, ethnicity, religion, populism, and international relations, as they apply to Southeast Asian politics.

●POLI 371 Challenge of Canadian Federalism.

(3) (Prerequisite: at least one course in Canadian politics) (Note: The field is Canadian Politics.) An analysis of the origins, evolution and nature of federalism in Canada. Topics and themes will include the impact of federalism on political institutions, the effect of different regional perspectives, and the issues and conflicts that currently confront Canadian federalism.

POLI 372 Aboriginal Politics in Canada.

(3) (Prerequisite: At least one course in Canadian politics such as, POLI 221 or POLI 222 OR Permission of the instructor.) (Restriction: Not open to students who have taken POLI 372 prior to W06.) The relationship of aboriginal politics to larger debates and literatures within political science, such as citizenship theory, federalism, and collective action. Subjects covered include Canada's treaty history, constitutional changes, and aboriginal political development.

POLI 378 The Canadian Judicial Process.

(3) (Fall) (Prerequisite: POLI 221 or POLI 222 or permission of the instructor) (Restriction: Not open to students who took 160-379 (1990-91) or 160-427 (1989-90)) (Note: The field is Canadian Politics.) An examination of the structure of

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

the judiciary and its role in the Canadian political process. Topics include the nature of judicial power and its constitutional framework in Canada, the structure and function of courts, judicial recruitment and personnel, judicial policy-making and the political role of the Supreme Court under the Charter of Rights and Freedoms.

● **POLI 379 Topics in Canadian Politics.**

(3) (Prerequisite: A basic course in Canadian Government and Politics) (Note: The field is Canadian Politics.) Topics in Canadian politics.

● **POLI 410 Canadian Political Parties.**

(3) (Prerequisite: At least one other course in Canadian Politics) (Note: The field is Canadian Politics.) This course examines Canadian political parties and party systems, stressing patterns of historical development, party organization and finance, relationships with social movement, and the impact of Canadian federalism.

● **POLI 411 Immigration and Multiculturalism in Canada.**

(3) (Prerequisite: at least one course in Canadian politics, preferably at the 300 or 400 level, or permission of the instructor) (Note: The field is Canadian Politics.) An examination of various aspects of Canadian politics that stems from the country's experience with immigration and ethnic and racial diversity.

POLI 412 Canadian Voting/Public Opinion.

(3) (Prerequisite: at least one course in Canadian politics, preferably at the 300 or 400 level, or permission of the instructor) (Note: The field is Canadian Politics.) A critical examination of major debates within the literature on Canadian voting behaviour and public opinion.

● **POLI 414 Society and Politics in Italy.**

(3) (Prerequisite: a basic course in Comparative Politics and preferably an upper level course or written permission of the Instructor) (Note: The area in the field of Comparative Politics is Developed Areas.) Analysis of modern Italian political development in comparison to other Western and Mediterranean countries. What makes Italian politics unique, what makes it resemble that of other countries.

POLI 417 Health Care in Canada.

(3) (Prerequisites: POLI 221 or POLI 221) (Note: The field is Canadian Politics.) This course analyzes the theory and politics of health policy and institutions, comparing provincial models and contextualizing Canadian systems with international perspectives from the U.S. and Europe. Current health reform debates will be explored, particularly those involving federal-provincial relations, sustainable financing and the role of the state in social protection.

POLI 419 Transitions from Communism.

(3) (Prerequisites: A previous History or Political Science course on the USSR, or Eastern Europe after WW II, or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developed Areas.) Selected problems facing the Post-Soviet world. Themes include: new political institutions, parties, and groups; economic reform; social problems; ideological changes; the rise of ethnonationalism; linkages with the West.

POLI 423 Politics of Ethno-Nationalism.

(3) (Prerequisites: one 300 or 400-level course in comparative politics; and one 300 or 400-level course on developing areas (any discipline.) The same course can fulfill both requirements) (Note: The area in the field of Comparative Politics is Developing Areas.) Theories of ethno-nationalism examined in light of experience in Asia, Middle East and Africa. Topics include formation and mobilization of national, ethnic and religious identities in colonial and post-colonial societies; impact of ethno-nationalism on pluralism, democracy, class and gender relations; means to preserve tolerance in multicultural societies.

● **POLI 424 Media and Politics.**

(3) (Prerequisites: POLI 211 or POLI 212; and at least 3 credits in Political Science at the 300 level) (Note: The area in the field of Comparative Politics is Developed Areas; also in the field of Canadian Politics.) The role of media in domestic and international politics, with reference to recent studies in political science. Themes in the study of mass media and

politics in developed democracies.

● **POLI 425 Topics in American Politics.**

(3) (Prerequisite: POLI 325) (Note: The area in the field of Comparative Politics is Developed Areas.) This course involves a detailed analysis of a limited area of American politics and government.

● **POLI 427 Selected Topics: Canadian Politics.**

(3) (Prerequisite: A basic course and preferably an upper level course as well in Canadian Government and Politics or permission of the instructor) (Note: The field is Canadian Politics.) Selected problem areas in Canada's political process, political culture, constitutional development, and machinery of government.

POLI 431 Nations and States/Developed World.

(3) (Prerequisite: POLI 211 or POLI 212 or POLI 328) (Note: The area in the field of Comparative Politics is Developed Areas.) The role of nationalism in European and North American political development. Topics include: nationalism and state-formation, secession and sub-state nationalism, war and nationalism, federal and consociational arrangements in multi-national societies.

● **POLI 432 Selected Topics: Comparative Politics.**

(3) (Note: The field is Comparative Politics in Developed Areas.)

POLI 433 History of Political/Social Theory 3.

(3) (Prerequisite: POL1 231 or 232 or 333 or 334 or written permission) (Note: The field is Political Theory) Early modern political philosophy, from Luther to Rousseau and Burke. Resistance theories of the 16th century, Hobbes and Locke, the Enlightenment and the French Revolution. Twentieth century work on concepts developed in this period such as rights, revolution, legitimacy, democracy, authority and liberty.

POLI 434 History of Political/Social Theory 4.

(3) (Prerequisite: POL1 433) (Note: The field is Political Theory.) A consideration of selected writers and themes of late 19th and 20th century political theory. Writers include Hegel, Clausewitz, Marx, Mill, Nietzsche, Lenin, Rowis, Foucault, and Habermas. The rise of industrial society, scientism, the romantic revolt, revolutionary movements, socialism and liberal-democracy.

● **POLI 435 Identity and Inequality.**

(3) (Prerequisite: 300 level course in comparative politics or related social science course.) Inequality is often particularly durable between groups whose boundaries are based on assumed ancestry - e.g., the major ethnic categories in former European settler colonies, castes in South Asia. This course explores ongoing changes in the relationship between identity and social, economic and political inequality in some of these contexts.

POLI 437 Politics in Israel.

(3) (Prerequisite: POLI 211 or POLI 212. Recommended JWST 366) (Note: The area in the field of Comparative Politics is Developed Areas.) An analysis of the nature and development of the Israeli political system, including historical background, Zionist ideology, the electoral system, the political parties, the institutions of government, constitutional issues, and religion and politics. The relationship between domestic politics and foreign policy will also be explored.

● **POLI 438 British Politics.**

(3)

POLI 440 Civil-Military Relations.

(3) (Prerequisites: POLI 244 or permission of instructor.) Civil-military relations is a key component of any society's political system. This course considers both domestic issues of political stability, such as the threat of coups d'état, as well as international ones, such as the use of force.

POLI 441 IPE: Trade.

(3) (Prerequisites: POLI 243 or permission of the instructor.) (Note: The field is International Politics.) Politics of international trade, such as the international rules governing trade in goods, the functioning of international bodies such as the WTO, and the domestic sources of these international policies.

●POLI 442 International Relations of Ethnic Conflict.

(3) (Prerequisite: POLI 244 or permission of instructor)
Issues related to the internationalization of ethnic conflict, including diasporas, contagion and demonstration effects, intervention, irredentism, the use of sanctions and force. Combination of theory and the study of contemporary cases.

●POLI 444 Topics in International Politics 2.

(3) (Prerequisite: An upper level course in International Politics or written permission of the instructor) (Note: The field is International Politics.) A specific problem area in International Politics.

●POLI 445 International Political Economy: Monetary Relations.

(3) (Prerequisites: Poli 243 or permission of the instructor.) (Note: The field is International Politics.) Advanced course in international political economy; the politics of international of monetary relations, such as international rules governing international finance, the reasons for and consequences of financial flows, and the functioning of international financial bodies such as the IMF and World Bank.

●POLI 450 Peacebuilding.

(3) (Prerequisites: previous courses in comparative politics/developing areas and international relations. Internet research skills are strongly recommended) (Note: The area in the field of Comparative Politics is Developing Areas; also in the field of International Politics.) An examination of transitions from civil war to peace, and the role of external actors (international organizations, bilateral donors, non-governmental organizations) in support of such transitions. Topics will include the dilemmas of humanitarian relief, peacekeeping operations, refugees, the demobilization of ex-combatants, transitional elections, and the politics of socio-economic reconstruction.

●POLI 451 The European Union.

(3) (Prerequisite: one course each in International Relations and Comparative Politics) (Note: The area in the field of Comparative Politics is Developed Areas; also in the field of International Politics.) The emergence of the EU and its innovative institutions and policies will be studied through lectures, discussions, and a simulation (of a European Council or Parliament session). Emphasis upon current debates about the EU's developing identity, its internal political economy, its institutions of 'multilevel' governance, and its external relation.

POLI 459 Topics in Political Theory 2.

(3) (Prerequisite: A 300- or 400-level course in political theory) (Note: The field is Political Theory.) This course will deal with a specific problem area in Political theory.

●POLI 469 Politics of Regulation.

(3) (Prerequisite: POLI 221 or POLI 222 and at least one 300-level course or above in Canadian politics, or permission of instructor) (Note: The field is Canadian Politics.) Issues arising from the use of regulation as a governing instrument including origins of regulation, costs and benefits, political accountability and regulatory change including deregulation. Issues will be explored through examination of broadcasting and telecommunications regulation and their convergence in the "Information Highway".

●POLI 473 Democracy and the Market.

(3) (Prerequisite: A course in Comparative Politics or written permission of the instructor) (Note: The area in the field of Comparative Politics is Developing Areas.) The course examines the relationship between economic and political change by focusing on dual processes of economic reform and democratization. The inter-play of societal, state-level and international actors, and the possible trade-offs involved, are explored using examples from Latin America, the former Soviet

bloc, and other developing areas.

POLI 474 Inequality and Development.

(3) (Prerequisite: A basic course in Comparative Politics or a course on the region or written permission of the instructor.) (Note: The area in the field of Comparative Politics is Developing Areas.) The political structures and social forces underlying poverty and inequality in the developing world; the historical roots of inequality in different regions, varying manifestations of inequality (class, region, ethnicity, gender), and selected contemporary problems.

POLI 475 Social Capital in Comparative Perspective.

(3) (Prerequisite: POLI 211 or POLI 212.) (Note: The area in the field of Comparative Politics is Developed Areas.) Social capital as an important societal resource that helps to overcome collective action and development problems. Introduction to the roots of the concept of social capital, and discussion on how and why this resource influences the political and economic life of countries, regions, cities and individuals.

POLI 478 The Canadian Constitution.

(3) (Winter) (Prerequisites: POLI 378 or an upper level course in Canadian Politics or permission of the instructor) (Restriction: Not open to students who took 160-427 in 1989-90 or 1991) (Note: The field is Canadian Politics.) An examination of legislative and judicial protection of rights and liberties in Canada. Topics to be covered include civil rights and the division of powers; the implied bill of rights theory; the 1960 Bill of Rights; establishment and enforcement of human rights legislation; and the Charter of Rights and Freedoms.

POLI 490 Independent Reading and Research 1.

(3) Final year Honours students wishing to pursue a specialized interest will be allowed to undertake a program of independent reading and/or research in that area under the supervision of a member of staff. Such programs may be undertaken by students either individually or in small groups. It is the responsibility of the student to obtain the instructor's consent prior to registration.

POLI 499 Honours Essay.

(3) (Fall and Winter) (Restriction: Open to Honours students only) Regular meetings between students and professors, the writing of a well researched essay and its oral defense. The essay should demonstrate some experience with primary sources, the ability to explore various theoretical perspectives as well as to organize and present a set of arguments in a systematic and thorough manner.

POLI 521 Seminar: Canadian Politics and Government.

(3) (Restriction: Open to graduate students, final year Honours students, and other advanced undergraduates with the permission of the instructor) (Prerequisite: At least one 300 or 400-level course in Canadian Politics) (Note: The field is Canadian Politics.) Topic For 2008-09: Identity and Canadian Democracy Selected problems of Canadian socio-economic and political structures; political culture; constitutional development, and governmental structure.

POLI 522 Seminar: Developing Areas.

(3) (Prerequisite: At least one upper level course in the politics of developing areas) (Note: The area in the field of Comparative Politics is Developing Areas.) (Restriction: Open to graduate students, final year honours students, and other advanced undergraduates with permission of instructor; (Note: The field is Comparative Politics in Developing Areas.)) Topic: THEORIES OF THE STATE State-society relations in the developing world through historical, comparative, and analytical perspectives, focusing on: (1) theories and concepts of the state; (2) state capacity and incapacity; (3) state formation.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

The major project will ordinarily consist of a major research paper, plus a substantial written record of the work conducted during the internship.

QCST-Quebec Studies

Offered by: Arts - Dean's Office

QCST 300 Études sur le Québec.

(3)

●QCST 336 Quebec Studies Summer Seminar.

(6) (Prerequisite: Intermediate level placement test required or permission of the instructor.) (Restrictions: Designed for non-Quebec and non-francophone students. Intermediate proficiency in French is required. Placement test is required. Enrolment is limited to 25 students. Not open to students who have taken FRSL 326 or QCST 300.) This intensive course, mainly in French, introduces non-Quebec students to Quebec and Montreal's history and culture. Special emphasis on French-language skills. Students attend lectures and seminars by instructors and invited experts. Weekend cultural activities will reinforce course themes.

QCST 440 Aspects du Québec contemporain/Aspects of Contemp. Quebec.

(3) (Cours obligatoire pour tous les étudiants(es) en Études sur le Québec. Également accessible aux étudiants(es) qui ont une connaissance de base de la société et culture québécoises, avec la permission du professeur) (Required course for all students in Quebec Studies. Open also to U2 and U3 students who have a basic knowledge of Quebec society) (Instruction, discussions, oral presentations and papers can be in French or English) L'enseignement, les discussions, les exposés et les travaux peuvent se faire en français et en anglais. Le thème du séminaire change à chaque année, mais porte toujours sur une facette de la société québécoise moderne. Cours interdisciplinaire, on y étudie différents aspects: historique, sociologique, économique, politique, culturel, etc. An interdisciplinary approach from a political science angle is comparing the topic's various dimensions: historical, sociological, economical, political, cultural, etc. This seminar has a different topic each year it is given, but all topics are directly related to some important problems or phenomena in modern Quebec politics and society.

QCST 472D1 (3), QCST 472D2 (3) Tutorial/Travaux dirigés.

(Obligatoire pour les étudiants(es) inscrit(e)s au concentration majeur en Études sur le Québec.) (Required for U3 students in completing a Major Concentration in Quebec Studies.) (Students must register for both QCST 472D1 and QCST 472D2.) (No credit will be given for this course unless both QCST 472D1 and QCST 472D2 are successfully completed in consecutive terms) Sous la direction du Directeur du Programme d'études sur le Québec ou d'un professeur, l'étudiant(e) choisit un sujet sur lequel il (elle) travaille pendant une année et rédige un essai d'une cinquantaine de pages. Under the supervision of either the Director of Quebec Studies Program or a professor, the student chooses a topic on which she/he works for a year and then submits an essay of approximately 50 pages.

RUSS-Russian

Offered by: Russian & Slavic Studies

RUSS 210 Elementary Russian Language 1.

(3) (Fall) Reading, grammar, translation, oral practice.

RUSS 211 Elementary Russian Language 2.

(3) (Winter) (Prerequisite: RUSS 210 or equivalent) Russian Language; continuation of RUSS 210.

RUSS 215 Elementary Russian Language Intensive 1.

(6) (Fall) (Restriction: Departmental approval required) (Restriction: Not open to students who are taking or have taken RUSS 210, RUSS 211 or equivalent) An intensive introduction to the Russian language which covers the first year of the normal level, i.e. RUSS 210/RUSS 211 in one semester. The basic grammatical structures are covered.

●RUSS 217 Russia's Eternal Questions.

(3) (Winter) (Given in English) (Restriction: Permission of the instructor) Exploration of cultural archetypes defining continuity and change from Peter the Great to the present; the Russian national identity, double-faith, Western and Slavophile influences, Mother Russia, superfluous men and the Eternal Feminine, anarchism, the avant-garde, Stalinism. Recurring themes traced in literature, art, film, music, pop culture and the applied arts.

(3) (Fall) (Prerequisite: None, but some background in Russian 20C history is helpful) (Given in English) The Russian twentieth-century literary dynamic up to the watershed of Stalin's death (1953). Carving out cultural territory against ideological polemics, revolutionary versus traditional values, the explosion of avant-garde experimentation under mounting critical conformism as reflected in major works and authors (Mayakovsky, Babel, Bulgakov, Platonov and others).

RUSS 219 Russian Literature in Recovery.

(3) (Winter) (Prerequisite: None, but some background in Russian 20C history is helpful) (Given in English) Rediscovering the Russian literary heritage, both traditional and avant-garde, after Stalin's death (1953). The Thaw, Soviet beatniks, Solzhenitsyn-style dissidents against cultural iconoclasts, the challenge and decline of perestroika, raising the literary Iron Curtain to include women writers, emigres, Western influence and the angst of pluralism.

RUSS 223 Russian Writers - 19th Century.

(3) (Fall) (Given in English) Designed for students interested in Russian literature and its authors. A broad overview acquainting them with the main Russian literary currents of the 19th century and with the lives and destinies of its writers.

RUSS 224 From War to Revolution.

(3) (Winter) (Given in English) Russian literature from the Crimean War (1856) to the revolutions of 1917. The classical novel through Symbolism to the end of the Empire. Literature in an age of uncertainty. There will be an examination of the works of Tolstoy, Dostoevsky, Chekhov, Bely, Gorky and other selected authors.

●RUSS 255D1 (3), RUSS 255D2 (3) Introduction to Polish.

(Fall, Winter) (Students must register for both RUSS 255D1 and RUSS 255D2.) (No credit will be given for this course unless both RUSS 255D1 and RUSS 255D2 are successfully completed in consecutive terms) An introduction to the study of Polish with emphasis on basic Polish grammar, conversation,

reading and writing. Please consult Department prior to registration.

RUSS 300 Russian for Heritage Speakers 1.

(3) (Fall) (Prerequisite: Permission of the Department) (Restriction: Not open to students who have taken RUSS 210, RUSS 211, RUSS 215, RUSS 310, RUSS 311 and RUSS 316.) (Given in Russian) For native speakers of Russian who have not had full academic instruction in the language. Focus on grammatical structure and syntax, the formalities of written Russian and appreciation of the language's stylistic diversity. Multi-media approach including excerpts from literary works, current newspapers, television news broadcasts, films and cartoons.

RUSS 301 Russian for Heritage Speakers 2.

(3) (Winter) (Given in Russian) (Prerequisites: RUSS 300 or permission of the instructor) (Restrictions: Not open to students who have taken Russ 210,211,215,310,311 and 316) For native speakers of Russian who have not had full academic instruction in the language. Focus on complex grammatical structures, syntax, and stylistically differentiated uses of vocabulary in written and spoken Russian. Multi-media approach including excerpts from literary works, current newspapers, Internet sources, and films.

RUSS 310 Intermediate Russian Language 1.

(3) (Fall) (Prerequisite: RUSS 210 and RUSS 211 or equivalent) (Restriction: Not open to students who are taking RUSS 316) Reading, translation, conversation.

RUSS 311 Intermediate Russian Language 2.

(3) (Winter) (Prerequisite: RUSS 310 or equivalent) (Restriction: Not open to students who are taking or have taken RUSS 316) Reading, translation, conversation.

RUSS 316 Intermediate Russian Language Intensive 2.

(6) (Winter) (Prerequisite: RUSS 215 or equivalent) (Restriction: Requires departmental approval) (Restriction: Not open to students who have taken RUSS 310, RUSS 311 or are taking RUSS 311) Continuing the Intensive program of RUSS 215 this course covers the second year of the normal level, i.e. RUSS 310/RUSS 311, in one semester. The basic grammatical structures are covered.

RUSS 327 Outlines 19th Century Russian Literature: Romantic Period.

(3) (Fall) (Prerequisite: RUSS 215 or equivalent, or permission of the Department. The) (The course will be conducted to some extent in Russian) A general introduction to Russian prose, poetry and drama in the 19th Century. Selected texts will be read in the original and discussed.

RUSS 328 Outlines 19th Century Russian Literature: Russian Realism.

(3) (Winter) (Prerequisite: RUSS 327 or permission of the Department.) (The course will be conducted to some extent in Russian) A general introduction to Russian prose, poetry and drama in the 19th Century. Selected texts will be read in the original and discussed.

RUSS 330 Introduction to Soviet Russian Literature before WWII.

(3) (Fall) (Prerequisite: RUSS 215 or equivalent, or permission of the Department) (The course will be given mainly in Russian) Selected texts will be read in the original and discussed.

RUSS 331 Introduction to Soviet Russian Literature after WWII.

(3) (Winter) (Prerequisite: RUSS 330 or equivalent.) (The course will be given mainly in Russian) Selected texts will be read in the original and discussed.

RUSS 385 Russian Drama.

(3) (Winter) (Prerequisite: Permission of the Department) (Restriction: Not open to students who have taken Russ 410,411) Pushkin and Chekhov. Masterpieces of the Russian stage in the

nineteenth and twentieth centuries; the emergence of a uniquely Russian dramatic sensitivity against prevailing European trends; the literary word in a public, political and/or avantgarde forum.

RUSS 390 Special Topics in Russian.

(3) (Fall) Exploration of a significant author, trend, theme or theory in modern Russian culture, including but not limited to the interface between literary works, the graphic and performing arts, ideology and national identity.

RUSS 400 Advanced Russian Language 1.

(3) (Fall) (Prerequisite: RUSS 310 and RUSS 311 or equivalent or permission of the Department) (Given in Russian) Advanced practical Russian grammar and composition. May include reading a variety of texts and media from classical to contemporary (literature, newspapers, TV, film, etc.).

RUSS 401 Advanced Russian Language 2.

(3) (Winter) (Prerequisite: RUSS 400 or equivalent) (Given in Russian) Advanced practical Russian grammar and composition. May include reading a variety of texts and media from classical to contemporary (literature, newspapers, TV, film, etc.).

RUSS 415 Advanced Russian Language Intensive 1.

(6) (Fall) (Prerequisite: RUSS 215/RUSS 316 or RUSS 310/RUSS 311) (Requires departmental approval) Continuing the Intensive program of RUSS 215 and RUSS 316, students will complete their study of the fundamental structure of modern literary Russian, including the morphology and syntax of the nominal and verbal systems.

RUSS 416 Advanced Russian Language Intensive 2.

(6) (Winter) (Prerequisite: RUSS 415) (Requires departmental approval) Continuing the Intensive program of RUSS 215/RUSS 316, students will complete their study of the fundamental structure of modern literary Russian, including the morphology and syntax of the nominal and verbal systems. Besides developing an oral facility in the language, this course introduces the student to the study of literature by analysing literary texts of prerevolutionary and Soviet Russia to see the use and verbal systems, syntax, stylistic levels, historical changes.

●RUSS 450 Reading the 20th Century.

(3) (Fall) (Prerequisite: Permission of instructor) (Restriction: Not open to students who have taken RUSS 451) (Given in Russian) A century of upheaval; the tug of war between iconoclasts (the avantgarde, the dissidents, the postmodernists) and the traditionalists (neo-realism, socialist realism). Major trends, polemics, authors and milestones; literature as the fulcrum of change and the conscience of the age.

RUSS 452 Advanced Russian Language and Syntax 1.

(3) (Fall) (Prerequisite: RUSS 415 and RUSS 416 or equivalent or permission of the Department) Prose composition, translation, essay writing. An introduction to Russian stylistics.

RUSS 453 Advanced Russian Language and Syntax 2.

(3) (Winter) (Prerequisite: RUSS 452 or equivalent) Prose composition, translation, essay writing. An introduction to Russian stylistics.

●RUSS 455 History of Modern Russian Language.

(3) (Fall) (Prerequisite: Permission of instructor) (Note open to students who have taken RUSS 456) (Course given principally in Russian) An examination of the structure of modern Russian using a historical, comparative approach.

RUSS 458 Development Russian Novel before Turgenev.

(3) (Fall) (Prerequisite: RUSS 415 and RUSS 416 or equivalent or permission of the Department) (Given in Russian) The development of the Russian novel before Turgenev. Reading texts will be chosen from the prose works of Karamzin, Bestuzhev, Pushkin, Lermontov, and Gogol.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

(3) (Winter) (Prerequisite: RUSS 458 or equivalent) (Conducted in Russian) The development of the Russian novel from Pushkin to Gogol. Reading texts will be chosen from the prose works of Pushkin and Gogol.

●RUSS 460 Russian Novel 1860-1900 1.

(3) (Fall) (Given mainly in Russian) (Prerequisite: RUSS 452 and RUSS 453 or equivalent or permission of the Department) The Golden Age of the novel in Russian Literature. The major works of Turgenev and Dostoevsky will be read in the original.

●RUSS 461 Russian Novel 1860-1900 2.

(3) (Winter) (Given mainly in Russian) (Prerequisite: RUSS 460) The Golden Age of the novel in Russian literature. The major works of Tolstoy will be read in the original.

●RUSS 465 Russian Modernism 1.

(3) (Fall) (Prerequisite: Permission of the Department) (Given mainly in Russian) Russian poetry, prose, drama, the essay and other media from the Silver Age to WWI, from Chekhov to Blok and Belyi. The crisis of realism, decadence, symbolism, and its waning traced through the eternal feminine, the devil, the city, poetry as pure creation, and millennial crisis.

●RUSS 466 Russian Modernism 2.

(3) (Winter) (Prerequisite: Permission of the Department) (Given mainly in Russian) Russian poetry, prose, drama, the manifesto and other media from WW1 to 1930. The avantgarde responds to revolution. Acmeism, futurism, and other movements modelled and transcended in the works of Khlebnikov, Akhmatova, Pasternak, Mandel'shtam, Tsvetaeva, Maiakovskii, Platonov, Kharms, Bulgakov and others. Agitprop, utopianism and total art.

RUSS 468 The Age of Pushkin.

(3) (Winter) (Prerequisite: RUSS 315 and 316 or equivalent or permission of the instructor) (Restriction: Not open to students who have taken RUSS 469) Examination of the major trends and concerns of the first third of the nineteenth century; the flowering of poetry and prose inspired by Pushkin and his contemporaries.

RUSS 470 Individual Reading Course.

(3) (Fall) (Prerequisite: Permission of instructor) Supervised reading under the direction of a member of staff.

RUSS 471 Independent Research.

(3) (Winter) (Prerequisite: Permission of instructor) Supervised research under the direction of a member of staff.

RUSS 475 Special Topics in Russ Culture.

(3) (Winter) (Prerequisite: Permission of instructor) Dissident Thought. Examination of a significant author, trend, theme or theory in modern Russian culture, including but not limited to the interface between literary works, the graphic and performing arts, ideology and national identity.

RUSS 490 Honours Seminar 01.

(3) (Fall) (Prerequisite: Permission of the Department) (Restriction: Honours or Joint Honours in Russian and Slavic Studies) This course is intended to allow students to bring together their knowledge of the general area of Russian & Slavic Studies and produce a synthesis appropriate to their level of development. The major exercise will consist of the writing of a research paper displaying their competence.

RUSS 491 Honours Seminar 02.

(3) (Winter) (Prerequisite: RUSS 490) This course is intended to allow students to bring together their knowledge of the general area of Russian & Slavic Studies and produce a synthesis appropriate to their level of development. The major exercise will consist of the writing of a research paper displaying their competence.

RUSS 499 Internship: Russian and Slavic Studies.

(3) (Fall or Winter) (Prerequisite: Permission of the departmental Internship Advisor.) (Restriction: Open to U2 and U3 students after completing 30 credits of a 90 credit degree program or 45 credits of a 69-120 credit program, a minimum CGPA of 2.7, and permission of the departmental Internship Advisor. This course will not normally fulfill program requirements for seminar or 400-level courses.) Internship with an approved host institution or organization.

●RUSS 500 Special Topics.

(3) (Given in English) (Prerequisite: Permission of Department) Focus on a critical theme, author or work, as determined by the current research interests of faculty and visiting faculty.

●RUSS 510 High Stalinist Culture.

(3) (Winter) (Prerequisite: Permission of instructor) (Given in English) Novels, films, art, architecture, pageantry, rhetoric and routine of the Stalinist 1930s-40s, including socialist realism as an aesthetic doctrine, utopian blueprint, target of parody, amalgam of a submerged avantgarde and state-controlled pop culture, precursor of the postmodernist simulacrum, self-proclaimed international style and/or uniquely Russian 20th-century project.

●RUSS 585 Woman in Russian Culture.

(3) Representation of and the discourse on woman by women in Russian literature and cultural thought from medieval times to the present. Topics include the age of Empresses, the salon, Decembrist wives; the Eternal Feminine, fallen woman, new woman, the rise of women's prose in post-Soviet Russia.

SDST-Sexual Diversity Studies

Offered by: Arts - Dean's Office

SDST 250 Introduction: Sexual Diversity Studies.

(3) A general introduction to the study of sexual and gender diversity and sexuality from a range of perspectives and across a variety of disciplines.

SDST 450 Independent Reading & Research.

(3) (Prerequisite: SDST 250.) (Restriction: Program students in Sexual Diversity Studies. Program and advisor approval required.) Advanced reading course and independent research project under the supervision of an instructor on aspects of Sexual Diversity Studies.

SOCI-Sociology

Offered by: Sociology

SOCI 210 Sociological Perspectives.

(3) Major theoretical perspectives and research methods in sociology. The linkages of theory and method in various substantive areas including: the family, community and urban life, religion, ethnicity, occupations and stratification, education, and social change.

SOCI 211 Sociological Inquiry.

(3) (Prerequisite or Corequisite: SOCI 210) An introductory review of methods of sociological research including research design, elementary quantitative data analysis, observation, and use of official statistics. Detailed examination of published examples of the use of each of the major techniques of data analysis and collection.

●SOCI 219 Sociology of Culture.

(3) A survey of theoretical approaches and substantive topics in the culture. Topics include: norms and values in national cultures; negotiation of cross-cultural interpersonal exchanges; structural codes and cultural classifications; production constraints on cultural objects; the differential reception of cultural products.

SOCI 222 Urban Sociology.

(3) Comparative analysis of the process of urbanization in Europe, North America and the Third World; effects of urbanization upon social institutions and individuals; theories of urbanization and urbanism; the Canadian urban system; urban problems in comparative view.

●SOCI 225 Medicine and Health in Modern Society.

(3) Socio-medical problems and ways in which sociological analysis and research are being used to understand and deal with them. Canadian and Québec problems include: poverty and health; mental illness; aging; death and dying; professionalism; health service organization.

SOCI 230 Sociology of Ethnic Relations.

(3) (Prerequisite: SOCI 210 or permission of instructor) An introduction to the sociological study of minority groups in Canada. The course will explore the themes of racism, prejudice, and discrimination, ethnic and racial inequalities, cultural identities, multiculturalism, immigration. Theoretical,

empirical, and policy issues will be discussed. While the focus will be primarily on Canada, comparisons will be made with the United States.

SOCI 234 Population and Society.

(3) Introduction to the reciprocal linkages in the social world between population size, structure and dynamics on the one hand, social structure, action and change on the other. An examination of population processes and their relation to the social world.

SOCI 235 Technology and Society.

(3) An examination of the extent to which technological developments impose constraints on ways of arranging social relationships in bureaucratic organizations and in the wider society: the compatibility of current social structures with the effective utilization of technology.

SOCI 247 Family and Modern Society.

(3) (Course for the Women's Studies Concentrations) Contrasting family in Canada and in the United States for the recent past. Examination of theories on family; changes and diversity of family life; complex relationships among marriage, work, and family; domestic violence; various types of family experience; and the future of the family.

SOCI 250 Social Problems.

(3) Contrasting theoretical approaches to social problems.

SOCI 254 Development and Underdevelopment.

(3) Competing theories about the causes of underdevelopment in the poor countries. Topics include the impact of geography, the population explosion, culture and national character, economic and sexual inequalities, democracy and dictatorship. Western imperialism and multi-national corporations, reliance on the market, and development through local participation, cooperation, and appropriate technology.

SOCI 265 War, States and Social Change.

(3) The impact of war on society in agrarian and industrial epochs. Particular attention is given to the relationship between war and economic development, social classes, nationalism, and democratization.

SOCI 270 Sociology of Gender.

(3) This course focuses on social changes in gender relations, gender inequalities and the social construction of gender. Using sociological theories of gender, different social institutions and spheres of society will be analyzed. Topics such as gender socialization, gender relations in work, family, education, and media will be covered.

SOCI 304 Sociology of the Welfare State.

(3) (Prerequisites: SOCI 210 and SOCI 211 or instructors permission.) The origins and history of the welfare state and the differences between types of welfare state regimes; debates about and empirical evidence for current developments in welfare state programs. Special attention will be paid to the interconnections between the evolution of the labour market and the resulting pressures on the welfare state.

● SOCI 305 Socialization.

(3) The effects of early childhood experiences upon adult personality, and the transmission of social roles and values. Topics include: social reinforcement theories, modeling theories, maternal deprivation, culture and personality studies, cognitive development and infantile sexuality. The processes of sexrole socialization.

SOCI 307 Sociology of Globalization.

(3) (Prerequisite: SOCI 210 or Permission of Instructor) Core sociological and political issues of the globalization debate, such as trade, global production networks and the new international division of labor, global inequalities, the ecological crisis, the reform of international institutions, and the emergence of the global justice movement.

SOCI 309 Health and Illness.

(3) Health and illness as social rather than purely bio-medical phenomena. Topics include: studies of ill persons, health care occupations and organizations; poverty and health; inequalities in access to and use of health services; recent policies, ideologies, and problems in reform of health services organization.

SOCI 310 Sociology of Mental Disorder.

(3) Data and theories of mental disorders. Transcultural psychiatry, psychiatric epidemiology, stress, labelling, mental health care delivery, the family, positive mental health and the "sick" society in the framework of sociological theories of stratification, organization and social psychology.

SOCI 312 Sociology of Work and Industry.

(3) The development of the world of work from the rise of industrial capitalism to the postindustrial age. Responses of workers and managers to changing organizational, technological and economic realities. Interrelations between changing demands in the workplace and the functioning of the labour market. Canadian materials in comparative perspective.

● SOCI 318 Television in Society.

(3) TV in the social communication process: a surveyor of the environment, a socializer, a definer of "public" realities and a forum of debate. Topics include: TV reporting of political and international events, differences in French/English outlooks, and the portrayal of women.

● SOCI 320 Topics in Sociology 2.

(3) (Prerequisite: SOC1 210 or Permission of instructor.) (Note: Topics will vary from year to year.) Examination of selected topics in sociological theory and research.

SOCI 321 Gender and Work.

(3) (Course for the Women's Studies Concentrations) Focus on men's and women's work in North American societies, historically and contemporarily, in order to understand the dynamisms of gender (in)equality in and outside of the home. Topics explored include: housework; the relationship(s) between gender, organizations and bureaucracy; emotional labour; occupational segregation and stratification; sexual harassment; and work-family policy.

● SOCI 322 Sociology of Literature.

(3) (Prerequisite: SOCI-219.) A review of sociological research on the production, readership, and broader social implications of literature. Topics will include: the issue of whether literature "reflects" society, the use of literature in establishing collective identities, and reading as a social practice.

SOCI 326 Political Sociology 01.

(3) An examination of the social changes that underly the emergence of modern politics. An outline and empirical critique of the principal alternative models of political functioning in industrial societies. Empirical analysis of elite and mass political behaviour.

SOCI 327 Jews in North America.

(3) Understanding of contemporary North American Jewry using findings of sociology and other social sciences. Social, cultural, and political issues of concern to the Jewish community. Specific characteristics of Jewish life in Canada, and Québec in particular, in comparison to the American Jewish experience.

SOCI 330 Sociological Theory.

(3) (Prerequisite: SOCI 210 or permission of instructor) Major sociological theoretical traditions are seen in their historical contexts, as the background to current theoretical issues. Emphasis on Smith, Tocqueville, Marx, Durkheim, Weber and Parsons.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

SOCI 333 Social Stratification.

(3) The pattern, causes and consequences of social inequality. Among the inequalities considered are those of economic class, sex (gender), race, ethnicity and age. Competing theories of the causes of social inequalities are compared and assessed.

● **SOCI 338 Introduction to Biomedical Knowledge.**

(3) The dynamics of biomedical disciplines and specialties. Social, scientific, political and commercial aspects of biomedical research. The organization of work in clinical and fundamental research and its consequences on the choice of research topics.

SOCI 341 Current Problems in Sociology 02.

(3) (Prerequisite: permission of instructor.) (Restriction: Open to U2 and U3 students only) Intended for students who are adequately prepared to undertake advanced work and have an explicit proposal to submit.

SOCI 342 Independent Study 1.

(3) (Prerequisite: permission of instructor.) (Restriction: Open to U2 and U3 students only) Intended for students who are adequately prepared to undertake advanced work and have an explicit proposal to submit.

SOCI 343 Independent Study 2.

(3) (Prerequisite: permission of instructor.) (Restriction: Open to U2 and U3 students only) Intended for students who are adequately prepared to undertake advanced work and have an explicit proposal to submit.

SOCI 350 Statistics in Social Research.

(3) (Prerequisite: SOCI 211) (Restriction: Not open to students who have taken PSYC 204, PSYC 305 or ECON 227) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) This is an introductory course in descriptive and inferential statistics. The course is designed to help students develop a critical attitude toward statistical argument. It serves as a background for further statistics courses, helping to provide the intuition which can sometimes be lost amid the formulas.

SOCI 354 Dynamics of Industrial Societies.

(3) (Prerequisite: SOCI 210 or any other introductory course in the social sciences) Theories of social, economic, and political change in the industrialized societies. Causes of cycles in economic growth; imperialism and war; and in ethnic, religious, and industrial conflict. Causes of long run trends in social inequality, crime, family stability, and the position of women. Comparison of North America, Europe, Russia, and Japan.

SOCI 365 Health and Development.

(3) (Prerequisite: SOCI 234 or SOCI 254) Main concepts and controversies linking health to broader social and economic conditions in low income countries. Topics include the demographic and epidemiological transitions, the health and wealth conundrum, the social determinants of health, health as an economic development strategy, and the impact of the AIDS pandemic.

SOCI 370 Sociology: Gender and Development.

(3) (Prerequisite: SOCI 210) Exploration of the main development theories and discussion of how gender is placed within them, analysis of the practical application of development projects and discussion of how they affect gender dynamics, and examination of power relations between development agencies and developing countries. Examples from Sub-Saharan Africa and Latin America are used.

SOCI 377 Deviance.

(3) Introduction to the sociological study of deviance. Emphasis on the "societal reaction" or "interactionist" approach to deviance. The correctional and causal approach towards deviance, its limitations and alternative ways to address the subject of deviance.

SOCI 386 Contemporary Social Movements.

(3) This course will focus on contemporary social movements in Canada, the U.S., and Western Europe, such as the civil rights movement, the women's movement, and the environmental movement. Empirical studies of movements will be used to explore such general issues as how social movements emerge, grow, and decline.

SOCI 388 Crime.

(3) Introductory course on methods and theories in criminology. Exploration of the nature and distribution of crime; and critical evaluation of definitions and the measurement of crime; review of theoretical approaches used to understand such a phenomenon; a comparative overview of the criminal justice system.

● **SOCI 390 Gender and Health.**

(3) Key conceptual and substantive issues in gender and health since c1950: stratified medicalization of women's and men's health; social movements in health including the women's health movement; gender inequality in morbidity and mortality; gender, power and control in patient/physician interactions; embodied experience; politics and policies of gender and health.

SOCI 420 Organizations.

(3) (Prerequisites: SOCI 210 or SOCI 235) A survey of theories of organization with particular reference to problems of growth, technology, centralization and decentralization, and organizational environments.

● **SOCI 422 Health Care Providers.**

(3) Current trends and issues in health and illness. The role of occupations and organizations which define health and illness and organize and provide health care. Topics include: the impact of interprofessional relationships; legitimation of approaches to health and illness; knowledge and belief systems, and the role of power; challenges to traditional providers, and the impact of the consumers' and women's movements.

SOCI 424 Networks and Social Structures.

(3) The study of relations and networks. Concepts and techniques of network analysis. Issues include: interlocking directorates, social relationships among individuals in heterogeneous communities and organizations, and relations among elites. Students will be required to design an inquiry into one of these substantive domains.

● **SOCI 425 Sociology of the Body.**

(3) (Prerequisite: SOCI 225 or Permission of Instructor.) Sociological examination of the human body as a cultural phenomenon that intersects with identity, health, illness, disability and medicine. Exploration of meanings attributed to human bodies as well as the body as a site of social interaction.

● **SOCI 435 Popular Culture.**

(3) A seminar exploring the nature of popular culture, tracing historical beginnings and contemporary changes in film, TV, comics, magazines, and rock music content. Emphasis on developing theoretical perspectives and methodologies for analysing genres and themes, and for making distinctions between so-called folk and popular art.

SOCI 440 Current Problems.

(3) (Prerequisite: permission of instructor.) (Restriction: Open to U2 and U3 students only) Intended for students who are adequately prepared to undertake advanced work and have an explicit proposal to submit.

SOCI 441 Current Problems in Sociology 03.

(3) (Prerequisite: permission of instructor.) (Restriction: Open to U2 and U3 students only) Intended for students who are adequately prepared to undertake advanced work and have an explicit proposal to submit.

SOCI 442 Independent Reading and Research 01.

(3) (Prerequisite: permission of instructor.) (Restriction: Open to U2 and U3 students only) Intended for students who are adequately prepared to undertake advanced work and have an explicit proposal to submit.

SOCI 443 Independent Reading and Research 02.

(3) (Prerequisite: permission of instructor.) (Restriction: Open to U2 and U3 students only) Intended for students who are adequately prepared to undertake advanced work and have an explicit proposal to submit.

SOCI 446 Colonialism and Society.

(3) (Prerequisite: SOCI 210 or permission from instructor.) Forms that colonialism took, its impact on colonial societies, and its modern legacies, focusing on overseas colonialism between 1600 and the 1970s.

SOCI 455 Post-Socialist Societies.

(3) (Prerequisite: SOCI 210.) The demise of Communist Party rule between 1989 - 1991 throughout Eastern Europe and the Soviet Union. The societal implications (e.g. class formation, gender relations, nationalism, corruption, religious freedom) of these dramatic economic and political changes.

SOCI 460 Responses to Social Problems.

(3) (Prerequisite: permission of instructor.) This seminar focuses on attempts to resolve social problems. There will be discussion and debate concerning policies suggested and critical examination of their potential successes and failures. The course presupposes knowledge of social problems issues obtained in 166-250. Topics include: crime and prisons; discrimination and inequality; poverty; and drug use.

SOCI 461 Quantitative Data Analysis.

(3) (Prerequisite: SOCI 350) (You may not be able to get credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) This course blends theory and applications in regression analysis. It focuses on fitting a straight line regression using matrix algebra, extending models for multivariate analysis and discusses problems in the use of regression analysis, providing criteria for model building and selection, and using statistical software to apply statistics efficiently.

SOCI 470 Topics in Economic Sociology.

(3)

SOCI 475 Canadian Ethnic Studies Seminar.

(3) (Restriction: Open to students following the Minor Concentration in Canadian Ethnic Studies; or to students with at least nine credits, three at the 300 level, in the social sciences; or with permission of instructor. Not open to students taking CANS 404 in 2007-08.) An interdisciplinary seminar focusing on current social sciences research and public policies in areas relating to Canadian ethnic studies. Topics will include ethnic and racial inequalities, prejudice and discrimination, ethnic identities and cultural expressions, the structure and organization of minority groups.

SOCI 480 Honours Project.

(3) (Restriction: For Sociology U3 Honours and Joint Honours students only) The Honours Project, normally in the form of a paper, provides every Honours student with the opportunity to work independently on a topic of special interest. The student works out the topic for the Honours Project through discussions with appropriate potential supervisors (aided by the Honours Adviser when necessary).

● SOCI 484 Emerging Democratic States.

(3) (Prerequisite: SOCI 210) Focus on the sociological aspects of recent transitions to democracy within developing countries - particularly within Sub-Saharan Africa and Latin America. Exploration of why democratization has taken place, to what extent it has been successful and the implications of democratization.

SOCI 489 Gender, Deviance and Social Control.

(3) (Course for Women's Studies Concentrations) (Prerequisite: Permission of instructor) (Restriction: open to U3 students concentrating on social problems.) This seminar examines how the definition of deviance, reactions to deviance and explanations deviance are gendered. Specific topics vary from year to year.

● SOCI 495 Social Problems and Conflicts.

(3) (Prerequisite: permission of instructor) This course explores the social construction of "social problems". It focuses on the social conflicts involved in the definition of social issues and on how and why "problems" change over time. Issues such as drinking, smoking, drug use, pornography,

abortion, and homosexuality will be discussed.

SOCI 499 Internship: Sociology.

(3) (Restriction: Open to U2 and U3 students with a minimum CGPA of 2.7, and permission of the departmental Internship Advisor. This course will normally not fulfill program requirements for seminar or 400-level courses. A letter from a supervisor at the institution must attest to successful completion of the student's tenure.) Internship with an approved host institution or organization.

SOCI 504 Quantitative Methods 1.

(3) (Prerequisites: SOCI 350 and SOCI 461 or equivalents) Analysis of quantitative information, especially in large, survey-type, data sets. Use of computer programs such as SPSS and SAS. Topics include: cross tabulations with an emphasis on multi-dimensional tables, multiple correlation and regression, and, the relationship between individual and aggregate level statistical analyses. Special reference to demographic techniques.

SOCI 505 Quantitative Methods 2.

(3) (Prerequisite: SOCI 504) Topics include: problems - and solutions - in regression analysis, models for categorical dependent variables, including logit, log-linear, and linear probability models, measurement models, structural equation models with latent variables (LISREL), and time series and panel analysis.

● SOCI 506 Quantitative Methods 3.

(3) (Prerequisite: SOCI 504 or equivalent or permission of instructor.) Advanced statistical analyses focusing on advanced methods such as event history analysis and analysis of contingency tables.

SOCI 507 Social Change.

(3) (Restrictions: Not open to students who have taken SOCI 672. Undergraduates by permission of instructor only.) An examination of the major sociological theories of long term macro social change. Topics include why industrialization began in Europe instead of Asia, the divergence among societies in systems of class, gender, ethnic and racial inequality, and whether industrial society has entered a new post-industrial or post-modern phase.

SOCI 508 Medical Sociology and Social Psychiatry.

(3) (Prerequisite: SOCI 309 or SOCI 310 or Permission of the Instructor.) (Note: Open to Social Studies of Medicine students.) The social construction of mental illness and disease, the personal and professional definition and recognition of illness, the distribution and determinants of illness, disease, sickness in the population, and the politics of medical research.

● SOCI 510 Seminar in Social Stratification.

(3) (Prerequisites: SOCI 333 and SOCI 350 or equivalents) Recent theoretical and empirical developments in social stratification and inequality. The study of social class, with attention to the anomalous findings on heterogeneity in labour markets and the labour process, status attainment processes, and the socio-political and industrial attitudes of the working class. Students will prepare quantitative analysis of Canadian survey material as well as critical qualitative reviews.

SOCI 511 Movements/Collective Action.

(3) A critical examination of classical and more recent approaches to the study of social movements and collective action. Discussion of: the role of grievances and interests, incentives and beliefs, conditions of breakdown and solidarity, mobilization and social control, the dynamics of collective action.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

SOCI 512 Ethnicity & Public Policy.

(3) (Prerequisite: SOCI 230 or permission from the instructor.) (Restriction: Not open to students who have taken SOCI 629.) Major themes in the theoretical literature on ethnicity. Public policies with direct and indirect implications for inter-ethnic relations will be studied. Policies affecting areas such as language, education, immigration, employment and promotion, multiculturalism and welfare. Examples drawn from several multi-ethnic societies. Political, constitutional, and economic problems associated with these policy initiatives.

SOCI 513 Social Aspects HIV/AIDS in Africa.

(3) (Prerequisites: SOCI 225 or SOCI 309 or Permission of Instructor.) Examination of the social causes and consequences of HIV/AIDS in Africa. Gender inequality, sexual behaviors, marriage systems, migration, and poverty are shaping the pandemic as well as how the pandemic is altering social, demographic and economic conditions across Africa.

SOCI 514 Criminology.

(3) (Prerequisite: Permission of Instructor.) (Note: Grad students and U3 students only.) A survey of the major schools of thought that have developed to explain criminal behavior from the emergence of modern criminology in the 18th and 19th centuries to current debates.

SOCI 515 Medicine and Society.

(3) (Prerequisite: Undergraduate students require permission of instructor) The sociology of health and illness. Reading in areas of interest, such as: the sociology of illness, health services occupations, organizational settings of health care, the politics of change in national health service systems, and contemporary ethical issues in medical care and research.

● **SOCI 516 Sociological Theory & Research.**

(3) (Prerequisites: SOCI 330 or Permission of Instructor.) (Note: Topics will vary from year to year.) Selected topics of current faculty interest in sociological theory and research.

● **SOCI 519 Gender and Globalization.**

(3) (Prerequisite: SOCI 270 or permission of instructor.) Focus on the diverse forces of globalization that impact the lives of men and women. Critical analysis of key theories and concepts implicated in the intersection of globalization processes with gender dynamisms.

● **SOCI 520 Migration and Immigrant Groups.**

(3) (Prerequisite: 15 credits in the Social Sciences) Review of the major demographic, economic and sociological theories of internal and international migration. The main emphasis will be on empirical research on migration and immigrant groups.

SOCI 525 Health Care Systems in Comparative Perspective.

(3) (Prerequisite: Permission of instructor.) (Restriction: Not open to students who are taking or have taken EPIB 525.) (Note: This course is cross-listed in Epidemiology, Biostatistics and Occupational Health and in Sociology.) Comparative perspective to illustrate processes involved in the development and evolution of health care systems around the world. Countries examined will represent different welfare state regimes, health care system typologies, levels of development and wealth.

SOCI 530 Sex and Gender.

(3) (Restriction: Open to Honours Sociology students and to Sociology Majors with the permission of the instructor) This seminar critically reviews theoretical perspectives and research on sex and gender in various domains of social life. It gives special emphasis to work which considers the meaning of gender and how it differs across time and place.

SOCI 535 Sociology of the Family.

(3) (Undergraduate students require permission of instructor) This seminar reviews literature on major research areas in family. The course examines families in the past, the study of family using a life course approach, and considers selective areas which may have had significant influences on contemporary family such as work and family, family violence, and cultural variation in families.

● **SOCI 538 Selected Topics in Sociology of Biomedical Knowledge.**

(3) The seminar will examine recent work in the sociology of biomedical knowledge. It will focus on the technological shaping of biomedical knowledge, i.e. on the impact of new technologies and equipments on the development of biomedical knowledge.

SOCI 540 Qualitative Research Methods.

(3) (Restrictions: open to Sociology Honours students, and Sociology Major Concentration students with the instructor's permission) Qualitative methodology, mainly participant observation, structured and unstructured interviewing. Students begin a research project using these techniques and submit field notes once a week.

SOCI 545 Sociology of Population.

(3) (Prerequisites: SOCI 234 or equivalent.) The classic literature of sociology of population. Drawing reciprocal linkages between social and population processes: Historical, family and labour force demography, demographic and fertility transitions, mortality, ethnic and race relations, gender, macro-structural interaction theory, and the relation of population and the environment.

SOCI 550 Developing Societies.

(3) Comparison of alternative explanations of underdevelopment: the impact of social stratification, relations of domination and subordination between countries, state interference with the market. Alternative strategies of change: revolution, structural adjustment, community development and cooperatives. Students will write and present a research paper, and participate extensively in class discussion.

● **SOCI 555 Comparative Historical Sociology.**

(3) (Restriction: Undergraduate students require permission of instructor) The analysis of patterns of state and nation-building in historical and comparative perspectives with particular attention being given to methodology.

SOCI 565 Social Change in Panama.

(3) (Prerequisites: SOCI 210 and SOCI 350 or equivalents.) (Restriction: Students must register for a full term in the Panama Field Studies Semester.) (Note: Four field trips.) Analysis of social change in Panama, particularly during the 20th century: demography, social and economic structures, rural and urban activities and landscapes, indigenous peoples, the effects of the Canal and the Free Trade Zone. Focus throughout on the interaction of human society and the environment.

SOCI 571 Deviance and Social Control.

(3) This seminar focuses on how social groups enforce rules (and maintain social order) through coercion and socialization. It reviews current research and critiques key theoretical approaches to social control. Included are discussions of regulating institutions such as prisons and mental asylums, and the roles of gossip, manners and etiquettes.

SOCI 580 Social Research Design and Practice.

(3) (Restriction: Open to U3 and graduate students) Asking researchable sociological questions and evaluation of different research designs used to answer such questions. Development of cogent research proposals, including data collection procedures. Principles, dynamics, strengths and practical limitations of research designs. Examples from recent publications.

● **SOCI 588 Sociology of Knowledge.**

(3) (Restriction: Not open to students who have taken SOCI 661.) A review of the current research in the sociology of knowledge. The focus will be on sociological studies of the formation, circulation and reception of scientific and artistic ideas, beliefs and practices, and the configuration and social organization of the collectives involved in these processes.

SSMD-Social Studies of Medicine

Offered by: Social Studies of Medicine

SSMD 199 FYS: Mind-Body Medicine.

(3) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Limit 25 students) Health is influenced by biological, psychological and social factors. The interaction between these determinants in the onset, course and recovery from a variety of diseases (e.g. AIDS) will be highlighted. Students will select one phase of a particular illness (e.g. remission following breast cancer treatment) and explore the related biopsychosocial factors.

● **SSMD 400 Interdisciplinary Seminar.**

(3)

SWRK-Social Work

Offered by: Social Work

● **SWRK 199 FYS: Social Work Profession.**

(3) (Fall) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25) The course will explore the profession and practice of social work including its history; ethical foundations and place in society. It will also address the various fields in which social workers practice - eg. health; child welfare; women's issues.

● **SWRK 220 History & Philosophy of Social Work.**

(3) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 240.) Historical, theoretical and philosophical base of social work which includes the role of social work in the social welfare, modalities of practice, professional codes of ethics, and human rights legislation.

● **SWRK 221 Public Social Services in Canada.**

(3) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 352.) Federal and provincial social welfare programs & the intended objectives, program design, issues of eligibility and funding, and comparison with programs in other parts of Europe and North America. Particular emphasis on concepts of social justice and poverty. Programs such as income security, labour market, health, immigration, and social services.

● **SWRK 222 Introduction to Practicum.**

(3) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 255.) Basic social work skills.

● **SWRK 223 Poverty and Inequality.**

(3) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 357.) Examination and analysis of laws and policies affecting those living in poverty, experiencing inequality, strategies for mitigating these issues, role of social work in advocating for legal and welfare rights of clients and communities.

● **SWRK 224 Human Development Across the Lifespan.**

(3) (Restrictions: Limited to U2, U3 and Special/Visiting Students) Physical, cognitive, emotional, behavioural and social development in different stages of the life course with a focus on childhood and adolescence. Human development in different social contexts. Theory and research as it relates to social work practice.

● **SWRK 320 Practice with Individuals and Families 1.**

(3) (Restriction: Not open to students who have taken SWRK 320 D1/D2 and SWRK 341) Introduction to theories and techniques informing clinical social work practice with individual and family systems in a social context. Sexual orientation, race, class, gender, culture, ability and diverse family forms are integrated. Knowledge and skills required for assessment and treatment across a range of practice settings.

● **SWRK 321 Introduction to Practice with Groups.**

(3) (Restriction: Not open to students who have taken SWRK 321 D1/D2 and SWRK 376) Introduction to theories and techniques informing social work practice with groups. Emphasis on understanding group formation, assessment, and models of group intervention across a range of practice settings and with different populations.

● **SWRK 322 Field Practice 1.**

(3) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 355.) Supervised educational experiences in social work practice designed to integrate practice and theory.

● **SWRK 323 Field Practice 2.**

(3) (Prerequisite: SWRK 322) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 356.) Supervised educational experiences in social work practice designed to integrate practice with theoretical knowledge.

● **SWRK 325 Anti-Oppression Social Work Practice.**

(3) (Prerequisite: SWRK 223.) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 344.) Social work policy and practice, including an examination of discrimination and oppressions, identity and social location, reflexivity, intersectionality, contemporary anti-oppression movements, access and equity in human services and their implications.

● **SWRK 326 Practice with Individuals and Families 2.**

(3) (Prerequisite: SWRK 320) (Restriction: Not open to students who have taken SWRK 320 D1/D2 and SWRK 341) Advanced integration of theories and techniques informing clinical social work practice with individual and family systems in a social context. Sexual orientation, race, class, gender, culture, ability and diverse family forms are integrated. Knowledge and skills required for assessment and treatment across a range of practice settings.

● **SWRK 327 Approaches to Community Practice.**

(3) (Prerequisite: SWRK 321) (Restriction: Limited to BSW students. Not open to students who have taken SWRK 321 D1/D2, SWRK 374 and SWRK 467) A comparison of models of community practice in a variety of social settings. An analysis of practice assumptions and methods. Intervention strategies and methods from student practice will be discussed.

● **SWRK 341 Introduction: Practice with Families.**

(3) (Winter) An introduction to theories and techniques of family assessment and intervention using genograms, family systems and eco-systemic approaches and family life cycle theory. The effects of class, gender, race, culture; also diverse family forms (nuclear, extended, divorcing, reconstituted, substitute, lone parent, gay/lesbian) are considered. Illustrations using simulations and tapes.

● **SWRK 342 Practice with Gay, Lesbian, Bisexual & Two-Spirit People.**

(3) (Restrictions: Social Work BSWU2, BSWU3, 2-year BSW students and U2, U3 Minor in Sexual Diversity Studies students) Issues facing gay, lesbian, bisexual and two-spirit people. Addresses how social workers can support the development of health and social services informed by principles of social justice and equity. Topics include self-esteem, youth at risk, families, and aging.

● **SWRK 350 Social Work Skills Laboratory.**

(3) (Summer) (Restriction: Limited to Special B.S.W. Students) A Compulsory Skills laboratory for all Special B.S.W. students which focuses on developing basic interviewing skills. Student participation is required.

● **SWRK 351 Children's Needs and Social Services.**

(3)

● **SWRK 353 Introduction to Practice.**

(6) (Summer) (Corequisite: SWRK 350) (Restriction: Limited to Special B.S.W. students only) Introduction to the principles and practice of social work. Examination of social legislation, social policy, and social services.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

* Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

SWRK 354 Social Work in the Health Field.

(3) (Winter) (Restriction: Limited to Social Work students) (Restriction: Not open to B.S.W. U1 students) An introduction to health and health institutions in the context of service delivery. Major themes will include: multidisciplinary teamwork in the hospital; crisis intervention; legal ethical issues; and emerging issues for social workers in health.

● **SWRK 374 Community Development/Social Action.**

(3) (Fall) (Restriction: Not open To U1 Level Students.) The organizing process and development of direct organizing skills. Emphasis on organizational entities, community power and conflict, organizing strategies and their application, urban community development.

● **SWRK 376 Social Work Practice with Groups.**

(3) (Fall) (Prerequisite: U1 required Social Work course) (Restriction: Limited to B.S.W. students only) Theory and practice of work with groups. Emphasis on understanding group concepts and group dynamics and learning about various theoretical models of social group work practice. Focus on group development theory and the skills of the worker in a small group context. Small group participation, role playing and simulations will be utilized.

SWRK 377 Women's Issues in Practice.

(3) (Winter) (Restriction: Limited to B.S.W. U2, B.S.W. U3, Special B.S.W. and U3 Women's Studies Major/ Minor Concentration students) Social work practice with women based on recent advances in understanding women's relationships to the structures and institutions of society. Issues which arise in the provision of social services: women and the family, mental and physical health, poverty and the welfare system, feminist counselling.

SWRK 400 Policy and Practice for Refugees.

(3) (Restriction: Limited to B.S.W. U3 level students, and U3 non-Social Work students) Refugee-generating conflicts, international and national responses are considered. Canadian policy, history and response to refugees are analyzed. Theory-grounded practice with refugees is examined, including community organizing and direct service delivery to individuals and families.

● **SWRK 402 Developmental Disabilities.**

(3) (Winter) (Restriction: Limited to U2 and U3 level students) This course provides an indepth analysis of social work's response to persons with a developmental disability. Students will review both the practice and the policy considerations that pertain to the field of developmental disabilities with a special emphasis on the effects of deinstitutionalization and the community response.

● **SWRK 403 Assessment - Clinical and Community.**

(3) (Winter) (Restriction: Limited to B.S.W. U2, B.S.W. U3 and 2-year B.S.W. students only) (Prerequisite: SWRK 240) Social work assessment is the crucial professional activity on which all interventions, clinical and community, are based. This course will address relevant factors involved in the situations faced by social work practitioners and their clients as they attempt to collaboratively solve problems.

SWRK 420 Advanced Field Practice 1.

(3) (Prerequisite: SWRK 323) (Restriction: Limited to BSW students) Supervised educational experience in social work practice at an advanced level.

SWRK 421 Advanced Field Practice 2.

(3) (Prerequisite: SWRK 420) (Restriction: Limited to BSW students completing their last practicum) Supervised educational experience in social work practice at an advanced level.

SWRK 422D1 (1.5), SWRK 422D2 (1.5) Integrative Seminar.

(Prerequisite: SWRK 323.) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 340D1/D2.) (No credit will be given for this course unless both SWRK 422D1 and SWRK 422D2 are successfully completed in consecutive terms.) Analyzing field experiences operationalizing the link between scholarship and practice. Dimensions of equity will be integrated.

SWRK 423 Social Work Research.

(3) (Prerequisite: SWRK 326) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 401) Appraising and analyzing social work practice research, including the perspectives of the authors, the literature reviewed, the practice questions, the research methodology and analysis and the implications of the findings for practice.

SWRK 424 Mental Health and Illness.

(3) (Prerequisite: SWRK 326 is a prerequisite for the students in the 90-credit program.) (Corequisite: SWRK 320 or SWRK 326 is a corequisite for the students in the 60-credit program) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 482.) Symptoms of mental illness and approaches to the delivery of services and programs within various sites of care. Impact of stigma and the place of psychosocial rehabilitation. Biopsychosocial framework and effective practice models examined with an emphasis on policy and its implications for the delivery of services and programs.

SWRK 428 Social Policy and Administration.

(3) (Prerequisites: SWRK 327) (Restrictions: Limited to BSW students. Not open to students who have taken SWRK 458.) An analysis of the administrative structures and dynamics of social service organizations, with special attention to Québec policies and to the role of social workers. Examples are drawn from current field experiences of students.

● **SWRK 434 Practice with Involuntary Clients.**

(3) (Winter) (Restriction: Limited to B.S.W. U3 and 2-year B.S.W. students) Issues and practice problems encountered with involuntary clients in settings such as courts, youth protection agencies and total institutions. Topics include: reaction of the client and worker to the "involuntary" situation, the ethics and efficacy of "coerced treatment" and practice interventions with involuntary clients. Students draw on their own experience with these issues.

SWRK 438 Drug Addiction and Society.

(3) (Fall or Winter) (Restriction: Limited to B.S.W. U3 and 2-year B.S.W. Students) This course examines primarily the abuse in our society of illegal drugs e.g. heroin, cocaine and marijuana, and the abuse of prescription drugs, e.g. tranquilizers and narcotics. Topics include: assessment and treatment; I.V. drug use and the spread of the HIV virus; Canada's policy on illegal drugs.

● **SWRK 459 Adult/Child Sexual Relations.**

(3) (Restriction: Limited to B.S.W. U3 and Special B.S.W. students) An examination of intra/ extra-familial child sexual abuse with a focus on the individual and family psychodynamics, the legal systems that respond to the problem and on assessment and treatment skills.

SWRK 463 Practice with the Elderly.

(3) (Winter) (Restriction: Limited to B.S.W. U2, B.S.W. U3, 2-year B.S.W. and U3 non-B.S.W. students) An introduction to social services to the aged. The involvement of the social worker with respect to: institutionalizing the elderly, community care, economics and aging, widowhood, separation and loss, the family situation of the elderly, and the strengths of older people.

● **SWRK 465 School Social Services.**

(3) (Winter) (Restriction: Limited to B.S.W. students) (Restriction: Not open to U1 students) Introduction to models of school social work practice. Diagnostic and practice approaches places emphasis on the relationships between the school, family, community and the pupil. Problems which affect the school social worker include: youth protection, children with special needs, drop-outs, conduct-disordered behaviour, integration of immigrants and violence.

SWRK 471 Tutorial in Social Work Research.

(3) (Fall and Winter and Summer) (Prerequisite: SWRK 401 or equivalent) (Restriction: Limited to B.S.W. U3 and 2-year B.S.W. students) Opportunity for interested students to conduct a small-scale practical research project, either individually or in a small group, with tutorial assistance from staff members.

● SWRK 472 Family Assessment.

(3) (Fall) (Restriction: Limited to B.S.W. U3 and 2-year B.S.W. students) An opportunity to participate in a seminar focusing on an integrative model of work with families. Concurrent field practice with families required.

SWRK 473 Individuals and Families in Crisis.

(3) (Restriction: Limited to B.S.W. U3 and Special B.S.W. students) Theory and practice of work with individuals and families under stress. Topics include: categories of hazardous events; affective, behavioural and role disorganization; phases in the crisis cycle; techniques of crisis intervention and abatement.

● SWRK 481 Goal Directed Time Limited Practice.

(3) (Fall) (Restriction: Limited to B.S.W. U3 and Special B.S.W. students) Principles of goal directed time limited casework with individuals, couples and families. Relevant theory will be examined and applied to practice drawing upon examples from the students' field experiences. Emphasis on goal setting, contracting, use of tasks, evaluation of practice.

SWRK 485 Tutorial: Social Work Practice.

(3) (Fall and Winter and Summer) (Restriction: Limited to B.S.W. U3 and 2-year B.S.W. students) An individual or small group tutorial in which students will work independently in conjunction with the instructor. The student will undertake a project related to the area of specialization.

SWRK 486 Tutorial in Social Policy.

(3) (Restriction: Limited to B.S.W. U3 and Special B.S.W. students) An individual or small group tutorial in which students will work independently in conjunction with the instructor. The student will undertake a project related to the area of specialization.

● SWRK 492 Violence against Women and Children.

(3) (Winter) (Restriction: Limited to B.S.W. U3, 2-year B.S.W., and Women's Studies Major/Minor Concentration students) Through a feminist theoretical lens, this course examines a range of male-perpetrated sexual and physical abuses of women and children. Such an examination includes critical appraisals of "common knowledge", research findings, dominant modes of intervention, and social welfare policies and legislation.

SWRK 493 Seminar on Child Protection.

(3) (Fall) (Restriction: Limited to B.S.W. U3 and 2-year B.S.W. students) The field of child protection and the problems of physical and sexual abuse and neglect of children. The general characteristics of this vulnerable population group and their families as well as some models of intervention.

SWRK 497 Clinical Practice Seminar 1.

(3) (Restriction: Limited to B.S.W. U3 and 2-year B.S.W. students) Practice competence with various population groups: physically and mentally handicapped, terminally-ill, multi-problem families. Topics may change from year to year.

SWRK 498 Clinical Practice Seminar 2.

(3) (Fall) (Restriction: Limited to B.S.W. U2, B.S.W. U3, 2-year B.S.W. and U3 non-B.S.W. students) Practice competence with various population groups. Topics may change from year to year.

SWRK 525 Critical Thought and Ethics in Social Work.

(3) (Prerequisite: SWRK 325.) (Restriction: Limited to BSW and MSW students.) Use of theory and reflexivity to challenge the various ways knowing and practicing within social work. Critically engage and assess the theoretical basis of social work theories and knowledge acquired over the course of the program. Application of this knowledge to ethical dilemmas that arise in practice.

● SWRK 531 Social Perspectives on Aging 2.

(3) (Summer) (Restriction: School of Social Work: Limited to U3 and M.S.W. students) Instructors and students from various disciplines will focus on certain aspects of aging related to issues of independence in later life. The provision of services and their impact on the recipients will be evaluated. Senior citizens will participate in the course as Senior Consultants.

SWRK 532 International Social Work.

(3) (Winter) (Restriction: Limited to B.S.W. U3, 2-year B.S.W. and M.S.W. students) Discussion based upon intensive study and reports on problems in selected countries. Emphasis on identifying major social problems, understanding the social forces bearing on those problems and considering appropriate professional approaches to aid in their solution.

● SWRK 539 Chronic and Terminal Illness.

(3) (Winter) (Restriction: Limited to B.S.W. U3, 2-year B.S.W. and M.S.W. students) A seminar to examine practice with persons living with chronic and terminal illnesses. Needs of families, caretakers, health care workers and the gay community are studied.

WMST-Women's Studies

Offered by: Arts - Dean's Office

WMST 200 Introduction to Women's Studies.

(3) An introduction to the interdisciplinary field of Women's Studies from historical and contemporary perspectives, this course will explore key concepts, issues and modes of analysis based on the intersection of gender with factors such as race, ethnicity, class, religion, and sexuality.

WMST 301 Women's Studies Current Topics 1.

(3) (Prerequisite: WMST 200 or PHIL 242 or permission of instructor) Topic in 2008-09 is Feminist Theories of Identity Consideration of contemporary issues in Women's Studies. Topic and approach will vary from year to year.

WMST 302 Women's Studies Current Topics 2.

(3) (Prerequisite: WMST 200 or PHIL 242 or permission of instructor) Topic: Women of Colour in Canada Consideration of contemporary issues in Women's Studies. Topic and approach will vary from year to year.

WMST 303 Feminist Theory and Research.

(3) (Prerequisite: WMST 200) (Restriction: Open to Women's Studies students only) This course explores contemporary feminist theories and critiques of approaches to knowledge developed in the humanities, social, natural, and applied sciences. Feminist contributions to research and critical practices will be examined in relation to course projects.

WMST 401 Women's Studies Special Topics 1.

(3) (Prerequisite: WMST 200 or PHIL 242 or permission of instructor) Advanced seminar in selected themes and issues in Women's Studies. Topics and theoretical or disciplinary approach will vary from year to year.

WMST 402 Women's Studies Special Topics 2.

(3) (Prerequisite: WMST 200 or PHIL 242 or permission of instructor) Topic 200901: Feminisms and Sexualities Advanced seminar in selected themes and issues in Women's Studies. Topics and theoretical or disciplinary approach will vary from year to year.

WMST 461 Tutorial in Women's Studies 1.

(3) (Prerequisite: WMST 303 or permission of instructor) (Restrictions: Majors, Honours and Joint Honours students in Women's Studies. Program and advisor approval required.) Advanced reading course and independent research project under the supervision of an instructor on aspects of Women's Studies.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

WMST 462 Tutorial in Women's Studies 2.

(3) (Prerequisite: WMST 303 and permission of instructor)
(Restriction: Majors, Honours and Joint Honours students in Women's Studies.) Advanced reading course and independent research project under the supervision of an instructor on aspects of Women's Studies.

WMST 494 Internship: Women's Studies.

(3) (Restrictions: Open to U-2 and U-3 students after completing 30 credits of a 90 credit program or 45 credits of a 96-120 credit program. A minimum CGPA of 2.7, and permission of the Women's Studies Internship Program Coordinator required. This course will not normally fulfill program requirements for seminar or 400-level courses.) Internship with an approved host institution or organization.

WMST 495D1 (1.5), WMST 495D2 (1.5) Honours/Joint Honours Colloquium.

(Prerequisite: WMST 303.) (Corequisite: WMST 497D1.)
(Restriction: Honours/Joint Honours students in Women's Studies)
(Students must register for both WMST 495D1 and WMST 495D2.) (No credit will be given for this course unless both WMST 495D1 and WMST 495D2 are successfully completed in consecutive terms.) Students will research, discuss, and present their thesis topics.

WMST 497D1 (1.5), WMST 497D2 (1.5) Honours/Joint Honours Thesis.

(Prerequisite: WMST 303) (Corequisite: WMST 495D1)
(Students must register for both WMST 497D1 and WMST 497D2.) (No credit will be given for this course unless both WMST 497D1 and WMST 497D2 are successfully completed in consecutive terms) Supervised reading and preparation of a Joint Honours thesis under the direction of a member of staff.

● **WMST 501 Advanced Topics 1.**

(3) (Prerequisite: WMST 303 or permission of instructor)
Advanced topics in theory and methodology related to Women's Studies. Topics will vary from year to year.

● **WMST 502 Advanced Topics 2.**

(3) (Prerequisite: WMST 303 or permission of instructor)
Advanced topics in theory and methodology related to Women's Studies. Topics will vary from year to year.

WMST 513 Gender, Race and Science.

(3) This course is a philosophical exploration of the nature of science concerning sex, gender, race and racial stereotypes, and the construction of "womanhood". The social history/biography of women and minorities in science will be studied to develop a critique of biological determinism and explore the meaning and possibility of a "feminist science".

Interfaculty, B.A. & Sc.

BASC-Arts & Science

Offered by: Science

BASC 201 Arts & Science Integrative Topics.

(3) (Restriction: Open only to students registered in the B.A. & Sc.) Topics that integrate information from Arts & Science (e.g. biomedical ethics; history of science; scientific reasoning; military conflict and geography; philosophy of mind, etc.) to exemplify the benefits of applying scholarship from diverse areas to a problem.

COGS-Cognitive Science

Offered by: Arts & Science Admin (Shared)

COGS 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project.

COGS 401 Research Cognitive Science 1.

(6) (Prerequisites: 30 credits of Cognitive Science program. Approval of program Coordinator. CGPA >3.00.) (Note: The student must find a Faculty research advisor in the Department of Linguistics, Philosophy, Physiology or Psychology, or the School of Computer Science. A research proposal worked out with the research advisor requires approval of the Coordinator of the Cognitive Science Program. The research will be reported in a scholarly paper to be evaluated by the research advisor and a second reader appointed by the Coordinator of the Cognitive Science Program. Please see regulations concerning Project Courses. COGS 401 is not a prerequisite to COGS 402. Thus the 2 courses can be done in either order, or either of the courses can be done if a student is to take only one of them.) Research project supervised by a McGill Faculty member.

COGS 402 Research Cognitive Science 2.

(6) (Prerequisites: 30 credits of Cognitive Science program. Approval of program Coordinator. CGPA >3.00.) (Note: The student must find a Faculty research advisor in the Department of Linguistics, Philosophy, Physiology or Psychology, or the School of Computer Science. A research proposal worked out with the research advisor requires approval of the Coordinator of the Cognitive Science Program. The research will be reported in a scholarly paper to be evaluated by the research advisor and a second reader appointed by the Coordinator of the Cognitive Science Program. Please see regulations concerning Project Courses. COGS 401 is not a prerequisite to COGS 402. Thus the 2 courses can be done in either order, or either of the courses can be done if a student is to take only one of them.) Research project supervised by a McGill Faculty member.

COGS 444 Honours Research.

(6) (Prerequisite: Permission of Director of Cognitive Science Programs.) (Note: To receive approval to register for this course, a student must present a research proposal to the director of the cognitive science program. The student's proposal must include approval of the research from one advisor

from each of the student's two focal departments. The student's focal departments must consist of one Arts department and the one Science department (both must be participating in the BASC option) in which the student will have at the completed least 12 credits, exclusive of required courses at graduation.) Honours research course including research issues in two areas of cognitive science.

COGS 444D1 (3), COGS 444D2 (3) Honours Research.

(Prerequisite: Permission of Director of Cognitive Science Programs.) (Note: To receive approval to register for this course, a student must present a research proposal to the director of the cognitive science program. The student's proposal must include approval of the research from one advisor from each of the student's two focal departments. The student's focal departments must consist of one Arts department and the one Science department (both must be participating in the BASC option) in which the student will have at the completed least 12 credits, exclusive of required courses at graduation.) (Students must register for both COGS 444D1 and COGS 444D2.) (No credit will be given for this course unless both COGS 444D1 and COGS 444D2 are successfully completed in consecutive terms.) Honours research course including research issues in two areas of cognitive science.

COGS 444N1 (3), COGS 444N2 (3) Honours Research.

(Prerequisite: Permission of Director of Cognitive Science Programs.) (Note: To receive approval to register for this course, a student must present a research proposal to the director of the cognitive science program. The student's proposal must include approval of the research from one advisor from each of the student's two focal departments. The student's focal departments must consist of one Arts department and the one Science department (both must be participating in the BASC option) in which the student will have at the completed least 12 credits, exclusive of required courses at graduation.) (Students must also register for COGS 444N2.) (No credit will be given for this course unless both COGS 444N1 and COGS 444N2 are successfully completed in a twelve month period.) Honours research course including research issues in two areas of cognitive science.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

Faculty of Education

EDEA-Arts Education

Offered by: Integrated Studies in Ed

☐▲ EDEA 201 Basic Musicianship Teaching 1.

(3) (Offered through Distance Education) Introduction to the elements of music theory through techniques of aural training, sight singing and keyboard. Lab work at the keyboard.

☐▲ EDEA 204 Drawing.

(3) Development of sound drafting skills through the study of organic forms and the human figure in various media.

☐▲ EDEA 205 Painting 2.

(3) (Prerequisite: EDEA 204) Investigation of color, media, tools, techniques. Studies of natural forms, the human figure.

EDEA 206 1st Year Professional Seminar.

(1) (Corequisite: EDFE 205) This seminar along with First Year Field Experience Music serves as an orientation to the culture of the school and to teaching as a profession. Emphasis is on the general functioning of elementary and secondary schools. Topics include the role of the arts in the curriculum.

☐▲ EDEA 241 Basic Art Media for Classroom.

(3) An introduction to media that can be easily adapted to elementary classroom studio exploration.

▲ EDEA 242 Cultural Skills 1.

(3) Development of First Nations and Inuit skills and knowledge in art, music, handicrafts and other areas both modern and traditional. Topics will vary and be chosen from a range identified by instructors and students. Course is seasonally based and will cover summer cultural skills.

▲ EDEA 243 Cultural Skills 2.

(3) (Note: Topics will vary and will cover different cultural skills than EDEA 242. Course content is seasonally based.) Development of First Nations and Inuit skills and knowledge in art, music, handicrafts and other areas both modern and traditional.

☐▲ EDEA 296 Basic Design.

(3) Exploration of the basic elements of visual art through two dimensional composition and three-dimensional constructions. Investigation of materials and tools and the processes of manipulating and relating materials.

☐▲ EDEA 302 Special Topics.

(3) Selected topics and contemporary issues in education in the arts. The content will vary from year to year and will be announced prior to registration.

☐▲ EDEA 304 Painting 3.

(3) (Prerequisite: EDEA 205) Continuation of course EDEA 205 with emphasis on drawing and structure.

☐▲ EDEA 305 Painting 4.

(3) Continuation of course EDEA 304 with emphasis on advanced composition.

☐▲ EDEA 307 Drawing 2.

(3) (Prerequisite: EDEA 204) A course designed to further the individual's natural drawing ability, and to develop a keen, perceptive approach to varied subject matter, including figure drawing.

☐▲ EDEA 314 Instruments in the Classroom.

(3) (The ability to read notation is not a prerequisite) Rhythmic and melodic instruments are introduced and their potential to enhance songs, poems, stories and movement is explored through students' active participation.

☐†EDEA 332 Art Curriculum and Instruction - Elementary.

(3) An introduction to theories on children's visual expression and perception, lesson planning, and classroom-oriented studio practice.

☐▲ EDEA 341 Listening for Learning.

(3) (The ability to read notation is not a prerequisite) Musical knowledge is developed and articulated through a structured approach to listening. Using recorded examples, students learn how to recognize, identify and discuss musical elements, devices, styles and genres.

☐†EDEA 342 Curriculum and Instruction in Drama Education.

(3) Pedagogical theory and practical applications in the teaching of developmental drama, dramatic forms, improvisation and theatre arts.

☐†EDEA 345 Music Curriculum and Instruction for Generalists.

(3) Study of materials and instructional techniques grounded in an understanding of basic musical concepts and contemporary theories of music teaching and learning. Definition of musical objectives and rationales, selection and development of materials, review of MEQ guidelines. Participation through singing, movement, listening, discussion and lesson planning and implementation.

▲ EDEA 352 Music Listening in Education.

(3) A perceptual development approach to music listening focusing on the relationship between the affective response and the musical stimulus. Designed to enhance the listening experience and to facilitate meaningful discourse about music. No formal music training is required.

☐▲ EDEA 362 Movement, Music and Communication.

(3) Coordination of musical perception and movement and development of communication skills that arise from this combination. Structured and improvised eurhythmic activities are used to explore the relationship between time, space and energy. Classroom applications are explored. No formal music training is required.

☐▲ EDEA 394 Creative Dramatics for Classroom.

(3) (Offered through Continuing Education) A participatory course in creative drama and the use of improvisational techniques in the pursuit of student development.

☐▲ EDEA 396 Speech in Drama Education.

(3) (Offered through Continuing Education) A study of the elements of voice production in teaching public speaking and drama, including training activities to develop the voice in speech and drama. Theoretical aspects of the structure and functioning of the voice and speech mechanism are included.

☐▲ EDEA 404 Painting 5.

(3) (Prerequisite: EDEA 305) Major problems in graphic expression. A tutorial course where the student selects the instructor. Individual conferences and criticism leads the student to an independent approach to painting.

☐▲ EDEA 405 Painting 6.

(3) (Prerequisite: EDEA 404) The student will be required to work in a variety of sizes up to mural painting. Exploration of selected media and new dimensions of design.

EDEA 407 Final Year Professional Seminar Music.

(3) (Corequisite: EDFE 407) (Restriction: Students in B.Ed. in Music or Concurrent B.Ed./B.Mus.) Summary of philosophical, theoretical and practical issues related to the profession of teaching.

☐EDEA 410 Aesthetics and Art for the Classroom.

(3) (Offered through Summer Studies) The course is designed to address the need for teachers to be able to lead students to increased perceptual awareness and critical thinking in relation to their visual environment. Museum visits are a regular component of this course.

※†EDEA 442 Elementary Music Curriculum and Instruction.

(3) Preparation for Third Year Field Experience. Includes the study of curriculum content and instructional approaches, classroom management issues, lesson planning and program development for elementary schools.

※†EDEA 472 Secondary Music Curriculum and Instruction.

(3) Preparation for Fourth Year Field Experience. Includes the study of curriculum content and instructional approaches, classroom management issues, lesson planning and program development for secondary schools.

☐▲ EDEA 496 Sculpture 1.

(3) (Offered through Continuing Education) An investigation of basic sculpture methods and concepts with a view toward developing personal aptitudes. Development of three-dimensional thinking through direct experience with processes using new and traditional materials.

☐▲ EDEA 497 Sculpture 2.

(3) (Prerequisite: EDEA 496) Further exploration of processes introduced in Sculpture 2 plus an introduction to constructive sculpture.

EDEC-Curriculum and Instruction

Offered by: Integrated Studies in Ed

▲ EDEC 200 Introduction to Inuit Studies.

(3) An introductory survey of Inuit history, language and culture, and of the social and political issues affecting contemporary Inuit life.

EDEC 201 First Year Professional Seminar.

(1) (Corequisite: EDFE 200) (Restriction: Open to B.Ed. Secondary and B.Ed. K/Elem. students only) Orientation to the culture of the school and to teaching as a profession, focusing on the general functioning of schools. Professional portfolios will be introduced.

▲ EDEC 202 Effective Communication.

(3) (Restriction: Not open to students who have taken EDES 201, EDEC 203, EDEC 204, EDEC 205 or EDEC 206) (Offered through Continuing Education) (Note that Arts students are allowed 6 credits in writing courses and may only take an EC course before EAPR 250.) A course designed to help students develop the quality and effectiveness of their writing and speaking (in English) in a variety of academic disciplines and professional situations. Emphasis is on identifying, analyzing, and solving writing and speaking problems.

▲ EDEC 203 Communication in Education.

(3) (Restriction: Education students who have not taken EDES 201 or EDEC 202) (Because this course uses a workshop format, attendance at first class is desirable.) Written and oral communication in Education (in English): emphasis on strategies for identifying, analyzing and solving writing and speaking problems. Course work based on academic and professional communication in education, with a particular focus on classroom communication.

EDEC 204 Communication in Social Work.

(3) (Restriction: Social Work students who have not taken EDES 201 or EDEC 202) (Because this course uses a workshop format, attendance at first class is desirable.) Written and oral communication in Social Work (in English): emphasis on strategies for identifying, analyzing and solving writing and speaking problems. Course work based on academic and professional communication in social work.

EDEC 205 Communication in Management 1.

(3) (Restriction: Placement test required) (Restriction: B.Com. students who have not taken EDES 201 or EDEC 202) (Because this course uses a workshop format, attendance at first class is desirable.) (Continuing Education: requirement for for the EA, AAC, and the Canadian Institute of Management) Written and oral communication in Management (in English): emphasis on strategies for identifying, analyzing and solving writing and speaking problems. Course work based on academic and professional communication in management.

EDEC 206 Communication in Engineering.

(3) (Limited enrolment) (Restriction: B.Eng. students who have not taken EDES 201 or EDEC 202) (Because this course uses a workshop format, attendance at first class is desirable.) Written and oral communication in Engineering (in English): strategies for generating, developing, organizing, and presenting ideas in a technical setting; problem-solving; communicating to different audiences, editing and revising; and public speaking. Course work based on academic, technical, and professional writing in engineering.

EDEC 207 Communication in Public Relations.

(3) (Restriction: Students in Public Relations Management Certificate only.) Identifying, analyzing, and solving communication problems in a variety of public relations

contexts. Emphasis on news releases, media kits, informational and promotional materials, and oral presentations.

EDEC 208 Expressive Writing.

(3) The focus is on strategies for writing authentic, authoritative texts as well as achieving correct grammar and appropriate style as well as the drafting and revising of a collection of short non-fiction pieces in a collaborative setting.

EDEC 215 English Language Requirement.

(0) The English language proficiency test is a program requirement that must be completed in the first term. Anyone who fails the test must re-take and pass it prior to the third-year field experience. Anyone who is unsuccessful after two attempts must withdraw from the program.

EDEC 216 Aboriginal Language Requirement.

(0) The Aboriginal language proficiency test is a program requirement. Anyone who fails the test must retake and pass it prior to the third year field experience. Anyone who is unsuccessful after two attempts must withdraw from the program.

EDEC 220 Curriculum Development.

(3) This course, introducing Aboriginal educators to the principles and processes of curriculum development, emphasizes the impact of language and culture on the development of materials. Features of the process of curriculum and materials design, which are strategically important in meeting the needs of Aboriginal students, are highlighted.

EDEC 221 Leadership and Group Skills.

(3) (Restriction: Normally for students registered within Certificate in First Nations and Inuit Educational Leadership) Management, effective team leadership, group dynamics, and communications skills crucial to First Nations and Inuit community-based educational leaders. Differences between traditional and mainstream institutional practices and leadership skills.

EDEC 222 Personnel Management and Support.

(3) (Restriction: Normally for students registered within Certificate in First Nations and Inuit Educational Leadership.) Methods of appropriate and supportive supervision in a First Nations and Inuit educational milieu. Techniques of developing staff members' potential through staff development and quality performance. A compulsory practicum component will demonstrate students' transfer of theory to practice.

EDEC 233 First Nations and Inuit Education.

(3) (Restriction: Not open to students who have taken EDEE 441. Not for credit if EDEC 248 or EDER 464 has been or is being taken.) Study of First Nations and Inuit schools as diverse social, cultural, linguistic, political and pedagogical settings. Considers school and community minority-majority interactions and their influence on teaching and learning in educational settings. Examines how a teacher's personal practice can be influenced by an understanding of these factors.

▲ EDEC 236 Mohawk Second Language 2.

(3) (Prerequisite: EDEE 296) Students will continue their study of Mohawk syntax and morphology and improve their literacy. Oral skills will focus on basic interactions and classroom commands. Students will discuss the difficulties encountered in learning a second language and consider implications for their students' language learning.

▲ EDEC 239 Mi'kmaq Language 1.

(3) Students will learn the phonological system and develop their literacy skills. They will also begin to explore Mi'kmaq syntax and morphology. Word generation conventions will be introduced and Mi'kmaq labels developed to describe how the language functions.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

▲ EDEC 241 Cree Language 1.

(3) Students will learn their own phonology and see how the phonological system is reflected in dialects. They will learn the spelling rules and develop their literacy skills in syllabics. Finally, they will derive Cree grammatical terms and begin to study Cree morphology and syntax.

▲ EDEC 242 Cree Language 2.

(3) (Prerequisite: EDEC 241) Students will study the morphology and syntax analysis of Cree at a more advanced level and begin the study of word generation conventions. In addition, features of Cree that are difficult in first language acquisition will be highlighted and implications for classroom practice discussed.

EDEC 243 Teaching: Multigrade Classrooms.

(3) This course introduces students to concepts and strategies for organizing, teaching, and evaluating learning in classes in which there are students from 2, 3 or 4 grade levels.

▲ EDEC 244 Issues in Aboriginal Education.

(3) The content of this course changes depending on the needs and interests of the students and the educational communities participating in programs administered by First Nations and Inuit Education. It always addresses issues related to Aboriginal education, e.g., local control, development of linguistic and cultural policies.

EDEC 245 Middle School Teaching.

(3) Explores the philosophy of middle school teaching and how this impacts on the institutional, curricula and instructional decisions made in meeting the specialized needs of Aboriginal adolescents. Particular attention will be paid to how middle school philosophy can be integrated with Aboriginal values.

EDEC 246 Middle School Curriculum.

(3) (Prerequisite: EDEC 245) Curriculum principles underlying an integrated approach to learning in the middle school level; surveys various curricula looking at program structures; explores teaching and learning methodologies appropriate for this age level when implementing an integrated curriculum, with particular attention to integrating indigenous language and culture.

EDEC 247 Policy Issues in Quebec Education.

(3) (Restriction: Not open to students who have taken EDEM 405.) This course examines the organization of education in Quebec from various perspectives, including historical, political, social and legal. It aims to provide students with sufficient knowledge that they can begin the life-long learning process of a professional educator, aware of, and contributing to, the policy talk on school.

EDEC 248 Multicultural Education.

(3) (Restriction: Not open to students who have taken EDEC 410 and EDER 464.) Introduction to theories about intercultural and multicultural education in Quebec and Canadian schools.

EDEC 260 Philosophical Foundations.

(3) (Restriction: Not open to students who have taken EDER 400.) Ideas essential for the development of a coherent educational theory and sound professional practice. Reflections on: the nature of the person, of reality, of knowledge, and of value; the aims of education, the nature of the school and the curriculum, the roles and responsibilities of professional educators.

EDEC 261 Philosophy of Catholic Education.

(3) (Restriction: Not open to students who have taken EDER 398.) An exploration of the philosophy of Catholic education, and its relevance in the world today.

EDEC 262 Media, Technology and Education.

(3) (Restriction: Not open to students who have taken EDEC 402.) Orientation to the equipment and systems of educational technology. Examination of theories of educational technology, media education and technology education and the exploration and development of possible applications in school settings.

EDEC 300 Special Topics 1.

(3) (Offered through Continuing Education) Selected topics and contemporary developments in the areas of elementary and/or secondary education. The content will vary from year to year and will be announced prior to registration.

EDEC 301 Special Topics 2.

(3) Selected topics and contemporary developments in the areas of elementary and/or secondary education. The content will vary from year to year and will be announced prior to registration.

EDEC 305 Communication in Management 2.

(3) (Restriction: B.Com. students. Prerequisite: EDEC 205 or based on the results of Placement Test.) (Because this course uses a workshop format, attendance at first class is desirable.) Advanced course (in English) in professional written and oral communication in Management. Assignments include résumés, business proposals, public relations documents and oral presentations. Students use a wide variety of communication technologies such as presentation software, video equipment, e-mail and the Internet.

EDEC 306 Third Year Professional Seminar (Sec).

(3) (Prerequisites: EDFE 254.) (Corequisite: EDFE 351.) (Restriction: Open to B.Ed. Secondary students only) Preparation for the third field experience through engaging in the full spectrum of unit/lesson planning, micro-teaching, critical analysis and self-reflection. Professional portfolios will be addressed.

EDEC 308 Learning to Write Fiction.

(3) Course focuses on basic story elements: character development, plot structure, setting, description, dialogue, point of view and the drafting and revising of stories through a shared experience within a community of supportive readers.

EDEC 309 Learning to Write Poetry.

(3) Basic poetic techniques such as freewriting, lineation, metaphor, simile, and scansion. Collaborative development and oral readings.

▲ EDEC 403 The Dialects of Inuktitut.

(3) (Prerequisite: EDEC 344) Study of the main Eskimo-Aleut dialects from Siberia to Greenland, looking at the effect of Inuit migrations across the Arctic on the development of dialectal differences. The main phonological, grammatical and lexical differences between the dialects and the patterns underlying these differences will be examined.

EDEC 404 Fourth Year Professional Seminar (Sec).

(3) (Prerequisites: EDEC 306, EDFE 351.) (Corequisite: EDFE 451) (Restriction: Open to B.Ed. Secondary students only) Preparation for the final field experience and entry into the teaching profession. Emphasis will be placed on developing the ability to demonstrate ethical and responsible professional behaviour in the performance of duties. Final preparation of professional portfolios will be addressed.

EDEC 405 Fourth Year Professional Seminar (K/Elem).

(3) (Prerequisites: EDFE 303, EDEC 350, EDEC 352 and EDEC 355.) (Corequisite: EDFE 405) (Restriction: Open to B.Ed. K/Elem. students only) Preparation for the final field experience and entry into the teaching profession. Emphasis will be placed on developing the ability to demonstrate ethical and responsible professional behaviour in the performance of duties. Final preparation of professional portfolios will be addressed.

EDEE-Elementary Education

Offered by: Integrated Studies in Ed

EDEE 223 Language Arts.

(3) This course will explore the current research and theory of language learning and the practices which provide meaningful language experiences in the context of the pre-school and elementary classroom.

□†EDEE 224 Language Arts Part 2.

(3) (Prerequisite: EDEE 223) This course will explore the current research and theory of language learning and the practices which provide integrated and meaningful language experiences in the context of the pre-school and elementary classroom.

▲ EDEE 230 Elementary School Mathematics.

(3) A course specially designed for elementary school teachers to provide the basic foundations, insight and understanding of the Quebec modern elementary mathematics programs.

EDEE 234 Elementary School Geometry.

(3) A course specially designed for elementary school teachers to provide the basic foundations, insight and understanding of the geometry found in the Quebec modern elementary mathematics programs.

EDEE 240 Use and Adaptation of Curricula.

(3) Provincial or Nunavut curricula as a basis for planning, materials production and evaluation. Methods of adapting curricula to local needs and of developing local courses of study in First Nations and Inuit community schools.

EDEE 241 Teaching Language Arts.

(3) (Prerequisite: Fluency in Inuktitut or another Aboriginal language) Organization and planning of Language Arts programs in Inuktitut or another Aboriginal language. Preparation and presentation of lesson sequences. Use of various techniques to improve language skills in listening, speaking, reading and writing.

EDEE 242 Teaching Mathematics.

(3) An introduction to mathematical concepts and approaches to teaching First Nations or Inuit students at the elementary level. Emphasis on the preparation and use of materials directly related to First Nations or Inuit life.

EDEE 243 Reading Methods in Inuktitut/Cree.

(3) (Prerequisite: Fluency in Inuktitut/Cree syllabics) Overview of reading theories and their application to Inuktitut/Cree; processes used by proficient readers. Methods of teaching reading.

EDEE 245 Orientation to Education.

(3) The First Nations or Inuit classroom as a unique pedagogical setting. Introduction to planning and maintaining a learning environment for First Nations or Inuit children. Study and application of differential learning styles.

▲ EDEE 246 Cultivating Language and Thought.

(3) Study and observation of spoken language development and its maturation in First Nations or Inuit children. Application of observed data to the selection and devising of appropriate materials and methods for pre-school and elementary levels.

EDEE 248 Reading and Writing Inuktitut/Cree.

(3) (Prerequisite: Fluency in Inuktitut/Cree syllabics) Methods of teaching syllabic reading and writing. Understanding the principles of sight word reading instruction, child observation, material development and guided instruction.

▲ EDEE 249 Inuktitut Orthography and Grammar.

(3) (Prerequisite: Fluency in Inuktitut) Structure and morphology of Inuktitut for teachers working in that language. Use of orthography, both qaliujaaqpait (Roman script) and qaniujaaqpait (syllabics) as established by the Inuit Cultural Association.

EDEE 250 The Kindergarten Classroom.

(2) (Restriction: Not open to students who have taken EDEC 310) An orientation to the Kindergarten curriculum. Integration of the school subject areas (language arts, second language, mathematics, social sciences, science, expressive arts, moral and religious education, and physical education) in a manner appropriate to the developmental level of the pre-school child.

EDEE 261 Reading Clinic - Early Childhood.

(3) Reading problems at a readiness and basic decoding level presented in a clinic format covering classroom diagnosis and remediation.

▲ EDEE 270 Elementary School Science.

(3) Science as a means of exploring and explaining our environment. A study of some of the fundamental concepts and process skills common to most elementary programs.

EDEE 275 Science Teaching.

(2) (Prerequisite: EDEE 270.) (Restriction: Not open to students who have taken EDEE 372 (Teaching Science)) A study of science programs and teaching strategies appropriate for providing elementary school children with an appreciation of the nature and method of science inquiry.

EDEE 280 Geography, History and Citizenship Education.

(3) (Restriction: Faculty of Education students.) Designed for elementary school teachers. A multi-disciplinary and cross-curricular investigation of various citizenship education themes, geographical regions and historical periods as outlined in the Quebec Education Program.

EDEE 282 Teaching Social Sciences.

(2) (Prerequisite: EDEE 280.) (Restriction: Not open to students who have taken EDEE 382) Programs, materials and strategies for social studies from Kindergarten through grade six.

EDEE 290 Cooperative Learning.

(3) Principles of cooperative learning and how they may be applied in First Nations and Inuit schools to the creation of team-building classroom activities and to the development of culturally appropriate learning materials.

EDEE 291 Cultural Values and Socialization.

(3) An introduction to the educational implications of cultural values and patterns of socialization of children. Topics will include a description of the cultural values of Aboriginal peoples, home styles of communication, learning and discipline and intercultural educational issues.

EDEE 292 Using Instructional Resources.

(3) Students will learn to find, assess, and use a variety of instructional resources. Specifically, they will learn how to evaluate the instructional value of software packages and other established audio-visual materials; how to make and use simple audio-visual materials; and how to find additional resource material in the library.

▲ EDEE 296 Mohawk Second Language 1.

(3) Students will develop a basic knowledge of the Mohawk phonological system and have some understanding of the morphological and syntactic rules, the stress and intonation patterns which control the language, and how Mohawk culture is reflected in the language.

▲ EDEE 297 Mohawk Language 1.

(3) Students will learn the Mohawk phonological system (including glottal stop, length mark, up and down stress). Syntactically and morphologically, they will focus on the pronoun system (tense included). Word generation conventions will be analyzed and Mohawk labels developed to describe how the language functions.

▲ EDEE 298 Mohawk Language 2.

(3) (Prerequisite: EDEE 297) Students will complete their earlier study of the predictable items in the language, and then will focus on the non-predictable items in Mohawk: irregular verbs, reflexive and semi-reflexive verbs, purposive stem, translocative, etc. Importance will be placed on developing reading and writing skills.

▲ EDEE 325 Children's Literature.

(3) (Restriction: Not open to students who have taken ENGL 240, ENGL 341) (Limited enrollment) Selection and use of literature suitable for children in the elementary school.

EDEE 332 Teaching Mathematics 1.

(3) (Prerequisite: EDEE 230.) Curriculum trends in teaching mathematics to children. Programs, methods, materials and evaluation procedures appropriate for the elementary school. Please check timetable information for labs schedule.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

* Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

▲ EDEE 340 Special Topics: Cultural Issues.

(3) Seminars on Inuit culture or on selected aspects of the culture of First Nations peoples. Topics will include historical cultural contacts, native oral tradition, religious beliefs and cultural change. Preparation of a project on an aspect of First Nations or Inuit life will be required.

▲ EDEE 342 Intermediate Inuktitut/Amerindian Language.

(3) (Prerequisite(s): EDEE 249 or equivalent, e.g. EDEE 295, EDEE 298 or permission of Director) A study for Inuktitut/Amerindian language speakers, of Inuktitut/Amerindian language phonology and structure, emphasizing the connection between the two, demonstrating the orderliness of many dialectic differences.

▲ EDEE 344 Advanced Inuktitut/Amerindian Language.

(3) (Prerequisite(s): EDEE 342 or permission of Director) The final course in a set dealing with Inuktitut/Amerindian Language phonology and structure. An understanding of basic Inuktitut/Amerindian Language syntax in particular, rules governing verb and possessive endings.

▲ EDEE 345 Literature and Creative Writing 1.

(3) A study of the development of oral and written poetry and prose in the various dialects of Inuktitut or of another Aboriginal Language from pre-European contact to the present day. Emphasis on themes and structures in contemporary writings. Original production of poetry, narrative, drama and journalism in the selected language is required of each student.

▲ EDEE 346 Literature and Creative Writing 2.

(3) (Prerequisite: EDEE 345) A continuation of course EDEE 345.

EDEE 350 Integrating the Curriculum.

(2) (Corequisites: EDEE 352, EDEE 355 and EDFE 303.) (Restriction: B.Ed. (K/Elem) students) Strategies and methods for integrating the individual subject areas in the elementary school curriculum, using the Québec curriculum as the primary example.

EDEE 352 Classroom Practices.

(2) (Corequisites: EDEE 350, EDEE 355 and EDFE 303.) (Restriction: B.Ed. (K/Elem) students) Theory-based strategies for setting up, managing and teaching in the elementary school classroom.

EDEE 355 Classroom-based Evaluation.

(3) (Corequisites: EDEE 350, EDEE 352 and EDFE 303.) (Restriction: B.Ed. (K/Elem) students) The role of evaluation within kindergarten/elementary school programs. Topics include the kinds of information needed, different techniques for collecting that information, and ways of interpreting it to make educational decisions. Principles and a variety of methods for evaluation are discussed and practiced.

EDEE 435 Mathematics Topics.

(3) (Restriction: Permission of instructor) (Offered through Continuing Education) Seminars and workshops on specific topics in mathematics education. One to three topics will be chosen, from such areas as construction of teaching materials, evaluation, audio-visual techniques, use of calculating instruments, readiness for mathematics concepts, and curriculum development. This course will make significant use of microcomputers in mathematics education.

EDEE 444 First Nations and Inuit Curriculum.

(3) An introduction to First Nations and Inuit curriculum: how curriculum needs in Aboriginal communities are similar to and different from mainstream ones, the range of ways in which First Nations and Inuit have responded to curriculum needs based on language, culture, and community perceptions.

▲ EDEE 473 Ecological Studies.

(3) (Offered through Summer Studies 2009) A lecture, laboratory and field course to train elementary school teachers in the principles and practices of field biology and nature tours. The observation and identification of various organisms and a study of their ecological relationships in the web of life.

▲ EDEE 474 Problems of the Environment.

(3) (Offered through Summer Studies 2008) A modern study of environmental problems designed for elementary school teachers. The role of humanity in the web of life in relation to conservation, the population explosion, waste disposal, sewage treatment, air and water pollution, chemical and radiation

pollution.

EDEM-Admin & Policy Studies in Ed

Offered by: Integrated Studies in Ed

EDEM 202 Educational and Administrative Institutions.

(3) (Restriction: Limited to students enrolled in off-campus programs delivered through First Nations and Inuit Education) A study of the inter-dependency of the various institutions affecting the education of Inuit or First Nations children. Relationships of non-education institutions, such as Co-ops, Health and Social Services, and other government services, to educational services.

EDEM 220 Contemporary Issues in Education.

(3) An introduction to contemporary issues in education in local, national and international contexts, including a critical perspective on educational issues by drawing on a variety of analytical frameworks.

EDER-Religious Studies

Offered by: Integrated Studies in Ed

▲ EDER 207 'Who is Christ?'

(3) (Offered through Continuing Education) An open search for the authentic person of Christ - from Scriptures and present day manifestations.

□▲ EDER 209 Search for Authenticity.

(3) (Offered through Continuing Education) A search for meaning in contemporary living as reflected in selected authors.

□ EDER 252 Understanding and Teaching Jewish Life.

(3) An exploration of Jewish holidays and life cycle rituals. Emphasis is placed on their historical development and philosophical meaning. Curriculum developed for teaching this material in various Jewish educational frameworks is examined and evaluated.

□▲ EDER 309 The Religious Quest.

(3) (Offered through Continuing Education) An approach to the study of religious experience as expressed in humanity's major religious traditions, especially Christianity, Judaism, Islam, Hinduism and Buddhism.

EDER 318 Teaching the Jewish Liturgy.

(3) (Restriction: Not open to students who have taken EDER 407.) An examination of curriculum developed for teaching prayer and fostering spirituality within Jewish educational frameworks. Excerpts from the liturgy of the Jewish people are studied with an emphasis on the theological, moral, and philosophical issues that they raise.

EDER 319 Teaching the Holocaust.

(3) (Restriction: Not open to students who have taken EDER 421.) An examination of approaches, strategies, and techniques of teaching the Holocaust, including methodologies for using the Holocaust as a basis for teaching about prejudice, cultural identity, racism, human rights and moral responsibility.

□ EDER 320 Visions and Realities of Jewish Education.

(3) A course in the philosophy of Jewish education. Various perspectives on the purpose of Jewish education are explored, and consideration is given to how contemporary Jewish ideologies can be translated into educational forms. Challenges facing Jewish education as it approaches the millennium are examined. Research in Jewish education is evaluated.

EDER 360 Ethics and Religious Culture (K/Elementary).

(2) (Restriction: Not open to students who have taken EDER 333) Teaching methods and pedagogical resources for programs in moral education, ethics, and religious culture in the K/elementary school curriculum.

※ EDER 372 Ethics and Religious Culture (Secondary).

(3) (Prerequisite: A course in World Religion with a RELG or EDER prefix and a course in Ethics with a PHIL or EDER prefix - refer to B.Ed., Secondary Program advising information.) Teaching methods and pedagogical resources for programs in moral education, ethics, and religious culture in the secondary school.

***EDER 392 Guiding Religious Response - Secondary.**

(3) A study of developmental religious and moral life of the secondary school student, and of the programs and procedures designed to meet this development.

□▲EDER 394 Philosophy of God.

(3) (Offered through Continuing Education) A critical study of the concept of God from a variety of religious, philosophic and mystical perspectives.

□▲EDER 395 Moral Values and Human Action.

(3) A philosophical critical inquiry into the relationship between belief and conduct oriented toward the teacher and his/her role in education.

□EDER 401 Teaching Biblical Literature - Jewish School 1.

(3) Examination of Biblical passages raising theological, moral, historical, literary, or linguistic challenges, and their interpretation within the rabbinic tradition and modern scholarship. Methodologies for teaching such passages in Jewish studies classrooms are discussed. Some familiarity with Biblical and Rabbinic Hebrew is essential, but most texts are available in English.

EDER 451 Tutorial in Jewish Education.

(3) A reading course for students who wish to explore intensively the literature in a particular area related to teaching Jewish studies.

□▲EDER 461 Society and Change.

(3) Factors influencing patterns of stability and change in major social institutions and the implications for formal and non-formal education.

□▲EDER 473 Living with Insight.

(3) An examination of the moral and spiritual challenges of the modern and post-modern world. Emphasis will also be placed on the role and responsibility of education in meeting these challenges.

□▲EDER 494 Ethics in Practice.

(3) Fundamental principles of ethics as applied to current moral issues such as abortion, drugs, nuclear war, and discrimination.

EDER 505 Education and Social Issues.

(3) A study of the philosophical aspects of major social issues to education, and of selected approaches to fostering critical thinking concerning such issues.

EDER 520 Issues in Jewish Education.

(3) (Restriction: Not open to students who have taken 422-320 / EDER 320) An exploration of dissenting and complementary perspectives on the purpose of Jewish education. Challenges facing the field of Jewish education are examined. Developments in general education of relevance to Jewish education are considered.

EDER 523 Teaching Judaism: Bible.

(3) (Restriction: Not open to students who have taken 422-401 / EDER 401) (Prerequisite: Knowledge of Hebrew, with permission of instructor) A study of selected narrative, poetic and legal portions of the Pentateuch with a view to teaching this material in Jewish schools. An examination of some of the techniques presently used in the teaching of Bible.

EDER 525 Teaching Judaism: Holidays.

(3) (Restriction: Not open to students who have taken 422-250 / EDER 252) An exploration of the rituals, customs, values and historical development of Jewish holidays. Methods of applying this material to the Jewish studies classroom are examined.

EDER 526 Teaching Judaism: Liturgy.

(3) (Restriction: Not open to students who have taken 422-400 / EDER 407) (Prerequisite: Knowledge of Hebrew, with permission of instructor.) An exploration of curriculum developed for teaching prayer and fostering spirituality within Jewish educational frameworks. Selected portions of the High Holy Day liturgy are examined with a view to teaching this

material in Jewish settings.

EDER 527 Teaching Judaism: Special Topics.

(3) In-depth examination of topics in Jewish education. Content will vary from year to year.

EDER 528 Teaching Judaism: The Holocaust.

(3) (Restriction: Not open to students who have taken 422-421 / EDER 421) An exploration of approaches and techniques for the teaching of the Holocaust. Strategies for using Holocaust education as a basis for discussing prejudice and moral responsibility are examined.

EDER 610D1 (7.5), EDER 610D2 (7.5) Internship.

(Restriction: Only open to students in M.A. Culture and Values Non-Thesis (Jewish Education Option)) (Students must register for both EDER 610D1 and EDER 610D2) (No credit will be given for this course unless both EDER 610D1 and EDER 610D2 are successfully completed in consecutive terms) Supervised fieldwork in a Jewish school or educational institution.

EDES-Secondary Education

Offered by: Integrated Studies in Ed

EDES 334 Teaching Secondary Social Studies 1.

(3) (Restriction: Not open to students who have taken EDEC 334.) An examination of Quebec and other secondary school social studies curricula: Objectives; theoretical orientation; course structures; curriculum resources. Teaching and learning methodologies both common to the social studies and specific to the disciplines of history, geography, and economics.

EDES 335 Teaching Secondary Science 1.

(3) (Restriction: Not open to students who have taken EDEC 335.) A survey of the philosophy and curriculum principles behind modern high school courses in the physical and life sciences, especially related to the Quebec context. An examination of teaching methods for junior and senior high school science.

EDES 350 Classroom Practices (Secondary).

(3) Competency-based discipline skills and methods of classroom management, emphasizing the relationship between theory and practice; the rationale for various approaches to classroom management; strategies for developing instruction that focus attention and reduce off-task behaviour.

***†EDES 353 Teaching Secondary Mathematics 1.**

(3) (Prerequisites: 18 credits in post-secondary mathematics) Directed observations in secondary schools and the study of the general objectives and curriculum trends. The learning problems, teaching strategies and mathematical concepts encountered in the High School curriculum.

***†EDES 361 Teaching Secondary English 1.**

(3) Examination of appropriate materials related to the high school English programs; exploration of various techniques of teaching language, literature, writing and dramatics in the secondary school.

EDES 365 Experiences in Communications.

(3) (Offered through Continuing Education) Personal development of students as communicators; involvement of the imagination in individual and group projects in language and in another chosen medium of communication: analysis of experiences in projects in relation to general problems of communication.

▲ EDES 366 Literature for Young Adults.

(3) Selection and use of literature for the differing abilities and interests of high school students.

EDES 434 Teaching Secondary Social Studies 2.

(3) (Prerequisite: EDES 334.) (Restriction: Not open to students who have taken EDES 389.) This course will examine the nature, content, and methodology of social studies education

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

* Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

in the secondary school.

EDES 435 Teaching Secondary Science 2.

(3) (Prerequisite: EDES 335.) (Restriction: Not open to students who have taken EDES 370.) Principles and procedures for implementation of the general science curriculum in the secondary schools of Québec. A survey of teaching methods and laboratory management appropriate to the junior and senior high school level.

EDES 453 Teaching Secondary Mathematics 2.

(3) (Prerequisite: EDES 353.) (Restriction: Not open to students who have taken EDEC 338.) This course supplements EDES 353 for students who select Mathematics as a single teachable subject. Evaluation of learning in Mathematics, obstacles to learning, technological aids to learning.

EDES 461 Teaching Secondary English 2.

(3) (Restriction: Open to B.Ed Secondary students having English as a teaching option.) (Prerequisite : EDES 361) Special interest areas in the teaching of English in the light of contemporary theories and research.

EDET-Vocational Education

Offered by: Integrated Studies in Ed

EDET 360 Teaching Business Subjects.

(3) (Offered through Continuing Education) A course in general teaching principles which will include the teaching and learning process, lesson planning, unit planning, and techniques of instruction specific to: a) Accounting and Business Machines b) Typewriting and Shorthand.

***EDET 373 Teaching Technical Subjects.**

(3) (Offered through Continuing Education) Methods and techniques of instruction in vocational education subjects. Classroom management and administration. Lesson planning and use of instructional materials. Individual assignments, demonstrations and reports. Special problems of the teacher.

EDET 376 Evaluation: Vocational Education.

(3) (Offered through Continuing Education) Emphasis on student growth and progress in public education; appraisal of specialized techniques of evaluation, teacher made tests, and data analysis as specifically related to Technical-Vocational Education.

EDET 395 Principles and Foundations.

(3) (Offered through Distance Education) A study of leaders, movements, legislation, events, and institutions that have contributed to the formation and development of vocational education. Special attention given to economic, social and philosophical factors.

EDET 398 Special Project.

(3) (Offered through Continuing Education) (May also be offered through Distance Education.) A project related to the student's teaching concentration will be investigated, developed, produced, implemented, and/or evaluated, depending on the nature of the project. Students must identify the problem or topic to be investigated and obtain approval of the instructor. Includes preparation and submission of a written report.

EDFC-Bachelor of Ed Core Program

Offered by: Education - Dean's Office

EDFC 497 Individual Research Project.

(3)

EDFE-Student Teaching

Offered by: Education - Dean's Office

EDFE 200 First Field Experience (K/Elem & Secondary).

(2) (Corequisite: EDEC 201) (Restriction: Open to B.Ed. Secondary and B.Ed. K/Elem. students) Students are assigned to a school for a "participant observer" field experience for a minimum of 10 days.

EDFE 205 First Field Experience (Music).

(2) (Corequisite: EDEA 206) Ten days of observation and some limited teaching in an elementary school under the supervision of a cooperating music teacher.

EDFE 207 2nd Field Experience Music.

(4) (Prerequisite: EDFE 205.) (Restriction: Students in B.Ed. in Music and Concurrent B.Ed./B.Mus.) Twenty days of observation and limited teaching in a secondary school under the supervision of a cooperating music teacher.

EDFE 208 Second Field Experience (Music).

(3) (Prerequisite: EDFE 205.) (Restrictions: Students in B.Ed. in Music and concurrent B.Ed./B.Mus. Not open to students who have taken EDFE 207.) (Note: Expectations for this field experience, according to your program can be found at www.mcgill.ca/ost.) A minimum of 15 days of supervised teaching in a school.

EDFE 209 First Field Experience (TESL).

(2) (Prerequisite: EDSE 300.) (Corequisite: EDSE 209) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) Students are assigned to a school for a "participant observer" field experience for a minimum of 10 days.

EDFE 214 Aboriginal Education Practicum 1.

(3) (Restrictions: Not open to students who have taken EDFE 444. Open to students registered in the Certificate in Education for First Nations and Inuit.) Observation and limited teaching in an elementary school.

EDFE 246 First Field Experience (Physical Education).

(3) (Prerequisite: EDKP 342) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 15 days of supervised student teaching in Physical Education in an elementary school.

EDFE 253 Second Field Experience (K/Elem).

(4) (Prerequisite: EDFE 200, EDEC 201.) (Restriction: Restricted to B.Ed. (K/Elem) students) Initial supervised teaching experience in an elementary school classroom.

EDFE 254 Second Field Experience (Secondary).

(3) (Prerequisite: EDEC 201 and EDFE 200) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 15 days of supervised student teaching in a school.

EDFE 255 Second Field Experience (TESL).

(3) (Prerequisites: EDSE 210, EDFE 209.) (Restrictions: Open only to B.Ed. TESL students. Not open to students who have taken or are taking EDFE 259.) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 15 days of supervised student teaching in a school.

EDFE 256 Second Field Experience (Kindergarten/Elementary).

(3) (Prerequisites: EDEE 275, EDEE 223, EDEE 250, EDEE 282, EDEE 332, EDFE 200, EDEC 201.) (Restrictions: B.Ed (K/Elementary) students. Not open to students who have taken EDFE 253.) (Note: Expectations for this field experience, according to your program can be found at www.mcgill.ca/ost.) A minimum of 15 days supervised student teaching in a school.

EDFE 260 Stage de familiarisation.

(1) (Restriction: Not open to students who have taken UdeM: EDU 1060.) Stage de familiarisation. à l'école en milieu pluriethnique et d'introduction à la fonction enseignante. Observation des élèves à l'école. Contacts avec des intervenants. Étude du projet éducatif.

EDFE 261 Stage d'assistantat - 2e année.

(3) (Prerequisites: EDFE 260.) (Corequisites: EDSE 260, EDSE 301, EDSE 444) Interventions progressives par tutorat auprès d'un élève ou de petits groupes d'élèves au primaire en immersion sous la supervision de l'enseignement. Assistant auprès d'un enseignant associé.

EDFE 303 Third Field Experience (K/Elem).

(7) (Prerequisites: EDEE 275, EDEE 223, EDEE 250, EDEE 282, EDEE 332, EDEC 215, EDFE 253.) (Corequisites: EDEE 350, EDEE 352 and EDEE 355.) (Restriction: Open to B.Ed. K/Elem. students only) 35 to 40 days of student teaching in a host school.

EDFE 305 3rd Field Experience Music.

(7) (Prerequisites: EDEC 215, EDFE 207.) 35 to 40 days of student teaching in a host school.

EDFE 306 Third Field Experience (Kindergarten/Elementary).

(8) (Prerequisites: EDEE 275, EDEE 223, EDEE 250, EDEE 282, EDEE 332, EDEC 215, EDFE 256.) (Corequisites: EDEE 350, EDEE 352 and EDEE 355.) (Restrictions: B.Ed (K/Elementary) students. Not open to students who have taken EDFE 303.) (Note: Expectations for this field experience, according to your program can be found at www.mcgill.ca/ost.) A minimum of 40 days of supervised student teaching in a school.

EDFE 308 Third Field Experience (Music).

(8) (Prerequisites: EDEC 215, EDFE 208.) (Restrictions: Students in B.Ed. in Music and concurrent B.Ed./B.Mus. Not open to students who have taken EDFE 305.) (Note: Expectations for this field experience, according to your program can be found at www.mcgill.ca/ost.) A minimum of 40 days of supervised student teaching in a school.

EDFE 325 Aboriginal Education Practicum 2.

(3) (Restrictions: Not open to students who have taken EDFE 422. Open to students registered in the Certificate in Education for First Nations and Inuit.) Supervised teaching of designated subject areas in an elementary school.

EDFE 326 Aboriginal Education Practicum 3.

(3) (Restrictions: Not open to students who have taken EDFE 423. Open to students registered in the Certificate in Education for First Nations and Inuit.) Supervised teaching of designated subject areas for a specific number of weeks in an elementary school, including assuming more responsibility for student learning, classroom management and formative and summative evaluation.

EDFE 351 Third Field Experience (Secondary).

(8) (Prerequisites: EDFE 254, EDEC 215.) (Corequisite: EDEC 306) (Restriction: Students must have completed, with a grade of C or higher, a minimum of 24 credits in a teachable subject and have taken the corresponding Methods courses as a co-requisite.) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 40 days of supervised student teaching in a school.

EDFE 359 Third Field Experience (TESL).

(8) (Prerequisites: EDEC 215, EDSL 259, EDFE 259.) (Corequisites: EDSL 309 and EDSL 447) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 40 days of supervised student teaching in a school.

EDFE 361 Stage d'enseignement 1.

(7) (Prerequisites: EDSL 260, EDFE 261.) (Corequisites: EDSL 391, EDSL 394.) (Restriction: Not open to students who have taken UdeM: EDU 3060.) Enseignement au secondaire en milieu pluriethnique. Gestion de classe, intervention et réflexion sur les pratiques. Réalisation de projets.

EDFE 362 Stage d'enseignement en Français langue seconde.

(7) (Prerequisite: EDFE 261) (Corequisites: EDSL 320, EDSL 341, EDSL 472) Enseignement accompagné d'un enseignant associé, avec prise en charge d'une classe.

EDFE 373 Second Field Experience (Physical Education).

(3) (Prerequisite: EDFE 246) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 15 days of supervised student teaching in Physical Education in a secondary school.

EDFE 374 Field Experience Secondary School One Subject.

(3) (1 subject)

EDFE 380 Third Field Experience (Physical Education).

(7) (Prerequisite: EDPE 373.) (Corequisite: EDKP 442.) (Restriction: Only open to B.Ed. Physical and Health Education students.) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 40 days of supervised student teaching

Physical Education in a school.

EDFE 406 Fourth Field Experience (K/Elem).

(7) (Prerequisite: EDEE 223, EDEE 332, EDEE 275, EDEE 282, EDFE 303 or EDFE 306.) (Corequisite: EDEC 405) (Restriction: Restricted to B.Ed. (K/Elem) students.) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 35 days of supervised student teaching in a school. Students will be expected to assume an increasing responsibility for students' learning, classroom management and formative and summative evaluations.

EDFE 407 Fourth Field Experience (Music).

(7) (Prerequisite: EDFE 308 or EDFE 305.) (Corequisite: EDEA 407.) (Restriction: Students in B.Ed. in Music and the Concurrent B.Ed./B.Mus.) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) Thirty-five days of teaching in a secondary school under the supervision of a cooperating music teacher. Students will gradually assume more responsibility for student learning, formative and summative evaluation, and will be expected to experience a full teaching load.

EDFE 425 Aboriginal Education Practicum 4.

(3) (Restrictions: Not open to students who have taken EDFE 394. Open to students registered in the Certificate in Education for First Nations and Inuit.) Teaching and classroom management skills at the elementary and secondary levels.

EDFE 451 Fourth Field Experience (Secondary).

(7) (Prerequisites: EDFE 351.) (Corequisite: EDEC 404.) (Restriction: Open to B.Ed. Secondary students only) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 35 days of supervised student teaching in a school. Students will be expected to assume an increased responsibility for students' learning, classroom management and formative and summative evaluations.

EDFE 459 Fourth Field Experience (TESL).

(7) (Prerequisites: EDSL 309 and EDFE 359.) (Corequisites: EDSL 409 and EDSL 458) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 35 days of supervised student teaching in a school.

EDFE 460 Enseignement en milieu pluriethnique. Gestion

(9) (Prerequisite: EDSL 402, EDFE 361.) (Corequisite: EDSL 498, EDSL 499.) (Restriction: Not open to students who have taken UdeM: EDU 4060) de classe, intervention et réflexion sur les pratiques. Réalisation de projets.

EDFE 461 Stage d'enseignement - immersion.

(9) (Prerequisite: EDFE 362 or EDFE 361.) (Corequisites: EDSL 345, EDSL 420.) Enseignement accompagné d'un enseignant associé, avec prise en charge d'une classe en immersion.

EDFE 478D1 (3), EDFE 478D2 (3) Field Experience (One Subject) - Secondary Level.

(Students must register for both EDFE 478D1 and EDFE 478D2.) (No credit will be given for this course unless both EDFE 478D1 and EDFE 478D2 are successfully completed in consecutive terms) (EDFE 478D1 and EDFE 478D2 together are equivalent to EDFE 478)

EDFE 480 Fourth Field Experience (Physical Education).

(7) (Prerequisite: EDFE 380) (Corequisite: EDKP 494.) (Restriction: Only open to B.Ed. Physical Education students) (Note: Expectations for this field experience, according to your program, can be found at www.mcgill.ca/ost.) A minimum of 35 days of supervised teaching Physical Education in a school.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

EDKP-Kinesiology&Physical Education

Offered by: Kinesiology and Physical Ed

□EDKP 200 Weight Training.

(1)

EDKP 201 Physical Activity Leadership.

(3) The methods of active lifestyle leadership from establishment of appropriate fitness objectives through the means of helping clients achieve their goals. Included are individual and group program designs and exercise precautions in various forms of exercise programs.

▲ EDKP 204 Health Education.

(3) A study of the teacher's role in the total school health program at both elementary and high school levels; current issues in contemporary health education.

▲ EDKP 205 Structural Anatomy.

(3) Skeletal, muscular and nervous system are examined anatomically and physiologically within the realm of how they interact to generate and apply the forces which permit man's mobility.

▲ EDKP 206 Biomechanics of Human Movement.

(3) Analysis of fundamental human movement and the kinematic concepts which underlie each: Stability, agility, walking, running, jumping, throwing, absorbing forces, striking, kicking, spinning, twisting, aquatics and work positions.

EDKP 208 Applied Biomechanics.

(3) (Prerequisite: EDKP 293.) (Restriction: Not open to students who have taken EDKP 206.) Nature and mechanical function of human movement in sport, dance, physical recreation and adapted movement activities.

EDKP 212 Folk Dance.

(1)

EDKP 213 Aquatics 1.

(1)

EDKP 214 Basketball 1.

(1)

EDKP 215 Standard First Aid/Cardio-Pulmonary Resuscitation Level C.

(0) Students are expected to take, on their own in their final year of study, Standard Level Safety First Aid/Cardio-Pulmonary Resuscitation Level "C" course and submit proof of certification to the Department of Kinesiology and Physical Education. Anyone who fails to submit valid proof of certification will not be granted a degree.

EDKP 217 Track & Field / Cross Country.

(2) Skills and techniques of the various disciplines in track and field/cross country and the teaching and evaluation strategies for the elementary and secondary school levels.

EDKP 218 Volleyball 1.

(1)

EDKP 223 Basic Games.

(2) Content and methodology of games teaching in elementary and secondary school settings.

▲ EDKP 224 Foundations of Movement Education.

(3) (Restriction: Not open to P.E. Majors) This course is designed for the elementary school classroom teacher. It will include the study of basic movement education concepts, principles of movement and the role of movement education in the life of the developing child.

EDKP 227 Rugby.

(1)

EDKP 228 Football 1.

(1)

EDKP 229 Ice Hockey 1.

(1)

EDKP 231 Martial Arts.

(1) (Summer)

EDKP 233 Soccer.

(1)

EDKP 234 Team Handball.

(1)

EDKP 236 Softball.

(1)

EDKP 238 Field Hockey 1.

(1)

EDKP 239 Medical Imaging of Anatomy.

(1) This course will examine various non-invasive imaging modalities to observe anatomical systems of living humans in vivo. Structural and functional properties of complex biological systems will be examined

EDKP 240 Winter Activities.

(1)

□EDKP 244 Dance and Fitness.

(1)

EDKP 245 Special Topics 01.

(1)

EDKP 249 Physical Activity Appraisal.

(1)

† EDKP 250 Practicum 1.

(3) A practical work-study experience with a focus on instruction and leadership in fitness. Work will be in a community placement under a qualified sponsor selected with the approval of the Department.

EDKP 252 Racquet Sports.

(2) (Restriction: Not open to students who have taken EDKP 226 and EDKP 235) Basic stroke techniques, rules and strategies, and teaching skills appropriate for various types of racquet sports.

EDKP 253 Gymnastics.

(2) (Restriction: Not open to students who have taken EDKP 216 and EDKP 210) Gymnastics skills, risk and safety concerns, discovery and direct teaching techniques, and evaluation strategies for the elementary and secondary school curricula.

EDKP 254 Principles of Dance.

(2) (Restriction: Not open to students who have taken EDKP 202 and EDKP 243) Basic dance skills, dance as a movement form, dance curriculum content and dance teaching skills, and resources to support dance instructional programs.

▲ EDKP 261 Motor Development.

(3) Changes apparent in motor behaviour from conception to old age. Two perspectives are emphasized: 1) contemporary and historical theories of human development, 2) development of motor behaviour and influences of physical growth, sensori-perceptual development, information processing and socio-cultural factors.

EDKP 292 Nutrition and Wellness.

(3) (Restriction: Not open to students who have taken EDKP 392) This course will examine the role of carbohydrates, fats, proteins, vitamins, minerals and water in a balanced diet. Students will be introduced to the affects of nutrition on exercise, sport performance and wellness. The validity of claims concerning nutrient supplements will be studied.

EDKP 293 Anatomy and Physiology.

(3) (Restriction: Not open to students who have taken EDKP 205 and EDKP 331) Basic foundations of structural, neuromuscular and visceral anatomy extending to the basic elements of the neuromuscular, circulatory and respiratory systems with emphasis on applications in instructional and coaching settings.

EDKP 300 Special Topics 02.

(3) Content will vary from year to year and will be announced prior to registration. The course will be given by a single instructor or by a group, as the occasion warrants.

EDKP 303 Advanced Biomechanics.

(3) (Prerequisites: EDKP 205, EDKP 206.) Functional anatomy of the human musculoskeletal system with emphasis on mechanics, electromyography(EMG), and motor control strategies.

EDKP 307 Evaluation in Physical Education.

(3) (Prerequisite: EDFE 246) (Restriction: Not open to students who have taken EDKP 207) Measurement and evaluation techniques designed to assess progress in physical education settings.

EDKP 311 Athletic Injuries.

(3) (Prerequisite: EDKP 205) This course is designed to educate students about the prevention, immediate care, and minor rehabilitation of athletic injuries. The course will focus on specific situations encountered in elementary, high school and fitness centers. An intensive academic program is coupled with practical lab sessions and field experience.

EDKP 314 Basketball 2.

(1)

EDKP 318 Volleyball 2.

(1)

EDKP 330 Physical Activity and Health.

(3) This course introduces students to literature on the role of physical activity and general health and well-being. Students will examine issues of exercise adherence, exercise prescription and the economic impact of physical fitness programs in the workplace.

EDKP 332 Physical Education Curriculum and Instruction.

(3) (Restriction: Not open to P.E. Majors) Principles, programs and procedures that an elementary teacher may use to promote the designing and teaching of elementary school P.E.

EDKP 336 Lacrosse.

(1)

† EDKP 342 Physical Education Methods.

(3) (Prerequisite: EDKP 223.) This course is a prerequisite for all field experience and practice.) Designed to prepare students for a teaching/leadership role in physical education. They will examine teaching/leadership effectiveness as it relates to organization and observation techniques, planning, instruction and evaluation of physical activity.

† EDKP 350 Physical Fitness Evaluation Methods.

(3) (Restriction: Open to BSc (Kinesiology) students only.) Protocols to evaluate physical fitness, including interpretation and evaluation of results, and prescription of exercise training programs for healthy populations.

▲ EDKP 391 Physiology in Sport and Exercise.

(3) (Prerequisite: EDKP 293 or equivalent.) Examination of the responses of the human body during and following acute and chronic exercise with practical applications for a school setting.

EDKP 393 Skill Learning and Expertise.

(3) (Restriction: Not open to students who have taken EDKP 492) Cognitive perspective on sport skill learning and the development of expertise, and the roles of innate talent, practice and instruction.

EDKP 394 Historical Perspectives.

(3) A historical survey of the form and function of organized sport and physical activity.

EDKP 395 Exercise Physiology.

(3) (Prerequisites: PHGY 201 or PHGY 209 and PHGY 202 or PHGY 210.) (Prerequisites: PHGY 201 and PHGY 202.) Examination of the physiological responses of the neuromuscular, metabolic, endocrine, and circulatory and respiratory systems to acute and chronic exercise.

EDKP 396 Adapted Physical Activity.

(3) (Restriction: Not open to students who have taken EDKP 496) Assessment, instruction and evaluation in physical activity for special populations. Emphasis on inclusion of people labelled intellectually disabled, learning disabled, physically awkward, autistic, visually or hearing impaired and physically disabled. Weekly lectures plus practical teaching lab.

EDKP 400 Special Topics 03.

(3)

EDKP 405 Sport in Society.

(3) (Prerequisites: EDKP 261, EDKP 393) (Corequisite: EDKP 498) (Restrictions: Not open to students who have taken EDKP 505) An examination of the cultural, social, political and economic factors that influence sport in society. Special attention to the effects of gender, financial constraints and political policies on involvement in physical activity and sports programs.

EDKP 442 Physical Education Pedagogy.

(3) (Prerequisites: EDKP 342, EDFE 246 and EDFE 373) This pedagogy course builds on physical education methods and field experiences. It focuses on the developing teacher, the establishment of the learning environment, and the implementation of the varied teaching strategies. Principles of research on teaching in physical education are translated into practical techniques for application in the field.

EDKP 443 Research Methods.

(3) (Prerequisites: PSYC 204 or equivalent.) How to conduct and understand research in physical activity, including a complete overview of the research process, statistical and measurement concepts in research, the various types of research including both quantitative and qualitative aspects, as well as ways of presenting research.

EDKP 444 Ergonomics.

(3) (Prerequisites: EDKP 205, EDKP 206.) An examination of ergonomic issues including: injury mechanisms, evaluation and assessment techniques, occupational health and safety legislation, and ergonomic inventions.

EDKP 445 Exercise Metabolism.

(3) (Prerequisite: EDKP 395.) The biochemical structure and regulation of major biochemical pathways related to exercise. Examine the hormonal regulation of lipid, carbohydrate and protein metabolism during short and prolonged exercise as well as the influence of physical training. Examine gender-related differences and exercise metabolism.

EDKP 446 Physical Activity and Ageing.

(3) (Prerequisite: EDKP 395.) Review of ageing-related changes in circulatory, respiratory, neuromuscular, hormonal, metabolic and immune systems as they relate to functional limitations and the physiological responses to acute and chronic exercise. Examination of the role of exercise in mitigating ageing response.

EDKP 447 Motor Development 2.

(3) (Prerequisites: ANAT 316, EDKP 205, PHGY 201, PHGY 202, EDKP 261.) An examination of the basic concepts and processes of biological growth, maturation and ageing and a consideration of the outcome of these processes for physical performance and exercise responses across the lifespan.

EDKP 448 Exercise and Health Psychology.

(3) (Prerequisites: EDKP 261, EDKP 393.) The psychological aspects of health and participation in exercise and physical activity. The application of psychological knowledge and methodology within exercise and health. Theory and evidence on selected topics in this area of study.

EDKP 449 Exercise Pathophysiology 2.

(3) (Prerequisite: EDKP 395.) Review of the physiological bases of selected disorders of the immune, renal, neurological and muscular-skeletal systems and an examination of the particularities of exercise responses and the effects of exercise conditioning in these populations. A special emphasis on the scientific bases for exercise prescription.

† EDKP 450 Practicum 3.

(3) (Prerequisites: EDKP 250 and EDKP 350) A work-study experience with a focus on administration and program development in fitness. Work will be in a community placement under a qualified sponsor selected with the approval of the

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

Department.

EDKP 451 Personal Trainer Practicum.

(3)

EDKP 452 Fitness & Lifestyle Consulting.

(3) (Prerequisites: EDKP 201, EDKP 249 and EDKP 350D1/D2.) This course prepares Kinesiology and Physical Education students for Professional Fitness and Lifestyle Consultant Certification from the Canadian Society of Exercise Physiology. Core competencies in ten subject domains as outlined in the certification guide will be reviewed. The certification process includes both theoretical and practical examinations.

EDKP 453 Research Practicum in Kinesiology.

(3) (Prerequisites: EDKP 206, EDKP 395, EDKP 393 (formerly EDKP 492).) (Restriction: Open to Kinesiology students only.) Research project in kinesiology. Independent work under the supervision of the thesis advisor(s) leading to the finalization of procedures for data collection.

EDKP 453D1 (1.5), EDKP 453D2 (1.5) Research Practicum in Kinesiology.

(Prerequisites: EDKP 206, EDKP 395, EDKP 393 (formerly EDKP 492).) (Restriction: Open to Kinesiology students only.) (Students must register for both EDKP 453D1 and EDKP 453D2.) (No credit will be given for this course unless both EDKP 453D1 and EDKP 453D2 are successfully completed in consecutive terms) (EDKP 453D1 and EDKP 453D2 together are equivalent to EDKP 453) Research project in kinesiology. Independent work under the supervision of the thesis advisor(s) leading to the finalization of procedures for data collection.

▲ EDKP 485 Exercise Pathophysiology 1.

(3) (Prerequisite: EDKP 395.) The physiological bases of selected cardiovascular, respiratory and metabolic disorders and an examination of the particularities of exercise responses and the effects of exercise conditioning in these populations. A special emphasis on the scientific bases for exercise prescription.

† EDKP 494 Physical Education Curriculum Development.

(3) (Prerequisite: EDKP 442) Analysis of important philosophies, principles, and personal, educational, and societal issues that influence current physical and health education curricula with particular emphasis on the Québec curriculum for Physical Education and Health.

▲ EDKP 495 Scientific Principles of Training.

(3) (Prerequisite: EDKP 395.) Application of physiological and kinesiological principles in the selection and evaluation of athletic and physical fitness programs. Specific topics studied will include aerobic and anaerobic training, interval training, circuit training, weight training for muscular strength and endurance, flexibility, motor ability, obesity and energy balance.

▲ EDKP 498 Sport Psychology.

(3) (Prerequisite: EDKP 393.) The psychological aspects of participation in sport and physical activity relative to performance enhancement.

EDKP 504 Health & Lifestyle Education.

(3) This course will focus on content development and implementation of Health and Lifestyle concepts within the elementary and secondary physical education curriculum. Emphasis through lectures and labs will allow students' participation and experimentation of activities that could be taught in classroom and/or physical education settings.

EDKP 505 Sport in Society.

(3) (Prerequisites: EDKP 261, EDKP 393.) (Corequisite: EDKP 498) An examination of the cultural, social, political and economic factors that influence sport in society. Special attention to the effects of gender, financial constraints and political policies on involvement in physical activity and sports programs.

EDKP 542 Environmental Exercise Physiology.

(3) (Prerequisite: EDKP 395.) Environmental Exercise Physiology will examine human physiological responses to acute and chronic exercise in the following environments: thermal stress (hot and cold), hypobaric (medium and high altitude), hyperbaric (diving and chambers), and microgravity.

EDKP 550 Analyzing Instructional Behaviours.

(3) Students will investigate generic and specialized data collection instruments used in the supervision of and research into teaching and coaching. Practical experience will include the selection and use of appropriate tools, establishment of observer reliability, critical analysis of observational systems, and application of systematic observation to pertinent research questions.

EDKP 566 Muscle Mechanics.

(3) (Prerequisite: EDKP 206) Theoretical basis of muscle activity measurement in the context of biomechanical studies, including muscle-related topics such as fatigue, injury and control.

EDKP 568 Biomechanics Instrumentation.

(3) (Restriction: Not open to students who have taken EDKP 668.) Instrumentation and technical knowledge to assist in the acquisition and processing of data used in biomechanics.

EDPC-Ed Psych & Couns (Counselling)

Offered by: Educational&Counselling Psych

EDPC 201 Introduction to Student Advising.

(3) Introduction to student advising and guidance including personal, vocational, and educational aspects of services normally found in Aboriginal school settings. Role of the student personnel advisor at both the elementary and secondary levels.

EDPC 202 Helping Skills Practicum 1.

(3) (Prerequisite: EDPC 201) Basic interviewing and helping skills relevant to the helping profession in Aboriginal settings. Interpersonal skills which facilitate the prevention and amelioration of problems.

EDPC 206 Group Leadership Skills.

(3) (Prerequisite: EDPC 203) Animation and practice of group leadership skills. Students learn to organize and lead groups, how and when to use groups for particular settings and topics.

EDPC 501 Helping Relationships.

(3) (Offered through Continuing Education.) A course in the basic principles of human relationships and communication skills, approached from a theoretical and experimental viewpoint. An emphasis will be given to training in basic listening skills, interviewing techniques, and the interpretation of non-verbal behaviour and communication.

EDPC 502 Group Processes and Individuals.

(3) (Offered through Continuing Education.) A laboratory course in which participants observe individual dynamics within a group setting as well as understand the developmental phases of the group. Participants will be encouraged to experiment with their own behaviour, in order to increase their own awareness of functioning.

EDPC 503 Human Sexuality: Professionals.

(3) Historical, biological, anthropological, psychological and sociological perspectives of human sexual development. Sexual dysfunctions and approaches to sex therapy. Attitudes toward sexuality held by professional helpers relative to their implications for the learning and teaching of human sexuality and sex therapy.

EDPC 504 Practicum: Interviewing Skills.

(3) (Offered through Continuing Education.) (Prerequisite: EDPC 501) This course will enable students to become practitioners in the field of Applied Social Sciences. Theoretical principles of the helping relationship will be applied in particular situations. Demonstration, lecture, role-playing and psychodrama techniques will be used.

EDPC 505 Crisis Intervention Processes.

(3) (Offered through Continuing Education.) Instruction in the skills of working with crisis situations involving persons emotionally disturbed, suicidal, or alcoholic, and those who are on drugs or experiencing emotional trauma, as well as other problems. Attention will be given to identification of referral sources and the writing of reports.

EDPC 507 Practicum: Group Leadership Skills.

(3) (Offered through Continuing Education.) (Prerequisite: EDPC 502) The practical aspects of group leadership, group design and planning. Candidates will set up groups, conduct such groups

over a number of sessions, and assess these groups according to the theoretical models covered in the prerequisite course.

★ **EDPC 508 Seminar in Special Topics.**

(3) (Offered through Summer Studies.) Content will vary from year to year and will be announced prior to registration. The seminar may be given by a single instructor or by a group, as the occasion warrants.

EDPC 509 Individual Reading Course.

(3) (Restriction: Permission of Program Director required) (By arrangement with individual instructor.)

EDPC 510 Family Life Education and Marriage.

(3) (Offered through Continuing Education.) The contribution of central concepts of psychological theories and therapeutic systems to the understanding of marriage and relationships. Special attention will be given to gender and ethnicity issues in order to increase the sensitivity of students to the issues typically confronted in the modern marriage and family.

EDPC 511 Demystifying Death & Dying.

(3) (Restriction: Open to U3 students or higher. Priority will be given to Educational and Psychology graduate, diploma and certificate students.) The impact of death and dying on individuals, the family, the community and society.

EDPC 540 Foundation of Family Life Education.

(3) (Restriction: Not open to students who have taken EDPC 640) (Offered through Continuing Education.) An examination of the psychological and sociological foundations of family life education tracing the evolution of theory, research and practice within this domain.

EDPC 542 Counselling Role of the Teacher.

(3) (Offered through Continuing Education or Summer Studies.) Theory and practice in interpersonal communication, interviewing, group dynamics, group leadership management, and referral criteria and procedures for students with developmental problems who experience trauma or crisis. Addressed primarily to elementary and secondary teachers who combine instructional responsibilities with a supportive role in school guidance and counselling activities.

EDPC 562 Career Education and Guidance.

(3) (Offered through Continuing Education or Summer Studies.) A review of career education and guidance programs that refer to the subject matter and related methods and techniques designed to foster the intellectual development of career awareness, career planning, career decision-making, and the necessary career-resilient employability skills for the school-to-work transition.

EDPE-Ed Psych & Couns (Psychology)

Offered by: Educational&Counselling Psych

EDPE 208 Personality and Social Development.

(3) (Restriction: Not available for Psychology Major students or any student who has taken or is required to take PSYC 304 in the Psychology Department) Personality, social behavior, and moral development from nursery school up to, but not including, adolescence. Emphasis on aspects of personality and social development that are related to the process of schooling.

† **EDPE 300 Educational Psychology.**

(3) Selected theories, models, and concepts relevant to planning and reflecting upon educational practice and improvement. Overview of development, learning, thinking, motivation, individual difference, etc. In relation to applications in classroom teaching and learning, the complementary role of counsellors and psychologists, educational computing and technology. The Youth Protection Act.

□▲ * **EDPE 304 Measurement and Evaluation.**

(3) The purposes of examinations. Causes of complaints about examinations. Equalizing means and dispersions in distribution of marks. Standardized scores. The percentile system. Essay and objective-type examinations. Taxonomies of educational objectives. Validity and reliability: item analysis.

EDPE 335 Instructional Psychology.

(3) (Prerequisites: An introductory course in psychology or EDPE 300) Psychological processes in instruction and learning, assessment, and curriculum design, based on theories of cognition, motivation, and the social context of instruction.

EDPE 355 Cognition and Education.

(3) (Prerequisites: PSYC 213 or permission of the instructor) Cognition and learning in educational domains and contexts. Contributions of cognitive science to issues in education including domain-specific and general knowledge and expertise, situated cognition and learning, cognitive apprenticeship, and uses of computers and networks as cognitive tools in educational settings.

EDPE 377 Adolescence and Education.

(3) (Offered through Continuing Education or Summer Studies) Development of personality and social behaviour in adolescence. Problems relating to self-concept, academic achievement, relationships with others, and development of values in a changing culture. Some attention to current criticisms of the school as an agency involved in adolescent development.

EDPE 495 Individual Reading Course.

(3) (By arrangement with individual instructor. Permission must be obtained from the Department before registration)

† **EDPE 496 Individual Reading Course.**

(3) (By arrangement with individual instructor. Permission must be obtained from the Department before registration)

EDPE 502 Theories of Development and Disabilities.

(3) Developmental theory to form a foundation for scholarly, empirical, and applied work with both typical and atypical populations.

EDPE 515 Gender Identity Development.

(3) (Prerequisites: EDPE 208, EDPE 300 or a course in developmental psychology) (Offered through Continuing Education.) Theoretical models and empirical findings relevant to the development of gender identity. Special attention is given to the influence of peers in school settings. Psychological, physiological, parental, peer and cultural influences on gender identity.

* † **EDPE 535 Instructional Design.**

(3) This course draws on the fields of learning theory, developmental psychology, and measurement to focus on the tasks of constructing instructional materials. Areas to be considered include behaviour analysis, concept formation, and test construction.

EDPE 550 Consciousness and Virtual Reality.

(3) (Restriction: Not open to students who have taken EDPE 650.) An exploration of the nature and role of consciousness from the virtual reality research perspective, and the implications of virtual reality and cyberspace in education.

EDPE 555 Applied Cognitive Science.

(3) Examination of foundations of cognitive science including contributions by psychology, linguistics, and computer science. Consideration of theory and methodology or cognitive science in educational and instructional contexts.

EDPE 560 Human Development.

(3) (Offered through Continuing Education.) A review of current theory and knowledge of human development through the life cycle. Particular attention is given to emotional and social development. All major age-stages are considered. Emphasis is placed on the effects of interaction between individuals of

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

* † Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

these different age groupings.

EDPE 561 Artificial Intelligence in Education.

(3) (Restriction: Not open to students who have taken EDPE 660.) An exploration of the principles of artificial intelligence as a metaphor for understanding conventional instructional and learning-processes. Topics include expert systems, intelligent computer-assisted instruction, tutoring systems, fifth-generation languages, and logic programming (e.g. Prolog). Lectures, discussion, demonstrations, and where possible site visits and hands-on experience will be provided.

EDPE 564 Family Communication.

(3) (May be offered through Summer Studies) Family communication processes and interpersonal reactions in the context of marriage and the contemporary family will be considered. Attention will be given to role changes and the effect of crises on marital and family relationships.

EDPE 575 Educational Measurement.

(3) (Offered through Continuing Education and Summer Studies.) Statistical measurements in education, graphs, charts, frequency distributions, central tendencies, dispersion, correlation, and sampling errors.

☛ **EDPE 595 Seminar in Special Topics.**

(3) (Restriction: Permission must be obtained from the Department before registration.) The content of the seminar will vary from year to year and will be announced prior to registration. The seminar may be given by a single instructor or by a group, as the occasion warrants.

☛ **EDPE 596 Seminar in Special Topics.**

(3) Seminar in selected topics in Educational and Counselling Psychology. The topic will vary from year and will be announced prior to registration.

EDPI-Ed Psych & Couns (Inclusive)

Offered by: Educational&Counselling Psych

EDPI 212 Perceptual Motor Development.

(3) (Offered through Continuing Education. Limited to students enrolled in programs offered by the Office of First Nations and Inuit Education) Observation of perceptual-motor aspects of child development at the pre-school and elementary levels. Application of observations to teaching methods and materials, curriculum, classroom management and evaluation.

EDPI 309 Exceptional Students.

(3) (Restriction: Open to B.Ed. and Concurrent students only.) (Also offered through Continuing Education or Summer Studies.) Evolution of special education to inclusive education; characteristics, teaching practices, and teachers' roles in inclusive classrooms. Overview of characteristics, causes, needs, and teaching strategies for students with each exceptionality, including students with intellectual, emotional, behavioral, sensory, physical and learning differences.

EDPI 341 Instruction in Inclusive Schools.

(3) (Restriction: Open to B.Ed. students only) (Also offered through Continuing Education.) Planning, implementing and evaluating curriculum and instruction for students with exceptionalities. Using technology and adapting curriculum and instruction for learners with varying abilities, learning styles, and needs. Collaboration with students, families, and other educators in the instructional process. Application component: application of instructional modifications for exceptional students in inclusive schools.

EDPI 344 Assessment for Instruction.

(3) (Offered through Summer Studies.) Assessing student strengths, problems and needs; functions and use of different types of student assessment (traditional and alternative assessments); assessing the classroom environment; issues in assessment. Application component: application of assessment process with exceptional students, and use of results for planning and adapting instruction.

EDPI 440 Managing the Inclusive Classroom.

(3) (Offered through Continuing Education) Comprehensive approach to classroom management, including management of student learning and behavior, classroom environment, material and human resources, and teacher growth. Focus on research-based practices, including behavioral approaches, for effectively

managing a classroom with diversity of students. Application component: application of classroom management principles in the field.

EDPI 441 Students with Behavior Difficulties.

(3) (Offered through Continuing Education.) Theoretical approaches and specific teaching methods appropriate to the needs of students with emotional or behavior problems, including students with attention deficit hyperactivity disorder. Multimodal team intervention approaches are emphasized. Application component: application of teaching methods with students experiencing behavior difficulties.

EDPI 442 Students with Learning Difficulties.

(3) (Offered through Continuing Education.) Commonalities and differences between students with specific learning disabilities, and related teaching approaches. Emphasis on methods, materials, and technology for teaching academic content as well as social skills. Application component: modifying and teaching content areas to students experiencing learning difficulties.

EDPI 446 Special Topics.

(3) Selected topics in the field of educating students with exceptionalities.

★ **EDPI 450 Computers and Special Needs.**

(3) (May be offered through Continuing Education.) Overview of the role and contribution of computers in relation to students with exceptionalities. Review of instructional uses of computers, applications for modifying and teaching curriculum applications for specific learning needs, assistive devices for students with sensory and physical disabilities, and resources for students and teachers.

EDPI 526 Talented and Gifted Students.

(3) (Offered through Continuing Education.) The psychology and education of exceptionally able children. Definitions, assessment, classroom adaptations, technology, educational programs and educational issues. The course combines theoretical background and practical concerns. Application component: application of teaching methods with exceptionally able students.

★ **EDPI 527 Creativity and its Cultivation.**

(3) (Offered through Continuing Education.) Recent research, theory, and educational practice concerning creativity, with special attention to creativity in students and educational settings.

☛ **EDPI 539 Field Work 1: Exceptional Students.**

(3) (Restriction: Permission of Program Director required.) Supervised experience with exceptional students in an approved educational setting.

☛ **EDPI 540 Field Work 2: Exceptional Students.**

(3) (Prerequisite: EDPI 539) (Restriction: Permission of Program Director required.) Supervised experience with exceptional students in an approved educational setting.

EDPI 543 Family, School and Community.

(3) (Offered through Summer Studies.) Examination of family, school, community and societal influences on student growth, development and adjustment. Emphasis on family perspectives, school orientation, community services, and community collaboration. Application component: using knowledge and skills in the field.

EDPT-Ed Psych & Couns (Media)

Offered by: Educational&Counselling Psych

▲ **EDPT 200 Integrating Educational Technology in Classrooms.**

(3) (Also offered through Continuing Education and Summer Studies) Applications Software is the "gateway" course to educational computing. It introduces novices to basic computing skills, using a printer, word processing, data bases and spreadsheets. Assignments and projects focus on educational applications by teachers and students.

▲ **EDPT 204 Educational Media 1.**

(3) (Offered through Continuing Education) Educational Media 1 is the "gateway" course for educational media. It reviews audio-visual education and emphasises the rationale for audio-visual materials in education, and the underlying principles in their design, production and effective use.

EDSSL-Education in Second Languages

Offered by: Integrated Studies in Ed

EDSSL 210 First Professional Seminar.

(1) (Corequisite: EDFE 209) (Restriction: Not open to students who have taken EDSSL 209 (First Year Professional Seminar)) How to observe in second language classrooms. Students will be introduced to ways of observing instructional practices and procedures and will begin to reflect on various interactional patterns between teachers and students as observed in the First Year Field Experience.

▲ EDSSL 247 Second Language Education in Aboriginal Communities.

(3) (Restriction: Limited to students enrolled in off-campus programs delivered through First Nations and Inuit Education) Issues and considerations in the learning of English or French in Aboriginal communities. Emphasis on teaching a second language to Aboriginal children.

EDSSL 255 Second Professional Seminar.

(2) (Restrictions: Open to B.Ed (TESL) students. Not open to students who have taken EDSSL 259 (Second Year Professional Seminar).) (Prerequisites: EDSSL 210, EDFE 209 and EDSSL 330.) The course aims to develop basic practices in planning and teaching in ESL classrooms, including microteaching and reflective analysis.

EDSSL 255D1 (1), EDSSL 255D2 (1) Second Professional Seminar.

The course aims to develop basic practices in planning and teaching in ESL classrooms, including microteaching and reflective analysis.

EDSSL 260 Séminaire professionnel-2e.

(1) (Corequisites: EDFE 261, EDSSL 301, EDSSL 444.) Analyse réflexive des pratiques d'enseignement propres à l'assistantat.

EDSSL 262 Système éducatif - profession enseignante.

(3) (Restriction: Not open to students who have taken UdeM: ETA 1900, McGill: EDEC 247 (formerly EDEM 405)) Initiation aux institutions scolaires du Québec et, au premier chef, à l'école. Initiation au rôle professionnel des enseignants. Perspectives historique et contemporaine.

EDSSL 263 Apprentissage et développement.

(3) (Restriction: Not open to students who have taken UdeM: PPA 1100.) Théories de l'apprentissage scolaire. L'enseignant comme médiateur des apprentissages. Milieu scolaire et croissance de 4 à 12 ans. Entrée à l'école. Facteurs d'adaptation scolaire et sociale. Élèves à besoins particuliers.

EDSSL 264 Phonétique et phonologie.

(3) (Restriction: Not open to students who have taken UdeM: LNG 1400.) Introduction à la phonétique et à la phonologie. Techniques d'analyse et de description.

EDSSL 265 Acquisition-apprentissage-langues secondes.

(3) (Restriction: Not open to students who have taken UdeM: DID 2102, McGill: EDSSL 305.) Connaissance des facteurs qui influent sur l'apprentissage et l'acquisition d'une langue seconde. Historique des méthodes d'enseignement. Approche communicative. Caractéristiques des clientèles de français langue seconde.

EDSSL 266 Mathématiques au primaire.

(3) (Restriction: Not open to students who have taken UdeM: DID 1500.) Les mathématiques enseignées: histoire, savoirs, rapport au savoir et transposition. Arrimage entre les différents ordres d'enseignement.

EDSSL 267 Didactique des arts plastiques 1.

(3) (Restriction: Not open to students who have taken UdeM: DID 2910.) Expérience des arts plastiques, médias plastiques, éléments du langage plastique. Programme des arts plastiques au primaire. Élaboration, animation d'activités et évaluation des

apprentissages.

EDSSL 268 Intégration des TIC.

(3) (Restriction: Not open to students who have taken UdeM: PPA 2100) Développement, mise à l'essai et analyse de situations pédagogiques intégrant stratégiquement les TIC. Réflexion critique et participation à une communauté apprenante dans une perspective de développement professionnel.

EDSSL 269 École et environnement social.

(3) (Restriction: Not open to students who have taken UdeM: ETA 2200.) L'école comme milieu de vie et lieu d'exercice de la citoyenneté. Impacts sur les acteurs éducatifs et les disparités économiques, sociales et culturelles. Critique des politiques et pratiques pertinentes.

EDSSL 270 Morphologie et syntaxe.

(3) (Restriction: Not open to students who have taken UdeM: LNG 1540.) Principaux concepts et méthodes de l'analyse morphologique et syntaxique en grammaire générative transformationnelle. Application à la structure du mot et de la phrase en français contemporain et analyse de constructions problématiques.

EDSSL 271 Lexique et sémantique.

(3) (Restriction: Not open to students who have taken UdeM: LNG 1080) Types de sens: prédicats et objets sémantiques. Sens lexicaux vs grammaticaux; notion d'unité lexicale; lexique vs grammaire. Relations sémantiques de base (synonymie, antonymie...).

▲ EDSSL 300 Foundations of L2 Education.

(3) This introduction to the field of second language education provides an overview of the supporting disciplines (e.g., linguistics, psychology, sociology and education) and includes historical and analytical perspectives on the development of L2 teaching through an examination of approaches to L2 instruction and specific teaching methods.

EDSSL 301 Étude de la langue.

(3) (Prerequisites: FREN 245, EDSSL 265.) (Corequisites: EDSSL 444, EDFE 261, EDSSL 206.) (Restriction: Not for credit if EDSSL 311 or EDEC 302 has been or is being taken) Notions de base pour l'enseignement des composantes linguistique (lexique, morphologie, syntaxe et sémantique) et discursive (de la phrase aux types de textes et de discours); apprentissage de la grammaire nouvelle; composante langue des programmes d'études.

▲ EDSSL 304 Sociolinguistics and L2 Education.

(3) (Prerequisite: LING 200 or LING 201.) (May be offered in English or French) This course introduces students to various social aspects of language, language use, and language learning by examining second language education from three interrelated perspectives: sociolinguistics, discourse, and culture. Issues range from language variation and social attitudes to conversational analysis and cross-cultural communication.

▲ EDSSL 305 L2 Learning: Classroom Settings.

(3) (Prerequisite: EDSSL 300 or LING 200 or LING 201.) This course provides an introduction to theory and research in second language acquisition (SLA). It is designed to help students understand the processes, developmental patterns and factors contributing to SLA so that the students will be prepared to evaluate and develop teaching procedures in light of this understanding.

EDSSL 310 Third Professional Seminar.

(3) (Prerequisite: EDSSL 255.) (Corequisite: EDFE 359) (Restriction: Not open to students who have taken EDSSL 309) Focus is on classroom processes such as teaching and learning strategies, lesson planning and implementation, classroom organization and management, and on developing a reflective teaching and learning practice.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

EDSL 311 Pedagogical Grammar.

(3) (Prerequisite: EDSDL 350) (Restriction: Not for credit if EDSDL 301 or EDEC 302 has been or is being taken) The course focuses on how the English language works as a system, examining it from the levels of phonology, morphology, syntax, semantics, and discourse. These aspects will be considered in relation to second language teaching and learning.

EDSL 315 Third Year Professional Seminar.

(2) (Prerequisites: EDSDL 255 and EDFE 255.) (Restrictions: Open only to B.Ed. TESL students who have taken EDFE 255. Not open to students who have taken or are taking EDFE 259, EDSDL 309 or EDSDL 310.) Classroom processes such as teaching and learning strategies, lesson planning and implementation, classroom organization and management, and developing a reflective teaching and learning practice.

EDSL 320 Séminaire 3 professionnel.

(1) (Corequisites: EDFE 362, EDSDL 341, EDSDL 472.) Ce séminaire professionnel porte sur l'analyse réflexive des pratiques stratégiques d'enseignement propres aux divers contextes scolaires au primaire. Ce séminaire vise également l'expérimentation de divers matériels pédagogiques et la simulation de techniques d'animation et de gestion de classe.

EDSL 330 L2 Literacy Development.

(3) (Prerequisite: EDSDL 350) This course examines current theories of second language literacy development and their implications for teaching, including the use of literature as a tool for language learning. Key issues include the nature of literacy development, reading and writing processes, and appropriate pedagogical approaches.

EDSL 334 Teaching Oral Skills in ESL.

(3) (Prerequisite: LING 200 or LING 201) Application of the English sound system to practical ESL teaching situations, planning and integrating pronunciation (as well as other oral skills, such as fluency) into activities and projects, developing materials, and assessing progress.

▲ EDSDL 341 Littérature et Littérature Jeunesse en FLS.

(3) (Corequisites: EDFE 362, EDSDL 320.) Développement de la littératie en langue seconde; les stratégies d'enseignement et d'apprentissage de la lecture et de l'écriture; l'exploration et l'utilisation de la littérature enfantine et de jeunesse propre à la francophonie dans divers contextes scolaires.

EDSL 345 Enseignement du FLS-immersion.

(3) (Prerequisite: EDSDL 402.) (Corequisites: EDFE 461, EDSDL 420.) Ce cours examine divers cheminements retrouvés en contexte immersif ainsi que diverses approches pédagogiques propices à l'enseignement du FLS par le biais de matières scolaires. Des recherches effectuées en contexte immersif seront également examinées par rapport au développement langagier des élèves en immersion.

EDSL 350 Essentials of English Grammar.

(3) (Restriction: Restricted to B.Ed. (TESL) students) (Restriction: This is a required course for B.Ed. TESL students. Students from other programs may be admitted at the discretion of the instructor.) Analysis of English phrases, clauses and sentences up to discourse level in connected text. Emphasis on distinguishing between grammatical form, meaning, and function. Identification, analysis and correction of common errors made by ESL learners.

EDSL 360 TESL/TFSL Practicum - Elementary.

(3) (Corequisites: EDSDL 444 for TFSL students; EDSDL 447 for TESL students) (Offered through Continuing Education) Supervised practice in the application of language teaching and learning theories: focus on the design and use of teaching units, the organization of communication activities, the selection and use of diagnostic and remedial materials.

EDSL 361 TESL/TFSL Practicum - Secondary.

(3) (Corequisites: EDSDL 472 for TFSL students; EDSDL 458 for TESL students) (Offered through Continuing Education) Supervised practice in the application of language teaching and learning theories: focus on curriculum development, and on the production of instructional, diagnostic and remedial materials.

EDSL 390 Teaching English as a Second Language in the Community.

(3) Introduction to pedagogical, program and policy contexts of teaching ESL outside the formal K - 11 school setting, including teaching children, adolescents and adults, in the private and community sectors in Canada and abroad.

EDSL 391 Didactique du français en accueil 1.

(3) (Prerequisite: EDSDL 301) Contenus et démarches en didactique de l'oral et de l'écrit au secondaire en classe d'accueil at autres formules de services d'aide à la francisation. Conception d'activités et de séquences d'apprentissage. Programmes d'étude.

EDSL 392 Gestion de classe en langues secondes.

(3) (Restriction: Not open to students who have taken UdeM: PPA 3222) Gestion de l'espace-temps en classe du primaire/secondaire. Modèles de gestion des environnements pédagogiques. Exploitation des ressources communautaires. Prévention et intervention. Prise en compte de l'hétérogénéité.

EDSL 393 Adolescent et expérience scolaire.

(3) (Restriction: Not open to students who have taken UdeM: PPA 1210.) Développement psychosocial des élèves; influence des environnements sociaux; problématiques contemporaines de l'adolescence(anxiété, suicide, abandon scolaire). Relations entre enseignants - élèves et entres pairs. Aperçu de la recherche récente.

EDSL 394 Séminaire de stage-3e.

(1) (Prerequisites: EDSDL 260, EDFE 261.) (Corequisite: EDFE 361.) (Restriction: Not open to students who have taken UdeM: EDU 3080.) Analyse réflexive des pratiques d'enseignement propres au secondaire.

EDSL 402 Évaluation en français langue seconde.

(3) (Prerequisite: EDFE 361 or EDFE 362.) Évaluation des compétences en enseignement du FLS: fonctions de l'évaluation; approches normative et critérielle; planification de situations d'évaluation authentiques; élaboration d'instruments; interprétation des résultats; modalités de consignation.

EDSL 412 Assessment in TESL.

(3) (Prerequisites: EDSDL 447 and EDFE 359) This course deals with the role of assessment in TESL. Students will explore the kinds of information needed to make educational decisions in second language courses, different techniques for collecting that information, and ways for interpreting it. Principles and methods for assessment with and without tests are discussed and practiced.

EDSL 415 Fourth Professional Seminar.

(3) (Prerequisite: EDSDL 310.) (Corequisite: EDSDL 409) (Restriction: Not open to students who have taken EDSDL 409) Focus is on development as a TESL professional, preparation for the workplace, and analysis, reflection, problem solving and support of actual teaching practice.

EDSL 420 Séminaire 4 professionnel.

(2) (Corequisites: EDFE 461, EDSDL 345.) Ce séminaire professionnel porte sur l'analyse réflexive des pratiques stratégiques d'enseignement propres aux divers contextes scolaires au secondaire. Ce séminaire vise également l'expérimentation de divers matériels pédagogiques et la simulation de techniques d'animation et de gestion de classe.

EDSL 444 Laboratoire d'enseignement en français langue seconde.

(3) (Corequisites: EDSDL 301, EDSDL 260, EDFE 261.) Entraînement à l'observation et à l'analyse de situations d'enseignement du français langue seconde au primaire. Pratiques d'habiletés en situation microenseignement. Vidéoscopie et entraînement à la pratique réfléchie.

EDSL 447 Third-Year Methods in TESL.

(3) (Prerequisite: EDSDL 350) (Corequisites: EDSDL 310 and EDFE 359) Intermediate-level skills in planning and teaching appropriate lessons, activities, and projects for ESL learners in a variety of programs at the elementary and secondary school levels.

EDSL 449 Special Topics in Second Language Teaching.

(3) Selected topics in second language teaching. Possible topics include communicative competence, interlanguage/error analysis and functional-notional approach to second language teaching.

EDSL 458 Fourth-Year Methods in TESL.

(3) (Prerequisite: EDSL 447, EDSL 311) (Corequisites: EDSL 415 and EDFE 459) Advanced-level skills in planning appropriate lessons, activities, units and projects for ESL learners in a variety of programs at the elementary and secondary levels.

EDSL 472 Enseignement du français langue seconde-secondaire.

(3) (Prerequisites: EDSL 444, EDSL 301.) (Corequisites: EDFE 362, EDSL 320.) Le but de ce cours est de développer l'habileté à planifier des activités, des unités et des projets, dans des séquences d'enseignement, en fonction des programmes d'études: FLS, immersion et accueil. Le cours intègre les pédagogies de la communication orale et écrite de la langue seconde au secondaire.

EDSL 491 Didactique des mathématiques en langues secondes.

(3) (Restriction: Not open to students who have taken UdeM: DID 3506.) Problématique spécifique de l'enseignement des mathématiques à des élèves non francophones. Principaux savoirs arithmétiques à géométriques enseignés au primaire. Situations didactiques. Évaluation.

EDSL 492 Didactique des sciences-technologies.

(3) (Restriction: Not open to students who have taken UdeM: DID 2110.) Apprentissages propres aux sciences et à la technologie au préscolaire et au primaire. Conception des élèves et démarche didactique. Résolution de problèmes et autres activités. Évaluation des apprentissages et du curriculum.

EDSL 493 Sciences humaines au primaire.

(3) (Restriction: Not open to students who have taken UdeM: DID 2205.) Sciences humaines et culture. Nature de savoir élaboré, rapport au savoir et transposition sous forme de programme d'étude. Éducation à la citoyenneté.

EDSL 494 Didactique de l'univers social et TIC.

(3) (Restriction: Not open to students who have taken UdeM: DID 3237.) Évaluation critique de logiciels et sites Internet relatifs à l'univers social. Production et diffusion de documents multimédias. Scénario d'intégration pédagogique des TIC.

EDSL 495 Recherche-résolution de problèmes.

(3) (Restriction: Not open to students who have taken UdeM: ETA 4000.) Études des grands courants de la recherche actuelle en éducation comme facteurs de renouvellement des pratiques pédagogiques en classe hétérogène et de l'école dans un environnement culturel et technologique en mutation.

EDSL 496 Laboratoire de formation professionnelle.

(3) (Restriction: Not open to students who have taken UdeM: ETA 4410.) Élaboration d'un projet permettant de faire la synthèse des connaissances et de les mettre en pratique dans le cadre d'une intervention planifiée en collaboration avec les divers intervenants du milieu scolaire.

EDSL 497 Problématique en éducation préscolaire.

(3) (Restriction: Not open to students who have taken UdeM: PPA 1205.) Le rôle et l'évolution des services offerts à la petite enfance au Québec. Les facteurs socio-économiques, culture et familiaux qui affectent le développement du jeune enfant. La prévention auprès de l'enfant et sa famille.

EDSL 498 Didactique du français en accueil 2.

(3) (Prerequisite: EDSL 391.) (Restriction: Not open to students who have taken UdeM: DID 4214.) Contenus et démarches en didactique du français L2 au primaire en classe d'accueil et autres services d'aide à la francisation. Intégration des TIC. Élèves à besoins particuliers. Conception de projets d'enseignement. Programmes d'étude.

EDSL 499 Séminaire de stage-4e.

(2) (Prerequisites: EDSL 394, EDFE 361.) (Corequisite: EDFE 460.) (Restriction: Not open to students who have taken UdeM: EDU 4061.) Analyse réflexive des pratiques

d'enseignement dans une perspective d'insertion professionnelle.

EDSL 500 Foundations and Issues in Second Language Education.

(3) (Restriction: Restricted to students in the Graduate Certificate in TESL.) Introduction of second language (L2) education; an overview of contributing disciplines (e.g., linguistics, psychology, sociology and education). A history of theory and various methodological approaches to L2 teaching and learning is used to promote an understanding of current theory and practice.

EDSL 505 Second Language Acquisition Applied to Classroom Contexts.

(3) (Prerequisite: EDSL 500.) (Restriction: Restricted to students in the Graduate Certificate in TESL.) An overview of theory and research in second language acquisition, including developmental patterns, factors affecting how second languages are learned, and relevance for teachers in terms of applications to the classroom context.

EDSL 512 Grammar in Teaching English as a Second Language.

(3) (Prerequisite: EDSL 505) (Restriction: Restricted to students in the Graduate Certificate in TESL) Analysis of English grammar at phonological, morphological, syntactic, semantic, and discourse levels. Applications are made to second language teaching and learning, focusing on integrating grammar into communicative language approaches.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

Faculty of Engineering

ARCH-Architecture

Offered by: Architecture

A limited number of courses are open to students not registered in the School of Architecture. Please consult Class Schedule for further information.

ARCH 201 Communication, Behaviour and Architecture.

(6) (2-10-6) Introduction to design; development of design judgement and communication skills in a series of exercises addressing light, scale, space, form and colour in the built environment; introduction to techniques of oral and graphic presentation, including model making, photography, sketching and architectural drawing. The course is based in the studio and includes lectures, seminars and field trips.

ARCH 202 Architectural Graphics and Elements of Design.

(6) (2-10-6) (Prerequisite: ARCH 201) Introduction to architectural design; consideration of building form in relation to program, structural system, material selection, site and climate; further development of skills in model making, conventional architectural drawing, axonometric and perspective drawing, sketching and architectural rendering. The course is based in the studio and includes lectures, seminars and field trips.

ARCH 217 Freehand Drawing 1.

(1) (0-2-1) Development of skills in drawing and observation through a series of exercises based on the study of the human figure in a studio setting. Media include pencil, charcoal, conte crayon, and pen and ink.

ARCH 218 Freehand Drawing 2.

(1) (0-2-1) (Prerequisite: ARCH 217) Continuation of ARCH 217. Development of graphic skills and visual literacy through exercises in life drawing. Introduction to basic colour theory: hue, intensity/dilution, temperature and emotional power. Additional media include coloured chalk and gouache.

ARCH 240 Organization of Materials in Buildings.

(3) (2-3-4) The characteristics of basic building materials: wood, steel, masonry and concrete. How building materials are shaped into building components, and how these components are integrated into the building envelope. Problems, laboratory projects and field trips to illustrate principles.

ARCH 241 Architectural Structures.

(3) (2-1-6) Introduction to the basic concepts and forms of structures in architecture.

ARCH 242 Digital Representation.

(2) (2-0-4) (Prerequisite: ARCH 201.) This course introduces students to digital representation in architecture. Students explore applications of state-of-the-art two- and three-dimensional computer modeling software in architectural design.

ARCH 250 Architectural History 1.

(3) (3-0-6) The study of architecture in relation to landscape, urban form and culture, from Antiquity to the end of the Middle Ages.

ARCH 251 Architectural History 2.

(3) (3-0-6) (Prerequisite: ARCH 250) Overview of early 20th century architecture with emphasis on a thematic approach to buildings and cities, architects and ideologies. The lectures will examine the origins, development and impact of canonical figures and buildings of Modernism.

ARCH 303 Design and Construction 1.

(6) (2-10-6) (Prerequisite: ARCH 202) An exploration of the design of buildings. Projects emphasize the major social, technological, environmental, and symbolic aspects of the design process. Introduction to specific modelling, presentation, and documentation techniques. Discussions, readings, field trips and practical exercises.

ARCH 304 Design and Construction 2.

(6) (2-10-6) (Prerequisite: ARCH 303) Continuation of Design and Construction I with projects of increasing complexity. Projects deal with particular aspects of architectural design and/or explore approaches to design methodology. Discussions, readings, field trips and practical exercises.

ARCH 321 Freehand Drawing 3.

(1) (0-2-1) (Prerequisite: ARCH 218) Continuation of ARCH 218. Refinement of graphic skills and visual literacy through exercises in life drawing. Introduction to the materials and methods of watercolour painting.

ARCH 322 Freehand Drawing 4.

(1) (0-2-1) (Prerequisite: ARCH 321) Synthesis of ARCH 217, 218 and ARCH 321. Further refinement of graphic skills and visual literacy through exercises in life drawing. Students select and combine various media and apply them to diverse drawing and painting surfaces.

ARCH 324 Sketching School 1.

(1) (0-0-3) (Prerequisite: ARCH 218) An eight-day supervised field trip in the late summer to sketch places or things having specific visual characteristics. Students are required to include Sketching School I in the B.Sc.(Arch.) program.

□ARCH 352 Art and Theory of House Design.

(3) (2-2-5) (Prerequisite: ARCH 202 or permission of instructor) An examination of the art and theory of the design of houses by architects who developed the form to perfection. Lectures and field trips will focus on the work of selected house architects from antiquity to the present.

ARCH 354 Architectural History 3.

(3) (3-0-6) (Prerequisite: ARCH 250 and Arch 251) General introduction to Modern Architecture in Western Europe from the Renaissance to the end of the 19th century. The course uses a thematic approach and sources on specific ideas and works drawn particularly from Italy, France, England and Germany.

ARCH 355 Architectural History 4.

(3) (3-0-6) (Prerequisite: ARCH 250 and ARCH 251) The study of architecture and cities in the postwar period. Emphasis placed on themes and approaches to architectural history, as opposed to traditional survey.

★□ARCH 372 History of Architecture in Canada.

(2) (2-0-4) (Prerequisite: ARCH 202) (Given alternate years, alternating with ARCH 388) French, British and American influences in the Maritime Provinces, Quebec and Ontario.

ARCH 375 Landscape.

(2) (2-2-2) Land form, plant life, microclimate; land use and land preservation; elements and methods of landscape design.

ARCH 377 Energy, Environment and Buildings.

(3) (3-0-6) (Prerequisite: ARCH 202 or permission of instructor) Exploration of the interrelationship between energy, environment and building. Topics include sustainability, assessment tools, the integrated design process, water conservation, energy conservation, renewable energy, materials and embodied energy, indoor environmental quality, environmental acoustics, and advanced building technology.

ARCH 378 Site Usage.

(3) (2-0-7) (Prerequisite: ARCH 202 or permission of instructor) The study of the creation, form and usage of the exterior space generated in various patterns of low-rise housing. Socio-cultural aspects of patterns; exterior space as a logical extension of the living unit; social control of the use of urban and suburban land; comparative model for low-rise housing patterns.

□ARCH 379 Summer Course Abroad.

(3) (0-0-9) (Prerequisite: ARCH 202 or permission of instructor) (Restriction: Departmental permission required) Studies in-situ of key buildings, landscapes and urban settings; techniques of graphic documentations, analysis of physical configuration, constructional details and present use. Excursions to neighbouring sites of architectural interest.

★ARCH 383 Geometry and Architecture.

(3) (2-0-7) (Prerequisite: ARCH 202 or permission of instructor) (Given alternate years, alternating with ARCH 525) Geometry in the formal structure of design. Grids, lattices, polygons and polyhedra; proportional systems. Evidence of these figures and structures in natural objects and phenomena. Graphical and physical models. Application to architecture and the human environment. Case studies.

★ ARCH 388 Introduction to Historic Preservation.

(2) (2-2-2) (Prerequisite: ARCH 303) (Given alternate years, alternating with ARCH 372) Historic attitudes and terminologies of conservation; historic research techniques. Restoration technology of building materials and principles of interior design in the 19th and 20th centuries; current preservation planning.

ARCH 405 Design and Construction 3.

(6) (2-10-6) (Prerequisite: ARCH 304) A structured investigation of architectural concepts; program interpretation with respect to relevant cultural, social and environmental contexts; applications of appropriate formal languages and building technologies in integrated proposals for a variety of building forms.

ARCH 406 Design and Construction 4.

(6) (2-10-6) (Prerequisite: ARCH 405) A detailed study and comprehensive development of architectural proposals for complex building types and site conditions; the exploration of coherent initial concepts with respect to programmatic requirements, image and form; subsequent elaboration leading to meaningful and technologically viable designs for the built environment.

ARCH 447 Lighting.

(2) (2-2-2) (Prerequisite: ARCH 304) Concepts of natural and artificial lighting in architecture and urban design.

ARCH 451 Building Regulations and Safety.

(2) (2-2-2) (Prerequisite: ARCH 405) The study of building codes with specific emphasis on the National Building and National Fire Codes of Canada. Examples of existing buildings with assignments to illustrate regulations. Development of a systematic approach to the implementation of codes during the preliminary design stage of an architectural project.

ARCH 461 Freehand Drawing and Sketching.

(1) (0-3-0) (Prerequisite: ARCH 324) Drawing and sketching in pencil, charcoal and other media both in the studio and out-of-doors.

□ ARCH 471 Computer-Aided Building Design.

(2) (2-2-2) (Prerequisite: ARCH 202 or equivalent) An introduction to selected applications of interactive computing in architecture; emphasis on development of simple algorithms in graphic, as well as non-graphic, modes in hands-on situations in the lab; field trips to several in use installations.

ARCH 490 Selected Topics in Design.

(2) (2-0-4) (Prerequisite: ARCH 202 or permission of instructor) A course to allow the introduction of special topics in related areas of design.

ARCH 512 Architectural Modelling.

(3) (2-1-6) (Prerequisites: ARCH 304 and ARCH 471 or equivalent.) (Restrictions: Not open to students who have taken ARCH 364.) Architectural modelling using advanced applications in digital media. Topics include: 3-D modelling and rendering; image editing; digital animation; hypertext and the World Wide Web; issues of representation and methodology; comparison of publishing applications. Projects complement design studio courses and independent studies that are student or instructor initiated.

ARCH 514 Community Design Workshop.

(4) (4-20-15) (Prerequisite: ARCH 202.) A design-build studio that engages community-based projects with identified needs and a requirement for intervention on real sites. Exploration of selected problems in architectural design and develop solutions from first concept to implementation on-site.

ARCH 515 Sustainable Design.

(3) (3-0-6) (Prerequisite: ARCH 377 or permission of instructor.) This course will address sustainable design theory and applications in the built environment with students from a variety of fields (architecture, urban planning, engineering,

sociology, environmental studies, economics, international studies). Architecture will provide the focus for environmental, socio-cultural and economic issues.

ARCH 519 Field Course Abroad.

(3) (Prerequisite: ARCH 304 or permission of instructor) (Restrictions: Limited enrolment; departmental permission required) (Note: Excursions to neighbouring sites of architectural interest) Advanced and comprehensive studies in-situ of key buildings, landscapes and urban settings; techniques of graphic documentations, analysis of physical configuration, constructional details and present use.

★ ARCH 520 Montreal: Urban Morphology.

(3) (2-1-6) (Prerequisite: ARCH 251) (Given alternate years, alternating with ARCH 521) Historical, geographical, demographical, and regional evolution of the metropolis of Montreal. Topics include: important quarters, the Montreal urban grid, industrialization, reform movements, geographical diversity, urban culture, local building techniques and materials. Basic concepts of urban morphology and their relationships to the contemporary urban context will be explored.

★ ARCH 521 Structure of Cities.

(3) (2-0-7) (Prerequisite: ARCH 202 or permission of instructor) (Given alternate years, alternating with ARCH 520) Nature, pattern and life of modern cities. Urban networks, special areas, problems and prospects.

□ ARCH 522 History of Domestic Architecture in Quebec.

(3) (2-0-7) (Prerequisite: ARCH 251) (Restriction: Departmental permission required) The architecture of houses in Quebec from 1650 to the present. Distinguished buildings are reviewed from the point of view of form, style, siting and material, as influenced by climate, culture and architectural antecedents in France, England and the United States. The course material is presented through alternating bi-weekly lectures and seminars.

★ □ ARCH 523 Significant Texts and Buildings.

(3) (2-0-7) (Prerequisite: ARCH 251) (Given alternate years, alternating with ARCH 524) (Restriction: Departmental permission required) Critical study of significant architectural thought since 1750 as it has been expressed in buildings and texts (treatises, manifestos, criticisms). A specific theme will be addressed every year to allow in-depth interpretations of the material presented and discussed.

★ □ ARCH 524 Seminar on Architectural Criticism.

(3) (2-0-7) (Prerequisite: ARCH 251) (Given alternate years, alternating with ARCH 523) (Restriction: Departmental permission required) The development and current role of architectural criticism with particular reference to its affinities with art and literary criticism.

★ □ ARCH 525 Seminar on Analysis and Theory.

(3) (2-0-7) (Prerequisite: ARCH 202 or permission of instructor) (Given alternate years, alternating with ARCH 383) (Restriction: Departmental permission required) Analysis and evaluation of significant architectural projects with reference to contemporary architectural theories.

ARCH 526 Philosophy of Structure.

(3) (2-0-7) (Prerequisite: ARCH 202 or permission of Instructor) (Restriction: Not open to students who have taken ARCH 374) Philosophy of Structure aims to investigate structure in its broadest sense. The course is divided in two halves; the first one gives an overview of the development of theoretical structural frameworks such as mathematics and geometry, while the second one highlights physical structures constructed by nature (geology, turbulence), man or animals.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

ARCH 527 Civic Design.

(3) (2-0-7) (Prerequisite: ARCH 378) The elements of form in buildings and their siting design in the urban setting.

ARCH 528 History of Housing.

(3) (2-0-7) (Prerequisite: ARCH 251 or permission of instructor) Indigenous housing both transient and permanent, from the standpoint of individual structure and pattern of settlements. The principal historic examples of houses including housing in the age of industrial revolution and contemporary housing.

ARCH 529 Housing Theory.

(3) (2-0-7) (Prerequisite: ARCH 528 or permission of instructor) A review of environmental alternatives in housing; contemporary housing and the physical and sociological determinants that shape it; Canadian housing.

ARCH 531 Architectural Intentions Vitruvius - Renaissance.

(3) (2-0-7) (Prerequisite: ARCH 251) Architectural intentions embodied in buildings and writings of architects from antiquity to the Renaissance. Special emphasis is placed on the cultural connections of architecture to science and philosophy.

ARCH 532 Origins of Modern Architecture.

(3) (2-0-7) (Prerequisite: ARCH 251) Examination of architectural intentions (theory and practice) in the European context (especially France, Italy and England), during the crucial period that marks the beginning of the modern era.

ARCH 534 Architectural Archives.

(3) (3-0-6) (Prerequisites: ARCH 250 and ARCH 251 or equivalent.) (Restriction: Open only to architecture students.) Role of archives in architectural culture. Methods of development, documentation and communication. Formats of architectural representation. Problems inherent in the creation and preservation of architectural records, and access to them. Case studies based on 19th and 20th century archives in the John Bland Canadian Architecture Collection, and other collections.

ARCH 540 Selected Topics in Architecture 1.

(3) (2-0-7) A course to allow the introduction of new topics in Architecture as needs arise, by regular and visiting staff.

ARCH 541 Selected Topics in Architecture 2.

(3) (2-0-7) A course to allow the introduction of new topics in Architecture as needs arise, by regular and visiting staff.

ARCH 550 Urban Planning and Development.

(4) (3-1-8) (Prerequisite: B.Sc.(Arch.) or permission of instructor) (Restriction: Not normally open to Urban Planning students) A survey of municipal, regional and provincial actions to guide urban development in Canada, with a particular emphasis on Montreal and Quebec. It also introduces students to concepts in real-estate development and highlights the relationship between developers and planners.

ARCH 554 Mechanical Services.

(2) (2-0-4) (Prerequisite: ARCH 405 or permission of instructor) Problems encountered in providing mechanical services in buildings. Physiological and environmental aspects of heat, ventilation and air conditions, estimation of heating and cooling loads and selection and specification of equipment. Sprinkler systems and plumbing. Construction problems produced by installation of this equipment.

ARCH 555 Environmental Acoustics.

(2) (2-0-4) (Prerequisite: ARCH 405 or permission of instructor) Acoustics in architectural design, and in environmental control of buildings. Acoustical requirements in the design of auditoria such as theatres, lecture halls, opera houses, concert halls, churches, motion picture theatres, studios. Principles of noise and vibration control, sound insulating in building construction. Practical noise control in various types of buildings.

BMDE-Biomedical Engineering

Offered by: Biomedical Engineering

BMDE 500D1 (1.5), BMDE 500D2 (1.5) Seminars in Biomedical Engineering.

(Students must register for both BMDE 500D1 and BMDE 500D2.) (No credit will be given for this course unless both BMDE 500D1 and BMDE 500D2 are successfully completed in consecutive terms)

BMDE 501 Selected Topics in Biomedical Engineering.

(3) (3-0-6) An overview of how techniques from engineering and the physical sciences are applied to the study of selected physiological systems and biological signals. Using specific biological examples, systems will be studied using: signal or finite-element analysis, system and identification, modelling and simulation, computer control of experiments and data acquisition.

BMDE 502 BME Modelling and Identification.

(3) (3-0-6) (Prerequisites: Undergraduate basic statistics and: either BMDE 519, or Signals and Systems (e.g., ECSE 303 & ECSE 304) or equivalent) Methodologies in systems or distributed multidimensional processes. System themes include parametric vs non-parametric system representations; linear/non-linear; noise, transients and time variation; mapping from continuous to discrete models; and relevant identification approaches in continuous and discrete time formulations.

BMDE 503 Biomedical Instrumentation.

(3) (3-0-6) The principles and practice of making biological measurements in the laboratory, including theory of linear systems, data sampling, computer interfaces, basic electronic circuit design and machining.

BMDE 504 Biomaterials and Bioperformance.

(3) (3-0-6) (Restriction: graduate and final-year undergraduate students from physical, biological and medical science, and engineering.) Biological and synthetic biomaterials, medical devices, and the issues related to their bioperformance. The physicochemical characteristics of biomaterials in relation to their biocompatibility and sterilization.

BMDE 505 Cell and Tissue Engineering.

(3) (3-0-6) ((1.5 hours lecture/1.5 hours seminar per week)) (Restriction: graduate and final year undergraduate students from physical, biological, and medical science, and engineering.) Application of the principles of engineering, physical, and biological sciences to modify and create cells and tissues for therapeutic applications will be discussed, as well as the industrial perspective and related ethical issues.

BMDE 506 Molecular Biology Techniques.

(3) (1-5-3) (Prerequisites: MATH 222, BIOL 200 or BIOL 201, CHEM 212 or CHEM 213 or PHYS 253) (Restrictions: Limited to 18 students. Calculus required, physics or physical chemistry (thermodynamics, statistical mechanics) preferred. Primarily for graduate students or advanced undergraduate students in the physical sciences who are interested in learning molecular biology techniques. Preference given to graduate students in Biomedical Engineering and Physics. Students who have completed BIOC 300 or MIMM 366 are not eligible.) Introduction to major techniques of molecular biology for physical scientists.

BMDE 519 Biomedical Signals and Systems.

(3) (3-0-6) (Prerequisites: Satisfactory standing in U3 Honours Physiology; or U3 Major in Physics-Physiology; or U3 Major Physiology-Mathematics; or permission of instructor.) An introduction to the theoretical framework, experimental techniques and analysis procedures available for the quantitative analysis of physiological systems and signals. Lectures plus laboratory work using the Biomedical Engineering computer system. Topics include: amplitude and frequency structure of signals, filtering, sampling, correlation functions, time and frequency-domain descriptions of systems.

CHEE-Chemical Engineering

Offered by: Chemical Engineering

CHEE 200 Introduction to Chemical Engineering.

(4) (3-1-8) (Restrictions: students with DCS in PAS, HS or equivalent) Introduction to the design of industrial processes. Survey of unit operations, and systems of units. Elementary material balances, first and second laws of thermodynamics, use of property tables and charts, steady flow processes, heat engines, refrigeration cycles. Relationships between thermodynamic properties, property estimation techniques. Laboratory and design exercise.

CHEE 204 Chemical Manufacturing Processes.

(3) (3-2-4) (Prerequisite: CHEE 200) Material and energy balances in chemical processes. Problem solving in the design of separation processes (evaporation, crystallization), reactor design, process control, and environmental applications.

CHEE 220 Chemical Engineering Thermodynamics.

(3) (3-1-5) (Prerequisite: CHEE 200) Application of thermodynamic equilibrium; free energy and equilibrium; phase rule; chemical reaction equilibrium for homogenous and multicomponent/multiphase systems. Application to the design of binary distillation. Laboratory exercise.

CHEE 230 Environmental Aspects of Technology.

(3) (3-0-6) The impact of urbanization and technology on the environment. Topics include urbanization: causes, effects, land use regulations; transportation technology and environmental implications; environmental impact of energy conversions; energy policy alternatives; formulation of energy and environmental policy; air pollution: sources, effects, control; water pollution: sources, effects, control.

CHEE 291 Instrumental Measurement Laboratory.

(4) (2-5-5) Elements of statistical analysis associated with instrumental measurements. Principles of operation and calibration of selected measuring instruments. Principles of modern data acquisition and processing. Introduction to instrument system selection in chemical engineering.

CHEE 310 Physical Chemistry for Engineers.

(3) (3-1-5) (Prerequisite: CHEE 220 or MIME 212.) (Restriction: Not open to students having taken CHEM 233.) Introduction to statistical thermodynamics, chemical kinetics, surface and colloid chemistry, spectroscopy, and electrochemistry from an engineering viewpoint. Topics emphasize applications of physical chemistry for chemical engineers.

CHEE 314 Fluid Mechanics.

(4) (3-3-6) (Prerequisite: CHEE 204.) (Corequisite: MATH 265 or MATH 264.) Fluid properties; dimensional analysis; drag; packed/fluidized beds; macroscopic energy balances, Bernoulli's equation and linear momentum theorem; flowmeters, pipeline systems, non-Newtonian fluids, microscopic balances leading to continuity and Navier-Stokes equations; boundary layer approximation; turbulence. Laboratory exercises.

CHEE 315 Heat and Mass Transfer.

(4) (3-2-7) (Prerequisite: CHEE 314) Transport of heat and mass by diffusion and convection; transport of heat by radiation; diffusion; convective mass transfer; drying; absorption; mathematical formulation of problems and equipment design for heat and mass transfer; laboratory exercises.

CHEE 340 Process Modelling.

(3) (3-1-5) (Prerequisites: MATH 261 or MATH 263; MATH 264 or MATH 265; CHEE 314) Principles of mathematical modelling in chemical engineering: problem formulation, solution, discrete systems; difference and difference-differential equations, methods of solution; understanding system behaviour, optimization.

CHEE 351 Separation Processes.

(3) (3-0-6) (Prerequisites: CHEE 204, CHEE 220. Corequisites: CHEE 315.) Concepts underlying separation processes. Equilibrium-based processes with staging and continuous contacting, distillation, evaporation, liquid-liquid extraction, leaching. Introduction to membrane based separations.

CHEE 360 Technical Paper 1.

(1) (0-0-3) A technical paper prepared according to instructions issued by the Department.

CHEE 363 Projects Chemical Engineering 1.

(2) (1-0-5) (Prerequisite: CHEE 200 (A D grade is acceptable for prerequisite purposes only)) Projects on social or technical aspects of chemical engineering practice. Students must suggest their own projects to be approved and supervised by a member of the departmental staff. Students may work in groups.

CHEE 370 Elements of Biotechnology.

(3) (3-0-6) (Prerequisite: CHEM 234) Enzyme kinetics; proteins, carbohydrates and other biochemicals; industrially significant microbes; introduction to genetic engineering, cell structure and metabolism; laboratory exercises.

CHEE 380 Materials Science.

(3) (3-1-5) Structure/property relationship for metals, ceramics, polymers and composite materials. Atomic and molecular structure, bonds, electronic band structure and semi-conductors. Order in solids: crystal structure, disorders, solid phases. Mechanical properties and fracture, physico-chemical properties, design. Laboratory exercises.

CHEE 392 Project Laboratory 1.

(4) (3-6-3) (Prerequisite: CHEE 291) Planning for the solution of experimental problems; design of experiments for logical and statistical interpretation; statistical analysis of experimental data; effective work in groups; selected laboratory exercises.

CHEE 393 Project Laboratory 2.

(5) (2-10-3) (Prerequisite: CHEE 392) Student groups execute and report on experimental projects.

CHEE 423 Chemical Reaction Engineering.

(4) (3-1-8) (Prerequisite: CHEE 310) Review of fundamental concepts in chemical reaction thermodynamics and kinetics. Mass and energy balances for homogenous ideal reactors. Batch, semi-batch and continuous operation. Minimization of by-product and pollution production. Heterogenous reactions, effect of heat and mass transfer on the global rate. Laboratory exercises.

CHEE 430 Technology Impact Assessment.

(3) (3-1-5) (Restriction: final year students by permission of instructor) The power of technology to shape man's physical, economic and social environment: effects of technological transitions on culture and ecology; (TIA) methodologies, public participation, engineering contributions, regulations; implications of TIA on social and economic development.

CHEE 438 Engineering Principles in Pulp and Paper Processes.

(3) (3-0-6) (Corequisite: CHEE 423) Characterization of wood, pulp and paper. Flowsheets of basic pulping processes. Applications of thermodynamics, fluid mechanics, heat and mass transfer, and reaction engineering principles in the pulp and paper processes.

CHEE 453 Process Design.

(4) (3-1-8) (Prerequisites: CHEE 315; CHEE 351) Analysis of design alternatives. Structure of process design systems, degrees of freedom, information flow. Computer-aided process and plant design programs, physical properties, specifications, recycle convergence, optimization, applications, economics. Safety, environmental control in plant design.

CHEE 455 Process Control.

(4) (3-2-7) (Prerequisites: CHEE 315; CHEE 351; CHEE 423) Dynamic modelling of processes, transfer functions, first and higher-order systems, dead-time, open and closed loop responses, empirical models, stability, feedback control, controller tuning, transient response, frequency response, feedforward and ratio control, introduction to computer control, sampling, discrete models, Z-transform, introduction to multivariable control. Laboratory exercises.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

CHEE 456 Design Project 1.

(1) (1-0-2) (Corequisites: CHEE 393, CHEE 453 and CHEE 340) (Restriction: Must be taken in the semester preceding CHEE 457.) Introduction to a process design and economic evaluation project, including environmental and safety aspects, for a major industrial operation. Students work in small groups under an experienced plant design supervisor.

CHEE 457 Design Project 2.

(5) (1-2-12) (Prerequisite: CHEE 456.) (Restriction: Must be taken in the semester following CHEE 456.) A process plant design and economic evaluation, including environmental and safety aspects, for a major industrial operation. Students work in small groups, under an experienced plant design supervisor. Plant visit.

CHEE 458 Computer Applications.

(3) (2-3-4) (Prerequisites: COMP 208 and CHEE 393) Use of computers and software as problem solving aids in chemical engineering. Lectures on software engineering, computer architectures, and multitasking. In laboratory work, groups of students will produce software to be used and maintained by others.

CHEE 462 Technical Paper 2.

(1) (0-0-3) (Prerequisite: CHEE 360) A technical paper prepared according to instructions issued by the Department.

CHEE 464 Projects Chemical Engineering 2.

(2) (1-0-5) (Prerequisite: CHEE 363) Projects on social or technical aspects of chemical engineering practice. Students must suggest their own projects to be approved and supervised by a member of the staff. Students may work in groups.

CHEE 474 Biochemical Engineering.

(3) (3-0-6) (Prerequisite: CHEE 370.) Bioreactor design for biotechnology and environmental applications; microbial growth kinetics; application of transport phenomena and selected chemical engineering unit operations. Bioreactor instrumentation and performance optimization. Air and media sterilization processes. Selected operations of downstream processing and product recovery.

CHEE 484 Materials Engineering.

(3) (3-0-6) (Prerequisites: CHEE 315, CHEE 380) Processes for forming and producing engineering materials such as amorphous, semicrystalline, textured and crystal-oriented substances and composites. Effect of processing variables on the properties of the finished article. Process of blending and alloying. Shaping and joining operations. Vessel equipment design for chemical engineering applications.

CHEE 494 Research Project and Seminar 1.

(3) (1-6-2) (Prerequisite: CHEE 393) Independent study and experimental work on a topic chosen by consultation between the student and Departmental Staff.

CHEE 494D1 (1.5), CHEE 494D2 (1.5) Research Project and Seminar 1.

(Students must register for both CHEE 494D1 and CHEE 494D2.) (No credit will be given for this course unless both CHEE 494D1 and CHEE 494D2 are successfully completed in consecutive terms) (CHEE 494D1 and CHEE 494D2 together are equivalent to CHEE 494) Independent study and experimental work on a topic chosen by consultation between the student and Departmental Staff.

CHEE 495 Research Project and Seminar 2.

(4) (1-9-2) (Prerequisite: CHEE 393) Independent study and experimental work on a topic chosen by consultation between the student and the Departmental staff.

CHEE 495D1 (2), CHEE 495D2 (2) Research Project and Seminar 2.

(Students must register for both CHEE 495D1 and CHEE 495D2.) (No credit will be given for this course unless both CHEE 495D1 and CHEE 495D2 are successfully completed in consecutive terms) (CHEE 495D1 and CHEE 495D2 together are equivalent to CHEE 495) Independent study and experimental work on a topic chosen by consultation between the student and the Departmental staff.

CHEE 496 Environmental Research Project.

(3) (1-6-2) (Prerequisite: CHEE 393 or permission of instructor.) Independent study and experimental work on an environmental topic chosen by consultation between the student and Departmental staff.

CHEE 496D1 (1.5), CHEE 496D2 (1.5) Environmental**Research Project.**

(Students must register for both CHEE 496D1 and CHEE 496D2.) (No credit will be given for this course unless both CHEE 496D1 and CHEE 496D2 are successfully completed in consecutive terms) (CHEE 496D1 and CHEE 496D2 together are equivalent to CHEE 496) Independent study and experimental work on an environmental topic chosen by consultation between the student and Departmental staff.

CHEE 541 Electrochemical Engineering.

(3) (3-0-6) (Prerequisite: CHEE 310 or permission of instructor.) (Restriction: Not open to students who have taken CHEE 489.) Electrochemical systems: electrodes, reactors. Electrochemical stoichiometry, thermodynamics and kinetics. Mass and charge transport. Current and potential distribution in an electrochemical reactor. Electrocatalysis. Fuel cells technology. Batteries. Industrial electrochemical processes. Electrochemical sensors. Biomedical electrochemistry. Passivity, corrosion and corrosion prevention. Electrocrystallization. Experimental Methods.

CHEE 543 Plasma Engineering.

(3) (3-1-5) (Prerequisites: CHEE 220 and CHEE 314 or equivalent.) Description of the plasma state and parameters, plasma generation methods, and of the related process control and instrumentation. Electrical breakdown in gases and a series of discharge models are covered. Plasma processing applications such as PVD, PECVD, plasma polymerisation and etching, environmental applications, nanoparticle synthesis, spraying and sterilization are treated.

CHEE 562 Engineering Principles in Physiological Systems.

(3) (3-1-5) (Prerequisites: MATH 263 or MATH 315, CHEE 370 or BIOL 112 or equivalent, or permission of the instructor) Basic aspects of human physiology. Applications of general balance equations and control theory to systems physiology. The course will cover: circulatory physiology, nervous system physiology, renal physiology and the musculoskeletal system.

□CHEE 563 Biofluids and Cardiovascular Mechanics.

(3) (3-0-6) (Prerequisites: CHEE 314 or MECH 331 or permission of instructor.) (Restriction: Not open to students who have taken MECH 563.) Basic principles of circulation including vascular fluid and solid mechanics, modeling techniques, clinical and experimental methods and the design of cardiovascular devices.

CHEE 571 Small Computer Applications: Chemical Engineering.

(3) (3-0-6) (Prerequisite: CHEE 458 or permission of the instructor.) The use of small computers employing a high level language for data acquisition and the control of chemical processes. Real-time system characteristics and requirements, analog to digital, digital to analog conversions and computer control loops are examined. Block level simulation.

CHEE 582 Polymer Science & Engineering.

(3) (3-0-6) (Prerequisite: CHEE 314 or equivalent.) (Restriction: Not open to students who have taken CHEE 481.) Application of engineering fundamentals to the preparation and processing of polymers emphasizing the relationship between polymer structure and properties. Topics include: polymer synthesis techniques, characterization of molecular weight, crystallinity, glass transition, phase behaviour, mechanical properties, visco-elasticity, rheology, and polymer processing for use in blends and composite materials.

CHEE 584 Polymer Processing.

(3) (3-0-6) (Corequisite: CHEE 215 or MIME 356 or equivalent.) (Restriction: Not open to students who have taken CHEE 684.) Survey of polymer processing operations with emphasis on the application of polymer rheology and transport phenomena to predict performance, including polymer rheology and constitutive equations, mixing, extrusion, injection molding, coating flows, fiber spinning, film blowing, blow molding, compression molding, thermoforming and composites processing.

CHEE 585 Foundations of soft matter.

(3) (3-0-6) Introduction to soft condensed matter. Atomic and molecular origins of hydrodynamics and elasticity. Microscale order and disorder, phase transitions and dynamics. Polymer solutions, melts and gels. Surfactants, self-assembled

structures, and fluid membranes. Colloidal dispersions, their dynamics, gels and crystals. Liquid crystals. Integration of the foregoing topics with modern experimental techniques in soft-matter research.

CHEE 591 Environmental Bioremediation.

(3) (3-0-6) The presence and role of microorganisms in the environment, the role of microbes in environmental remediation either through natural or human-mediated processes, the application of microbes in pollution control and the monitoring of environmental pollutants.

CHEE 592 Industrial Air Pollution Control.

(3) (3-0-6) (Prerequisite: CHEE 314 or permission of instructor.) (Restriction: Not open to students who have taken CHEE 472.) Air pollution effects, control laws and regulations, measurements; emission estimates, meteorology for air pollution control engineers, dispersion models, nature of particulate pollutants, control of primary particulates, control of volatile organic compounds, sulfur oxides and nitrogen oxides; air pollutants and global climate.

CHEE 593 Industrial Water Pollution Control.

(3) (3-0-6) (Prerequisite: CHEE 314 or equivalent.) (Restriction: Not open to students who have taken CHEE 471.) Wastewater constituents of concern; legislation pertinent to wastewater treatment; wastewater sampling and analysis techniques; process analysis and selection; physical, chemical and biological processes; advanced wastewater treatment methods; integration of sciences and engineering principles to design wastewater treatment processes.

CHEE 594 Biocolloids in Environmental Systems.

(3) (3-0-6) (Prerequisite: CHEE 315 or equivalent.) Principles of colloid chemistry for solid-liquid separations of environmental interest: (i) transport and fate of biocolloids and colloid-associated contaminants in waters and solids, and (ii) membrane-based water and wastewater filtration. Topics include: biocolloid-surface interactions, membrane process design, fouling and biofouling, experimental techniques, novel research developments.

CHEE 595 Energy Recovery, Use, & Impact.

(3) (3-0-6) (Prerequisite: CHEE 423 or permission of instructor.) Application of chemical engineering fundamentals to energy recovery, conversion, and environmental impact. Topics include thermodynamics of fossil fuel deposits, reaction engineering of fuel upgrading, power generation, operation of power sources, production/use of alternative fuels, environmental impact and pollution mitigation technologies dealing with energy use.

CIVE-Civil Engineering

Offered by: Civil Engineering

CIVE 202 Construction Materials.

(4) (4-2-6) (Prerequisite: CIVE 290) Classification of materials; atomic bonds; phase diagrams; elementary crystallography, imperfections and their relationship to mechanical behaviour; engineering properties and uses of ferrous and non-ferrous metals, ceramics, cement, concrete, timber and timber products, polymers, composites; smart materials and systems; electrochemical reactions and corrosion, prevention and protection; environmental influences; group laboratory projects.

CIVE 203 Solid Mechanics Laboratory.

(1)
CIVE 205 Statics.
 (3) (3-2-4) Systems of forces and couples, resultants, equilibrium. Trusses, frames and beams, reactions, shear forces, bending moments. Centroids, centres of gravity, distributed forces, moments of inertia. Friction, limiting equilibrium,

screws, belts.

CIVE 206 Dynamics.

(3) (3-2-4) (Prerequisite: CIVE 205.) (Corequisites: MATH 260 or MATH 260 and MATH 263 or MATH 261.) Kinematics and kinetics of particles, systems, and rigid bodies; mass-acceleration, work-energy, impulse-momentum. Moving coordinate systems. Lagrange's equations. Vibrations and waves.

CIVE 207 Solid Mechanics.

(4) (3-2-7) (Prerequisites: CIVE 205 (a D grade is acceptable for prerequisite purposes) or MECH 210 (under special circumstances, the Department may permit this course to be taken as a corequisite) or equivalent) (Four laboratory sessions and weekly tutorials) Stress-strain relationships; elastic and inelastic behaviour; performance criteria. Elementary and compound stress states, Mohr's circle. Shear strains, torsion. Bending and shear stresses in flexural members. Deflections of beams. Statically indeterminate systems under flexural and axial loads. Columns. Dynamic loading.

CIVE 208 Civil Engineering System Analysis.

(3) (3-1-5) (Prerequisite: COMP 208.) (Corequisite: MATH 264 or MATH 265.) Introduction to civil engineering systems; system modelling process; systems approach and optimization techniques; application of linear programming; simplex method; duality theory; sensitivity analysis; transportation problem; assignment problem; network analysis including critical path method; integer linear programming method.

CIVE 210 Surveying.

(2) (Prerequisite: MECH 289 (formerly MECH 290)) The construction and use of modern survey instruments; transit, level, etc.; linear and angular measurements and errors; horizontal and vertical curves; error analysis, significance of figures; use of computers and software; recent developments.

CIVE 225 Environmental Engineering.

(4) (4-2-6) (Prerequisite: CIVE 290.) (Corequisite: MATH 261 or MATH 263.) Introduction to environmental chemistry; mass balance analyses in engineered and natural systems; water, soil and air pollution characterization and control; water quality parameters; drinking water and wastewater treatment technologies; global climate change; possible causes and effects; risk assessment for pollutant exposure; solid- and hazardous-waste management.

CIVE 281 Analytical Mechanics.

(3) (3-1-5) (Corequisites: MATH 260 or MATH 262, MATH 261 or MATH 263.) Kinematics of particles, dynamics of particles. Work, conservative forces, potential energy. Relative motion and general moving frames of reference. Central force fields and orbits. Dynamics of a system of particles. General motion of rigid bodies, angular momentum and kinetic energy of rigid bodies. Generalized coordinates and forces, Lagrange's equations.

CIVE 284 Structural Engineering Basics.

(4) (3-3-6) (Restriction: Not open to students who have taken CIVE 205 and CIVE 283.) Basic principles of statics; force systems; trusses; centroids and second moment of areas; stress and strain; beams; shearing and bending stresses; deflections; combined stresses; columns.

CIVE 290 Thermodynamics and Heat Transfer.

(3) (3-2-4) Macroscopic vs. microscopic viewpoint; states and processes; energy conservation and transformation. Phase equilibrium; equations of state; thermodynamic properties; work; heat; First Law of thermodynamics; internal energy; enthalpy; specific heat; thermodynamic processes: reversibility, polytropic processes, applications of First Law; Second Law; entropy; introduction to heat transfer.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

CIVE 302 Probabilistic Systems.

(3) (3-1-5) (Prerequisites: MATH 260 or MATH 262, COMP 208 (a D grade is acceptable for prerequisite purposes)) An introduction to probability and statistics with applications to Civil Engineering design. Descriptive statistics, common probability models, statistical estimation, regression and correlation, acceptance sampling.

CIVE 311 Geotechnical Mechanics.

(4) (3-3-6) (Prerequisite: CIVE 207) Identification and classification of soils; physical and engineering properties; principle of effective stress; permeability, compressibility, shear strength, stress-strain characteristics; groundwater flow and seepage; earth pressure and retaining structures; stress distributions in soils; settlement; bearing capacity of shallow foundations.

CIVE 317 Structural Engineering 1.

(3) (3-1-5) (Prerequisites: CIVE 202, CIVE 207 and MECH 289 (formerly MECH 290).) The design process; loads, sources, classifications, load factors, combinations; limit states design; structural systems and foundations; choice of materials; virtual work and energy methods; static and kinematic indeterminacy; slope deflection method, introduction to matrix methods; analysis of indeterminate systems; force envelopes.

CIVE 318 Structural Engineering 2.

(3) (3-1-5) (Prerequisite: CIVE 317) Durability and service life; fire resistance and protection; steel, reinforced concrete and timber; behaviour and design of components in tension, compression, bending and shear; slenderness, global and local instability; axial load and moment interaction; curvature, deflection, ductility; connections; bond and anchorage of reinforcement; simple footings.

CIVE 319 Transportation Engineering.

(3) (3-1-5) (Prerequisites: CIVE 208 and COMP 208.) (Corequisite: CIVE 302) Introduction to design and operating principles and procedures for surface transportation systems, including vehicle motion and performance, pavements, geometric design of roadbeds, vehicle flow and capacity, traffic control, demand, supply and cost concepts.

CIVE 320 Numerical Methods.

(4) (3-3-6) (Prerequisites: COMP 208, MATH 264 or MATH 265.) Numerical procedures applicable to civil engineering problems: integration, differentiation, solution of initial-value problems, solving linear and non-linear systems of equations, boundary-value problems for ordinary-differential equations, and for partial-differential equations.

CIVE 323 Hydrology and Water Resources.

(3) (3-2-4) (Prerequisite: CIVE 302) Precipitation, evaporation and transpiration. Streamflow, storage reservoirs. Groundwater hydrology. Morphology of river basins. Statistical analysis in hydrology, stochastic modelling and simulation. Case studies in hydroelectric power development, flood damage mitigation, irrigation and drainage.

CIVE 324 Construction Project Management.

(3) (3-1-5) (Prerequisites: MIME 310 and CIVE 208) Construction fundamentals; procedures and responsibilities; tender documents, specifications, proposals, contracts; construction project organization, estimating, planning, scheduling, control; liability, claims procedures, arbitration; job safety; security and loss control; case histories, site visits.

CIVE 326 Fluids & Hydraulics Laboratory.

(1) (0-1-2) (Restriction: Not open to students who have taken or have taken CIVE 327.) (Prerequisite: Course equivalent to CIVE 327 without laboratory component.) Laboratory experiments in fluid mechanics and hydraulics.

CIVE 327 Fluid Mechanics and Hydraulics.

(4) (3-6-3) (Prerequisites: CIVE 206, MATH 264 or MATH 265.) Fluid properties; hydrostatics; dimensional analysis and similitude, fluxes of mass, momentum and energy; Bernoulli's equation; method of control volume; streamline curvature; potential flow and boundary layers; pipe flow, hydraulic machinery and introduction to open-channel flow.

CIVE 385 Structural Steel and Timber Design.

(3) (3-1-5) (Prerequisite: CIVE 284.) (Corequisite: ARCH 240) Structural loadings, load factors, code requirements and design procedures. Characteristics of structural steel and structural timber in building construction. Structural design of axially loaded tension and compression members, joists, beams, girders, trusses and framing systems.

CIVE 388 Foundation and Concrete Design.

(3) (3-1-5) (Prerequisite: CIVE 284.) Physical properties of concrete; behaviour and design of reinforced concrete members in compression, tension, bending, shear and combined loadings; bond and anchorage; soil properties, soil testing, footings; pile foundation; shorting; retaining walls.

CIVE 416 Geotechnical Engineering.

(3) (3-2-4) (Prerequisite: CIVE 311) Earth pressure theory, retaining walls, sheet pile walls, braced excavations. Slope stability analysis. 2D flow through isotropic and anisotropic soils. Bearing capacity and settlement of shallow foundations, stress distribution. Deep foundations, single pile, pile groups. Geotechnical investigation and reports.

CIVE 418 Design Project.

(3) (1-2-6) (Prerequisite: Completion of an approved set of required and complementary courses; normally restricted to final semester.) Capstone design project.

CIVE 421 Municipal Systems.

(3) (3-2-4) (Prerequisite: CIVE 327) Design of water-related municipal services; sources of water and intake design; estimation of water demand and wastewater production rates; design, construction and maintenance of water distribution, wastewater and stormwater collection systems; pumps and pumping stations; pipe materials, network analysis and optimization; storage; treatment objectives for water and wastewater.

CIVE 428 Water Resources and Hydraulic Engineering.

(3) (3-3-3) (Prerequisite: CIVE 327) Application of continuity, energy and momentum concepts to open-channel flow; design of channels considering uniform flow and flow resistance, non-uniform flow and longitudinal profiles; design of channel controls and transitions; unsteady flow and flood routing; river ice engineering.

CIVE 430 Water Treatment and Pollution Control.

(3) (3-3-3) (Prerequisites: CIVE 225 and CIVE 327) Principles of water and sewage treatment. Water and sewage characteristics; design of conventional unit operations and processes; laboratory analyses of potable and waste waters.

CIVE 432 Technical Paper.

(1) (0-0-3) (Prerequisite: EDEC 206) A technical paper, on a suitable topic, is to be prepared in accordance with detailed instructions which are provided by the Department. This paper will normally be written in the U3 year and may be submitted in September or January.

CIVE 433 Urban Planning.

(3) (3-1-5) (Restriction: Not open to U0 and U1 students.) The City in History. The planning profession, evolution of planning in North America, Canada and Quebec. Planning theories, the general or master plan, planning processes and techniques, planning and design of residential subdivisions. Local planning issues, housing policies, planning laws.

CIVE 440 Traffic Engineering.

(3) (3-1-5) (Prerequisite: CIVE 319 (a D grade is acceptable for prerequisite purposes)) Driver, vehicle and traffic flow characteristics; origin-destination studies, traffic studies and analysis, accident studies, queuing theory applications, gap acceptance, simulation, highway capacity, traffic regulations and control measures, intersection control.

CIVE 446 Construction Engineering.

(3) (3-1-5) (Prerequisite: CIVE 208 and MIME 310.) Project management principles; construction equipment economics, selection, operation; characteristics of building, heavy, marine, underground and route construction projects; international projects.

CIVE 451 Geoenvironmental Engineering.

(3) (3-1.5-4.5) (Prerequisites: CIVE 225 and CIVE 311) Geoenvironmental hazards; land management of waste; regulatory overview, waste characterization; soil-waste interaction; geosynthetics; low permeability clay barriers; contaminant

transport; containment systems; collection and removal systems; design aspects; strategies for remediation; rehabilitation technologies.

CIVE 452 Water Resources in Barbados.

(3) (Corequisites: None.) (Restrictions: Must be enrolled in the Barbados Field Study Semester.) Physical environment challenges, centered on water, being faced by an island nation. Guest speakers, field study tours and laboratory tests. Private, government and NGO institutional context of conservation strategies, and water quantity and quality analyses for water management specific to Barbados.

CIVE 460 Matrix Structural Analysis.

(3) (3-2-4) (Prerequisites: CIVE 206 and CIVE 317) Computer structural analysis, direct stiffness applied to two and three dimensional frames and trusses, matrix force method, nonlinear problems, buckling of trusses and frames, introduction to finite element analysis.

CIVE 462 Design of Steel Structures.

(3) (3-3-3) (Prerequisite: CIVE 318) Design of structural steel elements: plate girders, members under combined loadings, eccentrically loaded connections, structural systems. Design of structural steel systems: composite floor systems, braced frames, moment resisting frames.

CIVE 463 Design of Concrete Structures.

(3) (3-3-3) (Prerequisite: CIVE 318) Review of flexural behaviour and design concepts. Design of flexural members, columns, two-way slab systems, retaining walls, disturbed regions, and shear walls. Introduction to prestressed concrete design.

CIVE 469 Infrastructure and Society.

(3) (3-2-4) (Prerequisite: MIME 310) Infrastructure systems, historical background and socio-economic impact; planning, organization, communication and decision support systems; budgeting and management; operations, maintenance, rehabilitation and replacement issues; public and private sectors, privatization and governments; infrastructure crisis and new technologies; legal, environmental, socio-economic and political aspects of infrastructure issues; professional ethics and responsibilities; case studies.

CIVE 470 Undergraduate Research Project.

(3) (0-1-8) (Prerequisite: 60 credits in the Civil Engineering and Applied Mechanics program) Open to students with a high CGPA. A research project must be carried out and a technical paper prepared under the supervision of a member of staff. The project must be established with the consent of the Staff Supervisor, and must be approved by the Department before registration. May be taken in conjunction with the required course CIVE 418 and the project therefore can be carried out through two semesters.

CIVE 492 Structures.

(2) (2-2-2) (Prerequisites: CIVE 385 and CIVE 388) A study of structural systems in concrete, steel, timber; a philosophy of structure; choice of structure; economic factors in design; recent developments and trends in structure; lateral stability by frame action, bracing shear walls; mechanics of certain structural forms.

CIVE 512 Advanced Civil Engineering Materials.

(3) (3-3-3) (Prerequisite: CIVE 202) Production, structure and properties of engineering materials; ferrous alloys, treatments, welding, special steels, cast iron; ceramic materials; polymers; composite materials; concrete, admixtures, structure, creep, shrinkage; asphalt and asphaltic materials; clay materials and bricks; impact of environment on material response, durability, quality assessment and control, industrial specifications; recent advances.

CIVE 519 Sustainable Development Plans.

(6) (1-9-8) (Restriction: Must be enrolled in the Barbados Field Study Semester.) Geared for solving real-world environmental problems related to water at the local, regional and international scale in Barbados. Projects to be designed by instructors in consultation with university, government and NGO partners and to be conducted by teams of 2 to 4 students in collaboration with them.

CIVE 527 Renovation and Preservation: Infrastructure.

(3) (3-2-4) (Prerequisite (Undergraduate): CIVE 202 and CIVE 318) Maintenance, rehabilitation, renovation and preservation of infrastructure; infrastructure degradation mechanisms; mechanical, chemical and biological degradation; corrosion of steel; condition surveys and evaluation of buildings and bridges; repair and preservation materials, techniques and strategies; codes and guidelines; case studies.

CIVE 540 Urban Transportation Planning.

(3) (3-1-5) (Prerequisite: CIVE 319 or permission of instructor.) Process and techniques of urban transportation engineering and planning, including demand analysis framework, data collection procedures, travel demand modelling and forecasting, and cost-effectiveness framework for evaluation of project and system alternatives.

CIVE 546 Selected Topics in Civil Engineering 1.

(3) (3-0-6) (Prerequisite (Undergraduate): Permission of instructor) Special topics related to Civil Engineering will be presented by staff and visiting lecturers.

CIVE 550 Water Resources Management.

(3) (3-0-6) (Prerequisite (Undergraduate): CIVE 323 or equivalent) State-of-the-art water resources management techniques; case studies of their application to Canadian situations; identification of major issues and problem areas; interprovincial and international river basins; implications of development alternatives; institutional arrangements for planning and development of water resources; and, legal and economic aspects.

CIVE 551 Environmental Transport Processes.

(3) (3-2-4) (Prerequisite: CIVE 225 or Permission of instructor.) Equilibrium partitioning of pollutants in multiphase systems, sorption isotherms, diffusive mass transport, inter-phase mass transfer kinetics, contaminant transport processes in the subsurface porous media and in natural aquatic systems, mass transport in water and wastewater treatment systems.

CIVE 553 Stream Pollution and Control.

(3) (3-2-4) (Prerequisite (Undergraduate): CIVE 225) Water quality standards. Physical and chemical pollution, and bacterial contamination of surface waters. Effects of specific types of pollution such as thermal, point and non-point sources. Stream self purification. Effects on lake eutrophication. Pollution surveys and methods of control.

CIVE 555 Environmental Data Analysis.

(3) (3-0-6) (Prerequisite (Undergraduate): CIVE 302 or permission of instructor) Application of statistical principles to design of measurement systems and sampling programs. Introduction to experimental design. Graphical data analysis. Description of uncertainty. Hypothesis tests. Model parameter estimation methods: linear and nonlinear regression methods. Trend analysis. Statistical analysis of censored data. Statistics of extremes.

CIVE 572 Computational Hydraulics.

(3) (3-0-6) (Prerequisite: CIVE 327 or equivalent) Computation of unsteady flows in open channels; abrupt waves, flood waves, tidal propagation; method of characteristics; mathematical modelling of river and coastal currents.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

CIVE 573 Hydraulic Structures.

(3) (3-0-6) (Prerequisites: CIVE 323 and CIVE 327)
Hydraulic aspects of the theory and design of hydraulic structures. Storage dams, spillways, outlet works, diversion works, drop structures, stone structures, conveyance and control structures, flow measurement and culverts.

CIVE 574 Fluid Mechanics of Water Pollution.

(3) (3-0-6) (Prerequisite: CIVE 327 or equivalent.) Mixing, dilution and dispersion of pollutants discharged into lakes, rivers, estuaries and oceans; salinity intrusion in estuaries and its effects on dispersion; biochemical oxygen demand and dissolved oxygen as water quality indicators; thermal pollution; oil pollution.

CIVE 577 River Engineering.

(3) (3-0-6) (Prerequisite (Undergraduate): CIVE 428 or permission of the instructor.) (Corequisite (Graduate): CIVE 428) Fluvial geomorphology; sediment properties; river turbulence; mechanics of the entrainment, transportation and deposition of solids by fluids; threshold of movement; bed forms; suspended load, bed load and total load equations; stable channel design and regime rivers; river modeling; river engineering and river management.

CIVE 585 Groundwater Hydrology.

(3) (3-0-6) (Prerequisite: Permission of instructor) Groundwater geology; steady-state and transient-state regional groundwater; infiltration and recharge; hydrological cycle; chemical constituents; adsorption/desorption processes; Groundwater exploration techniques; pumping tests; groundwater pollution; diffusion and dispersion; thermal processes; groundwater resource management.

ECSE-Electrical Engineering

Offered by: Electrical & Computer Engr

ECSE 200 Fundamentals of Electrical Engineering.

(3) (3-1-5) (Prerequisite: PHYS 142 or CEGEP equivalent.) (Corequisite: MATH 261 or MATH 263 or MATH 325.) (Tutorials assigned by instructor.) An introduction to part of the broad scope of electrical engineering: electrostatics, capacitance, conduction, magnetic fields, inductance, circuits and components, sine waves in time and space, electrical machines and transformers, signal amplification.

ECSE 210 Circuit Analysis.

(3) (3-2-4) (Prerequisite: ECSE 200) (For Fall Term: Limited to Electrical Honours and Computer Engineering students only.) (For Winter Term: Limited to Regular Electrical Engineering students only.) (Tutorials assigned by instructor.) Circuit models, KCL and KVL, branch relations, resistive circuit analysis, network theorems, one- and two-port networks, networks in sinusoidal steady-state, power considerations, transient analysis of first- and second-order networks, response to exponential driving functions, frequency response of networks.

ECSE 211 Design Principles and Methods.

(3) (3-3-3) (Prerequisites: ECSE 200 and COMP 202.) (Corequisite: ECSE 291 (Electrical Measurements Lab.)) Engineering process: design specifications, parameters, optimization, implementation, troubleshooting and refinement; project management: scheduling, risk analysis, project control; case studies; design examples and project.

ECSE 212 Properties of Materials in Electrical Engineering.

(3) (3-1-5) (Restriction: Not open to students who have taken or are taking MIME 262.) Properties of a material continuum and crystalline state; properties of atoms in materials; conduction electrons in materials; electronic properties of semiconductors and metals; magnetic and thermal properties of materials; applications of electronic materials in semiconductor technology, recording media and transducers.

ECSE 221 Introduction to Computer Engineering.

(3) (3-2-4) (Prerequisite: COMP 202) (Tutorials assigned by instructor.) Data representation in digital computers. Boolean algebra. Basic combinational circuits; their analysis and synthesis. Elements of sequential circuits: latches, flip-flops, counters and memory circuits. Computer structure, central processing unit, machine language. Assemblers and assembler

language.

ECSE 291 Electrical Measurements Laboratory.

(2) (1-4-1) (Corequisite: ECSE 210) (Lab hours assigned by instructor.) Experiments with fundamental electric circuits are used to illustrate the principles and limitations of basic electrical and electronic instrumentation in typical measurement applications. Basic electrical laboratory practice and safety procedures are introduced. Introduction to error analysis and application to laboratory measurements.

ECSE 303 Signals and Systems 1.

(3) (3-2-4) (Prerequisites: ECSE 210, MATH 247 or MATH 270 or MATH 271.) (Corequisite: MATH 249 or MATH 381) (Tutorials assigned by instructor.) Elementary continuous and discrete-time signals, impulse functions, basic properties of discrete and continuous linear time-invariant (LTI) systems, Fourier representation of continuous-time periodic and aperiodic signals, the Laplace transform, time and frequency analysis of continuous-time LTI systems, application of transform techniques to electric circuit analysis.

ECSE 304 Signals and Systems 2.

(3) (3-2-4) (Prerequisite: ECSE 303) (Tutorials assigned by instructor.) Application of transforms to the analysis of LTI single-loop feedback systems, the discrete-time Fourier series, the discrete-time Fourier transform, the Z transform, time and frequency analysis of discrete-time LTI systems, sampling systems, application of continuous and discrete-time signal theory to communications LTI systems.

ECSE 305 Probability and Random Sig. 1.

(3) (3-1-5) (Prerequisite: ECSE 303 or ECSE 306.) (Tutorials assigned by instructor.) The basic probability model, the heuristics of model-building and the additivity of probability; classical models; conditional probability and Bayes rule; random variables and vectors, distribution and density functions, expectation; statistical independence, laws of large numbers, central limit theorem; introduction to random processes and random signal analysis.

ECSE 306 Fundamentals of Signals and Systems.

(3) (3-2-4) (Prerequisites: ECSE 210 and MATH 270 or MATH 271.) Review of complex functions. Discrete- and continuous-time signals, basic system properties. Linear time-invariant systems, convolution. Fourier series and Fourier transforms, frequency domain analysis, filtering, sampling. Laplace transforms and inversion, transfer functions, poles and zeros, solutions of linear constant-coefficient differential equations, transient and steady state response. Z-transforms

ECSE 321 Introduction to Software Engineering.

(3) (3-1-5) (Prerequisite: COMP 202 or COMP 208) (Tutorials assigned by instructor.) Design, development and testing of software systems. Software life cycle: requirements analysis, software architecture and design, implementation, integration, test planning, and maintenance. The course involves a group project.

ECSE 322 Computer Engineering.

(3) (3-2-4) (Prerequisites: ECSE 200 or MECH 383, and ECSE 221) (Tutorials assigned by instructor.) Data structures (arrays, lists, stacks, queues, dequeues and trees) and their machine representation and simple algorithms. Peripheral devices: printers, keyboards, magnetic type drives, magnetic disc drives. Peripheral interfacing and busses. Introduction to operating systems. System integration. Computer systems and networks.

ECSE 323 Digital System Design.

(5) (3-6-6) (Prerequisites: ECSE 221, ECSE 291, and EDEC 206) (Tutorials and lab hours assigned by instructor.) Minimization and synthesis of combinational logic and finite state machines. Synthesis of synchronous and asynchronous sequential circuits. Principles of control design. Basic concepts in design for testability. The laboratory experiments involve the design and testing of digital systems using small and medium scale integrated circuits. CAD software is used in the design process.

ECSE 330 Introduction to Electronics.

(3) (3-2-4) (Prerequisite: ECSE 210) (Tutorials assigned by instructor.) Introduction to electronic circuits using operational amplifiers, PN junction diodes, bipolar junction

transistors (BJTs), and MOS field-effect transistors (MOSFETs), including: terminal characteristics, large- and small-signal models; configuration and frequency response of single-stage amplifiers with discrete biasing. Introduction to SPICE. Simulation experiments.

ECSE 334 Introduction to Microelectronics.

(3) (3-2-4) (Prerequisites: ECSE 291, ECSE 303 or ECSE 306, ECSE 330.) (Tutorials assigned by instructor.)

Single-stage integrated-circuit amplifiers; differential and multistage amplifiers, integrated-circuit biasing techniques; non-ideal characteristics, frequency response; feedback amplifiers, output stages; digital CMOS logic circuits.

ECSE 351 Electromagnetic Fields.

(3) (3-1-5) (Prerequisites: ECSE 200, MATH 264 or MATH 265.) (Tutorials assigned by instructor.) Maxwell's equations, electrostatics, magnetostatics and induction for power-frequency electrical engineering problems.

ECSE 352 Electromagnetic Waves.

(3) (3-2-4) (Prerequisite: ECSE 351) (Tutorials assigned by instructor.) Transient and steady state wave propagation in transmission lines. Telephone and radio frequency lines. Smith's chart and impedance matching. Maxwell's equations, Helmholtz's equations, Poynting's theorem. Plane waves, polarization, Snell's law, critical and Brewster's angle. Rectangular waveguides, optical fibres, dispersion. Radiation and antennas. S-parameters.

ECSE 353 Electromagnetic Fields and Waves.

(3) (3-1-5) (Prerequisites: ECSE 210, MATH 264 or MATH 265.) (Tutorials assigned by instructor.) Maxwell's equations. Waves in free space and on transmission lines. Electric and magnetic force and energy. Magnetic materials. Faraday's law. Applications to engineering problems. S-parameters.

ECSE 361 Power Engineering.

(3) (3-1-5) (Prerequisites: ECSE 210, ECSE 351) (Tutorials assigned by instructor.) Characteristics and components of power systems. Generation, transmission and utilization of electric power. 3-phase ac and dc systems. Fundamentals of electromechanical energy conversion. Ampere and Faraday's law. Magnetic circuits. Systems of coupled coils. Torque and force. Rotating magnetic fields. Basic rotating machines.

ECSE 404 Control Systems.

(3) (3-0-6) (Corequisite: ECSE 304 or ECSE 306.) Modelling and simulation of control systems; Basic concepts of linear systems; open and closed loop control; classical design of controllers - specifications in the step response and the frequency domain; State space design of controllers - pole placement and LQR; Sampled data systems.

ECSE 405 Antennas.

(3) (3-0-6) (Prerequisites: ECSE 303 and ECSE 352.) (Restriction: Not open to students who have taken ECSE 593.) Fundamentals of antenna theory: sources, radiation pattern and gain. Classification of antennas. Main antenna types and their characteristics. Antenna temperature, remote sensing and radar cross-section. Self and mutual impedances. Special topics include adaptive antennas, very large array (VLA) used in radio astronomy and biomedical applications.

ECSE 411 Communications Systems 1.

(3) (3-1-5) (Prerequisites: ECSE 305, ECSE 304 or ECSE 306.) (Tutorials assigned by instructor.) Communication system models; AM and FM modulation, performance of AM and FM systems in noise; sampling, PCM and DPCM techniques; FDM and TDM multiplexing systems; baseband digital transmission over bandlimited channels, digital modulation and detection techniques; illustrative examples of subscriber loop

telephone systems, cable TV systems and broadcasting systems.

ECSE 412 Discrete Time Signal Processing.

(3) (3-1-5) (Prerequisite: ECSE 304 or ECSE 306.) (Tutorials assigned by instructor.) Discrete-time signals and systems; Fourier and Z-transform analysis techniques, the discrete Fourier transform; elements of FIR and IIR filter design, filter structures; FFT techniques for high speed convolution; quantization effects.

ECSE 413 Communications Systems 2.

(3) (3-0-6) (Prerequisite: ECSE 411) (Tutorials assigned by instructor.) Introduction to radio communications; satellite communication systems; the cellular concept; fading channel models, digital modulation techniques over fading channels, diversity systems, spread spectrum techniques; fixed assignment multiple access (FDMA, TDMA, CDMA), duplexing methods (FDD, TDD); illustrative examples of terrestrial mobile systems, fixed wireless systems, LEOs, etc.; overview of standardization activities.

ECSE 414 Introduction to Telecommunication Networks.

(3) (3-0-6) (Prerequisites: ECSE 322, and ECSE 304 or ECSE 306.) Introduction to the physical and software architecture of modern networks; transport configurations, multiplexing, the digital hierarchy; wired and wireless access systems; circuit and packet switching systems, signaling, addressing and routing; protocol stacks; local area networking; introduction to network engineering; examples include: ATM, ISDN, IP, Frame Relay, Ethernet.

ECSE 420 Parallel Computing.

(3) (3-2-4) (Prerequisite: ECSE 427) Modern parallel computing architectures for shared memory, message passing and data parallel programming models. The design of cache coherent shared memory multiprocessors. Programming techniques for multithreaded, message passing and distributed systems. Use of modern programming languages and parallel programming libraries.

ECSE 421 Embedded Systems.

(3) (3-0-6) (Prerequisites: ECSE 322, ECSE 323.) Definition, structure and properties of embedded systems. Real-time programming: interrupts, latency, context, re-entrancy, thread and process models. Microcontroller and DSP architectures, I/O systems, timing and event management. Real-time kernels and services. Techniques for development, debugging and verification. Techniques for limited resource environments. Networking for distributed systems.

ECSE 422 Fault Tolerant Computing.

(3) (3-0-6) (Prerequisite: ECSE 322.) Introduction to fault-tolerant systems. Fault-tolerance techniques through hardware, software, information and time redundancy. Failure classification, failure semantics, failure masking. Exception handling: detection, recovery, masking and propagation, termination vs resumption. Reliable storage, reliable communication. Process groups, synchronous and asynchronous group membership and broadcast services. Automatic redundancy management. Case studies.

ECSE 423 Fundamentals of Photonics.

(3) (3-2-4) (Prerequisites: ECSE 352 and PHYS 271.) Introduction to the fundamentals of modern optics and photonics. Geometric optics, wave optics, Gaussian beam optics and resonators, electromagnetic optics, polarization, Fourier optics. Attenuation and dispersion, interference, coherence, diffraction. Classical description of optical amplifiers, introduction to lasers. Experiments on physical and geometric optics.

ECSE 424 Human-Computer Interaction.

(3) (3-4-2) (Prerequisite: ECSE 322) The course highlights human-computer interaction strategies from an engineering perspective. Topics include user interfaces, novel paradigms in

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

human-computer interaction, affordances, ecological interface design, ubiquitous computing and computer-supported cooperative work. Attention will be paid to issues of safety, usability, and performance.

ECSE 425 Computer Organization and Architecture.

(3) (3-1-5) (Prerequisites: ECSE 322 and ECSE 323) (Tutorials assigned by instructor.) Trends in technology. CISC vs. RISC architectures. Pipelining. Instruction level parallelism. Data and Control Hazards. Static prediction. Exceptions. Dependencies. Loop level parallelism. Dynamic scheduling, branch prediction. Branch target buffers. Superscalar and N-issue machines. VLIW. ILP techniques. Cache analysis and design. Interleaved and virtual memory. TLB translations and caches.

ECSE 426 Microprocessor Systems.

(3) (1-5-3) (Prerequisites: ECSE 323 and EDEC 206) (This course may be counted as a technical complementary or a lab complementary.) (Limited Enrolment (50)) (Lab hours assigned by instructor.) Introduction to current microprocessors, their architecture, programming, interfacing and operating systems. The course includes lectures, use of crossassemblers, and simulators as well as laboratory experiments on actual microprocessor hardware.

ECSE 427 Operating Systems.

(3) (3-3-3) (Prerequisite: ECSE 322 or COMP 273) (Tutorials assigned by instructor.) Operating system services, file system organization, disk and cpu scheduling, virtual memory management, concurrent processing and distributed systems, protection and security. Aspects of the DOS and UNIX operating systems and the C programming language. Programs that communicate between workstations across a network.

ECSE 428 Software Engineering Practice.

(3) (3-4-2) (Prerequisite: ECSE 321 or COMP 335) Software engineering practice in industry, related to the design and commissioning of large software systems. Ethical, social, economic, safety and legal issues. Metrics, project management, costing, marketing, control, standards, CASE tools and bugs. The course involves a large team project.

ECSE 429 Software Validation.

(3) (3-0-6) (Prerequisite: ECSE 321) Correct and complete implementation of software requirements. Verification and validation lifecycle. Requirements analysis, model based analysis, and design analysis. Unit and system testing, performance, risk management, software reuse. Ubiquitous computing.

ECSE 430 Photonic Devices and Systems.

(3) (3-2-4) (Prerequisites: ECSE 352, PHYS 271.) (Tutorials assigned by instructor.) Introduction to photonic devices and applications. Semiconductor lasers, optical amplifiers, optical modulators, photodetectors and optical receivers, optical fibers and waveguides, fiber and waveguide devices. Photonic systems (communications, sensing, biomedical). Experiments on characterizing photonic devices and systems. Optical test-and-measurement instrumentation.

ECSE 431 Introduction to VLSI CAD.

(3) (3-4-2) (Prerequisites: ECSE 323 and ECSE 330) (Limited enrolment - 30. Departmental permission required.) (Note: This course may be counted as a technical complementary or as a lab complementary.) (Lab hours assigned by instructor.) The computer-aided design of digital VLSI circuits. Hardware description languages, automatic synthesis, design for testability, technology mapping, simulation, timing analysis, generation of test vectors and fault coverage analysis.

ECSE 432 Physical Basis: Transistor Devices.

(3) (3-0-6) (Prerequisites: ECSE 212, ECSE 330, ECSE 351 and PHYS 271) Quantitative analysis of diodes and transistors. Semiconductor fundamentals, equilibrium and non-equilibrium carrier transport, and Fermi levels. PN junction diodes, the ideal diode, and diode switching. Bipolar Junction Transistors (BJT), physics of the ideal BJT, the Ebers-Moll model. Field effect transistors, metal-oxide semiconductor structures, static and dynamic behaviour, small-signal models.

ECSE 434 Microelectronics Laboratory.

(2) (1-3-2) (Prerequisites: EDEC 206, ECSE 334.) Designing, building, and debugging electronic hardware using discrete transistors and circuit building blocks; Designing, simulating, laying-out, and post-fabrication experimental testing of an integrated circuit (IC). The laboratory experiments are designed to reinforce the microelectronics circuit theory studied in ECSE 334.

ECSE 435 Mixed-Signal Test Techniques.

(3) (3-0-6) (Prerequisites: ECSE 304 and ECSE 334) (Note: This course may be counted as a technical complementary or as a lab complementary.) Purpose and economics of mixed-signal test, DC measurements. Accuracy and repeatability. DSP-based theory and its applications to parametric testing of analog filters, DACs, and ADC. Timing and PLL measurements. Design for Testability.

ECSE 436 Signal Processing Hardware.

(3) (1-3-5) (Prerequisites: ECSE 322, ECSE 323, ECSE 304 or ECSE 306.) (Note: This course may be counted as a technical complementary or as a lab complementary. Limited enrolment (20).) Review of basic concepts in signals and microprocessors. Digital Signal Processing microprocessor architecture. Finite precision effects, real-time constraints, assembly language optimization. Implementation of DSP algorithms on a DSP microprocessor platform. Lab experiments on FIR filtering, IIR filtering, FFT computation, LPC analysis, circular and bit-reversed addressing, ping-pong buffering and frame-based processing.

ECSE 443 Introduction to Numerical Methods in Electrical Engineering.

(3) (3-2-4) (Prerequisites: ECSE 221, ECSE 330, ECSE 351 or ECSE 353.) (Corequisite: For CE students only: ECSE 353.) Symbolic vs. numerical computation. Number representation and numerical error; curve fitting and interpolation; numerical differentiation and integration; solutions of systems of linear equations and nonlinear equations; solutions of ordinary and partial differential equations; optimization. Applications in electrical engineering analysis and design. Evaluation of numerical software packages.

ECSE 450 Electromagnetic Compatibility.

(3) (2-4-3) (Prerequisites: ECSE 221, ECSE 334, ECSE 352 or ECSE 353.) Electromagnetic Compatibility (EMC), regulations and EMC requirements of electronic systems, non-ideal behaviour of circuit components, signal spectra, radiated emission and susceptibility, conducted noise, crosstalk, differential mode and common mode, shielding, and system design for EMC.

ECSE 451 EM Transmission and Radiation.

(3) (3-0-6) (Prerequisite: ECSE 352) Microwave transmission through waveguides: impedance matching, microwave devices, filters and resonators; microwave transmission through free space; near and far field behaviour of electromagnetic radiators, simple antennas, antenna arrays, practical antenna parameters; the physics of the radio communication channel: reflection, diffraction and scattering and their macroscopic impact (multipath, fading).

ECSE 460 Appareillage électrique (Electrical Power Equipment).

(3) (3-2-4) (Prerequisite: ECSE 361.) (Taught in French.) (This course is offered by the Power Engineering Institute.) Éléments d'un réseau de transport. Lignes: modélisation et paramètres. Transformateurs: circuits équivalents, pertes, enclenchement, protection. Disjoncteurs: fonctionnement et dimensionnement. Equipements de compensation: condensateurs, branchement série et shunt, inductances. Coordination d'isolement.

ECSE 461 Electric Machinery.

(3) (3-0-6) (Restriction: Not open to students in Electrical Engineering.) (Note: Tutorials assigned by instructor.) Electric and magnetic circuits. Notions of electromechanical energy conversion applied to electrical machines. Basic electrical machines - transformers, direct-current motors, synchronous motors and generators, three phase and single phase induction machines. Elements of modern electronically controlled electric drive systems.

ECSE 462 Electromechanical Energy Conversion.

(3) (3-0-6) (Prerequisite: ECSE 361) Lumped parameter concepts of electromechanics. Energy, co-energy in the derivation of torques and forces. Examples of electric machines: - dc, synchronous and induction types. Steady-state, transient and stability analysis. Power electronic controllers.

ECSE 463 Matériaux de l'électrotechnique.

(3) (3-0-6) (Prerequisite: ECSE 361.) (Note: Taught in french. This course is offered by the Power Engineering Institute.) Applications de matériaux en électrotechnique: appareillage, transformateurs, machines électriques. Matériaux conducteurs: propriétés, pertes, isolation. Matériaux magnétiques: propriétés thermiques / mécaniques, pertes, types, aimants. Matériaux isolants: conduction, pertes, claquage et performances des isolants, contraintes. Caractérisation et diagnostic: essais et analyses, mécanismes de vieillissement et de défaillance, maintenance prédictive. Considérations et équipements typiques.

ECSE 464 Power Systems Analysis 1.

(3) (3-0-6) (Prerequisite: ECSE 361) (This course is offered by the Power Engineering Institute.) Basic principles of planning and operating interconnected power systems with emphasis on Canadian conditions. Mathematical models for system. Steady-state analysis of power systems, load flow formulation and solution algorithms. Operating strategies, economic dispatch, voltage reactive power regulation, frequency and tie-line power control.

ECSE 465 Power Electronic Systems.

(3) (3-2-4) (Prerequisites: ECSE 334, ECSE 361.) (This course is offered by the Power Engineering Institute.) Introduction to power electronics: definition, applications and classification of converters. Review of analytical techniques. Overview of power semiconductor switches. Line communicated rectifiers and inverters. Switch mode power converters and modulation techniques. Choppers, inverters and rectifiers. Resonant mode converters. Application to power systems and energy conversion.

ECSE 467 Comportement des réseaux électriques.

(3) (3-0-6) (Prerequisite: ECSE 361.) (Note: Taught in French. This course is offered by the Power Engineering Institute.) Introduction: classification des phénomènes, structure d'un réseau électrique. Modélisation des composants: lignes, transformateurs, machines électriques, charges. Systèmes d'excitation des machines. Régime permanent. Stabilité de transitoire, de tension, des petits signaux. Méthodes de compensation: stabilisateurs, compensation série et shunt. Oscillations sous synchrones. Phénomènes électromagnétiques transitoires. Méthodes et outils de simulation numérique.

ECSE 468 Electricité industrielle (Industrial Power Systems).

(3) (3-2-4) (Prerequisite: ECSE 361.) (This course is offered by the Power Engineering Institute.) (Taught in French.) Structure des réseaux électriques industriels. Niveau de tension. Installations électriques, codes et normes. Court-circuits, protection et coordination. Mise à la terre. Qualité de l'onde. Facteur de puissance, tarification et gestion de l'énergie électrique.

ECSE 469 Protection des réseaux électriques.

(3) (3-0-6) (Prerequisite: ECSE 361.) (Note: Taught in French. This course is offered by the Power Engineering Institute.) Généralités sur les systèmes de protection. Calculs de défauts symétriques et asymétriques. Transformateurs de mesure. Système de mise à la terre. Types de relais de protection. Protection de transformateur, de barres, de ligne de transport : philosophie et application. Conception des systèmes de protection. Homologation et essais de relais.

ECSE 474 Design Project 1.

(1) (0-2-1) (Prerequisites: ECSE 211, EDEC 206 and at least 42 departmental credits.) A laboratory design project undertaken with close supervision by a staff member. The project consists of defining an engineering problem, reviewing relevant background and literature, and seeking the solution through numerical simulation and/or experimental investigation. A literature review, written project proposal, and seminar presentation are required.

ECSE 475 Design Project 2.

(2) (0-5-1) (Prerequisite: ECSE 474.) A laboratory design project undertaken with close supervision by a staff member. A continuation of ECSE 474 Design Project 1. The work consists of carrying out the project plan developed in ECSE 474 Design Project 1 producing a report summarizing the results, and a seminar presentation.

ECSE 476 Software Engineering Design Project 1.

(1) (Prerequisite: ECSE 321 and at least 42 departmental credits from Electrical and Computer Engineering and Computer Science) Design project in software engineering.

ECSE 477 Software Engineering Design Project 2.

(2) (Prerequisite: ECSE 476) Design project in software engineering.

ECSE 483 Multidisciplinary Project 1.

(3) (0-3-6) (Prerequisites: EDEC 206 and at least 42 Departmental credits from Electrical and Computer Eng. and Computer Science) (Restriction: Open only to later year students who can find a professor within the Department prepared to supervise a 2-semester, multidisciplinary project.) The first part of a 6-credit team project requiring collaboration with non-electrical/computer engineers.

ECSE 484 Multidisciplinary Project 2.

(3) (0-3-6) (Prerequisite: ECSE 483) The second part of a 6-credit team project requiring collaboration with non-electrical/computer engineers.

ECSE 485 IC Fabrication Laboratory.

(2) (1-3-2) (Prerequisites: ECSE 334, EDEC 206.) (Corequisite: ECSE 432 or ECSE 533) (Limited Enrolment - 12) (Lab hours assigned by instructor.) Essential processes for silicon semiconductor device fabrication: etching, diffusion, photolithography. Fabrication of large area PN junctions, selective area PN junctions and MOSFETs. Design and fabrication of simple MOS circuits. Electrical characterization of devices and circuits.

ECSE 486 Power Laboratory.

(2) (1-3-2) (Prerequisites: ECSE 334, ECSE 361 and EDEC 206) (Limited Enrolment - 14) (Lab hours assigned by instructor.) Techniques of electric power, efficiency, torque, speed measurements. Starting, running and control of electric machines: dc, synchronous, induction types. Power electronic controllers. Each group of students has access to a compact experiment bench containing a set of micro-machines and all the necessary equipment.

ECSE 487 Computer Architecture Laboratory.

(2) (1-3-2) (Prerequisite: EDEC 206.) (Corequisite: ECSE 425 or ECSE 525) (Limited enrollment -50) (Requires Permit to Register. See Department web site.) (Lab hours assigned by instructor.) Basic software tools used in the design, synthesis and analysis of computer and communication systems such as data-paths, switching circuits, and arithmetic and logic circuits. Behavioral and structural modeling of hardware designs in the IEEE standard hardware description language VHDL. Synthesis and implementation of hardware designs using Programmable Logic Devices.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

□ECSE 488 High Frequency Laboratory.

(2) (1-3-2) (Prerequisites: ECSE 291, EDEC 206.) (Corequisite: ECSE 451.) (Limited Enrolment - 20) (Lab hours assigned by instructor.) High frequency measurement techniques. Vector network analyzer and spectrum analyzer. Resistors, capacitors and inductors at high frequencies. High-level signal handling of a high-frequency bandpass amplifier. Electromagnetic interference (EMI) and spectrum coordination. Cavity resonators. Standing waves in waveguides. Reciprocity of microwave networks. Scattering parameters of a microstrip network.

ECSE 489 Telecommunication Network Laboratory.

(2) (0-3-3) (Prerequisite: EDEC 206) (Corequisite: ECSE 414 or ECSE 528 or COMP 535.) (Lab hours assigned by instructor.) Experiments involving the configuration and operation of telecommunication network technologies, and the modelling of telecommunication networks. Configuration of transport facility (SONET), bandwidth management with permanent virtual connections (ATM), implementation of a routing plan in a packet switched network (IP), configuration of end-to-end service (telephony over IP).

□ECSE 490 Digital Signal Processing Laboratory.

(2) (0-3-3) (Prerequisites: ECSE 291 and EDEC 206.) (Corequisite: ECSE 412 or ECSE 512) (Limited Enrolment - 30) (Restriction: Departmental approval required) (Requires Permit to Register. See Department web site.) (Lab hours assigned by instructor.) Experiments involving the digital processing of signals using computer-aided design tools for design, processing and visualization and real-time processing using DSP chips. Filter structures and design, multi-rate signal processing, filter banks, fast transforms, adaptive filtering, signal coding and quantization.

□ECSE 491 Communication Systems Laboratory.

(2) (0-3-3) (Prerequisites: ECSE 291 and EDEC 206.) (Corequisite: ECSE 411 or ECSE 511) (Limited Enrolment - 30) (Lab hours assigned by instructor.) Experimental studies and simulation of analog and digital transmission techniques. Performance of AM and FM systems. FSK and PSK modulation techniques and spectra. Sampling of analog signals, PCM and TDM techniques.

□ECSE 492 Optical Communications Laboratory.

(2) (0-3-3) (Prerequisite: EDEC 206.) (Corequisite: ECSE 423 or ECSE 527.) (Lab hours assigned by instructor.) Hands-on experience of the physical layer of optical communications systems. Experiments involving optical fiber link characterization, laser measurements, beam divergence, coupling efficiency. Use of lasers, optical spectrum analyser, data generator, beam profiler, photodetectors, optical filters. Experiments are supported with simulation and analysis software.

□ECSE 493 Control and Robotics Laboratory.

(2) (1-3-2) (Prerequisites: ECSE 291 and EDEC 206.) (Corequisite: ECSE 404 or ECSE 501.) (Limited Enrolment - 20) (Lab hours assigned by instructor.) Experimental studies for the design of control systems, with particular emphasis on motion control as applicable to robotics. Modeling of DC motors and electro-mechanical systems. Controller design in the time and frequency domain as well as state space. Experimental examples of PID, lead-lag, full state feedback and LQR controllers.

□ECSE 494 Electrical Engineering Design Project.

(3) (0-5-4) (Prerequisites: EDEC 206 and at least 42 Departmental credits) (Limited Enrolment - 50) A laboratory design project undertaken with close supervision by a staff member. The project consists of defining an engineering problem and seeking the solution through experimental investigation. Results are reported in a seminar at the end of term and in a technical paper.

ECSE 495 Software Engineering Design Project.

(3) (0-5-4) (Prerequisites: ECSE 321 and at least 42 Departmental credits from Electrical and Computer Eng. and Computer Science) Self-managed design and implementation of a complex software system according to a set or prescribed specifications.

ECSE 498 Honours Thesis 1.

(3) (0-3-6) (Prerequisites: EDEC 206 and at least 42 Departmental credits) A research project undertaken with close supervision by a staff member. The work consists of defining an engineering problem, reviewing the associated literature, and seeking the solution through experimental investigation. A literature review and a written thesis proposal are required along with a seminar presentation at end of term.

ECSE 499 Honours Thesis 2.

(3) (0-3-6) (Prerequisite: ECSE 498) A research project undertaken with close supervision by a staff member. A continuation of ECSE 498. The work consists of carrying out the research plan developed in ECSE 498 along with a seminar presentation at end of term.

ECSE 500 Mathematical Foundations of Systems.

(3) (3-0-6) (Restriction: Open only to graduate students within the Faculty of Engineering.) Basic set theories and algebraic structures, linear spaces, linear mappings, topological and metric spaces, separable spaces, continuity, compactness, Lebesgue measure on Euclidean spaces, measurability, Banach spaces, Hilbert spaces, linear bounded operators in Banach spaces, dual spaces, adjoint operators, the Orthogonal Projection Theorem, properties of the Fourier series, convergence in probability.

ECSE 501 Linear Systems.

(3) (3-0-6) (Corequisite: ECSE 500 or permission of instructor.) Mathematical models of linear systems, fundamental solution and transition matrices, non-homogeneous linear equations, controllability and observability of linear systems, reachable subspaces, Cayley-Hamilton's Theorem, Kalman's controllability and observability rank conditions, minimal realizations, frequency response, invariant subspaces, finite and infinite horizon linear regulator problems, uniform, exponential, and input-output stability, the Lyapunov equation.

ECSE 504 Sampled Data Control.

(3) (3-0-6) (Prerequisite: ECSE 304 or ECSE 306.) (Corequisites: ECSE 404 or ECSE 501.) Sampling and aliasing. Conversion of continuous-time controllers using s-to-z transformations; pre-and post-filtering. Discrete time state representation and z-transfer function of sampled linear, time-invariant systems. Correspondence between system theoretic results for continuous- and discrete-time systems. Sampled-data design, including pole placement, LQR control and model predictive control.

ECSE 505 Nonlinear Control Systems.

(3) (3-0-6) (Prerequisite: ECSE 501) Basic ODE formulation of non-linear systems; structural properties; Lyapunov and LaSalle stability theory and nonlinear and multivariable controller design; input-output stability; small gain theorem, conservation, passivity; system linearization, zero and inverse dynamics and regulator design; discontinuous and sliding mode control; applications to deterministic adaptive control.

ECSE 506 Stochastic Control & Decision Theory.

(3) (3-0-6) (Prerequisites: ECSE 509 and ECSE 500.) Gaussian processes and tail bounds; Bandit problems and optimal policies; Markov decision processes; Dynamic programming and optimal control in discrete time; learning models control from data; the ODE method and stochastic approximation; Q-learning; Approximate dynamic programming, linear stochastic systems; linear Gaussian systems; linear-quadratic control; system identification and stochastic adaptive control.

ECSE 507 Optimization and Optimal Control.

(3) (3-0-6) (Prerequisites: MATH 264 or MATH 265 or MATH 248, MATH 270 or MATH 247) General Introduction to optimization methods including steepest descent, conjugate gradient, Newton algorithms. Generalized matrix inverses and the least squared error problem. Introduction to constrained optimality; convexity and duality; interior point methods. Introduction to dynamic optimization; existence theory, relaxed controls, the Pontryagin Maximum Principle. Sufficiency of the Maximum Principle.

ECSE 508 Multi-Agent Systems.

(3) (3-0-6) (Prerequisite: ECSE 305 or equivalent.) Introduction to game theory, strategic games, extensive form games with perfect and imperfect information, repeated games and folk theorems, cooperative game theory, introduction to mechanism design, markets and market equilibrium, pricing and resource allocation, application in telecommunication networks, applications in communication networks, stochastic games.

ECSE 509 Probability and Random Sig. 2.

(3) (3-0-6) (Prerequisites: ECSE 304 and ECSE 305) Multivariate Gaussian distributions; finite-dimensional mean-square estimation (multivariate case); principal components; introduction to random processes; weak stationarity; correlation functions, spectra, linear processing and estimation; Poisson processes and Markov chains: state processes, invariant distributions; stochastic simulation.

ECSE 510 Stochastic Processes and Systems.

(3) (3-0-6) (Prerequisite: ECSE 500 and ECSE 509 or equivalent.) Basic notions. Linear state space (SS) systems. Least squares estimation and prediction: conditional expectations; Orthogonal Projection Theorem. Kalman filtering; innovations; Riccati equation. ARMA and SS systems. Stationary processes; Wold decomposition; spectral factorization; Weiner filtering. The Weiner process; linear stochastic differential equations; continuous time filtering. Chapman-Kolmogorov, Fokker-Plank equations. Applications.

ECSE 511 Introduction to Digital Communication.

(3) (3-1-5) (Prerequisite: ECSE 304.) (Corequisite: ECSE 509) (An advanced version of ECSE 411) (Tutorials assigned by instructor.) Amplitude and angle modulation including AM, FM, FDM and television systems; introduction to random processes; sampling and quantization, PCM systems, TDM; digital modulation techniques, Maximum-Likelihood receivers, synchronization issues; elements of information theory including information sources, source coding and channel capacity.

ECSE 512 Digital Signal Processing 1.

(3) (3-1-5) (Prerequisites: ECSE 304 and ECSE 305) Review of discrete-time transforms, sampling and quantization, frequency analysis. Structures for IIR and FIR filters, coefficient quantization, roundoff noise. The DFT, its properties, frequency analysis and filtering using DFT methods, the FFT and its implementation. Multirate processing, subsampling and interpolation, oversampling techniques.

ECSE 513 Robust Control Systems.

(3) (3-0-6) (Prerequisites: ECSE 304 and ECSE 500.) Feedback interconnections of LTI systems; Nominal stability and performance of feedback control systems; Norms of signals and systems; H₂-optimal control; H-infinity-optimal control; Uncertainty modeling for robust control; Robust closed-loop stability and performance; Robust H-infinity control; Robustness check using mu-analysis; Robust controller design via mu-synthesis.

ECSE 514 Probabilistic Reasoning and Artificial Intelligence.

(3) (3-0-6) (Prerequisites: COMP 206, COMP 360, COMP 424 or ECSE 526, and MATH 323 or ECSE 305.) (Restriction: Not open to students who have taken COMP 526.) Belief networks, utility theory, Markov decision processes, learning algorithms.

ECSE 520 Parallel Computing Systems.

(3) (3-2-4) (Prerequisite: ECSE 427.) (Restriction: Credit will only be given for one of ECSE 420 and ECSE 520.) Parallel computing models: shared memory, message passing and data parallel. Single-chip multiprocessors. Techniques for designing scalable cache coherent shared memory multiprocessors.

Programming shared memory and message passing systems. Multithreading and synchronization; interplay between parallel programming and architecture.

ECSE 521 Digital Communications 1.

(3) (3-0-6) (Prerequisite: ECSE 411 or ECSE 511.) (Corequisite: ECSE 509) Modulation: orthogonal and biorthogonal signalling, MPSK, QAM, modulation with memory. Detection: coherent, noncoherent and differentially coherent detection, performance issues and channel capacity, synchronization. Coding: block and convolutional codes, fast Hadamard Transform decoding, Viterbi algorithm, turbo-codes. Bandlimited channels: intersymbol interference, spectral shaping, correlative coding, data estimation and channel equalization.

ECSE 523 Speech Communications.

(3) (3-0-6) (Prerequisite: ECSE 412 or ECSE 512) Articulatory and acoustic descriptions of speech production, speech production models, speech perception, digital processing of speech signals, vocoders using formant, linear predictive and cepstral techniques, overview of automatic speech recognition systems, speech synthesis systems and speaker verification systems.

ECSE 524 Interconnects and Signal Integrity.

(3) (3-0-6) (Prerequisites: ECSE 334 and ECSE 352 or ECSE 353.) Interconnect structures, signal integrity issues: reflection, crosstalk, noise, electromagnetic interference, Lossy transmission lines, RLGC matrix representations, wave propagation in multilayered substrates, periodically loaded lines, Floquet's theorem, power distribution network, simultaneous switching noise, packaging structures, chip interconnection technologies, substrate integrated waveguides, methods for experimental characterization of interconnects, signal integrity CAD tools.

ECSE 526 Artificial Intelligence.

(3) (3-0-6) (Prerequisite: ECSE 322) Design principles of autonomous agents, agent architectures, machine learning, neural networks, genetic algorithms, and multi-agent collaboration. The course includes a term project that consists of designing and implementing software agents that collaborate and compete in a simulated environment.

ECSE 527 Optical Engineering.

(3) (3-0-6) (Prerequisites: ECSE 352) A structure introduction to modern optical engineering. Topics covered include the propagation of light through space, refraction, diffraction, polarization, lens systems, ray-tracing, aberrations, computer-aided design and optimization techniques, Gaussian beam analysis, micro-optics and computer generated diffractive optical elements. Systems and applications will be stressed throughout.

ECSE 528 Telecommunication Network Architecture.

(3) (3-0-6) (Prerequisite: ECSE 411 or ECSE 511.) (Corequisite: ECSE 509) Organization of large, highspeed, multiservice telecommunication networks. Connection hierarchies, protocol stacks, transmission formats. Local-area networking: Token Ring and Ethernet. Multiplexing for wide-area transport: performance modelling and analysis, traffic scheduling and shaping. Routing and flow control. Switch architecture: performance criteria, buffer management, routers versus switches and hybrids.

ECSE 529 Image Processing and Communication.

(3) (3-0-6) (Prerequisite: ECSE 304 or ECSE 306.) Introduction to vision in man and machine; computer vision systems; biological vision systems; biological signal processing; edge detection; spatial- and frequency-domain processing; color. Low-level visual processing in computer vision, psychophysics, and neurobiology, and their similarities

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

and differences.

ECSE 530 Logic Synthesis.

(3) (3-2-4) (Prerequisite: ECSE 323) The place of logic synthesis in microelectronics. Representations of Boolean functions: logic covers, binary decision diagrams. Two-level synthesis algorithms, Espresso. Multi-level synthesis to Boolean networks: don't care methods, algebraic optimizations, delay modelling. Sequential synthesis: state-based optimizations, state assignment, network optimizations. Technology mapping: library cell and FPGA mapping.

ECSE 532 Computer Graphics.

(3) (3-0-6) (Prerequisite: ECSE 322) Introduction to computer graphics systems and display devices: raster scan, scan conversion, graphical input and interactive techniques - window environments; display files: graphics languages and data structures: 2D transformations; 3D computer graphics, hidden line removal and shading; graphics system design; applications. Laboratory project involving the preparation and running of graphics programs.

ECSE 533 Physical Basis of Semiconductor Devices.

(3) (3-0-6) (Prerequisites: ECSE 330, ECSE 351 and PHYS 271) Quantitative analysis of diodes and transistors. Semiconductor fundamentals, equilibrium and non-equilibrium carrier transport, and Fermi levels. PN junction diodes, the ideal diode, and diode switching. Bipolar Junction Transistors (BJT), physics of the ideal BJT, the Ebers-Moll model. Field effect transistors, metal-oxide semiconductor structures, static and dynamic behaviour, small-signal models.

ECSE 534 Analog Microelectronics.

(3) (3-0-6) (Prerequisite: ECSE 334) Design of analog ICs using specialized analog CAD tools such as SPICE. Voltage and current amplifier design which encompasses the study of biasing circuits, current sources and mirrors, input and output stages, and frequency compensation; precision reference sources; analog multipliers; oscillators; waveform generators and shaping circuits, and analog switches.

ECSE 535 Nanoelectronic Devices.

(3) (3-0-6) (Prerequisites: ECSE 352, PHYS 271) Physical principles and modeling of nanoelectronic devices. Bandstructure and electronic density of states, Quantum wells, wires and dots. Ballistic electron transport, tunneling and scattering mechanisms. Electrical and optical properties of nanostructures, fundamental performance limits. Research devices and materials.

ECSE 536 RF Microelectronics.

(3) (3-3-3) (Prerequisite: ECSE 334.) (Restriction: Instructor's permission required.) Introduction to Radio Frequency Integrated Circuits and wireless transceiver architectures. Modeling of passive/active integrated devices. Design of monolithic bipolar and CMOS LNAs, mixers, filters, broadband amplifiers, RF power amplifiers, VCOs, and frequency synthesizers. Analysis of noise and non-linearity in RFICs. Project using modern RFIC simulation/layout CAD tools.

ECSE 543 Numerical Methods in Electrical Engineering.

(3) (3-0-6) (Prerequisites: ECSE 322, ECSE 334 and ECSE 352) DC resistor networks and sparse matrix methods. Nonlinear electric and magnetic circuits: curve-fitting; the Newton-Raphson method. Finite elements for electrostatics. Transient analysis of circuits: systems of Ordinary differential equations; stiff equations. Transient analysis of induced currents. Solution of algebraic eigenvalue problems. Scattering of electromagnetic waves: the boundary element method; numerical integration.

ECSE 545 Microelectronics Technology.

(3) (3-0-6) (Prerequisite: ECSE 432 or ECSE 533) Basic techniques in the fabrication of microelectronic circuits. Four-point probe, alloyed contacts, diffusion processes, ion implantation epitaxy, silicon dioxide, photolithography, selected diffusion and metallization, transistor fabrication, dry etching, monolithic integrated circuits, isolation, mask making, thin and thick film components, MOS gate voltage and integrated circuits.

ECSE 547 Finite Elements in Electrical Engineering.

(3) (3-0-6) (Prerequisites: ECSE 322 and ECSE 352) Finite elements for electrostatics. Energy minimization. Semi-conductors. Nonlinear magnetics and Newton-Raphson. Axisymmetric problems. Capacitance, inductance, and resistance through finite elements. Resonance: cavities, waveguides. High order and curvilinear elements.

ECSE 548 Introduction to VLSI Systems.

(3) (2-2-5) (Prerequisites: ECSE 334 and ECSE 323) (Restriction: Instructor's permission required.) (Lab hours assigned by instructor.) An interdisciplinary course for electrical engineering and computer science students. A structured design methodology for managing the complexity of VLSI system design. Sufficient information on integrated devices, circuits, digital subsystems and system architecture is presented to enable students to span the range of abstractions from device physics to VLSI digital systems.

ECSE 549 Expert Systems in Electrical Design.

(3) (3-0-6) (Prerequisites: ECSE 323 and ECSE 361) Design processes in electrical engineering. Hierarchical design. Computer aided design. Expert system technology. Device representations, heuristics and structures, algebraic models. Design versus diagnosis, "Shallow" and "Deep" systems, second generation (multi-paradigm) systems. Shells and their uses in design systems. Knowledge acquisition systems.

ECSE 559 Flexible AC Transmission Systems.

(3) (3-0-6) (Prerequisites: ECSE 334 and ECSE 361) Operating principles of controllers of flexible AC transmission systems (FACTS). Transformer, thyristor and gate- turn- off thyristor (GTO) technologies. Modulation methods: harmonic elimination, pulse width modulation. Applications in: shunt and series advanced static VAR Controllers (ASVC), phase shifters, unified power flow controllers (UPFC).

ECSE 563 Power Systems Operation and Planning.

(3) (3-0-6) (Prerequisite: ECSE 361) Design and operation of large scale power systems: Temporal, spatial and hierarchical decomposition of tasks. Local vs. distributed control. Load-frequency control. Voltage and speed regulation. Interconnected power systems. Power flow. Security states. Optimal operation of power systems. Power system reliability.

ECSE 565 Introduction to Power Electronics.

(3) (3-0-6) (Prerequisite: ECSE 334) Semiconductor power switches - thyristors, GTO's, bipolar transistors, MOSFET's. Switch mode power amplifiers. Buck and boost principles. Modulation methods -PWM, delta, hysteresis current control. Rectifiers, inverters, choppers.

ECSE 570 Automatic Speech Recognition.

(3) (3-0-6) (Prerequisites: ECSE 305 and ECSE 322.) Acoustic phonetics and signal representations. Pattern classification, stochastic modeling, language modeling and search algorithms as applied to speech recognition. Techniques for robustness, integration of speech recognition with other user interface modalities, and the role of automatic speech recognition in speech understanding.

ECSE 571 Optoelectronic Devices.

(3) (3-0-6) (Prerequisites: ECSE 352) (Corequisite: ECSE 533) Physical basis of optoelectronic devices including Light Emitting Diodes, semiconductor optical amplifiers, semiconductor lasers, quantum well devices, and solid state lasers. Quantitative description of detectors, optical modulation, optical logic devices, optical interconnects, and optomechanical hardware. Throughout the course, photonic systems applications will be addressed.

ECSE 572 Nonlinear Optics.

(3) (3-0-6) (Prerequisite: ECSE 352) Nonlinear optical processes and their applications: optical fibres, waveguides and crystals. Origin of second- and third-order nonlinear susceptibility, symmetry properties, coupled-wave propagation, phase-matching techniques, sum- and difference frequency generation, parametric amplification, four-wave mixing, self- and cross-phase modulation, soliton propagation, Raman scattering and the electro-optic effect.

ECSE 573 Microwave Electronics.

(3) (3-0-6) (Prerequisite: ECSE 432 or ECSE 533)

Physical basis of modern microwave devices and circuits. Microwave transistors and tunnel diodes, transferred electron devices, transit time devices and infra red devices. Microwave generation and amplification, microwave FET circuits. Noise and power amplification.

ECSE 574 CMOS Sensor Microsystems.

(3) (3-0-6) (Prerequisite: ECSE 485) CMOS sensor microsystems, fundamentals of microfabrication, micromachining technology, recognition elements, CMOS signal detection components, and sensor system integration and packaging.

ECSE 593 Antennas and Propagation.

(3) (3-0-6) (Prerequisites: ECSE 303 and ECSE 352.)

Fundamentals of antenna theory: sources, radiation pattern and gain. Classification of antennas. Main antenna types and their characteristics. Antenna temperature, remote sensing and radar cross-section. Self and mutual impedances. Special topics include adaptive antennas, very large array (VLA) used in radio astronomy and biomedical applications.

ECSE 596 Optical Waveguides.

(3) (3-0-6) (Prerequisite: ECSE 352) An in-depth analysis to guided-wave propagation. Dielectric waveguides (slab, 2D, nonlinear, spatial solitons), optical fibers (modes, dispersion relations, propagation in dispersive, nonlinear fibers, temporal solitons), beam propagation method, coupled mode theory, waveguide devices (couplers, gratings, etc.). Selection of current research topics of interest (e.g. photonic crystals, optical signal processing, etc.)

ECSE 597 Circuit Simulators.

(3) (3-0-6) (Prerequisites: ECSE 334, ECSE 352, MATH 270 or MATH 271.) Principles of circuit simulation. Formulation of network equations. Frequency domain analysis. Nonlinear networks. Transient analysis. Sensitivity analysis and optimization. Model order reduction. High-speed interconnect analysis. Complex frequency hopping. Analysis of radio frequency circuits.

FACC-Faculty Course

Offered by: Engineering - Dean's Office

FACC 200 Industrial Practicum.

(0) The purpose of this course is to expose engineering students to engineering practice in industry. It consists of a minimum of three months of full-time remunerated work in industry, typically done during the summer. The course is administered by the McGill Engineering Career Centre.

FACC 220 Law for Architects and Engineers.

(3) (3-0-6) Aspects of the law which affect architects and engineers. Definition and branches of law; Federal and Provincial jurisdiction, civil and criminal law and civil and common law; relevance of statutes; partnerships and companies; agreements; types of property, rights of ownership; successions and wills; expropriation; responsibility for negligence; servitudes/easements, privileges/liens, hypothecs/ mortgages; statutes of limitations; strict liability of architect, engineer and builder; patents, trade marks, industrial design and copyright; bankruptcy; labour law; general and expert evidence; court procedure and arbitration.

FACC 500 Technology Business Plan Design.

(3) (3-0-6) (Prerequisite: MIME 310 or permission of Instructor.) (Recommended to be taken in combination with FACC 501.) This course combines several management functional areas such as marketing, financial, operations and strategy with the skills of creativity, engineering innovation, leadership and communications. Students learn how to design an

effective and winning business plan around a technology or engineering project in small, medium or large enterprises.

FACC 501 Technology Business Plan Project.

(3) (1-0-8) (Prerequisite: FACC 500 or Permission of Instructor.) (Restrictions: Not open to students who have taken FACC 480.) (Recommended to be taken in combination with FACC 500.) Students work in teams to develop a comprehensive business plan project based on a technological or engineering innovation while utilizing site visits.

MECH-Mechanical Engineering

Offered by: Mechanical Engineering

MECH 201 Introduction to Mechanical Engineering.

(2) (3-0-3) The practice of Mechanical Engineering: its scope and context. The role of Design. Introduction to the Design process. The role of engineering analysis and socio-economic factors in Design. Introduction to the individual mechanical engineering subjects and their role in Design. Case studies.

MECH 210 Mechanics 1.

(2) (2-1-3) Static equilibrium of particles and rigid bodies. Beams, trusses, frames and machines. Concept of work and energy. Static equilibrium and stability.

MECH 220 Mechanics 2.

(4) (4-1-7) (Prerequisites: MECH 210 and (MATH 260 or MATH 262). Pre-/Co-requisite: MATH 261 or MATH 263.) Kinematics of particles and rigid bodies. Particle dynamics: force-momentum and work-energy approaches. Kinematics and kinetics of rigid bodies.

MECH 240 Thermodynamics 1.

(3) (3-1-5) Thermodynamic systems and properties. First law of thermodynamics: energy, work and heat. State principle, p-v-T surfaces, phase equilibrium, ideal gas model. Second law of thermodynamics, entropy, exergy analysis. Energy analysis applied to steady and transient engineering systems including heat engines, refrigerators and heat pumps, air compressors.

□MECH 260 Machine Tool Laboratory.

(2) (1-3-2) Basic machine tool operations, numerical control of machine tools, and metrology. The use of hand tools, and sheet metal work. Introduction to rapid prototyping and nontraditional machining methods. Extensive laboratory hands-on exercises.

MECH 261 Measurement Laboratory.

(2) (2-3-1) (Restriction: Civil Engineering students) Basic experimental laboratory measurements, such as measurement of strain, pressure, force, position, and temperature.

MECH 262 Statistics and Measurement Laboratory.

(3) (3-3-3) Introduction to probability: conditional probability, binomial and Poisson distributions, random variables, laws of large numbers. Statistical analysis associated with measurements; regression and correlation. Basic experimental laboratory techniques, including the measurement of strain, pressure, force, position, and temperature.

MECH 289 Design Graphics.

(3) (3-3-3) (Restriction: Not open to students who have taken MECH 290 or MECH 291.) Preliminary concepts of design, including free-hand sketching; fundamentals of geometry construction; and technology of object representation.

MECH 292 Conceptual Design.

(3) (1-3-5) (Prerequisites: MECH 260 and MECH 289 or MECH 291. Pre-/Co-requisite: CIVE 207) Introduction to design. Problem formulation; idea generation; feasibility study; preliminary design; design; analysis, design evaluation, project management, and optimal design.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

MECH 309 Numerical Methods in Mechanical Engineering.

(3) (3-1-5) (Prerequisites: MATH 261 or MATH 263, MATH 266 or MATH 271, COMP 208.) Numerical techniques for problems commonly encountered in Mechanical Engineering are presented. Chebyshev interpolation, quadrature, roots of equations in one or more variables, matrices, curve fitting, splines and ordinary differential equations. The emphasis is on the analysis and understanding of the problem rather than the details of the actual numerical program.

MECH 314 Dynamics of Mechanisms.

(3) (3-1-5) (Prerequisite: MECH 220.) First principles of analysis; motion; position; displacement; velocity; acceleration; force; inertia and its effects. Kinematic and dynamic analysis of rigid bodies in pure rotation and in pin-connected systems; dynamic balance. Rigid bodies in rolling contact; planetary gear-trains. Bodies in sliding contact; lower and higher sliding pairs.

MECH 315 Mechanics 3.

(4) (4-1-7) (Prerequisites: MECH 220 and (MATH 266 or MATH 271). Pre-/Co-requisite: CIVE 207.) Single-degree-of-freedom systems; free vibrations; effect of damping; response to harmonic, periodic and arbitrary excitation. Lagrange's equations of motion. Vibrations of multi-degree-of-freedom systems. Continuous systems.

MECH 321 Mechanics of Deformable Solids.

(3) (3-1-5) (Prerequisite: CIVE 207) Modern phenomenological theories of the behaviour of engineering materials. Stress and strain concepts and introduction to constitutive theory. Applications of theory of elasticity and thermoelasticity. Introduction to finite element stress analysis methods.

MECH 331 Fluid Mechanics 1.

(3) (3-1-5) (Prerequisite: MECH 210. Pre-/Co-requisites: MECH 220, MECH 240 and (MATH 266 or MATH 271).) Physical properties of fluids. Kinematics and dynamics of fluid flow: stress in a continuum, rates of strain, rotation. Control volume analysis; conservation of mass, linear momentum and energy; Euler and Bernoulli equations; Flow measurement. Dimensional analysis and dynamical similarity. Laminar and turbulent flow in pipes and boundary layers.

MECH 341 Thermodynamics 2.

(3) (4-0-5) (Prerequisite: MECH 240) Generalized thermodynamics relations. Real gas effects, gas tables, dense gas equations of state and generalized compressibility, enthalpy, and entropy charts. Vapour and gas power cycles (coal/nuclear power plants). Refrigerators and heat pumps. Psychrometry and air conditioning processes. Thermodynamics of reactive gas mixtures.

MECH 346 Heat Transfer.

(3) (3-1-5) (Prerequisites: MECH 240 or BREE 301, MECH 331 or BREE 305, MATH 266 or MATH 271 or AEMA 305.) Basic concepts and overview. Steady and unsteady heat conduction. Fin Theory. Convective heat transfer: governing equations; dimensionless parameters; analogy between momentum and heat transfer. Design correlations for forced, natural, and mixed convection. Heat exchangers. Radiative heat transfer: black- and gray-body radiation; shape factors; enclosure theory. Thermal engineering design project.

MECH 362 Mechanical Laboratory 1.

(2) (0-3-3) (Prerequisite: MECH 261 or MECH 262 or BREE 216) Experiments will be performed in four areas: MECH 240 Thermodynamics, MECH 315 Vibrations, MECH 331 Fluid Mechanics 1, and MECH 346 Heat Transfer. Students should sign up to do experiments in one or more areas the term following the completion of one or more of the above courses. Students will not formally register for this course until the term in which they will complete all of the experiments.

MECH 383 Applied Electronics and Instrumentation.

(3) (3-2-4) (Prerequisites: MECH 261 or MECH 262, and (MATH 261 or MATH 263).) Discrete and integrated components, both analogue and digital. Characteristics of passive elements. Semiconductors, amplifiers, filters, oscillators, modulators, power supplies and nonlinear devices. Introduction to digital electronics. Transducer/signal conditioner interfacing considerations.

MECH 393 Machine Element Design.

(3) (3-1-5) (Prerequisites: MECH 260 and (MECH 289 or MECH 291) and CIVE 207 and EDEC 206. Pre-/co-requisites: MECH 292 and MECH 314 and MIME 260.) The design of machine elements for strength requirements in consideration of various methods of manufacture. Synthesis of mechanical systems to fulfill performance requirements, following the engineering design process. Static and fatigue failure prevention. Students form groups to work on a design project.

MECH 403D1 (3), MECH 403D2 (3) Thesis (Honours).

(0-6-12) (Prerequisite: Candidates must have completed courses in the Mechanical Engineering Program weighted at a minimum of 60 credits.) (Students must register for both MECH 403D1 and MECH 403D2.) (No credit will be given for this course unless both MECH 403D1 and MECH 403D2 are successfully completed in consecutive terms) This course, together with course MECH 404 involves a research project containing an explicit component of design, encompassing interrelated aspects of engineering theory and requiring a theoretical and/or experimental investigation. Students will work under the supervision of one or more staff members; completed work will be submitted in the form of a thesis.

MECH 403N1 (3), MECH 403N2 (3) Thesis (Honours).

(Students must also register for MECH 403N2) (No credit will be given for this course unless both MECH 403N1 and MECH 403N2 are successfully completed in a twelve month period) This course, together with course MECH 404 involves a research project containing an explicit component of design, encompassing interrelated aspects of engineering theory and requiring a theoretical and/or experimental investigation. Students will work under the supervision of one or more staff members; completed work will be submitted in the form of a thesis.

MECH 404 Honours Thesis 2.

(3) (0-6-3) (Corequisite: MECH 403) This course is part of the same thesis project as course MECH 403.

MECH 412 Dynamics of Systems.

(3) (3-1-5) (Prerequisites: MECH 309 or MATH 317, MECH 315. Pre-/Co-requisite: MECH 331) Modelling of physical systems by lumped-parameter linear elements. Unified treatment of mechanical, fluid, electrical, and thermal devices and systems. State space, formulation of state equations, time response. Frequency-response methods. Dynamic response specifications. Stability. Elementary feedback control systems. Extensive use of engineering examples and software tools.

MECH 419 Advanced Mechanics of Systems.

(4) (3-0-9) (Prerequisites: MECH 220, CIVE 207, (MATH 264 or MATH 265) and (MATH 266 or MATH 271).) Lagrange's equations of motion. Hamilton's principle. Variational methods. Discrete linear systems: analytical and numerical methods. Distributed parameter systems: exact solutions and discretization techniques. Electrical-mechanical-acoustical analogies. Stability of systems. Nonlinear dynamics: phase-plane, perturbation and other methods of solution.

MECH 430 Fluid Mechanics 2.

(3) (3-1-5) (Prerequisites: MECH 331 and MECH 240.) Review of thermodynamics of gases, one dimensional isentropic flow and choking. Nozzles and wind tunnels. Normal shock waves. Flow in constant area ducts with friction and heat exchange. Compressible irrotational flow. Oblique shock waves and Prandtl-Meyer expansion. Supersonic aerofoil and wing theory.

MECH 432 Aircraft Structures.

(3) (3-0-6) (Prerequisites: MECH 331 and MECH 321) Plane stress and strain. Theories of failure. Plastic and viscoelastic stress-strain relations. External and internal forces in spars. Bending, deflection of beams, plastic deformation and aeroelastic distortion of wings and fuselage. Structural characteristics of wings. Torsion of wings and related critical aeroelastic design parameters; divergence and aeroelastic twist. Energy methods. Buckling in aeronautical structures. Flutter.

MECH 434 Turbomachinery.

(3) (3-0-6) (Prerequisite: MECH 331) A broad general treatment of energy transfer between a fluid and a rotor, velocity vector diagrams, and non-dimensional characteristics. Applications to hydraulic pumps and turbines. Two dimensional cascade theory leading to study of axial gas compressors and turbine stages. Three dimensional free and forced vortex configurations. Centrifugal compressors and radial inflow turbines.

MECH 447 Combustion.

(3) (3-0-6) (Prerequisite: MECH 240) Equilibrium analysis of reacting systems, Hugoniot analysis, flame propagation mechanisms, introduction to chemical kinetics, models for laminar flame propagation, ignition, quenching, flammability limits, turbulent flames, flame instability mechanisms, detonations, solid and liquid combustion.

MECH 463D1 (3), MECH 463D2 (3) Mechanical Engineering Project.

(1-3-5) (Prerequisite: MECH 393) (Students must register for both MECH 463D1 and MECH 463D2.) (No credit will be given for this course unless both MECH 463D1 and MECH 463D2 are successfully completed in consecutive terms) Team project work typically involving the design, fabrication, verification, and application of a mechanical device/system, or experimental facility. The project work is complemented with lectures in the Fall term on topics related to design and management of design projects. Emphasis is on the completion of a project of professional quality.

MECH 474 Selected Topics in Operations Research.

(3) (3-0-6) (Prerequisites: (MATH 266 or MATH 271) and COMP 208) Introduction to the general mathematical programming problem in the context of engineering design; linear programming, queuing theory, Monte Carlo simulation. The above techniques will be used to study the optimization of engineering systems.

MECH 494 Honours Design Project.

(3) (0-6-3) (Prerequisite: MECH 292) (Restriction: Mechanical Engineering Honours students.) An advanced design project course with emphasis on analytical solutions, performance prediction and validation, and planning for production.

MECH 497 Value Engineering.

(3) (0-8-1) (Prerequisites: MECH 393 and completion of 45 credits) Value Engineering is an in-depth analysis of an industrial product or process with a view to improving its design and/or performance to increase its worth. This is a workshop type of course. Projects will be supplied by industrial firms and students will work in teams with industrial personnel.

MECH 498 Interdisciplinary Design Project 1.

(3) (1-2-6) Completion of an individual project on an interdisciplinary theme with emphasis on a balanced combination on analysis and synthesis.

MECH 499 Interdisciplinary Design Project 2.

(3) (1-2-6) (Corequisite: MECH 498.) The individual project initiated in MECH 498 is continued and finalized in this course.

MECH 500 Selected Topics in Mechanical Engineering.

(3) (3-0-6) A course to allow the introduction of new topics in Mechanical Engineering as needs arise, by regular and visiting staff.

MECH 501 Special Topics: Mechanical Engineering.

(3) (3-0-6) A course to allow the introduction of new topics in Mechanical Engineering as needs arise, by regular and visiting staff.

MECH 502 Topics in Mechanical Engineering.

(3) A course to allow the introduction of new topics in Mechanical Engineering as needs arise, by regular and visiting staff.

MECH 513 Control Systems.

(3) (3-1-5) (Prerequisite: MECH 412 or MECH 419.) (Restriction: Not open to students who have taken MECH 413.) Stability: Lyapunov, Routh-Hurwitz and Nyquist criteria. Root-locus design of feedback control systems. Controller design based on polynomial methods and internal model principle. Frequency-response controller design. State feedback control. Controllability, observability, LQR, full- and reduced-order observer design. Robust control design. Optimization problems in control.

MECH 515 Unsteady Gasdynamics 1.

(3) (3-1-5) (Prerequisites: MECH 341, MECH 430.) (Restriction: Not open to students who have taken MECH 615) Fundamentals of unsteady gasdynamics. Shock and detonation waves in gases and condensed material. Condensed explosives: hydrodynamic theory, equations of state, initiation. Shock interactions. Blast wave theory, similarity methods, blast scaling.

MECH 522 Production Systems.

(3) (3-0-6) Characteristics of production systems. System boundaries, input-output, feedback time-lag effects, dynamics of production systems. Design for manufacturability. Process planning, process/machine tool selection, break-even analysis, CAPP. Production planning, scheduling and control of operations; quality management. Competitive strategies; FMS, CIM. Hands-on experience with production modelling and industrial simulation software.

MECH 524 Computer Integrated Manufacturing.

(3) (3-0-6) (Prerequisite: Permission of the instructor) A study of the present impact of computers and automation on manufacturing. Computer-aided systems. Information modelling. Information system structures. Study of several types of production systems. Integration issues: inter- and intra-enterprise. Laboratory experience with manufacturing software systems.

MECH 526 Manufacturing and the Environment.

(3) (3-0-6) (Prerequisite (Undergraduate): Permission of the instructor) Course topics include: clean manufacturing, product and process design for minimizing materials and energy use, the product life cycle, impact of technology on the environment, environmental impact assessment, regulatory process, and managing the "political" process.

MECH 528 Product Design.

(3) (3-0-6) (Prerequisite (Undergraduate): Permission of the instructor) A study of the design issues present in product life cycle demands. Computer-aided systems. Rapid prototyping. Design for manufacturability. Integration of mechanics, electronics and software in products. Effect on design of product cost, maintainability, recycling, marketability.

MECH 529 Discrete Manufacturing Systems.

(3) (3-0-6) (Prerequisite (Undergraduate): Permission of the instructor) An overview of present day production machines and systems with special emphasis on automation, computer control and integration techniques. Material handling, automatic inspection, process monitoring, maintenance. Socio-economic and environmental issues. Laboratory experience with factory simulation.

MECH 530 Mechanics of Composite Materials.

(3) (3-0-6) (Corequisite: MECH 321 or equivalent/instructor's permission.) Fiber-reinforced composites. Stress, strain, and strength of composite laminates and honeycomb structures. Failure modes and failure criteria. Environmental effects. Manufacturing processes. Design of composite structures. Computer modelling of composites. Computer techniques are utilized throughout the course.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

MECH 531 Aeroelasticity.

(3) (3-1-5) (Prerequisite (Undergraduate): MECH 419 or MECH 315 and MECH 533) (Prerequisite (Graduate): MECH 533) Wing divergence using strip-theory aerodynamics. Effect of aircraft flexibility on the control and stability. Flutter calculations for two-dimensional wings with discussion of three-dimensional effects. Some examples of aeroelastic instability, and the relevant analysis of non-aeronautical problems.

MECH 532 Aircraft Performance, Stability and Control.

(3) (3-1-5) (Prerequisite (Undergraduate): (MECH 412 or MECH 419), MECH 533) (Prerequisite (Graduate): MECH 533) Aircraft performance criteria such as range, endurance, rate of climb, maximum ceiling for steady and accelerated flight. Landing and take-off distances. Static and dynamic stability in the longitudinal (stick-fixed and stick-free) and coupled lateral and directional modes. Control response for all three modes.

MECH 533 Subsonic Aerodynamics.

(3) (3-1-5) (Prerequisite (Undergraduate): MECH 331) Kinematics: equations of motion; vorticity and circulation, conformal mapping and flow round simple bodies. Two-dimensional flow round aerofoils. Three-dimensional flows; high and low aspect-ratio wings; airscrews. Wind tunnel interference. Similarity rules for subsonic irrotational flows.

MECH 534 Air Pollution Engineering.

(3) (3-0-6) (Prerequisite (Undergraduate): MECH 331, MECH 341.) Pollutants from power production and their effects on the environment. Mechanisms of pollutant formation in combustion. Photochemical pollutants and smog, atmospheric dispersion. Pollutant generation from internal combustion engines and stationary power plants. Methods of pollution control (exhaust gas treatment, absorption, filtration, scrubbers, etc.).

MECH 537 High-Speed Aerodynamics.

(3) (3-0-6) (Pre/Corequisite (Undergraduate): MECH 533) Equations of compressible flows. Planar and conical shock waves. Expansion and shock wave interference; shock tubes. Method of characteristics. Supersonic nozzle design. Aerofoil theory in high subsonic, supersonic and hypersonic flows. Conical flows. Yawed, delta and polygonal wings; rolling and pitching rotations. Wing-body systems. Elements of transonic flows.

MECH 538 Unsteady Aerodynamics.

(3) (3-0-6) (Prerequisite (Undergraduate): MECH 533) Fundamental equations of unsteady compressible flows in fixed or moving reference frames. Unsteady flows past bodies in translation and having oscillatory motions. Oscillations of cylindrical pipes or shells subjected to internal flows. Vortex theory of oscillating aerofoils in incompressible flows. Theodorsen's method. Unsteady compressible flow past oscillating aerofoils.

MECH 539 Computational Aerodynamics.

(3) (3-0-6) (Prerequisite: MECH 309 or MATH 317, MECH 533.) Fundamental equations. Basic flow singularities. Boundary element methods. Source, doublet and vortex panel methods for 2D and 3D incompressible and compressible flows. Method of characteristics. Euler equations for inviscid rotational flows. Finite-difference and finite-volume methods. Explicit and implicit time-integration methods. Quasi 1D solutions. Nozzle and confined aerofoil applications.

MECH 541 Kinematic Synthesis.

(3) (3-0-6) (Prerequisite: MECH 309 or MATH 317 or permission of the instructor.) The role of kinematic synthesis within the design process. Degree of freedom. Kinematic pairs and bonds. Groups and subgroups of displacements. Applications to the qualitative synthesis of parallel-kinematics machines with three and four degrees of freedom. Function, motion and path generation problems in planar, spherical and spatial four-bar linkages. Extensions to six-bar linkages. Cam mechanisms.

MECH 542 Spacecraft Dynamics.

(3) (3-0-6) (Prerequisite (Undergraduate): MECH 220. Corequisite: MECH 412 or MECH 419) Review of central force motion; Hohmann and other coplanar transfers, rotation of the orbital plane, patched conic method. Orbital perturbations

due to the earth's oblateness, solar-lunar attraction, solar radiation pressure and atmospheric drag. Attitude dynamics of a rigid spacecraft; attitude stabilization and control; attitude manoeuvres; large space structures.

MECH 543 Design with Composite Materials.

(3) (3-3-3) (Prerequisite: MECH 530) Material systems/selection process. Cost vs performance. Laminate layup procedures. Theory and application of filament winding of composite cylinders. Regular oven and autoclave oven curing, analysis of resulting material performance. Practical design considerations and tooling. Analysis of environmental considerations. Joining techniques. Analysis of test methods. Theory of repair techniques.

MECH 544 Processing of Composite Materials.

(3) (3-0-6) (Prerequisite: MECH 530 or permission of instructor.) (Restriction: This course requires the use of a finite element software, so experience with finite elements is recommended.) Composite processing science basic principles. Reinforcement properties; permeability, compaction. Resin properties; curing, viscosity, shrinkage. Heat transfer and cure kinetics; cure cycle optimization. Resin flow; infusion, thickness variations, fiber volume fraction distribution. Residual stresses; tool-part interaction, warpage control, spring-back, tool design. Thermoplastic composites; crystallization control, melting and consolidation.

MECH 545 Advanced Stress Analysis.

(3) (3-1-5) (Prerequisite (Undergraduate): CIVE 207 and MECH 321) Tensor Analysis: Review of continuum mechanics. Equilibrium and constitutive equations in tensor form. Finite element methods. Torsion of non-circular cross-sections; spherical problems; advanced Airy stress function problems. Introduction to plates and shells. Thermal deformations and stresses. Introduction to plasticity and viscoelasticity.

MECH 546 Finite Element Methods in Solid Mechanics.

(3) (3-0-6) (Prerequisites: MECH 315 or MECH 419, and MECH 321, or Instructor's permission.) (Restriction: Not open to students who have taken MECH 645.) Discrete systems; variational formulation and approximation for continuous systems; direct and variational methods of element formulation in 1- 2- and 3 dimensions; formulation of isoparametric finite elements; plate and shell elements; finite element method for static analysis, vibration analysis and structural dynamics; introduction to nonlinear problems.

MECH 553 Design and Manufacture of Microdevices.

(3) (3-0-6) (Prerequisite: Instructors' Permission.) Introduction to microelectromechanical systems (MEMS). Micromachining techniques (thin-film deposition; lithography; etching; bonding). Microscale mechanical behaviour (deformation and fracture; residual stresses; adhesion; experimental techniques). Materials- and process-selection. Process integration. Design of microdevice components to meet specified performance and reliability targets using realistic manufacturing processes.

MECH 554 Microprocessors for Mechanical Systems.

(3) (2-3-4) (Prerequisite (Undergraduate): MECH 383 and COMP 208) Digital logic and circuits - asynchronous and synchronous design. Microcontroller architectures, organization and programming - assembly and high-level. Analog/digital/hybrid sensors and actuators. Sensing and conditioning subsystems. Interfacing issues. Real-time issues. Operator interfaces. Laboratory exercises on digital logic design, interfacing and control of peripherals with a final team project.

MECH 557 Mechatronic Design.

(3) (3-1-5) (Prerequisite (Undergraduate): ECSE 461, MECH 383 and (MECH 412 or MECH 419)) Team project course on the design, modelling, model validation, and control of complete mechatronic systems, constructed with modern sensors, actuators, real-time operating systems, embedded controllers, and intelligent control.

MECH 561 Biomechanics of Musculoskeletal Systems.

(3) (3-0-6) (Prerequisite (Undergraduate): MECH 321 and (MECH 315 or MECH 419)) The musculoskeletal system; general characteristics and classification of tissues and joints. Biomechanics and clinical problems in orthopaedics.

Modelling and force analysis of musculoskeletal systems. Passive and active kinematics. Load-deformation properties of passive connective tissue, passive and stimulated muscle response. Experimental approaches, case studies.

MECH 562 Advanced Fluid Mechanics.

(3) (3-0-6) (Prerequisite: MATH 271 or permission of instructor.) Conservation laws, control volume analysis, Navier Stokes equations, dimensional analysis and limiting forms of N-S equation, laminar viscous flows, boundary layer theory, inviscid potential flows, lift and drag, introduction to turbulence.

MECH 563 Biofluids and Cardiovascular Mechanics.

(3) (3-0-6) (Prerequisites: CHEE 314 or MECH 331 (or permission of instructor).) (Restriction : Not open to students who have taken CHEE 563.) Basic principles of circulation including vascular fluid and solid mechanics, modeling techniques, clinical and experimental methods and the design of cardiovascular devices.

MECH 565 Fluid Flow and Heat Transfer Equipment.

(3) (3-1-5) (Prerequisite (Undergraduate): MECH 240, MECH 309 or MATH 317, MECH 331, MECH 341, MECH 346 or permission of the instructor.) Pipes and piping systems, pumps, and valves. Fans and building air distribution systems. Basic thermal design methods for fins and heat exchangers. Thermal design of shell-and-tube and compact heat exchangers.

MECH 566 Fluid-Structure Interactions.

(3) (3-0-6) (Prerequisite: MECH 315 or MECH 419 or equivalent.) Pipes and cylindrical shells containing flow: fundamentals and applications in ocean mining, Coriolis mass-flow meters, heat exchangers, nuclear reactors and aircraft engines; chaos. Cylinders in axial flow and in cross-flow; vortex-shedding and galloping. Cylinder arrays in cross-flow; fluidelastic instabilities. Owalling of chimneys.

MECH 572 Introduction to Robotics.

(3) (3-0-6) (Prerequisite (Undergraduate): (MATH 266 or MATH 271) and MECH 220 or permission of the instructor) (Restriction: Not open to students who have taken MECH 573) Overview of the field of robotics. Kinematics, statics, singularity analysis and workspace of serial robots with decoupled architecture. Direct and inverse kinematics and dynamics. Algorithms for manipulator kinematics and dynamics.

MECH 573 Mechanics of Robotic Systems.

(3) (3-0-6) (Prerequisite: MECH 309 or MATH 317, and MECH 572 or permission of the instructor.) (Since the course is open to both undergraduate and graduate students, and B- is the minimum passing mark for graduate students, this minimum mark will be relaxed for undergraduates. The regulations applicable to undergraduates will apply accordingly.) Manipulator performance and design. Pick-and-place and continuous-path operations. Computation of rigid-body angular velocity and acceleration from point-data measurements. Inverse kinematics of serial manipulators with coupled architectures; kinostatics of multifingered hands and walking machines. Kinematics and dynamics of parallel manipulators and wheeled mobile robots.

MECH 576 Computer Graphics and Geometrical Modelling.

(3) (2-3-4) (Prerequisite (Undergraduate): (MATH 266 or MATH 271) and (MECH 309 or MATH 317) and (MECH 289 or MECH 290 or MECH 291) or permission of the instructor.) Review of pertinent linear algebra and projective geometry. Explicit, implicit and parametric polynomial forms. Splines: curves and surfaces. Properties: curvature, twist, continuity. Ruled surfaces and other quad patches. Constructive solid models; Octree/Voxel, sweep wire frame, Boolean, boundary representation. Mechanical Engineering applications.

MECH 577 Optimum Design.

(3) (2-3-4) (Prerequisite: MECH 309 or MATH 317 or permission of the instructor) The role of optimization within the design process: Design methodology and philosophy. Constrained optimization: The Kuhn-Tucker conditions. Techniques of linear and non-linear programming. The simplex and the complex methods. Sensitivity of the design to manufacturing errors. Robustness of the design to manufacturing and operation errors.

MECH 578 Advanced Thermodynamics.

(3) (3-0-6) Review of classical mechanics; Boltzmann statistics, thermodynamics of ideal gases; Fermi-Dirac and Bose-Einstein statistics, Gibbsian ensembles; elementary kinetic theory of transport processes, Boltzmann equation, Boltzmann H-theorem and entropy, KBG approximation, discussion on the solution of Boltzmann equation; Maxwell transport equations, derivation of Navier Stokes equations.

MECH 593 Design Theory and Methodology.

(3) (3-0-6) (Prerequisite: Permission of instructor.) The overall design process is scrutinized within a discipline-independent framework. The nature of design as a creative engineering activity. The polarity of design. The role of knowledge in design. Design representation. History of design and design schools. Design trends in the 21st century. Design engineering schools. Design models.

MIME-Mining & Materials Engineering

Offered by: Mining & Materials Engineering

MIME 200 Introduction to the Minerals Industry.

(3) (3-3-3) Economic importance of the minerals industry. Mining: legislation, regulations, criteria for exploiting an ore: mining methods, equipment. Extractive metallurgy: mineral processing, hydrometallurgy, pyrometallurgy. Environmental protection.

MIME 202 Engineering Communication Skills.

(2) (1-2-3) Basic forms of engineering communication: memoranda, executive summaries, letters, proposals, evaluations, oral presentations and presentation graphics, email, groupware, workflow, internet, graphics and presentation tools. Adaptation into engineering. Short assignments and oral presentations.

MIME 203 Mine Surveying.

(2) (3-3-0) (Prerequisite: MIME 200 or permission of instructor) Introduction to surveying. Definitions & mathematics. Measurement of levels, angles and distances. Fundamentals of control surveying. Underground mine surveying. GPS and laser applications.

MIME 209 Mathematical Applications.

(3) (3-2-4) Introduction to stochastic modelling of mining and metallurgical engineering processes. Description and analysis of data distributions observed in mineral engineering applications. Modelling with linear regression analysis. Taylor series application to error and uncertainty propagation. Metallurgical mass balance adjustments.

MIME 212 Engineering Thermodynamics.

(3) (3-1-5) Macro versus microscopic approach: patterns of Nature. First and second laws and their uses. Property relationships: free energies, chemical potentials, activities, heat capacity. Chemical equilibrium. Reaction kinetics. Phase equilibrium for a pure substance. Experimental methods. Engineering applications: high-temperature metallurgical reactors, turbines, mixtures and solutions, phase diagrams, superconductivity.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

MIME 221 Engineering Professional Practice.

(2) (3-1-2) Introduction to the engineering profession. Rights and code of conduct for students. Regulation of the engineering profession. Law/liability. Principles of engineering ethics. Ethical problems of engineers in industry, management, and private practice. The engineer's duty to society and the environment. Occupational health and safety. Engineering case histories.

MIME 250 Introduction to Extractive Metallurgy.

(3) (3-2-4) (Corequisite: MIME 202.) Introduction to physical, hydrochemical, electrochemical and thermochemical processing in the production of metals and materials; description of the industries, basic processing concepts, unit operations and an introduction to environmental exchanges. Size reduction and classification, particle separation, stoichiometric and mass balance calculations, chemical equilibria, aqueous processing, smelting and refining.

MIME 260 Materials Science and Engineering.

(3) (2-2-5) Structure properties and fabrication of metals, polymers, ceramics, composites; engineering properties: tensile, fracture, creep, oxidation, corrosion, friction, wear; fabrication and joining methods; principles of materials selection.

MIME 261 Structure of Materials.

(3) (3-2-4) Classification of materials, electrons in atoms, molecules and solids, bonding in solids, elements of crystallography, common crystal structures, atoms positions, directions and planes in crystal structures, defects in crystalline solids, point defects, dislocations, structure of polycrystalline materials, grains, grain boundaries, non-crystalline solids.

MIME 262 Properties of Materials in Electrical Engineering.

(3) (3-1-5) (Restriction: Not open to students who have taken or are taking ECSE 212.) Properties of a material continuum and crystalline state; properties of atoms in materials; conduction electrons in materials; electronic properties of semiconductors and metals; magnetic and thermal properties of materials; applications of electronic materials in semiconductor technology, recording media and transducers.

MIME 280 Industrial Training 1.

(2) (Prerequisites: MIME 202. Department permission required. Must also have obtained a minimum of 40 credits of the core program.) Four-month training period in a materials engineering industrial or research environment.

MIME 290 Industrial Work Period 1.

(2) (Prerequisites: MIME 200 or MIME 203) A four-month work period in the mineral industry, to expose the student to an industrial environment. Candidates will receive basic industrial training. A complete report must be submitted at the end of the term.

MIME 291 Industrial Work Period 2.

(2) (Prerequisite: MIME 290) A four-month industrial work period in a mining company, research laboratory or government agency. The student will receive formal industrial training in a technical position. A complete report must be submitted at the end of the term.

MIME 308 Social Impact of Technology.

(3) (3-0-6) (Enrolment encouraged by students outside the Faculty of Engineering) Critical examination of the socio-economic costs and benefits of technology, case studies of old engineering works and new technologies. The integration of applied ethics and engineering practice, analysis of basic concepts of technology assessment, the inter-connected processes of risk assessment, management, and communication.

MIME 310 Engineering Economy.

(3) (3-1-5) Introduction to the basic concepts required for the economic assessment of engineering projects. Topics include: accounting methods, marginal analysis, cash flow and time value of money, taxation and depreciation, discounted cash flow analysis techniques, cost of capital, inflation, sensitivity and risk analysis, analysis of R and D, ongoing as well as new investment opportunities.

MIME 311 Modelling and Automatic Control.

(3) (3-2-4) (Prerequisite: MIME 356) Mass and energy conservation laws. Dynamic versus steady state models, dynamic behaviour of first and higher order metallurgical systems, linear and nonlinear models, interacting and noninteracting systems. Laplace domain dynamics and transfer functions. Feedback control, control valves and controllers, transducers. Feedback-feedforward control, introduction to cascade, adaptive and statistical control strategies. Digital computer control, instruments and interfaces.

MIME 313 Mining Science and Technology Seminar.

(1) (1-0-2) (Prerequisites: MIME 322 and MIME 333.) Review of mining-related technological advances in fragmentation, materials handling, processing, ventilation and ground control.

MIME 317 Analytical and Characterization Techniques.

(3) (2-3-4) (Prerequisite: MIME 261) Bulk, surface and microanalytical techniques for materials characterization. Bulk analysis: spectrophotometry using UV, visible, flame and atomic absorption, x-ray diffraction and x-ray fluorescence. Surface and microanalysis: infrared spectroscopy, scanning and transmission electron microscopy, Auger electron and x-ray photoelectron spectroscopy.

MIME 320 Extraction of Energy Resources.

(3) (3-0-6) The extraction of energy resources, i.e. coal, gas, oil and tar sands. After a brief geological review, different extraction techniques for these substances will be discussed. Emphasis on problems such as northern mining and offshore oil extraction with reference to Canadian operations. Transportation and marketing.

MIME 322 Rock Fragmentation.

(3) (3-3-3) (Prerequisite (Undergraduate): MIME 200) Principles of drilling, penetration rates, performance and factors to consider in the choice of a drilling method. Characteristics of explosives, firing systems and blast patterns. Blasting techniques in surface and underground workings and in permafrost. Special blasting techniques at excavation perimeters. Vibration and noise control. Economics of drill/blast practice, interface with transport and crushing systems. Legislation and safety in explosives use and handling. Ripping and fullface boring machines.

MIME 323 Rock and Soil Mass Characterization.

(3) (3-3-3) (Prerequisite (Undergraduate): EPSC 221 and MIME 200) Characteristics of soil and rock masses and the stability of mine workings. Mechanical properties of rocks and soils related to physical/chemical properties. Characterization of rock mass discontinuities. Laboratory and in-situ techniques to define mechanical properties of soils, rocks and discontinuities. Permeability and groundwater flow principles. In-situ stresses and their measurement. Rock mass quality and classification systems.

MIME 325 Mineral Industry Economics.

(3) (3-2-4) (Prerequisite: MIME 310) Geographical distribution of mineral resources. Production, consumption and prices of minerals. Market structure of selected minerals. Economic evaluation aspects: grade-tonnage considerations; capital and operating cost estimation; assessment of market conditions; estimation of revenue; taxation; sensitivity and risk analyses; economic optimization of mine development and extraction.

MIME 333 Materials Handling.

(3) (3-3-3) (Prerequisite: MIME 200) Physical and mechanical characteristics of materials related to loading, transport and storage. Dynamics of particles, systems and rigid bodies, mass-acceleration, work-energy, impulse-momentum. Types and selection of excavation and haulage equipment. Layout of haul roads. Rail transport. Conveyor belts and chain conveyors. Mine hoists. Layout of mine shafts.

MIME 337 Electrotechnology.

(2) (3-1-2) Emphasize role of electrical equipment in the mining, metals and materials industry sectors. Operating theory and technical standards of prime electrical equipment, transformers, motors, generators, rectifiers, variable speed drives, circuit breakers, starters. DC and AC theory for circuit components, resistance, capacitance, inductance and

impedance. Distribution system single line diagrams.

MIME 340 Applied Fluid Dynamics.

(3) (3-3-3) (Prerequisite: CIVE 205) Flow analysis and manometry. Conservation of mass and momentum. Flow in pipes and ducts, analysis of pipe networks. First and second law of thermodynamics and their applications. Open channel flows. Dimensional analysis and similitude. Flow measurements. Settling and separation of particles. Non-Newtonian flow and slurry transport. Fluidized beds. Filtration of liquid/solid mixtures.

MIME 341 Introduction to Mineral Processing.

(3) (2-3-4) (Prerequisite (Undergraduate): MIME 200 or MIME 250) Theory and practice of unit operations including: size reduction-crushing and grinding; size separation-screening and classification; mineral separation-flotation, magnetic and gravity separation. Equipment and circuit design and selection. Mass balancing. Laboratory procedures: grindability, liberation, magnetic and gravity separation, flotation and solid-liquid separation.

MIME 345 Applications of Polymers.

(3) (3-3-3) (Prerequisite: MIME 261 or permission of instructor.) Applications of synthetic and natural polymers and composites as engineering materials e.g. in biomedical, automotive and aerospace applications. Thermoplastics, thermosets and elastomers. Animal and plant origin, degradable and non-degradable polymers. Particulate and fibre reinforced polymer matrix composites. Manufacturing routes, and characterization tools for their physical, thermal, mechanical and chemical properties.

MIME 350 Extractive Metallurgical Engineering.

(3) (2-3-4) (Prerequisites: MIME 200 or MIME 250, MIME 212) Principle non-ferrous base-metal pyrometallurgical extraction processes, relevant thermodynamics, heat and mass balances, transport phenomena (copper, nickel, lead, zinc, aluminum, magnesium). Ores, gangue, fuels, slag, fluxes, recovery, refining, minor elements, byproducts and the environment. Roasting, drying, smelting, converting, reverberatory furnaces, flash furnaces, continuous and batch operations, injection practices and oxygen enrichment. Simulation, modelling, control and optimization.

MIME 352 Hydrochemical Processing.

(3) (3-2-4) (Prerequisites: CHEM 233, MIME 212, MIME 200 or MIME 250) (Corequisite: MIME 356) Analysis and description of dissolution (leaching), solute separation (solvent extraction, ion exchange, carbon adsorption) and deposition operations (precipitation, crystallization, electrolysis) in aqueous reaction media as these apply to: (i) the hydrometallurgical extraction of metals from primary/secondary sources; (ii) the treatment of effluents and (iii) the production of inorganic materials.

MIME 356 Heat, Mass and Fluid Flow.

(4) (4-4-4) (Prerequisites: MIME 212, MATH 261 or MATH 263.) Fluid statics and dynamics. Newton's laws of viscosity and motion, control volume analyses. Navier Stokes, Euler, Bernoulli and Steady Flow Energy Equations. Turbulence and Reynolds stress equations. Molecular conduction/diffusion processes in heat and mass transfer). Convective flows. Transport coefficients in slugs, metals and gases. Radiative heat transfer. Transient/steady state flow.

MIME 360 Phase Transformations: Solids.

(3) (2-3-4) (Pre/Corequisite:MIME 212.) (Prerequisite: MIME 260 or MIME 261.) Free energy (equilibrium) and kinetic (non-equilibrium) considerations, phase diagrams and TTT diagrams, solid state diffusion, diffusional (nucleation and growth) and shear (martensitic) transformations.

MIME 362 Mechanical Properties.

(3) (2-3-4) (Prerequisite: MIME 360) Stress-strain behaviour. Elasticity and plasticity of metals, ceramics and polymers. Dislocations theory. Single crystal and polycrystalline slip. Mechanical twinning. Strengthening mechanisms. Process-property and microstructure-property relationships. Notch toughness and fracture mechanics. Failure, fracture and damage accumulation. Fatigue. Creep and creep rupture. Fractography. Design considerations in materials selection.

MIME 367 Electronic Properties of Materials.

(3) (3-3-3) (Prerequisite: MIME 261) Structure of materials, electronic structure, electrical and thermal conductivity, semiconducting materials, fundamentals of magnetism, hard and soft magnetic materials, superconductivity and superconductive materials, dielectric materials, optical properties of materials, thermoelectricity. Advanced materials and their technological applications.

MIME 380 Industrial Training 2.

(2) (Prerequisite: MIME 280) 2 Four-month work period in industry. Work term report required upon completion.

MIME 392 Industrial Work Period 3.

(2) (Prerequisite: 75 credits including MIME 291) A four-month industrial work period in a mining company, research laboratory or government agency. Based on the experience gained during the first two work periods, the student may be asked to undertake more challenging technical tasks. A complete report must be submitted at the end of the term.

MIME 410 Research Project.

(3) (0-6-3) (Prerequisite: Recommendation of Instructor) A research project will be carried out, usually in groups, under the guidance of a staff member. A technical report will be prepared at the end and a formal presentation will be made on the research topic.

MIME 412 Corrosion and Degradation.

(3) (2-3-4) (Prerequisites: MIME 261; MIME 352) Electrochemical principles of metal oxidation in aqueous environments. Use of polarization diagrams for corrosion rate prediction. Characteristics of stress corrosion and related phenomena. High temperature, non-aqueous degradation; growth kinetics and structure of oxide films. Corrosion prevention in aqueous systems; fundamentals and applications of cathodic and anodic protection, inhibitors, metallic coatings and industrial priming paints. Use of non-metallics and their degradation; glasses, cement, plastics. Corrosion as a factor in selection of materials; use of iso-corrosion charts.

MIME 419 Surface Mining.

(3) (3-3-3) (Prerequisite (Undergraduate): MIME 322, MIME 333 and MIME 325) Choice of a surface mining method. Analysis of soil and rock mass properties related to surface mining. Calculation and monitoring of stripping ratios, ultimate pit depth, slope stability, rock reinforcement, bench and berm dimensioning and ramp design. Loading and hauling systems. Surface layout and development. Water drainage systems. Production and cost analysis. Computerized design techniques.

MIME 420 Feasibility Study.

(3) (1-2-6) (Prerequisite (Undergraduate): MIME 333, MIME 419, MPMC 421) This course consists of a case study exercise in the application of the specialist skills which the student has developed in the mining engineering program. The objective is to combine these skills in carrying out a professional appraisal of the technical feasibility and economic viability of developing a mineral deposit. Students are required to prepare a professional level report and present seminars on particular aspects of the feasibility analysis.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

MIME 422 Mine Ventilation.

(3) (3-3-3) (Prerequisite: MIME 340) (Restriction: Not open to students who have taken MPMC 422.) Statutory regulations and engineering design criteria. Occupational health hazards of mine gasses, dusts, etc. Ventilation system design. Natural and mechanical ventilation. Measuring and modelling air flow in ventilation networks. Calculation of head losses. Selection of mine ventilation fans. Air heating and cooling. Aspects of economics.

MIME 426 Development and Services.

(3) (3-3-3) (Prerequisite (Undergraduate): MIME 324 and MIME 333) Selection and design of the facilities required to start production at both surface and underground mines, based on design criteria dictated by mining plans, geography, geology and government regulations. Scheduling of development and construction. Staffing and health and safety considerations during development, construction and operations.

MIME 442 Modelling and Control: Mineral Processing.

(3) (3-3-3) (Prerequisite: MIME 341) Basic kinetic modelling: perfect mixers, plug-flow, zero and first-order kinetics, residence time distributions. Grinding: breakage and selection functions. Overview of the modelling of flotation and gravity separation. Introduction to control: economic incentives, basic PI control, applications to grinding and flotation circuits.

MIME 452 Process and Materials Design.

(4) (4-2-6) Design of new metallurgical plants, processes, materials and products based on 3 previous core courses; materials and heat balances, metal economics, design and optimization; materials selection, design and failure problems in various materials systems.

MIME 455 Advanced Process Engineering.

(3) (3-1-5) (Prerequisite: MIME 356) Transport phenomena in non-idealized systems. Solutions for transient heat and mass transfer processes involving thermal and molecular diffusion in materials processing systems. Natural and forced convection in heat and mass transfer. Dimensionless correlations. Fick's Laws and Fourier's Laws. Exact solutions. Numerical approximations for transient systems. Equivalences between heat and mass transfer. Finite difference modelling of conduction, convection and radiation heat transfer and diffusion and convection mass transfer.

MIME 456 Steelmaking and Steel Processing.

(3) (2-2-5) (Prerequisite: MIME 360. Pre/corequisite: MIME 455) The production and refining of liquid iron in the iron blast furnace, the production and refining of liquid steel, secondary refining operations, continuous casting and thermomechanical processing (hot rolling). Specialty steels and newly emerging technologies (e.g. thin slab casting, direct ironmaking) are also discussed in terms of process/environment and productivity. "Downstream" topics will include cold rolling, batch and continuous annealing, and coating operations.

MIME 465 Ceramic Engineering.

(3) (2-3-4) (Prerequisite: MIME 360) Classification of technical ceramics, refractories and glasses. Powder metallurgy. Structure and bonding of ceramics and glasses. Common crystal structures. Physical properties. Mechanical properties and fracture behaviour. Powder processing and consolidation techniques. Sintering and densification of powders. Refractories: production and applications. Glass forming systems, processing and properties.

MIME 470 Engineering Biomaterials.

(3) (Prerequisite: MIME 261 or equivalent. Permission of instructor.) Key definitions, clinical need, desired materials properties, current and future materials, materials assessments and performance. Materials of the body. Characterisation techniques for bulk and mechanical properties of biomaterials. Engineering processing and design of biomaterials.

MIME 480 Industrial Training 3.

(2) (See details listed under MIME 481) (Prerequisite: MIME 380) Four-month work period in industry. Work term report due upon completion of MIME 481.

MIME 481 Industrial Training 4.

(2) (Prerequisite: MIME 480) Four-month work period in industry. This course is intended to be taken immediately after MIME 480 at the same work location. One work term report and one seminar are required upon completion of this course. If MIME 480 and MIME 481 are in different work locations, the work term report should be in two parts following the co-op handbook guidelines.

MIME 484 Mining Project.

(3) (0-0-9) (Corequisites: MIME 419, MIME 426, MPMC 328 and MPMC 421) A mining research project to be completed during one semester. The project must be approved by an academic advisor. A comprehensive report and a seminar presentation are required for the project.

MIME 494 Industrial Work Period 4.

(2) (Prerequisites: MIME 419, MIME 426, MPMC 328 and MPMC 421) A four-month industrial work period after which the student must submit a report.

MIME 512 Corrosion and Degradation of Materials.

(3) (3-3-3) (Prerequisites: MIME 261 and MIME 352 or permission of instructor.) (Restriction: Not open to students who have taken MIME 412.) Electrochemical theory of metal corrosion, Evans Diagrams, corrosion rate controlling mechanisms, mixed corrodents, alloying effects, passivation. Discussion and analysis of the various forms of corrosion. Corrosion prevention methods. Oxidation of alloys-mechanisms and kinetics. Degradation of ceramics and polymers. Case studies.

MIME 513 Mine Planning Optimization Under Uncertainty.

(3) (3-3-3) (Prerequisite: Permission of instructor.) Strategic mine planning and optimization under uncertain demand and supply. Modern optimization techniques in mine design and production scheduling. Metal supply and orebody modelling. Market forecasting and planning with flexibility. Valuing information. Stochastic mine optimization and applications in open pit and underground metal mines.

MIME 520 Stability of Rock Slopes.

(3) (3-0-6) (Prerequisite: permission of instructor.) The properties of rock masses and of structural discontinuities. Influence of geological structure on stability. Linear, non-linear, and wedge failures. Site investigations. Methods of slope stabilization.

MIME 521 Stability of Underground Openings.

(3) (3-3-3) (Prerequisite: permission of instructor) The properties of rock masses and stability classification systems. The influence and properties of geological structural features. Stability related to the design of underground openings and mining systems. Site investigations. Methods of stabilization.

MIME 522 Mineral Reserve Assess Techs.

(3)

MIME 524 Mineral Resources Economics.

(3) (3-0-6) (Prerequisite: MIME 310 or equivalent, or permission of instructor) Analysis of significant factors affecting mineral supply, including oil and gas. Role of governments, concept of economic rent and determinants of a mineral policy. Objectives, strategies and concerns of mining and oil and gas companies. International resource environment, commodity associations, mineral investment and trade patterns.

MIME 525 Stochastic Orebody Modelling.

(3) (3-3-3) (Prerequisite: Permission of instructor.) Uncertainty in modelling orebodies. Conventional modelling methods. Ore reserve estimation and risk. Geostatistical basics. Sequential simulation methods. Fast and efficient simulation of large orebodies. Simulation of multi-element deposits. Simulation of geology. Geometallurgical modelling. Integration and effects on mine planning and financial evaluation. Drilling optimization; reserve classification; grade control. Practical applications.

MIME 526 Mineral Economics.

(3) (3-2-5) (Prerequisite: MIME 310 or equivalent) Mineral project evaluation techniques and applications. Topics covered include grade-tonnage relationships, capital and operating cost estimation techniques, assessment of mineral market conditions, taxation, discounted cash flow analysis, risk analysis, and optimization of project specifications with respect to capacity and cutoff grade.

MIME 528 Mining Automation.

(3) (3-3-3) (Prerequisite: MIME 426) System analysis and design in the frequency domain. Review of optimization methods. Mining system modelling applied to rock cutting, materials transport, and bunkerage, pitch, yaw and roll steering of mining machines. Control and robotics: digitization, discrete systems, sensors, actuators and real time algorithms. Data communication in mines. Simulation exercises.

MIME 544 Analysis: Mineral Processing Systems 1.

(3) (2-3-4) (Prerequisite (Undergraduate): MIME 341) The course covers three main topics: principles of separation, including data presentation, properties of recovery/ yield plots, technical and economic efficiency and identification of limits to separation; column flotation, hydrodynamics of collection and froth zones, mixing, scale-up and design, measurements and control; surface and electrochemistry, including absorption, surface charge, coagulation, electron transfer reactions, electrochemistry in plant practice.

MIME 545 Analysis: Mineral Processing Systems 2.

(3) (4-2-3) (Prerequisite (Undergraduate): MIME 341) Gold recovery (as a Professional Development Seminar): methods of recovery (gravity, flotation, cyanidation), refractory gold (roasting, pressure oxidation, bacterial leaching), dissolved gold recovery (Merrill-Crowe) and activated carbon methods. Sampling: definition of errors, sample extraction, size, and processing. Mass balancing: basic considerations, definition of networks, software. Blending: auto-correlation functions, transfer functions, blending systems. Effect of feed variability.

MIME 551 Electrochemical Processing.

(3) (3-2-4) (Prerequisite: MIME 352) Characterization of aqueous, fused salt and solid electrolytes; laws of electrolysis; ion transport mechanisms; interfacial phenomena (electrolyte-electrolyte, electrode-electrolyte); reversible cells and potentials; electrode kinetics, overpotential and potential-current laws; industrial applications; electrolytic winning and refining, electroplating, surface cleaning and coating, electrodialysis and electrochemical sensors.

MIME 552 Environmental Controls in Metallurgical Plants.

(3) (3-3-3) (Prerequisites: MIME 341, 350 and 352 or permission of instructor.) (Restriction: Not open to students who have taken MIME 451.) Generation, characterization and abatement of pollutants in the minerals and metals industries. Environmental regulations. Control technologies for gaseous, aqueous and solid waste streams. Heavy metal removal, arsenic control, cyanide destruction, prediction of acidic drainage, greenhouse gas effects, control of SO₂ and NO_x emissions, destruction of organic pollutants.

MIME 553 Impact of Materials Production.

(3) (3-0-6) (Prerequisite: Permission of instructor.) Impact on the environment of the production of major materials. Pollution control practices, emerging technologies, cost, resources and conservation. Review of flowsheets for various production methods. Analysis of the use of materials, prices, consumption, fabrication, and recycling of waste materials.

MIME 556 Sustainable Materials Processing.

(3) (3-1-5) (Prerequisite: Permission of Instructor.) Sustainability, population and environment impact, environmental impact indicators, materials flows, enthalpy flows, the carbon cycle, materials intensity, energy intensity, global warming potential, acidification potential, FACTOR-Two, -Four and -Ten, life-cycle-inventory/assessment, end-of-pipe strategies, supply-chain and flow-sheet redesign, recycling, waste treatment and materials case studies.

MIME 558 Engineering Nanomaterials.

(3) (3-2-4) (Prerequisite: MIME 260 or MIME 261 and MIME 362 or equivalent or permission of instructor.) Aspects of manufacturing bulk-nanostructured materials. Fabrication of nanosized and nanostructured precursors (metals, ceramics, intermetallics, CNT). Reactivity, handling and safety of nano-particles. Processes developed to fabricate bulk nanostructured materials (pressing and sintering, hot pressing and extrusion, ECAP, electrodeposition, spray forming, shockwave compaction). Characterisation of nanostructures. Physical and mechanical properties of nanomaterials.

MIME 559 Aluminum Physical Metallurgy.

(3) (3-3-3) (Prerequisites: MIME 360 and MIME 362, or permission of instructor.) Crystal structure, deformation characteristics, strengthening and softening mechanisms, hot and cold working. Microstructure property relationships in aluminum alloys. Physical metallurgy of aluminum casting alloys and their uses. Properties, and physical metallurgy of aluminum wrought alloys and their industrial applications.

MIME 560 Joining Processes.

(3) (3-3-3) (Prerequisite: MIME 200, MIME 360) Physics of joining; interfacial requirements; energy sources, chemical, mechanical and electrical; homogeneous hot-joining, arc-, Mig-, Tig-, gas-, thermite- and Plasma-welding; Autogeneous hot-joining, forge-, pressure-, friction-, explosive-, electron beam- and laser-welding; Heterogeneous hot-joining, brazing, soldering, diffusion bonding; Heterogeneous cold joining, adhesives, mechanical fastening; Filler materials; Joint metallurgy; Heat affected zone, non-metallic systems; joint design and economics; defects and testing methods.

MIME 561 Advanced Materials Design.

(3) (0-4-5) (Prerequisite: MIME 362 or equivalent) Advanced topics in materials design problems. Discussion and laboratory work, supplemented by detailed technical reports. Special attention is given to selection, design and failure problems in various materials systems.

MIME 563 Hot Deformation of Metals.

(3) (2-2-5) (Prerequisite (Undergraduate): MIME 360 and MIME 362) (Prerequisite (Graduate): MIME 362 or equivalent.) High temperature deformation processing of metallic materials. Topics include static and dynamic recrystallization, recovery, precipitation; effect of deformation on phase transformations and microstructural evolution during industrial processing. Mathematical modelling of microstructural evolution.

MIME 564 X-Ray Diffraction Analysis of Materials.

(3) (2-3-4) (Prerequisite: MIME 317 or equivalent) The techniques of X-ray and neutron diffraction are discussed as applied to the minerals and materials production industries. Special emphasis is placed upon automated X-ray powder diffractometry as employed for determining the structure and composition of materials. The application of X-ray techniques to studies of crystal structure, crystal orientation, residual stress, short-range order in liquid metals, phase diagram determination, order-disorder transformation and chemical analysis are presented.

MIME 565 Aerospace Metallic-Materials and Manufacturing Processes.

(3) (3-0-6) (Prerequisites: MIME 260 or MIME 261 or Permission of Instructor.) (Restriction: Permission of Instructor required.) Integrated approach to aerospace materials, manufacturing and repair; materials and selection criteria for airframe, engines and coatings; repair concepts and technologies; application of new and emerging manufacturing technologies for the forming, joining and repair of aerospace products.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

MIME 566 Texture, Structure & Properties of Polycrystalline Materials.

(3) (2-3-4) (Prerequisite: MIME 317) Concepts and quantitative methods for the description of the structure of minerals and materials are discussed. Special emphasis is placed on experimental techniques of texture measurement. Procedures are demonstrated for the control of deformation and recrystallization textures in order to obtain the properties required for industrial products. Finally, the correlation between texture and the anisotropy of elastic, plastic and magnetic properties of engineering materials is described and analyzed.

MIME 568 Topics in Advanced Materials.

(3) (3-0-6) (Prerequisite: MIME 362 or equivalent) New and emerging materials. Composites. Coatings. Electronic materials. Current and future technologies. Specialized property requirements. Novel processing and fabrication techniques. Future developments.

MIME 569 Electron Beam Analysis of Materials.

(3) (2-3-4) (Prerequisite: MIME 317) Emphasis on operation of scanning and transmission electron microscopes. Topics covered are electron/specimen interactions, hardware description; image contrast description; qualitative and quantitative (ZAF) x-ray analysis; electron diffraction pattern analysis.

MIME 571 Surface Engineering.

(3) (Prerequisite: MIME 362 Mechanical Properties.) Surface science. Surface characterization. Surface modification. Coatings and thin films. Tribology. Surface engineering and control of surface properties.

MPMC-McGill/Poly Mining Coop

Offered by: Mining & Materials Engineering

MPMC 320 CAO et informatique pour les mines.

(3) (2-3-4) Présentation de techniques informatisées et de logiciels permettant d'appliquer l'informatique dans le cadre des diverses opérations reliées à l'exploitation des mines. Utilisation de logiciels de support: chiffrier électronique, traitement de texte, éditeur graphique, utilitaires de DOS. Utilisation de graphisme, de traceurs à plumes, de tablettes numérisantes, d'interfaces pour capteurs analogique/numérique et numérique/analogique. Notions de géométrie descriptive appliquées à des problèmes miniers.

MPMC 321 Mécanique des roches et contrôle des terrains.

(3) (3-3-3) (Préreqs: MIME 323) Pressions de terrains au pourtour des excavations: solutions analytiques et numériques. Stabilité des excavations souterraines et à ciel ouvert: analyse des instabilités structurales par projection stéréographique méridienne, analyse des instabilités causées par les excès de contraintes. Soutènement. Surveillance. Études de cas.

MPMC 326 Recherche opérationnelle I.

(3) (3-3-3) (Préreqs: MATH 260 ou MATH 262.) Logistique minière. Modèles de localisation optimale: Steiner, HAP, construction itérative. Modèles de détermination des contours optimaux des exploitations à ciel ouvert: conventionnels, Lerchs et Grossman, Ford et Fulkerson. Programmation dynamique et modèles d'optimisation du taux de production et de la teneur de coupure. Modèles de planification: cheminement critique et PERT, programmation linéaire et non-linéaire, théorie des graphes. Modèles de capacité: théorie des files d'attente, simulation, silos et stockage. Modèles de mélange.

MPMC 328 Environnement et gestion des rejets miniers.

(3) (3-3-3) (Préreqs: MIME 200 et MIME 291) Effets du milieu de travail sur l'homme (hygiène du travail): législation; contraintes thermiques, problèmes de bruit, de contaminants gazeux et de poussières; techniques de mesures. Effets de l'exploitation d'une mine sur le milieu (environnement et écologie): législation; études d'impacts; effluents miniers: origine, nature et traitement des effluents; entreposage des résidus; restauration des sites.

MPMC 329 Géologie minière.

(2) (2-2-2) (Préreqs: EPSC 221, MIME 200 et MIME 209) Méthodes de cartographie minière, de sondages et d'échantillonnage. Notion de teneur de coupure, calcul des réserves par les méthodes conventionnelles. Évaluation des réserves par les méthodes géostatistiques.

MPMC 330 Géotechnique minière.

(3) (3-3-3) (Préreqs: MIME 323) Propriétés mécaniques des matériaux meubles. Conception d'empilements et de digues de rétention pour les matériaux miniers. Conception de structures enfouies. Problèmes particuliers avec les résidus miniers: liquéfaction, déposition, etc. Écoulement gravitaire des matériaux meubles.

MPMC 421 Exploitation en souterrain.

(3) (3-3-3) (Préreqs: MIME 322, MIME 325 et MIME 333) Étude des caractéristiques des principales méthodes d'abattage utilisées en souterrain. Méthodes d'analyse simplifiée d'un gisement quant à son exploitation en fosse ou en souterrain. Dimensionnement des ouvrages et choix des équipements. Calculs des quantités, des équipements et des coûts reliés aux excavations souterraines. Conception d'un circuit de remblai hydraulique.

URBP-Urban Planning

Offered by: Urban Planning

URBP 201 Planning the 21st Century City.

(3) (3-1-5) The study of how urban planners respond to the challenges posed by contemporary cities world-wide. Urban problems related to the environment, shelter, transport, human health, livelihoods and governance are addressed; innovative plans to improve cities and city life are analyzed.

URBP 501 Principles and Practice 1.

(2) (2-0-4) This six-week intensive course exposes students to issues and techniques that are applicable in diverse professional planning contexts. The subject matter, geographic area, scale of intervention and institutional location of planning varies from semester to semester. The course focuses on a specific case study and is taught by a visiting lecturer with professional experience in the selected subject matter.

URBP 505 Geographic Information Systems.

(3) (0-2-7) An introduction to fundamental geographic information system (GIS) concepts and a range of GIS applications in urban and regional planning.

URBP 506 Environmental Policy and Planning.

(3) (3-0-6) (Restriction: This course is open to students in U3 and above) Analytical and institutional approaches for understanding and addressing urban and other environmental problems at various scales; characteristics of environmental problems and implications; political-institutional context and policy instruments; risk perception and implications; cost-benefit analysis, risk assessment, multiple-objectives approaches, life-cycle analysis; policy implementation issues; case studies.

URBP 507 Planning and Infrastructure.

(3) (8-.5-.5) (Restriction: Must be enrolled in the Barbados Field study Semester.) An exploration of the interrelationship between land-use planning and infrastructure provision, especially water and sewerage. An examination of their policy and regulatory frameworks and other methodology of plan making and evaluation.

URBP 519 Sustainable Development Plans.

(6) (0-10-8) (Restrictions: Must be enrolled in Barbados Field Study Semester. Not open to students who have taken or are taking AGRI 519 or CIVE 519.) Geared for solving real-world environmental problems related to water at the local, regional and international scale in Barbados. Projects to be designed by instructors in consultation with university, government and NGO partners and to be conducted by teams of 2 to 4 students in collaboration with them.

URBP 520 Globalization: Planning and Change.

(3) (3-3-3) (Restriction: Must be enrolled in the Barbados Field study Semester.) Economic and social issues related to planning for sustainable development, with a focus on water. Political and environmental determinants of resource use. Impact of

global, regional and local institutions, programs and plans in Barbados and in the field locale in general.

URBP 530 Urban Environmental Planning.

(3) (Note: Not open to students who have taken URBP 614.) Urban environmental planning with a focus on sustainability and smart growth. Consideration is given to the tools, techniques and processes that planners use to promote sustainable urban development. Local applications and community initiatives are addressed.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

McGill School of Environment

ENVR-Environment

Offered by: McGill School of Environment

ENVR 200 The Global Environment.

(3) (Fall) (Section 001: Downtown Campus) (Section 051: Macdonald Campus) A systems approach to study the different components of the environment involved in global climate change: the atmosphere, biosphere, hydrosphere, and lithosphere. The interactions among these components. Their role in global climate change. The human dimension to global change.

ENVR 201 Society and Environment.

(3) (Fall) (Section 001: Downtown Campus) (Section 051: Macdonald Campus) An introduction to human societies and their relations with the biophysical environment, focusing on how economy, technology, and institutions interact to give rise to environmental problems. Analytical treatment of key concepts from distinct disciplinary perspectives in the social and life sciences, including "carrying capacity", "renewable resources", "environmental equity", and "sustainability".

ENVR 202 The Evolving Earth.

(3) (Winter) (Section 001: Downtown Campus) (Section 051: Macdonald Campus) Formation of the Earth and the evolution of life. How geological and biological change are the consequence of history, chance, and necessity acting over different scales of space and time. General principles governing the formation of modern landscapes and biotas. Effects of human activities on natural systems.

ENVR 203 Knowledge, Ethics and Environment.

(3) (Fall - Macdonald Campus; Winter - Downtown) (Section 001: Downtown Campus) (Section 051: Macdonald Campus) Introduction to cultural perspectives on the environment: the influence of culture and cognition on perceptions of the natural world; conflicts in orders of knowledge (models, taxonomies, paradigms, theories, cosmologies), ethics (moral values, frameworks, dilemmas), and law (formal and customary, rights and obligations) regarding political dimensions of critical environments, resource use, and technologies.

ENVR 301 Environmental Research Design.

(3) (Winter) (Restrictions: Restricted to U2 or higher) (Section 001: Downtown Campus) (Section 051: Macdonald Campus) Techniques used in design and completion of environmental research projects. Problem definition, data sources and use of appropriate strategies and methodologies. Principles underlying research design are emphasized, including critical thinking, recognizing causal relationships, idealogies and bias in research, and when and where to seek expertise.

ENVR 380 Topics in Environment 1.

(3) (Restriction: Normally open only to students who have completed MSE U1 core courses) Lectures and discussion of interdisciplinary aspects of current problems in environment led by staff and/or special guests. This course is offered on an irregular basis.

ENVR 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

ENVR 400 Environmental Thought.

(3) (Fall - Macdonald Campus; Winter - Downtown) (Section 001: Downtown Campus) (Section 051: Macdonald Campus) Students work in interdisciplinary seminar groups on challenging philosophical, ethical, scientific and practical issues. They will explore cutting-edge ideas and grapple with the reconciliation of environmental imperatives and social, political and economic pragmatics. Activities include meeting

practitioners, attending guest lectures, following directed readings, and organizing, leading and participating in seminars.

ENVR 401 Environmental Research.

(3) (Fall) (Prerequisite: ENVR 301) (Restriction: B.A. Faculty Program in Environment, B.A&Sc Faculty Program in Environment, B.Sc.(Ag.Env.Sc.) and B.Sc. Major in Environment, and Diploma in Environment.) Students work in an interdisciplinary team on a real-world research project involving problem definition, methodology development, social, ethical and environmental impact assessment, execution of the study, and dissemination of results to the research community and to the people affected. Teams begin defining their projects during the preceding spring.

ENVR 451 Research in Panama.

(6) (Winter) (Restriction: students in the Panama Field Semester program. Offered in Panama only) Research projects will be developed by instructors in consultation with Panamanian universities, government agencies and non-governmental organizations. Project groups will consist of four to six students working with a Panamanian institution. Topics will be relevant to Panama: e.g., protection of the Canal watershed, economical alternatives to deforestation, etc.

ENVR 480 Topics in Environment 2.

(3) (Restriction: Normally open only to U3 MSE students) Intermediate-level seminars and discussion of interdisciplinary aspects of current problems in environment led by staff and/or special guests. This course is offered on an irregular basis.

ENVR 485 Readings in Environment 1.

(3) (Restriction: Normally open only to U3 MSE students) Interdisciplinary literature project/essays related to environment, enabling independent study under guidance of qualified MSE staff in areas outside the scope of individual departments. Proposed topic and method of evaluation must be approved by the Associate Director one month before the beginning of term. Contact the Program Coordinator for information.

ENVR 490 Independent Study in Environment.

(3) (Prerequisite: Permission of instructor.) (Restrictions: Normally open only to U3 MSE students. Proposed topic and method of evaluation must be approved by the Director one month before the beginning of term. Contact the Program Coordinator for information.) Interdisciplinary research projects related to environment, enabling independent study under guidance of qualified MSE staff in areas outside the scope of individual departments.

ENVR 491 Independent Project in Environment.

(1) (Prerequisite: Permission of instructor.) (Restrictions: Normally open only to U3 MSE students. Proposed topic and method of evaluation must be approved by the Director one month before the beginning of term. Contact the Program Coordinator for information.) Interdisciplinary research projects related to environment, enabling independent study under guidance of qualified MSE staff in areas outside the scope of individual departments.

ENVR 495D1 (3), ENVR 495D2 (3) Honours Research.

(Prerequisites: ENVR 301. Acceptance to Honours Program in Environment.) (Restrictions: For U3 B.A., B.Sc., and B.A&Sc Honours Program in Environment students. Not open to students in the BSc (AgEnvSc) Honours in Environment program.) (Students must register for both ENVR 495D1 and ENVR 495D2.) (No credit will be given for this course unless both ENVR 495D1 and ENVR 495D2 are successfully completed in consecutive terms.) Preparation of an honours thesis.

ENVR 495N1 (3), ENVR 495N2 (3) Honours Research.

(Prerequisites: ENVR 301. Acceptance to Honours Program in Environment.) (Restrictions: For U3 B.A., B.Sc., and B.A&Sc Honours Program in Environment students. Not open to students in the BSc (AgEnvSc) Honours in Environment program.) (Students must register for both ENVR 495N1 and ENVR 495N2.) (No credit will be given for this course unless both ENVR 495N1 and ENVR 495N2 are successfully completed in a twelve month period.) Preparation of an honours

thesis.

ENVR 496 Honours Research Part 1.

(3) (Prerequisite: ENVR 301. Acceptance to Honours Program in Environment.) (Restrictions: For U3 B.Sc.(Ag.Env.Sc.) Honours Program in Environment students. Normally, credit for ENVR 496 will not be given unless ENVR 497 is completed; the courses may be evaluated together and the same mark will be given for both ENVR 496 and ENVR 497; ENVR 496 and ENVR 497 must be taken in consecutive semesters. Not open to students in the BA Honours, BSc Honours, or BA&Sc Honours programs in Environment.) Preparation of an honours thesis.

ENVR 497 Honours Research Part 2.

(3) (Prerequisite: ENVR 496. Acceptance to Honours Program in Environment.) (Restrictions: For U3 B.Sc.(Ag.Env.Sc.) Honours Program in Environment students. Normally, credit for ENVR 496 will not be given unless ENVR 497 is completed; the courses may be evaluated together and the same mark will be given for both ENVR 496 and ENVR 497; ENVR 496 and ENVR 497 must be taken in consecutive semesters. Not open to students in the BA Honours, BSc Honours, or BA&Sc Honours programs in Environment.) Continuation of the preparation of an honours thesis.

ENVR 519 Global Environmental Politics.

(3) (Prerequisite: ENVR 201 or ENVR 203 or permission of instructor) (Restrictions: Open to students in the Environment Option (available to other students with permission of instructor). (Not open to students who have taken ENVR 580 -- section 001 -- in Winter 2002, Fall 2003, or Fall 2004) (Note: This course has been offered three times as a Topics in Environment Course) How the problem of environmental degradation is dealt with at the international level. The scope and nature of global environmental protection issues that cross boundaries, both physical and conceptual. Actors, structures and processes of international society. Consideration of global commons and transnational resources and of environmental externalities.

ENVR 540 Ecology of Species Invasions.

(3) (Winter) (3 hours lecture) (Prerequisite: BIOL 308 or permission of instructor.) (Restrictions: Not open to U1 or U2 students. Not open to students who are taking or have taken BIOL 540.) Causes and consequences of biological invasion, as well as risk assessment methods and management strategies for dealing with invasive species.

ENVR 544 Environmental Measurement and Modelling.

(3) (Prerequisites: NRSC 430 or GEOG201 or URBP 505 or permission of instructor) (Restriction: Students registered in Environment Option (or permission of instructor)) Utility of geographic information systems, remote sensing and spatially-explicit modelling for environmental planning in conjunction with analytical frameworks used in the decision-making process (e.g., cost-benefit analysis, life-cycle analysis and multi-criteria decision making).

ENVR 580 Topics in Environment 3.

(3) (Prerequisite: Permission of instructor) Advanced-level seminars and discussion of interdisciplinary aspects of current problems in environment led by staff and/or special guests. This course is offered on an irregular basis.

ENVR 585 Readings in Environment 2.

(3) (Prerequisites: ENVR 400 and ENVR 401, or permission of instructor) Interdisciplinary literature project/essays related to environment, enabling advanced-level study under guidance of qualified MSE staff in areas outside the scope of individual departments. Proposed topic and method of evaluation must be approved by the Associate Director one month before the beginning of term. Contact the Program Coordinator for information.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

Desautels Faculty of Management

ACCT-Accounting

Offered by: Management

ACCT 351 Intermediate Financial Accounting 1.

(3) (Prerequisite: MGCR 211) An examination of the theoretical foundation for financial reporting and revenue recognition. The tools of accounting, including a review of the accounting process and compound interest concepts. Asset recognition, measurement and disclosure. Partnership accounting.

ACCT 352 Intermediate Financial Accounting 2.

(3) (Prerequisites: ACCT 351 and MGCR 341 or ACCT 311 and MGCR 341) A continuation of Intermediate Financial Accounting 1. An examination of liability recognition, measurement and disclosure, including leases, pension costs and corporate income tax. Shareholders' equity, dilutive securities and earnings per share. The statement of changes in financial position, basic financial statement analysis and full disclosure in financial reporting.

ACCT 354 Financial Statement Analysis.

(3) (Prerequisite: MGCR 211) Interpretative nature of the conceptual framework underlying a multitude of financial reporting standards, including the impact of alternative accounting methods, management biases and stakeholder interests in the analysis and valuation of the firm.

ACCT 356 International Accounting.

(3) (Prerequisites: ACCT 351 and ACCT 361) Current international issues in financial and management accounting including different reporting models and standards, the International Accounting Standards Committee, international transfer pricing and control systems in multinationals.

ACCT 361 Intermediate Management Accounting 1.

(3) (Prerequisite: MGCR 211) The role of management accounting information to support internal management decisions and to provide performance incentives.

ACCT 362 Intermediate Management Accounting 2.

(3) (Prerequisites: ACCT 361 or ACCT 313) An examination of a number of recurring issues in the area of decision-making and control, including cost allocation, alternative costing systems, and innovations in costing and performance measurement.

ACCT 385 Principles of Taxation.

(3) (Prerequisite: MGCR 211) An introduction to the concepts underlying the Canadian tax system and how they are applied in relation to the taxation of individuals and businesses.

ACCT 434 Topics in Accounting.

(3) (Restriction: Open to advanced students only) Topics will be selected from current issues in the Accounting Area.

ACCT 452 Financial Reporting Valuation.

(3) (Prerequisite: ACCT 354.) Models to determine firm value from accounting information and a broader perspective on key sources of information, key value drivers, in a setting where evaluating firm value is the ultimate purpose.

ACCT 453 Advanced Financial Accounting.

(3) (Prerequisites: ACCT 352 or ACCT 312) Reporting relevant financial information subsequent to long term intercorporate investments. The preparation of consolidated financial statements with emphasis on their economic substance rather than legal form.

ACCT 454 Financial Reporting.

(3) (Prerequisites: ACCT 352 or ACCT 312) An in-depth study of Canadian accounting standards and how Canadian corporations apply them in their financial reporting.

ACCT 455 Development of Accounting Thought.

(3) (Prerequisites: ACCT 352 or ACCT 312) The conceptual underpinning of accounting thought, including its historical development and the modifications that have occurred over time. A review of accounting literature and its relevance to practice.

ACCT 463 Advanced Management Accounting.

(3) (Prerequisites: ACCT 362 or ACCT 415) The theoretical frameworks for the examination and evaluation of management accounting and control systems. The technical aspects of accounting along with behavioural issues of management control.

ACCT 471 Non-Profit Accounting.

(3) (Prerequisites: ACCT 352 or ACCT 312) The foundations and practices of non-profit accounting for organizations including government, volunteer, charitable, health care and educational. The framework to evaluate and understand emerging issues.

ACCT 475 Principles of Auditing.

(3) (Prerequisites: ACCT 352 or ACCT 312) An introduction to basic auditing concepts and internal controls of an accounting system. Topics include current auditing standards, ethical conduct, legal liability, planning of an audit, sampling techniques, non-audit engagements, the study and evaluation of internal controls in an accounting system.

ACCT 476 Internal Auditing.

(3) (Prerequisites: ACCT 475) The modern internal audit approach including operational and management audit practices within the internal audit framework. Topics include objectives of an internal audit, communication by internal auditors, planning audit projects, audit of EDP systems, audit testing, operational areas.

ACCT 477 External Auditing.

(3) (Prerequisites: ACCT 475) The theory of auditing financial statements and the various complexities encountered in these audit environments. A thorough study of auditing standards, ethical conduct, communication by auditors, auditing in an EDP environment, audit of a small business, other reports and services provided by auditors and public accountants.

ACCT 486 Business Taxation 2.

(3) (Prerequisite: ACCT 385) A study of the Income Tax Act as it applies to the taxation of individuals and corporations, including capital cost allowances, capital gains, corporate reorganisations, trusts and partnerships and administrative regulations. A review of consumption taxes.

BUSA-Business Admin

Offered by: Management

BUSA 364 Business Law 1.

(3) (Restriction: This course cannot be double-counted from the Certificate in Management.) An introduction to the legal system and basic legal principles affecting business. Tort negligence, contracts, forms of business organization, creditors' rights and bankruptcy.

BUSA 368 Business Law 2.

(3) (Prerequisite: BUSA 364) An outline of the application of law to professional negligence, product liability, competition, corporate governance and employment. Review of particular contracts; sale, agency, mortgages, lease, insurance.

BUSA 391 International Business Law.

(3) (Prerequisite: MGCR 382) Introduction to the legal aspects of foreign trade and investment transactions. Forms and documentation of types of foreign trade contracts. Conflict avoidance, arbitration, and litigation arising from international transactions. Government regulation of foreign trade. Legal aspects of the international transfer of investments and technology. Conventions and institutions of international economic cooperation (e.g. GATT, ICC, IMF, etc.).

BUSA 394 Management in Asia.

(3) (Prerequisite: MGCR 382.) (Restriction: Restricted to U2/U3 students.) Environmental aspects, Eastern value systems and distinct patterns of management in the Asia-Pacific region. Patterns of Chinese, Japanese, Korean, Taiwanese and other management philosophies, practices and styles will be studied, compared and discussed. Interaction between these theories and practices and those of the west will be contrasted.

BUSA 395 European Economy and Business.

(3) (Prerequisite: MGCR 382) An overview of current social, economic and trade developments in the rapidly-evolving European arena. Focus on both the integrating economies of the EU and the emerging market economies and central and eastern Europe. Emphasis on the expanded opportunities and the challenges facing international managers.

BUSA 399 Internship Project.

(1) Upon completion of the internship, students must submit a paper on the integration of the applied and academic aspects of their BCom courses and the Internship experience.

BUSA 400 Independent Studies in Management.

(3) (Prerequisite: U3 students only. CGPA of at least 3.00 required.) Research reading or field projects, permitting independent study under the guidance of a Faculty member. Projects to be arranged individually with instructors. A detailed student proposal must be submitted to the instructor and the Director during the first week of term.

BUSA 434 Topics in General Management.

(3) (Prerequisite: MGCR 382) (Restriction: Restricted to U2/U3) (Note: Topics vary from year to year) Topics in management.

BUSA 462 Management of New Enterprises.

(3) (Prerequisite: MGCR 341) Evaluation of new business ventures, recognition and treatment of associated risks. Detailed consideration is given to sources of risk funds in the form of venture capital, public, private and government programs. Emphasis on the critical importance of the entrepreneur, the demands and the risks faced as well as the rewards and satisfactions.

BUSA 464 Management of Small Enterprises.

(3) (Prerequisite: MGCR 341) The distinctive characteristics, risks, opportunities and rewards inherent in the ownership and management of a small enterprise. It will assist students in judging the appropriateness of an entrepreneurial career and in selecting and timing a specific venture.

BUSA 465 Technological Entrepreneurship.

(3) (Prerequisite: MIME 310 or MGCR 341) Concentrating on entrepreneurship and enterprise development, particular attention is given to the start-up, purchasing and management of small to medium-sized industrial firms in an environment that would appeal to Engineering students. The focal point is in understanding the dilemmas faced by entrepreneurs, resolving them, developing a business plan and the maximum utilization of the financial, marketing and human resources that make for a successful operation.

BUSA 466 Technological Entrepreneurship Project.

(3) (Restriction: students registered in Minor in Technological Entrepreneurship program) (Prerequisite: 12 credits in the MTE program and BUSA 465) Project involving a small to medium company in the high technology field.

BUSA 481 North America: Global Markets.

(3) (Restriction: U2 and U3 students) (Prerequisite: MGCR 382 or permission of instructor) Analysis of corporate strategies in the Canada-United States context. Emphasis on public policy impact of corporate decision-making and implications of alternative public policy options. Bilateral experience by major industrial sectors examined and compared with global corporate strategies. Theoretical and empirical literature combined with industrial histories and policy case studies.

BUSA 493 Global Economic Competitiveness.

(3) (Prerequisite: MGCR 382.) How nations achieve and maintain competitiveness in the rapidly globalizing world economy. Studies the stages of evolution of world competitiveness in 46 nations, incorporating the latest practical business theories and case studies on the dynamics of effective globalization ventures.

BUSA 499 Case Analysis and Presentation.

(3) (Prerequisite: BCom Core and 3.0 CGPA or better.) Integration of core knowledge and practice for preparing and presenting case studies, including professor coaching,

preparation and presentation feedback, presentation skills, leadership skills, team building skills, analytical skills, logical thinking, debating, persuasive communications and cross discipline work.

FINE-Finance

Offered by: Management

FINE 342 Finance 2.

(3) (Restriction: For Finance Concentration/Major/Honours) (Prerequisite: MGCR 341) (Restriction: Only one of FINE 342 or FINE 343 can be counted for credit) In depth study of corporate finance, risk, diversification, portfolio analysis, and capital market theory.

FINE 343 Managerial Finance.

(3) (Restriction: For non-Finance students) (Prerequisite: MGCR 341) (Restriction: Only one of FINE 342 or FINE 343 can be counted for credit) (Continuing education: requirement for CGA, CMA, the Institute of Internal Auditors and the Canadian Institute of Management (in addition to these, the course "Introduction to Business," CGMG 282 is also required for C.I.M.)) A second course in Finance for students not pursuing the Finance Concentration. Topics include short and long term asset and liability management, risk and diversification, and the nature of capital markets. Cases, lectures, projects and discussions.

FINE 434 Topics in Finance.

(3) Topics will be selected from current issues in the Finance Area.

FINE 441 Investments and Portfolio Management.

(3) (Prerequisite: MGCR 341) Application of investment principles and security analysis to the selection and comparison of equity and fixed income securities in the current economic and financial environment. Also covered are: determinants of stock prices, growth models and portfolio diversification.

FINE 442 Capital Markets and Institutions.

(3) (Prerequisite: MGCR 341) (Restriction: Only one of FINE 442 or ECON 302 can be counted for credit.) Functions of the capital market through flow of funds analysis and an examination of portfolio activities of financial intermediaries. Also covered are: securities regulations and ethical considerations, the term structure of interest rates and risk and rates of return in debt and equity markets.

FINE 443 Applied Corporate Finance.

(3) (Prerequisite: FINE 342) Concepts and techniques are applied to problems faced by managers in Corporate Finance, such as working capital management, capital budgeting, capital structure, dividend policy, cost of capital, and mergers and acquisition. Application of theory and techniques through case studies.

FINE 444 Risk Management and Insurance.

(3) (Prerequisite: MGCR 341) Risk exposures of the individual and the firm. A wide variety of techniques for reducing risk exposure are studied including Life, Property and Casualty Insurance. In addition, the course treats the problems faced by insurers such as re-insurance and investment policy.

FINE 445 Real Estate Finance.

(3) (Prerequisite: MGCR 341) Fundamentals of mortgages from the viewpoint of both consumer and the firm. Emphasis on legal, mathematical and financial structure, provides a micro basis for analysis of the functions and performance of the mortgage market, in conjunction with the housing market. A weekly series of one-hour tutorials are mandatory for the first six weeks of class.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

FINE 448 Derivatives and Risk Management.

(3) (Prerequisite: MGSC-272 or equivalent) The course will concentrate on both the analytical and practical aspects of investments in options and futures. The first part of the course concentrates on option and futures valuation, considering both discrete and continuous time models. The second part of the course concentrates on the practical aspects of options and futures trading.

FINE 449 Market Risk Models.

(3) (Prerequisites: FINE 441 and MGSC 272 or equivalent.) Dynamic market risk models including GARCH volatility models, dynamic conditional correlation models, non-normal return distributions, option pricing allowing for skewness and kurtosis, and option risk management using, delta, delta-gamma and full-valuation.

FINE 451 Fixed Income Analysis.

(3) (Prerequisites: FINE 441.) Fixed income financial instruments and their uses for both financial engineering and risk management (at the trading desk and aggregate firm level). This will involve coverage of fixed income mathematics, risk management concepts, term structure modeling, derivatives valuation and credit risk analysis.

FINE 480 Global Investments.

(3) (Prerequisite: FINE 441, FINE 482, or consent of instructor) The theoretical foundations of international investments theory and empirical evidence in a real world setting. This course will focus on portfolio investment decisions of investment banks. It will span the Developed Markets (DMs) of Europe and Japan, Newly Industrialized Nations (NICs) of the Pacific rim, Emerging Markets (EMs) of Asia, Latin America, Eastern Europe and Africa.

FINE 482 International Finance 1.

(3) (Prerequisite: MGCR 341) The international financial environment as it affects the multinational manager. Balance of payments concepts, adjustment process of the external imbalances and the international monetary system. In depth study of the institutional and theoretical aspects of foreign exchange markets; International capital markets, including Eurobonds and eurocredit markets.

FINE 492 International Finance 2.

(3) (Prerequisite: FINE 482) Focus on the operational problems of financial management in the multinational enterprise: Financing of international trade, international capital budgeting, multinational cost of capital, working capital management; International banking and recent developments in international capital markets.

FINE 541 Applied Investments.

(3) (Prerequisite: MGCR-651 Managing Resources.) Students are exposed to practical aspects of managing investment portfolios. A principal activity of students is participation in the management of a substantial investment fund.

FINE 541D1 (1.5), FINE 541D2 (1.5) Applied Investments.

(Prerequisite: MGCR 341) (Students must register for both FINE 541D1 and FINE 541D2.) (No credit will be given for this course unless both FINE 541D1 and FINE 541D2 are successfully completed in consecutive terms) (FINE 541D1 and FINE 541D2 together are equivalent to FINE 541) Students are exposed to practical aspects of managing investment portfolios. A principal activity of students is participation in the management of a substantial investment fund.

FINE 547 Advanced Finance Seminar.

(3) (Prerequisite: MGCR-651 Managing Resources.) (Corequisites: FINE-646 and FINE-622.) (Restriction: Not open to students who have taken FINE 647.) (Note: Lectures for this course span both the fall and winter semesters.) Selected topics will be discussed by Faculty members, invited guest speakers, and the students. Each student is required to select a topic for study and prepare a written report for presentation.

INDR-Industrial Relations

Offered by: Management, Arts - Dean's Office

INDR 294 Introduction to Labour-Management Relations.

(3) An introduction to labour-management relations, the structure, function and government of labour unions, labour legislation, the collective bargaining process, and the public interest in industrial relations.

INDR 449 Occupational Health and Safety.

(3) (Prerequisite: INDR 294) Examines the public policy of occupational health and safety in Canada as well as the dynamics of contemporary occupational health and safety management. Topics include occupational safety and health, human rights and workers' compensation legislation, accident prevention and investigation, ergonomics, safety training, and workers' compensation claims management.

INDR 459 International Labour Relations.

(3) (Prerequisite: INDR 294) Examines industrial relations systems of other nations, including those of the EEC and the Pacific rim. Includes a discussion of the existing institutional structure, the historical and recent developments in these systems, the role of multi-national corporations, as well as the current economic and political context.

INDR 492 Public Policy in Industrial Relations.

(3) (Prerequisite: INDR 294) Development and structure of legislative framework governing labour-management relations. Court cases, arbitration precedents, labour relations board activities, and public attitudes; the formation of a public policy for labour relations. Major issues in shaping labour policy, and the linkages between policy and experience in labour management relations. The federal and Quebec jurisdictions.

INDR 494 Labour Law.

(3) (Prerequisite: INDR 294) (Restriction: Management: Open to Labour-Management Relations Major students in U3) Introduction to the basic concepts of labour law relevant to the practice of industrial relations. Historical development of labour law in certain social and legal systems and the culmination in the legislative enactments and jurisprudence of Canadian jurisdictions and certain comparative foreign models.

INDR 495 Labour Relations: Public Sector.

(3) (Prerequisite: INDR 294) Labour relations in federal, provincial, municipal, and quasi-public services such as hospitals, schools, government agencies and boards. Contentious current issues in public service labour relations and compare and analyze the alternative methods that have been evolved to deal with them.

INDR 496 Collective Bargaining.

(3) (Prerequisite: INDR 294) Principles of collective bargaining in Canada and abroad. Problem oriented. Mock collective bargaining sessions provide an opportunity for students to apply knowledge gained.

INDR 497 Contract Administration.

(3) (Prerequisite: INDR 294) The processes of grievance handling and arbitration under the terms of collective bargaining agreements. Substantive and procedural issues as well as behavioral and policy aspects of contract administration.

INDR 499 Internship in Industrial Relations.

(3) (Restriction: Open to U-2 and U-3 students after completing 30 credits of a 90 credits program or 45 credits of a 96-120 credit program, a minimum CGPA of 2.7, and permission of the departmental Internship Advisor. This course will normally not fulfill program requirements for seminar or 400-level courses. A letter from a supervisor at the institution must attest to successful completion of the student's tenure.) Internship with an approved host institution or organization.

INSY-Information Systems

Offered by: Management

INSY 331 Managing Information Technology.

(3) (Prerequisite: MGCR 331) Tools and concepts necessary to manage information systems in an organization: hardware/software/telecom administration, knowledge discovery/management, web-technologies, and computer security.

Focuses on both mechanical aspects of IT and conceptual understanding with regard to impact on business organizations.

INSY 332 Accounting Information Systems.

(3) (Prerequisites: MGCR 331 and MGCR 211) Accounting cycles and information flows and the systems that manage those flows. Principals of systems development and data management as relates to accounting information. Relationship between accounting applications and transaction processing systems. Practical experience with accounting packages.

INSY 333 Systems Analysis and Modelling.

(3) (Prerequisite: MGCR 331) First two phases of the software development life cycle. Techniques used to conduct system requirement analysis, practical application of the analyst role in identifying operational problems, defining information system requirements, working with technical and non-technical staff, and making recommendations for system improvement.

INSY 341 Developing Business Applications.

(3) (Prerequisite: MGCR 331) Fundamental programming techniques, concepts, and data structures. Discusses modularization and maintainability. Emphasis on facilitating communication and understanding between systems analysts and programmers to support decision-making.

INSY 342 Advanced Application Development.

(3) (Prerequisite: INSY 341) Object oriented design, modeling (UML) and programming techniques, including the creation of classes, the use of objects, inheritance, and other object oriented principles. Strong focus on problem solving techniques and ways in which programmers can support decision-making within an organization.

INSY 422 Object Oriented Design.

(3) (Prerequisite: INSY 342) (Restriction: Not open to students having taken COMP 202, COMP 203) Principals of the object oriented paradigm. Object technology, data management, and design principals related to business application development.

INSY 431 System Design and Implementation.

(3) (Prerequisites: INSY 333, INSY 437, and INSY 341) (Prerequisite-Continuing Education: CCCS 300, INSY 333, INSY 437) Latter phases of the software development life cycle. Techniques used to design and implement the results of the systems analysis. Practical application of IS team roles.

INSY 432 Information Technology in Business.

(3) (Prerequisite: INSY 333) Discusses the role of the information systems department within an organization, information systems resource management, staff organization and leadership, strategic systems, planning, and end-user computing. Focuses on key IT trends in industries such as banking, insurance, manufacturing, retailing & distribution, and health.

INSY 434 Advanced Topics.

(3) (Prerequisite: MGCR 331) Current topics in the area of information systems.

INSY 436 Telecommunications Management.

(3) (Prerequisites: MGCR 331 and INSY 333) This course addresses the challenges and issues managers face in delivering telecommunications and data networking services to their organizations. Using case studies and lectures, it explores technical and managerial aspects of data communications; local, wide-area and wireless networks; network protocols; Internet/intranets; client/server computing; network security and management.

INSY 437 Managing Data & Databases.

(3) (Prerequisite: INSY 333) (Management: students are encouraged to take this course as early as possible in their program.) Management of organizational data, implementation of database management systems, and the roles and responsibilities

of data management personnel. Explores different models of data representation with an emphasis on the relational model; simple and complex SQL queries.

INSY 438 Interface Design & Prototyping.

(3) (Prerequisites: INSY 333 & INSY 341) (Corequisite: INSY 342) (Prerequisite-Continuing Education: CCCS 300) Practical and theoretical interface design & prototyping principles and tools. Practical application of principles in an event-driven development environment.

INSY 440 Information Technology Challenges in Electronic Business.

(3) (Prerequisite: MGCR 331) Build the knowledge base and skills needed to face today's electronic business challenges, opportunities, and issues. Explore important concepts, models, tools and applications related to e-business.

INSY 444 Managing Knowledge with Information Technology.

(3) (Prerequisite: MGCR 331) Types of organizational knowledge and their value for organizations, analyzing knowledge processes, and assessing tools and technologies for managing knowledge.

INSY 450 Information Systems Project Management.

(3) (Prerequisite: MGCR 331) Practical principles of project management essential to successful IS development projects or other complex undertakings within an organization; includes methods for defining, planning, and scheduling activities and resources. Discusses managerial and behavioural issues.

INSY 454 Technological Foundation for E-Commerce.

(3) (Prerequisite: MGCR 331) (Restriction: A basic understanding of HTML is necessary.) Technology trends and vocabulary pertaining to current technology developments in E-Commerce. Practical IT skills in web application design, including ASP, XML, etc. Discusses business issues affected by the introduction of e-technologies.

INSY 533 Information Systems Auditing and Security.

(3) (Prerequisite: INSY 332 or CCCS 300) (Requirement for the Institute of Internal Auditors) This course considers problems and methods of establishing effective controls of computer systems at an advanced level. The student will learn how to review, and evaluate controls in a computer environment through the use of case studies. The student will also learn how to use computer assisted audit techniques to test computer controls.

MGCR-Management Core

Offered by: Management

MGCR 211 Introduction to Financial Accounting.

(3) The role of financial accounting in the reporting of the financial performance of a business. The principles, components and uses of financial accounting and reporting from a user's perspective, including the recording of accounting transactions and events, the examination of the elements of financial statements, the preparation of financial statements and the analysis of financial results.

MGCR 222 Introduction to Organizational Behaviour.

(3) Individual motivation and communication style; group dynamics as related to problem solving and decision making, leadership style, work structuring and the larger environment. Interdependence of individual, group and organization task and structure.

MGCR 271 Business Statistics.

(3) (Prerequisite: MATH 122 and 123 or equivalent) (Restriction: Not open to students who have taken or are taking MATH 204, MATH 324, PSYC 204, ECON 227, ECON 257) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) Statistical concepts and methodology, their application to management problems. Topics include: descriptive statistics; probability theory, important distributions, sampling and sampling distributions, hypothesis testing, simple linear and multiple regression.

MGCR 293 Managerial Economics.

(3) The course focuses on the application of economic theory to management problems and the economic foundations of marketing, finance, and production. Attention is given to the following topics: price and cost analysis; demand and supply analysis, conditions of competition.

MGCR 331 Information Systems.

(3) (Restriction: Fall sections restricted to BCom students.) (A special seminar will be available to those students who do not possess the above basic computer skills, at the students' own expense.) Introduction to principles and concepts of information systems in organizations. Topics include information technology, transaction processing systems, decision support systems, database and systems development. Students are required to have background preparation on basic micro computer skills including spreadsheet and word-processing.

MGCR 341 Finance 1.

(3) (Prerequisites: MGCR 271 or equivalent) An introduction to the principles, issues, and institutions of Finance. Topics include valuation, risk, capital investment, financial structure, cost of capital, working capital management, financial markets, and securities.

MGCR 352 Marketing Management 1.

(3) Introduction to marketing principles, focusing on problem solving and decision making. Topics include: the marketing concept; marketing strategies; buyer behavior; Canadian demographics; internal and external constraints; product; promotion; distribution; price. Lectures, text material and case studies.

MGCR 360 Social Context of Business.

(3) This course examines how business interacts with the larger society. It explores the development of modern capitalist society, and the dilemmas that organizations face in acting in a socially responsible manner. Students will examine these issues with reference to sustainable development, business ethics, globalization and developing countries, and political activity.

MGCR 382 International Business.

(3) An introduction to the world of international business. Economic foundations of international trade and investment. The international trade, finance, and regulatory frameworks. Relations between international companies and nation-states, including costs and benefits of foreign investment and alternative controls and responses. Effects of local environmental characteristics on the operations of multi-national enterprises.

MGCR 423 Organizational Policy.

(3) (Restriction: Open to U2, U3 students only) Focus on the primary functions of general management: the formation of a corporate strategy that relates the company's opportunities to its resources, competence, and leadership style. Measures to improve organization effectiveness.

MGCR 472 Operations Management.

(3) (Prerequisite: MGCR 271 or equivalent) (Requirement for the Canadian Institute of Management) Introduction to decisions and trade-offs associated with production of goods and services. Topics include technology planning (production process), control issues (production planning and inventory control, MRP/JIT, scheduling, quality and reliability and distribution planning), design for manufacturability, management of new technology (FMS, group technology and robotics) and management of service operations.

MGPO-Management Policy

Offered by: Management

MGPO 383 International Business Policy.

(3) (Prerequisites: MGCR 382 or permission of instructor) (Restriction: Open to U2, U3 students only) Development and application of conceptual approaches to general management policy and strategy formulation in multinational business involvement (exporting, licensing, contractual arrangements, turnkey projects, joint ventures, consortia); technology transfer, location and ownership strategies: competitive multinational relationships. Emphasis on pragmatic analysis, using case studies.

MGPO 434 Topics in Policy.

(3) (Restriction: Open to U2, U3 students only) This is a specialized course covering an advanced topic in strategy and organization.

MGPO 440 Strategies for Sustainability.

(3) (Restriction: Open to U2, U3 students only) This course explores the relationship between economic activity, management, and the natural environment. Using readings, discussions and cases, the course will explore the challenges that the goal of sustainable development poses for our existing notions of economic goals, production and consumption practices and the management of organizations.

MGPO 445 Industry Analysis & Competitive Strategy.

(3) (Restriction: Open to U3 students only) Analysis of industry structure, macro-environment, and evolution. Evaluation of strategic position, behaviour, and intent of organizations within industry context. Development of strategic recommendations for these firms.

MGPO 450 Ethics in Management.

(3) (Restriction: U2 and U3 students only) An examination of the economic, legal and ethical responsibilities of managers in both private and public organizations. Through readings, case studies, discussions and projects the class evaluates alternative ethical systems and norms of behaviour and draws conclusions as to the right, proper and just decisions and actions in the face of moral dilemmas. The focus of this course is on the decision process, values and consistency of values of the individual and on the impact of systems control and incentives on managerial morality.

MGPO 460 Managing Innovation.

(3) (Restriction: Open to U2, U3 students only) Firms face difficulties in developing new products. This course examines the new product development process to understand why problems occur and what managers can do. Topics include the creative synthesis of market and technology; the coordination of functions; and the strategic connection between the project and the strategy.

MGPO 468 Managing Organizational Politics.

(3) (Restriction: Open to U2, U3 students only) Power and politics can be mechanisms of control that maintain the status quo or they can be used as a force for change. Students learn how to recognize politics and use power. There is also a strong focus on the ethical implications.

MGPO 469 Managing Globalization.

(3) (Recommended: MGCR 423) (Restriction: Open to U2, U3 students only) This course exposes students to global competition. Many critical questions will be explored, such as: why do industries globalize? how do firms expand and grow internationally? what are strategies that firms can use to compete internationally? Many industries will be covered, such as: telecommunications, airlines, footwear, and automobiles.

MGPO 470 Strategy and Organization.

(3) (Restriction: Open to U2, U3 students only) This course explores how strategic change affects the organization and how the organization can be designed to realize its strategy more effectively. It will examine how strategic choices affect organizational structures, processes, culture, human resource policies, leadership styles, etc. and how the organization can be aligned with the organizational mission.

MGPO 475 Strategies for Developing Countries.

(3) (Restriction: Open to U2, U3 students only) Strategic management challenges in developing and emerging economies. Focus on strategies that foster both firm competitiveness and economic development, including: technological capabilities, new forms of organization, small and large firms, global production, social impact, global standards and governance.

MGPO 567 Business in Society.

(3) (Restriction: U2 and U3 students only) Examines different ideologies; business ethics and values; the corporation and its constituencies; the social impact of corporate decisions. The focus of this course is on the interaction between business organizations and society and on incorporating social impact analysis into strategic management.

MGSC-Management Science

Offered by: Management

MGSC 272 Advanced Business Statistics.

(3) (Prerequisite: MGCR 271) (Restriction: Not open to students who have taken MGCR 272) Advanced multiple regression analysis, experimental design and factorial analysis, time series and forecasting.

MGSC 373 Operations Research 1.

(3) (Prerequisite: MGCR 271) (Prerequisite (CE): MGCR 273) (Restriction: Not open to students who have taken MGCR 373) (Note: Continuing Education: CMA Requirement) Topics include: introduction to decision analysis and risk attitudes, inventory control, linear programming and simulation. Emphasis on the formulation of problems and their solution by standard methods or by computer packages.

MGSC 402 Operations Strategy.

(3) (Restriction: Not open to U0 and U1 students) Effective management at the operating unit level, including the concept of "operations strategy", action-oriented tools and frameworks for designing and managing operations innovation, effective use of operations-related technologies and supply chain strategy.

MGSC 403 Introduction to Logistics Management.

(3) (Prerequisite: MGCR 472.) Managing logistics systems, including transportation management, facility location, procurement, distribution management, and supply chain management.

MGSC 405 Quality Management.

(3) (Restriction: Not open to U0 and U1 students and other faculties.) Integrated view of quality management, quality systems and improvement techniques including tools and methodologies for quality improvement, six-sigma methodology.

MGSC 415 Supplier Management.

(3) (Restriction: Not open to U0 and U1 students) Strategic role of purchasing, supplier selection, supplier relationship management, international sourcing, E-procurement, price determination, purchasing services, and auctions.

MGSC 431 Operations Analysis.

(3) (Prerequisite: MGCR 472.) Optimizing cycle-time, throughput and inventory performance of operations, including analytical modeling as well as simulation.

MGSC 434 Topics in Management Science.

(3) Topics will be selected from current issues in the Management Science Area.

MGSC 479 Applied Optimization.

(3) (Prerequisite: MGSC 373.) Applications of optimization models to management problems, including Linear Programming, Integer Programming and Nonlinear Programming.

MGSC 575 Applied Time Series Analysis Managerial Forecasting.

(3) (Prerequisite: (Undergraduate) MGCR 271.) (Restriction: Not open to students who have taken MGSC 675.) Management applications of time series analysis. Starting with ratio-to-moving average methods, the course deals successively with Census 2, exponential smoothing methods, the methodology introduced by Box and Jenkins, spectral analysis and time-series regression techniques. Computational aspects and applications of the methodology are emphasized.

MGSC 578 Simulation of Management Systems.

(3) (Prerequisite: (Undergraduate) MGCR 271.) (Restriction: Not open to students who have taken MGSC 678.) Building simulation models of management systems. Design of simulation experiments and the analysis and implementation of results. Students are expected to design a complete simulation of a real problem using a standard simulation language.

MRKT-Marketing

Offered by: Management

MRKT 354 Marketing Management 2.

(3) (Prerequisite: MGCR 352) The decision areas in marketing. Emphasis on the use of marketing theory and concepts in the solution of realistic marketing problems. Decision making in a marketing context using cases, some of which will be computer assisted, and readings.

MRKT 355 Services Marketing.

(3) (Prerequisite: MGCR 352) Services are fleeting and involve direct contact between the supplier and the buyer. Inventories disappear every time an aircraft takes off or the night passes for an hotel. Yet services have become the largest sector in modern Western economy and their importance shows every sign of continuing to grow. This course focuses on the key differences between product and services marketing and the skills that are necessary for the services sector.

MRKT 357 Marketing Planning 1.

(3) (Prerequisites: MRKT 354, MRKT 451, and MRKT 452) (Restriction: Management: U3 students only) Marketing Planning is designed as a capstone to previous marketing courses; Structured approach to developing a marketing plan, proceeding from corporate mission and objectives through to detailed marketing mix programs. Lectures, discussions and cases. A field project provides marketing planning experience.

MRKT 360 Marketing of Technology.

(3) (Restriction: non-Management students) The analysis, planning, and control of marketing activities in a high technology business environment through the application of a good conceptual framework that is useful in addressing marketing management problems.

MRKT 365 New Products.

(3) (Prerequisite: MGCR 352) New products will follow the new product introduction process from idea generation to post introduction. It will use ideas developed in marketing, production and policy. It will use cases and projects and will involve a real life new product project. In the average firm today, 40% of sales come from products not being sold five years ago. The ability of the firm to innovate is at the heart of long term success.

MRKT 434 Topics in Marketing 1.

(3) (Prerequisite: MGCR 352) (Corequisite Current topics in marketing.

MRKT 438 Brand Management.

(3) (Prerequisite: MGCR 352) Looks at the decisions a brand manager in a major consumer goods company takes. It examines, in particular, the breakdown of advertising and sales promotion expenditures. It looks at the short term nature of the decisions

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

taken. It will concentrate on the vast amount of new information available to brand managers today, especially in the form of scanner data.

MRKT 451 Marketing Research.

(3) (Prerequisites: MGCR 352 and MGCR 271) Theoretical techniques and procedures common in marketing research. Topics include: research design, sampling, questionnaire design, coding, tabulating, data analysis (including statistical techniques). Specialized topics may encompass advertising, motivation and product research; forecasting and location theory.

MRKT 452 Consumer Behaviour.

(3) (Prerequisite: MGCR 352) A study of basic factors influencing consumer behaviour. Attention is focused on psychological, sociological and economic variables including motivation, learning, attitude, personality, small groups, social class, demographic factors and culture, to analyze their effects on purchasing behaviour.

MRKT 453 Advertising Management.

(3) (Prerequisite: MRKT 452) Surveys advertising and promotion in Canadian context. Examines activities as they relate to advertisers, the advertising agency and media. Stresses advertising by objectives as the approach to developing strategy and tactics. Real examples from current campaigns are the focal point of class discussions.

MRKT 455 Sales Management.

(3) (Prerequisite: MGCR 352) Responsibilities of the sales manager as they relate to the sales force. These include the selection of process, training alternatives, compensation and incentive plans, supervision and evaluation and budgeting and forecasting. Case studies and discussions of sales force models are used.

MRKT 456 Business to Business Marketing.

(3) (Prerequisite: MGCR 352) Decision-making and management of the marketing effort in a business to business (b-to-b) context, including the b-to-b marketing system; b-to-b purchasing; researching the b-to-b market; product, price distribution, selling and advertising decisions; strategies for business markets.

MRKT 459 Retail Management.

(3) (Prerequisite: MGCR 352) Principles and methods of marketing management as applied to retailing, including strategy and tactics: market structure; consumer behaviour; competition; financial management; human resources planning; promotion; presentation; merchandising; operations; pricing; planning and attaining retail profits. Lectures, text material, outside reading, planned retail visiting, cases.

MRKT 461 Advertising Practicum.

(3) (Corequisite: MRKT 453) Primarily designed as a practical course in measuring advertising effectiveness. Emphasis on understanding the dynamics of persuasion in an advertising context and developing projects focused on specific aspects of campaign strategies. Knowledge of basic techniques of statistical hypothesis testing is essential.

MRKT 483 International Marketing Management.

(3) (Prerequisites: MGCR 382 and MGCR 352, or permission of instructor) (Formerly MGMT 483) Marketing management considerations of a company seeking to extend beyond its domestic market. Required changes in product, pricing, channel, and communications policies. Attention to international trade and export marketing in the Canadian context.

ORGB-Organizational Behaviour

Offered by: Management

ORGB 321 Leadership.

(3) (Prerequisite: only B Com students require MGCR 222) Leadership theories provide students with opportunities to assess and work on improving their leadership skills. Topics include: the ability to know oneself as a leader, to formulate a vision, to have the courage to lead, to lead creatively, and to lead effectively with others.

ORGB 325 Negotiations and Conflict Resolution.

(3) A conceptual framework to guide participants through negotiation and conflict resolution process.

ORGB 380 Cross Cultural Management.

(3) Cross-cultural awareness and communication skills necessary to manage in multicultural organizations. Focus on the relationship between cultural values and communication style as they affect inter and intra cultural communication of managers, personnel and clients of multinational and multicultural organizations.

ORGB 409 Organizational Research Methods.

(3) (Prerequisite: MGCR 222) Field research in organizational behaviour.

ORGB 420 Managing Organizational Teams.

(3) (Prerequisite: MGCR 222 or permission of Instructor) Theory, research, and applications Principles of team processes and effectiveness in organizational settings, specifically the theoretical developments and empirical findings of group dynamics and team effectiveness, and practical strategies and skills for successful management of organizational teams.

ORGB 421 Managing Organizational Change.

(3) (Prerequisite: MGCR 222 or permission of Instructor) Organizational change theory and techniques are examined with an emphasis on techno-structural interventions such as Quality-of-Work-Life approaches. Through simulations and case-studies, the course explores initiatives in organizational change, primarily in contemporary Canadian organizations. It also includes opportunities for "hands-on" experience in work and organization redesign.

ORGB 423 Human Resources Management.

(3) (Prerequisite: MGCR 222) (Requirement for the Institute of Internal Auditors) Issues involved in personnel administration. Topics include: human resource planning, job analysis, recruitment and selection, training and development, performance appraisal, organization development and change, issues in compensation and benefits, and labour-management relations.

ORGB 424 Employment.

(3) (Prerequisite: ORGB 423) (Prerequisite-Continuing Education: ORGB 423) Reviews in sequence all aspects of the hiring of employees. Topics covered will include manpower planning, recruiting, selection, placement orientation, retirement and de-hiring. Each area will be covered from legal, technical and theoretical perspectives.

ORGB 426 Human Resource Training and Development.

(3) (Prerequisite: ORGB 423) Planning, conceptualization, design, implementation and evaluation of training and career development programs. Review of the major techniques in each area. Training and development approached from a systems point of view.

ORGB 429D1 (3), ORGB 429D2 (3) Organizational Behaviour for Course Counsellors.

(Prerequisite: MGCR 222) (Students must register for both ORGB 429D1 and ORGB 429D2.) (No credit will be given for this course unless both ORGB 429D1 and ORGB 429D2 are successfully completed in consecutive terms) Examination of behaviour in organizations, coupled with training in teaching methods, to prepare students to team teach a section of MGCR 222. Selection of course counsellors is made toward the end of the preceding winter term. Only students thus selected will be permitted to register for this course.

ORGB 434 Advanced Topics in Organizational Behaviour.

(3) (Prerequisite: MGCR 222) This is an advanced course for students with a special interest in Organizational Behaviour. Topics will be selected from current issues or themes in literature.

ORGB 435 Women as Global Leaders and Managers.

(3) (Prerequisite: MGCR 222) Women are assuming leadership roles in many fields heretofore almost exclusively led by men. Yet even in the 1990s, less than 5% of international managers are women and less than 3% of international business cases portray women in leadership roles. This seminar will review the major trends affecting women's power and influence in society in general and in organizations in particular. Participants will develop the vision, skills, and competencies needed for global

leadership.

ORGB 525 Compensation Management.

(3) (Prerequisite (Undergraduate): ORGB 423) Compensation policies and practices, consistent with motivational theories, are examined. Topics include: design and evaluation of job evaluation systems, salary structures, and performance-based pay; compensation of special employee groups; and current pay equity laws. Projects and simulations provide "hands-on" experience in the use of compensation techniques.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

⌘ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

Schulich School of Music

MUCO-Composition

Offered by: Music Research, Music

MUCO 240D1 (3), MUCO 240D2 (3) Tonal Composition.

(3 hours) (Prerequisites: MUTH 110 and MUTH 111 OR their equivalent.) (Corequisites: MUSP 229 and MUSP 231 AND MUSP 170 and MUSP 171.) (Restriction: Open only to students in Composition) (Students must register for both MUCO 240D1 and MUCO 240D2.) (No credit will be given for this course unless both MUCO 240D1 and MUCO 240D2 are successfully completed in consecutive terms) A writing course based on the stylistic concepts and resources of European music - 1770-1850 - and designed to develop control of factors such as phrase structure, melodic shape, rhythm, linear continuity, economy of means, notation, and basic contrapuntal procedures. Extensive and detailed analysis of characteristic forms.

MUCO 245D1 (2), MUCO 245D2 (2) Composition.

(2 hours) (Prerequisites: MUTH 110 and MUTH 111.) (Corequisites: MUSP 229 and MUSP 231 AND MUSP 170 and MUSP 171.) (Restriction: Open only to students in Composition) (Students must register for both MUCO 245D1 and MUCO 245D2.) (No credit will be given for this course unless both MUCO 245D1 and MUCO 245D2 are successfully completed in consecutive terms) 20th Century techniques and approaches. Basic dimensions such as pitch, rhythm and timbre, and their inter-relationship at all structural levels. Notation and score preparation. Performance practice. Analysis of selected 20th Century scores. Writing of short pieces for solo instruments and small ensembles, including voice.

MUCO 260 Instruments of the Orchestra.

(2) (2 hours) (Prerequisite: MUTH 111 or equivalent) An introductory study of the instruments of string, woodwind and brass families, elementary acoustics of the instruments. Techniques of playing including embouchure, fingering, bowing, hand-stopping, transposing instruments. Evolution of the instruments, their technique and their music from the 18th century to the present.

MUCO 261 Elementary Orchestration.

(2) (2 hours) (Prerequisite: MUCO 260) Study of traditional orchestration through analysis. Transcription of piano works for small ensembles (string quartet, woodwind quintet, brass quintet). Reduction of orchestral scores for piano.

MUCO 340D1 (3), MUCO 340D2 (3) Composition.

(2 hours) (Prerequisites: MUCO 240 AND MUCO 245 with "B" standing in each.) (Corequisites: MUSP 329 and MUSP 331) (Students must register for both MUCO 340D1 and MUCO 340D2.) (No credit will be given for this course unless both MUCO 340D1 and MUCO 340D2 are successfully completed in consecutive terms) Free composition.

□MUCO 341 Digital Studio Composition 1.

(3) (3 hours lecture-demonstration and 3 hours studio time) (Prerequisites: MUCO 240D1/D2 and MUCO 245D1/D2.) Composition with MIDI, audio recording, digital audio signal processing software and hardware. Creation of small-scale composition studies using technological resources in the context of electroacoustic music. The hands-on activities will include critical listening and evaluation of electronic and computer music repertoire.

□MUCO 342 Digital Studio Composition 2.

(3) (3 hours lecture-demonstration and 3 hours studio time) (Prerequisite: MUCO 341) Advanced composition with MIDI, audio recording, digital audio signal processing software and hardware. Creation of complete electroacoustic pieces and/or production of audio media materials.

MUCO 373 Special Topic in Composition 1.

(3) (Prerequisites: MUHL 184, MUHL 185, MUTH 211 or MUCO 240, MUSP 231.) Special topic in composition.

MUCO 374 Special Topic in Composition 2.

(3) (Prerequisites: MUHL 184, MUHL 185, MUTH 211 or MUCO 240, MUSP 231.) Special topic in composition.

MUCO 440D1 (3), MUCO 440D2 (3) Composition.

(2 hours) (Prerequisite: MUCO 340) (Students must register for both MUCO 440D1 and MUCO 440D2.) (No credit will be given for this course unless both MUCO 440D1 and MUCO 440D2 are successfully completed in consecutive terms) Free composition.

MUCO 441 Special Projects: Composition.

(6) (2 hours) (Prerequisite: MUCO 440)

MUCO 441D1 (3), MUCO 441D2 (3) Special Projects: Composition.

(Students must register for both MUCO 441D1 and MUCO 441D2.) (No credit will be given for this course unless both MUCO 441D1 and MUCO 441D2 are successfully completed in consecutive terms) (MUCO 441D1 and MUCO 441D2 together are equivalent to MUCO 441)

MUCO 460D1 (2), MUCO 460D2 (2) Advanced Orchestration.

(2 hours) (Prerequisites: MUCO 240 and MUCO 261) (Students must register for both MUCO 460D1 and MUCO 460D2.) (No credit will be given for this course unless both MUCO 460D1 and MUCO 460D2 are successfully completed in consecutive terms) A short survey of the history of instrumentation and orchestration. Various orchestration theories and practices used by composers, particularly in the twentieth century. Analysis of orchestration techniques. Major orchestration project to be rehearsed by the McGill Symphony Orchestra. Other projects may be linked to electroacoustic and to world music practices.

MUCO 541 Advanced Digital Studio Composition 1.

(3) (Prerequisite: MUCO 342 or permission of the instructor.) Advanced topics in digital studio composition. Aesthetics and poetics of electroacoustic composition. Analytical approaches to this repertoire. Use of digital signal processing and synthesis techniques. Creation of complete pieces incorporating music technology which may include a live performance component.

MUCO 542 Advanced Digital Studio Composition 2.

(3) (Prerequisite: MUCO 541.) Further advanced topics in digital studio composition culminating in a complete large-scale work incorporating music technology, including computer-assisted composition, analysis/resynthesis techniques, and new gestural controllers for live performance of digital musical instruments.

MUCT-Choral Techniques

Offered by: Music Research

□MUCT 235 Vocal Techniques.

(3) (3 hours and 2 hours lab) (Corequisites: MUTH 110 or MUTH 111 AND MUSP 129 or MUSP 131 AND MUHL 184 or MUHL 185.) Development of basic singing skills through group voice lessons, lectures, and Choral Lab performances. Emphasis will be on: text production, breathing, projection, clarity of vowels and consonants, the International Phonetic Alphabet, and definition of voice categories. Simple diagnostic teaching skills will be developed through observation of group voice lessons.

□MUCT 315 Choral Conducting 1.

(3) (3 hours and 2 hours lab) (Prerequisites: MUTH 211, MUSP 229, MUCT 235 AND MUGT 215 or permission of instructor.) The fundamental skills of choral conducting, including baton technique, score reading, and rehearsal procedures. Conducting materials will be selected from representative choral works.

MUEN-Ensemble

Offered by: Performance

MUEN 496 Opera Studio.

(4) (3-6 hours) (Prerequisites for B.Mus. (Majors & Honours) & L.Mus.: MUHL 184, MUHL 185, MUTH 110, MUTH 111, MUSP 129, MUSP 131. Other prerequisites for B.Mus. (Majors & Honours) only: MUHL 210, MUHL 211, MUSP 229. Open to Voice Performance students by audition and with practical teacher's approval; open to others by special permission; may be repeated for credit.) .

MUEN 560 Chamber Music Ensemble.

(1) .

MUEN 561 2nd Chamber Music Ensemble.

(1) (1 hour) (Prerequisite: Audition.) Chamber music of the Medieval, Renaissance and Baroque periods.

MUEN 563 Jazz Vocal Workshop.

(2) .

MUEN 567 Beethoven Orchestra.

(1) (Prerequisite: Audition.) (Note: Open to all students registered at McGill.) A reading orchestra that also functions as a conductor's workshop orchestra. Repertoire includes the complete Beethoven Symphonies.

MUEN 568 Multiple Ensemble 1.

(1) .

MUEN 570 Jazz Combo.

(1) (1 hour) (Prerequisite: Audition.) A Jazz Improvisation Ensemble of approximately 4 to 9 players.

MUEN 571 Contemporary Improvisation Ensemble.

(1) (Prerequisite: Audition.) (Restriction: Open to advanced performance majors.) Ensembles of 4-6 players will explore the creative performance practice of improvisatory contemporary music.

MUEN 572 Cappella Antica.

(2) (4 hours) (Prerequisite: Audition.) An ensemble of 8 to 12 voices specializing in early music. N.B. This ensemble may substitute as a Basic Ensemble in programs that specify Choral Ensemble, with Departmental approval.

MUEN 573 Baroque Orchestra.

(2) (4 hours) (Prerequisites: Audition AND MUEN 480 AND a prerequisite or corequisite of MUPP 381. Additional prerequisite for keyboard players: MUPG 372 with a grade of A-) Open to singers and instrumentalists, this ensemble specializes in chamber music primarily of the Baroque era.

MUEN 578 Song Interpretation 1.

(1) (2 hours) (Prerequisite: Audition.) Normally open only to Voice and Piano Performance students. Study of the standard song repertoire with emphasis on the singer and pianist as partners. A public recital will be given at the end of each term.

MUEN 579 Song Interpretation 2.

(1) .

MUEN 580 Early Music Ensemble.

(1) (Prerequisite: Audition. Prerequisite or corequisite for keyboard players: MUPG 272.) An ensemble of 4-6 vocalists and instrumentalists which performs music of the Medieval, Renaissance and Baroque periods.

MUEN 581 Early Piano Ensemble Seminar 1.

(1) (1 hour) (Prerequisite: Piano Concentration 1 Examination or Audition.) Concentration on interpretation and performance of piano duet and two piano repertoire.

MUEN 582 Piano Ensemble Seminar 2.

(1) (Prerequisite: MUEN 581 or permission of the instructor.) Ensemble playing in two-piano and piano 4-hand repertoire.

MUEN 583 Introduction to Collaborative Piano.

(1) (2 hours) (Prerequisite: Audition.) A limited number of qualified students will be accepted for intensive work in this field. Singers and other instrumentalists will be admitted.

MUEN 584

(1) (4 hours) (Prerequisite: MUEN 583 (formerly MUEN 483).) Highly qualified accompanists will be assigned to work independently with studio teachers and their students.

MUEN 585 Sonata Masterclass.

(1) (Prerequisite: MUEN 583, or permission of the instructor.) (Restriction: Limited to 4 advanced pianists and 4 instrumentalists.) Exploration of the vast literature for sonatas with piano and instrument, including multiple issues of ensemble preparation and performing.

MUEN 587

(2) (4 hours) (Prerequisite: Audition.) (Note: May be taken instead of Choral Ensemble.) An ensemble of 16 voices performing challenging repertoire from the Renaissance to the present day. Since the expectation is a level of performance equivalent to a professional chamber ensemble, singers wishing to join this group should have had considerable ensemble experience, and advanced vocal and sight-reading skills.

MUEN 588 Multiple Ensemble 2.

(1) .

MUEN 589 Woodwind Ensembles.

(1) (2-3 hours) (Prerequisite: Audition.) .

MUEN 590 McGill Winds.

(2) (4-6 hours) (Prerequisite: Audition.) .

MUEN 591 Brass Ensembles.

(1) (2-3 hours) (Prerequisite: Audition.) .

MUEN 592 Chamber Jazz Ensemble.

(2) (Restriction: Open to Jazz Performance students only.) This ensemble will deal with the extensive repertoire of music which exists for small jazz orchestra (9-13 instruments).

MUEN 593 Choral Ensembles.

(2) (4 hours) (Prerequisite: Audition.) (Section 001 Chamber Singers: a group of approximately 24 mixed voices which explores the a capella repertoire of all periods as well as works with chamber accompaniment.) (Section 002 Concert Choir: an ensemble of approximately 60 voices (S.A.T.B.) which performs the repertoire from all periods appropriate to a group of this size.) (Section 003 University Chorus: a mixed chorus of approximately 100 which performs a variety of choral material including both traditional and popular selections.) (Section 004 Women's Chorale: an ensemble of approximately 40 women stressing the fundamentals of singing and ensemble participation.) Students enrolling in Choral Ensembles will be assigned to one of the above groups.

MUEN 594 Contemporary Music Ensemble.

(2) (4 hours) (Prerequisite: Audition.) .

MUEN 595 Jazz Ensembles.

(2) (3-4 hours) (Prerequisite: Audition.) .

MUEN 596 Opera Repetiteur.

(2) (6 hours) (Restriction: Open by audition to advanced pianists, and to students in conducting, who are interested in training as operatic coaches. Students enrolled for piano instruction at McGill must also have their practical teacher's approval) Supervised coaching of singers, and playing of scenes and productions; rehearsal pianists and backstage conducting responsibilities.

MUEN 597 Orchestral Ensembles.

(2) (6-7 hours) (Prerequisite: Audition.) .

MUEN 598 Percussion Ensembles.

(1) (2-3 hours) .

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

MUGT-General Music Techniques

Offered by: Music Research

MUGT 205 Psychology of Music.

(3)

MUGT 215 Basic Conducting Techniques.

(1) (1 hour) (Prerequisites: MUTH 110, MUTH 111, MUSP 129.) Development of basic manual dexterity and rehearsal skills. Topics include: preparatory posture, establishing tempo, releases, simple duple and triple metre beat patterns, cueing, dynamics, fermata, transposition, terminology, score preparation, and listening.

MUGT 301 Technology and Media for Music Education.

(3) (3 hours) Introduction to the use of microcomputers and electronic music instruments in the music classroom and in individualized instruction. Topics include: computer-assisted instruction, MIDI, sequencing and notation software, hard disk recording, NICT, and object-oriented authoring software.

MUGT 305 Introduction to Music Therapy.

(3) (3 hours) (Prerequisites: MUTH 210 and MUSP 229) Introduction to basic principles and techniques of music therapy. Topics will include: definitions of music therapy; identifying and developing an understanding of the individual's special needs; simple social, emotional, and physiological therapeutic applications; and music as a motivational tool. Will include limited field observation.

MUGT 355 Music in Early Childhood.

(3) (3 hours) Organized as a laboratory, this course will explore the musical growth and development of children from birth to age six, with topics including heredity and environment, music skills and concept development, affective development, creativity, and musical activities.

MUGT 356 Music for Children 1: Philosophy and Techniques.

(3) (3 hours) (Prerequisite: none) Introduction to techniques for cultivating musical understanding and creativity in children from age 6 to 12. Traditional and contemporary approaches such as Orff, Kodaly, Dalcroze, Montessori, Gordon, and Carabo-Cone, plus relevant research will be examined for underlying principles of musical development. Will include guided field observation.

MUGT 357 Music for Children 2: Philosophy and Techniques.

(3) (3 hours) (Prerequisite: MUGT 356) Continued exploration of techniques for cultivating musical understanding, with emphasis on needs and musical development of older children, and creativity begun in MUGT 356. Will include guided field observation and planning of activity sequences.

MUGT 358 General Music for Adults and Teenagers.

(3) (Prerequisite: MUTH 210 and MUSP 131.)

MUGT 401 Issues in Music Education.

(3)

MUGT 475 Special Project.

(3) (Restriction: Open only to honours students in School Music) A student may engage in an individual research project with the approval of the Departmental Chair and under appropriate supervision.

MUGT 475D1 (1.5), MUGT 475D2 (1.5) Special Project.

(Students must register for both MUGT 475D1 and MUGT 475D2.) (No credit will be given for this course unless both MUGT 475D1 and MUGT 475D2 are successfully completed in consecutive terms) (MUGT 475D1 and MUGT 475D2 together are equivalent to MUGT 475) A student may engage in an individual research project with the approval of the Departmental Chair and under appropriate supervision.

MUHL-Music History and Literature

Offered by: Music Research

MUHL 184 History Survey - Medieval, Renaissance, Baroque.

(3) (Corequisites: MUTH 110 and MUSP 129 OR permission of instructor) Representative works from the Carolingian Renaissance to 1750 and their relation to the social and cultural milieu. Basic reference works. Developments in

notation, instruments, and performance practice.

MUHL 185 History Survey - Classical, Romantic, 20th-C.

(3) (Corequisites: MUTH 111 and MUSP 131 OR permission of instructor) Historical and stylistic investigation of music and musical life from circa 1750 to the present, i.e., the transition to the Classical period, the period of C.P.E. Bach and the Mannheim, Berlin, and Viennese symphonists, to recent developments, including electronic and music technology.

MUHL 220 Women in Music.

(3) (3 hours) (Prerequisites: MUAR 201 and/or MUAR 211 and/or MUHL 184/185 or permission of the instructor.) Case studies in contributions of selected women to various areas of music (including composition, teaching, performance, and patronage), in Europe and North America, chosen mainly from 19th and 20th centuries. Topics include: women as amateurs and professionals; past restrictions; movement for full acceptance into "musical mainstream" especially during twentieth century.

MUHL 330 Music and Film.

(3) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231.) The modern genre of music for films, and its changing styles (symphonic, jazz, pop compilation) from the silent era to today. Includes study of major film composers in North America and other traditions; analysis of the role of music in cinematic narrative, expression and symbolism.

MUHL 342 History of Electroacoustic Music.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Restriction: Open to non-music students by permission of instructor) (Normally offered in alternate years) Investigation of the repertoire and techniques of electro-acoustic music and the historical developments at important centers for research and creative activities. The roles of electronic and computer technologies in commercial and concert music are examined.

MUHL 362 Popular Music.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) History, criticism, and analysis of twentieth-century repertoires of popular musics. Detailed examination of special topics. These include genre and style in 1970s rock and soul, history of the Broadway musical, approaches to the transcription of pop music, and/or constructions of race and gender in music video.

MUHL 366 The Era of the Fortepiano.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Survey of the repertoire for keyboard 1750-1850: the instruments, Empfindsamkeit, galant style, London, Paris, Vienna, the Czech school, Haydn, Mozart, Beethoven, sonatas, variations, character pieces, "high" and "low" salon music, virtuosos and the virtuosos repertoire, Schubert, Chopin, Schumann, Mendelssohn, early Liszt.

MUHL 372 Solo Song Outside Germany and Austria.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Topics in American and European non-German song repertoire from the eighteenth century to the present. Issues discussed may include the role of song in national music culture, art song and folk song, national styles and poetic traditions, text-music relationships, and performance practice.

MUHL 373 Special Topic.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231)

MUHL 374 Special Topic.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231)

MUHL 377 Baroque Opera.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) History of opera from its origins in the musical, literary, and philosophical models available to the Florentine Camerata to the end of the baroque. The development of opera will be studied from the perspective of artistic style and in the light of historical, political, social, and economic conditions.

MUHL 380 Medieval Music.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Corequisites: MUTH 210 and MUSP 229) (Normally alternates with MUHL 381) The medieval style - an intensive study of one or more selected topics from the repertoire. Possible subjects include liturgical chant, Notre Dame, the medieval motet, secular developments, and instrumental literature.

MUHL 381 Renaissance Music.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Corequisites: MUTH 210 and MUSP 229) (Normally alternates with MUHL 380) Sacred and secular musical genres of the 15th and 16th Centuries. Various phases of imitative practice, cantus firmus and parody techniques. The emergence of homophonic textures in peripheral areas of the repertoire. Selected problems in the fields of theory, bibliography and aesthetics.

MUHL 382 Baroque Music.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Normally offered in alternate years) A detailed examination of several selected areas of Baroque music. Topics will be drawn from different geographical regions (e.g., Italy, France, Germany, etc.) and encompass church, chamber and theatre music, as well as performance practice. Each topic will be related to general musical developments of the period.

MUHL 383 Classical Music.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Normally offered in alternate years) The period covered will be from approximately 1740-1828, from the schools of the Italian keyboard composers, opera buffa and seria, and composers centered at Mannheim, Paris, London, Berlin and Vienna, through the Viennese Classic period of Haydn, Mozart and Beethoven, to the death of Schubert.

MUHL 384 Romantic Music.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Normally offered in alternate years) The Romantic style as traced by an analysis of works by the major composers of Lied, symphony, symphonic poem, chamber music, and opera.

MUHL 385 Early Twentieth-Century Music.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Development of European, Russian, and American music from the 1890s until the early 1940s, tracing its roots in late 19th-century Romanticism and following its evolution in central Europe, France, and the United States. The music of major innovators such as Debussy, Stravinsky, Schoenberg, Ives, and Varèse will be discussed.

MUHL 386 Chamber Music Literature.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) The course will concentrate on the forms and media for chamber ensembles during the 18th, 19th and 20th centuries: accompanied sonatas, duos, trios, quartets, quintets, sextets, divertimenti, and works for small chamber orchestra. Major works of the most representative composers will be discussed.

MUHL 387 Opera from Mozart to Puccini.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Mozart's operas and the seria, buffa, and Singspiel traditions. Ottocento opera, grand opera, and cross-fertilization between France and Italy. German Romantic opera. Wagner. Eastern European opera. Verismo and fin-de-siècle opera in Vienna and Paris. Sociology of opera. Emphasis on critical understanding of music's role in

articulating drama.

MUHL 388 Twentieth-Century Opera.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Major early twentieth-century works by Debussy, Strauss, Schreker, Bartók, Stravinsky and Schoenberg. Opera in Europe between the Wars including operas of Berg, Milhaud, Krenek, Hindemith and Weill. Politics, sociology, and literature in relationship to musical style. Approaches since 1945 in selected works by Britten, Henze, Zimmermann, Ligeti, Somers and Glass.

MUHL 389 Orchestral Literature.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Study of the literature for orchestra alone, composed since the early 18th Century. The material will be divided as follows: 1) orchestral music to the time of Beethoven; 2) orchestral music from 1800 to 1860; 3) orchestral music from 1860 to 1900; 4) orchestral music of the 20th Century.

MUHL 390 The German Lied.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Survey of the German Lied from the late eighteenth to the early twentieth century, focusing on songs and song cycles by Schubert, Schumann, Brahms, Wolf, Mahler, Schoenberg, Berg, and Webern. Topics include text, musical form and text-music relationships, melodic style and harmonic organization, accompaniment, and performance practice.

MUHL 391 Canadian Music.

(3) (3 hour) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Survey of music in Canada from the 16th Century to the present. Current musical organizations and institutions, and contemporary Canadian music will be stressed. Time permitting, brief reference will be made to the folk music of indigenous and immigrant groups.

MUHL 392 Music since 1945.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Appearance and evolution of such post-war phenomena as total serialism, "chance" music of various kinds, and electronic music as seen in major figures such as Boulez, Stockhausen, Cage and others in Europe and the United States. Important developments during the 1960. Rise of "minimalism" and "neo-Romanticism" during the 1970s and 80s.

MUHL 393 History of Jazz.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Prerequisite for Jazz Performance Majors: permission of instructor) The evolution of jazz from its origins to the present day. The course centers upon musical issues and will include careful analysis of style based upon recordings, live performances and transcriptions. Ragtime, blues, the Twenties, big-band, swing, bebop, cool, third stream, hard bop and free jazz will be explored.

MUHL 395 Keyboard Literature before 1750.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) The solo repertoire for organ, harpsichord, and clavichord from 1400 to 1750: intabulation, cantus firmus treatment, indigenous keyboard genres, German organ literature, French harpsichord repertoire.

MUHL 396 Era of the Modern Piano.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Survey of keyboard repertoire from 1850 to the present: instruments, the crisis at mid-century, character pieces, Brahms, late Liszt, national schools, commercialization - the concert hall, music for the bourgeois - salon music, Scriabin, the Second Viennese School, Impressionism, Neo-Classicism, Neo-Romanticism,

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

serialism, the sonata in the 20th-century, North American composers.

MUHL 397 Choral Literature after 1750.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) The development of sacred and secular choral music from 1750 to the present. Selected liturgical and secular works will be included; the Mass, the cantata, the oratorio and other genres. Form and stylistic considerations will be examined in representative works.

MUHL 398 Wind Ensemble Literature after 1750.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) Study of wind ensemble music from Handel to Xenakis as it evolved under the influences of changing musical taste and technological advance. Topics include wind chamber music, music of the French Revolution, the 19th-century military band and the development of school, college and professional bands since 1900.

MUHL 475 Special Project.

(3) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) For details contact the Department of Theory.

MUHL 475D1 (1.5), MUHL 475D2 (1.5) Special Project.

(Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Students must register for both MUHL 475D1 and MUHL 475D2.) (No credit will be given for this course unless both MUHL 475D1 and MUHL 475D2 are successfully completed in consecutive terms) (MUHL 475D1 and MUHL 475D2 together are equivalent to MUHL 475) For details contact the Department of Theory.

MUHL 475N1 (1.5), MUHL 475N2 (1.5) Special Project.

(Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Students must also register for MUHL 475N2) (No credit will be given for this course unless both MUHL 475N1 and MUHL 475N2 are successfully completed in the same calendar year) (MUHL 475N1 and MUHL 475N2 together are equivalent to MUHL 475) For details contact the Department of Theory.

MUHL 529 Proseminar in Musicology.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Prerequisite: open to all students in a Major or Honours program in Music History, and to students in other programs by permission of instructor) (Normally alternates with MUHL 591) Study of selected methodologies in musicology through critical examination of significant texts. Topics may include approaches to historiography, biography, editing and source studies, as well as aesthetics, literary criticism, semiology, feminist musicology, and ideology critique. Works by Adler, Adorno, Dahlhaus, Kerman, McClary, Meyer, Nattiez, and Subotnik, among others, will be addressed.

MUHL 570 Research Methods in Music.

(3) (3 hours) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231. Additional prerequisite: one MUHL or MUPP course at the 300 level or higher, or permission of instructor.) Survey and critical evaluation of research- and performance-related tools: composers' collected editions, monuments of music, bibliographies of music and music literature, discographies, directories, and databases. Topics will include: developing bibliographies, structuring written arguments, assessing academic and popular writings about music, and understanding the task of the music editor.

MUHL 591D1 (1.5), MUHL 591D2 (1.5) Paleography.

(1 hour) (Prerequisites: MUHL 184 and MUHL 185 and MUTH 211 OR MUCO 240 and MUSP 231) (Restriction: U3 honours students in History) (Normally alternates with MUHL 529) (Students must register for both MUHL 591D1 and MUHL 591D2.) (No credit will be given for this course unless both MUHL 591D1 and MUHL 591D2 are successfully completed in consecutive terms) The theory and practice of musical transcription for the period 1100 to 1600. Black modal notation, Franconian notation, French and Italian Ars Nova notation, Mannerism, white mensural notation, proportions, and lute and keyboard tablatures will be studied.

MUIN-Practical Instrument

Offered by: Performance

MUIN 110 Elective Practical Instruction 1.

(2)

MUIN 111 Elective Practical Instruction 2

(2)

MUIN 120 Practical Instruction 1.

(2) (1 hour) (Prerequisite: Admission to the B.Mus. program by audition) (Restriction: Open to students entering directly from High Schools outside Quebec.)

MUIN 121 Practical Instruction 2.

(2) (1 hour) (Prerequisite: MUIN 120) (Restriction: Open to transfer students and high school students entering directly from outside Quebec.)

MUIN 130 Performance Practical Instruction 1.

(4) (1 hour) (Prerequisite: Admission to the B.Mus.) (Performance program by audition) (Restriction: Open to students entering directly from high school outside Quebec.)

MUIN 131 Performance Practical Instruction 2.

(4) (1 hour) (Prerequisite: MUIN 130) (Restriction: Open to transfer students and high school students entering directly from outside Quebec.)

MUIN 180 Flute Doubling Proficiency Test.

(0)

MUIN 181 Clarinet Doubling Proficiency Test.

(0)

MUIN 210 Elective Practical Instruction 3.

(2)

MUIN 211 Elective Practical Instruction 4.

(2)

MUIN 220 Practical Instruction 3.

(2) (1 hour) (Prerequisite: MUIN 121)

MUIN 221 Practical Instruction 4.

(2) (1 hour) (Prerequisite: MUIN 220) .

MUIN 222 Concentration 1 Examination.

(0) .

MUIN 230 Performance Practical Instruction 3.

(4) (1 hour) (Prerequisite: MUIN 131)

MUIN 231 Performance Practical Instruction 4.

(4) (1 hour) (Prerequisite: MUIN 230)

MUIN 232 Performance 1 Examination.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 250 L.Mus. Practical Instruction 1.

(8) (1 hour) (Prerequisite: Admission to the L.Mus. program by audition)

MUIN 251 L.Mus. Practical Instruction 2.

(8) (1 hour) (Prerequisite: MUIN 250) .

MUIN 252 L.Mus. Performance 1 Examination.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 300 Voice Coaching 1.

(2)

MUIN 301 Voice Coaching 2.

(2)

MUIN 320 Practical Instruction 5.

(2) (1 hour) (Prerequisite: MUIN 221)

MUIN 321 Practical Instruction 6.

(2) (1 hour) (Prerequisite: MUIN 320) .

MUIN 322 Concentration 2 Examination.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 330 Performance Practical Instruction 5.

(4) (1 hour) (Prerequisite: MUIN 231)

MUIN 331 Performance Practical Instruction 6.

(4) (1 hour) (Prerequisite: MUIN 330) .

MUIN 332 Performance 2 Examination.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 333 Piano Techniques 2.

(0) (pass/fail) (Mandatory test for pianists to be taken prior to the Performance 2 Exam.)

MUIN 340 Honours Practical Instruction 5.

(4) (1 hour) (Prerequisite: MUIN 231)

MUIN 341 Honours Practical Instruction 6.

(4) (1 hour) (Prerequisite: MUIN 340) .

MUIN 342 Honours Performance 2 Examination.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 350 L.Mus. Practical Instruction 3.

(8) (1 hour) (Prerequisite: MUIN 251)

MUIN 351 LMus Practical Instruction 4.

(8) (1 hour) (Prerequisite: MUIN 350) .

MUIN 352 L.Mus. Performance 2 Examination.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 369 Concerto.

(0) (pass/fail) (Mandatory test for pianists)

MUIN 400 Voice Coaching 3.

(2) (Restriction: Open only to students in the Artist Diploma in Voice program.) A course in which the student will have individual coaching sessions on repertoire, with emphasis in musical and linguistic nuance.

MUIN 401 Voice Coaching 4.

(2) (Restriction: Open only to students in the Artist Diploma in Voice program.) Continued individual coaching sessions on repertoire, with emphasis in musical and linguistic nuance.

MUIN 430 Performance Practical Instruction 7.

(4) (1 hour) (Prerequisite: MUIN 331)

MUIN 431 Performance Practical Instruction 8.

(4) (1 hour) (Prerequisite: MUIN 430) .

MUIN 432 Performance 3 Examination.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 433 Piano Techniques 3.

(0) (pass/fail) (Mandatory test for pianists to be taken prior to the Performance 3 Exam.)

MUIN 440 Honours Practical Instruction 7.

(4) (1 hour) (Prerequisite: MUIN 341)

MUIN 441 Honours Practical Instruction 8.

(4) (1 hour) (Prerequisite: MUIN 440) .

MUIN 442 Honours Performance 3 Examination.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 450 L.Mus. Practical Instruction 5.

(8) (1 hour) (Prerequisite: MUIN 351)

MUIN 451 LMus Practical Instruction 6.

(8) (1 hour) (Prerequisite: MUIN 450) .

MUIN 452 L.Mus. Performance 3 Examination.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 460 Artist Diploma Practical Instruction 1.

(8) (1.5 hours) (Prerequisite: admission to the Artist Diploma program by audition.)

MUIN 461 Artist Diploma Practical Instruction 2.

(8) (1.5 hours) (Prerequisite: MUIN 460) .

MUIN 462 Artist Diploma Recital 1.

(0) (Note: Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 469 Artist Diploma Concerto 1.

(1) (Prerequisite: MUIN 460)

MUIN 560 Artist Diploma Practical Instruction 3.

(8) (1.5 hours) (Prerequisite: MUIN 461)

MUIN 561 Artist Diploma Practical Instruction 4.

(8) (1.5 hours) (Prerequisite: MUIN 560) .

MUIN 562 Artist Diploma Recital 2.

(0) (Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) .

MUIN 563 Artist Diploma Recital 3.

(0) (Complete descriptions are to be found under Examinations and Goals in Practical Subjects in the Music Chapter of the University Calendar.) (Restriction: Not open to students who have taken MUIN 562 prior to 200509.) .

MUIN 569 Artist Diploma Concerto 2.

(1) (Prerequisite: MUIN 469)

MUIT-Instrumental Techniques

Offered by: Music Research

□MUIT 201 String Techniques.

(3) (3 hours and 2 hours lab) (Corequisites: MUTH 110 or MUTH 111 AND MUSP 129 or MUSP 131 AND MUHL 184 or MUHL 185.) The fundamental techniques in performance of four common stringed instruments, i.e., violin, viola, cello, and bass. Principles of sound production on stringed instruments, historical development of the strings, purchase of new and used instruments, maintenance and repairs, teaching procedures and reference materials.

□MUIT 202 Woodwind Techniques.

(3) (3 hours and 2 hours lab) (Corequisites: MUTH 110 or MUTH 111 AND MUSP 129 or MUSP 131 AND MUHL 184 or MUHL 185.) The fundamental techniques in performance of five common woodwind instruments, i.e., clarinet, flute, oboe, bassoon, and saxophone. Principles of sound production, historical development of the woodwinds, purchase of new and used instruments, maintenance and repairs, teaching procedures and reference materials.

□MUIT 203 Brass Techniques.

(3) (3 hours and 2 hours lab) (Corequisites: MUTH 110 or MUTH 111 AND MUSP 129 or MUSP 131 AND MUHL 184 or MUHL 185.) The fundamental techniques in performance of five common brass instruments, i.e., trumpet, horn, trombone, baritone, and tuba. Principles of sound production, historical development of the brass, purchase of new and used instruments, maintenance and repairs, teaching procedures and reference materials.

□MUIT 204 Percussion Techniques.

(3) (3 hours and 2 hours lab) (Corequisites: MUTH 110 or MUTH 111 AND MUSP 129 or MUSP 131 AND MUHL 184 or MUHL 185.) The fundamental techniques in performance of percussion instruments commonly in use in symphonic bands and orchestras. Principles of sound production, historical development of the percussion, purchase of new and used instruments, maintenance and repairs, teaching procedures and reference materials.

□MUIT 250 Guitar Techniques.

(3) (3 hours) (Corequisites: MUTH 110 or MUTH 111 AND MUSP 129 or MUSP 131 AND MUHL 184 or MUHL 185.) The fundamental techniques in guitar performance. Basic principles of beginning and intermediate pedagogy, sound production, historical development of the instrument, purchase of new and used instruments, maintenance and repair, and teaching materials and repertoire for solo and ensemble performance.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

□MUIT 302 Advanced Wind Techniques.

(3) (3 hours and 2 hours lab) (Prerequisites: MUIT 202, MUIT 203.) Continued exploration of brass and woodwind pedagogy. Methods for developing technique and musical sensitivity in beginning and intermediate performers will be explored through in-depth study of heterogeneous and homogeneous instrumental methods. Skill on secondary instruments and diagnostic and prescriptive teaching abilities will be extended through Lab performances and individual coaching projects.

□MUIT 315 Instrumental Conducting.

(3) (3 hours and 2 hours lab) (Prerequisites: MUTH 211, MUSP 229, MUGT 215, MUIT 201 or MUIT 250, MUIT 202, MUIT 203, MUIT 204.) (Restriction: Open to non-music education students with permission of instructor.) The fundamental skills of instrumental conducting, including baton technique, score analysis, and rehearsal procedures; conducting materials are selected from representative orchestral works.

□MUIT 356 Jazz Instruction: Philosophy and Techniques.

(3) (3 hours) (Prerequisites: MUIT 202, MUIT 203, MUIT 204. May be taken by Jazz Performance students with approval of instructor.) Introduction to techniques for the development of school and community-based jazz programs. Topics will include: philosophy of jazz instruction, rhythm section, musical materials, techniques to develop improvisation and aural skills, jazz styles, score preparation, rehearsal techniques, and administration of jazz programs. Will include observation of rehearsals and coaching opportunities.

MUJZ-Jazz Studies

Offered by: Performance

MUJZ 160 Jazz Materials 1.

(3) (4 hours) (Prerequisite: none. Open to non-jazz majors, space permitting, but not for elective credit in B.Mus. or Artist Diploma programs) Fundamental aural and theoretical skills associated with the jazz idiom. Nomenclature, chord construction, chord/scale relationships, harmonic progression, circle of 5ths, simple turnarounds, simple substitution, symmetrical scales and chord relationships, voice leading.

MUJZ 161 Jazz Materials 2.

(3) (4 hours) (Prerequisite: MUJZ 160. Open to non-jazz majors, space permitting, but not for elective credit in B.Mus. or Artist Diploma programs) Simple and advanced substitution, borrowed chords, reharmonisation, modes of harmonic minor and melodic minor diatonic systems, unresolved tensions, odd and infrequent modulations, mixed two-five-ones, introduction to polychords, slashchords and non-functional harmony.

MUJZ 170 Jazz Keyboard Proficiency 1.

(1) (1 hour) (Prerequisite: none. Open only to Jazz Performance Majors. May not be taken for elective credit in B.Mus. or Artist Diploma programs) Basic piano skills, basic comping techniques, standard 3 note rootless voicings in 7, 3 and 3, 7 position with one extension, two-five-ones in major and minor - limited keys. Simple substitution and reharmonisation.

MUJZ 171 Jazz Keyboard Proficiency 2.

(1) (1 hour) (Prerequisite: MUJZ 170. Open only to Jazz Performance Majors. May not be taken for elective credit in B.Mus. or Artist Diploma programs) Continuation of previous semester. Two-five-ones and mixed two-five-ones using 4 note close position voicings and 4 and 5 note spreads, in all keys, diminished passing chords, half step shifts, voice leading extensions, quartal and modal voicing, sight reading of standard jazz repertoire.

MUJZ 213 Non-Performance Jazz Improvisation 1.

(3) (Prerequisites: MUTH 110, MUTH 111, MUSP 129, MUSP 131.) (Note: Open to jazz instrumentalists who are not in Performance programs, with preference given to Jazz Concentration students.) Introduction to basic improvisation concepts of phrasing, articulation, melodic development, harmonic control, musical vocabulary and style. Pedagogical techniques will be discussed.

MUJZ 214 Non-Performance Jazz Improvisation 2.

(3) (Prerequisite: MUJZ 213 or permission of instructor.) (Note: Open to jazz instrumentalists who are not in Performance programs, with preference given to Jazz Concentration students.)

A continuation of development of basic improvisation concepts of phrasing, articulation, melodic development, harmonic control, musical vocabulary and style. Pedagogical techniques will be discussed.

MUJZ 223 Jazz Improvisation/Musicianship 1.

(3) (3 hours) (Prerequisite: none.) (Restriction: Open only to Jazz Performance Majors) Basic improvisational concepts with emphasis on time feel, phrasing, articulation, melodic development, voice leading, harmonic control and stylistic nuance. Memorization and aural recognition of standard jazz repertoire also stressed. The aural tradition of the music is emphasized through rhythmic/melodic dictation.

MUJZ 224 Jazz Improvisation/Musicianship 2.

(3) (3 hours) (Prerequisite: MUJZ 223.) (Restriction: Open only to Jazz Performance Majors) Continuation of Jazz Improvisation/Musicianship MUJZ 223.

MUJZ 260 Jazz Arranging 1.

(3) (Corequisite: MUJZ 223.) (Restriction: Open only to Jazz Performance Majors. Not open to students who have taken MUJZ 261D1/D2.) Introduction to concepts and techniques commonly used in jazz arranging. Notation, calligraphy and score preparation are discussed; including study of classical and contemporary scores by prominent jazz arrangers.

MUJZ 261 Jazz Arranging 2.

(3) (Prerequisite: MUJZ 260.) (Corequisite: MUJZ 224.) (Restriction: Open only to Jazz Performance Majors. Not open to students who have taken MUJZ 261D1/D2.) Consolidation of knowledge of basic concepts and techniques used in jazz arranging.

MUJZ 340 Jazz Composition 1.

(3) (Prerequisites: MUJZ 224, MUJZ 260, MUJZ 261.) (Restriction: Open only to Jazz Performance Majors. Not open to students who have taken MUJZ 340D1/D2.) Jazz composition based on the stylistic concepts of leading jazz composers. Development of a personal and creative compositional style and of control of factors such as: rhythmic, harmonic, and melodic continuity, vertical modal, and linear modal harmony, polychordal techniques, and non-functional harmonic concepts.

MUJZ 341 Jazz Composition 2.

(3) (Prerequisites: MUJZ 260, MUJZ 261, MUJZ 340.) (Restriction: Open only to Jazz Performance Majors. Not open to students who have taken MUJZ 340D1/D2.) A continuation of development of a personal and creative jazz compositional style.

MUJZ 356 Jazz Pedagogy.

(3) (3 hours) (Prerequisites: MUHL 393 and MUJZ 224.) (Restriction: Open only to Jazz Performance Majors) Techniques for development of school, community-based and post-secondary jazz programs. Topics include: philosophy of jazz instruction, curriculum development, rhythm section, musical materials, techniques to develop improvisation and aural skills, jazz styles, idiomatic instrumental techniques, score preparation, rehearsal techniques and administration of jazz programs. May include coaching opportunities.

MUJZ 423 Jazz Improvisation/Musicianship 3.

(3) (3 hours) (Prerequisite: MUJZ 224.) (Corequisite: MUJZ 340.) (Restriction: Open only to Jazz Performance Majors) Refinement of improvisational concepts in conjunction with ear training, leading towards the establishment of a personal style of playing. Complex forms and harmonies, and contemporary techniques. Memorization of large and varied repertoire is stressed. The ability to identify, transcribe and perform various melodies, rhythms, and complex harmonies by ear will be stressed.

MUJZ 424 Jazz Improvisation/Musicianship 4.

(3) (3 hours) (Prerequisite: MUJZ 423.) (Restriction: Open only to Jazz Performance Majors) Continuation of Jazz Improvisation/Musicianship MUJZ 423.

MUJZ 440D1 (2), MUJZ 440D2 (2) Advanced Jazz Composition.

(Students must register for both MUJZ 440D1 and MUJZ 440D2.) (No credit will be given for this course unless both MUJZ 440D1 and MUJZ 440D2 are successfully completed in consecutive terms) (MUJZ 440D1 and MUJZ 440D2 together are equivalent to MUJZ 440) A continuation of MUJZ 340. This course will emphasize and facilitate the development of a

personal and creative compositional style. Jazz aesthetics will be emphasized and explored in greater depth.

MUJZ 461D1 (2), MUJZ 461D2 (2) Advanced Jazz Arranging.

(2 hours) (Prerequisites: MUJZ 261 and MUJZ 340 OR permission of instructor.) (Corequisite: MUJZ 423.) (Restriction: Open only to Jazz Performance Majors) (Students must register for both MUJZ 461D1 and MUJZ 461D2.) (No credit will be given for this course unless both MUJZ 461D1 and MUJZ 461D2 are successfully completed in consecutive terms) This course introduces advanced concepts in jazz writing by examining scores by historically-important jazz composers/arrangers, as well as contemporary masters. Student writing, including expanded combo, big band, and small group string projects, is geared toward public performance by McGill jazz ensembles and combos.

MUJZ 493 Jazz Performance Practice.

(3) (3 hours) (Prerequisites: MUHL 393, MUJZ 224.) (Restriction: Open only to Jazz Performance Majors) An in-depth exploration of the performance practice of leading jazz figures, primarily through the study of solo transcriptions. Comparative study of conceptual differences in time feel, ornamentation, tone quality, articulation and harmonic and melodic approach. Detailed study of major rhythm sections and their interaction with soloists.

MUMT-Music Technology

Offered by: Music Research

MUMT 201 Introduction to Music Technologies.

(3) (3 hours) (Prerequisite: none) (Restriction: Not open to students in the following programs: B.Mus. Honours in Music Technology; B.Mus. Minor in Music Technology; B.A. Minor Concentration in Music Technology; B.Sc., Minor in Music Technology) A general introduction to the history and techniques of music technology to include: synthesis, MIDI, sequencing, sampling, digital audio, music and audio for the Internet, sound recording, interactive music systems, and notation systems.

MUMT 202 Fundamentals of New Media.

(3) (3 hours) (Prerequisites: none) (Restriction: Open only to students in Music Technology, including those in Minor Programs, and students in Sound Recording, and Composition) Combining theory and practice, the course covers the areas of MIDI, sound/image/MIDI sequencing, sampling, mixing, soundfile processing and editing, elementary music systems programming, and use of the Internet for sound/music/image.

MUMT 203 Introduction to Digital Audio.

(3) (3 hours) (Prerequisite: MUMT 202) An introduction to the theory and practice of digital audio. Topics include: sampling theory; digital sound synthesis methods (additive, subtractive, summation series); sound processing (digital mixing, delay, filters, reverberation, sound localization); software-based samplers; real-time sound processing; interactive audio systems. Hands-on exercises are included.

MUMT 250 Music Perception and Cognition.

(3) Basic processes by which the brain transforms sound waves into musical events, dimensions, systems and structures and the processes by which musicians imagine new musical sounds and structures and plan movements that produce music on instruments.

MUMT 301 Music and the Internet.

(3) (3 hours) (Prerequisite: MUMT 201 OR MUMT 202) Technologies and resources of the Internet (access tools, data formats and media) and Web authoring (HTML) for musicians; locating, retrieving and working with information; putting information online; tools for music research, music skills development, technology-enhanced learning, music productivity, and promotion of music and musicians. Evaluation of Internet

music resources.

MUMT 302 New Media Production 1.

(3) (3 hours) (Prerequisite: MUMT 201 OR MUMT 202) (Restriction: Not open to students in B.Mus. Honours in Music Technology) Methods and techniques for producing and modifying musical and audiovisual content in new media applications. Media formats: audiovisual sequences (QuickTime), CD-ROMs and interactive CD-ROMs, DVD, surround sound audio. Also covered: software-based synthesis and sampling, techniques for image scanning, audio capture, content manipulation, media compression and format conversion.

MUMT 303 New Media Production 2.

(3) (3 hours) (Prerequisite: MUMT 301) (Restriction: Not open to students in B.Mus. Honours in Music Technology) A continuation of MUMT 302. Students produce new media objects of increasing complexity and scope, integrating several types of content.

MUMT 306 Music and Audio Computing 1.

(3) (3 hours) (Prerequisites: MUMT 202 and MUMT 203. Pre-/Co-requisite: COMP 251) Concepts, algorithms, data structures, and programming techniques for the development of music and audio software, ranging from musical instrument design to interactive music performance systems. Student projects will involve the development of various music and audio software applications.

MUMT 307 Music and Audio Computing 2.

(3) (3 hours) (Prerequisite: MUMT 306) Advanced programming techniques for the development of music and audio software, and system components (plugins). Development of audio and control systems. Advanced data structures, object-oriented programming, optimization of source code for DSP, debugging techniques. Projects will involve the development of various musical and audio software applications and plugins.

MUMT 402 Advanced Multimedia Development.

(3) (3 hours) (Prerequisite: MUMT 307) Design, programming, and deployment of music and audio in multimedia production. Topics include: compression and decompression schemes, music and audio support in C++, JAVA, and applications languages. Development of platform independent software for interactive and networked music and audio.

MUMT 475 Special Project.

(3) (Prerequisite: permission of Dept. of Theory) Undergraduate research project in music technology.

MUMT 501 Digital Audio Signal Processing.

(3) (Prerequisite: MUMT 307 and MATH 133 or equivalent) (Music students and students enrolled in the MST Minor will be given priority for this course) Discrete-time signal processing concepts and techniques. Discrete-time Fourier transform and series, linear time-invariant systems, digital filtering, spectral analysis of discrete-time signals, and the z-transform.

MUMT 502 Senior Project: Music Technology.

(3) (3 hours) (Prerequisites: MUMT 307 and Honours standing in Music Technology) Independent senior project in Music Technology. Students will design and implement a medium-scale project in consultation with their advisor. Evaluation will be based on concept, background research, implementation, reliability, and documentation.

MUPG-Performance

Offered by: Performance

MUPG 100 Life as Professional Musician.

(1) (1 hour) (Prerequisite: none. May not be taken for elective credit in B.Mus. or Artist Diploma programs) An introduction to the responsibilities and skills required of a professional

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

musician; job options, stage presence, rehearsal etiquette, contracts, professional organizations, freelancing, auditions, special health problems, etc.

MUPG 201 Basic Lyric Diction 1.

(1) (2 hours.) (Restriction(s): for voice concentration students, and others with permission of instructor. Not available to vocal performance students.) Practical application of the fundamentals of English, Italian and Latin pronunciation in singing, utilizing the International Phonetic Alphabet in song, opera, oratorio and choral texts.

MUPG 202 Basic Lyric Diction 2.

(1) (Restriction(s): for voice concentration students, and others with permission of instructor. Not available to vocal performance students.) Practical application of the fundamentals of German, French and Spanish pronunciation in singing, utilizing the International Phonetic Alphabet in song, opera, oratorio and choral texts.

□MUPG 210 Italian Diction.

(2) (2 hours) (Prerequisite: none) Study of International Phonetic Alphabet. Study of Italian pronunciation in singing using song and opera texts.

□MUPG 211 French Diction.

(2) (2 hours) (Prerequisite: MUPG 210) Study of French pronunciation in singing using song and opera texts.

□MUPG 212 English Diction.

(2) (2 hours) (Prerequisite: none) Study of International Phonetic Alphabet. Study of Standard English pronunciation in singing using song and opera texts with a special emphasis on problematic vowels, diphthongs and consonants.

□MUPG 213 German Diction.

(2) (2 hours) (Prerequisite: MUPG 212) Study of German pronunciation in singing using song and opera texts.

MUPG 272D1 (2), MUPG 272D2 (2) Continuo.

(2 hours) (Prerequisites: MUTH 111 AND permission of instructor. Enrolment limited to 6) (Students must register for both MUPG 272D1 and MUPG 272D2.) (No credit will be given for this course unless both MUPG 272D1 and MUPG 272D2 are successfully completed in consecutive terms) An historically-oriented study of the principles of figured-bass. The student will realize at sight elementary bass patterns. Standard idioms from historical treatises will be introduced.

MUPG 315D1 (2), MUPG 315D2 (2) Introduction to Orchestral Conducting.

(2 hours) (Prerequisites: MUTH 211, MUSP 229, MUCO 261, MUGT 215, and permission of instructor) (Students must register for both MUPG 315D1 and MUPG 315D2.) (No credit will be given for this course unless both MUPG 315D1 and MUPG 315D2 are successfully completed in consecutive terms) Emphasis on classical repertoire (Haydn, Mozart, Beethoven). Practical analysis and score preparation, style, and interpretation. Development of clear and expressive technique. Some practical experience.

MUPG 370 Keyboard Improvisation 1.

(2) (2 hours) (Prerequisites: audition and Piano Major Performance 1 Examination or audition for students in programs other than Performance. Open to all keyboard instruments except Jazz) Development of harmonic skills necessary for simple improvised accompaniment, using classical folk and popular music examples. Left-hand accompaniment in varied metres. Different forms of arpeggiation and left-hand accompaniment. Modal materials. Pedal-point. Free improvisation within simple formal structures. Recordings and published materials used to support individual development.

MUPG 372D1 (1), MUPG 372D2 (1) Continuo.

(1 hour) (Prerequisites: MUPG 272 AND permission of instructor. Enrolment limited to 4) (Students must register for both MUPG 372D1 and MUPG 372D2.) (No credit will be given for this course unless both MUPG 372D1 and MUPG 372D2 are successfully completed in consecutive terms) A study of 17th and 18th Century styles of figured-bass accompaniment as revealed in contemporary sources. The emphasis will be on the realization at the keyboard of representative works using original sources.

MUPG 473 Special Project in Performance.

(1) For details, contact the Department of Performance.

MUPG 474 Special Project in Performance.

(2) For details, contact the Department of Performance.

MUPG 475 Special Project in Performance.

(3) For details, contact the Department of Performance.

MUPG 541 Senior Piano Seminar 1.

(2) (3 hours) (Prerequisite(s): MUIN 331 and 4 semesters of MUEN 493) (Restriction: Only open to Faculty of Music Piano Performance students) In-class performance and analysis of solo and ensemble repertoire, including historical and modern recordings.

MUPG 542 Senior Piano Seminar 2.

(2) (3 hours) (Prerequisite: MUPG 541) (Restriction: Only open to Faculty of Music Piano Performance students.) Issues of piano pedagogy and preparation for competitions.

MUPG 590 Vocal Styles and Conventions.

(3) (3 hours) (Restriction: Not open to students who have taken MUPG 690.) Emphasis on vocal performance practices through practical application: text, language, inflection, pronunciation and interpretation considered with individuality of each student's voice and technical development. After examining historical treatises, students will discuss and present musical selections utilizing modern performance standards yet remaining true to stylistic demands of each period.

MUPP-Performance Practice

Offered by: Music Research

MUPP 381 Topics: Performance Practice before 1800.

(3) (3 hours) (Restriction: Enrolment limited to 20. May not be taken by students who have had MUPP 381, MUPP 382, or MUPP 384, except by permission of instructor) Issues in performance practice of pre-nineteenth-century music. Topics may include rhythmic interpretation, voices and instruments in Medieval and Renaissance polyphony, ornamentation, improvisation, performance venues and context. Sources include original notation and modern editions, treatises, iconography, organology, analysis, criticism, and recordings.

MUSP-Musicianship

Offered by: Music Research

MUSP 129 Musicianship 1.

(2) (2 hours, plus 2 hours Choral Solfège Lab) (Prerequisite: Admission to the B.Mus. or L.Mus. program through audition and placement tests in Musicianship (including Keyboard Proficiency) and Theory. Open to students from other Faculties with permission of Musicianship Co-ordinator; McGill Conservatory Secondary V or equivalent level in Ear Training. Corequisites: MUTH 110 and MUSP 170) Rhythm (basic duple-triple divisions); Isolated Sonorities (intervals, triads, tonal-modal collections); non-modulating Tonal Melodic Structures; Score Reading with treble-bass-alto clefs; Atonal Structures (cells with intervals to fifth excluding tritone); species-counterpoint-like Multipart Structures; Repertoire Building (MUTH 110).

MUSP 129D1 (1), MUSP 129D2 (1) Musicianship 1.

(Students must register for both MUSP 129D1 and MUSP 129D2.) (No credit will be given for this course unless both MUSP 129D1 and MUSP 129D2 are successfully completed in consecutive terms) (MUSP 129D1 and MUSP 129D2 together are equivalent to MUSP 129) Rhythm (basic duple-triple divisions); Isolated Sonorities (intervals, triads, tonal-modal collections); non-modulating Tonal Melodic Structures; Score Reading with treble-bass-alto clefs; Atonal Structures (cells with intervals to fifth excluding tritone); species-counterpoint-like Multipart Structures; Repertoire Building (MUTH 110).

MUSP 131 Musicianship 2.

(2) (2 hours, plus 2 hours Choral Solfège Lab) (Prerequisite: MUSP 129) (Corequisites: MUTH 111 and MUSP 171) (Students must complete three of five Listening Tasks (one of which must be Tonal Melodic Structures) in the final segments of both MUSP 129 and MUSP 131 before proceeding to the next

Musicianship course.) Rhythm (quadruple-mixed divisions); Isolated Sonorities (voiced triads, dominant sevenths); chromatically-embellished modulating Tonal Melodic Structures; Score Reading with treble-bass-alto-tenor clefs; Atonal Structures (cells with intervals to seventh); diatonic Harmonic Progressions; Repertoire Building (MUTH 111).

MUSP 170 Keyboard Proficiency.

(1) (1 hour) (Prerequisite: Admission to the B.Mus. or L.Mus. program through audition and placement tests in Musicianship and Theory) A remedial piano skills course for students who have been admitted to the B.Mus. or L.Mus. program but who were unable to pass the basic Keyboard Proficiency Test administered to all incoming students (with the exception of those students whose principal instrument is keyboard, who are automatically exempt from MUSP 170). The course focuses on preparing students to retake the Test (see Keyboard Proficiency Test).

MUSP 171 Keyboard Lab 1.

(1) (1 hour) (Prerequisite: completion of, or concurrent re-enrolment in, MUSP 170) (Corequisites: MUTH 111 and MUSP 131) (Restriction: All students admitted to B.Mus and L.Mus. programs, including those with keyboard or guitar as their principal instrument, are required to take MUSP 171 Keyboard Lab, unless exempt on the basis of a placement test. Students who are exempt from MUTH 111 through placement tests must still take MUSP 171 (unless exempt) since this course forms the foundation of keyboard-based musicianship tasks at upper levels. (All Majors in Jazz Performance substitute MUJZ 171 for MUSP 171. Students in Jazz Performance who have completed MUJZ 170 and MUJZ 171, and who transfer to a Department of Theory program, will be required to complete MUSP 171.) Students who do not achieve a continuation pass in MUSP 171 must reregister for the course in the semester immediately following. Students who do not achieve a continuation pass after repeating the course will not be allowed to proceed with further Musicianship or Theory studies until a continuation pass is achieved. Tests for MUSP 171 are held in August-September, December-January, and April-May [as well as during the Summer Session when course(s) offered], the exact dates determined by the Department of Theory.) Course contents parallel those of MUTH 111 with emphasis on memorization of diatonic paradigmatic harmonic progressions (prolongational and cadential) and on their combination in phrases; realization of elementary figured bass; additional tasks include harmonization of simple melodies and elementary score reading using treble, bass, and alto clefs (also some tenor clef).

MUSP 172 Keyboard Lab 2.

(1) (Prerequisites: MUSP 131, MUSP 171 and MUTH 111) (Corequisites: MUSO 229, MUTH 210) (Course contents parallel those of MUTH 210, MUSP 229) Keyboard studies with emphasis on memorization and transposition of diatonic sequences; use of seventh chords in diatonic and chromatic contexts; augmented sixth and Neapolitan sixth chords, pivot chords, enharmonic and common-tone modulation; practical command of orchestral score analysis at the keyboard.

MUSP 229 Musicianship 3.

(2) (2 hours) (Prerequisite: MUSP 131) (Corequisite: MUTH 210 and MUSP 172) Rhythm (six-, five- and seven-part subdivisions); Isolated Sonorities (triads, dominant, supertonic, leading-tone sevenths); Tonal Melodic Structures tonicizing V, III (also vi, v); Score Reading with treble-bass-alto-tenor clefs; Atonal Structures (basic cell combinations); dance-suite Multipart Structures; Harmonic Progressions including sequential paradigms; Repertoire Building (MUTH 210).

MUSP 231 Musicianship 4.

(2) (2 hours, plus Keyboard lab) (Prerequisite: MUSO 172 and MUSP 229) (Corequisite: MUTH 211) Rhythm (eight-part subdivisions, smaller note values); Isolated Sonorities (applied, neapolitan, augmented sixth chords); Tonal Melodic Structures tonicizing related scale-steps; Score Reading with treble-bass-alto-tenor-soprano clefs; Atonal Structures (basic cell combinations); instrumental-texture Multipart Structures; applied chords and tonicizations in Harmonic Progression; Repertoire Building (MUTH 211).

MUSP 329 Musicianship 5.

(2) (2 hours) (Prerequisite: MUSP 231) (Corequisite: MUTH 310 or MUTH 327) Rhythm (mixed divisions, basic polyrhythms); Isolated Sonorities (dominant ninths, thirteenth, diminished sevenths, augmented sixths); chromaticism, mixture, enharmonicism in 19th-century Tonal Melodic Structures; Atonal Structures (extended melodies with basic cells); instrumental-texture Multipart Structures; Harmonic Progression with early-19th-century uses of chromatic chords; Score Reading (19th-century repertoire).

MUSP 331 Musicianship 6.

(2) (2 hours) (Prerequisite: MUSP 329) (Corequisite: MUTH 311 or MUTH 427) Rhythm (20th-century practices); Isolated Sonorities (trichordal set-classes); chromatically-complex shorter or longer common-practice Tonal Melodic Structures; Atonal Structures (20th-century repertoire items); two-part 20th-century Multipart Structures; Harmonic Progression with late-19th-century chromatic and extended-modulatory paradigms; Score Reading (20th-century repertoire).

MUSR-Sound Recording

Offered by: Music Research

□MUSR 232 Introduction to Electronics.

(3) (2 hours lecture plus 2 hours laboratory.) (Prerequisite or corequisite: MATH 112. Available as Arts/Science elective in B.Mus. programs.) (Restriction: Not open to students who have taken MUMT 232.) Basics of electricity including: Ohm's law, electronic components, DC circuits, block diagram, amplifiers, filters, power supplies, electrical measurements (frequency levels, distortion). Emphasis will be placed on electronics applied to audio.

□MUSR 300D1 (3), MUSR 300D2 (3) Introduction to Music Recording.

(3 hours lecture plus 4 hours studio time.) (Prerequisite: MUCO 242 or MUCO 341. Prerequisites or corequisites: MUTH 211 and permission of instructor.) (It is recommended that all students taking this course register concurrently for PHYS 224 Physics and Psychophysics of Music if they do not already have a background in this subject.) (Students must register for both MUSR 300D1 and MUSR 300D2.) (No credit will be given for this course unless both MUSR 300D1 and MUSR 300D2 are successfully completed in consecutive terms.) (Restriction: Not open to students who have taken MUMT 300D1/D2.) The theory and practice of music recording including a study of recording environments, equipment and studio techniques. The analysis of music scores and recordings with respect to the requirements and possibilities of the recording studio. Studio work will include recording sessions, recording of live concerts, editing, mixing and music p.a.

□MUSR 339 Introduction to Electroacoustics.

(3) (2 hours lecture plus 2 hours laboratory.) (Prerequisite: MUSR 232 (previously MUMT 232). Available as Arts/Science elective in B.Mus. programs.) (Restriction: Not open to students who have taken MUMT 339.) Basic principles of operation and design of electroacoustical devices and

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

systems; transducers and signal processing devices; magnetic tape sound recording - reproducing systems; disc recording, motion picture sound recording and reproducing systems; practical demonstration of some of these devices and associated measuring, testing and analyzing equipment and techniques.

MUTH-Music Theory and Analysis

Offered by: Music Research

MUTH 110 Melody and Counterpoint.

(3) (4 hours) (Prerequisite: Matriculation Music or McGill Conservatory Theory Secondary V or its equivalent. Corequisites: MUSP 129 and MUSP 170 or permission of co-ordinator or instructor) Introduction to principles of melodic and contrapuntal structure through the traditional species of counterpoint: first through fifth species in two parts; first species in three parts. Analysis and compositional modelling of repertoire in medieval-renaissance and 20th-century idioms. Notation, elementary acoustics, review of rudiments.

MUTH 111 Elementary Harmony and Analysis.

(3) (4 hours) (Prerequisite: MUTH 110) (Corequisites: MUSP 131 and MUSP 171) Diatonic chords, harmonic progression, the concept and practice of tonality, simple modulation, seventh chords and secondary dominants. Small forms from c.1700 to the early 19th Century will be analyzed. Written four-part exercises will be required.

MUTH 210 Tonal Theory and Analysis 1.

(3) (3 hours) (Prerequisites: MUTH 110 and MUTH 111) (Corequisite: MUSP 229) (Prerequisite or corequisite: MUSP 171) Compositional resources of early and mid-18th Century music. Thorough review of elementary harmonic procedure. Introduction to chromatic alteration and linear chords, and to analysis of imitative and invertible counterpoint. Analysis of common forms of the period c.1700 - 1770, including principal Baroque forms, but not including the Classical sonata.

MUTH 211 Tonal Theory and Analysis 2.

(3) (3 hours) (Prerequisite: MUTH 210) (Corequisite: MUSP 231) Compositional resources of late 18th and early 19th Century music. Analysis of forms common to the period c.1770 - 1830, including Classical sonata forms in several media. Writing of short pieces for keyboard, piano and voice, and string quartet.

MUTH 301 Modal Counterpoint 1.

(3) (3 hours) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) Polyphonic techniques of the Renaissance period studied through analysis of works by Palestrina and others and through written exercises in two to three voices.

MUTH 302 Modal Counterpoint 2.

(3) (3 hours) (Prerequisite: MUTH 301) Continuation of Modal Counterpoint I. Study of more advanced techniques through further analysis and written exercises in three or more voices.

MUTH 303 Tonal Counterpoint 1.

(3) (3 hours) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) The contrapuntal techniques of J.S. Bach studied through detailed technical analysis of his work and through written exercises in two to three parts.

MUTH 304 Tonal Counterpoint 2.

(3) (3 hours) (Prerequisite: MUTH 303) Continuation of Tonal Counterpoint 1. Further analysis and written exercises in three to four parts with special emphasis on fugal techniques.

MUTH 310 Mid and Late 19th-Century Theory and Analysis.

(3) (3 hours) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) Expanded harmonic resources of the late 19th Century (e.g., foreign modulation, chromatic harmony). Analysis of characteristic small and large forms. Development of writing and analytical skills with a goal toward perceiving how levels of musical structure interact.

MUTH 311 20th-Century Theory and Analysis.

(3) (3 hours) (Prerequisite: MUTH 310) Exploration of 20th-Century systems of pitch organization and attitudes toward counterpoint (e.g., polytonality, modal systems, neo-classical tonality, serialism, linear counterpoint, etc.). Examination of the relationship of these systems to earlier practices. Development of written and analytical skills for the purpose of

gaining insight into 20th-Century principles and techniques.

□MUTH 312 19th-Century Theory and Analysis/Jazz Majors.

(3) (3 hours) (Prerequisites: MUTH 211 or MUJZ 261 AND MUJZ 161.) (Restriction: Open only to Jazz Performance Majors) Expanded harmonic resources of the late 19th-Century (e.g., foreign modulation, chromatic harmony). Analysis of characteristic small and large forms. Development of writing and analytical skills with a goal toward perceiving how levels of musical structure interact. This course is oriented towards students with Jazz theoretical background.

□MUTH 313 20th-Century Theory and Analysis/Jazz Majors.

(3) (3 hours) (Prerequisite: MUTH 312.) (Restriction: Open only to Jazz Performance Majors) 20th-Century systems of musical organization (e.g., polytonality, modal systems, neo-classical tonality, serialism, linear counterpoint) and their relationship to earlier practices. Development of writing and analytical skills to gain insight into 20th-Century principles and techniques. This course is oriented towards students with Jazz theoretical background. Unless otherwise indicated the following courses are prerequisites to 300-, 400- and 500- level theory courses: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171.

MUTH 327 19th-Century Analysis.

(4) (2 hours) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) The analysis of representative works of the 19th Century, selected from various genres of the period encompassed by late Beethoven, Schubert, and Berlioz to Mahler and Wolf. Some preliminary work in Schenkerian analysis will be undertaken.

MUTH 327D1 (2), MUTH 327D2 (2) 19th-Century Analysis.

(Students must register for both MUTH 327D1 and MUTH 327D2.) (No credit will be given for this course unless both MUTH 327D1 and MUTH 327D2 are successfully completed in consecutive terms) (MUTH 327D1 and MUTH 327D2 together are equivalent to MUTH 327) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) The analysis of representative works of the 19th Century, selected from various genres of the period encompassed by late Beethoven, Schubert, and Berlioz to Mahler and Wolf. Some preliminary work in Schenkerian analysis will be undertaken.

□MUTH 426 Analysis of Early Music.

(3) (3 hours) (Prerequisites: MUTH 211, MUHL 184) Music from before 1700 is analyzed using recently developed techniques as well as materials gathered from treatises contemporaneous with the music. The implications of analysis for performance are considered.

MUTH 427D1 (2), MUTH 427D2 (2) 20th-Century Analysis.

(2 hours) (Students must register for both MUTH 427D1 and MUTH 427D2.) (No credit will be given for this course unless both MUTH 427D1 and MUTH 427D2 are successfully completed in consecutive terms) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) Analysis of a cross-section of 20th Century music from Debussy and Mahler to the present to: 1) provide analytical tools necessary for the understanding of pitch organization, form, rhythm, timbre, etc., in individual works; 2) introduce salient theoretical approaches pertaining to 20th Century music.

MUTH 461 Choral and Keyboard Arranging.

(2) (2 hours) (Prerequisite: MUTH 311 OR permission of instructor) An introduction to arranging techniques, and their application in settings for keyboard and choral resources. Materials include folksongs, carols, popular and originally composed melodies. The emphasis is on creative arrangement as opposed to transcription.

MUTH 462 Instrumental Arranging.

(3) (2 hours) (Prerequisites: MUTH 461 AND MUIT 201, MUIT 202, MUIT 203 and MUIT 204 OR permission of instructor) The application of the general techniques studied in MUTH 461 to woodwind, brass and string ensembles, to various of which may be added keyboard, chorus, and percussion. Major assignments are prepared and recorded in workshops, and are subsequently discussed in class.

MUTH 475 Special Project.

(3) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) For details contact the Department of Theory.

MUTH 475D1 (1.5), MUTH 475D2 (1.5) Special Project.

(Students must register for both MUTH 475D1 and MUTH 475D2.) (No credit will be given for this course unless both MUTH 475D1 and MUTH 475D2 are successfully completed in consecutive terms) (MUTH 475D1 and MUTH 475D2 together are equivalent to MUTH 475) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) For details contact the Department of Theory.

MUTH 476 Special Project.

(6) For details contact the Department of Theory.

MUTH 502 Theory Review 2.

(3) (3 hours) (For incoming graduate students who, on the basis of placement tests, are deemed deficient in tonal theory and analysis; may not be taken by students enrolled in B.Mus. programs; may not be taken as elective in M.Mus. and M.A. programs) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) Analytical approaches to larger forms of 18th- and 19th-century repertoire, particularly sonata and other forms in solo, chamber, and orchestral genres. Various analytical methods are applied to the study of advanced chromatic vocabulary and syntax, and to large-scale tonal and formal design.

MUTH 503 Theory Review 3.

(3) (3 hours) (For incoming graduate students who, on the basis of placement tests, are deemed deficient in post-tonal theory and analysis; may not be taken by students enrolled in B.Mus. programs; may not be taken as elective in M.Mus. and M.A. programs) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) Analytical approaches to 20th-century repertoire in extended tonal, atonal, twelve-tone, and later idioms. Analysis of pitch and pitch-class structure, and of rhythmic, timbral, and formal developments in 20th-century compositions.

MUTH 528 Schenkerian Techniques.

(3) (3 hours) (Prerequisite: MUTH 310 or MUCO 240 OR Corequisite: MUTH 327 OR permission of instructor.) (Restriction: Limited enrolment with preference given to students in Honours Theory) Introduction to the principles and techniques of Schenkerian analysis. Interpretation and construction of reductive graphs through the analysis of a diversified repertoire of tonal works. Comparison with traditional methods of harmonic analysis (Rameau, Riemann, etc.).

MUTH 529 Proseminar in Music Theory 1.

(3) (3 hours) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) (Corequisites: MUTH 327 and MUHL 570 OR permission of instructor. Preference given to students in Honours Theory) A survey of various topics in contemporary music theory, including experimental aesthetics, indeterminacy, information theory, linguistics, microtonality, music technology, psycho-acoustics, and rhythmic theory.

MUTH 538 Mathematical Models/Musical Analysis.

(3) (3 hours) (Prerequisites: MUTH 211 or MUCO 240 and MUSP 231 and MUSP 171) A survey of the theoretical and analytical writings from 1955 to the present, with emphasis on the following topics: a) atonal music (the works of Forte, Lewin, Rahn, Clough, Benjamin); b) twelve-tone music (Babbitt, Lewin, Mead); c) contour theory (Friedmann, West Marvin, Morris); and d) mathematical groups and transformational models (Lewin, Morris, Starr).

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

Faculty of Religious Studies

RELG-Religious Studies

Offered by: Religious Studies

RELG 201 Religions of the Ancient Near East.

(3) (Fall) Introduction to the religions of Mesopotamia, Egypt and Syria-Palestine (excluding Israelite religion) from the fourth to first millennium B.C.E. Themes that will be discussed include: gods and goddesses, divine kingship, deification of kings, temple cult, death and afterlife, magic, piety, oracles, prayer, lament, myth and epic.

RELG 202 Religion of Ancient Israel.

(3) (Winter) An examination of the religion of Ancient Israel by a study of selected texts (narratives, laws, prophetic sayings, wisdom traditions, and psalms) from the Hebrew Scriptures/Old Testament in translation.

RELG 203 Bible and Western Culture.

(3) (Fall and Winter) To provide students of the humanities with knowledge of the Bible as a tool for interpreting religious references in Western literature, art and music. Biblical stories (e.g. Creation, Exodus), key figures (e.g. David, Job, Mary), and common motifs (e.g. Holy City, Pilgrimage, Bride) are explored, then illustrated by later cultural forms.

RELG 204 Judaism, Christianity and Islam.

(3) (Winter) An introduction to the beliefs, practices, and religious institutions of these three world religions.

RELG 207 The Study of World Religions 1.

(3) (Fall and Winter) An introduction to the study of Hinduism, Buddhism, Confucianism, Taoism, Judaism, Christianity, Islam and Primal Religions.

RELG 210 Jesus of Nazareth.

(3) (Fall) A critical study of selected ancient and modern accounts of the aims and person of Jesus. Attention will be given also to the question of the historical sources and to the relationship between faith and history.

RELG 232 Eastern Orthodox Mysticism and Contemporary Literature.

(3) (Winter) A survey of Eastern Orthodox mystical thought in 19th - 20th century authors studied against the background of early texts (in translation) of the Syro-Byzantine and Russian spiritual tradition and examined in light of modern literary-religious trends.

RELG 252 Hinduism and Buddhism.

(3) (Fall) The interaction of Hinduism and Buddhism in India with special reference to the law of Karma, caste, women, ritual, death, yoga, and liberation. Determination of interpretative principles for understanding the religious psychology of Hindus and Buddhists.

RELG 253 Religions of East Asia.

(3) (Winter) Harmony with nature, society, and cosmos to be explored through the religions of the Far East (Confucianism, Taoism, Buddhism and Shinto).

RELG 254 Introduction to Sikhism.

(3) (Fall and Winter) An introduction to the historical and religious context in which the Sikh religion developed, its principal doctrines, practices and institutions and its evolution from its origins to the present, both inside and outside India.

RELG 256 Women in Judaism and Islam.

(3) (Winter) The role of women in Judaism and Islam from the point of view of institutionalized religious traditions and of women's religious subjectivity; how women's spiritual and social roles within their religious traditions are shaped by Revealed Law, Holy Text and the Authority of Interpretation. Comparative sociology of religion approach.

RELG 257D1 (3), RELG 257D2 (3) Introductory Sanskrit.

(Students must register for both RELG 257D1 and RELG 257D2.) (No credit will be given for this course unless both RELG 257D1 and RELG 257D2 are successfully completed in consecutive terms) To develop basic language and reading skills.

RELG 264 Introductory Tibetan 1.

(3) (Fall) An introduction to the language of Classical Tibetan, specifically Tibetan script and basic grammar.

RELG 265 Introductory Tibetan 2.

(3) (Winter) (Prerequisite: RELG 264) A continuation of the introduction to the language of Classical Tibetan, specifically Tibetan script and basic grammar.

RELG 266 Introductory Tamil 1.

(3) An introduction to the basic grammar and syntax of Tamil, a classical and modern language from South India. Students will acquire basic skills in reading, writing and speaking Tamil.

RELG 267 Introductory Tamil 2.

(3) (Prerequisite: RELG 266) Advanced basic grammar and syntax of Tamil, a classical and modern language from South India. Students will acquire basic skills in reading, writing and speaking Tamil.

RELG 270 Religious Ethics and the Environment.

(3) (Fall: Macdonald Campus (Ste. Anne-de-Bellevue). Winter: Downtown Campus.) Survey of issues and debates in environmental ethics. The challenge posed to human and religious values by the present ecological crisis and some ethical and religious responses to this challenge, Native American spirituality, Eastern and African religions, ecofeminism and liberation theology will be discussed, as will recent environmental debates concerning technology and large scale development projects. Lectures supplemented by guest speakers and audiovisual presentations.

RELG 271 Sexual Ethics.

(3) (Fall, Winter and Summer) A study of the social construction of sexual identity and of selected issues regarding sexual behaviour.

RELG 280 Elementary New Testament Greek.

(6) (Open to students in the Honours and Major programs in Religious Studies. Other Arts and Science students may take the course as an elective outside their faculty, in accordance with Arts and Science regulations) An introduction to the grammar and syntax of New Testament Greek.

RELG 280D1 (3), RELG 280D2 (3) Elementary New Testament Greek.

(Students must register for both RELG 280D1 and RELG 280D2.) (No credit will be given for this course unless both RELG 280D1 and RELG 280D2 are successfully completed in consecutive terms) (RELG 280D1 and RELG 280D2 together are equivalent to RELG 280) An introduction to the grammar and syntax of New Testament Greek.

RELG 285 The Gnostic Worldview.

(3) (Summer) On the basis of newly-discovered gnostic writings, forms of gnosticism will be studied in their relationship to Platonists, Jewish and Christian circles in the Graeco-Roman world. Attention to Manicheism, Mandeism and some medieval and modern representatives of the gnostic worldview.

*RELG 300 Second Temple Judaism.

(3) (Fall) A survey of Jewish history and thought from Ezra to the Mishnah; religious developments and groups, e.g., apocalypticism, Hellenistic Judaism, Essenes, Pharisees, Early Christianity and Rabbinic Judaism; and Biblical Interpretation in the Dead Sea Scrolls, Philo, Paul, Mishnah and Midrashim.

*RELG 301 Jewish Thought 200 B.C.E. - 200 C.E.

(3) (Prerequisite: RELG 300 or the consent of the instructor) The religion and literature of sectarian groupings; Apocalyptic thought; Wisdom; Dead Sea Scrolls; Josephus.

RELG 302 Old Testament Studies 1.

(3) (Fall) An introduction to the literature of Ancient Israel in English translation. Reading and interpreting representative selections.

RELG 303 Literature of Ancient Israel 2.

(3) (Winter) Approaches to historical-critical scholarship and to the historical background of the Old Testament. Part of the course will be an examination of methods of biblical analysis through the use of learning cells.

RELG 306 Rabbinic Judaism.

(3) (Fall) (Prerequisite: RELG 202 or RELG 204 or permission of instructor) (Restriction: Not open to students who have taken RELG 206) The beliefs, practices and religious institutions of the Jews from ancient times to the present.

★RELG 307 Bible, Quran & Interpretations.

(3) (Winter) Jewish, Christian and Muslim scriptures as responses to earlier sacred texts and in the light of post-scriptural interpretations. The debates, polemics, interpretative strategies, and intellectual and spiritual sharing produced by these three religions in accepting, explaining, amplifying, modifying, and selectively rejecting their and other sacred scriptures.

RELG 308 Ancient Bible Translations.

(3) (Prerequisites: One of RELG 202, 302 or JWST 211, 327, 328, 329, 330.) Canonical changes, literary alterations, translation techniques, hermeneutical strategies, variant readings, and textual histories of the books of the Hebrew Bible as evidenced in the ancient versions, primarily the Septuagint. (No knowledge of Greek or Hebrew is required.)

RELG 311 New Testament Studies 1.

(3) (Fall) An introduction to the interpretation of the New Testament.

RELG 312 New Testament Studies 2.

(3) (Winter) An introduction to the critical study of the Gospels.

RELG 313 Topics in Biblical Studies 1.

(3) (Fall, Winter and Summer) .

RELG 314 Topics in Biblical Studies 2.

(3) Topics of current interest in or between world religions.

RELG 315 Special Topics in Religion 1.

(3) (Prerequisites: RELG 204 or RELG 252 or RELG 253) (Restriction: Not open to students who have taken RELG 496) Topics of current interest in or between world religions.

RELG 316 New Religious Movements.

(3) (Prerequisites: RELG 204 or RELG 252 or RELG 253) A critical analysis of the origins, character and influence of one or more religious movements of the 19th C. and beyond, with special attention to their religious principles and social function.

RELG 317 Special Topics in Religion 2.

(3) (Prerequisites: RELG 204 or RELG 252 or RELG 253.) (Restriction: Not open to students who have taken RELG 496.) Topics of current interest in, or between, world religions.

RELG 318 Special Topics in Religion 3.

(3) (Summer) (Prerequisites: RELG 204 or RELG 252 or RELG 253.) (Restriction: Not open to students who have taken RELG 496.) Topics of current interest in, or between, world religions.

RELG 319 Special Topics in Religion 4.

(3) (Prerequisites: RELG 204 or RELG 252 or RELG 253) (Restriction: Not open to students who have taken RELG 496) Topics of current interest in, or between, world religions.

RELG 322 The Church in History 1.

(3) (Fall) A survey of major developments in the history of Christianity from the end of the apostolic age to 1500. Selected readings from primary and secondary sources will be used.

RELG 323 The Church in History 2.

(3) (Winter) Significant events and persons in the history of western Christianity from 1500 - 1948 will be studied. Attention is focused on mainline denominations in Britain and continental Europe.

RELG 324 Armenian Apostolic Tradition.

(3) (Prerequisite: RELG 322) History of the Armenian Orthodox Apostolic Church from its foundation to the present: apostolic beginnings; St Gregory the Illuminator and the establishment of Christianity in Armenia in the fourth century; development of doctrine, ecumenical discussions; theology, mystical thought, liturgy, sacred art and architecture.

RELG 325 Varieties Religious Experience in Christianity.

(3) (Summer)

★RELG 326 Ancient Christian Church AD54 - AD604.

(3) (Fall) (Restriction: Not open to students who have taken RELG 322 or RELG 323) Significant persons and events from Nero's reign to the papacy of Gregory I. Attention to major Christian centres within the Roman Empire before Constantine, to the development of the Eastern Byzantine Church, and to the growth of the papacy in the West. Leading Christian theologians and thinkers will be studied.

RELG 330 Reformed Theology.

(3) (Fall) Selected topics illustrating the Reformers' theological agenda, with special reference to Luther, Zwingli and Calvin.

RELG 333 Principles of Christian Theology 1.

(3) (Winter) Course will be held at Montreal Diocesan College, 3473 University St. An introduction to the central categories of Christian theology. The course will include discussion of the nature of theology, and of all the primary areas of doctrine (Theology, Christology, Pneumatology, Anthropology, Ecclesiology, Eschatology). Throughout, a conscious attempt will be made to reflect on the Christian faith in the light of the contemporary apologetic situation.

RELG 334 The Christian Faith.

(3) (Fall) (Prerequisites: One of RELG 202, 204, 210, 302, 311, 312 or the equivalent.) A study of core Christian ideas and their relation to doxology, morality, history and culture.

RELG 336 Contemporary Theological Issues.

(3) (Fall, Winter and Summer) (Prerequisite: RELG 320 or RELG 338 or permission of instructor)

RELG 337 Themes in Buddhist Studies.

(3) (Fall and Winter) (Prerequisite: RELG 252 or RELG 253 or permission of instructor) A focussed examination of major themes within a branch of Theravada, Mahayana or Vajrayana Buddhism. Emphasis will be placed on both the close study of primary texts (in translation) in historical context and the application of recent methods to fundamental Buddhist concepts, ritual practices and community institutions.

RELG 338 Women and the Christian Tradition.

(3) (Core course for the Women's Studies Minor program) Survey of women's involvement in the Christian tradition. Topics include feminist interpretation of scripture, ideas of virginity, marriage and motherhood, mysticism, asceticisms, European witchhunts, contemporary women's liberation theories.

RELG 339 Gender & Sexuality in Buddhism.

(3) (Core course for the Women's Studies Minor program) (Prerequisite: RELG 252 or permission of the instructor) Religious perspectives on the body, gender and sexual activity in Buddhist cultures.

RELG 340 Religion and the Sciences.

(3) (Fall and Summer) Philosophies of science and of religion have created a more positive dialogue on questions of method, symbolism and rationality. Examines key issues (e.g. creation and evolution; objectivity and involvement; determinism and freedom) raised by natural and social sciences, and various possible solutions.

RELG 341 Introduction: Philosophy of Religion.

(3) (Fall) Introduction to the subject. Faith and reason, theistic arguments, values and destiny, the problem of evil, religious language.

★RELG 342 Theravada Buddhist Literature.

(3) (Fall) (Prerequisite: RELG 252 or permission of instructor) The evolution of doctrines, practices and institutions explored through critical survey of Pali Canon (in translation), focusing on the dialogues of Gotama Buddha and his community during its first five centuries and on the historical

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

accounts contained in the codes of monastic discipline.

RELG 343 Topics: Philosophy of Religion.

(3) (Fall and Summer)

RELG 344 Mahayana Buddhism.

(3) (Fall) (Prerequisites: RELG 252 or RELG 253.)

Investigation of Mahayana schools of thought based on reading of key sutras and commentarial literature.

RELG 345 Religion and the Arts 1.

(3) (Fall, Winter and Summer) Topics of current interest in Religion and the Arts.

RELG 346 Myth and Symbol in Hindu and Buddhist Art.

(3)

RELG 347 Topics in Religion and the Arts.

(3) (Winter)

★**RELG 348 Classical Hinduism.**

(3) (Fall) (Prerequisite: RELG 252 or permission of the instructor) The study of classical Hindu values in historical context with reference to the goals and stages of life, traditional Hindu laws, ethics (including biomedical ethics), axiology and moral dilemmas in the Epics, gender differences, notions of orthodoxy, and the expansion of Hinduism.

RELG 350 Bhakti Hinduism.

(3) (Fall) (Prerequisite: RELG 252 or permission of the instructor) Foundation of theism in the Upanisads, Epics, Gita and puranas; image worship and temple religion in the Agamas; Vaisnavism, Saivism, Saktism, and competition with Buddhism and Jainism; the relation of Bhakti and Tantra; interaction of Hinduism, Islam, and Sikhism.

★**RELG 352 Japanese Religions.**

(3) (Winter) (Prerequisite: RELG 253 or permission of instructor) A study of early Shinto mythology, Shinto-Buddhist syncretism, Neo-Confucianism and its influence upon the resurgence of Shinto during the Tokugawa period, folk religion and the New Religions.

RELG 353 Gandhi: His Life and Thought.

(3) (Fall, Winter and Summer)

RELG 354 Chinese Religions.

(3) (Fall) This course studies the Confucian classics, philosophical and religious Taoism, and Neo-Confucianism and also examines the syncretism between the Chinese religions and Indian Buddhism.

RELG 355 Religion and the Arts 2.

(3) (Summer) Topics of current interest in Religion and the Arts.

RELG 356 Gender & Sexuality in Hinduism.

(3) (Fall and Summer) (Prerequisite: RELG 252 or Permission of the instructor.) Religious perspectives on the body, gender and sexual activity in Hindu cultures. Topics include: dharma and sexual practice; female sexuality; Bhakti and Tantra; same-sex relations; hijras; eroticism in the literary, visual, and performing arts; colonialism, Hindu nationalism, and the politics of gender.

RELG 357D1 (3), RELG 357D2 (3) Sanskrit 2.

(Prerequisite: RELG 257 or permission of the instructor) (Students must register for both RELG 357D1 and RELG 357D2.) (No credit will be given for this course unless both RELG 357D1 and RELG 357D2 are successfully completed in consecutive terms) Advanced grammar and vocabulary with readings in epic and similar texts.

RELG 361 Religious Behaviour.

(3) (Winter) A study of the psychological origins of religion, of some aspects of the religious life (e.g. prayer, conversion, mystical experiences), and of some contemporary religious phenomena (e.g. marginal religious groups, the charismatic movement, glossolalia). The views of Freud and Jung are also considered.

RELG 363 Religion and the Arts in India.

(3) (Winter) Aspects of the arts in India (dance, music, drama, novels, film, sculpture and/or painting) as they relate to Hinduism.

RELG 364 Intermediate Tibetan 1.

(3) (Fall) (Prerequisite: RELG 265 or permission of the instructor.) Advanced Tibetan grammar, and translation of selected Tibetan texts.

RELG 365 Intermediate Tibetan 2.

(3) (Winter) (Prerequisite: RELG 364 or permission of the instructor.) Continuation of advanced Tibetan grammar and translation of selected Tibetan texts.

RELG 370 Human Condition.

(3) (Winter) Explores social justice as a key aspect of religious reforms in the 20th century; social justice, liberation theology and the human rights movement; human rights in the scriptures of the major world religions; perspectives on religious liberty and conscientious objection; religious critiques of the human rights movement.

RELG 371 Ethics of Violence/Non-Violence.

(3) (Winter) Forms of violence and the reaction of religious groups are assessed both for their effectiveness and for their fidelity to their professed beliefs. Different traditions, ranging from the wholesale adoption of violent methods (e.g. the Crusades) to repudiation (e.g. Gandhi; the Peace Churches).

RELG 372 Hindu Goddesses.

(3) (Fall) The mythology, theology, soteriology, history, ritual, and texts of the goddess-centred (Sakta) branches of Hinduism.

RELG 373 Topics in Christian Ethics.

(3) (Fall:)

RELG 374 Topics: Philosophy of Religion.

(3)

RELG 375 Religion and Society.

(3) (Restriction: U2 and U3 students) A study of the sociology of religion in the light of the contemporary debates regarding secularization, the relation of religion and politics, and the emergence of new religious movements.

RELG 376 Religious Ethics.

(3) A discussion of ethical theory will provide the background for an analysis of the relationship between religious world views and moral reason. Attention will be given to the way in which the dominant religious traditions view the exemplars of religious virtue, and to how the virtues exemplified are related to and justified by the faith tradition in which they operate.

RELG 377 Religious Controversies.

(3) (Fall) A comparative survey of types and topics of argumentation developed in the literature of controversy. Texts discussed include disputations, missionary sermons and polemical treatises.

RELG 381 Advanced New Testament Greek.

(3) (Fall) (Prerequisite: RELG 280 or equivalent, with a minimum grade of 70%) A review of grammar and syntax with an emphasis on rapid reading of sections chosen from different parts of the New Testament.

RELG 389 Introduction to the Bahai Faith.

(3) (Summer) A study of the Bahá'í Faith with an emphasis on its sacred practices, philosophical principles, practical ethics, history (including historical precedents), administrative structure, sacred texts, and theology of others regions.

RELG 390 Elementary Biblical Hebrew.

(6) (Summer) An introduction to the grammar and syntax of Biblical Hebrew. Emphasis is placed on both the oral and the written language.

RELG 390D1 (3), RELG 390D2 (3) Elementary Biblical Hebrew.

(Students must register for both RELG 390D1 and RELG 390D2.) (No credit will be given for this course unless both RELG 390D1 and RELG 390D2 are successfully completed in consecutive terms) An introduction to the grammar and syntax of Biblical Hebrew. Emphasis is placed on both the oral and the written language.

★**RELG 399 Christian Spirituality.**

(3) (Winter) Seminar exploring the phenomena of internal religious experience in their relation to received formularies of Christian thought and practice.

RELG 404 Post Exilic Biblical Literature.

(3) (Fall)

★**RELG 407 The Writings.**

(3) (Prerequisites: RELG 202, or RELG 302 and RELG 303, or equivalent) A study of Job with some attention to Proverbs and Ecclesiastes (in English translation).

RELG 408 The Prophets.

(3) (Fall) (Prerequisites: RELG 202, or RELG 302 and RELG 303) A study of significant texts selected from the prophetic tradition in the Old Testament.

RELG 411 New Testament Exegesis.

(3) (Winter) (Prerequisites: RELG 311 and RELG 312) A seminar in exegesis on the basis of representative passages chosen from different parts of the New Testament in English.

RELG 420 Canadian Church History.

(3) (Winter) (Prerequisite: RELG 323) A survey of the major Christian traditions in Canada from the settlement of New France to the present. Lectures and seminars with use, where possible, of primary source materials.

***RELG 423 Reformation Thought.**

(3) (Fall) An examination of issues and persons in Europe and the British Isles that contributed to ecclesiastical and social change during the 16th and early 17th centuries.

RELG 434 Principles of Christian Theology 2.

(3) (Fall) (Prerequisite: RELG 333) Course will be held at the Presbyterian College, 3495 University St. This course is a continuation of RELG 333.

RELG 438 Topics in Jewish Theology.

(3) (Winter) A topic in Jewish Theology will be studied from a variety of approaches, including historical sociological and phenomenological.

RELG 439 Religious Dialogues.

(3) (Winter) (Prerequisite: RELG 204 or RELG 207.) A comparative survey of the literature of Western religious dialogues, addressing the history and diversity of debates concerning religion. Texts to be discussed include dialogues by Plato, Cicero, Augustine, Boethius, Anselm, Cusanus, Leo Hebraeus, Erasmus, Thomas More, Jean Bodin, Leibniz and Hume.

RELG 442 Pure Land Buddhism.

(3) (Fall) (Prerequisite: RELG 252 and RELG 253, or RELG 342 or RELG 344, or permission of instructor) The concept of Buddha Countries and Pure Lands in Buddhism, the Western Pure Land of Amida (Jodokyo) and its basic scriptures, the Chinese Buddhist schools, the introduction to Japan and the foundation of the Pure Land school by Honen, the Pure Land School of Shinran and its development, and the other Pure Land related schools.

***RELG 451 Zen: Maxims and Methods.**

(3) (Fall) (Prerequisites: RELG 252, RELG 342 or RELG 344, or permission of instructor) Through the reading of such key Zen writings as The Platform Sutra and selections from Zen Masters Chinul of Korea and Dōgen of Japan, an attempt will be made to relate Zen anecdote to meditational practice.

RELG 452 East Asian Buddhism.

(3) (Winter) (Prerequisite: RELG 253 or RELG 344) Topic for 2000: Precept and Ritual in East Asian Buddhism and Confucianism.

RELG 453 Vajrayana Buddhism.

(3) (Prerequisite: RELG 344.) A study of the history, philosophy and practices of Vajrayana Buddhism.

RELG 454 Modern Hindu Thought.

(3) (Prerequisite: RELG 252) A study of the developments in religious thought with special reference to such thinkers as Ram Mohan Roy, Dayananda Saraswati, Ramakrishna, Vivekananda, Gandhi, Tilak, Aurobindo, and Radhakrishnan.

◆RELG 456 Theories of Religion.

(3) (Fall and Winter) (Restriction: For Religious Studies Majors and Honours students or with permission of the Chair of the Religious Studies B.A. Committee) The history of the academic study of religion from its beginnings in the 19th century until the present. Key texts by figures such as Max Muller, Sigmund Freud, Emile Durkheim, Max Weber, Mircea Eliade,

Claude Levi-Strauss and Clifford Geertz will be studied.

RELG 457D1 (3), RELG 457D2 (3) Advanced Sanskrit.

(Prerequisite: RELG 357 or permission of instructor) (Students must register for both RELG 457D1 and RELG 457D2.) (No credit will be given for this course unless both RELG 457D1 and RELG 457D2 are successfully completed in consecutive terms) Critical reading of selected Sanskrit texts.

RELG 464 Advanced Tibetan 1.

(3) (Fall) (Prerequisite: RELG 365 or permission of instructor.) Translation of specially selected Tibetan texts.

RELG 465 Advanced Tibetan 2.

(3) (Winter) (Prerequisite: RELG 464 or permission of the instructor.) Continuation of translation of specially selected Tibetan texts.

RELG 470 Theological Ethics.

(3) (Fall) (Prerequisite: RELG 341 or RELG 333) A study of the biblical and theological foundations of Christian ethics, and the nature, application and relevance of the Christian norm.

RELG 479 Christianity in Global Perspective.

(3) (Winter) (Prerequisites: RELG 333 and RELG 334.) This course examines traditional Western Christianity, aiming at theological integration in light of religious and cultural pluralism and with reference to issues of world wide concern (e.g. gender, ethnicity, poverty, work, environment).

RELG 482 Exegesis of Greek New Testament.

(3) (Winter) (Prerequisite: RELG 381 or equivalent, and RELG 311, RELG 312) An intensive seminar in exegesis on the basis of representative passages chosen from different parts of the New Testament.

RELG 491 Hebrew Texts.

(3) (Fall) Translation and exegesis of selected texts.

RELG 492 Hebrew Texts.

(3) (Winter) Translation and exegesis of selected texts.

RELG 494 B.Th. Honours Seminar 1.

(3) (Fall) (Prerequisite: permission of the Chair of the B.Th. Committee) Open to students in the final year of B.Th. Honours. Provides opportunity for advanced development of research interests and methods in the student's area of Honours specialization.

RELG 495 B.Th. Honours Seminar 2.

(3) (Winter) (Prerequisite: RELG 494 and permission of the Chair of the B.Th. Committee) Open to students in the final year of B.Th. Honours. Provides further opportunity for advanced development of research interests and methods in the student's area of Honours specialization.

RELG 496 Special Studies.

(3) (Fall and Winter)

RELG 497 Research Seminar.

(3) (Fall and Winter) (Students wishing to take this course must have the permission of the Religious Studies Adviser)

RELG 498 Special Studies.

(3) (Fall and Winter) (Prerequisite: permission of the Chair of the B.Th. Committee)

RELG 501 Honours Seminar.

(3) (Summer)

RELG 502 Greco-Roman Judaism.

(3) (Prerequisite: Permission of instructor.) The religion and literature of wisdom and apocalyptic traditions, the Dead Sea Scrolls, Philo and Josephus, with special attention to the Jewish matrix of Early Christianity.

RELG 520 Biblical Theology.

(3) (Fall and Winter) (Restriction: Limited to S.T.M. students.) Tutorials and guided reading in the field of Biblical Theology.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

RELG 530 Church History.

(3) (Fall and Winter) Limited to S.T.M. students. Tutorials and guided reading in the field of church history.

RELG 531 Christian Theology.

(3) (Fall and Winter) Limited to S.T.M. studies. Tutorials and guided reading in the field of Christian Theology.

RELG 532 History of Christian Thought 1.

(3) (Prerequisite: At least six (6) credits at the 300-level in Christianity or the Christian Bible.) (Restriction: Not open to students who have taken RELG 320) The development of Christian theology in the Patristic and Medieval periods. Focus on the controversial development of Christian doctrines and disciplines through intensive exposure to primary texts.

RELG 533 History of Christian Thought 2.

(3) (Prerequisite: At least six (6) credits at the 300-level in Christianity or the Christian Bible.) (Restriction: Not open to students who have taken RELG 327) The development of Christian theology in the Reformation, Post Reformation and Modern periods through intensive exposure to primary texts.

RELG 540 Philosophy of Religion.

(3) (Winter) (Restriction: Limited to S.T.M. students.) Tutorials and guided reading in the field of Philosophy of Religion.

RELG 541 Theological Ethics.

(3) (Fall and Winter) (Restriction: Limited to S.T.M. students.) Tutorials and guided reading in the field of Theological Ethics.

RELG 545 Ramayana: Multiple Lives.

(3) (Prerequisite: RELG 252 Hinduism & Buddhism) Focus on the Rama story in South Asia. Exploration of the multiple versions of the narrative from classical Sanskrit textual versions, to rural vernacular retellings, to contemporary TV versions, and examination of the various religious, social, cultural and political significations of the narrative in these contexts.

RELG 546 Indian Philosophy.

(3) (Fall) (Prerequisites: 6 credits in Indian religions, philosophy of religion, philosophy, or permission of the instructor) Introduction to the orthodox systems of Hindu Philosophy leading up to Vedanta i.e. Nyaya, Vaisesika, Sankhya, Yoga and Mimamsa, which will include discussion of such topics as: grounds for belief and disbelief in God, the nature of revelation, means of knowledge, etc.

RELG 547 Special Topics in Hinduism.

(3) (Prerequisites: 6 credits in Indian religions, philosophy of religion, philosophy, or permission of the instructor) A research-oriented seminar dealing with topics in Hindu studies.

RELG 548 Indian Buddhist Philosophy.

(3) (Prerequisites: RELG 252 or RELG 342 or permission of instructor) The rise of buddhist schools of philosophy, especially the Theravada and Sauntranika, as an attempt to systematize the canonical teachings and defend Buddhism against its critics.

★RELG 549 Japanese Buddhist Philosophy.

(3) (Prerequisites: RELG 344, or RELG 451, or permission of the instructor.) (Note: Taught in alternate years.) Major figures of the Kyoto School of Buddhist philosophy (Nishida, Tanabe, Nishitani), emphasizing their intellectual debts to both modern European philosophy (Hegel, Nietzsche, Heidegger) and Mahayana Buddhism (Zen and Pure Land Buddhism).

RELG 550 Comparative Religion.

(3) (Fall, Winter and Summer) Tutorials and guided reading in the field of Comparative Religion.

RELG 551 Special Topics in Buddhism.

(3) (Prerequisite: RELG 344 or Permission of Instructor.) A research-oriented seminar dealing with topics in Buddhist studies.

RELG 552 Advaita Vedanta.

(3) (Fall) (Prerequisites: 6 credits in Indian religions) The relation of Nyaya-Vaisesika and Mimamsa to Kevaladvaita with concentration on Sankara's Brahmasutrabhasya, Pada 1 and 2.

RELG 553 Religions of South India 1.

(3) (Winter) (Prerequisite: 6 credits in Indian religions) Topics include: definitions of Tamil identity, the relation of akam to bhakti poetry, the theology of the Alvars and Nayanmars,

inter-religious and sectarian competition, the motif of pilgrimage, questions of caste and women.

★RELG 554 Religions of South India 2.

(3) (Winter) (Prerequisite: RELG 553) Analysis of the following: sampradaya; ubhayavedanta; comparison of Visistadvaita and Saiva Siddhanta with reference to selected themes that illustrate the Tamil contribution; the relationship of theology to the sociology of knowledge in Tamilnad.

RELG 555 Honours Seminar.

(3) (Winter) (Restriction: For Religious Studies Honours students or with permission of the Chair of the Religious Studies B.A. Committee) Current trends in the study of religion, including the approaches of critical theory, feminism, post-modernism, and post-colonialism.

RELG 556 Issues in Buddhist Studies.

(3) (Fall and Winter) (Prerequisite: permission of instructor) A graduate seminar taught by the Numata Visiting Professor on critical issues in contemporary Buddhist Studies. Emphasis will be placed on the intensive application of different methods - philosophical, philosophical or social scientific - to some area of modern Buddhist research.

RELG 557 Asian Ethical Systems.

(3) (Fall) (Prerequisites: RELG 252, RELG 253, or permission of instructor) An examination of the ethical ideals that have evolved in Asia with reference to Hinduism, Buddhism, Confucianism, and Taoism. Issues to be explored include competing views of the individual's duties to social and political institutions, the individual's right to non-conformity, the relationship between morality and metaphysics, and a comparison of moral principles in theistic and atheistic contexts.

RELG 558 Indian Tantric Traditions.

(3) (Winter) (Prerequisites: Any two 300-level courses in Hinduism or Buddhism.) Study of esoteric Tantric culture (philosophy, ritual, pilgrimage, art, and iconography) with focus on either Hindu or Buddhist Tantric traditions.

RELG 571 Religion and Medicine.

(3) (Fall) A study of the resources of major world religions (Judaism, Christianity, Islam, Hinduism, Buddhism, Taoism and Shinto) for thinking about ethical issues related to modern medicine, e.g., health, illness, suffering; new reproductive technologies; genetic engineering; euthanasia; palliative care; animal research; transplants.

RELG 583 Hellenistic Religious Texts.

(3) (Prerequisite: RELG 482 or permission of the instructor.) Translation and discussion of Hellenistic Greek texts pertaining to the study of topics in Early Christianity and Greco-Roman religions.

Faculty of Science

ANAT-Anatomy & Cell Biology

Offered by: Anatomy and Cell Biology

ANAT 205 Astrobiology.

(3) (Winter) (3 hours lecture) (Restriction: Not open to students who have taken or are taking EPSC 205) Astrobiology is the search for the origin, evolution and destiny of life in the universe. The course will provide insight into the formation and evolution of habitable worlds, the evolution of life and the biogeochemical cycles in the Earth's oceans and atmosphere, and the potential for biological evolution beyond an organism's planet of origin.

ANAT 212 Molecular Mechanisms of Cell Function.

(3) (Winter) (Prerequisite: BIOL 200) (Restriction: This course is also listed as BIOC 212. Not open to students who have taken or are taking BIOC 212 or BIOL 201) An introductory course describing the biochemistry and molecular biology of selected key functions of animal cells, including: gene expression; mitochondrial production of metabolic energy; cellular communication with the extra-cellular environment; and regulation of cell division.

ANAT 214 Systemic Human Anatomy.

(3) (Fall) (2 hours lectures, 2 hours practical tutorial) (Restriction: Open to students in biological sciences) (Recommended: to U2 students in Anatomy and Cell Biology) Introduction to the gross anatomy of the various organ systems of head, neck and trunk regions of the human body. Practical tutorials include studies of prepared specimens, use of the anatomical museum and audio-visual materials. This course is limited in size. Selection of students (other than those requiring the course as part of their program) will be made after the first lecture. (Admission is guaranteed for all students enrolled in programs in the Department of Anatomy and Cell Biology for which ANAT 214 is a required course.

ANAT 261 Introduction to Dynamic Histology.

(4) (Fall) (3 hours lectures, 2 hours laboratory) (Must be taken in U1 by students in Anatomy and Cell Biology programs) (Restriction: Open to students in biological sciences and others by special permission) An introduction to light and electron microscopic anatomy in which cell and tissue dynamics will be explored in the principal tissues and organs of the body.

ANAT 262 Introductory Molecular and Cell Biology.

(3) (Winter) (3 hours lecture) (Corequisites: ANAT 212 or BIOC 212 or BIOL 201) (Restriction: Open to students in biological sciences and others by special permission) The architectural, functional and temporal continuity of organelles and the cytoskeleton of mammalian cells is introduced as well as their functional integration in the phenomena of exocytosis, endocytosis, protein trafficking and cell motility and adhesion.

ANAT 315 Anatomy/Limbs and Back.

(4) (Fall) (2 hours lectures, 4 hours laboratory) (Restriction: Open to students in Physical and Occupational Therapy; and to Honours students in Anatomy and Cell Biology, with permission of instructor.) The regional human gross anatomy of the skeleton, joints, muscles and neurovascular structures of the limbs and back.

ANAT 316 Human Visceral Anatomy.

(2) (Winter) (2 hour lecture, 2 hours laboratory) (Prerequisite: ANAT 315) (Restriction: Open to students in Physical and Occupational Therapy, and to others by special permission) The gross anatomy of the various organ systems of the human body, with emphasis on those aspects of greatest relevance to physical and occupational therapists. Laboratories include studies of

prepared specimens, use of the anatomical museum and audiovisual materials.

ANAT 321 Circuitry of the Human Brain.

(3) (Fall) (2 hour lectures, 2 hours laboratory/tutorial) (Prerequisite: at least one 3-credit university level course in biology or psychology) (Restriction: Open to U3 students only, except for P&OT students.) This course explores the functional organization of the human brain and spinal cord. The course focuses on how neuronal systems are designed to subserve specific motor, sensory, and cognitive operations.

ANAT 322 Neuroendocrinology.

(3) (Winter) (2 hours lectures, 1 hour conference) (Prerequisite: ANAT 261.) A lecture course describing brain-endocrine relationships. Emphasis on modern experimental evidence and conceptual developments within the field.

ANAT 365 Cellular Trafficking.

(3) (Fall) (2 hours lectures, 2 hours conference) (Prerequisites: ANAT 261, BIOL 200, BIOL 201 or by special permission.) An intensive study of the processes of protein secretion and cell membrane biogenesis. Emphasis on morphological aspects of the above processes, and on the major techniques which have provided experimental evidence, namely, subcellular fractionation, cytochemistry and quantitative electron microscope radioautography.

ANAT 381 Basis of Embryology.

(3) (Fall) (3 hour lectures) (Prerequisites: ANAT 261, BIOL 202 or permission of instructor) The basic processes of reproduction and embryonic development, such as molecular signaling; cell-cell interaction; differentiation; cell fate determination; genetic and epigenetic control of embryonic development.

ANAT 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

● ANAT 432 Honours Research Project.

(9) (Summer) (Restriction: For students in the Honours program.) (Course opened to all Anatomy & Cell Biology students and other BSc students by special permission only.) Supervised honours research project in biological sciences.

ANAT 432D1 (4.5), ANAT 432D2 (4.5) Honours Research Project.

(Restriction: For students in the Honours program.) (Course opened to all Anatomy & Cell Biology students and other BSc students by special permission only.) (Students must register for both ANAT 432D1 and ANAT 432D2.) (No credit will be given for this course unless both ANAT 432D1 and ANAT 432D2 are successfully completed in consecutive terms) (ANAT 432D1 and ANAT 432D2 together are equivalent to ANAT 432) Supervised honours research project in biological sciences.

ANAT 458 Membranes and Cellular Signaling.

(3) (Winter) (3 hours lectures) (Prerequisites: BIOC 212 or ANAT 212 or BIOL 201, ANAT 262, one of PHGY 201, PHGY 209 or BIOL 205; one of BIOC 312 or ANAT

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

365; BIOC 311 recommended) (Restriction: This course is also listed as BIOC 458. Not open to students who are taking or who have taken BIOC 458) An integrated treatment of the properties of biological membranes and of intracellular signaling, including the major role that membranes play in transducing and integrating cellular regulatory signals. Biological membrane organization and dynamics; membrane transport; membrane receptors and their associated effectors; mechanisms of regulation of cell growth, morphology, differentiation and death.

ANAT 499 Supervised Library Research.

(1) (Prerequisite: ANAT 262, BIOL 202, or by permission of the instructor.) Supervised exploration of the current scientific literature as it pertains to the advanced field of anatomy and cell biology.

ANAT 541 Cell and Molecular Biology of Aging.

(3) (Winter) (2 hours lecture, 2 hours conference) (Prerequisites: ANAT 212 (or BIOC 212 or BIOL 201), ANAT 261, ANAT 262, or permission of instructor.) (Corequisite: BIOL 301.) Complex aging process, including theories and mechanisms of aging, animal model systems used to study aging, age-dependent diseases, for example, Alzheimer's, osteoporosis, and cancer, and age-related diseases, for example, Werner's syndrome and dyskeratosis congenita.

ATOC-Atmospheric & Oceanic Sciences

Offered by: Atmospheric & Oceanic Sciences

ATOC 104 The Earth System.

(3) (Winter) (Restriction: Not open to students who are taking or have taken EPSC 104 or GEOG 104.) Earth system science examines the complex interactions among the atmosphere, biosphere, geosphere and hydrosphere. It focuses on physical, chemical, and biological processes that extend over spatial scales ranging from microns to the size of planetary orbits, and spans time scales from fractions of a second to billions of years.

ATOC 210 Introduction to Atmospheric Science.

(3) (Fall and Winter) (3 hours lectures) (Restriction: Open to all students except those who have taken ATOC 214) A survey of the Earth's atmosphere, weather and climate system. Topics include the fundamental processes that determine interactions between the atmosphere, ocean and biosphere; anthropogenic effects such as global warming, the ozone hole and acid rain; a perspective on future climate change.

ATOC 214 Introduction: Physics of the Atmosphere.

(3) (Fall) (3 hours lectures) (Prerequisite: CEGEP Physics) An introduction to physical meteorology designed for students in the physical sciences. Topics include: composition of the atmosphere; heat transfer; the upper atmosphere; atmospheric optics; formation of clouds and precipitation; instability; adiabatic charts.

ATOC 215 Oceans, Weather and Climate.

(3) (Winter) (3 hours lectures) (Prerequisite: CEGEP Physics or permission of the instructor) Laws of motion, geostrophic wind, gradient wind. General circulation of the atmosphere and oceans, local circulation features. Air-sea interaction, including hurricanes and sea-ice formation, extra-tropical weather systems and fronts, role of the atmosphere and oceans in climate.

★ ATOC 219 Introduction to Atmospheric Chemistry.

(3) (Winter) (3 hours lectures) (Prerequisite: CEGEP DEC in Science or permission of instructor) (Restriction: Not open to students who have taken CHEM 219, CHEM 419 or ATOC 419) (Offered in odd years. Students should register in CHEM 219 in even years) An introduction to the basic topics in atmospheric chemistry. The fundamentals of the chemical composition of the atmosphere and its chemical reactions. Selected topics such as smog chamber, acid rain, and ozone hole will be examined.

ATOC 220 Introduction to Oceanic Sciences.

(3) (Fall and Winter) (3 hours lectures) (Restriction: Not open to students who have taken EPSC 360 or EPSC 560) Air-sea interaction; oceanic properties; global climate change, carbon cycle; polar oceans, sea ice, polynyas; El Niño; remote sensing

of oceans; physical control of biological processes in the sea.

ATOC 230 Climate and Climate Change.

(3) (3 hours lectures) The atmosphere, ocean and sea-ice distribution characteristic of the current climate, as seen through observational data and computer model results. Physics of naturally occurring variability on time scales of months to years, such as El Niño. Global circulation models of the atmosphere, ocean and coupled atmosphere-ocean system, and global warming simulations.

ATOC 240 Science of Storms.

(3) (Winter) Physical processes associated with severe and hazardous weather affecting the Earth. Topics are taught at a fundamental level, without equations, to provide a complete and up-to-date understanding of such extreme events as blizzards, ice storms, tornadoes, hurricanes, floods and droughts.

ATOC 250 Natural Disasters.

(3) (Fall) (3 hours lectures) (Restriction: Not open to students who have taken or are taking EPSC 250) This course examines the science behind different types of disasters and our ability or inability to control and predict such events. From this course the student will gain an appreciation of natural disasters beyond the newspaper headlines, and will better understand how the effects of disasters can be reduced.

ATOC 308 Principles of Remote Sensing.

(3) (Fall) (3 hours lectures) (Restriction: Not open to students who have taken or are taking GEOG 308) A conceptual view of remote sensing and the underlying physical principles are presented. Ground-based and satellite systems and various components of the acoustic and electromagnetic spectrum - from visible to microwave - are discussed. Substantial emphasis is devoted to the application of remote sensed data in geography and atmospheric sciences.

ATOC 309 Weather Radars and Satellites.

(3) (Winter) (3 hours lecture) (Prerequisite: ATOC 215) Basic notions of radiative transfer and applications of satellite and radar data to mesoscale and synoptic-scale systems are discussed. Emphasis will be put on the contribution of remote sensing to atmospheric and oceanic sciences.

ATOC 315 Water in the Atmosphere.

(3) (Fall) (3 hours lectures) (Prerequisite: ATOC 214) Global distribution of water in the atmosphere. Moist processes. Global and mesoscale precipitation systems. Quantitative forecasting of precipitation. Extreme precipitation events. Large-scale influences. Precipitation modification.

ATOC 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

ATOC 400 Indep Study of an Env Problem.

(3) (Restriction: students taking a joint program in Atmospheric and Environmental Science or with permission of Department.) A reading or research project, conducted under the guidance of an instructor, on the meteorological processes related to an environmental problem. A written report will be required. Students should consult the departmental undergraduate student adviser for the names of available supervisors.

ATOC 412 Atmospheric Dynamics.

(3) (Prerequisites: MATH 314, MATH 315.) Equations of motion in rotating coordinates, elementary applications, circulation and vorticity, the planetary boundary layer, synoptic scale motions, Rossby waves and inertial oscillations.

★ ATOC 419 Advances in Chemistry of Atmosphere.

(3) (Winter) (3 hours lectures) (Prerequisites: CHEM 243, and CHEM 263 or CHEM 213 and CHEM 273, MATH 222 and MATH 315 (or equivalents) or permission of instructor.) (Restriction: Not open to students who have taken CHEM 419, CHEM 619, and ATOC 619) (Offered in odd years. Students should register in CHEM 419 in even years) Selected areas of atmospheric chemistry from field and laboratory to theoretical modelling are examined. The principles of atmospheric reactions (gas, liquid and heterogeneous phases in aerosols and clouds) and issues related to chemical global change will be explored.

ATOC 480 Honours Research Project.

(3) (Restriction: U3 Honours students) The student will carry out a research project under the supervision of a member of the staff. The student will be expected to write a report and present a seminar on the work.

ATOC 512 Atmospheric and Oceanic Dynamics.

(3) (Fall) (3 hours lectures) (Prerequisite (Undergraduate): Permission of instructor) Introduction to the fluid dynamics of large-scale flows of the atmosphere and oceans. Stratification of atmosphere and oceans. Equations of state, thermodynamics and momentum. Kinematics, circulation, and vorticity. Hydrostatic and quasi-geostrophic flows. Brief introduction to wave motions, flow over topography, Ekman boundary layers, turbulence.

ATOC 513 Waves and Stability.

(3) (Winter) (3 hours lectures) (Prerequisite (Undergraduate): Permission of instructor) Linear theory of waves in rotating and stratified media. Geostrophic adjustment and model initialization. Wave propagation in slowly varying media. Mountain waves; waves in shear flows. Barotropic, baroclinic, symmetric, and Kelvin-Helmholtz instability. Wave-mean flow interaction. Equatorially trapped waves.

ATOC 515 Turbulence in Atmosphere and Oceans.

(3) (3 hours lectures) (Prerequisite (Undergraduate): ATOC 512 or permission of instructor) Application of statistical and semi-empirical methods to the study of geophysical turbulence. Reynolds' equations, dimensional analysis, and similarity. The surface and planetary boundary layers. Oceanic mixed layer. Theories of isotropic two- and three- dimensional turbulence: energy and enstrophy inertial ranges. Beta turbulence.

ATOC 530 Climate Dynamics 1.

(3) (Fall) (3 hours lectures) (Prerequisite (Undergraduate): Permission of instructor) (Restriction: Graduate students and final-year Honours Atmospheric Science students. Others by special permission.) Introduction to the components of the climate system. Review of paleoclimates. Physical processes and models of climate and climate change.

ATOC 531 Climate Dynamics 2.

(3) (Winter) (3 hours lectures) (Prerequisite (Undergraduate): Permission of instructor) (Restriction: Graduate students and final-year Honours Atmospheric Science students. Others by special permission.) The general circulation of the atmosphere and oceans. Atmospheric and oceanic general circulation models. Observations and models of the El Niño and Southern Oscillation phenomena.

ATOC 540 Synoptic Meteorology 1.

(3) (Fall) (2 hours lectures; 2 hours laboratory) (Prerequisite (Undergraduate): Permission of instructor) Analysis of current meteorological data. Description of a geostrophic, hydrostatic atmosphere. Ageostrophic circulations and hydrostatic instabilities. Kinematic and thermodynamic methods of computing vertical motions. Tropical and extratropical condensation rates. Barotropic and equivalent barotropic atmospheres.

ATOC 541 Synoptic Meteorology 2.

(3) (Winter) (2 hours lectures; 2 hours laboratory) (Prerequisite (Undergraduate): ATOC 412 and ATOC 540 or permission of instructor.) Analysis of current meteorological data. Quasi-geostrophic theory, including the omega equation, as it relates to extratropical cyclone and anticyclone development. Frontogenesis and frontal circulations in the lower and upper troposphere. Cumulus convection and its relationship to tropical and extratropical circulations. Diagnostic case study work.

ATOC 546 Current Weather Discussion.

(1) (Fall) (2 hours) (Prerequisite (Undergraduate): ATOC 540 or permission of instructor) (Restriction: Graduate students and final-year Honours Atmospheric Science students. Others by special permission.) Half-hour briefing on atmospheric general circulation and current weather around the world using satellite data, radar observations, conventional weather maps, and analyses and forecasts produced by computer techniques.

ATOC 550 Special Topics Meteorology and Oceanography.

(1) (Fall) (1 hour lecture) (Prerequisite (Undergraduate): Permission of instructor) (Restriction: Graduate students and final-year Honours Atmospheric Science students. Others by special permission.) Lectures and seminars on special topics such as hydrology, agricultural meteorology, the limits of predictability, planetary atmospheres, atmospheric and oceanic pollution, coastal currents, and research reviews.

● ATOC 551 Selected Topics 1.

(3) (Restriction: Course restricted to students in U3 undergraduate or graduate programs in ATOC or in closely related disciplines, and permission of the instructor.) Topics in atmospheric and oceanic sciences.

● ATOC 552 Selected Topics 2.

(3) (Restrictions: Course restricted to students in U3 undergraduate or graduate programs in ATOC or in closely related disciplines, and permission of the instructor.) Topics in atmospheric and oceanic sciences.

● ATOC 555 Field Course 1.

(3) (Restrictions: Course restricted to students in U3 undergraduate or graduate programs in ATOC or in closely related disciplines, and permission of the instructor.) Field studies in selected topics of the atmospheric and oceanic sciences.

● ATOC 556 Field Course 2.

(3) (Restrictions: Course restricted to students in U2 undergraduate or graduate programs in ATOC or in closely related disciplines, and permission of the instructor.) Field studies in selected topics of the atmospheric and oceanic sciences.

● ATOC 558 Numerical Methods and Laboratory.

(3) (Winter) (1 hour lecture; 4 hours laboratory) (Prerequisite (Undergraduate): Permission of instructor) (Restriction: Graduate students and final-year Honours Atmospheric Science students. Others by special permission.) Numerical simulation of atmospheric and oceanic processes. Finite difference, finite element, and spectral modelling techniques. Term project including computer modelling of convection or large-scale flows in the atmosphere or ocean.

ATOC 568 Ocean Physics.

(3) (Winter) (3 hours lectures) (Prerequisite (Undergraduate): ATOC 512 or permission of instructor) (Restriction: Graduate students and final-year Honours Atmospheric Science students. Others by special permission.) Research methods in physical oceanography including data analysis and literature review. Course will be divided into five separate modules focussing on temperature-salinity patterns, ocean circulation, boundary layers, wave phenomena and tides.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

BIOC-BiochemistryOffered by: Biochemistry

BIOC 212 Molecular Mechanisms of Cell Function.

(3) (Winter) (Prerequisite: BIOL 200) (Restrictions: A non-terminal course intended to be followed by BIOC 311; BIOC 312 in the U2 year. Not open to students who have taken or are taking BIOL 201 or ANAT 212.) An introductory course describing the biochemistry and molecular biology of selected key functions of animal cells, including: gene expression; mitochondrial production of metabolic energy; cellular communication with the extra-cellular environment; and regulation of cell division.

BIOC 300D1 (3), BIOC 300D2 (3) Laboratory in Biochemistry.

(Fall/Winter) (1 lecture and one 6-hour lab per week) (Prerequisites: BIOL 200 and BIOL 201 or BIOC 212, CHEM 222; CHEM 257D1/CHEM 257D2 recommended.) (Corequisites: BIOC 311 and BIOC 312.) (Restriction: Not open to students who have taken or are taking BIOL 301.) (For students in Biochemistry programs, others with permission of instructor) (Students must register for both BIOC 300D1 and BIOC 300D2.) (No credit will be given for this course unless both BIOC 300D1 and BIOC 300D2 are successfully completed in consecutive terms) A comprehensive course in modern biochemical techniques involving properties of enzymes, metabolism, fractionation of organelles from mammalian cells and molecular biology.

BIOC 311 Metabolic Biochemistry.

(3) (Fall) (Prerequisites: BIOL 200, BIOL 201 or BIOC 212, CHEM 222) The generation of metabolic energy in higher organisms with an emphasis on its regulation at the molecular, cellular and organ level. Chemical concepts and mechanisms of enzymatic catalysis are also emphasized. Included: selected topics in carbohydrate, lipid and nitrogen metabolism; complex lipids and biological membranes; hormonal signal transduction.

BIOC 312 Biochemistry of Macromolecules.

(3) (Winter) (Prerequisites: BIOC 311, BIOL 200, BIOL 201 or BIOC 212) Gene expression from the start of transcription to the synthesis of proteins, their modifications and degradation. Topics covered: purine and pyrimidine metabolism; transcription and its regulation; mRNA processing; translation; targeting of proteins to specific cellular sites; protein glycosylation; protein phosphorylation; protein turn-over; programmed cell death (apoptosis).

BIOC 404 Biophysical Chemistry.

(3) (Winter) (Prerequisites: CHEM 204, CHEM 214 or equivalent) (Restriction: Not open to students who have taken or are taking CHEM 404.) Hydrodynamic and electrophoretic methods for separation and characterization of macromolecules. Optical and magnetic resonance spectroscopy of biopolymers, and applications to biological systems.

BIOC 450 Protein Structure and Function.

(3) (Fall) (Prerequisites: BIOC 311, BIOC 312 and/or sufficient organic chemistry.) (Restriction: Intended primarily for students at the U3 level) Primary, secondary, tertiary and quaternary structure of enzymes. Active site mapping and site-specific mutagenesis of enzymes. Enzyme kinetics and mechanisms of catalysis. Multienzyme complexes.

BIOC 454 Nucleic Acids.

(3) (Fall) (Prerequisites: BIOC 311, BIOC 312 or permission of instructor) Chemistry of RNA and DNA, transcription and splicing of RNA and their control; enzymology of DNA replication. Special topics on transgenics, genetic diseases and cancer.

BIOC 455 Neurochemistry.

(3) (Winter) (Prerequisites: BIOC 311, BIOC 312 or permission of instructor) Covers biochemical mechanisms underlying central nervous system function. Introduces basic neuroanatomy, CNS cell types and morphology, neuronal excitability, chemically mediated transmission, glial function. Biochemistry of specific neurotransmitters, endocrine effects on brain, brain energy metabolism and cerebral ischemia (stroke). With examples, where relevant, of biochemical processes

disrupted in human CNS disease.

BIOC 458 Membranes and Cellular Signaling.

(3) (Winter) (Prerequisites: BIOC 212, ANAT 262; one of PHGY 201, PHGY 209 or BIOL 205; one of BIOC 312 or ANAT 365; and BIOC 311 or permission of instructors) (Restriction: This course is also listed as ANAT 458. Not open to students who have taken or are taking ANAT 458 or BIOC 456) An integrated treatment of the properties of biological membranes and of intracellular signaling, including the major role that membranes play in transducing and integrating cellular regulatory signals. Biological membrane organization and dynamics: membrane transport; membrane receptors and their associated effectors; mechanisms of regulation of cell growth, morphology, differentiation and death.

BIOC 460 Advanced Lab in Biochemistry.

(6) (Fall) Students will select one project, employing advanced as well as standard biochemical techniques, to be performed in a research laboratory in the Department. Each student will also write a research-review paper with the advice of a professor and perform student projects in the teaching laboratory.

BIOC 491 Independent Research.

(6) (Winter) (Restriction: Registration by departmental permission only) (Prerequisite: BIOC 460) Individual work on a project to be performed in a research laboratory.

BIOC 503 Immunochimistry.

(3) (Winter) (Prerequisites: BIOC 311, BIOC 312) This course, presented in lecture format, emphasizes the molecular, genetic and structure function events that occur in the humoral immune response. Interleukins and other mediators of inflammation, a field in which rapid changes are occurring, are discussed. The clinical significance of fundamental biochemical findings is described.

BIOL-BiologyOffered by: Biology

BIOL 101 Organismal Biology Laboratory.

(1) (Fall) (3 hours laboratory) (Prerequisite: Permission of the Associate Dean (Student Affairs), Faculty of Science.) (Restriction: Not open to students who have taken, or are taking BIOL 111.) Laboratory component of BIOL 111. May be taken only by transfer students who have completed elsewhere the lecture component but not the laboratory of BIOL 111 and only with permission of the Associate Dean (Student Affairs) of Science.

BIOL 102 Cell and Molecular Biology Methods.

(1) (Winter) (3.5 hours laboratory) (Prerequisite: Permission of the Associate Dean (Student Affairs), Faculty of Science.) (Restriction: Not open to students who are taken, or have taken BIOL 112.) The laboratory component of BIOL 112. May be taken only by transfer students who have completed elsewhere the lecture component but not the laboratory of BIOL 112 and only with permission of the Associate Dean (Student Affairs) of Science.

BIOL 111 Principles: Organismal Biology.

(3) (Fall) (2 hours lecture and 3 hours laboratory) (Prerequisite: none.) (Restriction: Not open to students who have taken CEGEP objective 00UK or equivalent; or BIOL 115.) (This course serves as an alternative to CEGEP objective code 00UK) (May require departmental approval.) (Open to all students wishing introductory biology.) (Attendance at first lab is mandatory to confirm registration in the course.) (Note: This class will use a Student Response System (clicker) which can be obtained when you get your ID Card in the Trotter Building between August 20 and August 31st. If you already have your ID Card, you can get your SRS at Redpath Library Room 22 beginning August 20th.) An introduction to the structure, function and adaptation of plants and animals in the biosphere.

BIOL 112 Cell and Molecular Biology.

(3) (Winter) (2 hours lecture and 3.5 hours laboratory/seminar) (Prerequisite: none.) (Restriction: Not open to students who have taken or are taking CEGEP objective 00XU or equivalent; or BIOL 115) (May require departmental approval.)

(Attendance at first lab is mandatory to confirm registration in the course.) The cell: ultrastructure, division, chemical constituents and reactions. Bioenergetics: photosynthesis and respiration. Principles of genetics, the molecular basis of inheritance and biotechnology.

BIOL 115 Essential Biology.

(3) (Fall) (3 hours lecture) (Prerequisites: none.) (Restrictions: Open only to non-Science students; not open to students who have had BIOL 111, BIOL 112, or equivalents.) An introduction to biological science that emphasizes the manner in which scientific understanding is achieved and evolves and the influence of biological science on society. Topics will include cell structure and function, genetics, evolution, organ physiology, ecology and certain special topics that change from year to year.

BIOL 200 Molecular Biology.

(3) (Fall) (3 hours lecture, 1 hour optional tutorial) (Prerequisite: BIOL 112 or equivalent.) (Corequisite: CHEM 212 or equivalent) The physical and chemical properties of the cell and its components in relation to their structure and function. Topics include: protein structure, enzymes and enzyme kinetics; nucleic acid replication, transcription and translation; the genetic code, mutation, recombination, and regulation of gene expression.

BIOL 201 Cell Biology and Metabolism.

(3) (Winter) (3 hours lecture, 1 hour optional tutorial) (Prerequisite: BIOL 200.) (Restriction: Not open to students who have taken or are taking BIOC 212 or ANAT 212) This course introduces the student to our modern understanding of cells and how they work. Major topics to be covered include: photosynthesis energy metabolism and metabolic integration; plasma membrane including secretion, endocytosis and contact mediated interactions between cells; cytoskeleton including cell and organelle movement; the nervous system; hormone signalling; the cell cycle.

BIOL 202 Basic Genetics.

(3) (Winter or Summer) (3 hours lecture, 1 hour optional tutorial) (Prerequisite: BIOL 200.) (Restriction: Not open to students who have taken or are taking CELL 204.) Introduction to basic principles, and to modern advances, problems and applications in the genetics of higher and lower organisms with examples representative of the biological sciences.

BIOL 205 Biology of Organisms.

(3) (Winter) (3 hours lecture, optional conference hour) (Prerequisites: BIOL 200 and PHYS 101, 131 or CEGEP Physics or permission.) (Corequisite: BIOL 201 or BIOC 212/ANAT 212) Unified view of form and function in organisms from all five kingdoms. Focus on the principal functions that all organisms must achieve to ensure their survival.

BIOL 206 Methods in Biology of Organisms.

(3) (Fall) (1.5 hours lecture, 4 hours laboratory and local field trip in week 2.) (Prerequisite: BIOL 111 or equivalent) Introduction of modern methods used in organismal biology, including ecological sampling, experimental methods and statistics, taxonomic and phylogenetic analysis of biodiversity, experimental behavioural ecology, microbiological methods, and library search procedures.

BIOL 210 Perspectives of Science.

(3) (Fall) (3 hours lecture) This course is an introduction to the thinking, language and practices of scientists. Its objective is to bridge the gap between science and the humanities, and in particular to allow students enrolled in the Minor Concentration in Science for Arts to pursue their interests in specific scientific disciplines.

BIOL 215 Introduction to Ecology and Evolution.

(3) (Fall) (3 hours lecture) (Prerequisite: BIOL 111) (Restrictions: Not open to students who have taken BIOL 304 or BIOL 308. Not open to students who have taken ENVR 202) An introduction to the fundamental processes of ecology and evolution that bear on the nature and diversity of organisms and the processes that govern their assembly into ecological communities and their roles in ecosystem function.

BIOL 240 Monteregian Flora.

(3) (Summer) (Prerequisite: BIOL 111 or permission) (Restriction: Not open to students who have taken BIOL 358 or PLNT 358) (Note: Taught at the Gault Nature Reserve. Contact instructor for specific dates, logistics: (martin.lechowicz@mcgill.ca).) Field studies of ferns, fern allies, conifers and flowering plants; the use of keys for species identification.

BIOL 300 Molecular Biology of the Gene.

(3) (Fall) (3 hours lecture, optional tutorials) (Prerequisites: BIOL 200, BIOL 201) A survey of current knowledge and approaches in the area of regulation of gene expression, post-transcriptional control of gene expression, and signal transduction.

BIOL 301 Cell and Molecular Laboratory.

(4) (Fall or Winter) (1 hour lecture and one 6-hour laboratory) (Prerequisites: PHYS 102 or 142, BIOL 200, BIOL 201, BIOL 202. BIOL 206 recommended.) (Restrictions: Not open to students who have taken or are taking BIOC 300. Requires departmental approval.) A practical introduction to laboratory techniques. Focus is on the experimental methods used to develop fundamental biological principles. Techniques involving enzyme characterization, DNA isolation and manipulation and genetic analysis are covered. Metabolism and regulation of cell systems are analyzed and by which biological macro-molecules are purified and characterized.

BIOL 303 Developmental Biology.

(3) (Winter) (3 hours lecture and 1 hour optional tutorial) (Prerequisites: BIOL 200 and BIOL 201. Corequisite: BIOL 202) A consideration of the fundamental processes and principles operating during embryogenesis. Experimental analyses at the molecular, cellular, and organismal levels will be presented and analyzed to provide an overall appreciation of developmental phenomena.

BIOL 304 Evolution.

(3) (Fall) (3 hours lecture) (Prerequisite: BIOL 205 and BIOL 215 or ENVR 202) This course will show how the theory of evolution by natural selection provides the basis for understanding the whole of biology. The first half of the course describes the process of selection, while the second deals with evolution in the long term.

BIOL 305 Animal Diversity.

(3) (Winter) (2 hours lecture and 1 three-hour laboratory) (Prerequisite: BIOL 215 or both ENVR 200 and ENVR 202) The characteristics of the major groups of animals, their ancestry, history and relationship to one another. The processes of speciation, adaptive radiation and extinction responsible for diversity. Methods for constructing of phylogenies, for comparing phenotypes, and for estimating and analyzing diversity.

BIOL 306 Neurobiology.

(3) (Fall) (3 hours lecture) (Prerequisite: BIOL 201 or BIOC 212 or ANAT 212 and PHYS 102 or PHYS 142 or CEGEP Physics.) (Restriction: Not open to students who are taking or have taken PSYC 308.) Neural mechanisms of animal behaviour; neuroethology; cellular neurophysiology, integrative networks within nervous systems; neural control of movement; processing of sensory information.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

BIOL 307 Behavioural Ecology/Sociobiology.

(3) (Winter) (2 hours lecture and 1 hour conference)
(Prerequisites: BIOL 205 and BIOL 215 or permission) The relationship between animal behaviour and the natural environment in which it occurs. This course introduces the subject of ecology at the level of the individual organism. Emphasis on general principles which relate to feeding, predator avoidance, aggression, reproduction and parental care of animals including humans.

BIOL 308 Ecological Dynamics.

(3) (Fall) (3 hours lecture, 1 hour tutorial) (Prerequisite: BIOL 215 or both ENVR 200 and ENVR 202) Principles of population, community, and ecosystem dynamics: population growth and regulation, species interactions, dynamics of competitive interactions and of predator/prey systems; evolutionary dynamics.

BIOL 309 Mathematical Models in Biology.

(3) (Fall) (3 hours lecture) (Prerequisite: Elementary calculus. An additional course in calculus is recommended) Application of finite difference and differential equations to problems in cell and developmental biology, ecology and physiology. Qualitative, quantitative and graphical techniques are used to analyze mathematical models and to compare theoretical predictions with experimental data.

BIOL 310 Large-scale Ecology.

(3) (Winter) (Prerequisite: BIOL 215; or ENVR 200 and ENVR 202 and MATH 112 or equivalent.) Ecology of spaces larger than a population or community, including exploration of the variation in life between regions (biomes), the effect of human destruction of habitat (landscapes), patterns across many species and of biodiversity (macroecology), and of changes in biodiversity and climate over time (including global warming).

BIOL 313 Eukaryotic Cell Biology.

(3) (Winter) (3 hours lecture and 1 hour optional tutorial) (Prerequisites: BIOL 200 and BIOL 201 (or ANAT/BIOC 212) and BIOL 202.) Cell biology of eukaryotes focusing on the assembly and function of cellular structures, the regulation of transcription; the dynamics of the cytoskeleton and its motors; mechanics of cell division; cell cycle and checkpoints; nuclear dynamics; chromosome structure and behaviour and experimental techniques.

BIOL 314 Molecular Biology of Oncogenes.

(3) (Fall) (3 hours lecture) (Prerequisites: BIOL 200; BIOL 201 or BIOC 212/ANAT 212) The genes that cause cancer are altered versions of genes present in normal cells. The origins of these oncogenes, their genetic structure, regulation, and the biochemical properties of the oncogene-encoded proteins will be analyzed in an attempt to understand the origins of human and animal cancers.

★ ● BIOL 324 Ecological Genetics.

(3) (Fall) (2 hours lecture, 1 hour seminar) (Prerequisite: BIOL 202) This course presents evolutionary genetics within an ecological context. The course covers theoretical topics together with relevant data from natural populations of plants and animals.

BIOL 328 Biological Diversity in Africa.

(3) (Winter) (7 hours lecture, 5 hours project.) (Prerequisite: BIOL 205 or permission of instructor.) (Corequisite: NRSC 300.) (Restriction: Students must be enrolled in the African Field Study Semester.) Biological diversity as exemplified by a particular taxonomic group chosen by the instructor, using field setting in East Africa to impart training in species identification, field research, and principles embodied in the phylogeny, systematics, biogeography, ecology, physiology and/or behaviour of the organisms concerned.

BIOL 329 East African Ecology.

(3) (Winter) (Prerequisite: BIOL 215 or equivalent.) (Corequisite: NRSC 300) (The course is to be taught in Africa as a component of the Africa Field Study Semester. Students must register for the Africa Field Study Semester.) Marine, terrestrial, conservation, or restoration ecology in East Africa.

BIOL 331 Ecology/Behaviour Field Course.

(3) (Fall) (Prerequisites: BIOL 206 and BIOL 215) (Note: Preregistration in March and April. See Course web page: <http://www2.mcgill.ca/biology/undergrad/C331A/index.htm>. Meets 12-days just before the fall term, with a project report early in the fall term.) Methods of sampling natural populations. Testing hypotheses in nature.

BIOL 334D1 (1.5), BIOL 334D2 (1.5) Applied Tropical Ecology.

(Winter, Summer) (Students must register for both BIOL 334D1 and BIOL 334D2.) (No credit will be given for this course unless both BIOL 334D1 and BIOL 334D2 are successfully completed in consecutive terms) (BIOL 334D1 and BIOL 334D2 together are equivalent to BIOL 334) (Prerequisites: BIOL 206 and BIOL 215 and permission) Relevant to agriculture, forestry, fisheries and conservation of natural resources. Field component taught at the University's Bellairs Research Institute in Barbados, for two weeks in early May. The course is organized in a series of small-group field projects of 2-3 days each. Interested students should check the course website, attend the full information session and fill out an application form.

BIOL 335 Marine Mammals.

(3) (Summer) (Prerequisite: BIOL 205) Biology of marine mammals with special emphasis on seals and whales of the Bay of Fundy. Taught at the Huntsman Marine Science Centre, St. Andrews, N.B., for two weeks in August. The course combines lectures, laboratory exercises, field trips, and individual projects. Apply early to Huntsman. See S. Gabe, W4/8.

BIOL 350 Insect Biology and Control.

(3) (Fall) (3 hours lecture) (Prerequisite: BIOL 205 or permission of instructor.) (Restriction: Not open to students who have taken or are taking ENTO 330 or ENTO 350.) (Note: This course is also offered as ENTO 350 in the winter term.) Introduction to insect structure, physiology, biochemistry, development, systematics, evolution, ecology and control. Stress on interrelationships and integrated pest control.

★ ● BIOL 352 Vertebrate Evolution.

(3) (Winter) (2 hours lecture, 3 hours laboratory) (Prerequisites: BIOL 304 or permission) The origin and evolution of the major groups of vertebrates; their anatomy, phylogeny and zoogeography.

★ ● BIOL 355 Trees: Ecology & Evolution.

(3) (Fall) (3 hours lecture) (Prerequisites: BIOL 205 and BIOL 215 or permission of instructor.) (Restriction: Not open to students who have taken or are taking BIOL 555.) Functional ecology and evolution of trees: patterns in the diversity of tree form and function, the nature of tree adaptation to environment from the scale of habitat to global biogeography.

BIOL 370 Human Genetics Applied.

(3) (Fall) (3 hours lecture; 1 hour conference optional) (Prerequisites: BIOL 200 and BIOL 201, BIOL 202) A contemporary view of what genetics can do when applied to human beings.

BIOL 373 Biometry.

(3) (Fall) (2 hours lecture and 2 hours laboratory) (Prerequisite: MATH 112 or equivalent) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) Elementary statistical methods in biology. The aim of this course is to introduce students to the analysis of biological data. Emphasis is placed on the assumptions behind statistical tests and models. The course is designed to give a student the ability to intelligently use the statistical techniques typically available on computer packages such as SYSTAT or SPSS.

BIOL 377 Independent Reading Project.

(3) (Fall, Winter or Summer) (Prerequisite: BIOL 200 and BIOL 201; or BIOL 215; or permission.) (Restriction: Open to U2 or U3 Biology students only) (Note: Before registration, projects must be arranged individually with a staff member in the Biology Department and a form from Ms. A.Comeau, Room W4/13, Stewart Building, must be completed. Please see regulations concerning Project Courses, under

"Project Courses" in the Faculty Degree Requirements section.)
Independent reading project.

BIOL 385 Plant Growth and Development.

(3) (Fall) (3 hours lecture) (Prerequisite: BIOL 205.)
(Restriction: Not open to students who have taken BIOL 485.)
Physiological, biochemical and molecular processes involved in growth and development of the plant body; formation of new tissues and organs; photomorphogenesis, fruit growth and ripening; programmed cell death and senescence; growth and development in extreme environments.

BIOL 389 Laboratory in Neurobiology.

(3) (Winter) (1 hour lecture; 5 hours laboratory)
(Prerequisites: BIOL 306 or PHGY 311 or PSYC 308 or NEUR 310 or permission) Methods of neurobiological research, including extracellular and intracellular recordings, electrical stimulation, and the study of neuro-behavioural problems.

BIOL 396 Undergraduate Research Project.

(3) (Fall, Winter or Summer) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

BIOL 413 Directed Reading.

(1) (Fall, Winter or Summer) (3 hours independent work)
(Prerequisites: BIOL 200, BIOL 201, BIOL 202, BIOL 205, BIOL 215.) (Note: Special topics paper in conjunction with an upper-level biology course, under the guidance of a staff member of the Biology Department. A form required from Ms. A.Comeau in W4/13 of the Stewart Building prior to registration.) Directed reading.

BIOL 416 Genetics of Mammalian Development.

(3) (Winter) (3 hours lecture) (Prerequisites: BIOL 202, BIOL 300, BIOL 303; permission) (Restriction: Not open to students who have taken BIOL 516) This course aims to examine problems, theories, and experimental evidence on several concepts of mammalian developmental processes at molecular to organogenesis levels. Most topics are in the mouse model system, where various techniques for genetic manipulation are available.

★ ● **BIOL 427 Herpetology.**

(3) (Fall) (2 hours lecture; 3 hours laboratory) (Prerequisite: BIOL 205 and BIOL 305 or permission of instructor.)
(Restriction: Not open to students who have taken BIOL 327.) Principles of biology as exemplified by amphibians and reptiles. Topics include: adaptation, social behaviour, reproductive strategies, physiology, biomechanics, ecology, biogeography and evolution. Laboratories will emphasize structure, systematics and identification of local and world herpetofauna as well as field methods.

BIOL 432 Limnology.

(3) (Fall) (2 hours lecture; 2 weekends at field station equivalent to 3 hours laboratory per week) (Prerequisites: BIOL 206 and BIOL 215 or permission of instructor.) A study of the physical, chemical and biological properties of inland waters, with emphasis on their functioning as systems.

BIOL 434 Theoretical Ecology.

(3) (Winter) (Prerequisites:BIOL 308 or BIOL 309 or permission of instructor.) (Restriction: Not open to students who have taken BIOL 534.) Study of theoretical ecology and of mathematical tools available to explore the dynamical behaviour of model populations, communities and ecosystems. Models addressing major ecological theories including population stability, community dynamics and ecosystem functioning, epidemic and disturbance dynamics, spatial models, game theory.

BIOL 435 Natural Selection.

(3) (Fall) (3 hours of lecture) (Prerequisite: BIOL 304 or permission of instructor.) Explains how the selection of undirected variation accounts for some of the leading features of the natural world. Its main focus is evolutionary change and adaptation, but it will also include material from ecological, economic, biochemical and computer systems. It emphasizes experimental studies of evolution.

★ ● **BIOL 441 Biological Oceanography.**

(3) (Winter) (2 hours lecture, 3 hours laboratory/conference) (Prerequisites: BIOL 206 and BIOL 215.) An introduction to how the ocean functions biologically: biology and ecology of marine plankton; regulation, extent and fate of production in the sea.

★ ● **BIOL 442 Marine Biology.**

(3) (Winter) (2 hours lecture, 1 hour laboratory or conference) (Prerequisites: BIOL 205 and BIOL 215.) An introduction to marine benthic communities. Topics include structure and dynamics of hard and soft bottom communities; bioturbation, feeding strategies and trophodynamics; ecology of seagrass, mangrove and coral reef ecosystems; marine pollution.

BIOL 465 Conservation Biology.

(3) (Fall) (3 hours lecture) (Prerequisite: BIOL 215)
Discussion of relevant theoretical and applied issues in conservation biology. Topics: biodiversity, population viability analysis, community dynamics, biology of rarity, extinction, habitat fragmentation, social issues.

BIOL 466 Independent Research Project 1.

(3) (Fall, Winter or Summer) (Prerequisite: BIOL 206 or BIOL 301 or other suitable laboratory course.)
(Restrictions: Open only to Biology students. Not open to students who have taken BIOL 477.) (Note: Before registration, projects must be arranged individually with a staff member of the Biology Department and a form from Ms. Comeau, Room W4/13, Stewart Building, must be completed.) Independent research project.

BIOL 467 Independent Research Project 2.

(3) (Fall, Winter or Summer) (Prerequisite: BIOL 206 or BIOL 301 or other suitable laboratory course.)
(Restrictions: Open only to Biology students. Not open to students who have taken BIOL 478.) (Note: Before registration, projects must be arranged individually with a staff member of the Biology Department and a form from Ms. Comeau, Room W4/13, Stewart Building, must be completed.) Independent research project.

BIOL 468 Independent Research Project 3.

(6) (Fall, Winter or Summer) (Prerequisite: BIOL 206 or BIOL 301 or other suitable laboratory course) (Restriction: Open only to Biology students. Not open to students who have taken BIOL 471 or BIOL 471D1/D2.) (Projects must be arranged individually with a staff member of the Biology Department and a form from Ms. A. Comeau, Room W4/13, Stewart Building, must be completed to receive credit for the course.) Independent research project.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

BIOL 468D1 (3), BIOL 468D2 (3) Independent Research Project 3.

(Fall and Winter) (Prerequisite: BIOL 206 or BIOL 301 or other suitable laboratory course.) (Restriction: Open only to Biology students. Not open to students who have taken BIOL 471 or BIOL 471D1/D2.) (Projects must be arranged individually with a staff member of the Biology Department and a form from Ms. A. Comeau, Room W4/13, Stewart Building, must be completed to receive credit for the course.) (Students must register for both BIOL 468D1 and BIOL 468D2.) (No credit will be given for this course unless both BIOL 468D1 and BIOL 468D2 are successfully completed in consecutive terms.) Independent research project.

BIOL 469D1 (4.5), BIOL 469D2 (4.5) Independent Research Project 4.

(Fall and Winter) (13.5 hours per week research) (Prerequisites: BIOL 206 or BIOL 301 or other suitable 300-level biology course.) (Restrictions: Restricted to Biology students. Projects must be arranged individually with a professor in the Biology department and a form from the undergraduate office (STBIO W4/13) must be completed.) (Students must register for both BIOL 469D1 and BIOL 469D2.) (No credit will be given for this course unless both BIOL 469D1 and BIOL 469D2 are successfully completed in consecutive terms.) Independent research project.

BIOL 479D1 (4.5), BIOL 479D2 (4.5) Honours Research Project 1.

(Fall, Winter) (8-12 hours per week research project and related seminars) (Restriction: Biology Honours students. Projects must be arranged individually with, and accepted by a staff member of the Biology Department) (Students must register for both BIOL 479D1 and BIOL 479D2.) (No credit will be given for this course unless both BIOL 479D1 and BIOL 479D2 are successfully completed in consecutive terms) The major objective of the course is to provide an introduction to the design, execution and reporting of research. The quality of projects is examined by at least two members of the Biology Department.

BIOL 480D1 (6), BIOL 480D2 (6) Honours Research Project 2.

(Fall and Winter) (10-15 hours per week research project and related seminars) (Restriction and course description: as for BIOL 479) (Students must register for both BIOL 480D1 and BIOL 480D2.) (No credit will be given for this course unless both BIOL 480D1 and BIOL 480D2 are successfully completed in consecutive terms)

BIOL 499D1 (2), BIOL 499D2 (2) Honours Seminar in Biology.

(Fall, Winter) (Students must register for both BIOL 499D1 and BIOL 499D2.) (No credit will be given for this course unless both BIOL 499D1 and BIOL 499D2 are successfully completed in consecutive terms) Honours students in Biology attend a selected series of guest speaker seminars of general interest and prepare reports. In addition, students give a seminar on their research.

★ ● BIOL 505 Diversity and Systematics Seminar.

(3) (Winter) (3 hours seminar) (Prerequisites: BIOL 215 and BIOL 304 or permission) A course dealing in depth with a particular aspect of biological diversity and/or systematics. Topics may include the systematics of a particular taxon, issues in biodiversity, systematics theory and practice, etc. The class will discuss aspects of the chosen topic and prepare individual seminar reports.

★ BIOL 507 Animal Communication.

(3) (Fall) (3 hours lecture) (Corequisites: BIOL 307 or equivalent and one of BIOL 306 or NEUR 310 or PHGY 311 or PSYC 308; or permission of instructor. Since all corequisites may not be offered in the same term, students are advised that they may have to plan their schedules so that they may register in these courses in the term prior to BIOL 507.) Introduction to communication between animals, including humans. Physical and phylogenetic constraints on the evolution of communication systems will be discussed. The approach to communication will draw from behavioural ecology, psychology, physiology and physics.

BIOL 510 Advances in Community Ecology.

(3) (Fall) (3 hours lecture/seminar) (Prerequisites: BIOL 308 or GEOG 350 or permission of instructor.) The origin, maintenance and consequences of biological diversity within ecological communities.

BIOL 518 Advanced Topics in Cell Biology.

(3) (Winter) (2 hours seminar) (Prerequisite: BIOL 313 and permission) Conserved processes in Eukaryotic organisms, including the cytoskeleton, the cell cycle, complex traits/disease, global analysis/bioinformatics, and innovative studies/techniques in cell biology.

BIOL 520 Gene Activity in Development.

(3) (Winter) (3 hours lecture and discussion) (Prerequisites: BIOL 300 and BIOL 303 or permission) An analysis of the role and regulation of gene expression in several models of eukaryotic development. The emphasis will be on critical evaluation of recent literature concerned with molecular or genetic approaches to the problems of cellular differentiation and determination. Recent research reports will be discussed in conferences and analyzed in written critiques.

BIOL 524 Topics in Molecular Biology.

(3) (Fall) (Prerequisites: BIOL 300 and BIOL 303 or permission.) Molecular genetics and molecular, cellular and developmental biology, including signal transduction, cell differentiation and function, genetic diseases in eukaryotes.

BIOL 530 Neural Basis of Behaviour.

(3) (Winter) (3 hours seminar) (Prerequisite: BIOL 306 or PHGY 311 or PSYC 308 or permission of instructor.) Neural mechanisms underlying behaviour in vertebrate and invertebrate organisms.

● BIOL 531 Neurobiology Learning Memory.

(3) (Fall) (3 hours lecture and discussion) (Prerequisite: BIOL 306 or PHGY 311 or PSYC 308 or NEUR 310 or permission of instructor.) Properties of nerve cells that are responsible for learning and memory. Recent advances in the understanding of neurophysiological, biochemical and structural processes relevant to neural plasticity. Emphasis on a few selected model systems involving both vertebrate and invertebrate animals.

BIOL 532 Developmental Neurobiology Seminar.

(3) (Winter) (1 hour lecture, 2 hours seminar) (Prerequisites: BIOL 303 or BIOL 306 or permission) Discussions of all aspects of nervous system development including pattern formation, cell lineage, pathfinding and targeting by growing axons, and neuronal regeneration. The basis for these discussions will be recent research papers and other assigned readings.

BIOL 540 Ecology of Species Invasions.

(3) (Winter) (3 hours lecture) (Prerequisite: BIOL 308 or permission of instructor) (Restriction: Not open to U1 or U2 students) (Restriction: Not open to students who are taking or have taken ENVR 540.) Causes and consequences of biological invasion, as well as risk assessment methods and management strategies for dealing with invasive species.

★ ● BIOL 544 Genetic Basis of Life Span.

(3) (Fall) (1 hour lecture, 2 hours seminar) (Prerequisites: BIOL 202, BIOL 300; BIOL 303 recommended or permission) The course will consider how gene action is determining the duration of life in various organisms focusing on the strengths and limitations of the genetic approach. The course will focus particularly on model organisms such as yeast, *Caenorhabditis*, *Drosophila* and mouse, as well as on the characterization of long-lived mutants.

BIOL 553 Neotropical Environments.

(3) (Winter) (24 hours lecture and 36 hours field work over a 4-week period) (Prerequisites: HISP 218, MATH 203, and BIOL 208/308, or equivalents, and permission of Program Coordinator.) (Corequisites: ENVR 451, GEOG 404 and SOCI 565.) (Restriction: location in Panama. Students must register for a full semester of studies in Panama) Ecology revisited in view of tropical conditions. Exploring species richness. Sampling and measuring biodiversity. Conservation status of ecosystems, communities and species. Indigenous knowledge.

★ ● BIOL 555D1 (1.5), BIOL 555D2 (1.5) Functional Ecology of Trees.

(Fall and Winter) (Prerequisites: BIOL 304, BIOL 308 or permission.) (Students must register for both BIOL 555D1 and BIOL 555D2.) (No credit will be given for this course unless both BIOL 555D1 and BIOL 555D2 are successfully completed in consecutive terms.) (BIOL 555D1 and BIOL

555D2 together are equivalent to BIOL 555.) Discussion of the interactions among traits that underpin the survival of woody plants in diverse environments: physiology, anatomy, architecture, seasonality and phenology, reproductive ecology, life history trade-offs, and the phylogenetic basis of functional diversification.

BIOL 568 Topics on the Human Genome.

(3) (Winter) (3 hours lecture) (Prerequisites: BIOL 202, BIOL 300, BIOL 370, or permission.) Cellular and molecular approaches to characterization of the human genome.

***BIOL 569 Developmental Evolution.**

(3) (Winter) (3 hours lecture) (Prerequisites: BIOL 303 and BIOL 304; or permission of instructor.) The influence of developmental mechanisms on evolution. This course draws on recent examples from plants and invertebrate and vertebrate animals. Topics include homology, modularity, dissociation, co-option, evolutionary novelty, evolution of genetic cis-regulation, developmental constraint and evolvability, heterochrony, phenotypic plasticity, and canalization.

BIOL 570 Advanced Seminar in Evolution.

(3) (Fall or Winter) (3 hours seminar) (Restriction: Open to undergraduates by permission) Detailed analysis of a topic in evolutionary biology, involving substantial original research.

***BIOL 571 Experimental Evolution/Ecology.**

(3) (Winter) (1 hour lecture, 4 hours laboratory) (Prerequisite: BIOL 435 or equivalent) (Restriction: Restricted to U3 and Graduate students.) Basic principles and processes of evolution and ecology will be demonstrated using microbial model systems. Topics include mutation, fitness, selection, adaptive radiation, properties of mixtures and community assembly.

*** ● BIOL 572 Molecular Evolution.**

(3) (Fall) (3 hours lecture/seminar) (Prerequisite: BIOL 300) Evolutionary change in DNA and proteins and its implications for cellular, organismal, and population/species evolution.

BIOL 573 Vertebrate Palaeontology Field Course.

(3) (Summer) (Prerequisites: BIOL 304 and BIOL 352 or permission of instructor.) (Notes: Field course with completed project and presentation in the early Fall. Given in a selected early Cretaceous Alberta site. Enrolment limited to 15 students) Terrestrial vertebrate fossils (i.e. dinosaurs, crocodiles and other reptiles) and palaeocommunity analysis, including practical training with fossil identification, mapping, collecting, and stratigraphic interpretation.

BIOL 575 Human Biochemical Genetics.

(3) (Winter) (3 hours lecture) (Prerequisites: BIOL 202 and BIOL 300.) Topics on the study of human systems that have led to advances in basic biology.

*** ● BIOL 583 Advanced Biometry.**

(3) (Winter) (Prerequisite: BIOL 373 or permission of instructor.) (Note: You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) Advanced techniques in biometry surveying a broad number of statistical tools including: philosophy of scientific inference, experimental design and advanced linear models, generalized linear models (esp. logistic regression), modern regression techniques (quantile, local, etc), temporal and spatial statistics, and multivariate techniques.

*** ● BIOL 585 Game Theory and Evolutionary Dynamics.**

(3) (3) (Winter) (2 hours lecture; 1 hour laboratory) (Prerequisites: BIOL 308 and BIOL 434 or permission of instructor.) (Note: Course given in alternating years.) Mathematical models of game theory and evolutionary dynamics; classical models and current research.

***BIOL 588 Molecular/Cellular Neurobiology.**

(3) (Fall) (1 1/2 hours lecture, 1 1/2 hours seminar) (Prerequisite: BIOL 300 and BIOL 306 or permission) Discussion of fundamental molecular mechanisms underlying the general features of cellular neurobiology. An advanced course based on lectures and on a critical review of primary research papers.

***BIOL 590 Linking Community and Ecosystem Ecology.**

(3) (Winter) (1.5 hours lecture, 1.5 hours seminar) (Prerequisite: BIOL 434 or permission of instructor.) Theoretical foundations for a new ecological synthesis that merges the perspectives of population, community, evolutionary and ecosystem ecology. Focus on theory in interaction with experimental and empirical work, and covers current topics at the interface between community and ecosystem ecology.

BIOL 592 Integrated Bioinformatics.

(3) (Fall) (3 hours lecture) (Prerequisite: BIOL 301 or permission of instructor.) (Restriction: Not open to students who have taken or are taking BINF 511.) 'Post-genomic' bioinformatics. Concepts behind large-scale computational analysis and comparison of genomes/proteomes (and beyond), and the implications for our understanding of the basic processes of molecular and cell biology and the evolution of those processes.

*** ● BIOL 594 Advanced Evolutionary Ecology.**

(3) (Fall) (Prerequisite: BIOL 304 and BIOL 308) (Restriction: U3 or permission.) Evolutionary ecology is the study of evolutionary change in natural populations. General predictive approaches in evolutionary ecology, including population genetics, quantitative genetics, optimality, and game theory will be examined. Emphasis will be placed on the mathematical underpinnings of each approach, particularly as they relate to classic and contemporary problems.

BIOT-Biotechnology

Offered by: Biology

BIOT 505 Selected Topics in Biotechnology.

(3) (Fall) (Restriction: U3 students) Current methods and recent advances in biological, medical, agricultural and engineering aspects of biotechnology will be described and discussed. An extensive reading list will complement the lecture material.

CHEM-Chemistry

Offered by: Chemistry, Earth & Planetary Sciences

CHEM 110 General Chemistry 1.

(4) (Fall) (3 lectures and laboratory) (Prerequisites/corequisites: College level mathematics and physics or permission of instructor; CHEM 120 is not a prerequisite) (Each lab section is limited enrolment) A study of the fundamental principles of atomic structure, valence theory and the periodic table.

CHEM 112 General Chemistry Laboratory 1.

(1) (Fall) (2 1/2 hours laboratory) (Open only to entering students who have the lecture equivalent of CHEM 110) (Each lab section is limited enrolment) Illustrative experiments. Laboratory section of CHEM 110. New students will be issued lab sections in OM 1 on the first day of classes.

CHEM 115 Accelerated General Chemistry: Giants in Science.

(4) (Fall) (3 hour lectures and laboratory) (Prerequisite: Grade 12 Chemistry) (Corequisites: PHYS 131 and MATH 140 or 150, or permission of instructor.) (Restrictions: Enrollment is restricted to students who have obtained a grade greater than 95% in their high school university preparatory chemistry course (e.g., the Ontario Grade 12 University Preparation Chemistry Course [SCH4U]) or permission of the instructor. Not open to

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

students who are taking or have taken CHEM 110 or CHEM 120.) (Note: CHEM 115 and (CHEM 110 plus CHEM 120) are considered equivalent from a prerequisite point of view. If you are planning on applying to medical school, note that some medical schools require applicants to have two general chemistry courses; at McGill you would have to take an additional physical chemistry course like CHEM 204 or equivalent to meet this requirement.) An advanced combined version of CHEM 110 and CHEM 120 that will emphasize developments in the chemical sciences that changed the way nature was understood, focusing, where possible, on examples that led to Nobel Prizes.

CHEM 120 General Chemistry 2.

(4) (Winter) (3 lectures and laboratory)
(Prerequisites/corequisites: College level mathematics and physics, or permission of instructor: CHEM 110 is not a prerequisite) (Each lab section is limited enrolment) A study of the fundamental principles of physical chemistry.

CHEM 122 General Chemistry Laboratory 2.

(1) (Winter) (2 1/2 hours laboratory) (Open only to entering students who have the lecture equivalent of CHEM 120) Illustrative experiments. Laboratory section of CHEM 120.

CHEM 150 World of Chemistry: Food.

(3) (Winter) (3 lecture hours/week) (No prerequisites)
(Restriction: Science and B.A. & Sc. students may take for credit only two of: CHEM 150, CHEM 160, CHEM 170, CHEM 180. These courses can be taken independently of each other.) A series of lectures on the historical, practical, and simple chemical aspects of: food, food additives; vitamins; minerals, diet and cancer; dieting; water.

CHEM 160 World of Chemistry: Technology.

(3) (Fall) (3 lecture hours/week) (No prerequisites)
(Restriction: Science and B.A. & Sc. students may take for credit only two of: CHEM 150, CHEM 160, CHEM 170, CHEM 180. These courses can be taken independently of each other.) Aspects of chemical technology including publishing of scientific articles, rocketry, chemistry of space travel, materials (metals, ceramics, wood, plastic), genetic engineering chemistry, forensic science, art and money.

CHEM 170 World of Chemistry: Drugs.

(3) (Fall) (3 lecture hours/week) (No prerequisites)
(Restriction: Science and B.A. & Sc. students may take for credit only two of: CHEM 150, CHEM 160, CHEM 170, CHEM 180. These courses can be taken independently of each other.) Aspects of drugs including drug history, over the counter drugs (e.g. aspirin, cough remedies, allergy preparations), and street drugs. Significant attention will be paid to prescription drugs such as heart remedies and antibiotics.

CHEM 180 World of Chemistry: Environment.

(3) (Winter) (3 lecture hours/week) (No prerequisites)
(Restriction: Science and B.A. & Sc. students may take for credit only two of: CHEM 150, CHEM 160, CHEM 170, CHEM 180. These courses can be taken independently of each other.) Water, air pollution, sick-building syndrome, the chemistry of the car, energy (fossil fuel, nuclear), household products, quackery (18th century to the internet), computers and cosmetics.

CHEM 199 FYS: Why Chemistry?

(3) (Fall) (2 lectures and 1 seminar) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) A lecture/seminar course which is expected to deal with a) colour, from gemstones to lasers; b) microscopes that see atoms - with demonstrations; c) the atmosphere: the greenhouse effect, and acid rain, and d) scientific ethics in research and publication.

CHEM 201 Modern Inorganic Chemistry 1.

(3) (Winter) (3 lectures) (Prerequisites: CHEM 110 and CHEM 120 or equivalent.) (Restriction: Not open to Honours or Majors in chemistry) (Restriction: Not open to students who have taken or plan to take CHEM 281) Systematic survey of the chemistry of the main group elements and their compounds. Basic concepts of electronic structure, bonding and structure will be developed and applied to the understanding of common materials.

Emphasis on elements such as oxygen, nitrogen, silicon and others in order to understand their role in our everyday lives.

CHEM 203 Survey of Physical Chemistry.

(3) (Fall and Summer) (3 lectures) (Prerequisites: CHEM 110 and CHEM 120 or equivalent.) (Restriction: Intended for students in biological science programs requiring only one course in physical chemistry) (Restriction: Not open to students who have taken or are taking CHEM 204 or CHEM 213) A survey of the principles and methods of physical chemistry with emphasis on the use of biological examples. Topics will include thermodynamics, transport properties, kinetics, molecular structure and interactions, and spectroscopy.

CHEM 204 Physical Chemistry/Biological Sciences 1.

(3) (Fall and Winter) (3 lectures) (Prerequisites: CHEM 110 and CHEM 120 or equivalent and one full course in calculus) (Restriction: Not open to students who have taken or are taking CHEM 203 or CHEM 213 or CHEM 223 and CHEM 243.) Similar to CHEM 223/CHEM 243. Emphasis on the use of biological examples to illustrate the principles of physical chemistry. The relevance of physical chemistry to biology is stressed.

CHEM 211 Organic Chemistry 1 Lectures.

(3) (Fall and Winter and Summer) (3 lectures) (Prerequisite: CHEM 110 or equivalent.) (Corequisite: CHEM 120 or equivalent.) (Restrictions: Not open to students who are taking or have taken CHEM 212 or equivalent. Permission of the Department of Chemistry is required.) (Note: Some CEGEP programs provide equivalency for this course. For more information, please see the Department of Chemistry's Webpage (<http://www.chemistry.mcgill.ca/advising/outside/equivalent.htm>.) A survey of reactions of aliphatic and aromatic compounds including modern concepts of bonding, mechanisms, conformational analysis, and stereochemistry.

CHEM 212 Introductory Organic Chemistry 1.

(4) (Fall and Winter and Summer) (3 lectures and a laboratory) (Prerequisite: CHEM 110 or equivalent.) (Corequisite: CHEM 120 or equivalent.) (Restriction: Not open to students who are taking or have taken CHEM 211 or equivalent) (Each lab section is limited enrolment) (Note: Some CEGEP programs provide equivalency for this course. For more information, please see the Department of Chemistry's Webpage (<http://www.chemistry.mcgill.ca/advising/outside/equivalent.htm>.) A survey of reactions of aliphatic and aromatic compounds including modern concepts of bonding, mechanisms, conformational analysis, and stereochemistry.

CHEM 214 Physical Chemistry/Biological Sciences 2.

(3) (Winter) (3 lectures) (Prerequisites: CHEM 204 or CHEM 223/CHEM 243.) Emphasis is placed on the use of biological examples to illustrate the principles of physical chemistry. The relevance of physical chemistry to biology is stressed.

CHEM 217 General Analytical Chemistry Lab 1.

(1) (Fall) (3 hours) (Prerequisites: CHEM 110 and CHEM 120 or equivalent) Laboratory portion of an individualized program in analytical chemistry.

★ ● **CHEM 219 Introduction to Atmospheric Chemistry.**

(3) (Winter) (3 lectures) (Prerequisite: CEGEP DEC in Science or permission of instructor) (Restriction: Not open to students who have taken ATOC 219, CHEM 419, or ATOC 419) (Offered in even years. Students should register in ATOC 219 in odd years) An introduction to the basic topics in atmospheric chemistry. The fundamentals of the chemical composition of the atmosphere and its chemical reactions. Selected topics such as; a smog chamber, acid rain, and the ozone hole, will be examined.

CHEM 222 Introductory Organic Chemistry 2.

(4) (Fall and Winter and Summer) (Prerequisite: CHEM 212 or equivalent.) (Restriction: Not open to students who have taken Chemistry 302 or equivalent at CEGEP.) Modern spectroscopic techniques for structure determination. The chemistry of alkyl halides, alcohols, ethers, carbonyl compounds, and amines, with special attention to mechanistic aspects. Special topics.

CHEM 223 Introductory Physical Chemistry 1.

(2) (Prerequisites: CHEM 110, CHEM 120 or equivalent, PHYS 142, or permission of instructor.) (Corequisite: MATH 222 or equivalent.) (Restrictions: Not open to students who have taken or are taking CHEM 203 or CHEM 204.) (Note: Chemistry Honours and Majors must take CHEM 223 and CHEM 253 simultaneously.) Kinetics 1: Gas laws, kinetic theory of collisions. Thermodynamics: Zeroth law of thermodynamics. First law of thermodynamics, heat capacity, enthalpy, thermochemistry, bond energies. Second law of thermodynamics; the entropy and free energy functions. Third law of thermodynamics, absolute entropies, free energies, Maxwell relations and chemical and thermodynamic equilibrium states.

CHEM 224 Organic Chemistry Laboratory 1.

(1) (4 hours laboratory) (Open only to students who have the lecture equivalent of CHEM 212) Illustrative experiments in organic chemistry. Laboratory section of CHEM 212.

CHEM 232 Organic Chemistry Principles.

(4) (Restriction: Only open to students in the BN Program) (Restriction: Not open to students in the B.Sc. Program) Concepts of modern organic chemistry, its application to biological processes and everyday life, principles of bonding, structure/stereochemistry, and reaction mechanisms will be presented. Their application to reaction of all of the main functional groups and to biologically important substances will be described.

CHEM 233 Topics in Physical Chemistry.

(3) (Winter) ((3-0-6)) (Restriction: For Engineers only.) Introduction to chemical kinetics, surface and colloid chemistry and electrochemistry. The topics to be discussed will be of particular interest to students in chemical engineering.

CHEM 234 Topics in Organic Chemistry.

(3) (Fall and Winter and Summer) ((3-0-6)) (Prerequisite: CHEM 212 or equivalent) (Restriction: For Chemical Engineers only or Permission of Department.) Modern spectroscopic techniques for structure determination. The chemistry of alkyl halides, alcohols, ethers, carbonyl compounds, and amines, with special attention to mechanistic aspects. Special topics.

CHEM 243 Introductory Physical Chemistry 2.

(2) (Prerequisites: CHEM 223 and CHEM 253.) (Restrictions: Not open to students who have taken or are taking CHEM 203 or CHEM 204. Permission of instructor.) (Note: Chemistry Honours and Majors must take CHEM 243 and CHEM 263 simultaneously.) Heterogeneous equilibrium: phase rule and phase diagrams. Ideal solutions, colligative properties, solubility. Electrochemistry, Debye-Hückel Theory. Kinetics 2: Transition State Theory, complex reactions, free-radical reactions, chain reactions, catalysis, reactions at surfaces, ionic effects of reactions in solution, photochemistry.

CHEM 244 Organic Chemistry Laboratory 2.

(1) (Fall and Winter and Summer) (4 hours laboratory) (Prerequisite: CHEM 234 or equivalent) Laboratory section of CHEM 222.

CHEM 253 Introductory Physical Chemistry 1 Laboratory.

(1) (Prerequisite: CHEM 110, CHEM 120 or equivalent.) (Corequisite: CHEM 223 or equivalent.) (Restrictions: Not open to students who have taken or are taking CHEM 203 or CHEM 204. Permission of instructor.) Illustrative experiments in physical chemistry. Laboratory section of CHEM 223.

CHEM 263 Introductory Physical Chemistry 2 Laboratory.

(1) (Prerequisites: CHEM 223 and CHEM 253.) (Corequisite: CHEM 243 or equivalent.) (Restrictions: Not open to students who have taken or are taking CHEM 203 or CHEM 204. Permission of instructor.) (Note: Chemistry Honours and Majors must take CHEM 243 and CHEM 263

simultaneously.) Illustrative experiments in physical chemistry. Laboratory section of CHEM 243.

CHEM 281 Inorganic Chemistry 1.

(3) (Winter) (3 lectures) (Prerequisites: CHEM 110 and CHEM 120 or equivalent.) (Restriction: For Honours and Major Chemistry students) (Restriction: Not open to students who have taken or plan to take CHEM 201) Basic concepts of electronic structure and molecular bonding will be developed and applied to the understanding of common materials. Acid-base chemistry. Survey of the chemistry of the main group elements. Introduction to coordination and organometallic chemistry.

CHEM 287 Introductory Analytical Chemistry.

(2) (Prerequisites: CHEM 110 and CHEM 120, or CHEM 115, or equivalent.) (Corequisite: CHEM 297.) (Restrictions: Not open to students who have taken CHEM 257D1/D2 or CHEM 277D1/D2.) Qualitative and quantitative analysis. A survey of methods of analysis including theory and practice of semimicro qualitative analysis and representative gravimetric, volumetric and instrumental methods.

CHEM 297 Introductory Analytical Chemistry Laboratory.

(1) (Prerequisites: CHEM 110 and CHEM 120, or CHEM 115, or equivalent.) (Corequisite: CHEM 287.) (Restriction: Not open to students who have taken CHEM 257D1/D2 or CHEM 277D1/D2.) Introductory experiments in analytical chemistry emphasizing classical and instrumental methods of quantitative analysis.

CHEM 302 Introductory Organic Chemistry 3.

(3) (Fall and Winter) (3 lectures) (Prerequisites: BIOL 112, CHEM 222, or permission of the instructor.) Topics covered may include the following: aromatics and heterocyclics, carbanions, rearrangements, molecular orbital considerations, polymers and biomolecules.

●CHEM 307 Analytical Chemistry of Pollutants.

(3) (2 lectures and laboratory with field trips) (Prerequisites: One course in analytical chemistry) Description of current analytical practices in air and water pollution; critical evaluation of the reliability of the methods, with particular emphasis on interfering substances; rudiments of automated instrumentation; toxicological analysis as it relates to pollution.

CHEM 334 Advanced Materials.

(3) (Fall) (3 lectures) (Prerequisites: CHEM 110/CHEM 120 and PHYS 101/PHYS 102 or PHYS 131/PHYS 142, or CEGEP Physics and Chemistry, or equivalent. Prerequisite or Corequisite: one of CHEM 203, CHEM 204, CHEM 223 and CHEM 243, CHEM 214 or equivalent; or one of PHYS 230 and PHYS 232, or equivalent; or permission of instructor.) (Restriction: Not open to students who have taken or are taking PHYS 334.) The physicochemical properties of advanced materials. Topics discussed include photonics, information storage, 'smart' materials, biomaterials, clean energy materials, porous materials, and polymers.

CHEM 345 Molecular Properties and Structure 1.

(3) (Fall) (3 lectures) (Prerequisites: CHEM 213, MATH 315, and PHYS 142, or permission of instructor.) (Restriction: For Chemistry Honours and Majors only) An introduction to quantum chemistry covering the historical development, wave theory, methods of quantum mechanics, and applications of quantum chemistry.

CHEM 352 Structural Organic Chemistry.

(3) (Winter) (3 lectures) (Prerequisite: CHEM 302) Modern methods of structure determination employing spectroscopic techniques; stereochemistry.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

CHEM 355 Molecular Properties and Structure 2.

(3) (Winter) (3 lectures) (Prerequisite: CHEM 345) A survey of the principles of electronic, vibrational and rotational spectroscopy. Magnetic resonance methods.

CHEM 362 Advanced Organic Chemistry Laboratory.

(2) (Fall and Winter) (4 hours) (Prerequisite or corequisite: CHEM 302. Not open to Honours or Majors in Chemistry) An advanced laboratory with experiments related to the theoretical principles and synthetic methods of modern organic chemistry.

CHEM 363 Physical Chemistry Laboratory 1.

(2) (Fall and Winter) (3 hours) (Prerequisites: CHEM 213 and CHEM 273) (Each lab section is limited enrolment) Selected experiments to illustrate physico-chemical principles.

CHEM 365 Statistical Thermodynamics.

(2) (Winter) (2 lectures) (Prerequisite: CHEM 345) Molecular basis of thermodynamics with applications to ideal gases and simple solids. Topics to be covered will include: calculation of thermodynamic functions, chemical equilibrium constants, Einstein and Debye models of solids, absolute reaction rate theory, Debye-Hückel theory of strong electrolytes.

CHEM 367 Instrumental Analysis 1.

(3) (Fall) (2 lectures and 4 hours of laboratory) (Prerequisite: CHEM 257 or CHEM 277) (Each lab section is limited enrolment) An introduction to modern methods of instrumental analysis emphasizing chromatography and electrochemical methods. Analytical methods to be examined in detail include gas liquid chromatography, high performance liquid chromatography, flow injection analysis, and electrochemical methods. Laboratory exercises give the student practical exposure to these techniques.

CHEM 371 Inorganic Chemistry Laboratory.

(2) (Fall and Winter) (4 hours) (Prerequisite: CHEM 362; prerequisite/corequisite: CHEM 381.) (Restriction: Not open to students who have taken CHEM 392) Modular format incorporating self-paced and selfguided instructions. In consultation with the instructors, a program of experimental modules is chosen covering projects related to theoretical principles, synthetic techniques and those instrumental methods used in modern inorganic and organometallic chemistry.

CHEM 371D1 (1), CHEM 371D2 (1) Inorganic Chemistry Laboratory.

(Fall) (Prerequisite: CHEM 362; prerequisite/corequisite: CHEM 381.) (Restriction: Not open to students who have taken CHEM 392.) (Students must register for both CHEM 371D1 and CHEM 371D2.) (No credit will be given for this course unless both CHEM 371D1 and CHEM 371D2 are successfully completed in consecutive terms) (CHEM 371D1 and CHEM 371D2 together are equivalent to CHEM 371) Modular format incorporating self-paced and selfguided instructions. In consultation with the instructors, a program of experimental modules is chosen covering projects related to theoretical principles, synthetic techniques and those instrumental methods used in modern inorganic and organometallic chemistry.

CHEM 377 Instrumental Analysis 2.

(3) (Winter) (2 lectures and 4 hours of laboratory) (Prerequisite: CHEM 367) (Each lab section is limited enrolment) Spectroscopic methods of analysis will be studied with respect to fundamentals, operational aspects and instrument design. Topics will range from UV-visible to x-ray spectrometry. Methodologies will be evaluated with respect to their application in spectrometric systems. Laboratory automation will be studied and applied in the laboratory.

CHEM 381 Inorganic Chemistry 2.

(3) (Fall) (3 lectures) (Prerequisite: CHEM 281.) (Restriction: For Honours and Major Chemistry students) (Restriction: Not open to students who have taken or plan to take CHEM 301) Introduction to transition metal chemistry, coordination numbers and geometry, and nonmenclature will be followed by a discussion of crystal field theory and its applications to problems in spectroscopy, magnetochemistry, thermodynamics and kinetics. Several aspects related to applications of organometallic compounds in catalysis and bioinorganic systems will be discussed.

CHEM 382 Organic Chemistry: Natural Products.

(3) (Winter) (3 lectures) (Prerequisite/corequisite: CHEM 302) Structure, synthesis, stereochemistry and biosynthesis.

CHEM 392 Integrated Inorganic/Organic Laboratory.

(3) (Fall and Winter) (4 hours) (Prerequisite/corequisites: CHEM 381 and CHEM 302. Advanced laboratory for Chemistry Honours and Major students. Students enrolled in CHEM 392 are strongly advised to choose the D option.) (Restriction: Not open to students who have taken CHEM 362.) Modular format of self-paced and self-guided instruction. A program of modules is selected in consultation with the laboratory staff. The experimental modules consist of projects related to the theoretical principles, synthetic techniques and instrumental methods used in modern organic, inorganic and organometallic chemistry.

CHEM 392D1 (1.5), CHEM 392D2 (1.5) Integrated Inorganic/Organic Laboratory.

(Fall) (Prerequisite/corequisites: CHEM 381 and CHEM 302. Advanced laboratory for Chemistry Honours and Major students. Students enrolled in CHEM 392 are strongly advised to choose the D option.) (Restriction: Not open to students who have taken CHEM 362.) (Students must register for both CHEM 392D1 and CHEM 392D2.) (No credit will be given for this course unless both CHEM 392D1 and CHEM 392D2 are successfully completed in consecutive terms) (CHEM 392D1 and CHEM 392D2 together are equivalent to CHEM 392) Modular format of self-paced and self-guided instruction. A program of modules is selected in consultation with the laboratory staff. The experimental modules consist of projects related to the theoretical principles, synthetic techniques and instrumental methods used in modern organic, inorganic and organometallic chemistry.

CHEM 393 Physical Chemistry Laboratory 2.

(2) (Fall and Winter) (3 hours) (Prerequisite: CHEM 253 and CHEM 263 or CHEM 363) (Each lab section has limited enrolment.) Selected experiments to illustrate physico-chemical principles more advanced than those of CHEM 363, CHEM 253 and CHEM 263.

CHEM 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

CHEM 400 Independent Study in Chemistry.

(1) (Prerequisites: CHEM 213, CHEM 222, CHEM 277D1/D2, CHEM 281, plus at least one course in Chemistry at 300 level or higher.) (Restrictions: Registration is restricted to Honours and Major students in Chemistry and requires the approval of the Director of the Undergraduate Studies in the Department of Chemistry.) Supervised research.

★CHEM 419 Advances in Chemistry of Atmosphere.

(3) (Winter) (3 lectures) (Prerequisites: CHEM 243, and CHEM 263 or CHEM 213 and CHEM 273, MATH 222 and MATH 315 (or equivalents) or permission of instructor.) (Restriction: Not open to students who have taken ATOC 419, CHEM 619, or ATOC 619) (Offered in even years. Students should register in ATOC 419 in odd years.) Selected areas of atmospheric chemistry from field and laboratory to theoretical modelling are examined. The principles of atmospheric reactions (gas, liquid and heterogeneous phases in aerosols and clouds) and issues related to chemical global change will be explored.

CHEM 455 Introductory Polymer Chemistry.

(3) (Fall) (Prerequisites: CHEM 243 and CHEM 263 or CHEM 213 and CHEM 273, or CHEM 233 (For engineering students only).) A survey course on the structure of polymers,

kinetics and mechanisms of polymer and copolymer synthesis; characterization and molecular weight distributions; polymer microstructure, the thermodynamics of polymer solutions; the crystalline and amorphous states, rubber elasticity and structure-property relationships.

CHEM 462 Green Chemistry.

(3) (Fall) (3 lectures) (Prerequisites: CHEM 302 and CHEM 381) New reactions and methods which can be used for the production of chemicals from renewable feedstocks; the use of new environmentally benign solvents, catalysts and reagents; organic reactions in aqueous media and in supercritical carbon dioxide; bio-catalysis and bio-processes.

● **CHEM 470 Research Project 1.**

(6) (Fall and Winter) (Prerequisite: registration by Departmental permission only) (Please see regulations concerning Project Courses, under "Project Courses" in the Faculty Degree Requirements section) A course designed to give students research experience. The student will be assigned a project supervisor and a research project at the beginning of the session. The project will consist of a literature survey, experimental and/or theoretical work, a written research report and an oral examination.

CHEM 470D1 (3), CHEM 470D2 (3) Research Project 1.

(Fall) (Students must register for both CHEM 470D1 and CHEM 470D2.) (Students must also register for CHEM 470D2) (No credit will be given for this course unless both CHEM 470D1 and CHEM 470D2 are successfully completed in consecutive terms) (CHEM 470D1 and CHEM 470D2 together are equivalent to CHEM 470) A course designed to give students research experience. The student will be assigned a project supervisor and a research project at the beginning of the session. The project will consist of a literature survey, experimental and/or theoretical work, a written research report and an oral examination.

CHEM 480 Research Project 2.

(3) (Fall) (Prerequisite or Corequisite: CHEM 490. Registration by Departmental permission only.) (Please see regulations concerning Project Courses, under "Project Courses" in the Faculty Degree Requirements section) A course designed to give Honours students research experience. The student will be assigned a project supervisor and a research project at the beginning of the session. The project will consist of a literature survey, experimental or theoretical work, a written research report and an oral examination.

CHEM 480D1 (1.5), CHEM 480D2 (1.5) Research Project 2.

(Fall) (Students must register for both CHEM 480D1 and CHEM 480D2.) (No credit will be given for this course unless both CHEM 480D1 and CHEM 480D2 are successfully completed in consecutive terms) (CHEM 480D1 and CHEM 480D2 together are equivalent to CHEM 480) A course designed to give Honours students research experience. The student will be assigned a project supervisor and a research project at the beginning of the session. The project will consist of a literature survey, experimental or theoretical work, a written research report and an oral examination.

CHEM 490D1 (1.5), CHEM 490D2 (1.5) Research Project 3.

(Fall) (Prerequisite or Corequisite: CHEM 480. Registration by Departmental permission only) (Please see regulations concerning Project Courses, under "Project Courses" in the Faculty Degree Requirements section) (Students must register for both CHEM 490D1 and CHEM 490D2.) (No credit will be given for this course unless both CHEM 490D1 and CHEM 490D2 are successfully completed in consecutive terms) A course designed to give Honours students research experience. The student will be assigned a project supervisor and a research project at the beginning of the session. The project will

consist of a literature survey, experimental or theoretical work, a written research report and an oral examination.

CHEM 502 Advanced Bio-Organic Chemistry.

(3) (Winter) (3 lectures) (Prerequisite: CHEM 302) (Restriction: Not open to students who have taken CHEM 402.) This course will cover biologically relevant molecules, particularly nucleic acids, proteins, and their building blocks. In each case, synthesis and biological functions will be discussed. The topics include synthesis of oligonucleotides and peptides; chemistry of phosphates; enzyme structure and function; coenzymes, and enzyme catalysis; polyketides; antiviral and anticancer agents.

CHEM 503 Drug Design and Development 1.

(3) (Fall) (Prerequisites: CHEM 302, BIOL 200, BIOL 201 or BIOC 212, PHAR 300 or PHAR 301 or PHAR 303 or permission of instructor) (Restriction: U3 and graduate students. Students can register only with permission of coordinators. Priority: students registered in the Minor in Pharmacology) (Restriction: Not open to students who are taking or have taken PHAR 503) Interdisciplinary course in drug design and development covering chemistry, mechanisms of action and steps in drug development, principles and problems in drug design.

CHEM 504 Drug Design and Development 2.

(3) (Winter) (Prerequisite: CHEM 503 and permission of instructor) (Restriction: U3 and graduate students. Students can register only with permission of coordinators) (Restriction: Not open to students who are taking or have taken PHAR 504) Groups of 2-4 students with different backgrounds will form a team. Each team will select a lead compound, design the analogues, propose the preclinical and clinical studies, present possible untoward effects, and reasons for drug (dis)approval.

CHEM 514 Biophysical Chemistry.

(3) (Winter) (Prerequisite: CHEM 203 or CHEM 204 or CHEM 223 and CHEM 243, or permission of instructor.) (Restriction: Not open to students who have taken CHEM 404.) Physical chemistry concepts needed to understand the function of biological systems at the molecular level, including the structure, stability, transport, and interactions of biological macromolecules.

CHEM 522 Stereochemistry.

(3) (Prerequisite: CHEM 302) (Restriction: Not open to students who have taken CHEM 623) Stereoisomers, their nomenclature and configuration. Conformational analysis, separation of stereoisomers, and stereocontrol in organic synthesis.

CHEM 531 Chemistry of Inorganic Materials.

(3) (Winter) (3 lectures) (Prerequisite: CHEM 381) Structure, bonding, synthesis, properties and applications of covalent, ionic, metallic crystals, and amorphous solids. Defect structures and their use in synthesis of specialty materials such as electronic conductors, semiconductors, and superconductors, and solid electrolytes. Basic principles of composite materials and applications of chemistry to materials processing.

CHEM 533 Small Molecule Crystallography.

(3) (Fall) (Prerequisite: CHEM 355 or permission of instructor.) Fundamentals of x-ray diffraction related to small molecule structure resolution, space groups, diffraction theory, strategies for structure solution, and refinement will be covered.

CHEM 534 Nanoscience and Nanotechnology.

(3) (Fall) (Prerequisites: CHEM 334 or PHYS 334 or permission of instructor) (Corequisites: one of CHEM 345, PHYS 357, or PHYS 446 or permission of instructor) (Restriction: Not open to students who have taken or are taking

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

PHYS 534) Topics discussed include scanning probe microscopy, chemical self-assembly, computer modelling, and microfabrication/micromachining.

● **CHEM 543 Chemistry of Pulp and Paper.**

(3) (Fall) (2 lectures plus a reading/research project.) (Prerequisite: CHEM 302 or permission of instructor.) The industrial processes for converting wood to paper are described with emphasis on the relevant organic, physical, surface chemistry and colloid chemistry. The structure and organization of the polymeric constituents of wood are related to the mechanical, optical and other requisite properties of paper.

CHEM 547 Laboratory Automation.

(3) (Winter) (Two 1.5 hour lectures, lab) (Prerequisite: CHEM 377, equivalent or permission of instructor) Automation and data handling with respect to modern chemical laboratory instrumentation. Basic electronics, data acquisition, evaluation of laboratory needs, data processing methodologies.

CHEM 552 Physical Organic Chemistry.

(3) (Fall) (Prerequisite: CHEM 302) The correlation of theory with physical measurements on organic systems; an introduction to photochemistry; solvent and substituent effects on organic reaction rates, etc.; reaction mechanisms.

CHEM 555 NMR Spectroscopy.

(3) (Fall) (3 lectures) (Prerequisite: CHEM 355 or equivalent) Interpretation of proton and carbon-13 nuclear magnetic resonance spectroscopy in one dimension for structural identification.

CHEM 556 Advanced Quantum Mechanics.

(3) (Fall) (3 lectures) (Prerequisites: CHEM 345 and PHYS 242) Quantum mechanical treatment of species of chemical interest. Introduction to perturbation theory, both time-dependent and time-independent. Treatment of the variational principle. Introduction to atomic spectra. Chemical bonding in terms of both the valence bond and molecular orbital theory. Elementary collision theory. Interaction of radiation with molecules.

CHEM 567 Chemometrics: Data Analysis.

(3) (Winter) (2 lectures and 3 hours of laboratory) (Prerequisite: Linear Algebra and experience in some computer programming language) Topics covered include; factorial analysis of chemical spectra, pattern recognition from multisensor data, linear and nonlinear optimization for the determination of optimal reaction conditions molecular modeling, multisensor calibration, etc.

CHEM 571 Polymer Synthesis.

(3) (Winter) (3 lectures) (Prerequisite: CHEM 302 or equivalent, or permission of instructor.) A survey of polymer preparation and characterization; mechanisms of chain growth, including free radical, cationic, anionic, condensation and transition metal-mediated polymerization, and the effects of these mechanisms on polymer architecture; preparation of alternating, block, graft and stereoblock copolymers; novel macromolecular structures including dendrimers and other nanostructures.

CHEM 572 Synthetic Organic Chemistry.

(3) (Winter) (3 lectures) (Prerequisite: CHEM 382) Synthetic methods in organic chemistry and their application to the synthesis of complex molecules.

CHEM 575 Chemical Kinetics.

(3) (Winter) (3 lectures) (Prerequisites: CHEM 273 and CHEM 223/CHEM 243 (formerly CHEM 213).) Kinetic laws, measurement of reaction rates, transition state and collision theory. Elementary reactions in gas, solution and solid phases and on surfaces. Reaction mechanisms, laser techniques, molecular beams, chemiluminescence, explosions. Extensive use of computers to simulate the kinetic behaviour of chemical systems.

● **CHEM 581 Inorganic Topics 1.**

(3) (Winter) (Prerequisite: CHEM 381) An introduction to some areas of current interest in inorganic chemistry. Each year a selection of several particularly active areas will be chosen.

CHEM 582 Supramolecular Chemistry.

(3) (Winter) (3 lectures) (Prerequisites: CHEM 222, CHEM 381) Introduction to supramolecular organization will be followed by discussions on the nature of interactions and methodologies to create ordered aggregates of high complexity.

Potential of supramolecular chemistry in fabricating smart materials will be explored using specific topics including inclusion chemistry, dendrimers, molecular self-assembly and crystal engineering.

CHEM 585 Colloid Chemistry.

(3) (Winter) (Prerequisites: CHEM 345, MATH 233 and MATH 315, PHYS 241 and PHYS 242. Students who haven't taken CHEM 223 and CHEM 243 must have taken CHEM 273 or permission of instructor.) Principles of the physical chemistry of phase boundaries. Electrical double layer theory; van der Waals forces; Brownian motion; kinetics of coagulation; electrokinetics; light scattering; solid/liquid interactions; adsorption; surfactants; hydrodynamic interactions; rheology of dispersions.

CHEM 587 Topics in Modern Analytical Chemistry.

(3) (Fall) (Prerequisites: CHEM 367 and CHEM 377) Current theories of aqueous and nonaqueous solutions, with application to analytical chemistry; recent advances in analytical techniques. Topics may include: chromatography; applications of kinetics, solvent extraction and thermal analysis, with emphasis on their theoretical basis.

CHEM 591 Bioinorganic Chemistry.

(3) (Winter) (3 hours) (Prerequisite: CHEM 381) (Restriction: For Honours and Major Chemistry students or with permission) The roles of transition and main group elements in biology and medicine will be examined with an emphasis on using tools for structure and genome searching as well as becoming acquainted with experimental spectroscopic methods useful for bioinorganic chemistry such as macromolecular X-ray diffraction, EPR and EXAFS.

CHEM 593 Statistical Mechanics.

(3) (Winter) (3 lectures) (Research project) (Prerequisite: CHEM 345. Recommended: CHEM 365) Basic hypotheses of statistical thermodynamics; ideal monatomic, diatomic and polyatomic gases; Einstein and Debye models of solids; statistical theory of black-body radiation; Debye-Hückel theory of electrolyte solutions; absolute reaction rate theory of rate processes; theories of solutions.

CHEM 597 Analytical Spectroscopy.

(3) (Fall) (2 lectures; 3 hours lab) (Prerequisites: CHEM 367 and CHEM 377) The design and analytical use of spectroscopic instrumentation with respect to fundamental and practical limitations. Classical emission, fluorescence, absorption and chemical luminescence. Topics may include photo-acoustic spectroscopy, multielement analysis, X-ray fluorescence and modern multiwavelength detector systems.

COMP-Computer Science

Offered by: Computer Science

COMP 102 Computers and Computing.

(3) (3 hours lecture) (Prerequisite: high school level mathematics course on functions.) (Restrictions: Credit will not be given for COMP 102 if it is taken concurrently with, or after, any of: COMP 202, COMP 203, COMP 208, COMP 250. Management students cannot receive credit for COMP 102.) A course for students with no previous knowledge of computer science. The impact of computers on society. Web design and dynamic content. The inner workings of computers (hardware). Networking principles. Algorithm design and programming. A look at how computers store data (image, sound, and video). Software distribution policies and mechanisms.

COMP 199 FYS: Excursions in Computer Science.

(3) (3 hours) (Prerequisite: high school mathematics) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25) This is a seminar format course intended for freshman and other beginning students. The topics are chosen to encourage critical discussion of fundamental ideas. Possible topics are computability, complexity, geometry, vision, AI, pattern recognition, machine models, cryptography and security and social implications of computing.

COMP 202 Introduction to Computing 1.

(3) (3 hours) (Prerequisite: a CEGEP level mathematics course) (Restrictions: COMP 202 and COMP 208 cannot both be taken for credit. COMP 202 is intended as a general introductory course, while COMP 208 is intended for students interested in scientific computation. COMP 202 cannot be taken for credit with or after COMP 250) Overview of components of microcomputers, the internet design and implementation of programs using a modern high-level language, an introduction to modular software design and debugging. Programming concepts are illustrated using a variety of application areas.

COMP 203 Introduction to Computing 2.

(3) (3 hours) (Prerequisites: MATH 133 and COMP 202) (Restrictions: COMP 203 and COMP 250 are considered to be equivalent from a prerequisite point of view, and cannot both be taken for credit. Students who are registered in the following programs: Major or Honours in Computer Science, Major in Software Engineering, any of the joint major programs offered through the Faculty of Science and the Major Concentration in Foundations of Computing, in the Faculty of Arts, may not take this course.) Basic data structures. Representation of arrays, stacks, and queues. Linked lists and their applications to binary trees. Internal sorting. Graph representation. Elementary graph algorithms.

COMP 206 Introduction to Software Systems.

(3) (3 hours) (Prerequisite: COMP 202 or COMP 250) Comprehensive overview of programming in C, use of system calls and libraries, debugging and testing of code; use of developmental tools like make, version control systems.

COMP 208 Computers in Engineering.

(3) (3 hours) (Prerequisite: differential and integral calculus.) (Corequisite: linear algebra: determinants, vectors, matrix operations.) (Restrictions: COMP 202 and COMP 208 cannot both be taken for credit. COMP 202 is intended as a general introductory course, while COMP 208 is intended for students interested in scientific computations. Credits for either of these courses will not count towards the 60-credit Major in Computer Science. COMP 208 cannot be taken for credit with or after COMP 250.) Introduction to computer systems. Concepts and structures for high level programming. Elements of structured programming using FORTRAN 90 and C. Numerical algorithms such as root finding, numerical integration and differential equations. Non-numerical algorithms for sorting and searching.

COMP 230 Logic and Computability.

(3) (Prerequisite: CEGEP level mathematics.) Propositional Logic, predicate calculus, proof systems, computability Turing machines, Church-Turing thesis, unsolvable problems, completeness, incompleteness, Tarski semantics, uses and misuses of Gödel's theorem.

COMP 250 Introduction to Computer Science.

(3) (Prerequisites: Familiarity with a high level programming language and CEGEP level Math.) (Restrictions: COMP 203 and COMP 250 are considered to be equivalent from a prerequisite point of view, and cannot both be taken for credit.) An introduction to the design of computer algorithms, including basic data structures, analysis of algorithms, and establishing correctness of programs. Overview of topics in computer science.

COMP 251 Data Structures and Algorithms.

(3) (Prerequisite: COMP 250 or COMP 203.) (Restrictions: Not open to students who have taken or are taking COMP 252. For students in the B.Eng. Program, credit will be given for only one of: COMP 431, COMP 251, COMP 360.) Design and analysis of algorithms. Complexity of algorithms. Data

structures. Introduction to graph algorithms and their analysis.

COMP 252 Algorithms and Data Structures.

(3) (3 hours) (Prerequisite: COMP 250 and MATH 240) (Restrictions: Open only to students registered in following programs: Honours in Computer Science, Joint Honours in Mathematics and Computer Science, Honours in Applied Mathematics, Honours in Mathematics. Not open to students who have taken or are taking COMP 251.) (Note: COMP 252 can be used instead of COMP 251 to satisfy prerequisites.) The design and analysis of data structures and algorithms. The description of various computational problems and the algorithms that can be used to solve them, along with their associated data structures. Proving the correctness of algorithms and determining their computational complexity.

COMP 273 Introduction to Computer Systems.

(3) (Corequisite: COMP 206.) Number representations, combinational and sequential digital circuits, MIPS instructions and architecture datapath and control, caches, virtual memory, interrupts and exceptions, pipelining.

COMP 280 History and Philosophy of Computing.

(3) A history of early mathematical computation. Symbolic logic and computation. Modern computer systems and networks. The rise of the internet.

COMP 302 Programming Languages and Paradigms.

(3) (3 hours) (Prerequisite: COMP 250 or COMP 203) Programming language design issues and programming paradigms. Binding and scoping, parameter passing, lambda abstraction, data abstraction, type checking. Functional and logic programming.

COMP 303 Software Development.

(3) (Winter) (3 hours) (Prerequisites: COMP 206, COMP 250.) (Corequisite: COMP 302.) (The course involves a significant project) Principles, mechanisms, techniques, and tools for object-oriented software development: encapsulation, design patterns, unit testing, etc.

COMP 304 Object-Oriented Design.

(3) (3 hours) (Prerequisites: COMP 206, COMP 251, COMP 302) The object model, objects and classes, verification and testing, object-oriented analysis, unified modeling language and design patterns.

COMP 308 Computer Systems Lab.

(1) (Prerequisite: COMP 273.) Digital circuitry and programming interface of peripheral circuit boards (cards), e.g., graphics cards; introduction to tools and libraries that interact with the card; performance issues.

COMP 310 Operating Systems.

(3) (3 hours) (Prerequisite: COMP 273) Control and scheduling of large information processing systems. Operating system software - resource allocation, dispatching, processors, access methods, job control languages, main storage management. Batch processing, multiprogramming, multiprocessing, time sharing.

COMP 321 Programming Challenges.

(1) (Prerequisites: COMP 250 or COMP 206 or COMP 203, MATH 223 and MATH 240.) (Note: At the end of the class, interested students are encouraged to join the McGill team to participate in the annual ACM International Collegiate Programming Competition.) Development of programming skills on tricky challenges, games and puzzles by means of programming competitions.

COMP 322 Introduction to C++.

(1) (Prerequisites: COMP 202 or COMP 250 or COMP 206 or COMP 208. Ability to program in general is presumed. Some familiarity with the C language is assumed.) Basics and advanced features of the C++ language. Syntax, memory management, class structure, method and operator overloading, multiple

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

inheritance, access control, stream I/O, templates, exception handling.

COMP 330 Theoretical Aspects: Computer Science.

(3) (3 hours) (Prerequisite: COMP 251.) Mathematical models of computers, finite automata, Turing machines, counter machines, push-down machines, computational complexity.

● **COMP 335 Software Engineering Methods.**

(3) (3 hours) (Corequisite: COMP 302) This course in software engineering teaches basic concepts and methods for software development. The focus is on engineering and analysing requirements, design and code. Small software development exercises will be given where students would learn how to apply different methods.

COMP 350 Numerical Computing.

(3) (3 hours) (Prerequisites: MATH 222 and MATH 223 and one of: COMP 202, COMP 208, COMP 250; or equivalents.) Computer representation of numbers, IEEE Standard for Floating Point Representation, computer arithmetic and rounding errors. Numerical stability. Matrix computations and software systems. Polynomial interpolation. Least-squares approximation. Iterative methods for solving a nonlinear equation. Discretization methods for integration and differential equations.

COMP 360 Algorithm Design Techniques.

(3) (3 hours) (Prerequisite: Either COMP 251 or COMP 252, and either MATH 240 or MATH 235 or MATH 363.) (Restriction: Not open to students who have taken or are taking COMP 362.) A study of techniques for the design and analysis of algorithms.

COMP 361 Systems Development Project.

(3) (Prerequisite: ECSE 321 or COMP 335 or COMP 303.) Practical issues in systems programming including: inter-process communication, task scheduling, special purpose systems, multi-processor systems. Implementation of a large body of software to illustrate core concepts and provide substantial hands-on experience.

COMP 362 Honours Algorithm Design.

(3) (Prerequisite: COMP 252) (Restriction: Not open to students who have taken or are taking COMP 360.) (Note: COMP 362 can be used instead of COMP 360 to satisfy prerequisites.) Basic algorithmic techniques, their applications and limitations. Problem complexity, how to deal with problems for which no efficient solutions are known.

COMP 364 Computer Tools for Life Sciences.

(3) (Prerequisite: BIOL 200.) (Restrictions: Not available to students in Computer Science or Joint Computer Science programs. Not available to students who have taken Comp 208 or Comp 250, or who are taking either of these at the same time.) (Note: It is recommended that students have already taken a laboratory course (e.g., BIOL 301 Cell and Molecular Laboratory). Topics motivated by biological questions.) Basic concepts and tools for storing, retrieving, and analyzing large biological data sets: relational databases, on-line databases, structured query language, scripting for automating interaction with databases and data analysis, digital images and movies, advanced topics.

COMP 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

COMP 400 Technical Project and Report.

(3) (Prerequisites: 15 Computer Science credits.) (Restriction: For Honours students) A computer related project, typically a programming effort, along with a report will be carried out in

cooperation with a staff member in the School of Computer Science.

COMP 409 Concurrent Programming.

(3) (Prerequisites: COMP 251, COMP 302, and COMP 310 or ECSE 427) Characteristics and utility of concurrent programs; formal methods for specification, verification and development of concurrent programs; communications, synchronization, resource allocation and management, coherency and integrity.

COMP 417 Introduction Robotics and Intelligent Systems.

(3) (Prerequisites: COMP 424 and MATH 223.) This course considers issues relevant to the design of robotic and of intelligent systems. How can robots move and interact. Robotic hardware systems. Kinematics and inverse kinematics. Sensors, sensor data interpretation and sensor fusion. Path planning. Configuration spaces. Position estimation. Intelligent systems. Spatial mapping. Multi-agent systems. Applications.

COMP 420 Secondary Storage Algorithms and Data Structures.

(3) (Prerequisite: COMP 251 or COMP 252.) Data structures and algorithms for persistent or very extensive data: sequential, logarithmic and direct-access files. Activity, volatility, and symmetry requirements of applications. Efficiency and cost analyses. Systems design. Programming language for secondary storage: basics of relational databases.

COMP 421 Database Systems.

(3) (3 hours) (Prerequisites: COMP 206, COMP 251, COMP 302) Database Design: conceptual design of databases (e.g., entity-relationship model), relational data model, functional dependencies. Database Manipulation: relational algebra, SQL, database application programming, triggers, access control. Database Implementation: transactions, concurrency control, recovery, query execution and query optimization.

● **COMP 423 Data Compression.**

(3) (3 hours) (Prerequisites: COMP 251, MATH 223, MATH 323) Information Theory. Huffman, arithmetic and dictionary codes. Context Modelling. Lossy compression and quantization. Signal processing. Applications to text, image, speech, audio and video data.

COMP 424 Topics: Artificial Intelligence 1.

(3) (3 hours) (Prerequisites: COMP 206, COMP 251, COMP 302) Introduction to search methods in AI problems. Mechanical theorem-proving techniques, game playing by computers, the minimax and alpha-beta algorithms, and heuristic approaches to state space search problems.

● **COMP 431 Algorithms for Engineers.**

(3) (3 hours) (Prerequisites: ECSE 222 and MATH 363) (Restrictions: COMP 431 is open only to B.Eng. students in Electrical and Computer Engineering. Credit will be given for only one of: COMP 431, COMP 251, COMP 360.) Advanced data structures: heaps, binary search trees, graphs, algorithmic analysis: space-time analysis, worst-case and expected complexity. Examples of searching sorting and merging. Algorithm design: divide-and-conquer, dynamic programming, greedy methods, backtracking. Algorithms: set manipulation, tree traversals. Memory management: hashing, dynamic storage allocation and garbage collection.

● **COMP 435 Basics of Computer Networks.**

(3) (3 hours) (Prerequisite: COMP 310) (COMP 435 and COMP 535 cannot both be taken for credit.) Exposition of the first four layers of the ISO model for computer network protocols. Socket programming. Network administration and configuration and security issues.

COMP 462 Computational Biology Methods.

(3) (3 hours) (Prerequisites: COMP 251 and MATH 323) (Restriction: Not open to students who have taken COMP 562. Not open to students who are taking or have taken COMP 561.) Application of computer science techniques to problems arising in biology and medicine, techniques for modeling evolution, aligning molecular sequences, predicting structure of a molecule and other problems from computational biology.

● **COMP 490 Introduction to Probabilistic Analysis of Algorithms.**

(3) (3 hours) (Prerequisites: COMP 251 and MATH 323) Fundamental tools from probability are used to analyze algorithms. Notions covered included independence, generating functions, probability inequalities, random walks and Markov

chains. Analysis of probabilistic recurrences, Las Vegas algorithms, randomized approximation algorithms, random sampling methods, Monte Carlo techniques and algorithms for combinatorial search and graph theoretic problems.

● **COMP 506 Advanced Analysis of Algorithms.**

(3) (3 hours) (Prerequisite: COMP 330 or COMP 360 or COMP 431.) The study of computational complexity and intractability: Cook's Theorem, NP-completeness, oracles, the polynomial hierarchy, lower bounds, heuristics, approximation problems.

● **COMP 507 Computational Geometry.**

(3) (3 hours) (Prerequisite: COMP 360 or COMP 362 or permission of instructor or corequisite COMP 506.) Problems in computational geometry; worst-case complexity of geometric algorithms; expected complexity of geometric algorithms and geometric probability; geometric intersection problems; nearest neighbour searching; point inclusion problems; distance between sets; diameter and convex hull of a set; polygon decomposition; the Voronoi diagram and other planar graphs; updating and deleting from geometric structures.

● **COMP 512 Distributed Systems.**

(4) (Prerequisites: COMP 310, COMP 251 or equivalent.) Models and Architectures. Application-oriented communication paradigms (e.g. remote method invocation, group communication). Naming services. Synchronization (e.g. mutual exclusion, concurrency control). Fault-tolerance (e.g. process and replication, agreement protocols). Distributed file systems. Security. Examples of distributed systems (e.g. Web, CORBA). Advanced Topics.

● **COMP 520 Compiler Design.**

(4) (3 hours, 1 hour consultation) (Prerequisites: COMP 273 and COMP 302) The structure of a compiler. Lexical analysis. Parsing techniques. Syntax directed translation. Run-time implementation of various programming language constructs. Introduction to code generation for an idealized machine. Students will implement parts of a compiler.

● **COMP 521 Modern Computer Games.**

(4) (Prerequisite: COMP 303 or COMP 361.) (Corequisite: COMP 557.) Genre and history of games, basic game design, storytelling and narrative analysis, game engines, design of virtual worlds, real-time 2D graphics, game physics and physical simulation, pathfinding and game AI, content generation, 3D game concerns, multiplayer and distributed games, social issues.

● **COMP 522 Modelling and Simulation.**

(4) (3 hours) (Prerequisites: COMP 251, COMP 302, COMP 350) Simulation and modeling processes, state automata, Petri Nets, state charts, discrete event systems, continuous-time models, hybrid models, system dynamics and object-oriented modeling.

● **COMP 523 Language-based Security.**

(3) (Prerequisites: COMP 302, COMP 330.) State-of-the-art language-based techniques for enforcing security policies in distributed computing environments. Static techniques (such as type- and proof-checking technology), verification of security policies and applications such as proof-carrying code, certifying compilers, and proof-carrying authentication.

● **COMP 524 Theoretical Foundations of Programming Languages.**

(3) (3 hours) (Prerequisites: COMP 302 and COMP 330.) Operational and denotational semantics of programming languages. Equivalence theorems for first-order languages. Lambda calculus. Type-inference, typed lambda calculus. Polymorphism. Elements of domain theory and fixed-point induction.

● **COMP 525 Formal Verification.**

(3) (3 hours) (Prerequisites: COMP 251 and COMP 330.) Propositional logic - syntax and semantics, temporal logic, other modal logics, model checking, symbolic model checking, binary decision diagrams, other approaches to formal verification.

● **COMP 526 Probabilistic Reasoning and AI.**

(3) (3 hours) (Prerequisites: COMP 206, COMP 360, COMP 424 and MATH 323) Belief networks, Utility theory, Markov Decision Processes and Learning Algorithms.

● **COMP 527 Logic and Computation.**

(3) (3 hours) (Prerequisite: COMP 302) (Restriction: Not open to students who have taken COMP 426) Introduction to modern constructive logic, its mathematical properties, and its numerous applications in computer science.

● **COMP 529 Software Architecture.**

(4) (Prerequisite: COMP 303 or COMP 304.) Development, analysis, and maintenance of software architectures, with special focus on modular decomposition and reverse engineering.

● **COMP 531 Theory of Computation.**

(3) (3 hours) (Prerequisite: COMP 330) Models for sequential and parallel computations: Turing machines, boolean circuits. The equivalence of various models and the Church-Turing thesis. Unsolvability problems. Model dependent measures of computational complexity. Abstract complexity theory. Exponentially and super-exponentially difficult problems. Complete problems.

● **COMP 533 Object-Oriented Software Development.**

(3) (Prerequisites: COMP 335 or ECSE 321) Object-oriented, UML-based software development; requirements engineering based on use cases; using OCL and a coherent subset of UML to establish complete and precise analysis and design documents for a software system; Java-specific mapping strategies for implementation.

● **COMP 535 Computer Networks 1.**

(3) (3 hours) (Prerequisite: COMP 310) (Restriction: Students may not take both COMP 435 and COMP 535 for credit) Exposition of the first four layers of the ISO model for computer network protocols, i.e., the physical, data, network, and transport layers. Basic hardware and software issues with examples drawn from existing networks, notably SNA, DECnet, and ARPAnet.

● **COMP 537 Internet Programming.**

(3) (3 hours) (Prerequisites: COMP 251 and COMP 302, and any one of COMP 310, COMP 420, COMP 424, or COMP 433) Sockets, User Datagram Protocol (UDP), Transmission utility protocols; Remote Terminal Protocol (Telnet), Simple Mail Transfer Protocol (SMTP), File Transfer Protocol (FTP), Hypertext Transfer Protocol (HTTP), Internet resource database and search engines. Remote File Systems. Distributed objects, Common Object Request Broker Architecture (CORBA).

● **COMP 540 Matrix Computations.**

(3) (3 hours) (Prerequisite: MATH 327 or COMP 350) Designing and programming reliable numerical algorithms. Stability of algorithms and condition of problems. Reliable and efficient algorithms for solution of equations, linear least squares problems, the singular value decomposition, the eigenproblem and related problems. Perturbation analysis of problems. Algorithms for structured matrices.

● **COMP 547 Cryptography and Data Security.**

(4) (3 hours) (Prerequisites: COMP 360 or COMP 362, MATH 323.) This course presents an in-depth study of modern cryptography and data security. The basic information theoretic and computational properties of classical and modern cryptographic systems are presented, followed by a cryptanalytic examination of several important systems. We will study the applications of cryptography to the security of systems.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

●COMP 552 Combinatorial Optimization.

(4) (Prerequisite: Math 350 or COMP 362 (or equivalent).)
(Restriction: This course is reserved for undergraduate honours students and graduate students. Not open to students who have taken or are taking MATH 552.) Algorithmic and structural approaches in combinatorial optimization with a focus upon theory and applications. Topics include: polyhedral methods, network optimization, the ellipsoid method, graph algorithms, matroid theory and submodular functions.

COMP 557 Fundamentals of Computer Graphics.

(3) (3 hours) (Prerequisite: MATH 223, COMP 251, COMP 206) The study of fundamental mathematical, algorithmic and representational issues in computer graphics. The topics to be covered are: overview of graphics process, projective geometry, homogeneous coordinates, projective transformations, quadrics and tensors, line-drawing, surface modeling and object modeling reflectance models and rendering, texture mapping, polyhedral representations, procedural modeling, and animation.

COMP 558 Fundamentals of Computer Vision.

(3) (3 hours) (Prerequisites: COMP 206, COMP 360, MATH 222, MATH 223) (Restriction: not open to students who have taken 308-766 before January 2001) Biological vision, edge detection, projective geometry and camera modeling, shape from shading and texture, stereo vision, optical flow, motion analysis, object representation, object recognition, graph theoretic methods, high level vision, applications.

●COMP 560 Graph Algorithms and Applications.

(3) (3 hours) (Prerequisite: COMP 360 or COMP 431 or MATH 343) Algorithms for connectivity, partitioning, clustering, colouring and matching. Isomorphism testing. Algorithms for special classes of graphs. Layout and embedding algorithms for graphs and networks.

COMP 561 Computational Biology Methods and Research.

(4) (Prerequisites: COMP 251, MATH 323) (Restrictions: Not open to students who have taken COMP 562. Not open to students who are taking or have taken COMP 462.) (Note: Additional work will consist of assignments and of a substantial final project that will require to put in practice the concepts covered in the course.) Application of computer science techniques to problems arising in biology and medicine, techniques for modeling evolution, aligning molecular sequences, predicting structure of a molecule and other problems from computational biology. An indepth exploration of key research areas.

●COMP 563 Molecular Evolution Theory.

(3) (Prerequisites: COMP 251 or COMP 252, MATH 323 or equivalent; or by permission of instructor.) Population genetics; statistical inference from sequence data; phylogenetics, coalescent theory; models of mutation and selection.

COMP 564 Computational Gene Regulation.

(3) (Prerequisite: COMP 462.) This course examines computational problems related to gene regulation at the mRNA and protein levels. With respect to mRNA expression, topics include microarray analysis, SNP detection, and the inference of genetic networks. With respect to protein expression, topics include peptide sequencing, peptide identification, and the interpretation of interaction maps.

COMP 566 Discrete Optimization 1.

(3) (3 hours) (Prerequisites: COMP 360 and MATH 223) Use of computer in solving problems in discrete optimization. Linear programming and extensions. Network simplex method. Applications of linear programming. Vertex enumeration. Geometry of linear programming. Implementation issues and robustness. Students will do a project on an application of their choice.

●COMP 567 Discrete Optimization 2.

(3) (3 hours) (Prerequisites: COMP 566 or MATH 417) Formulation, solution and applications of integer programs. Branch and bound, cutting plane, and column generation algorithms. Combinatorial optimization. Polyhedral methods. A large emphasis will be placed on modeling. Students will select and present a case study of an application of integer programming in an area of their choice.

●COMP 575 Fundamentals of Distributed Algorithms.

(3) (3 hours) (Prerequisite: COMP 310) Study of a collection of algorithms that are basic to the world of concurrent programming. Discussion of algorithms from the following areas: termination detection, deadlock detection, global snapshots, clock synchronization, fault tolerance (byzantine and self-stabilizing systems). Students will implement algorithms on the BBN butterfly and will present papers on topics in these areas.

●COMP 577 Distributed Database Systems.

(3) (3 hours) (Prerequisites: COMP 421 and COMP 310) High-level communication paradigms (e.g. client/server, publish/subscribe). Architecture of distributed information systems. Distributed transactions: concurrency control, recovery, distributed agreement. Data Replication. Data Distribution. Distributed queries. Advanced topics.

COMP 598 Topics in Computer Science 1.

(3) (Prerequisite: Permission of instructor.) Topics in computer science.

●COMP 599 Topics in Computer Science 2.

(3) (Prerequisite: Permission of instructor.) Topics in computer science.

EPSC-Earth & Planetary Sciences

Offered by: Earth & Planetary Sciences

EPSC 104 The Earth System.

(3) (Winter) (3 hours lectures) (Restriction: Not open to students who are taking or have taken ATOC 104 or GEOG 104.) Earth system science examines the complex interactions among the atmosphere, biosphere, geosphere and hydrosphere. It focuses on physical, chemical, and biological processes that extend over spatial scales ranging from microns to the size of planetary orbits, and spans time scales from fractions of a second to billions of years.

EPSC 199 FYS: Earth & Planetary Exploration.

(3) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) An exploration of how earth and planetary scientists reconstruct the current state, past progress, and initial conditions of the continuously evolving Earth experiment.

EPSC 200 The Terrestrial Planets.

(3) (Winter) (3 hours lectures) A comparative survey of the planets of our solar system with an emphasis on the terrestrial planets and their implications for the Earth as a planet. Topics include: structure and origin of the solar system, meteorites, and comparisons of the terrestrial planets in terms of their rotational properties, magnetic fields, atmospheres, surface histories, internal structure, chemical composition, volcanism, and tectonics.

EPSC 201 Understanding Planet Earth.

(3) (Fall or Winter) (3 hours lectures; afternoon field trips) Learn about Earth's origin, its place in the solar system, its internal structure, rocks and minerals, the formation of metal and fossil fuel deposits, and the extinction of dinosaurs. Discover the impact of the volcanic eruptions, earthquakes and mountain chains on Earth's past, present and future. Explore 125 million-year-old Mount Royal.

EPSC 203 Structural Geology.

(3) (Winter) (2 hours lectures, 3 hours laboratory) Primary igneous and sedimentary structures, attitudes of planes and lines, stress and strain, fracturing of rocks, faulting, homogeneous strain, description and classification of folds, foliation and lineation, orthographic and stereographic projections.

EPSC 205 Astrobiology.

(3) (Winter) (3 hours lectures) (Restriction: Not open to students who have taken or are taking ANAT 205) Astrobiology is the search for the origin, evolution and destiny of life in the universe. The course will provide insight into the formation and evolution of habitable worlds, the evolution of life and the biogeochemical cycles in the Earth's oceans and atmosphere, and the potential for biological evolution beyond an organism's planet of origin.

EPSC 210 Introductory Mineralogy.

(3) (Fall) (2 hours lectures, 3 hours laboratory) Crystal chemistry and identification of the principal rock-forming and ore minerals. Elementary crystallography. Optional 2-day field trip.

EPSC 212 Introductory Petrology.

(3) (Winter) (2 hours lectures, 3 hours laboratory) (Prerequisite: EPSC 210) A survey of igneous, sedimentary and metamorphic rocks and the processes responsible for their formation. The laboratory will emphasize the recognition of rocks in both hand-specimen and thin section using optical microscopes.

EPSC 220 Principles of Geochemistry.

(3) (Fall) (2 hours lecture, 3 hours laboratory) (Prerequisites: None.) Basic concepts in geochemistry and the application of geochemical principles of chemistry to geological subdisciplines. Particular emphasis on origin of elements, controls on their distribution in Earth and cosmos, isotopes, organic geochemistry and water chemistry. Application of phase diagrams to geology.

EPSC 221 General Geology.

(3) (Fall) (2 hours lectures, 3 hours laboratory) (2-3-4) (Restriction: Open to Engineering students only.) An introductory course in physical geology designed for majors in civil and mining engineering. Properties of rocks and minerals, major geological processes, together with natural hazards and their effects on engineered structures are emphasized. The laboratory is an integral part of the course which includes rock and mineral identification, basic techniques of airphoto and geological map interpretation, and structural geology.

EPSC 225 Properties of Minerals.

(1) (Fall) (1 hour lecture, 1 hour laboratory) (Restriction: Open to Engineering students only) (Restriction: Not open to students who have taken EPSC 210) Survey of the physical and chemical properties of the main mineral groups. Discussion of their relationships to the chemical composition and structure of minerals. The practical exercises emphasize the physical and chemical properties that relate to industrial uses and environmental issues, and the identification of hand specimens.

EPSC 231 Field School 1.

(3) (Prerequisite: EPSC 203, EPSC 212, or equivalent) Geological mapping of selected areas, preparation of maps, reports from field notes, aerial photographs, etc.

EPSC 233 Earth and Life History.

(3) (Fall) (3 hours lectures) Interpretation of stratified rocks; history of Earth with special emphasis on the regions of North America; outline of the history of life recorded in fossils.

EPSC 243 Environmental Geology.

(3) (Fall or Winter) (3 hours lectures) Introduction to the relationship of geological processes and materials to the human environment; geologic hazards; hydrogeology; impacts of waste disposal, energy use, land resource development.

EPSC 250 Natural Disasters.

(3) (Fall) (3 hours lectures) (Restriction: Not open to students who have taken or are taking ATOC 250) This course examines the science behind different types of disasters and our ability or inability to control and predict such events. From this course the student will gain an appreciation of natural disasters beyond the newspaper headlines, and will better understand how the effects of disasters can be reduced.

EPSC 312 Spectroscopy of Minerals.

(3) (Winter) (6 hours laboratory and relevant in-lab lectures) (Prerequisite: EPSC 210) Interaction of minerals with electromagnetic radiation. Optical mineralogy on thin and polished sections. Demonstrations of other spectroscopic

techniques applied to the identification of minerals and to the analysis of their composition and structure.

EPSC 320 Elementary Earth Physics.

(3) (Fall) (3 hours lectures) (Prerequisite: MATH 222) Physical properties of Earth and the processes associated with its existence as inferred from astronomy, geodesy, seismology, geology, terrestrial magnetism and thermal evolution.

EPSC 330 Earthquakes and Earth Structure.

(3) (Fall) (3 hours lectures, tutorial as required) (Prerequisites: MATH 314, EPSC 320.) (Corequisites: MATH 319) Seismic wave theory; body waves, surface waves and free oscillations; seismicity and earthquakes; seismology and Earth's internal structure.

EPSC 331 Field School 2.

(3) (Winter or Summer) (Two-week intensive field school to a range of national and international locations.) (Prerequisites: enrollment in U2 or U3 EPS program and permission of the instructor.) (Alternates years with EPSC 341.) Two week field studies in selected branches of the geosciences.

EPSC 334 Invertebrate Paleontology.

(3) (Winter) (2 lectures and one laboratory period) Preservation of fossils; the fossil record of invertebrates; use of fossils in stratigraphy and paleoecology; fossils in evolutionary studies. Fossils of invertebrates are studied in the laboratory.

● EPSC 341 Field School 3.

(3) (Winter or Summer) (Two week intensive field school to a range of national and international locations.) (Prerequisites: Enrolment in U2 or U3 EPS program and permission of the instructor.) (Alternates years with EPSC 331.) Two week field studies in selected branches of the geosciences to examine processes in geology.

● EPSC 350 Tectonics.

(3) (Winter) (3 hours lectures) (Prerequisites: EPSC 320, Calculus 3 or equivalent) Rheology of the Earth, mechanics of the crust and mantle and core, convection in the mantle, evolution and kinematics and deformations of the oceanic and continental plates, thermal evolution of the Earth, the unifying theory of plate tectonics.

EPSC 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project.

● EPSC 423 Igneous Petrology.

(3) (Fall) (2 hours lectures, 3 hours laboratory) (Prerequisites: EPSC 212, EPSC 312) Physical properties, nucleation, crystallization, differentiation and emplacement of magmas. Integrated studies on various rock suites.

EPSC 425 Sediments to Sequences.

(3) (Winter) (2 hours lectures, 3 hours laboratory) (Prerequisites: EPSC 210, EPSC 212) Processes and products of modern and ancient carbonate and siliciclastic depositional environments. Sequence stratigraphy as a tool for studying the fundamental controls (sea level, tectonics, sediment supply, etc.) on stratigraphic architecture.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

EPSC 435 Geophysical Applications.

(3) (Fall) (3 hours lectures) (Prerequisites: Calculus 3, Linear Algebra and EPSC 320 or equivalents) Methods in geophysical surveying including gravity, magnetism, electromagnetism, resistivity and induced polarisation, seismology and radioactivity; applications to oil and mineral exploration and near surface environmental and hydrological targets.

EPSC 445 Metamorphic Petrology.

(3) (Winter) (2 hours lectures, 3 hours laboratory) (Prerequisites: EPSC 212, EPSC 303, EPSC 312) The origin, classification and petrological significance of metamorphic rocks, from the point of view of theory, experiment and field observations.

EPSC 452 Mineral Deposits.

(3) (Fall) (2 hours lectures, 3 hours laboratory) (Prerequisite: EPSC 312, EPSC 220) A systematic review of the nature and origin of the major types of metallic and non-metallic mineral deposits; typical occurrences; geographic distribution; applications to exploration. Emphasis on magmatic ores, massive sulfides, iron formations.

●EPSC 455 Sedimentary Geology.

(3) (Fall) (2 hours lectures, 3 hours laboratory) (Prerequisites: EPSC 210, EPSC 212) This course discusses the origin, diagenesis, classification and economic importance of sedimentary rocks. Students will learn about the physical properties of sedimentary rocks, including porosity and permeability, different techniques for analyzing those rocks (thin sections, hand specimens, wireline logs) and the types of sedimentary basins within which sediments accumulate.

EPSC 478 Short Research Project.

(1) (Fall or Winter) (Restrictions: Open only to U3 students. Students are expected to find an appropriate instructor for their project.) Supervised research project in earth and planetary sciences.

EPSC 480D1 (3), EPSC 480D2 (3) Honours Research Project.

(Fall) (Restriction: For Honours students in 3rd year) (Students must register for both EPSC 480D1 and EPSC 480D2.) (No credit will be given for this course unless both EPSC 480D1 and EPSC 480D2 are successfully completed in consecutive terms) A written proposal outlining the studies to be undertaken must be submitted to the undergraduate Student Adviser by May 1st of the U-2 year. The proposal will be reviewed by a committee and a decision forwarded by mail. If approved the investigation will be supervised by a staff member, and the results must be presented in the form of an undergraduate thesis.

●EPSC 480N1 (3), EPSC 480N2 (3)

(Restriction: For Honours students in 3rd year) (Students must register for both EPSC 480N1 and EPSC 480N2.) (No credit will be given for this course unless both EPSC 480N1 and EPSC 480N2 are successfully completed in consecutive terms.) A written proposal outlining the studies to be undertaken must be submitted to the undergraduate Student Adviser by May 1st of the U-2 year. The proposal will be reviewed by a committee and a decision forwarded by mail. If approved the investigation will be supervised by a staff member, and the results must be presented in the form of an undergraduate thesis.

EPSC 482 Independent Studies 1.

(3) (Fall or Winter) (May not be taken concurrently with EPSC 480) Research and/or reading project in Earth and Planetary Sciences, designed by the student in consultation with a Faculty supervisor. A statement of the proposed project and the method of evaluation must be approved by the Director of Undergraduate studies before October 15. This statement will be included in the student's file.

EPSC 482D1 (1.5), EPSC 482D2 (1.5) Independent Studies 1.

(Fall) (Students must register for both EPSC 482D1 and EPSC 482D2.) (No credit will be given for this course unless both EPSC 482D1 and EPSC 482D2 are successfully completed in consecutive terms) (EPSC 482D1 and EPSC 482D2 together are equivalent to EPSC 482) Research and/or reading project in Earth and Planetary Sciences, designed by the student in consultation with a Faculty supervisor. A statement of the proposed project and the method of evaluation must be approved by the Director of Undergraduate studies before October 15. This

statement will be included in the student's file.

EPSC 501 Crystal Chemistry.

(3) (Fall) (2 hours lectures, 1 hour seminar) (Prerequisites: CHEM 203 or CHEM 213.) Discussion of crystal structures and compositions of important mineral groups, especially oxides, sulphides and silicates. Solid solution. Relation of structure to morphology and to chemical and physical properties of the rock-forming minerals.

●EPSC 510 Geodynamics and Geomagnetism.

(3) (Fall) (3 hours lectures) (Prerequisites: EPSC 320, MATH 319, or equivalent, or permission of the instructor.) (Corequisite: EPSC 350) The gravity field of the Earth and planets, body and orbital dynamics of the Earth, moon and planets, tidal interactions of the Earth-moon-sun system, deformation of the Earth under static and dynamic loads, the magnetic field of the Earth and planets: the magnetosphere, the external radiation belts, magnetohydrodynamic models of the core dynamo, geochemical convection in the core, fluid dynamic motions of the outer core, dynamics of the inner core.

EPSC 519 Isotope Geology.

(3) (Fall) (3 hours lectures) (Prerequisites: equivalent of the U2 core program.) Geochronology, the fractionation of the stable isotopes, and applications to petrology and mineral deposits.

●EPSC 525 Subsurface Mapping.

(3) (Winter) (2 hours lectures, 3 hours laboratory) (Prerequisites: EPSC 455 or equivalent, or permission of instructor.) This course will provide participants the opportunity to learn how different types of data (wireline logs, seismic, etc.) are employed to map geological features in the subsurface. Lectures will teach participants about the physical basis of each of the data types, and the basic mapping and analytical techniques (e.g., geostatistics, gridding) that are employed in subsurface mapping. The principal focus will be on applying these techniques and concepts to real-world data sets.

●EPSC 530 Volcanology.

(3) (Winter) (2 hours lectures, 3 hours laboratory) (Prerequisites: EPSC 212 and EPSC 312, or equivalent, or permission of instructor.) The physical mechanisms which drive volcanoes and volcanic activity are presented. Descriptive, practical and theoretical approaches to the study of volcanoes are discussed.

EPSC 542 Chemical Oceanography.

(3) (Fall) (3 hours lectures) (Prerequisites: CHEM 213, CHEM 257 or equivalents, or registration in the Graduate Program in Oceanography.) History of chemical oceanography. Seawater composition and definition of salinity/chlorinity. Minor and trace-element distribution in the ocean. Geochemical mass balance. Dissolved gases in sea water. CO₂ and the carbonate system. Chemical speciation. Physical chemistry of seawater. Organic matter and the carbon cycle in the marine environment. Sediment geochemistry.

●EPSC 547 High-Temperature Geochemistry.

(3) (Fall) (2 hours lectures, 3 hours laboratory) (Prerequisites: CHEM 203, CHEM 204 or CHEM 213, or equivalents, or permission of instructor.) The application of thermodynamic principles to igneous and metamorphic petrology and economic geology. Topics include but are not restricted to: solid solutions in minerals, behaviour of geological fluids, phase equilibria, flow processes, estimation of thermodynamic data.

EPSC 548 Processes of Igneous Petrology.

(3) (Fall) (2 hours lectures, 1 hour seminar) (Prerequisite: EPSC 423) Investigation of the primary mechanisms causing the diversity of igneous rock compositions on the Earth, other planets, asteroids, and meteorite parent bodies.

EPSC 549 Hydrogeology.

(3) (Winter) (3 hours lectures, 1-2 hours laboratory) (Prerequisite: permission of the instructor) Introduction to groundwater flow through porous media. Notions of fluid potential and hydraulic head. Darcy flux and Darcy's Law. Physical properties of porous media and their measurement. Equation of groundwater flow. Flow systems. Hydraulics of pumping and recharging wells. Notions of hydrology. Groundwater quality and contamination. Physical processes of contaminant transport.

EPSC 550 Selected Topics 1.

(3) (Fall or Winter) (2 hours seminar, permission of department undergraduate advisor) Research seminar and/or lecture with readings in topics concerning aspects of current interests in Earth & Planetary Sciences.

EPSC 551 Selected Topics 2.

(3) (Fall or Winter) (2 hours seminar, permission of department undergraduate advisor) Research seminar and/or lecture with readings in topics concerning aspects of current interest in Earth & Planetary Sciences.

EPSC 552 Selected Topics 3.

(3) (Fall or Winter) (2 hours seminar, permission of department undergraduate advisor) Research seminar and/or lecture with readings in topics concerning aspects of current interest in Earth & Planetary Sciences.

●EPSC 561 Ore-forming Processes 1.

(3) (Fall) (3 hours seminar) (Prerequisite: One course in ore petrology (EPSC 451 or EPSC 452) or equivalent, or permission of the instructor.) Physicochemical controls of hydrothermal mineral deposition. Discussion of fluid inclusion theory and application; stable isotope systematics, wall-rock alteration; ore mineral solubility and speciation; and mechanisms of mineral deposition.

●EPSC 562 Ore-forming Processes 2.

(3) (Winter) (3 hours seminar) (Prerequisite: One course in mineral deposits (EPSC 451 or EPSC 452) or equivalent, or permission of the instructor.) Genesis of hydrothermal mineral deposits. Discussion of geological setting, fluid and metal sources, method of metal transport, and factors controlling metal concentration for a selection of hydrothermal mineral deposit types.

EPSC 570 Cosmochemistry.

(3) (Fall) (3 hours lecture) (Prerequisites: EPSC 220, EPSC 210, or equivalent, or permission of instructor.) Examines the implications of phase equilibria and the compositions of meteorites and the solar system for the formation and internal differentiation of the terrestrial planets and the nature of chemical fractionation processes in both planetary interiors and the solar system as a whole.

●EPSC 580 Aqueous Geochemistry.

(3) (Fall) (3 hours lectures) (Prerequisites: EPSC 210, EPSC 212, or equivalent, or permission of instructor.) The use of chemical thermodynamics to study fluid-rock interactions with an emphasis on the aqueous phase. The course will introduce basic concepts and will discuss aqueous complexation, mineral surface adsorption, and other controls on crustal fluid compositions. Applications will range from considering contaminated groundwater systems to metamorphic reactions.

EPSC 590 Applied Geochemistry Seminar.

(3) (Winter) (3 hours seminar) (Prerequisite: permission of instructor) Seminar course devoted to field case studies that illustrate the applications of geochemical principles to solving geologic problems. Each student will prepare and lead a class devoted to a geochemical subject of their own choosing.

ESYS-Earth System Science

Offered by: Atmospheric & Oceanic Sciences, Geography

ESYS 200 Earth System Processes.

(3) (Winter) (3 hours lecture) Complex interactions among the atmosphere, biosphere, geosphere and hydrosphere. Biological, chemical and physical processes within and between each "sphere" that extend over spatial scales ranging from microns to the size of planetary orbits and that span time scales from fractions of a second to billions of years.

ESYS 300 Investigating the Earth System.

(3) (Fall) (3 hours lecture) (Prerequisite: ESYS 200 or equivalent.) An understanding of the biological, chemical and physical fundamentals of the Earth system and how the different components interact. The mechanisms controlling interactions between reservoirs are quantitatively investigated. Special emphasis on the development and response of the Earth system to perturbations.

ESYS 301 Earth System Modelling.

(3) (Winter) (3 hours lecture) (Prerequisite: ESYS 200 or ENVR 200 or equivalent.) Principal concepts of systems modelling related to earth system science and environmental science. Students explore the ideas of state, stability, equilibria, feedbacks, and complexity using simple models.

ESYS 500 Earth System Applications.

(3) (Fall) (3 hours seminar) Individual research projects that contribute to a group project that addresses one of the six scientific "Grand Challenges" crucial to humanity: global cycles (water and biogeochemical); climate variability and change; land use and land cover change; energy and resources; earth hazards; earth-atmosphere observation, monitoring, analysis and prediction.

EXMD-Experimental Medicine

Offered by: Medicine

EXMD 401 Physiology and Biochemistry Endocrine Systems.

(3) (Winter) (Prerequisite: BIOL 200 and BIOL 201) Offered in conjunction with the Department of Physiology. The course provides a basic knowledge of endocrine systems encompassing biosynthesis, metabolism and physiological actions of hormones. Specific topics covered are hormones of the hypothalamus, pituitary, adrenals, thyroids, parathyroids, pancreas, gut and the gonads. The role of hormones and growth factors in pregnancy and fetal development are also discussed.

EXMD 502 Advanced Endocrinology 01.

(3) (Fall) (Prerequisite (Undergraduate): EXMD 301 or an equivalent course) This course is designed for U3 students who are in a major or honours program in anatomy, biology, biochemistry or physiology and for graduate students. A multidisciplinary approach will be used to teach biosynthesis and processing of hormones, their regulation, function and mechanism of action. The material will cover hypothalamic, pituitary, thyroid, atrial and adrenal hormones as well as prostaglandins and related substances.

EXMD 503 Advanced Endocrinology 02.

(3) (Winter) Study of the parathyroids, gut and pancreatic hormones and growth factors. In addition, the role of hormones and growth factors in reproduction and fetal maturation will be discussed.

EXMD 504 Biology of Cancer.

(3) (Fall) (Prerequisite (Undergraduate): A good knowledge of biology at the cellular and molecular level. Open to U3 and graduate students only) An introduction to the biology of malignancy. A multidisciplinary approach dealing with the etiology of cancer, the biological properties of malignant cells, the host response to tumour cell growth and the principles of cancer therapy.

EXMD 506 Advanced Applied Cardiovascular Physiology.

(3) (Fall) (Prerequisite (Undergraduate): PHGY 313 or by permission of Instructors) Offered in conjunction with the Department of Physiology. Current topics, methods and techniques for studying the cardiovascular system. Basic and applied cardiac electrophysiology, mechanisms of pacemaker activity, arrhythmias, the effects of drugs on cardiac functions, fetal circulation, coronary circulation, mechanics of blood flow,

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

cardiovascular diseases, renal and neural control of the circulation, and cardiac assist devices.

EXMD 507 Advanced Applied Respiratory Physiology.

(3) (Fall) (Prerequisite: PHGY 313) Offered in conjunction with the Department of Physiology. In depth coverage of respiratory biology including: functional anatomy of the respiratory system, pulmonary statics and dynamics, chest wall and respiratory muscles, ventilation and perfusion, control of breathing, and defense mechanisms. This course is aimed at providing a solid grounding in pulmonary biology and its research applications.

EXMD 508 Advanced Topics in Respiration.

(3) (Winter) (Prerequisite: EXMD 507) Offered in conjunction with the Department of Physiology. In depth coverage of developmental physiology, pulmonary vascular physiology, biology of airway smooth muscle, respiratory epithelium and molecular biology of respiratory muscles. Dyspnea, mechanical ventilation and respiratory failure will also be covered. This course emphasizes application of respiratory biology to basic and applied research and touches on pulmonary pathophysiology.

EXMD 509 Gastrointestinal Physiology and Pathology.

(3) (Fall and Winter) (Prerequisite: Graduate students, U3 undergraduates) Course deals with various aspects of gastrointestinal and hepatic function in health and altered physiological states. The principal focus is on the recent literature pertaining to cell and molecular mechanisms underlying the motility secretory process, absorption and secretion. The molecular biology of the hepatic viruses and various aspects of colonic neoplasia will also be considered.

EXMD 510 Bioanalytical Separation Methods.

(3) (Fall) The student will be taught the capabilities and limitations of modern separation methods (gas and high-performance liquid chromatography, capillary electrophoresis, hyphenated techniques). Application of these techniques to solve analytical problems relevant to biomedical research will be emphasized, with special attention being paid to the processing of biological samples.

EXMD 511 Joint Venturing with Industry.

(3) (Winter) (Offered in conjunction with the Centre for Continuing Education) Using problem-based learning, the course examines the various business interactions between researchers and their business partners in support and development of research into commercial endeavours using models such as venture capital, business partnerships, or grants-in-aid.

FIGS-Freshman Interest Groups

Offered by: Science

For more information, please see "Freshman Interest Groups" in the Faculty of Science section of the Undergraduate Programs' calendar.

FIGS 196 Freshman Interest Groups.

(0) (Fall)

FSCI-Faculty of Science

Offered by: Science

● **FSCI 200 Industrial Practicum 1.**

(0) (Restrictions: Must have completed at least 27 credits and have at least 12 credits remaining. Must be registered as a full-time student prior to work term. CGPA 3.00 or permission of internship officer.) (Open to B.Sc., B.A. & Sc. and B.Sc./B.Ed. students, as well as qualified students in other undergraduate programs including majors in Environment, Computer Science, Geography, Mathematics and Psychology.) (Students will be graded using the Pass/Fail system. Students must be registered as a full-time student prior to and after enrollment in this course. A mandatory report must be submitted at the end of the Practicum to the Faculty of Science Internship Officer--Martine Dolmiere martine.dolmiere@mcgill.ca. Completion of both the FSCI 200 and FSCI 300 courses will allow B.Sc. students to add the Internship Option to their transcript.) Paid, fulltime work-term intended to complement the student's undergraduate studies.

● **FSCI 300 Industrial Practicum 2.**

(0) (PreRequisite: FSCI 200) (Restrictions: Must have completed at least 42 credits and have at least 12 credits remaining. Must be registered as a full-time student prior to

work term. CGPA 3.00 or permission of internship officer.)

(Open to B.Sc., B.A. & Sc. and B.Sc./B.Ed. students, as well as qualified students in other undergraduate programs including majors in Environment, Computer Science, Geography, Mathematics and Psychology.) (Students will be graded using the Pass/Fail system. Students must be registered as a full-time student prior to and after enrollment in this course. A mandatory report must be submitted at the end of the Practicum to the Faculty of Science Internship Officer--Martine Dolmiere martine.dolmiere@mcgill.ca. Completion of both the FSCI 200 and FSCI 300 courses will allow B.Sc. students to add the Internship Option to their transcript.) Paid, fulltime work-term intended to complement the student's undergraduate studies.

GEOG-Geography

Offered by: Geography

● **GEOG 104 The Earth System.**

(3) (Winter) (Restriction: Not open to students who are taking or have taken ATOC 104 or EPSC 104.) Earth system science examines the complex interactions among the atmosphere, biosphere, geosphere and hydrosphere. It focuses on physical, chemical, and biological processes that extend over spatial scales ranging from microns to the size of planetary orbits, and spans time scales from fractions of a second to billions of years.

● **GEOG 199 FYS: Geo-Environments.**

(3) (Fall) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25. Closed to Geography Majors) Geography studies the complex but crucial relationships between people and their physical and socio-cultural environments. The course is constructed around field trips and preparatory seminars which provide an opportunity for students to learn about a variety of physical environments and their utilisation.

● **GEOG 200 Geographical Perspectives: World Environmental Problems.**

(3) (Fall and Summer) (3 hours) Introduction to geography as the study of nature and human beings in a spatial context. An integrated approach to environmental systems and the human organization of them from the viewpoint of spatial relationships and processes. Special attention to environmental problems as a constraint upon Third World development.

● **GEOG 201 Introductory Geo-Information Science.**

(3) (Fall) (3 hours and lab) An introduction to Geographic Information Systems. The systematic management of spatial data. The use and construction of maps. The use of microcomputers and software for mapping and statistical work. Air photo and topographic map analyses.

● **GEOG 202 Statistics and Spatial Analysis.**

(3) (Winter) (2.5 hours and lab) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) Exploratory data analysis, univariate descriptive and inferential statistics, non-parametric statistics, correlation and simple regression. Problems associated with analysing spatial data such as the 'modifiable areal unit problem' and spatial autocorrelation. Statistics measuring spatial pattern in point, line and polygon data.

● **GEOG 203 Environmental Systems.**

(3) (Fall) (3 hours) (Restriction: Because of quantitative science content of course, not recommended for B.A. and B.Ed. students in their U0 year.) An introduction to system-level interactions among climate, hydrology, soils and vegetation at the scale of drainage basins, including the study of the global geographical variability in these land-surface systems. The knowledge acquired is used to study the impact on the environment of various human activities such as deforestation and urbanisation.

● **GEOG 205 Global Change: Past, Present and Future.**

(3) (Winter) (3 hours) An examination of global change, from the Quaternary Period to the present day involving changes in the physical geography of specific areas. Issues such as climatic

change and land degradation will be discussed, with speculations on future environments.

GEOG 210 Global Places and Peoples.

(3) (Winter) (3 hours) Introduction to key themes in human geography. Maps and the making, interpretation and contestation of landscapes, 'place', and territory. Investigation of globalization and the spatial organization of human geo-politics, and urban and rural environments.

GEOG 216 Geography of the World Economy.

(3) (Fall) (3 hours) This course introduces the geography of the world economic system. It describes the spatial distribution of economic activities and examines the factors which influence their changing location. Case studies from both "developed" and "developing" countries will test the different geographical theories presented in lectures.

GEOG 217 The Canadian City.

(3) (Winter) (3 hours) An introduction to the social, economic, political and built environments of Canadian cities. Theories of the internal structure of cities, and relationships between urban places of various sizes. The course situates Canadian urbanism in the North American context, and emphasizes social and economic processes distinctive to Montreal.

GEOG 221 Environment and Health.

(3) (Winter) (3 hours) (Restriction: Not open to students who have taken or are taking NRSC 221.) (Note: This course is also offered as NRSC 221. Students enrolled in downtown campus programs register in GEOG 221; students enrolled in Macdonald campus programs register in NRSC 221. In Winter 2009, GEOG221/NRSC 221 will be taught on the downtown campus.) This course introduced physical and social environments as factors in human health, with emphasis on the physical properties of the atmospheric environment as they interact with diverse human populations in urban settings.

GEOG 272 Earth's Changing Surface.

(3) (Fall) (3 hours) Introduction to the study of landforms as products of geomorphic and geologic systems acting at and near the Earth's surface. The process geomorphology approach will be used to demonstrate how landforms of different geomorphic settings represent a dynamic balance between forces acting in the environment and the physical properties of materials present.

GEOG 290 Local Geographical Excursion.

(1) (Fall) (1 credit) (Restriction: Open to first-year Geography Major and Honours students only. Not open to students who have taken GEOG 199) (Excursion Dates: October 3-5, 2008) Introduction to landscape interpretation and geographical site analysis in physical and human geography. A three-day fall excursion with preparatory and concluding seminars.

●GEOG 300 Human Ecology in Geography.

(3) (Winter) (3 hours) (Prerequisite: GEOG 203 or ANTH 202 or BIOL 111) The course will examine research approaches in human ecology since its inception early in this century. Emphasis will be placed on the theoretical shifts that have led to its emergence as an important social science perspective. The course will also involve case studies to evaluate the methodological utility of the approach.

●GEOG 301 Geography of Nunavut.

(3) (Fall) (3 hours) An introduction to the physical and cultural geography of Canada's newest territory. The course will emphasize the bio-physical heterogeneity of the natural environment and the cultural and political ecology of the human population.

GEOG 302 Environmental Management 1.

(3) (Fall and Summer) (3 hours) (Prerequisite: Any 200-level course in Geography or MSE or BIOL 208 or permission of instructor.) An ecological analysis of the physical and biotic

components of natural resource systems. Emphasis on scientific, technological and institutional aspects of environmental management. Study of the use of biological resources and of the impact of individual processes.

GEOG 303 Health Geography.

(3) (Winter) (Prerequisite: One of the following: GEOG 201, GEOG 203, GEOG 210, GEOG 216, GEOG 217; or permission of instructor) Discussion of the research questions and methods of health geography. Particular emphasis on health inequalities at multiple geographic scales and the theoretical links between characteristics of places and the health of people.

GEOG 305 Soils and Environment.

(3) (Fall) (3 hours and laboratory) (Prerequisite: GEOG 203 or introductory course in biology or geology) Discussion of the major properties of soils; soil formation, classification and mapping; land capability assessment; the role and response of soils in natural and disturbed environments (e.g. global change, ecosystem disturbance).

GEOG 306 Raster Geo-Information Science.

(3) (Winter) (2 hours and laboratory) (Prerequisite: GEOG 201) Formal introduction to a computer-based Geographical Information System (GIS). Topics will focus on map analysis and on transforming and displaying spatial data. GIS will be used by students to solve problems in both physical and human geography.

GEOG 307 Socioeconomic Applications of GIS.

(3) (Winter) (2 hours and laboratory) (Prerequisites: GEOG 201, MATH 203 or equivalent) GIS applied to the spatial analysis of socioeconomic and market data. Topics include geographic market segmentation, geodemographics, spatial decision-support systems and modelling applications of GIS. Empirical focus is on analysing spatial patterns of population and consumption characteristics in cities and on facility location problems. Emphasis on visualization and problem solving.

GEOG 308 Principles of Remote Sensing.

(3) (Fall) (3 hours and laboratory periods) (Restriction: Not open to students who have taken or are taking ATOC 308) A conceptual view of remote sensing and the underlying physical principles are presented. Ground-based and satellite systems and the various components of the acoustic and electromagnetic spectrum - from visible to microwave - are discussed. Substantial emphasis is devoted to the application of remote sensed data in geography and atmospheric sciences.

GEOG 309 Geography of Canada.

(3) (Fall) (3 hours) An introduction to the geography of Canada. A comprehensive geographical interpretation of Canada's salient physical and human characteristics, including landscapes and their evolution, climate, vegetation, society/land relationships and socio-economic attributes of the population.

GEOG 311 Economic Geography.

(3) (Fall) (3 hours) (Prerequisite: GEOG 216 or permission of instructor) Different theories and approaches to understanding the spatial organization of economic activities. Regional case studies drawn from North America, Europe and Asia used to reinforce concepts. Emphasis also on city-regions and their interaction with the global economy.

●GEOG 315 Urban Transportation Geography.

(3) (Winter) (3 hours) (Prerequisite: GEOG 217 or permission of instructor) Discusses the urban transportation problem and proposed solutions from a geographic perspective. Specific topics include an analysis of the land use-transportation system in North American cities; its social environmental impacts; the analysis of urban travel behaviour; and the geographical implications of various policy alternatives.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

GEOG 316 Political Geography.

(3) (Fall) (3 hours) The study of the spatial dimensions of political activities and developments at the regional, national and global levels in historical and contemporary perspective. Presentation of case studies relating to the theoretical framework of political geography.

GEOG 321 Climatic Environments.

(3) (Winter) (3 hours) (Prerequisite: GEOG 203 or ATOC 210 or permission of instructor) Scope of climatology, physical, dynamic and applied. The Earth/atmosphere system, radiation and energy balances, governing meteorological processes. Movement and circulation of the atmosphere on a local and global scale. Resulting weather systems.

GEOG 322 Environmental Hydrology.

(3) (Winter) (3 hours) (Prerequisite: GEOG 203 or equivalent) Quantitative, experimental study of the principles governing the movement of water at or near the Earth's surface and how the research relates to the chemistry and biology of ecosystems.

GEOG 331 Urban Social Geography.

(3) (Fall) (3 hours) (Prerequisite: GEOG 216 or GEOG 217 or permission of instructor) Social space and social time. The reflection of social structure in the spatial organization of the city. Historical perspective on changing personal mobility, life cycle, family structure and work organization. The appropriation and alienation of urban spaces.

●GEOG 350 Ecological Biogeography.

(3) (Fall) (3 hours) (Prerequisite: GEOG 203 or ENVR 200 or ENVR 202) (Note: Offered at Macdonald campus in alternate years.) The study of the patterns of distribution of organisms in space and time with emphasis on plant communities. Ecological, geographical, historical and anthropological factors affecting these distribution patterns will be discussed. Particular consideration is given to methods for description and classification of plant communities.

GEOG 351 Quantitative Methods.

(3) (Winter) (3 hours) (Prerequisite: MATH 203 or permission of instructor) (You may not be able to get credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) Multiple regression and correlation, logit models, discrete choice models, gravity models, facility location algorithms, survey design, population projection.

●GEOG 370 Protected Areas.

(3) (Winter) (3 hours) (Prerequisite: BIOL 208 or GEOG 203 or AEBI 205) Discussion of the goals of protected areas, focusing on the potential conflict between biodiversity conservation and use for recreation, education and sustainable extraction of resources. Principles and current issues in protected area design and management are reviewed. Examples are taken from developed and developing countries.

GEOG 372 Running Water Environments.

(3) (Fall) (3 hours) (Prerequisites: GEOG 203 and GEOG 272, or ENVR 200 and ENVR 202) The course focuses on the physical habitat conditions found in streams, rivers, estuaries and deltas. Based on the laws governing flow of water and sediment transport, it emphasizes differences among these environments, in terms of channel form, flow patterns, substrate composition and mode of evolution. Flooding, damming, channelisation, forestry impacts.

●GEOG 380 Adaptive Environmental Management.

(3) (Winter) (3 hours) (Pre/Co-requisites: GEOG 202 or equivalent, GEOG 203, ENVR 200, Biol 215, or equivalent.) Articulates and evaluates competing hypotheses about the functioning of human-dominated ecosystems. Introduces the use of statistics, ecological modeling, and management in an integrated ecological management context. Case studies examine factors that impede and enhance adaptive management.

●GEOG 381 Geographic Thought and Practice.

(3) (Winter) (3 hours) An overview of the philosophy of geography and its emergence as a discipline nationally and internationally with emphasis on current concepts and their application to geographical studies in local field work analyzing the impact of human environmental interactions.

●GEOG 382 Principles Earth Citizenship.

(3) (Winter) (Restrictions: Not open to students who have taken or are taking NRSC 374. Restricted to U2 or U3 students. Enrolment limited to 50.) Foundations and applications of earth citizenship. Foundations: sustainability, tragedy of the commons, dominion, privatization and public welfare, resilience, precautionary principle, and land ethic are critically considered. Applications: implications for relationship between human and natural economies; human population size and control; and morality of modern agricultural and forestry practices.

●GEOG 390 Managing Field Research.

(3) (Fall) (Restrictions: Open to U2 or U3 students planning field research or internship as part of their university experience. Not open to U0 or U1 students except with permission of instructor.) Skills for making field research successful, especially where human communities are involved and/or where risk management is important. Topics: characteristics of field-based research, ethical issues, researcher bias, logistics and risk management, research planning, field methods, adapting in the field.

GEOG 396 Undergraduate Research Project.

(3) (Fall and Winter) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

GEOG 404 Environmental Management 2.

(3) (Winter) (3 hours) (Prerequisite: GEOG 302 or permission of instructor) Practical application of environmental planning, analysis and management techniques with reference to the needs and problems of developing areas. Special challenges posed by cultural differences and traditional resource systems are discussed. This course involves practical field work in a developing area (Kenya or Panama).

GEOG 407 Issues in Geography.

(3) (Fall) (3 hours) Treatment of contemporary issues in geographical research focusing on human-environmental relations and interactions. Instructor(s) and topics will be announced each term the course is given.

GEOG 408 Geography of Development.

(3) (Fall) (3 hours) (Prerequisite: GEOG 210 or GEOG 216 or permission of instructor) Examines the geographical dimensions of development policy, specifically the relationships between the process of development and human-induced environmental change. Focuses on environmental sustainability, struggles over resource control, population and poverty, and levels of governance (the role of the state, non-governmental organizations, and local communities).

GEOG 410 Geography of Underdevelopment: Current Problems.

(3) (Winter) (3 hours) (Prerequisite: GEOG 216 or permission of instructor) An examination of the cultural, political, and economic mechanisms and manifestations of contemporary underdevelopment and the response to it from different regional and national peripheral societies within the dominant world economic system.

GEOG 416 Africa South of the Sahara.

(3) (Winter) (Offered in Kenya as part of the African Field Studies semester.) A synthetic overview of physical and cultural geography examining particularly the relation of African peoples to their landscapes, the causes and consequences of environmental changes, and the idea of sustainable development as it applies to African landscapes, resource systems and economies.

● GEOG 424 Europe: Places and Peoples.

(3) (Fall) (3 hours) (Prerequisite: At least one 300-level course in geography, anthropology, history, political science, sociology or permission of instructor.) The dynamics of change in distinct European landscapes, peoples and their cultures during the modern era with emphasis upon divergence/convergence of regional identities, emergent nationalism and their implications for contemporary issues of international cooperation.

● GEOG 451 Research in Society and Development in Africa.

(3) (Prerequisite: Open to U2 or later students in the AFSS.) (Corequisite: NRSC 452.) (Restriction: Not open to students who have taken, or are taking ANTH 451.) Three intersecting components: 1) core development themes including culture change, environmental conservation, water, health, development (urban and rural), governance and conflict resolution, 2) research techniques for topics related to core themes, including ethics, risk, field methods and data analysis, 3) field documentation, scientific recording and communication.

GEOG 470 Wetlands.

(3) (Fall) (3 hours) (Restriction: Permission of instructor.) An examination of the structure, function and utility of wetlands. Topics include the fluxes of energy and water, wetland biogeochemistry, plant ecology in freshwater and coastal wetlands and wetlands use, conservation and restoration. Field trip(s) are envisaged to illustrate issues covered in class.

GEOG 490 Geography: Independent Studies.

(3) (Fall and Winter) (Prerequisites: Permission of instructor and completion of 30 credits of courses at the 200-level or above.) (Note: Please see regulations concerning "Project Courses" in the Faculty Degree Requirements section. Before registration a project must be arranged with an instructor and a plan for the independent studies approved by the Department.) Research project permitting independent study under the guidance of a staff member specializing in the field of interest.

GEOG 490D1 (1.5), GEOG 490D2 (1.5) Geography: Independent Studies.

(Fall) (Prerequisites: Permission of instructor and completion of 30 credits of courses at the 200-level or above.) (Students must register for both GEOG 490D1 and GEOG 490D2.) (No credit will be given for this course unless both GEOG 490D1 and GEOG 490D2 are successfully completed in consecutive terms) (GEOG 490D1 and GEOG 490D2 together are equivalent to GEOG 490) (Note: Please see regulations concerning "Project Courses" in the Faculty Degree Requirements section. Before registration a project must be arranged with an instructor and a plan for the independent studies approved by the Department.) Research project permitting independent study under the guidance of a staff member specializing in the field of interest.

GEOG 491D1 (3), GEOG 491D2 (3) Honours Research.

(Fall) (Prerequisite: 183-381) (Restriction: For U3 B.A. and B.Sc. Honours and Joint Honours Geography students) (Students must register for both GEOG 491D1 and GEOG 491D2.) (No credit will be given for this course unless both GEOG 491D1 and GEOG 491D2 are successfully completed in consecutive terms) Supervised reading, research and preparation of an undergraduate thesis under the direction of a member of staff.

GEOG 491N1 (3), GEOG 491N2 (3) Honours Research.

(Winter) (Restriction: For U3 B.A. and B.Sc. Honours and Joint Honours Geography students) (Students must also register for GEOG 491N2) (No credit will be given for this course unless both GEOG 491N1 and GEOG 491N2 are successfully completed in a twelve month period) Supervised reading, research and preparation of an undergraduate thesis under the direction of a member of staff.

GEOG 492D1 (1.5), GEOG 492D2 (1.5) Joint Honours Research.

(Fall) (Restriction: Only for those U3 Joint Honours students in Geography who opt to enrol in a parallel course in another department) (Students must register for both GEOG 492D1 and GEOG 492D2.) (No credit will be given for this course unless both GEOG 492D1 and GEOG 492D2 are successfully completed in consecutive terms) Supervised reading, research and preparation of an undergraduate thesis under the direction of a member of staff.

GEOG 492N1 (1.5), GEOG 492N2 (1.5) Joint Honours Research.

(Winter, Fall) (Students must also register for GEOG 492N2) (No credit will be given for this course unless both GEOG 492N1 and GEOG 492N2 are successfully completed in a twelve month period) Supervised reading, research and preparation of an undergraduate thesis under the direction of a member of staff.

GEOG 494 Urban Field Studies.

(3) (Fall) (Prerequisites: One of the following: GEOG 201, GEOG 203, GEOG 210, GEOG 216, GEOG 217, GEOG 272, or permission of instructor.) Geographical research in urban public and semi-public spaces. Demonstration of techniques of mapping, sampling, measurement, photography, interviewing. Attention to research design.

GEOG 495 Field Studies - Physical Geography.

(3) (Summer) (2-week field school) (Prerequisites: 6 credits from the following list of Systematic Physical Geography courses: GEOG 305, GEOG 321, GEOG 322, GEOG 350, GEOG 372) Field research projects in physical geography. Held locally in Monteregian or Eastern Township regions. The course is organised around field projects designed to formulate and test scientific hypotheses in a physical geography discipline. May summer session. Preregistration in Department required by March 14.

● GEOG 496 Geographical Excursion.

(3) (Winter) (Prerequisites: GEOG 290 and permission of instructor) Lecture course on the geography of a region and excursion through the selected country or region including landscape interpretation and field study projects.

● GEOG 498 Humans in Tropical Environments.

(3) (Winter) (6 hours lecture for 4 weeks, 3 hours seminar, 2 hours laboratory, 8 hours conference) (Restriction: Location in Panama. Student must register for a full semester of studies in Panama) (Prerequisites: HISP 218, MATH 203 or equivalents) Focus on understanding of inter-relations between humans and neotropical environments represented in Panama. Study of contemporary rural landscapes, their origins, development and change. Impacts of economic growth and inequality, social organization, and politics on natural resource use and environmental degradation. Site visits and field exercises in peasant/colonist, Amerindian, and plantation communities.

● GEOG 499 Subarctic Field Studies.

(3) (Fall) (Prerequisite: GEOG 203 or GEOG 301) An introduction to the geography of the subarctic with emphasis on the application of field methods in physical and/or human geography.

● GEOG 500 Geography of Regional Identity.

(3) (Fall) (3 hours) (Restriction: Graduate students and final year undergraduates and/or those who have taken GEOG 408) The response of diverse regional groups in Europe to the centripetal tendencies of national institutions. The course draws upon examples from a variety of European regions. Contemporary regional issues will be contextualised within a spatial framework of historical geography.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

GEOG 501 Modelling Environmental Systems.

(3) (Fall) (1.15 hours lecture, 0.58 hours seminar, 0.69 hours project, 0.58 hours laboratory) (Restriction: open only to U2 or U3 students who have completed six or more credits from courses at the 300 level of Atmospheric and Oceanic Sciences, Biology, Chemistry, Earth and Planetary Sciences, Geography, Natural Resource Sciences, or a McGill School of Environment domain, or permission of the instructor) (Prerequisites: MATH 139 or MATH 140, MATH 141, and MATH 203, or equivalent) (Enrolment limited to 20 students by availability of workstations) Most problems in environmental science deal with weak relationships and poorly defined systems. Model development and simulation will be used in this course to help improve understanding of environmental systems. Simulation of environmental systems is examined, focusing on problem definition, model development and model validation.

●GEOG 502 Geography of Northern Development.

(3) (Fall) (3 hours) (Prerequisite (Undergraduate): GEOG 301 or GEOG 436, or permission of instructor) Analysis of the evolution of development policies and their spatial implications in circumpolar areas with an emphasis on the application of geographical concepts. Special attention is given to indigenous peoples and new immigrant populations in northern North America.

●GEOG 503 Location & Spatial Development.

(3) (Winter) (3 hours) (Prerequisites: GEOG 216 and GEOG 202, OR one course in each of microeconomics and macroeconomics, OR permission of instructor.) Patterns of regional economic growth or decline explained in terms of the competitive behaviour of profit-maximizing firms and utility-maximizing households. Ideas, models and evidence developed in competitive location theory.

GEOG 505 Global Biogeochemistry.

(3) (Winter) (2 hours and research) (Prerequisite: GEOG 305 or GEOG 322 and permission of instructor) An examination of the storage, transfers and cycling of major elements and substances, with an emphasis on the global scale and the linkages between the atmosphere, hydrosphere, lithosphere and biosphere.

GEOG 506 Advanced Geographic Information Science.

(3) (Winter) (2 hours and laboratory) (Prerequisite (Undergraduate): GEOG 201 and GEOG 307 and permission of instructor.) Critically analyse major themes in geographic information science and draw out the practical ramifications for spatial technologies and research. Topics such as spatial interoperability, data quality, scale, visualization, location based services and ontologies are covered.

●GEOG 507 Advanced Social Geography.

(3) (Prerequisite: GEOG 331 or equivalent, and permission of instructor.) Current theories and themes in social geography, such as relations between society and space, social and spatial relations of inequality, difference and diversity, situated and embodied identities, social issues and problems, connections between society and nature, all within a spatial framework.

●GEOG 508 Resources, People and Power.

(3) (Fall) (3 hours) (Prerequisite: GEOG 408 or GEOG 410 or permission of instructor) Addresses how different groups of people struggle over natural resources and environmental change. Politics of conservation in resource-dependent local communities, struggles over resource access and character, questions of power, resistance, class, and gender, and to "nature" as a socially-constructed yet active player.

●GEOG 509 Qualitative Methods.

(3) (Winter) (Prerequisite: Permission of instructor.) Qualitative methods that geographers use and the debates surrounding their use; epistemological underpinnings of methodological choices.

GEOG 510 Humid Tropical Environments.

(3) (Winter) (3 hours) (Prerequisite: GEOG 203 or equivalent and written permission of the instructor) Focus on the environmental and human spatial relationships in tropical rain forest and savanna landscapes. Human adaptation to variations within these landscapes through time and space. Biophysical constraints upon "development" in the modern era.

●GEOG 513 Behavioural Geography.

(3) (3 hours) (Prerequisite (Undergraduate): a course in introductory statistics) The development of behavioural approaches in geography. A survey of methods and findings in the area of environmental and spatial cognition, preference and choice behaviour. Models of disaggregate and aggregate travel demand.

●GEOG 522 Advanced Environmental Hydrology.

(3) (2 hours and 1 tutorial) (Prerequisite: GEOG 322, or permission of instructor) (Cross-listed with CASN 300) Surface and shallow ground water determine the availability of moisture and many chemical elements at the Earth's surface. This course discusses the link between surface water and ground water flow systems and the role this link plays in stream flow production and biogeochemical cycling in lake, riparian and terrestrial ecosystems.

GEOG 523 Advanced Climatology.

(3) (Fall) (3 hours) (Prerequisite: a previous course in climatology or meteorology, and written permission of the instructor) Principles of physical climatology involving a detailed examination of energy and mass exchange at or near the Earth's surface, emphasizing radiative heat, moisture and momentum transfers. Methods of measurement based on energy balance, water balance, and turbulent transport theory. Models of potential and actual evaporation and their use in predicting soil moisture and plant productivity. Examples drawn from natural, agricultural, and urban environments.

GEOG 535 Remote Sensing and Interpretation.

(3) (Winter) (3 hours) (Prerequisite: GEOG 308 and written permission of instructor) Basic photogrammetry and interpretation procedures for aircraft and space craft photography and imagery.

●GEOG 536 Geocryology.

(3) (Fall) (3 hours) (Prerequisite: GEOG 272 and any 300-level geomorphology course approved by instructor) Study of the unique geomorphic aspects of periglacial and permafrost environments. The focus will be on processes in cold climates, the impact of human activity on permafrost landscapes and potential impacts of climatic change.

●GEOG 537 Advanced Fluvial Geomorphology.

(3) (Winter) (Prerequisite (Undergraduate): permission of instructor) An examination of current advances in fluvial geomorphology: sediment entrainment and transport, alluviation and river channel evolution.

GEOG 540 Topics in Geography 1.

(3) (Fall) (Prerequisite: Permission of instructor.) (Note: This course is offered on an irregular basis. See Geography website (www.geog.mcgill.ca) for current status.) In-depth review of a current topic in physical geography.

GEOG 541 Topics in Geography 2.

(3) (Prerequisite: Permission of instructor.) (Note: This course is offered on an irregular basis. See Geography website (www.geog.mcgill.ca) for current status.) In-depth review of a current topic in human geography.

●GEOG 542 Advanced Studies in Geography 1.

(1) (Prerequisite: Permission of instructor.) (Note: This course is offered on an irregular basis. See Geography website (www.geog.mcgill.ca) for current status.) Intensive review of a current topic or technique in physical geography.

●GEOG 543 Advanced Studies in Geography 2.

(1) (Prerequisite: Permission of instructor.) (Note: This course is offered on an irregular basis. See Geography website (www.geog.mcgill.ca) for current status.) Intensive review of a current topic or technique in human geography.

GEOG 550 Historical Ecology Techniques.

(3) (Fall) (2 hours, laboratory and seminar) (Prerequisite: GEOG 350 or BIOL 215 or PLNT 460 or permission of instructor.) Principles and methods of Quaternary paleoecology and vegetation reconstruction. Examination of ecosystem response to human disturbance and environmental change.

GEOG 551 Environmental Decisions.

(3) (Fall) (2 hours seminar, 1 hour tutorial) (Prerequisites: GEOG 302, GEOG 306 or equivalents) This course deals with the role of geographic information, paradigms and modes of analysis - including but not restricted to GIS - in

environmental impact assessment and decision making. The focus will be on community-based decision making, particularly where conservation issues are involved. Cross-cultural situations, developing areas and the role of non-government organizations.

GEOG 555 Ecological Restoration.

(3) (Prerequisites: GEOG 350 or BIOL 308 or PLNT 460 and permission of instructor.) (Note: Requires participation in a field trip over reading week. Offered in alternate years.) A broad overview of ecological restoration. Considers causes of environmental degradation, why and what we restore, how restoration goals are set, and standards in restoration practice, as well as critiques and philosophies of ecological restoration, such as "ecocultural" restoration.

MATH-Mathematics & Statistics

Offered by: Mathematics and Statistics

MATH 111 Mathematics for Education Students.

(3) (Winter) (Restriction: Open only to students in the B.Ed. program, not open to students who have successfully completed CEGEP course 201-101 or an equivalent. Not available for credit with MATH 112) (Offered by the Faculty of Science. Note: all Science courses have limited enrolment) An overview of the nature of mathematics and its applications. Manipulative algebra, inequalities, linear and quadratic equations. Transformational geometry and symmetry. An intuitive discussion of area and volume. Sets and functions. A brief introduction to probability and statistics.

MATH 112 Fundamentals of Mathematics.

(3) (Fall) (Restriction: Not open to students who have taken CEGEP course 201-101) (Restriction: Open only to those students who are deficient in a pre-calculus background) Equations and inequalities, graphs, relations and functions, exponential and logarithmic functions, trigonometric functions and their use, mathematical induction, binomial theorem, complex numbers.

MATH 122 Calculus for Management.

(3) (3 hours lecture, 1 hour tutorial.) (Prerequisite: A course in functions.) (Restrictions: Not open to students who have taken or are taking MATH 130, MATH 131, MATH 139, MATH 140, MATH 150. MATH 139, MATH 140, MATH 141, MATH 150 and MATH 151 are not open to students who have taken or are taking MATH 122, except by special permission of the Department of Mathematics and Statistics. Open to Faculty of Management students only. Offered by the Faculty of Science. Students intending to pursue one of the major or minor concentrations in Mathematics and Statistics in the Faculty of Management should take MATH 140 [or MATH 139] and MATH 141 instead.) Review of functions, exponents and radicals, exponential and logarithm. Examples of functions in business applications. Limits, continuity and derivatives. Differentiation of elementary functions. Antiderivatives. The definite integral. Techniques of Integration. Applications of differentiation and integration including differential equations. Trigonometric functions are not discussed in this course.

MATH 123 Linear Algebra and Probability.

(3) (3 hours lecture, 1 hour tutorial.) (Restrictions: Not open to students who have taken or are taking MATH 223, or MATH 133 or CEGEP objective 00UQ or equivalent. Open to Faculty of Management students only. Offered by the Faculty of Science. Students intending to pursue one of the major or minor concentrations in Mathematics and Statistics in the Faculty of Management should take MATH 133 instead.) Geometric vectors in low dimensions. Lines and planes. Dot and cross product. Linear equations and matrices. Matrix operations, properties and

rank. Linear dependence and independence. Inverses and determinants. Linear programming and tableaux. Sample space, probability, combination of events. Conditional probability and Bayes Law. Random sampling. Random variables and common distributions.

MATH 133 Vectors, Matrices and Geometry.

(3) (Fall and Winter and Summer) (Prerequisite: a course in functions) (Restriction: Not open to students who have taken MATH 221 or CEGEP objective 00UQ or equivalent.) (Restriction Note B: Not open to students who have taken or are taking MATH 123, MATH 130 or MATH 131, except by permission of the Department of Mathematics and Statistics.) Systems of linear equations, matrices, inverses, determinants; geometric vectors in three dimensions, dot product, cross product, lines and planes; introduction to vector spaces, linear dependence and independence, bases; quadratic loci in two and three dimensions.

MATH 139 Calculus.

(4) (Fall and Winter) (3 hours lecture; 2 hours tutorial) (Prerequisite: a course in functions) (Requires Departmental Approval) (Restriction: Not open to students who have taken MATH 120 or CEGEP objective 00UN or equivalent. This course is intended for students with no previous knowledge of Calculus; it is not open to students who have had one term of College level Calculus) (Restriction Note B: Not open to students who have taken or are taking MATH 122 or MATH 130 or MATH 131, except by permission of the Department of Mathematics and Statistics.) (Students continue in MATH 141) (Each Tutorial section is enrolment limited) Review of functions and graphs. Limits, continuity, derivative. Differentiation of elementary functions. Antidifferentiation. Applications.

MATH 140 Calculus 1.

(3) (Fall and Winter and Summer) (3 hours lecture, 1 hour tutorial) (Prerequisite: High School Calculus) (Restriction: Not open to students who have taken MATH 120, MATH 139 or CEGEP objective 00UN or equivalent) (Restriction Note B: Not open to students who have taken or are taking MATH 122 or MATH 130 or MATH 131, except by permission of the Department of Mathematics and Statistics) (Each Tutorial section is enrolment limited) Review of functions and graphs. Limits, continuity, derivative. Differentiation of elementary functions. Antidifferentiation. Applications.

MATH 141 Calculus 2.

(4) (Fall and Winter and Summer) (Prerequisites: MATH 139 or MATH 140 or MATH 150.) (Restriction: Not open to students who have taken MATH 121 or CEGEP objective 00UP or equivalent) (Restriction Note B: Not open to students who have taken or are taking MATH 122 or MATH 130 or MATH 131, except by permission of the Department of Mathematics and Statistics.) (Each Tutorial section is enrolment limited) The definite integral. Techniques of integration. Applications. Introduction to sequences and series.

MATH 150 Calculus A.

(4) (Fall) (3 hours lecture, 2 hours tutorial) (Students with no prior exposure to vector geometry are advised to take MATH 133 concurrently. Intended for students with high school calculus who have not received six advanced placement credits) (Restriction: Not open to students who have taken CEGEP objective 00UN or equivalent) (Restriction Note B: Not open to students who have taken or are taking MATH 122 or MATH 130 or MATH 131, except by permission of the Department of Mathematics and Statistics) (MATH 150 and MATH 151 cover the material of MATH 139, MATH 140, MATH 141, MATH 222) Functions, limits and continuity, differentiation, L'Hospital's rule, applications, Taylor polynomials, parametric curves, functions of several variables.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

MATH 151 Calculus B.

(4) (Winter) (3 hours lecture; 2 hours tutorial) (Prerequisite: MATH 150) (Restriction: Not open to students who have taken CEGEP objective 00UP or equivalent) (Restriction: Not open to students in the Faculty of Engineering) (Restriction: Not open to students who have taken or are taking MATH 122 or MATH 130 or MATH 131, except by permission of the Department of Mathematics and Statistics) (Restriction: Not open to students who have taken MATH 152) (Each Tutorial section is enrolment limited) Integration, methods and applications, infinite sequences and series, power series, arc length and curvature, multiple integration.

MATH 152 Calculus E.

(4) (Winter) (Prerequisite: MATH 150.) (Restrictions: Open only to students in the Faculty of Engineering. Not open to students who have taken CEGEP objective 00UP or equivalent. Not open to students who have taken or are taking MATH 122 or MATH 130 or MATH 131, except by permission of the Department of Mathematics and Statistics. Not open to students who have taken MATH 151.) Integration, methods and applications, Laplace and wave equations, implicit functions, infinite sequences and series, power series and applications to ODE, arc length and curvature, tangent, normal and conormal and applications.

MATH 203 Principles of Statistics 1.

(3) (Fall, Winter and Summer) (No calculus prerequisites) (Restriction: This course is intended for students in all disciplines. For extensive course restrictions covering statistics courses see Section 3.6.1 of the Arts and of the Science sections of the calendar regarding course overlaps.) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar. Students should consult <http://www.mcgill.ca/student-records/transfercredits/> for information regarding transfer credits for this course.) Examples of statistical data and the use of graphical means to summarize the data. Basic distributions arising in the natural and behavioural sciences. The logical meaning of a test of significance and a confidence interval. Tests of significance and confidence intervals in the one and two sample setting (means, variances and proportions).

MATH 204 Principles of Statistics 2.

(3) (Winter) (Prerequisite: MATH 203 or equivalent. No calculus prerequisites) (Restriction: This course is intended for students in all disciplines. For extensive course restrictions covering statistics courses see Section 3.6.1 of the Arts and of the Science sections of the calendar regarding course overlaps.) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) The concept of degrees of freedom and the analysis of variability. Planning of experiments. Experimental designs. Polynomial and multiple regressions. Statistical computer packages (no previous computing experience is needed). General statistical procedures requiring few assumptions about the probability model.

MATH 222 Calculus 3.

(3) (Fall and Winter and Summer) (Prerequisite: MATH 141. Familiarity with vector geometry or Corequisite: MATH 133) (Restriction: Not open to students who have taken CEGEP course 201-303 or MATH 150, MATH 151 or MATH 227) Taylor series, Taylor's theorem in one and several variables. Review of vector geometry. Partial differentiation, directional derivative. Extreme of functions of 2 or 3 variables. Parametric curves and arc length. Polar and spherical coordinates. Multiple integrals.

MATH 223 Linear Algebra.

(3) (Fall and Winter and Summer) (Prerequisite: MATH 133 or equivalent) (Restriction: Not open to students in Mathematics programs nor to students who have taken or are taking MATH 236, MATH 247 or MATH 251. It is open to students in Faculty Programs) Review of matrix algebra, determinants and systems of linear equations. Vector spaces, linear operators and their matrix representations, orthogonality. Eigenvalues and

eigenvectors, diagonalization of Hermitian matrices. Applications.

MATH 235 Algebra 1.

(3) (Fall) (3 hours lecture; 1 hour tutorial) (Prerequisite: MATH 133 or equivalent) Sets, functions and relations. Methods of proof. Complex numbers. Divisibility theory for integers and modular arithmetic. Divisibility theory for polynomials. Rings, ideals and quotient rings. Fields and construction of fields from polynomial rings. Groups, subgroups and cosets; group actions on sets.

MATH 236 Algebra 2.

(3) (Winter) (Prerequisite: MATH 235) Linear equations over a field. Introduction to vector spaces. Linear mappings. Matrix representation of linear mappings. Determinants. Eigenvectors and eigenvalues. Diagonalizable operators. Cayley-Hamilton theorem. Bilinear and quadratic forms. Inner product spaces, orthogonal diagonalization of symmetric matrices. Canonical forms.

MATH 240 Discrete Structures 1.

(3) (Fall) (Corequisite: MATH 133.) (Restriction: For students in any Computer Science program. Others only with the instructor's permission. Not open to students who have taken or are taking MATH 235.) Mathematical foundations of logical thinking and reasoning. Mathematical language and proof techniques. Quantifiers. Induction. Elementary number theory. Modular arithmetic. Recurrence relations and asymptotics. Combinatorial enumeration. Functions and relations. Partially ordered sets and lattices. Introduction to graphs, digraphs and rooted trees.

MATH 242 Analysis 1.

(3) (Fall) (Prerequisite: MATH 141) A rigorous presentation of sequences and of real numbers and basic properties of continuous and differentiable functions on the real line.

MATH 243 Analysis 2.

(3) (Winter) (Prerequisite: MATH 242) Infinite series; series of functions; power series. The Riemann integral in one variable. A rigorous development of the elementary functions.

MATH 247 Honours Applied Linear Algebra.

(3) (Winter) (Prerequisite: MATH 133 or equivalent.) (Restriction: Intended for Honours Physics and Engineering students) (Restriction: Not open to students who have taken or are taking MATH 236, MATH 223 or MATH 251) Matrix algebra, determinants, systems of linear equations. Abstract vector spaces, inner product spaces, Fourier series. Linear transformations and their matrix representations. Eigenvalues and eigenvectors, diagonalizable and defective matrices, positive definite and semidefinite matrices. Quadratic and Hermitian forms, generalized eigenvalue problems, simultaneous reduction of quadratic forms. Applications.

MATH 248 Honours Advanced Calculus.

(3) (Fall and Winter and Summer) (Prerequisites: MATH 133 and MATH 222 or consent of Department.) (Restriction: Intended for Honours Mathematics, Physics and Engineering students) (Restriction: Not open to students who have taken or are taking MATH 314) Partial derivatives; implicit functions; Jacobians; maxima and minima; Lagrange multipliers. Scalar and vector fields; orthogonal curvilinear coordinates. Multiple integrals; arc length, volume and surface area. Line integrals; Green's theorem; the divergence theorem. Stokes' theorem; irrotational and solenoidal fields; applications.

MATH 249 Honours Complex Variables.

(3) (Winter) (Prerequisite: MATH 248.) (Restriction: Intended for Honours Physics and Engineering students) (Restriction: Not open to students who have taken or are taking MATH 316) Functions of a complex variable; Cauchy-Riemann equations; Cauchy's theorem and consequences. Taylor and Laurent expansions. Residue calculus; evaluation of real integrals; integral representation of special functions; the complex inversion integral. Conformal mapping; Schwarz-Christoffel transformation; Poisson's integral formulas; applications.

MATH 251 Honours Algebra 2.

(3) (Winter) (Prerequisites: MATH 235 or permission of the Department) (Restriction: Not open to students who are taking or have taken MATH 247) Linear equations over a field. Introduction to vector spaces. Linear maps and their matrix representation. Determinants. Canonical forms. Duality. Bilinear and quadratic forms. Real and complex inner product spaces. Diagonalization of self-adjoint operators.

MATH 255 Honours Analysis 2.

(3) (Winter) (Prerequisites: MATH 242 or permission of the Department) Series of functions including power series. Riemann integration in one variable. Elementary functions.

MATH 262 Intermediate Calculus.

(3) (Fall, Winter and Summer) ((3-1-5)) (Prerequisites: MATH 141, MATH 133 or equivalent.) (Restrictions: Open only to students in the Faculty of Engineering. Not open to students taking or having taken MATH 151, MATH 152, MATH 222 OR MATH 260.) Series and power series, including series solutions to ODEs at ordinary points. Brief review of vector geometry. Vector functions and curves. Partial differentiation and differential calculus for vector valued functions. Unconstrained and constrained extremal problems.

MATH 263 Ordinary Differential Equations and Linear Algebra.

(3) (Fall, Winter and Summer) ((3-1-5)) (Corequisite: MATH 262 or MATH 260.) (Restrictions: Open only to students in the Faculty of Engineering. Not open to students taking or having taken MATH 261, MATH 315, or MATH 325.) First Order ODEs. Second and higher order linear ODEs. Laplace Transforms. Linear Algebra: introduction to vector spaces, linear transformations, diagonalization of matrices (in particular symmetric matrices), applications to linear systems of differential equations.

MATH 264 Advanced Calculus ENG.

(3) (Fall, Winter and Summer) ((3-1-5)) (Prerequisites: MATH 260 or MATH 262 or MATH 151 or MATH 152 or equivalent.) (Restrictions: Open only to students in the Faculty of Engineering. Not open to students taking or having taken MATH 248, MATH 265 or MATH 314.) Multiple integration. Vector fields. Vector calculus. Introduction to partial differential equations and Fourier Series.

MATH 270 Applied Linear Algebra.

(3) (Winter) ((3-1-5)) (Prerequisite: MATH 263) Introduction. Review of basic linear algebra. Vector spaces. Eigenvalues and eigenvectors of matrices. Linear operators.

MATH 271 Linear Algebra and Partial Differential Equations.

(3) (Fall and Winter) ((3-1-5)) (Prerequisites: MATH 263, MATH 264.) (Not open to students who have taken MATH 266.) Applied Linear Algebra. Linear Systems of Ordinary Differential Equations. Power Series Solutions. Partial Differential Equations. Sturm-Liouville Theory and Applications. Fourier Transforms.

MATH 314 Advanced Calculus.

(3) (Fall and Winter and Summer) (Prerequisites: MATH 133, MATH 222) (Restriction: Not open to students who have taken or are taking MATH 248) Derivative as a matrix. Chain rule. Implicit functions. Constrained maxima and minima. Jacobians. Multiple integration. Line and surface integrals. Theorems of Green, Stokes and Gauss.

MATH 315 Ordinary Differential Equations.

(3) (Fall and Winter and Summer) (Prerequisite: MATH 222.) (Corequisite MATH 133) (Restriction: Not open to students who have taken or are taking MATH 325) First order ordinary differential equations including elementary numerical methods. Linear differential equations. Laplace transforms. Series solutions.

MATH 316 Complex Variables.

(3) (Fall) (Prerequisites: MATH 314 and MATH 243) (Restriction: Not open to students who have taken or are taking MATH 249, MATH 366, MATH 381 or MATH 466.) Algebra of complex numbers, Cauchy-Riemann equations, complex integral, Cauchy's theorems. Taylor and Laurent series, residue theory and applications.

MATH 317 Numerical Analysis.

(3) (Fall) (Prerequisites: MATH 315 or MATH 325 or MATH 261 or MATH 263 and COMP 202 or permission of instructor.) Error analysis. Interpolation. Numerical solutions of equations by iteration. Numerical integration. Introduction to numerical solutions of differential equations. Programming assumed. Some lab work necessary.

MATH 318 Mathematical Logic.

(3) (Fall) (Restriction: Not open to students who are taking or have taken PHIL 210) Propositional calculus, truth-tables, switching circuits, natural deduction, first order predicate calculus, axiomatic theories, set theory.

MATH 319 Introduction to Partial Differential Equations.

(3) (Winter) (Prerequisites: MATH 223 or MATH 236, MATH 314, MATH 315) First order equations, geometric theory; second order equations, classification; Laplace, wave and heat equations, Sturm-Liouville theory, Fourier series, boundary and initial value problems.

★ ● MATH 320 Differential Geometry.

(3) (Fall) (Prerequisites: MATH 236 or MATH 223 or MATH 247, and MATH 314 or MATH 248) Review of Euclidean geometry. Local theory of plane and space curves: the Frenet formulas. Local theory of surfaces: the first and second fundamental forms, the shape operator, the mean and Gaussian curvatures, surfaces of revolution with prescribed curvature, ruled and developable surfaces. Geodesic curves on surfaces of revolution. The Gauss-Codazzi equations, rigidity.

MATH 323 Probability.

(3) (Fall and Winter and Summer) (Prerequisites: MATH 141 or equivalent.) (Restriction: Intended for students in Science, Engineering and related disciplines, who have had differential and integral calculus) (Restriction: Not open to students who have taken or are taking MATH 356) Sample space, events, conditional probability, independent events, Bayes' Theorem. Basic combinatorial probability, random variables, introductory univariate and discrete multivariate distributions. Independence. Moment generating functions. Expectation, conditional expectation. Inequalities, the weak law of large numbers, central limit theorem. Information theory. Markov chains.

MATH 324 Statistics.

(3) (Fall and Winter) (Prerequisite: MATH 323 or equivalent) (Restriction: Not open to students who have taken or are taking MATH 357) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) Multivariate continuous distributions, sampling distributions, point and interval estimation, hypothesis testing, analysis of variance, contingency tables, nonparametric inference, regression, Bayesian inference.

MATH 325 Honours Ordinary Differential Equations.

(3) (Fall and Winter) ((3-0-6)) (Prerequisite: MATH 222.) (Restriction: Intended for Honours Mathematics, Physics and Engineering programs.) (Restriction: Not open to students who have taken MATH 263 (formerly MATH 261), MATH 315) First and second order equations, linear equations, series solutions, Frobenius method, introduction to numerical methods and to linear systems, Laplace transforms, applications.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

MATH 326 Nonlinear Dynamics and Chaos.

(3) (Fall) (Prerequisites: MATH 222, MATH 223)

(Restriction: Not open to students who have taken or are taking MATH 376) Linear systems of differential equations, linear stability theory. Nonlinear systems: existence and uniqueness, numerical methods, one and two dimensional flows, phase space, limit cycles, Poincare-Bendixson theorem, bifurcations, Hopf bifurcation, the Lorenz equations and chaos.

★ ● MATH 327 Matrix Numerical Analysis.

(3) (Winter) (Prerequisites: MATH 223 or MATH 236 or MATH 247 or MATH 251, COMP 202 or consent of instructor.) An overview of numerical methods for linear algebra applications and their analysis. Problem classes include linear systems, least squares problems and eigenvalue problems.

MATH 329 Theory of Interest.

(3) (Winter) (Prerequisite: MATH 141) Simple and compound interest, annuities certain, amortization schedules, bonds, depreciation.

★ ● MATH 335 Computational Algebra.

(3) (Prerequisites: MATH 235 and MATH 236.) (Note: This course is intended primarily for students in the Major Program in Mathematics and the Joint Major Program in Mathematics and Computer Science.) Computational aspects of modern algebra. Computing in groups: algorithms, algorithmic problems in groups, finitely generated abelian groups, free groups and automata, finitely presented groups. Computing in rings: elementary notions of ring theory, ideals of polynomial rings in several variables, Groebner bases, elements of field theory.

MATH 338 History and Philosophy of Mathematics.

(3) (Fall) Egyptian, Babylonian, Greek, Indian and Arab contributions to mathematics are studied together with some modern developments they give rise to, for example, the problem of trisecting the angle. European mathematics from the Renaissance to the 18th century is discussed in some detail.

● MATH 339 Foundations of Mathematics.

(3) (Winter) (Prerequisites: MATH 235, MATH 318) A continuation of MATH 338. Topics are chosen mainly from 19th and 20th century mathematics, with some emphasis on philosophical and foundational problems. Sample topics are: progress in number theory, construction of the number system, infinity according to Cantor, logic and foundations from Aristotle to Cohen, Gödel's incompleteness theorem, calculability and programs, formalism versus intuitionism, abstract mathematics and categories.

MATH 340 Discrete Structures 2.

(3) (Winter) (Prerequisites: MATH 235 or MATH 240.) (Corequisites: MATH 223 or MATH 236.) (Restriction: Not open to students who have taken or are taking MATH 343 or MATH 350.) Review of mathematical writing, proof techniques, graph theory and counting. Mathematical logic. Graph connectivity, planar graphs and colouring. Probability and graphs. Introductory group theory, isomorphisms and automorphisms of graphs. Enumeration and listing.

★ ● MATH 346 Number Theory.

(3) (Winter) (Prerequisite: MATH 235 or consent of instructor) (Restriction: Not open to students who have taken or are taking MATH 377.) Divisibility. Congruences. Quadratic reciprocity. Diophantine equations. Arithmetical functions.

MATH 348 Topics in Geometry.

(3) (Fall and Summer) (Prerequisite: MATH 133 or equivalent or permission of instructor.) Selected topics - the particular selection may vary from year to year. Topics include: isometries in the plane, symmetry groups of frieze and ornamental patterns, equidecomposability, non-Euclidean geometry and problems in discrete geometry.

● MATH 350 Graph Theory and Combinatorics.

(3) (Prerequisites: MATH 235 or MATH 240 and MATH 251 or MATH 223.) (Restrictions: Not open to students who have taken or are taking MATH 343 or MATH 340.) (Intended for students in mathematics or computer science honours programs.) Graph models. Graph connectivity, planarity and colouring. Extremal graph theory. Matroids. Enumerative combinatorics and listing.

◆ MATH 352 Problem Seminar.

(1) (Prerequisite: Enrolment in a math related program or permission of the instructor. Requires departmental approval.) (Prerequisite: Enrolment in a math related program or permission of the instructor.) Seminar in Mathematical Problem Solving. The problems considered will be of the type that occur in the Putnam competition and in other similar mathematical competitions.

MATH 354 Honours Analysis 3.

(3) (Fall) (Prerequisite: MATH 255 or equivalent) Introduction to metric spaces. Multivariable differential calculus, implicit and inverse function theorems.

MATH 355 Honours Analysis 4.

(3) (Winter) (Prerequisite: MATH 354 or equivalent.) Lebesgue measure, integration and Fubini's theorem. Abstract measure and integration. Convergence theorems. Introduction to Hilbert spaces, L_2 spaces, Fourier series. Fourier integrals (if time allows).

MATH 356 Honours Probability.

(3) (Fall) (Prerequisite: MATH 255 or MATH 243) (Restriction: Not open to students who have taken or are taking MATH 323) Basic combinatorial probability. Introductory distribution theory of univariate and multivariate distributions with special reference to the Binomial, Poisson, Gamma and Normal distributions. Characteristic functions. Weak law of large numbers. Central limit theorem.

MATH 357 Honours Statistics.

(3) (Winter) (Prerequisite: MATH 356 or equivalent) (Restriction: Not open to students who have taken or are taking MATH 324) Data analysis. Estimation and hypothesis testing. Power of tests. Likelihood ratio criterion. The chi-squared goodness of fit test. Introduction to regression analysis and analysis of variance.

MATH 363 Discrete Mathematics.

(3) (3-0-6) (Prerequisites: MATH 264 or MATH 265 and MATH 263.) (Restriction: Open only to students in the Faculty of Engineering.) Logic and combinatorics. Mathematical reasoning and methods of proof. Sets, relations, functions, partially ordered sets, lattices, Boolean algebra. Propositional and predicate calculi. Recurrences and graph theory.

★ MATH 366 Honours Complex Analysis.

(3) (Prerequisite: MATH 248.) (Corequisite: MATH 354.) (Restriction: Not open to students who have taken or are taking MATH 466, MATH 249, MATH 316, MATH 381.) Functions of a complex variable, Cauchy-Riemann equations, Cauchy's theorem and its consequences. Uniform convergence on compacta. Taylor and Laurent series, open mapping theorem, Rouché's theorem and the argument principle. Calculus of residues. Fractional linear transformations and conformal mappings.

MATH 370 Honours Algebra 3.

(3) (Fall) (Prerequisite: MATH 251) Introduction to monoids, groups, permutation groups; the isomorphism theorems for groups; the theorems of Cayley, Lagrange and Sylow; structure of groups of low order. Introduction to ring theory; integral domains, fields, quotient field of an integral domain; polynomial rings; unique factorization domains.

MATH 371 Honours Algebra 4.

(3) (Winter) (Prerequisite: MATH 370) Introduction to modules and algebras; finitely generated modules over a principal ideal domain. Field extensions; finite fields; Galois groups; the fundamental theorem of Galois theory; application to the classical problem of solvability by radicals.

MATH 375 Honours Partial Differential Equations.

(3) (Fall) (Prerequisites: MATH 247 or MATH 251 or equivalent, MATH 248 or equivalent, MATH 325) First order partial differential equations, geometric theory, classification of second order linear equations, Sturm-Liouville problems, orthogonal functions and Fourier series, eigenfunction expansions, separation of variables for heat, wave and Laplace equations, Green's function methods, uniqueness theorems.

MATH 376 Honours Nonlinear Dynamics.

(3) (Fall) (Prerequisites: MATH 222, MATH 223) (Restrictions: Intended primarily for Honours students. Not open to students who have taken or are taking MATH 326.) (Note:

Additionally, a special project or projects may be assigned.) This course consists of the lectures of MATH 326, but will be assessed at the honours level.

★ ● **MATH 377 Honours Number Theory.**

(3) (Winter) (Prerequisite: Enrolment in Mathematics Honours program or consent of instructor) (Restriction: Not open to students who have taken or are taking MATH 346.) (Note: Additionally, a special project or projects may be assigned.) This course consists of the lectures of MATH 346, but will be assessed at the honours level.

MATH 380 Honours Differential Geometry.

(3) (Winter) (Prerequisites: MATH 251 or MATH 247, and MATH 248 or MATH 314) In addition to the topics of MATH 320, topics in the global theory of plane and space curves, and in the global theory of surfaces are presented. These include: total curvature and the Fary-Milnor theorem on knotted curves, abstract surfaces as 2-d manifolds, the Euler characteristic, the Gauss-Bonnet theorem for surfaces.

MATH 381 Complex Variables and Transforms.

(3) (Fall and Winter) ((3-1-5)) (Prerequisite: Math 264 or MATH 265) (Restriction: Open only to students in the Faculty of Engineering.) Analytic functions, Cauchy-Riemann equations, simple mappings, Cauchy's theorem, Cauchy's integral formula, Taylor and Laurent expansions, residue calculus. Properties of one and two-sided Fourier and Laplace transforms, the complex inversion integral, relation between the Fourier and Laplace transforms, application of transform techniques to the solution of differential equations. The Z-transform and applications to difference equations.

★ ● **MATH 387 Honours Numerical Analysis.**

(3) (Fall) (Prerequisites: MATH 325 or MATH 315, COMP 202 or permission of instructor.) (Corequisites: MATH 255 or MATH 243.) (Restriction: Intended primarily for Honours students.) Error analysis. Interpolation. Nonlinear equations. Numerical integration. Introduction to numerical solutions of differential equations.

MATH 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

★ ● **MATH 397 Honours Matrix Numerical Analysis.**

(3) (Winter) (Prerequisites: MATH 251 or MATH 247, COMP 202 or permission of the instructor.) The course consists of the lectures of MATH 327 plus additional work involving theoretical assignments and/or a project. The final examination for this course may be different from that of MATH 327.

★ ● **MATH 407 Dynamic Programming.**

(3) (Winter) (Prerequisites: COMP 202; MATH 223 or MATH 236, MATH 314, MATH 315 and MATH 323) Sequential decision problems, resource allocation, transportation problems, equipment replacement, integer programming, network analysis, inventory systems, project scheduling, queuing theory calculus of variations, markovian decision processes, stochastic path problems, reliability, discrete and continuous control processes.

◆ **MATH 410 Majors Project.**

(3) (Prerequisite: Students must have 21 completed credits of the required mathematics courses in their program, including all required 200 level mathematics courses.) (Requires departmental approval.) A supervised project.

MATH 417 Mathematical Programming.

(3) (Prerequisites: COMP 202, and MATH 223 or MATH 236, and MATH 314 or equivalent) (Restriction: Not open to students who have taken or are taking MATH 487.) An introductory course in optimization by linear algebra, and calculus methods. Linear programming (convex polyhedra, simplex method, duality, multi-criteria problems), integer programming, and some topics in nonlinear programming (convex functions, optimality conditions, numerical methods). Representative applications to various disciplines.

MATH 420 Independent Study.

(3) (Fall and Winter and Summer) (Requires approval by the chair before registration) (Please see regulations concerning Project Courses under Faculty Degree Requirements) Reading projects permitting independent study under the guidance of a staff member specializing in a subject where no appropriate course is available. Arrangements must be made with an instructor and the Chair before registration.

MATH 423 Regression and Analysis of Variance.

(3) (Fall) (Prerequisites: MATH 324, and MATH 223 or MATH 236) (Restriction: Not open to students who have taken or are taking MATH 533.) Least-squares estimators and their properties. Analysis of variance. Linear models with general covariance. Multivariate normal and chi-squared distributions; quadratic forms. General linear hypothesis: F-test and t-test. Prediction and confidence intervals. Transformations and residual plot. Balanced designs.

● **MATH 430 Mathematical Finance.**

(3) (Restrictions: Not open to students who have taken MATH 330. Not open to students who have taken or are taking MATH 490.) Introduction to concepts of price and hedge derivative securities. The following concepts will be studied in both concrete and continuous time: filtrations, martingales, the change of measure technique, hedging, pricing, absence of arbitrage opportunities and the Fundamental Theorem of Asset Pricing.

★ ● **MATH 437 Mathematical Methods in Biology.**

(3) (Fall) (Prerequisites: MATH 315 or MATH 325, and MATH 323 or MATH 356, a CEGEP or higher level computer programming course) The formulation and treatment of realistic mathematical models describing biological phenomena through such qualitative and quantitative mathematical techniques as local and global stability theory, bifurcation analysis and phase plane analysis. Numerical simulation. Concrete and detailed examples will be drawn from molecular, cellular and population biology and mammalian physiology.

MATH 447 Stochastic Processes.

(3) (Winter) (Prerequisite: MATH 323) Random walk on the integers and gambler's ruin problem; the Galton-Watson branching process; Markov chains and their applications in the physical and social sciences; birth and death processes and their applications to biological growth problems and queueing systems.

MATH 470 Honours Project.

(3) (Fall and Winter and Summer) (Requires Departmental Approval) (Prerequisites: appropriate second year honours courses with approval of coordinator) (Please see regulations concerning Project Courses under Faculty Degree Requirements) The student will be assigned a project supervisor and a project topic at the beginning of the semester. The project will consist of a written report including a literature survey and will be tested by an oral examination.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

● MATH 470D1 (1.5), MATH 470D2 (1.5) Honours Project.

(Restriction: Requires departmental approval.) (Students must register for both MATH 470D1 and MATH 470D2.) (No credit will be given for this course unless both MATH 470D1 and MATH 470D2 are successfully completed in consecutive terms) (MATH 470D1 and MATH 470D2 together are equivalent to MATH 470) The student will be assigned a project supervisor and a project topic at the beginning of the semester. The project will consist of a written report including a literature survey and will be tested by an oral examination.

MATH 480 Honours Independent Study.

(3) (Fall and Winter and Summer) (Please see regulations concerning Project Courses under Faculty Degree Requirements) (Requires approval by the chair before registration) Reading projects permitting independent study under the guidance of a staff member specializing in a subject where no appropriate course is available. Arrangements must be made with an instructor and the Chair before registration.

MATH 487 Honours Mathematical Programming.

(3) (Prerequisites: MATH 248, MATH 251 and COMP 202 or COMP 250 or permission of instructor.) (Restriction: Intended primarily for honours students. Not open to students who have taken or are taking MATH 417.) (Note: Additionally, a special project or projects may be assigned.) The course consists of the lectures of MATH 417, but will be assessed at the honours level.

★ ● MATH 488 Honours Set Theory.

(3) (Fall) (Prerequisites: MATH 251 or MATH 255 or permission of instructor) Axioms of set theory. Operations on sets. Ordinal and cardinal numbers. Well-orderings, transfinite induction and recursion. Consequences of the axiom of choice. Boolean algebras. Cardinal arithmetic.

● MATH 490 Honours Mathematics of Finance.

(3) (Prerequisites: MATH 222, MATH 323 or equivalent. (Intended primarily for honours students.)) (Restrictions: Not open to students who have taken MATH 330. Not open to students who have taken or are taking MATH 430.) (Note: Additionally, a special project or projects may be assigned.) This course consists of the lectures of MATH 430, but will be assessed at the honours level.

MATH 523 Generalized Linear Models.

(4) (Winter) (Prerequisite: MATH 423 or EPIB 697) (Restriction: Not open to students who have taken MATH 426) Modern discrete data analysis. Exponential families, orthogonality, link functions. Inference and model selection using analysis of deviance. Shrinkage (Bayesian, frequentist viewpoints). Smoothing. Residuals. Quasi-likelihood. Sliced inverse regression. Contingency tables: logistic regression, log-linear models. Censored data. Applications to current problems in medicine, biological and physical sciences. GLIM, S, software.

● MATH 524 Nonparametric Statistics.

(4) (Fall) (Prerequisite: MATH 324 or equivalent) (Restriction: Not open to students who have taken MATH 424) Distribution free procedures for 2-sample problem: Wilcoxon rank sum, Siegel-Tukey, Smirnov tests. Shift model: power and estimation. Single sample procedures: Sign, Wilcoxon signed rank tests. Nonparametric ANOVA: Kruskal-Wallis, Friedman tests. Association: Spearman's rank correlation, Kendall's tau. Goodness of fit: Pearson's chi-square, likelihood ratio, Kolmogorov-Smirnov tests. Statistical software packages used.

MATH 525 Sampling Theory and Applications.

(4) (Winter) (Prerequisite: MATH 324 or equivalent) (Restriction: Not open to students who have taken MATH 425) Simple random sampling, domains, ratio and regression estimators, superpopulation models, stratified sampling, optimal stratification, cluster sampling, sampling with unequal probabilities, multistage sampling, complex surveys, nonresponse.

MATH 533 Honours Regression and Analysis of Variance.

(4) (Prerequisites: MATH 357, MATH 247 or MATH 251.) (Restriction: Not open to have taken or are taking MATH 423.) (Note: An additional project or projects assigned by the instructor that require a more detailed treatment of the major results and concepts covered in MATH 423.) This course

consists of the lectures of MATH 423 but will be assessed at the 500 level.

★ ● MATH 550 Combinatorics.

(4) (Intended primarily for honours and graduate students in mathematics.) (Restriction: Permission of instructor.) Enumerative combinatorics: inclusion-exclusion, generating functions, partitions, lattices and Moebius inversion. Extremal combinatorics: Ramsey theory, Turan's theorem, Dilworth's theorem and extremal set theory. Graph theory: planarity and colouring. Applications of combinatorics.

MATH 552 Combinatorial Optimization.

(4) (Prerequisite: MATH 350 or COMP 362 (or equivalent).) (Restriction: Not open to students who have taken or are taking COMP 552.) Algorithmic and structural approaches in combinatorial optimization with a focus upon theory and applications. Topics include: polyhedral methods, network optimization, the ellipsoid method, graph algorithms, matroid theory and submodular functions.

★ ● MATH 555 Fluid Dynamics.

(4) (Fall) (Prerequisite (Undergraduate): MATH 315 and MATH 319 or equivalent) Kinematics. Dynamics of general fluids. Inviscid fluids, Navier-Stokes equations. Exact solutions of Navier-Stokes equations. Low and high Reynolds number flow.

MATH 556 Mathematical Statistics 1.

(4) (Fall) (Prerequisite: MATH 357 or equivalent) Probability and distribution theory (univariate and multivariate). Exponential families. Laws of large numbers and central limit theorem.

MATH 557 Mathematical Statistics 2.

(4) (Winter) (Prerequisite: MATH 556) Sampling theory (including large-sample theory). Likelihood functions and information matrices. Hypothesis testing, estimation theory. Regression and correlation theory.

MATH 560 Optimization.

(4) (Prerequisite: Undergraduate background in analysis and linear algebra, with instructor's approval) Classical optimization in n variables. Convex sets and functions, optimality conditions for single-objective and multi-objective nonlinear optimization problems with and without constraints. Duality theories and their economic interpretations. Optimization with functionals. Connections with calculus of variations and optimal control. Stability of mathematical models. Selected numerical methods.

MATH 564 Advanced Real Analysis 1.

(4) (Fall) (Prerequisites: MATH 354, MATH 355 or equivalents) Review of theory of measure and integration; product measures, Fubini's theorem; L_p spaces; basic principles of Banach spaces; Riesz representation theorem for $C(X)$; Hilbert spaces; part of the material of MATH 565 may be covered as well.

MATH 565 Advanced Real Analysis 2.

(4) (Winter) (Prerequisite: MATH 564) Continuation of topics from MATH 564. Signed measures, Hahn and Jordan decompositions. Radon-Nikodym theorems, complex measures, differentiation in \mathbb{R}^n , Fourier series and integrals, additional topics.

● MATH 566 Advanced Complex Analysis.

(4) (Winter) (Prerequisites: MATH 366 (formerly MATH 466), MATH 564.) Simple connectivity, use of logarithms; argument, conservation of domain and maximum principles; analytic continuation, monodromy theorem; conformal mapping; normal families, Riemann mapping theorem; harmonic functions, Dirichlet problem; introduction to functions of several complex variables.

MATH 570 Higher Algebra 1.

(4) (Fall) (Prerequisite: MATH 371 or equivalent) Review of group theory; free groups and free products of groups. Sylow theorems. The category of R -modules; chain conditions, tensor products, flat, projective and injective modules. Basic commutative algebra; prime ideals and localization, Hilbert Nullstellensatz, integral extensions. Dedekind domains. Part of the material of MATH 571 may be covered as well.

MATH 571 Higher Algebra 2.

(4) (Winter) (Prerequisites: MATH 570 or consent of instructor) Completion of the topics of MATH 570. Rudiments of algebraic number theory. A deeper study of field extensions;

Galois theory, separable and regular extensions. Semi-simple rings and modules. Representations of finite groups.

★ **MATH 574 Dynamical Systems.**

(4) (Winter) (Prerequisites: MATH 325 and MATH 354 or permission of the instructor.) Dynamical systems, phase space, limit sets. Review of linear systems. Stability. Liapunov functions. Stable manifold and Hartman-Grobman theorems. Local bifurcations, Hopf bifurcations, global bifurcations. Poincare Sections. Quadratic maps: chaos, symbolic dynamics, topological conjugacy. Sarkovskii's theorem, periodic doubling route to chaos. Smale Horseshoe.

● **MATH 575 Intermediate Partial Differential Equations.**

(4) (Prerequisite: MATH 375) A continuation of topics introduced in MATH 375.

MATH 576 Geometry and Topology 1.

(4) (Fall) (Prerequisite: MATH 354) Basic point-set topology, including connectedness, compactness, product spaces, separation axioms, metric spaces. The fundamental group and covering spaces. Simplicial complexes. Singular and simplicial homology. Part of the material of MATH 577 may be covered as well.

MATH 577 Geometry and Topology 2.

(4) (Winter) (Prerequisite: MATH 576) Continuation of the topics of MATH 576. Manifolds and differential forms. De Rham's theorem. Riemannian geometry. Connections and curvatures 2-Manifolds and imbedded surfaces.

MATH 578 Numerical Analysis 1.

(4) (Fall) (Prerequisites: MATH 247 or MATH 251; and MATH 387; or permission of the instructor.) Development, analysis and effective use of numerical methods to solve problems arising in applications. Topics include direct and iterative methods for the solution of linear equations (including preconditioning), eigenvalue problems, interpolation, approximation, quadrature, solution of nonlinear systems.

MATH 579 Numerical Differential Equations.

(4) (Winter) (Prerequisites: MATH 375 and MATH 387 or permission of the instructor.) Numerical solution of initial and boundary value problems in science and engineering: ordinary differential equations; partial differential equations of elliptic, parabolic and hyperbolic type. Topics include Runge Kutta and linear multistep methods, adaptivity, finite elements, finite differences, finite volumes, spectral methods.

MATH 580 Applied Partial Differential Equations 1.

(4) (Fall) (Prerequisites: MATH 316, MATH 375 or equivalent.) (Restrictions: Not open to students who have taken MATH 586.) Linear and nonlinear partial differential equations of applied mathematics. Uniqueness, regularity, well posedness and classification for elliptic, parabolic and hyperbolic equations. Method of characteristics, conservation laws, shocks. Fundamental solutions, weak and strong maximum principles, representation formulae, Green's functions.

MATH 581 Applied Partial Differential Equations 2.

(4) (Winter) (Prerequisite: MATH 580.) Continuation of topics from MATH 580. Transform methods. Weak solutions. Advanced topics in partial differential equations.

MATH 587 Advanced Probability Theory 1.

(4) (Fall) (Prerequisite: MATH 356 or equivalent and approval of instructor) Probability spaces. Random variables and their expectations. Convergence of random variables in L_p . Independence and conditional expectation. Introduction to Martingales. Limit theorems including Kolmogorov's Strong Law of Large Numbers.

MATH 589 Advanced Probability Theory 2.

(4) (Winter) (Prerequisites: MATH 587 or equivalent) Characteristic functions: elementary properties, inversion formula, uniqueness, convolution and continuity theorems. Weak

convergence. Central limit theorem. Additional topic(s) chosen (at discretion of instructor) from: Martingale Theory; Brownian motion, stochastic calculus.

★ ● **MATH 590 Advanced Set Theory.**

(4) (Prerequisites: MATH 318, either MATH 355 or MATH 371, or permission of the instructor.) (Restriction: Not open to students who have taken or are taking MATH 488.) Students will attend the lectures and fulfill all the requirements of MATH 488. In addition, they will study an advanced topic agreed on with the instructor. Topics may be chosen from combinatorial set theory, Goedel's constructible sets, forcing, large cardinals.

★ ● **MATH 591 Mathematical Logic 1.**

(4) (Winter) (Prerequisites: MATH 488 or equivalent or consent of instructor) Propositional logic and first order logic, completeness, compactness and Löwenheim-Skolem theorems. Introduction to axiomatic set theory. Some of the following topics: introduction to model theory, Herbrand's and Gentzen's theories, Lindström's characterization of first order logic.

★ ● **MATH 592 Mathematical Logic 2.**

(4) (Winter) (Prerequisites: MATH 488 or equivalent or consent of instructor) Introduction to recursion theory; recursively enumerable sets, relative recursiveness. Incompleteness, undecidability and undefinability theorems of Gödel, Church, Rosser and Tarski. Some of the following topics: Turing degrees, Friedberg-Muchnik theorem, decidable and undecidable theories.

MIMM-Microbiology and Immun

Offered by: Microbiology & Immunology

MIMM 211 Introductory Microbiology.

(3) (Fall) (3 hours of lecture) (Corequisite: BIOL 200) A general treatment of microbiology bearing specifically on the biological properties of microorganisms. Emphasis will be on procaryotic cells. Basic principles of immunology and microbial genetics are also introduced.

MIMM 212 Laboratory in Microbiology.

(2) (Fall) (3 hours laboratory, 0.5 hour lecture, 1 hour follow-up) (Corequisite: MIMM 211) This laboratory course is designed to complement MIMM 211. Sessions introduce general techniques peculiar to the handling of microorganisms.

MIMM 314 Immunology.

(3) (Winter) (3 hours of lecture) (Prerequisite: BIOL 200 and BIOL 201 or BIOC 212) An introduction to the immune system, antigens, antibodies and lymphocytes. The course will cover the cellular and molecular basis of lymphocyte development and mechanisms of lymphocyte activation in immune responses.

MIMM 323 Microbial Physiology.

(3) (Fall) (3 hours of lecture) (Prerequisite: MIMM 211) An introduction to the composition and structure of microbial cells, the biochemical activities associated with cellular metabolism and how these activities are regulated and coordinated. The course will have a molecular and genetic approach to the study of microbial physiology.

MIMM 324 Fundamental Virology.

(3) (Fall) (3 hours of lecture) (Prerequisites: MIMM 211, BIOL 200, BIOL 201 or BIOC 212) A study of the fundamental properties of viruses and their interactions with host cells. Bacteriophages, DNA- and RNA-containing animal viruses, and retroviruses are covered. Emphasis will be on phenomena occurring at the molecular level and on the regulated control of gene expression in virus-infected cells.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

★ Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

MIMM 386D1 (3), MIMM 386D2 (3) Laboratory in Microbiology and Immunology.

(Fall) (1 hour lecture, 4 hours laboratory, 1 hour follow-up) (Prerequisites: MIMM 211, MIMM 212. Corequisites: MIMM 314, MIMM 323, MIMM 324) (Students must register for both MIMM 386D1 and MIMM 386D2.) (No credit will be given for this course unless both MIMM 386D1 and MIMM 386D2 are successfully completed in consecutive terms) A series of illustrative exercises in bacterial classification, bacterial and viral molecular genetics and immunological techniques. The objective is to provide a practical introduction to microbiological and immunological research and technology.

MIMM 387 Applied Microbiology and Immunology.

(3) (Winter) (Prerequisite: MIMM 211) The ability to select and manipulate genetic material has led to unprecedented interest in the industrial applications of prokaryotic and eukaryotic cells. Beginning in the 1970s the introduction of and subsequent refinements to recombinant DNA technology and hybridoma technology transformed the horizons of the biopharmaceutical world. This course will highlight the important events that link basic research to clinical/commercial application of new drugs and chemicals.

MIMM 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

MIMM 413 Parasitology.

(3) (Winter) (Prerequisite: MIMM 314 or equivalent - ANAT 261 is strongly recommended) A study of the biology, immunological aspects of host-parasite interactions, pathogenicity, epidemiology and molecular biological aspects of selected parasites of medical importance. Laboratory will consist of a lecture on techniques, demonstrations and practical work.

MIMM 414 Advanced Immunology.

(3) (Fall) (3 hour lecture) (Prerequisite: MIMM 314) An advanced course serving as a logical extension of MIMM 314. The course will integrate molecular, cellular and biochemical events involved in the ontogeny of the lymphoid system and its activation in the immune response. The course will provide the student with an up-to-date understanding of a rapidly moving field.

MIMM 465 Bacterial Pathogenesis.

(3) (Fall) (3 hours of lecture) (Prerequisites: MIMM 211, MIMM 314, MIMM 323, or the permission of the instructor) Organized by the McGill Centre for the Study of Host Resistance. This course focuses on the interplay of the host and the pathogen. The cellular and molecular basis of the host defense mechanism against infections will be considered in relationship to the virulence factors and evasion strategies used by bacteria to cause disease.

MIMM 466 Viral Pathogenesis.

(3) (Winter) (3 hours of lecture) (Prerequisites: MIMM 211, MIMM 324, MIMM 314) A study of the biological and molecular aspects of viral pathogenesis with emphasis on the human pathogenic viruses including the retroviruses HIV and HTLV-1; herpes viruses; papilloma viruses; hepatitis viruses; and new emerging human viral diseases. These viruses will be discussed in terms of virus multiplication, gene expression virus-induced cytopathic effects and host immune response to infection.

MIMM 499 Library Research Project.

(1) (Prerequisites: MIMM 314, MIMM 323, MIMM 324 and MIMM 386.) (Restriction: This course is intended for final year Microbiology students only. Students taking MIMM 502 are not eligible to take this course. (See section 3.6.2, "Project Courses" in the Science "Faculty Degree Requirements".) Supervised exploration of the current scientific literature on an assigned topic of an advanced nature within the general areas of Bacteriology, Virology, Immunology or Parasitology.

MIMM 502D1 (6), MIMM 502D2 (6) Honours Research Project.

(Fall) (More than 18 hours per week for an independent research project) (Restriction: U3 Honours students and Majors students are eligible. Required CGPA: 3.50 or higher) (Please see regulations concerning Project Courses) (Students must register for both MIMM 502D1 and MIMM 502D2.) (No credit will be given for this course unless both MIMM 502D1 and MIMM 502D2 are successfully completed in consecutive terms) An information meeting about the course is held annually in January for students who intend to apply for registration. Subject to the availability of space and resources, professors in the Department of Microbiology and Immunology provide research opportunities for registrants in this course. Students present their research findings in a seminar and a final written report is required. Because this is a 12 credit course, students are expected to devote at least 40% of their academic effort towards their research.

MIMM 509 Inflammatory Processes.

(3) (Winter) (3 hours of seminar) (Prerequisite: MIMM 314.) (Corequisite: PHGY 513 or MIMM 414) (This course will be given in conjunction with the Division of Experimental Medicine) This course concentrates on the non-specific aspects of the immune response, an area which is not adequately covered by the other immunology courses presented at the university. Interactions between guest researchers (from McGill and other universities) and students will be furthered.

NEUR-Neurology and Neurosurgery

Offered by: Neurology And Neurosurgery

NEUR 310 Cellular Neurobiology.

(3) (Winter) (2 lectures each week) (Prerequisite or corequisite: BIOL 200 and BIOL 201, or PHGY 209, or PHGY 210) A survey of the functional organization of nerve cells, signalling in the nervous system, and principles of neural development. Topics include cell polarity, neurotransmitters, neurotrophins, receptors and second messengers, cell lineage, guidance of axon outgrowth, and nerve regeneration. Emphasis will be placed on analysis of neurons at the molecular level.

★NEUR 550 Free Radical Biomedicine.

(3) (Prerequisite: BIOL 200, BIOL 201, BIOC 311, BIOC 312, PHGY 209, PHGY 210 or Permission of Instructor.) An interdisciplinary course on the biochemistry and cellular/molecular biology of free radicals, transition metals, oxidative stress and antioxidants and their roles in health and disease.

NUTR-Nutrition and Dietetics

Offered by: Dietetics & Human Nutrition

NUTR 307 Human Nutrition.

(3) (Fall) (Prerequisites: BIOL 201 or AEBI 202, CHEM 212 or FDSC 230 or permission of the instructor.) (Corequisite: BIOC 311 or PHGY 202 or PHGY 210 or NUTR 207.) (3 lecture hours and 1 tutorial/conference hour.) Nutrition in human health and disease from the molecular to the organismal level. Nutrigenomics, the impact of genotype on nutrient metabolism, health and disease risk, and the role of nutrients in metabolic regulation.

NSCI-Neuroscience

Offered by: Physiology, Neuroscience, Biology,
Psychology

NSCI 200 Introduction to Neuroscience 1.

(3) (Prerequisites: BIOL 112, CHEM 110, CHEM 120, PHYS 101 or PHYS 131, and PHYS 102 or PHYS 142. Pre-/Co-requisite BIOL 200, CHEM 212 or permission of instructor.) (Restrictions: Not open to students who are taking or have taken PHGY 209.) An introduction to how nerve cells generate action potentials, communicate with one another at synapses, develop synaptic connections, early brain development, and the construction of specific neural circuits.

NSCI 201 Introduction to Neuroscience 2.

(3) An introduction to how the nervous system acquires and integrates information and uses it to produce behaviour.

NSCI 300

(3)
● **NSCI 396 Undergraduate Research Project.**
(3) (Prerequisites: At least one term of undergraduate studies, a CGPA of at least 3.0, or permission of instructor to waive these requirements. A project proposal form must be completed by the student and instructor and approved by the unit head or his/her delegate before the start of the term. Instructors will list project-specific prerequisites with the project description available through the Office for Undergraduate Research in Science (OURS) website.) (Restrictions: This course cannot be taken under the S/U option. Coordinator's permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project.

NSCI 400D1 (0.5), NSCI 400D2 (0.5) Neuroscience Seminar.

(Students will demonstrate their understanding of neuroscience by writing critical analyses of selected published papers and research seminars.) (Prerequisite: NSCI 200, 201, and 300) (Restriction: Open to students in their final year of a B.Sc. Major Neuroscience Program) Analysis of current research in neuroscience.

NSCI 410 Independent Research 1.

(6) (Prerequisite: NSCI 200, 201 and 300) (Restrictions: Only open to students registered in the B.Sc. Neuroscience Major. Not open to students who have taken or are taking NSCI 420D1 & D2.) Independent laboratory research in neuroscience.

NSCI 420D1 (4.5), NSCI 420D2 (4.5) Independent Research 2.

(Prerequisites: NSCI 200, 201 and 300) (Restrictions: Only open to students registered in the B.Sc. Neuroscience Major. Not open to students who have taken or are taking NSCI 410.) Independent laboratory research in neuroscience.

PATH-Pathology

Offered by: Pathology

PATH 300 Human Disease.

(3) (Winter) (Prerequisites: BIOL 200, BIOL 201 or BIOC 212, PHGY 209. Pre-/co-requisite: PHGY 210) Provides a fundamental understanding of the diseases prevalent in North America, for upper level students in the biological sciences. Includes: general responses of cells and organ systems to injury; assessment of individual diseases by relating the causes, symptoms, diagnosis, treatment and prevention to the primary biological abnormalities in each disorder.

PHAR-Pharmacology and Therapeutics

Offered by: Pharmacology And Therapeutics

PHAR 300 Drug Action.

(3) (Fall) (Prerequisites: BIOL 200 and BIOL 201 or BIOC 212, PHGY 209 and PHGY 210 or permission of instructor) This course covers the fundamental principles of pharmacology and toxicology. Frequently encountered drugs are used as a focus to illustrate sites and mechanisms of action, distribution, metabolism, elimination and adverse effects.

PHAR 301 Drugs and Disease.

(3) (Winter) (Prerequisites: BIOL 200, BIOL 201 or BIOC 212, PHGY 209 and PHGY 210 and PHAR 300 or permission of instructor) This course further explores the basic principles of pharmacology as illustrated by drugs used in the treatment of disease. Emphasis is placed on drugs used for diseases prevalent in North America.

PHAR 303 Principles of Toxicology.

(3) (Winter) (Prerequisites: BIOL 200, BIOL 201 or BIOC 212, PHGY 209 and PHGY 210) Fundamental mechanisms by which toxic compounds damage a biological system (organelle, cell, organ, organism, ecosystem). Detection and quantification of toxicity and risk/benefit analysis are considered. Selected agents of current risk to human health or the environment are evaluated in depth.

PHAR 503 Drug Design and Development 1.

(3) (Fall) (Prerequisites: CHEM 302, BIOL 200, BIOL 201, BIOC 212, PHAR 300, PHAR 301, PHAR 303 or permission of coordinator) (Restriction: Not open to students who are taking or have taken CHEM 503) (Priority: students registered in the Minor in Pharmacology) Interdisciplinary course in drug design and development covering chemistry, mechanisms of drug action and steps in drug development, principles and problems in drug design.

PHAR 504 Drug Design and Development 2.

(3) (Winter) (Prerequisite: PHAR 503/CHEM 503 or permission of the instructor.) (Restriction: U3 and graduate students. Students can register only with permission of coordinators) (Restriction: Not open to students who are taking or have taken CHEM 504) Interdisciplinary course in drug design and development in which teams of 2-4 students select a lead chemical compound, design the analogues, propose the preclinical and clinical studies, present possible untoward effects, and reasons for drug (dis)approval.

PHAR 558 Pharmacology Research Topics.

(3) (Prerequisite: PHAR 562 or permission of the instructor.) (Corequisite: PHAR 563 or permission of the instructor.) Selected drug targets in their native cellular milieu, in the context of intact tissues, organs and whole animals, highlighting conceptual advances in pharmacological theory.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

PHAR 562 General Pharmacology 1.

(3) (Fall) (Prerequisite: PHAR 301.) (Restrictions: Open to U3 students with permission of instructors, and students registered in the Minor Pharmacology Program) Principles of pharmacology as illustrated by current issues with an emphasis on the nervous system will be discussed. Drugs classified by their molecular target of action, their mechanism of action, and possibly a rationale for therapeutic use will be presented. Students will be required to examine and interpret scientific data, to write a paper and/or participate in small group discussions.

PHAR 563 General Pharmacology 2.

(3) (Winter) (Prerequisite: PHAR 301.) (Restrictions: Open to U3 students with permission of instructors, and students registered in the Minor in Pharmacology Program) Selected topics of basic interactions between chemicals and biological systems. Actions of drugs at the molecular and cellular levels. Principles of drug development. Chemotherapy of infections and of cancer. Toxicology and pharmacokinetics/dynamics. Drug metabolism.

PHAR 599 Research Projects in Pharmacology.

(6) (Minimum of 12 hours per week to be spent in the lab and/or library.) (Pre-/co-requisite PHAR 562 and PHAR 563 or PHAR 300 and PHAR 301) (Restrictions: Open to U3 students with permission of instructors, and students registered in the Minor Pharmacology Program. Students should consult instructors 3 - 4 weeks before registration. Students may not register without prior approval of the course co-ordinator(s)) (Please see regulations concerning Project Courses) This course involves individual research work. Students select a project under the supervision of a staff member. Areas of interest include toxicology, endocrine, developmental, cardiovascular, reproductive and neuropharmacology. This course requires a minimum of 6 hours per week for the full year course (PHAR 599D1/PHAR 599D2), and a minimum of 12 hours per week for the half year (PHAR 599) course to be spent in the laboratory and/or library.

PHAR 599D1 (3), PHAR 599D2 (3) Research Projects in Pharmacology.

(Fall) (Minimum of 6 hours per week to be spent in the lab and/or library.) (Students must register for both PHAR 599D1 and PHAR 599D2.) (No credit will be given for this course unless both PHAR 599D1 and PHAR 599D2 are successfully completed in consecutive terms) (PHAR 599D1 and PHAR 599D2 together are equivalent to PHAR 599) This course involves individual research work. Students select a project under the supervision of a staff member. Areas of interest include toxicology, endocrine, developmental, cardiovascular, reproductive and neuropharmacology. This course requires a minimum of 6 hours per week for the full year course (PHAR 599 D1/PHAR 599D2), and a minimum of 12 hours per week for the half year (PHAR 599) course to be spent in the laboratory and/or library.

PHGY-Physiology

Offered by: Physiology

●PHGY 199 FYS: History of Genetic Engineering.

(3) (Winter) (3 hours seminar per week) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 20) The history of molecular biology and genetic engineering will be surveyed through a series of essays and reviews written by historic figures and prominent scientists of today. The course will trace key players and principal advances in our understanding of the gene, its manipulation, and the future of genetic engineering.

●PHGY 201 Human Physiology: Control Systems.

(3) (Fall) (3 hours lecture weekly) (Prerequisites: collegial courses in biology or anatomy, and in chemistry and physics; with CHEM 212 or equivalent, as a pre-/co-requisite) (Restriction: For students in Physical and Occupational Therapy, Nursing, and others with permission of the course coordinator) (Restriction: Not open to students who have taken PHGY 209) Physiology of body fluids, blood, nerve and muscle, peripheral

nerves, central nervous system, special senses, autonomic nervous system, defense mechanisms.

●PHGY 202 Human Physiology: Body Functions.

(3) (Winter) (3 hours lecture weekly) (Prerequisites: collegial courses in biology or anatomy and in chemistry and physics; with CHEM 212 or equivalent, as a pre-/co-requisite) (Restriction: For students in Physical and Occupational Therapy, Nursing, Education, and others with permission of the course coordinator) (Restriction: Not open to students who took 552-201 in 1976-77 or earlier, or PHGY 210) Physiology of the cardiovascular, respiratory, excretory, endocrine, and digestive systems; organic and energy metabolism; nutrition; exercise and environmental stress.

PHGY 209 Mammalian Physiology 1.

(3) (Fall) (3 hours lectures weekly) (Prerequisites: BIOL 112, CHEM 110, CHEM 120, PHYS 101 or PHYS 131, and PHYS 102 or PHYS 142. Pre-/co-requisites: BIOL 200, CHEM 212 or equivalent.) (Restriction: Not open to students who have taken PHGY 211 or PHGY 201 or students who are taking and who have taken NSCI 200.) (Restriction: For students in the Faculty of Science, and other students by permission of the instructor) (Restriction: Not open to students who have taken PHGY 211 or PHGY 201 or students who are taking and who have taken NSCI 200.) Physiology of body fluids, blood, body defense mechanisms, muscle, peripheral, central, and autonomic nervous systems.

PHGY 210 Mammalian Physiology 2.

(3) (Winter) (3 hours lectures weekly) (Prerequisites: BIOL 112, CHEM 110, CHEM 120, PHYS 101 or PHYS 131, and PHYS 102 or PHYS 142. Pre-/co-requisite: BIOL 200, BIOL 201, BIOC 212, CHEM 212 or equivalent.) (Restriction: Not open to students who have taken PHGY 202.) (Restriction: For students in the Faculty of Science, and other students by permission of the instructor) (Although PHGY 210 may be taken without the prior passing of PHGY 209, students should note that they may have some initial difficulties because of lack of familiarity with some basic concepts introduced in PHGY 209) Physiology of cardiovascular, respiratory, digestive, endocrine and renal systems.

PHGY 212 Introductory Physiology Laboratory 1.

(1) (One 3-hour lab and one 1-hour lecture every second week.) (Corequisite: PHGY 209.) (Restrictions: Required for Physiology students enrolled in PHGY 209. Open to BA &Sc. students and to others by permission of the instructor. Not open to students who have taken PHGY 212D1/D2.) (Note: For students in a Physiology program, PHGY 212 should be taken concurrently with PHGY 209.) Exercises illustrating fundamental principles in physiology: Biological Signals Acquisitions, Blood, Immunology, Neurophysiology, Neuromuscular Physiology.

PHGY 213 Introductory Physiology Laboratory 2.

(1) (One 3-hour lab and one 1-hour lecture every second week.) (Prerequisite: PHGY 212) (Corequisite: PHGY 210.) (Restrictions: Required for Physiology students enrolled in PHGY 210. Open to BA &Sc. students and to others by permission of the instructor. Not open to students who have taken PHGY 212D1/D2.) (Note: For students in a Physiology program, PHGY 213 should be taken concurrently with PHGY 210.) Exercises illustrating fundamental principles in physiology: Central Nervous System, Cardiovascular, Respiration, Exercise Physiology, Molecular Endocrinology.

PHGY 311 Channels, Synapses & Hormones.

(3) (Fall) (3 hours of lectures per week; 1-3 hours optional lab/demonstration/tutorial arranged for a maximum of 3 afternoons per term) (Prerequisite: PHGY 209 or permission of the instructor.) In-depth presentation of experimental results and hypotheses on cellular communication in the nervous system and the endocrine system.

PHGY 312 Respiratory, Renal, & Cardiovascular Physiology.

(3) (Winter) (3 hours of lectures per week; 1-3 hours optional lab/demonstration/tutorial arranged for a maximum of 3 Wednesday afternoons per term) (Prerequisites: PHGY 209 and PHGY 210 or equivalent, PHGY 311 or permission of the instructor) In-depth presentation of experimental results and

hypotheses underlying our current understanding of topics in renal, respiratory and cardiovascular functions explored beyond the introductory level.

PHGY 313 Blood, Gastrointestinal, & Immune Systems Physiology.

(3) (Winter) (3 hours of lectures per week; 1-3 hours optional lab/demonstration/tutorial arranged for a maximum of 3 Wednesday afternoons per term) (Prerequisites: PHGY 209 and PHGY 210 or equivalent, PHGY 311 or permission of the instructor) In-depth presentation of experimental results and hypotheses underlying our current understanding of topics in immunology, blood and fluids, and gastrointestinal physiology.

PHGY 314 Integrative Neuroscience.

(3) (Fall) (3 hours of lectures per week) (Prerequisites: PHGY 209) In depth presentation of experimental results and hypotheses underlying our current understanding of how single neurons and ensembles of neurons encode sensory information, generate movement, and control cognitive functions such as emotion, learning, and memory, during voluntary behaviours.

PHGY 351 Research Techniques: Physiology.

(3) (Winter) (2 hour lecture and 3 hour lab weekly) (Prerequisites: PHGY 209, PHGY 210 and PHGY 311.) (Corequisites: PHGY 312 and PHGY 313) (Restriction: Honours Physiology students) Provides an overview of common research methods in Physiology, including critical analysis and practical experience with some of the methods. Topics include research ethics of animal experimentation, data analysis, membrane biophysics, radioimmunoassay, ion sensitive dyes, immunocytochemistry, localization techniques, protein transport, cell sorting and molecular biology.

PHGY 359D1 (0.5), PHGY 359D2 (0.5) Tutorial in Physiology.

(Fall) (Prerequisites: PHGY 209 and PHGY 210 or equivalent.) (Corequisites: PHGY 311, PHGY 312 and PHGY 313.) (Restriction: Enrolment restricted to Honours Physiology students) (Students must register for both PHGY 359D1 and PHGY 359D2.) (No credit will be given for this course unless both PHGY 359D1 and PHGY 359D2 are successfully completed in consecutive terms) The course consists of regularly scheduled meetings between each individual student and a chosen staff member, to consider current problems in biomedical research and to develop background for a research project to be carried out in U3. Brief written summaries of each meeting are required.

PHGY 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

PHGY 419D1 (4.5), PHGY 419D2 (4.5) Project and Seminar in Immunology.

(Fall) (15-18 hours lab, 1 hour seminar weekly) (Restriction: Enrolment restricted to U3 Honours Immunology students) (Students must register for both PHGY 419D1 and PHGY 419D2.) (No credit will be given for this course unless both PHGY 419D1 and PHGY 419D2 are successfully completed in consecutive terms) Individual research projects in immunology under the guidance of staff members in the three participating

departments: Physiology, Biochemistry, and Microbiology and Immunology.

PHGY 425 Analyzing Physiological Systems.

(3) (Prerequisite: PHGY 311, PHGY 314, BIOL 200 or permission from instructor.) (Note: Enrolment limited to 20 students.) An introduction to quantitative analysis of physiological data, both to the mode of thinking and to a set of tools that allows accurate predictions of biological systems. Examples will range from oscillating genetic networks to understanding higher brain function. Modelling and data analysis through examples and exercises will be emphasized.

PHGY 451 Advanced Neurophysiology.

(3) (Fall) (3 hours lecture) (Prerequisites: PHGY 311 or equivalent and BIOL 301) (Restriction: Departmental approval required) Topics of current interest in neurophysiology including the development of neurons and synapses, physiology of ionic channels, presynaptic and postsynaptic events in synaptic transmission and neuronal interactions in CNS function.

PHGY 459D1 (3), PHGY 459D2 (3) Physiology Seminar.

(Fall) (2 hours seminar) (Prerequisite: permission of instructors) (Required course for U3 Honours students.) (Students must register for both PHGY 459D1 and PHGY 459D2.) (No credit will be given for this course unless both PHGY 459D1 and PHGY 459D2 are successfully completed in consecutive terms) Discussion of topics in mammalian, cellular and molecular physiology. Students will be required to write one essay and make at least one oral presentation per term. A final course essay is required.

PHGY 461D1 (4.5), PHGY 461D2 (4.5) Experimental Physiology.

(Fall) (Restriction: Departmental approval required) (Restriction: This course is a requirement for U3 students in the Honours Physiology program, the Major Program in Physiology and Mathematics, and the Major program in Physiology and Physics, and is open to a limited number of other U3 Physiology students) (Students must register for both PHGY 461D1 and PHGY 461D2.) (No credit will be given for this course unless both PHGY 461D1 and PHGY 461D2 are successfully completed in consecutive terms) Individual project work under the supervision of Departmental Staff members.

PHGY 502 Exercise Physiology.

(3) (Winter) (Prerequisites: PHGY 311, PHGY 312, and PHGY 313) Behaviour of physiological processes in response to physical effort, in areas such as structural basis of muscle contraction, thermoregulation during exercise, mechanics and energetics of muscle contraction, fuel utilization, fatigue, physiological adjustments during exercise and influence of training.

PHGY 508 Advanced Renal Physiology.

(3) (Fall) (Prerequisite (Undergraduate): PHGY 312 or the equivalent) (Restriction: Open to advanced undergraduate and graduate students) Offered in conjunction with the Department of Medicine. Lectures and seminars will cover advanced concepts in selected areas of kidney physiology (glomerular and tubular function) as well as membrane and epithelial transport. Students will be expected to critically discuss selected experimental papers.

PHGY 513 Cellular Immunology.

(3) (Winter) (3 hours lectures plus term paper) (Prerequisite: MIMM 314, or permission of the instructor) This course deals with cellular interactions, regulation and effector mechanisms of the normal immune response in relation to diseases and pathogenic processes. It is taught at an advanced level.

PHGY 515 Physiology of Blood 1.

(3) (Fall) (2 hours lecture plus 1 hour seminar weekly) (Prerequisite: PHGY 313 or PHGY 312 or permission of the instructor) Study of the cell and molecular physiology of

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

hemostasis and its pathophysiology (bleeding and thrombosis). Emphases on molecular mechanisms regulating clot formation, fibrinolysis, and cell adhesion/aggregation. Experimental approaches and specific clinical disorders will be analyzed. Weekly discussions, and a major term paper.

PHGY 516 Physiology of Blood 2.

(3) (Winter) (2 hours lecture plus 1 hour seminar weekly) Bone marrow hematopoiesis, with emphasis on regulation of stem cell proliferation and differentiation along hematopoietic pathways. Formation and differentiation of red and white blood cells and some of the diseases associated with hematopoiesis will be covered. Emphasis will be given to the molecular mechanisms involved in the normal and pathological conditions.

● **PHGY 517 Artificial Internal Organs.**

(3) (Winter) (Prerequisite (Undergraduate): permission of instructors.) Physiological, bioengineering, chemical and clinical aspects of artificial organs including basic principles and physiopathology of organ failure. Examples: oxygenator, cardiac support, vascular substitutes, cardiac pacemaker, biomaterials and tissue engineering, biocompatibility.

PHGY 518 Artificial Cells.

(3) (Fall) (Prerequisite (Undergraduate): permission of instructors.) Physiology, biotechnology, chemistry and biomedical application of artificial cells, blood substitutes, immobilized enzymes, microorganisms and cells, hemoperfusion, artificial kidneys, and drug delivery systems. PHGY 517 and PHGY 518 when taken together, will give a complete picture of this field. However, the student can select one of these.

PHGY 531 Topics in Applied Immunology.

(3) (Winter) (Restriction: Permission of the instructor. U3 InterDept. Honours Immunology students and graduate students with strong immunology background i.e. PHGY 513 and BIOC 503) Seminar format course in which experts in immunologic mechanisms of resistance against a variety of infectious diseases, including AIDS, malaria, and tuberculosis oversee student moderators in their presentation of recent scientific literature in the field.

PHGY 550 Molecular Physiology of Bone.

(3) (Fall) (1 hour of lecture, 2 hours of seminar per week) (Prerequisites: PHGY 311, and BIOL 202 or equivalent) (Restriction: U3 Physiology students, and graduate students in biomedical departments; others by permission of the instructor) Students will develop a working knowledge of cartilage and bone. Discussion topics will include: molecular and cellular environment of bone; heritable and acquired skeletal defects; research models used to study metabolic bone disease.

PHGY 552 Cellular and Molecular Physiology.

(3) (Winter) (1 hour lecture, 2 hours seminar weekly) (Prerequisite: PHGY 311) (Preference will be given to Physiology Honours and Graduate students) Discussions of recent significant advances in our understanding of the gene products involved in diverse cellular signalling pathways. Topics will include cell-surface hormone receptors, nuclear steroid hormone receptors, and ion channels and transporters. Students will present and critically evaluate experimental approaches, results and interpretations of selected research publications.

PHGY 556 Topics in Systems Neuroscience.

(3) (Winter) (Restriction: Permission of the instructor required.) (Restriction: Not open to students who have taken PHGY 456) Topics of current interest in systems neurophysiology and behavioural neuroscience including: the neural representation of sensory information and motor behaviours, models of sensory motor integration, and the computational analysis of problems in motor control and perception. Students will be expected to present and critically discuss journal articles in class.

● **PHGY 560**

(3) (Prerequisites: BIOL 301 or permission of instructors.) Introduction to optics, light microscopy imaging and data analysis for life scientists.

PHYS-Physics

Offered by: Physics

PHYS 101 Introductory Physics - Mechanics.

(4) (Fall) (3 hours lectures; 2 hours laboratory; tutorial sessions) (Restriction: Not open to students taking or having taken PHYS 131, CEGEP objective 00UR or equivalent) (Laboratory sections have limited enrolment) The object of this course is to give the students a basic understanding of the principles of physics, illustrating these, where possible, with current examples of their use in biology and medicine.

PHYS 102 Introductory Physics - Electromagnetism.

(4) (Winter) (3 hours lectures; 2 hours laboratory; tutorial sessions) (Prerequisite: PHYS 101.) (Corequisite: MATH 139 or higher level calculus course.) (Restriction: Not open to students taking or having taken PHYS 142, CEGEP objective 00UR or equivalent) (Laboratory sections have limited enrolment) Electric field and potential. D.C. circuits and measurements. Capacitance. Magnetic field and induction. A.C. circuits Semiconductor devices and their application. Electromagnetic waves.

PHYS 107 Mechanics Laboratory (Life Sciences).

(1) (Fall) (Prerequisite: Lecture component of PHYS 101 or equivalent) (Restriction: Not open to students who have taken or are taking PHYS 101) The laboratory component of PHYS 101.

PHYS 108 E&M Laboratory (Life Sciences).

(1) (Winter) (Prerequisite: Lecture component of PHYS 102 or equivalent) (Restriction: Not open to students who have taken or are taking PHYS 102) The laboratory component of PHYS 102.

PHYS 117 Mechanics Laboratory.

(1) (Fall) (Prerequisite: Lecture component of PHYS 131 or equivalent) (Restriction: Not open to students who have taken or are taking PHYS 131) The laboratory component of PHYS 131.

PHYS 118 E & M Laboratory.

(1) (Winter) (Prerequisite: Lecture component of PHYS 142 or equivalent) (Restriction: Not open to students who have taken or are taking PHYS 142) The laboratory component of PHYS 142.

PHYS 131 Mechanics and Waves.

(4) (Fall) (3 hours lectures; 1 hour tutorial, 3 hours laboratory in alternate weeks; tutorial sessions) (Corequisite: MATH 139 or higher level calculus course.) (Restriction: Not open to students taking or having taken PHYS 101, CEGEP objective 00UR or equivalent) (Laboratory sections have limited enrolment) The basic laws and principles of Newtonian mechanics; oscillations and waves.

PHYS 142 Electromagnetism and Optics.

(4) (Winter) (3 hours lectures, 3 hours laboratory in alternate weeks; tutorial sessions) (Prerequisite: PHYS 131.) (Corequisite: MATH 141 or higher level calculus course.) (Restriction: Not open to students taking or having taken PHYS 102, CEGEP objective 00UR or equivalent) (Laboratory sections have limited enrolment) The basic laws of electricity and magnetism; geometrical and physical optics.

PHYS 200 Space, Time and Matter.

(3) (Fall) (3 hours lectures) (Restriction: Not open to students in a Physics program) A nonmathematical, conceptual look at physics, beginning with the idea of space and time, continuing with the historical development of Newtonian mechanics of celestial motion, electricity and magnetism, ether and light, Einstein's special and general theories of relativity, quantum mechanics, matter and antimatter, cosmology and the big bang.

PHYS 202 Everyday Physics.

(3) (Fall) (Note: The course will be divided into thirteen weeks with a different topic for each week throughout the semester.) The day-to-day physics behind the materials and phenomena around us. Demonstrations of the intriguing properties of materials and the simple physical theories explaining them.

PHYS 205 Our Evolving Universe.

(3) (Fall) (Restrictions: Not open to students in a physics program. Not open to students who have taken PHYS 204.) An elementary course on astronomy and astrophysics. Positional astronomy and finding your way about the sky. Our evolving picture of the universe. Properties and origins of the solar system. The Big Bang and modern cosmology.

PHYS 206 The Milky Way Inside and Out.

(3) (Winter) (Restrictions: Not open to students in a Physics program. Not open to students who have taken PHYS 204.) An elementary course on astronomy. Star origins and star formation, supernovae, white dwarfs, neutron stars, and black holes. Galaxies, their structure and their interactions. Stellar clusters, the interstellar medium. Galactic classification and galaxy evolution.

PHYS 214 Introductory Astrophysics.

(3) (Fall) (Prerequisite: CEGEP Physics or PHYS 102 or PHYS 142.) (Restriction: Not open to students who have taken or are taking PHYS 205 or PHYS 206.) An introduction to astrophysics with emphasis placed on methods of observation and current models. Stellar radiation and detectors, quasars, black holes. Galaxies, large scale structure of the universe, cosmology.

PHYS 224 Physics and Psychophysics of Music.

(3) (Fall) (3 hours lectures) (Designed for students in the Faculty of Music but suitable for students with an interest in music, and how it is perceived) (Prerequisite: none) An introduction to physics and psychophysics of music with demonstrations of the relevant phenomena and the theories explaining them. Pitch, loudness and timbre in the context of the physics properties of the human ear. The basic physics of music production including modes of oscillation of mechanical systems, resonance, feedback, transmission and reflection of sound. The human voice. Modern methods of sound production using electrical analogue devices and digital computers. Room reverberation and acoustics.

PHYS 225 Musical Acoustics.

(3) (Winter) (3 hours lectures) (Prerequisites: CEGEP Physics or PHYS 101 or PHYS 131 or both MATH 112 and PHYS 224.) (Designed for students in music who have interests in sound recording and reproduction and also suitable for students in science with an interest in music) Physical acoustics with applications to music. Resonators and radiators, acoustic impedance. Acoustic properties of strings, bars, membranes, pipes and horns. Application to selected musical instruments. Direction characteristics of sound sources. Room acoustics.

PHYS 228 Energy and the Environment.

(3) Energy fundamentals, generation of electricity, heat engines, fossil fuel production and consumption, local and global effects, economic impact, transportation, and pollution and environmental impact of energy use. Non-renewable energy sources (fossil fuels, nuclear) and renewable sources (solar, wind, hydro, geothermal).

PHYS 230 Dynamics of Simple Systems.

(3) (Fall) (3 hours lectures) (Prerequisite: CEGEP Physics or PHYS 131.) (Corequisite: MATH 222) (Restriction: Not open to students taking or having passed PHYS 251) Translational motion under Newton's laws; forces, momentum, work/energy theorem. Special relativity; Lorentz transforms, relativistic mechanics, mass/energy equivalence. Topics in rotational dynamics. Noninertial frames.

PHYS 232 Heat and Waves.

(3) (Winter) (3 hours lectures) (Prerequisites: CEGEP Physics or PHYS 142, and CEGEP chemistry or CHEM 120, and PHYS 230.) (Restriction: Not open to students taking or having passed PHYS 253) First and second laws of thermodynamics, kinetic theory of gases, optical interference, polarization, electro-optics, physics of microscopic systems.

PHYS 241 Signal Processing.

(3) (Winter) (2 hours lectures; 3 hours laboratory alternate weeks) (Prerequisite: CEGEP physics or PHYS 142.) Linear circuit elements, resonance, network theorems, diodes,

transistors, amplifiers, feedback, integrated circuits.

PHYS 242 Electricity and Magnetism.

(2) (Winter) (2 hours lectures) (Prerequisites: CEGEP Physics, MATH 222) Properties of electromagnetic fields, dipole and quadrupole fields and their interactions, chemical binding of molecules, electromagnetic properties of materials, Maxwell's equations and properties of electromagnetic waves, propagation of waves in media.

PHYS 251 Honours Classical Mechanics 1.

(3) (Fall) (3 hours lectures) (Prerequisite: CEGEP physics or PHYS 131.) (Corequisite: MATH 222) (Restriction: Not open to students taking or having taken PHYS 230.) Newton's laws, work energy, angular momentum. Harmonic oscillator, forced oscillations. Inertial forces, rotating frames. Central forces, centre of mass, planetary orbits, Kepler's laws.

PHYS 253 Thermal Physics.

(3) (Fall) (3 hours lectures) (Prerequisites: CEGEP physics or PHYS 131, and CEGEP chemistry or CHEM 120.) (Corequisite: MATH 222) (Restriction: Not open to students taking or having taken PHYS 232.) Energy, work, heat; first law. Temperature, entropy; second law. Absolute zero; third law. Equilibrium, equations of state, gases, liquids, solids, magnets; phase transitions.

PHYS 257 Experimental Methods 1.

(3) (Fall) (6 hours of laboratory and classroom work) (Corequisite: PHYS 230 or PHYS 251) Introductory laboratory work and data analysis as related to mechanics, optics and thermodynamics. Introduction to computers as they are employed for laboratory work, for data analysis and for numerical computation. Previous experience with computers is an asset, but is not required.

PHYS 258 Experimental Methods 2.

(3) (Winter) (6 hours of laboratory and classroom work) (Prerequisite: PHYS 257) Advanced laboratory work and data analysis as related to mechanics, optics and thermodynamics. Computers will be employed routinely for data analysis and for numerical computation, and, particularly, to facilitate the use of Fourier methods.

PHYS 260 Modern Physics and Relativity.

(3) (Fall) (3 hours lectures) (Prerequisite: CEGEP physics or PHYS 142.) (Corequisite: MATH 222) History of special relativity; Lorentz transformations: kinematics and dynamics; transformation of electric and magnetic forces; introduction to topics in modern physics.

PHYS 271 Introduction to Quantum Physics.

(3) (Winter) ((3-0-6)) (Prerequisite: PHYS 251 or CIVE 281) (Restriction: This course is not available to any student enrolled in any Majors or Honours program involving Physics.) The observed properties of atoms and radiation from atoms. Electron waves. The Schroedinger Equation in one dimension. Quantum mechanics of the hydrogen atom. Angular momentum and spin. Quantum mechanics of many electron systems. Basic ideas of electrons in solids and solid state physics.

PHYS 328 Electronics.

(3) (Fall) (2 hours lectures; 3 hours laboratory) (Prerequisite: PHYS 241 or permission of instructor) Semiconductor devices, basic transistor circuits, operational amplifiers, combinatorial and sequential logic, integrated circuits, analogue to digital converters. The laboratory component covers design, construction and testing of basic electronic circuits.

PHYS 331 Topics in Classical Mechanics.

(3) (Winter) (3 hours lectures) (Prerequisite: PHYS 230.) (Corequisite: MATH 315) (Restriction: Not open to students having passed PHYS 451) Forced and damped oscillators, Newtonian mechanics in three dimensions, rotational motion,

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

Lagrangian mechanics, small vibrations, normal modes. Introduction to Hamiltonian mechanics.

PHYS 332 Physics of Fluids.

(3) (Winter) (3 hours lectures) (Prerequisites: PHYS 230, MATH 223, MATH 314, MATH 315) The physical properties of fluids. The kinematics and dynamics of flow. The effects of viscosity and turbulence. Applications of fluid mechanics in biophysics, geophysics and engineering.

PHYS 333 Thermal and Statistical Physics.

(3) (Winter) (3 hours lectures) (Prerequisite: PHYS 232) (Restriction: Not open to students taking or having passed PHYS 362) Introductory equilibrium statistical mechanics. Quantum states, probabilities, ensemble averages. Entropy, temperature, Boltzmann factor, chemical potential. Photons and phonons. Fermi-Dirac and Bose-Einstein distributions; applications.

PHYS 334 Advanced Materials.

(3) (Fall) (Prerequisites: CHEM 110, CHEM 120 or CHEM 111, CHEM 121 and PHYS 101, PHYS 102 or PHYS 131, PHYS 142, or CEGEP Physics and Chemistry, or equivalent. Pre- or Co-requisite: one of CHEM 203, CHEM 204, CHEM 213, CHEM 214 or equivalent; or one of PHYS 230 and PHYS 232, or equivalent; or permission of instructor) (Restriction: Not open to students who have taken or are taking CHEM 334) The physicochemical properties of advanced materials. Topics discussed include photonics, information storage, 'smart' materials, biomaterials, clean energy materials, porous materials, and polymers.

PHYS 339 Measurements Laboratory in General Physics.

(3) (Winter) (6 hours) (Prerequisite: PHYS 241) Introduction to modern techniques of measurement. The use of computers in performing and analysing experiments. Data reduction, statistical methods, report writing. Extensive use of computers is made in this laboratory; therefore some familiarity with computers and computing is an advantage.

PHYS 340 Majors Electricity and Magnetism.

(3) (Fall) (3 hours lectures) (Prerequisites: CEGEP physics or PHYS 142, MATH 222, MATH 223.) (Restriction: Not open to students who have passed PHYS 242 or PHYS 350.) The electrostatic field and scalar potential. Dielectric properties of matter. Energy in the electrostatic field. Methods for solving problems in electrostatics. The magnetic field. Induction and inductance. Energy in the magnetic field. Magnetic properties of matter. Maxwell's equations. A vector treatment.

PHYS 342 Majors Electromagnetic Waves.

(3) (Winter) (3 hours lectures) (Prerequisites: PHYS 340 or PHYS 242, Mathematics MATH 314, MATH 315) (Restriction: Not open to students having passed ECSE 357) Maxwell's equations. The wave equation. The electromagnetic wave, reflection, refraction, polarization. Guided waves. Transmission lines and wave guides. Vector potential. Radiation. The elemental dipole; the half-wave dipole; vertical dipole; folded dipoles; Yagi antennas. Accelerating charged particles.

PHYS 350 Honours Electricity and Magnetism.

(3) (Fall) (3 hours lectures) (Prerequisites: MATH 248, MATH 325.) (Restriction: Honours students or permission of the instructor) (Restriction: Not open to students having taken PHYS 340) Fundamental laws of electric and magnetic fields in both integral and differential form.

PHYS 352 Honours Electromagnetic Waves.

(3) (Fall) (3 hours lectures) (Prerequisite: PHYS 350.) (Restriction: Honours students, or permission of the instructor) Vector and scalar potentials; plane waves in homogeneous media; refraction and reflection; guided waves; radiation from simple systems; dipole and quadrupole radiation; introduction to fields of moving charges; synchrotron radiation; Bremsstrahlung.

PHYS 357 Honours Quantum Physics 1.

(3) (Fall) (3 hours lectures) (Restriction: Honours students or permission of the instructor) (Restriction: Not open to students taking or having passed PHYS 446) Experimental basis for quantum mechanics; wave-packets; uncertainty principle. Hilbert space formalism. Schrodinger equation: eigenvalues and eigenvectors: applications to 1-d problems including the infinite and finite potential wells and the harmonic oscillator. Tunneling. Time independent perturbation theory.

PHYS 359 Honours Laboratory in Modern Physics 1.

(3) (Winter) (6 hours) (Corequisite: PHYS 457. Honours students or permission of instructor) Advanced level experiments in modern physics stressing quantum effects and some properties of condensed matter.

PHYS 362 Statistical Mechanics.

(3) (Winter) (3 hours lectures) (Prerequisites: MATH 248 or equivalents, PHYS 253.) (Restriction: Honours students, or permission of the instructor) (Restriction: Not open to students taking or having passed PHYS 333) Quantum states and ensemble averages. Fermi-Dirac, Bose-Einstein and Boltzmann distribution functions and their applications.

PHYS 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

***PHYS 413 Physical Basis of Physiology.**

(3) (Fall) (3 hours lectures) (Prerequisite: MATH 315, or MATH 325, and permission of the instructor) (Intended for Major or Honours students in Physics, Physiology, Physiology and Physics, or Mathematics and others with permission) Analytic and computer simulation techniques are used to examine the role of nonlinearities and time delays in determining the dynamic behaviour of physiological control systems and their relation to normal and pathophysiological states. Examples drawn from the control of respiration, cellular proliferation and differentiation, biochemical feedback networks, thermoregulatory mechanisms, and neural feedback.

PHYS 434 Optics.

(3) (Winter) (3 hours lectures) Geometrical optics, wave optics, lasers, Fourier transform spectroscopy, holography, optical data processing, stellar interferometry.

PHYS 436 Modern Physics.

(3) (Winter) (3 hours lectures) (Prerequisite: PHYS 446) (Restriction: Not open to students in Honours Physics or in Joint Honours in Mathematics and Physics) One electron atoms, radiation, multielectron atoms, molecular bonds. Selected topics from condensed matter, nuclear and elementary particle physics.

PHYS 439 Majors Laboratory in Modern Physics.

(3) (Fall) (6 hours) (Prerequisite: PHYS 339.) (Corequisite: PHYS 446) (Restriction: Not open to students with credit in PHYS 359 except with permission of instructor) Advanced level experiments in modern physics stressing quantum effects and some properties of condensed matter.

PHYS 446 Majors Quantum Physics.

(3) (Fall) (3 hours lectures) (Prerequisite: PHYS 230 and PHYS 232, or PHYS 251) (Restriction: Not open to students taking or having taken PHYS 357 or PHYS 457) de Broglie waves, Bohr atom. Schrodinger equation, wave functions, observables. One dimensional potentials. Schrodinger equation in three dimensions. Angular momentum, hydrogen atom. Spin, experimental consequences.

PHYS 449 Majors Research Project.

(3) (Winter or Summer) (6 hours) (Prerequisite: PHYS 328, PHYS 439) A supervised research project.

PHYS 451 Honours Classical Mechanics 2.

(3) (Winter) (3 hours lectures) (Prerequisite: PHYS 251.) (Restriction: Honours students, or permission of instructor) (Restriction: Not open to students having taken PHYS 331) Rigid bodies, angular momentum, gyroscope, moment of inertia, principal axes, Euler's equations. Coupled oscillations and normal modes. Lagrangian mechanics and applications. Hamiltonian mechanics. Topics in advanced analytical mechanics.

PHYS 457 Honours Quantum Physics 2.

(3) (Winter) (3 hours lectures) (Restriction: Honours students or permission of instructor) (Restriction: Not open to students having taken PHYS 446) Angular momentum and spin operators. Operator methods in quantum mechanics. Coupling of spin and angular momenta. Variational principles and elements of time dependent perturbation theory (the Golden Rule). Solution of the Schrodinger equation in three dimensions. Applications to the hydrogen and helium atoms and to simple problems in atomic and molecular physics.

PHYS 459D1 (3), PHYS 459D2 (3) Honours Research Thesis.

(Fall) (6 hours) (Restriction: Honours students or permission of instructor) (Students must register for both PHYS 459D1 and PHYS 459D2.) (No credit will be given for this course unless both PHYS 459D1 and PHYS 459D2 are successfully completed in consecutive terms) Honours supervised research project and thesis.

PHYS 469 Honours Laboratory in Modern Physics 2.

(3) (Fall) (6 hours) (Restriction: Honours students or permission of instructor) (Prerequisite: PHYS 359) (Restriction: Not open to students taking PHYS 459) Advanced level experiments in modern physics stressing quantum effects and some properties of condensed matter. Continuation of PHYS 359.

PHYS 478 Short Research Project.

(1) (Note: Students are expected to find an appropriate instructor for their project.) Supervised research project in physics.

PHYS 479 Honours Research Project.

(3) (6 hours) (Restriction: Honours students or permission of instructor) (Students must also register for PHYS 469 or PHYS 459.) (Credit for this course will only be given if student successfully completes either PHYS 469 or PHYS 459.) Honours supervised research project.

PHYS 489 Special Project.

(3) (Winter) (6 hours) (Restriction: Only open to students in their final year of the Joint Major in Physics and Computer Science after consultation with the adviser(s) for the program) A project incorporating aspects of both physics and computer science, under the joint supervision of the two departments. The Physics aspect may be either laboratory-based or theoretical in nature. The Computational aspect will involve the development and implementation of algorithms arising from the investigation.

PHYS 514 General Relativity.

(3) (Winter) (3 hours lectures) (Restriction: Honours students, or permission of the instructor) Transition from special to general relativity. Non-Euclidian geometry. The basic laws of Physics in co-variant form, Einstein's equations. Gravitational waves; neutron stars; black holes; cosmology.

PHYS 521 Astrophysics.

(3) (Fall) (3 hours) A quantitative course in galactic and extragalactic astrophysics. Topics include observational techniques, stars and stellar evolution, compact objects, galaxy structure, kinematics, evolution and cosmology.

PHYS 534 Nanoscience and Nanotechnology.

(3) (Fall) Topics include scanning probe microscopy, chemical selfassembly, computer modeling, and microfabrication/micromachining.

PHYS 551 Quantum Theory.

(3) (Fall) (3 hours lectures) (Restriction: Honours students, or permission of the instructor) General formulation, scattering theory, WKB approximation, time-dependent perturbation, theory and applications, angular momentum, relativistic wave equations.

PHYS 557 Nuclear Physics.

(3) (Fall) (3 hours lectures) (Restriction: Honours students, or permission of the instructor) General nuclear properties, nucleon-nucleon interaction and scattering theory, radioactivity, nuclear models, nuclear reactions.

PHYS 558 Solid State Physics.

(3) (Fall) (3 hours lectures) (Restriction: Honours students, or permission of the instructor) Properties of crystals; free electron model, band structure; metals, insulators and semi-conductors; phonons; magnetism; selected additional topics in solid-state (e.g. ferroelectrics, elementary transport theory).

PHYS 559 Advanced Statistical Mechanics.

(3) (Fall) (3 hours lectures) (Restriction: Honours students, or permission of the instructor) Scattering and structure factors. Review of thermodynamics and statistical mechanics; correlation functions (static); mean field theory; critical phenomena; broken symmetry; fluctuations, roughening.

PHYS 562 Electromagnetic Theory.

(3) (Winter) (3 hours lectures) (Restriction: Honours students, or permission of the instructor) (Prerequisites (Graduate): U1 or U2 Honours Physics or permission of instructor.) Electrostatics, dielectrics, magnetostatics, timevarying fields, relativity, radiating systems, fields of moving charges.

PHYS 567 Particle Physics.

(3) (Winter) (3 hours lectures) (Restriction: Honours students, or permission of the instructor) Survey of elementary particles; hadrons, leptons and hadrons' constituents (quarks). Invariance principles and conservation laws. Detectors and accelerators. Phenomenology of strong, electromagnetic and weak interactions.

PHYS 580 Introduction to String Theory.

(3) (Prerequisite: Permission of instructor.) (Restriction: Honours students.) Introduction to bosonic string theory, with application to fundamental theories of particle physics. Gravity and electromagnetism in extra dimensions, dynamics of classical and quantum strings, worldsheet parametrization, conserved currents, light-cone gauge, string thermodynamics and black holes, D-branes.

PSYC-Psychology

Offered by: Psychology

PSYC 100 Introduction to Psychology.

(3) (Fall) (2 lectures; 1 conference) (Restriction: Not open to students who have passed an Introductory Psychology course in CEGEP: 350-101 or 350-102 or equivalent) Introduction to the scientific study of mind and behavior, including basic concepts and methods in psychology while also highlighting the relevance of psychology to everyday life; attachment, aggression, depression, parenting and personality change.

PSYC 204 Introduction to Psychological Statistics.

(3) (Fall and Winter) (2 lectures; 1 conference) (Restriction: Not open to students who have passed a CEGEP statistics course(s) with a minimum grade of 75%: Mathematics 201-307 or 201-337 or equivalent or the combination of Quantitative Methods 300 with Mathematics 300) (This course is a prerequisite for PSYC 305, PSYC 406, PSYC 310, PSYC 336) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) The statistical analysis of research data; frequency distributions; graphic representation; measures of central tendency and variability; elementary sampling theory and tests of significance.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

PSYC 211 Introductory Behavioural Neuroscience.

(3) (Winter) (2 lectures) (Prerequisite: PSYC 100 or equivalent) An introduction to contemporary research on learning, memory and motivation, from behavioural, biological and evolutionary perspectives. Topics include: internal and external influences on behaviour, biological constraints on motivation and learning, conditioning and cognitive processes. Much of the material will be drawn from the experimental literature on research with animals.

PSYC 211 Introductory Behavioural Neuroscience.

(3) (Winter) (2 lectures) (Prerequisite: PSYC 100 or equivalent) An introduction to contemporary research on learning, memory and motivation, from behavioural, biological and evolutionary perspectives. Topics include: internal and external influences on behaviour, biological constraints on motivation and learning, conditioning and cognitive processes. Much of the material will be drawn from the experimental literature on research with animals.

PSYC 212 Perception.

(3) (Fall) (2 lectures; 1 conference) Perception is the organization of sensory input into a representation of the environment. Topics include: survey of sensory coding mechanisms (visual, auditory, tactile, olfactory, gustatory), object recognition, spatial localization, perceptual constancies and higher level influences.

PSYC 213 Cognition.

(3) (Winter) (2 lectures, 1 conference) (Prerequisite: One previous course in Psychology.) Where do thoughts come from? What is the nature of thought, and how does it arise in the mind and the brain? Cognition is the study of human information processing, and we will explore topics such as memory, attention, categorization, decision making, intelligence, philosophy of mind, and the mind-as computer metaphor.

PSYC 215 Social Psychology.

(3) (Fall and Winter) (3 lectures) (Restriction: Not open to students who have taken PSYC 330, MGCR 221 or SOCI 216) The course offers students an overview of the major topics in social psychology. Three levels of analysis are explored beginning with individual processes (e.g., attitudes, attribution), then interpersonal processes (e.g., attraction, communication, love) and finally social influence processes (e.g., conformity, norms, roles, reference groups).

PSYC 301 Animal Learning & Theory.

(3) (Fall) (Prerequisite(s): PSYC 211 or PSYC 213 or permission of instructor.) (Restriction: Not open to students who have taken PSYC 211 prior to the 2000-01 academic year) Contemporary and historical research and theory on animal learning approached from a behavioural, cognitive and biological perspective. Classical and instrumental conditioning, cognitive learning, and biological constraints. The status and history of North American behaviourism will be discussed and compared with cognitive and other approaches.

PSYC 304 Child Development.

(3) (Fall) (2 lectures, 1 conference) (Prerequisites: two courses from PSYC 211, PSYC 212, PSYC 213, and PSYC 215 or permission of the instructor) (This course is a prerequisite for PSYC 412, PSYC 413, PSYC 414, PSYC 416) Psychology of children, covering critical issues, theories, biological underpinnings, experimental methods, and findings in perceptual, cognitive, language, emotional, and social development.

PSYC 305 Statistics for Experimental Design.

(3) (Fall and Winter) (Prerequisite: PSYC 204 or equivalent) (This course is required of all students who propose to enter an Honours or Major program in Psychology) (You may not be able to receive credit for this course and other statistic courses. Be sure to check the Course Overlap section under Faculty Degree Requirements in the Arts or Science section of the Calendar.) An introduction to the design and analysis of experiments, including analysis of variance, planned and post hoc tests and a comparison of anova to correlational analysis.

●PSYC 308 Behavioural Neuroscience 1.

(3) (Fall) (2 lectures, 1 conference) (Prerequisite: BIOL 111 or BIOL 112 or BIOL 115 or equivalent) (Restriction: Not open to students who have taken or are taking; ANAT 321 or PHGY 314.) The neural basis of mammalian behavior. Basic neuroanatomy, neurophysiology and neurochemistry. Sensory and motor systems. How the nervous system acquires and integrates information and uses it to produce behavior.

PSYC 311 Human Cognition and the Brain.

(3) (Fall) (2 lectures; 1 conference) The course is an introduction to the field studying how human cognitive processes, such as perception, attention, language, learning and memory, planning and organization, are related to brain processes. The material covered is primarily based on studies of the effects of different brain lesions on cognition and studies of brain activity in relation to cognitive processes with modern functional neuroimaging methods.

PSYC 315 Computational Psychology.

(3) (Winter) (Prerequisite: Permission of instructor.) (Restriction: Not open to U0 or U1 students.) Application of computational methods to the simulation of psychological phenomena. Comparison of natural and artificial intelligence. Symbolic and neural network techniques. Methods for evaluating simulations.

●PSYC 316 Psychology of Deafness.

(3) (Fall) (2 lectures; 1 conference) (Prerequisite: PSYC 100 or equivalent or permission of instructor) Basic introduction to the field of deafness from a psychological perspective. Topics include effect of deafness on sensory, perceptual, cognitive, intellectual and linguistic processes. Impact of deafness on children and families.

●PSYC 317 Genes and Behaviour.

(3) (Fall) (Pre-requisite: PSYC 211 or PSYC 308 or BIOL 306 or PHGY 314 or permission of instructor.) Focuses on current techniques employed to study which genes influence behaviour, and how they do so.

PSYC 318 Behavioural Neuroscience 2.

(3) (Winter) (2 lectures, 1 conference) (Prerequisite: PSYC 308 or PSYC 311 or BIOL 306 or PHGY 314) Physiological bases of motivation including feeding and drinking, sexual and parental behaviour. Physiological processes in reinforcement and learning.

●PSYC 329 Introduction to Auditory Cognition.

(3) (3 lecture hours per week.) (Prerequisites: PSYC 212 or PSYC 213 or permission of the instructor.) Listener's response to sound. Higher-level mental principles including perception, attention, memory, motor control, and emotion. Sensation and perceptual organization of sound. Perception/production of speech, music, and other auditory events.

PSYC 331 Inter-Group Relations.

(3) (Winter) (2 lectures) (Prerequisite: PSYC 215) The course focuses on the social psychology of societal groups such as racial minorities, aboriginal groups and women. The ideological biases of current theories is first established. This is followed by a review of current theories and finally current controversies are explored including new forms of racism and affirmative action.

PSYC 332 Introduction to Personality.

(3) (Winter) (3 lectures) (Prerequisite: PSYC 100) This course examines some of the major theories of personality, e.g., those of Freud, Rogers, and Bandura. Empirical research inspired by these theories will also be examined. Topics include the nature of human motivation, the role of the self-concept, and the consistency and stability of personality.

PSYC 333 Personality and Social Psychology.

(3) (Fall) (2 lectures) (Prerequisite: PSYC 215) The course builds on and is an extension of Social Psychology (PSYC 215). Traditional approaches to person-situation interactions and a more dynamic approach based on recent research on goals and social cognition.

PSYC 337 Introduction: Abnormal Psychology 1.

(3) (Fall) (2 lectures, 1 conference) (This course is prerequisite for PSYC 338) A survey of the genetic, physiological and environmental origins of intellectual and emotional disorders.

PSYC 338 Introduction: Abnormal Psychology 2.

(3) (Winter) (2 lectures; 1 conference) (Prerequisite: PSYC 337) (This course is prerequisite for PSYC 491) An introduction to psychotic behaviour problems, character disorders and behaviour modification.

● PSYC 340 Psychology of Language.

(3) (Winter) (Prerequisite: PSYC 212 or PSYC 213.) A survey of issues in psycholinguistics, focusing on the nature and processing of language (e.g., how we understand speech sounds, words, sentences, and discourse). Also surveyed: language and thought, the biological foundations of language, and first language acquisition.

PSYC 341 The Psychology of Bilingualism.

(3) (Winter) (2 lectures) (Prerequisites: Introductory Psychology, and PSYC 340 or introduction to linguistics; or permission of instructor) This course will examine issues in bilingualism, including second language acquisition in children and adults, critical period hypothesis, cognitive consequences and correlates of bilingualism, social psychological aspects of bilingualism, and bilingual education.

PSYC 342 Hormones and Behaviour.

(3) (Winter) (2 lectures) (Prerequisite: BIOL 111, BIOL 112, BIOL 115 or equivalent) The role of hormones in organization of CNS function, as effectors of behaviour, in expression of behaviours and in mental illness.

PSYC 351 Research Methods in Social Psychology.

(3) (Fall) (1 hour lecture, 6 hour lab and/or field work) (Prerequisite: PSYC 215. Pre-/Co-requisite: PSYC 305.) (Restriction: U2 level and above. Requires departmental approval.) (Students will be admitted on the basis of a written application on forms available from the Department (Room N7/9). Applications must be submitted by August 1st) Designed to introduce students to the issues, strategies, and applications of various research methodologies in social psychology. Through demonstrations, exercises, and pilot studies, students will gain experience with lab and field methods using both correlational and experimental procedures. Classic and contemporary approaches will be examined.

PSYC 352 Cognitive Psychology Laboratory.

(3) (Winter) (1 hour lecture, weekly lab) (Prerequisite: PSYC 213 and PSYC 305.) (Corequisite: PSYC 305 or equivalent.) (Restriction: Requires departmental approval.) (Students will be admitted on the basis of a written application on forms available from the Department (Room N7/9). Applications must be submitted by first day of class) Introduction to research methods and experimental techniques in cognitive psychology for exploring topics such as attention, memory, categorization, reasoning, and language processing.

● PSYC 353 Laboratory in Human Perception.

(3) (Winter) (1 hour lecture plus 3 hour lab) (Prerequisites: PSYC 212, U2 level or above. Requires departmental approval.) (Students will be admitted on the basis of a written application on forms available from the Department (Room N7/9). Applications must be submitted by August 15) Students will be introduced to standard psychophysical procedures and data analysis techniques, and will have the opportunity to design and carry out their own experiments. Research topics include: visual acuity, form and motion perception, and visual search. Evaluation based on individually written reports on lab experiments.

PSYC 380D1 (4.5), PSYC 380D2 (4.5) Honours Research**Project Seminar.**

(3 hour seminar) (Restriction: For U2 honours students only. Requires departmental approval.) (Students must register for both PSYC 380D1 and PSYC 380D2.) (No credit will be given for this course unless both PSYC 380D1 and PSYC 380D2 are successfully completed in consecutive terms) First laboratory research project.

PSYC 395 Psychology Research Project 1.

(6) (Fall or Winter) (Prerequisites: 24 credits of the psychology program, PSYC 305 or equivalent and CGPA above 3.00.) (Restriction: Requires departmental approval.) (Restriction: Registration is by special arrangement with Psychology staff, and project proposals must be approved by the Department before registration.) (For more information see the Psychology Department website.) Supervised research project.

PSYC 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

PSYC 403 Modern Psychology in Historical Perspective.

(3) (Fall) (2 lectures) A survey of the scientific and ideological influences on psychology from its philosophical beginnings through the period of the schools to its modern situation.

● PSYC 406 Psychological Tests.

(3) (Winter) (2 lectures) (Prerequisite: PSYC 204 or equivalent) An introduction to the theory and practice of psychological measurement in health, educational, clinical and industrial/organizational settings. Attention to procedures for developing and validating tests and questionnaires. Techniques include: intelligence tests, projective tests, questionnaires, structured interviews, rating scales, and behavioural/performance tests.

PSYC 408 Principles of Cognitive Behaviour Therapy.

(3) (2 lectures) (Prerequisites: PSYC 337 and PSYC 211 or permission of instructor) An introduction to the theory, research and practice of cognitive behaviour therapy. The experimental approach to understanding human behaviour is used to follow basic principles of learning and their clinical application. Certain psychiatric disorders such as alcoholism and depression are highlighted to illustrate how a behaviour therapist conceptualizes problems and formulates treatments.

● PSYC 409 Positive Psychology.

(3) (Prerequisites: PSYC 215 Social Psychology) (Note: Permission from instructor is required.) Didactic instruction and experiential learning in its coverage of three issues central to this field: positive emotions, positive individual traits, and positive institutions. Topics covered include sensory savoring, expressing gratitude, optimism, identifying and building strengths, kindness, and meaning.

● PSYC 410 Special Topics in Neuropsychology.

(3) (Winter) (2 lectures) (Prerequisites: PSYC 311 or PSYC 308. Knowledge of basic neuropsychology at the level covered in PSYC 311 is assumed) Developments in cognitive

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

neuroscience and cognitive neuropsychiatry via readings from primary sources. Topics include the neural bases of memory, emotion, social cognition and neuropsychiatric diseases. Integrating knowledge from studies in clinical populations and functional neuroimaging studies.

PSYC 412 Developmental Psychopathology.

(3) (Fall) (2 lectures; 1 conference) (Corequisite: PSYC 304 or PSYC 337 or permission of instructor) Introduction to the field of behavior disorders of childhood and adolescence, including core issues, theoretical and methodological underpinnings, descriptions and discussions of many disorders, clinical and research data, and treatment approaches. Three major assumptions will be woven through the course.

PSYC 413 Cognitive Development.

(3) (Fall) (3 hours) (Prerequisite: PSYC 304 or PSYC 213 or equivalent) In-depth exploration of cognitive development in infants and children including knowledge representation and processing, conceptual development, language development, and theories and principles of cognitive development.

● **PSYC 414 Social Development.**

(3) (Fall) (Prerequisites: PSYC 304 and PSYC 305) Advanced study of the development of social behaviour and social cognition in children. Topics include: socialization, attachment, aggression, exploration, role taking, communication, family and peer relations, self and person perception. The development of these social processes within the framework of three general theories of development: behaviour genetics, learning, and cognitive-developmental.

PSYC 427 Sensorimotor Behaviour.

(3) (Fall) (2 lectures) (Prerequisite: PSYC 308 or permission of instructor) A systematic examination of the sensorimotor system, drawing on models and data from both behavioural and physiological studies. Topics include: cortical motor areas, cerebellum, basal ganglia, spinal mechanisms, motor unit properties and force production, proprioception, muscle properties.

● **PSYC 429 Health Psychology.**

(3) (Winter) (2 lectures; 1 conference) A survey of major issues in the developing field of health psychology: historical perspective; health effects of stress; pain mechanisms and management; prevention and management of chronic diseases, hypertension, coronary heart disease, cancer, and immunological disorders. Behaviour change strategies for smoking, overeating, physical inactivity, and sexual risk behaviour.

PSYC 436 Human Sexuality and its Problems.

(3) (Fall) (Prerequisite: either PSYC 337 or permission of the instructor) This course will deal with typical sexual behavior and its variations. Topics will include the history of sex research, the sexual response cycle, sexual dysfunction, gender identity, sexual orientation, etc. Current research and theory will be emphasized.

PSYC 450D1 (4.5), PSYC 450D2 (4.5) Research Project and Seminar.

(Prerequisites: PSYC 204, PSYC 305.) (Restriction: Requires departmental approval.) (Restriction: Only for Major or special students in U3 who intend to proceed to graduate school) (Students will be admitted on the basis of a written application on forms available from the Department (Room N7/9). Applications must be submitted by August 1st) (Students must register for both PSYC 450D1 and PSYC 450D2.) (No credit will be given for this course unless both PSYC 450D1 and PSYC 450D2 are successfully completed in consecutive terms) Under supervision of an adviser approved by the Department, students design and carry out a research project. Students report their research in seminars throughout the year and in a final written report.

● **PSYC 451 Human Factors Research and Techniques.**

(3) (Fall) (2 lectures; 1 lab) (Prerequisites: PSYC 204, PSYC 211, PSYC 212, PSYC 213, PSYC 215 and PSYC 305 or permission of instructor) The application of psychology to the analysis and design of systems and products to increase efficiency and reduce the probability and risk of human error. Topics include: workload and vigilance, control-display relationships, task analysis, and workstation design.

PSYC 470 Memory and Brain.

(3) (Winter) (3 hour lectures) (Prerequisites: PSYC 308 and PSYC 318 or PHGY 311 or BIOL 306) Memory systems are studied with an emphasis on the neural computations that occur at various stages of the processing stream, focusing on the hippocampus, amygdala, basal ganglia, cerebellum and cortex. The data reviewed is obtained from human, non-human primates and rodents, with single unit recording, neuroimaging and brain damaged subjects.

PSYC 471 Human Motivation.

(3) (Winter) (3 hours lectures) (Prerequisite: PSYC 215) The course is designed to explore questions such as "Why do people often fail to reach their personal goals?" Current goal-based and need-based theories of human motivation will be reviewed. The instructor will highlight the relevance of motivation research to the domains of education, sports and management.

PSYC 473 Social Cognition and the Self.

(3) (Winter) (2 lectures) (Prerequisites: PSYC 215 and PSYC 333 or PSYC 331 or PSYC 474) (Restriction: Not open to students who have taken PSYC 411) This course examines the social psychological literature emphasizing a) social cognition - how people think about and make sense of their social experiences; and b) self theory - how people create and maintain a sense of identity. These frameworks will be applied to social psychological topics including close relationships, attitudes and self-esteem.

● **PSYC 474 Interpersonal Relationships.**

(3) (Winter) (Prerequisite: PSYC 215, PSYC 204, and PSYC 333 or permission of instructor) Psychological science approach to interpersonal relationships. Organized in terms of the development of relationships, focusing first on impression formation as a platform for the development of relationships. Then we focus on close relationships, examining interpersonal constructs (intimacy, trust, commitment) and reconsidering social cognitive constructs (attributions, schemas) in an interpersonal context.

PSYC 482 Advanced Honours Seminar.

(3) (Fall) (2 lectures, plus student presentations, debates, and discussions.) (Restrictions: Not open to students who have taken 204-480D. For Honours students only.) Ethical issues in scientific and clinical psychology, scientific psychology and social policy; and other issues.

● **PSYC 483 Seminar in Experimental Psychopathology.**

(3) (Winter) (Restriction: For U3 students only.) (2 lectures) (Prerequisite: PSYC 305 or equivalent.) (Note: Students will be admitted based on written application. Forms available from the Department (Room N7/9). Applications must be submitted by August 1st) Design of experiments in psychopathology, interviewing techniques and clinical diagnosis.

PSYC 488D1 (1.5), PSYC 488D2 (1.5) Special Topics Seminar.

(Restriction: Requires departmental approval.) (Students must register for both PSYC 488D1 and PSYC 488D2.) (No credit will be given for this course unless both PSYC 488D1 and PSYC 488D2 are successfully completed in consecutive terms) (Note: A written proposal detailing the plans for the seminar must be prepared by the student and the professor and must be approved by the undergraduate program director before registering for this course. This proposal must be received by the Director well before the beginning of the term. Consult the departmental handbook for additional information.) Topics in Psychology.

PSYC 491D1 (3), PSYC 491D2 (3) Advanced Study:

Behavioural Disorders.

(1-2 hours lecture or tutorial per week plus a field experience requirement) (Prerequisites: PSYC 337 and PSYC 338. Departmental permission required.) (Students will be admitted on the basis of a written application on forms available from the Department (Room N7/9). Applications must be submitted by August 1st) (Students must register for both PSYC 491D1 and PSYC 491D2.) (No credit will be given for this course unless both PSYC 491D1 and PSYC 491D2 are successfully completed in consecutive terms) A critical examination of topics in abnormal and clinical psychology. Emphasis will be on analysis of theoretical positions and empirical findings as they relate to both etiology and treatment.

PSYC 492 Special Topics Seminar 1.

(3) (Fall or Winter) (Restriction: U3 students. Requires departmental approval.) These seminars are offered by special arrangement between interested Psychology staff and students. Note: A written proposal detailing the plans for the seminar must be approved by the Department Curriculum Committee before the student is permitted to register for this course. This proposal must be received by the Departmental Curriculum Committee well before the beginning of the term for which the seminar is proposed. Consult the Departmental Handbook for additional information.

PSYC 493 Special Topics Seminar 2.

(3) (Fall or Winter) (Restriction: U3 students. Requires departmental approval.) These seminars are offered by special arrangement between interested Psychology staff and students. Note: A written proposal detailing the plans for the seminar must be approved by the Department Curriculum Committee before the student is permitted to register for this course. This proposal must be received by the Departmental Curriculum Committee well before the beginning of the term for which the seminar is proposed. Consult the Departmental Handbook for additional information.

PSYC 494D1 (4.5), PSYC 494D2 (4.5) Psychology Research Project.

(Prerequisites: 30 credits of the psychology program, PSYC 305 or equivalent and CGPA above 3.00.) (Restrictions: Requires departmental approval. Registration is by special arrangement with Psychology staff, and project proposals must be approved by the Department before registration.) (For more information see the Psychology Department website.) (Students must register for both PSYC 494D1 and PSYC 494D2.) (No credit will be given for this course unless both PSYC 494D1 and PSYC 494D2 are successfully completed in consecutive terms.) Supervised research project.

PSYC 495 Psychology Research Project 2.

(6) (Fall or Winter) (Prerequisite: PSYC 395 or equivalent.) (Restriction: Registration is by special arrangement with Psychology staff, and project proposals must be approved by the Department before registration.) (Registration is by special arrangement with Psychology staff, and project proposals must be approved by the Department before registration.) (For more information see the Psychology Department website.) Supervised research project.

PSYC 496 Senior Honours Research 1.

(6) (Prerequisite: PSYC 380D1/PSYC 380D2) Second laboratory research project.

PSYC 497 Senior Honours Research 2.

(6) (Prerequisite: PSYC 380D1/PSYC 380D2.) (Corequisite: PSYC 496) Third laboratory research project.

PSYC 498D1 (4.5), PSYC 498D2 (4.5) Senior Honours Research.

(Students must register for both PSYC 498D1 and PSYC 498D2.) (No credit will be given for this course unless both PSYC 498D1 and PSYC 498D2 are successfully completed in consecutive terms) (Prerequisite: PSYC 380D1/PSYC 380D2) Second two-term laboratory research project.

PSYC 499 Reading Project.

(1) (Prerequisites: PSYC 211, 212, 214, 215 and 305.) (Restriction: Open only to U3 students.) Under the guidance of an instructor with the relevant expertise, the student explores the literature on a special topic.

PSYC 501 Auditory Perception.

(3) (2 lectures) (Prerequisite: PSYC 212 or equivalent, or permission of instructor.) Non-mathematical presentation of the acoustics biology and perception of: loudness, pitch, spatial location, frequency specificity, musical and speech sounds. Auditory scene analysis (segregation of component sounds) in multi-sound environments. For graduate students and

undergraduates in any department with some background in acoustics or perception. Lectures and student presentations.

PSYC 502 Psychoneuroendocrinology.

(3) (Fall) (Prerequisite: One of PSYC 308, PSYC 311, PSYC 318, PSYC 342, or permission of the instructor.) Neuroendocrinological mechanisms of action that underlie specific behaviors and their disorders. Hormones and cognitive functioning, sexual functioning, aggression, mood and stress in humans and will focus on methods of hypothesis-testing in these areas.

PSYC 505 The Psychology of Pain.

(3) (Fall) (2 lectures; 1 conference) (Prerequisites: any two of the following: PSYC 308, PSYC 311, PSYC 318, PSYC 522, ANAT 321, BIOL 306, PHGY 314 or permission of instructor.) An introduction to pain research and theory, with emphasis on the interactions of psychological, cultural and physiological factors in pain perception. The role of these factors in clinical pain and its management by pharmacological and non-pharmacological means will be discussed.

● PSYC 507 Emotions, Stress, and Illness.

(3) (Prerequisites: PSYC 337, PSYC 429 and permission of the instructor.) Emotional effects on peripheral physiology and the development, course, and outcome of physical disorders such as high blood pressure, coronary artery disease, ulcers, asthma, and cancer.

● PSYC 512 Advanced Personality Seminar.

(3) (Prerequisite: PSYC 332 or permission of instructor.) (Restrictions: Open to psychology students. Enrollment limited. Students must be in U3 or above. Departmental permission required.) Advanced topics in personality. Focus on power, status, and dominance and how these are manifested in social behavior. Dominance in nonhuman species, biological substrates of dominance, relations of status and dominance to social cognition, affect, and health; gender, role and cultural influences on dominance.

● PSYC 526 Advances in Visual Perception.

(3) (Fall) (2 lectures) We examine in detail the structure of the visual system, and its function as reflected in the perceptual abilities and behaviour of the organism. Parallels are also drawn with other sensory systems to demonstrate general principles of sensory coding.

● PSYC 528 Vulnerability to Depression.

(3) (Prerequisite: PSYC 337 or PSYC 412 or permission of instructor. Requires departmental approval.) This course will examine in depth cognitive, behavioral, psychodynamic, biological, and developmental psychopathology models of the etiology of depression. Within each theoretical perspective, core issues, theoretical and methodological underpinnings, and research data will be examined.

PSYC 529 Music Cognition.

(3) (Fall) (Prerequisites: PSYC 212, PSYC 213, PSYC 204 (or equivalent)) Interdisciplinary study of music cognition and perception, with an emphasis on cognitive and experimental approaches. Topics include: psychoacoustics, music memory, tonality, neuropsychology of music, performance, talent and expertise, and developmental aspects.

PSYC 530 Applied Topics in Deafness.

(3) (Fall) (Prerequisite: PSYC 340 or PSYC 316 or equivalent. Permission of instructor) Covers fundamental topics in deafness (sensory, perceptual, cognitive, social, linguistic, education and health issues) from an applied psychological perspective. Lectures and seminar presentations plus field work involving ASL/LSQ.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

●PSYC 531 Structural Equation Models.

(3) (Fall) (one 2-hour lecture plus one lab) (Prerequisite: PSYC 536, PSYC 651, or equivalent, or permission of instructor.) The course introduces basic concepts underlying structural equation models (SEM). SEM, which combine regression analysis and factor analysis, are quite useful and are currently very popular in analyzing data that arise in social, developmental and clinical psychology. The students are expected to get first-hand experiences in fitting SEM, and learn how to interpret and report the results from SEM.

PSYC 532 Cognitive Science.

(3) (Fall) (Prerequisites: Admission to the Cognitive Science Minor or permission of instructor. Students should ideally have some cognitive science background in at least two disciplines) The multi-disciplinary study of intelligent systems. Problems in vision, memory, categorization, choice, problem solving, cognitive development, syntax, language acquisition, and rationality. Rule-based and connectionist approaches.

PSYC 533 International Health Psychology.

(3) (Fall) (Prerequisite: PSYC 305 and PSYC 215 or PSYC 429 or PSYC 304 or ANTH 227.) (Restriction: Departmental permission required.) The focus will be on health and illness in developing countries, in particular, on health problems (malnutrition, alcohol abuse, mental illness, family planning, and HIV) where psychosocial factors play a large role in the problem and the solution. Attempted solutions based on community participation, health education, non-governmental and international agencies will be discussed.

PSYC 535 Advanced Topics in Social Psychology.

(3) (Winter) (Prerequisites: PSYC 215; and PSYC 333 or PSYC 351 or PSYC 380.) (Restriction: Departmental permission required.) (Restriction: Graduate Students, enrolment limited) Classic and contemporary readings in a specific content area within social psychology will be assigned in order to examine the sub-area in depth. The focus will vary depending upon the speciality area of the instructor. These areas include interpersonal relationships, intergroup relations, the self, and social cognition.

●PSYC 536 Correlational Techniques.

(3) (Winter) (Prerequisites: PSYC 204 and PSYC 305 or their equivalents, and MATH 133 or equivalent.) (Restriction: Requires departmental approval.) The statistical analysis of relations among a number of variables in situations common in psychology, ecology, and other fields. Methods include regression analysis, principal components analysis, and other techniques for modelling the structure of correlation matrices.

PSYC 537 Advanced Seminar in Psychology of Language.

(3) (Fall) (Prerequisites: PSYC 213 and one of: PSYC 340, LING 200, or LING 201.) (Note: Prior background in the psychology of language, cognitive psychology, or linguistics is essential.) Topics may include: the neural basis of language, evolutionary approaches to language, pragmatics and figurative language processing, disordered language processing, models of spoken word recognition.

●PSYC 545 Topics in Language Acquisition.

(3) (Fall) Psychological mechanisms and theories of first language acquisition in infancy and early childhood. Topics such as: infant speech perception, acquisition of grammar, word learning, pidgin and Creole languages, critical and sensitive periods, genetic and evolutionary bases of language.

PSYC 561 Methods: Developmental Psycholinguistics.

(3) (Winter) (3 hour lectures) (Prerequisites: PSYC 340 and LING 355 or equivalent or permission of instructor.) Approaches and methods used in investigations of the development of language and communication. A case study approach, observational-correlational approach versus experimental-manipulative approach, cross sectional design versus longitudinal design.

PSYC 562 Measurement of Psychological Processes.

(3) (Fall) (Restriction: Not open to students who have taken PSYC 336.) The properties of measurements and techniques for the measurement of psychophysical variables such as brightness and loudness and of attitudinal variables such as similarity, preference, and utility. Data analysis tools of value to experimenters. Emphasis on current problems in experimental

psychology.

PSYT-Psychiatry

Offered by: Psychiatry

PSYT 199 FYS: Mental Illness and the Brain.

(3) (1 hour lecture and 2 hours seminar weekly) (Restriction: Open only to newly admitted students in U0 or U1, who may take only one FYS. Students who register for more than one will be obliged to withdraw from all but one of them.) (Maximum 25. No prerequisites) This course will introduce the student to the fundamentals of neuroscience, and then use these principles to illustrate recent advances made on the biological causes of, and treatments for, mental disorders with a strong biological component: schizophrenia, depression, mania, anxiety disorders, obsessive-compulsive disorder, Alzheimer's and Parkinson's diseases and alcohol and drug abuse.

PSYT 301 Issues in Drug Dependence.

(3) (Winter) (3 hours) (Prerequisites: PHGY 201 or PHGY 209 or PHGY 210 or PSYC 100 or BIOL 201 or permission of instructor) The phenomenology and epidemiology of the use and abuse of alcohol, nicotine, opiates, stimulants, sedatives and psychotomimetic agents are discussed in relation to current theoretical and experimental issues. The perspective is multidisciplinary and the intention is to develop an understanding of the nature of the issues surrounding drug dependence.

PSYT 500 Advances: Neurobiology of Mental Disorders.

(3) (Winter) (3 hours) (Prerequisite (Undergraduate): BIOC 212 and BIOC 311, or BIOC 312, or BIOL 200 and BIOL 201, or PHGY 311, or PSYC 308 and an upper-level biological science course with permission of the instructors, or equivalent. Basic knowledge of cellular and molecular biology is required.) (Restriction: Open to U3 and graduate students only.) (Restriction: Graduate Studies: strongly recommended for M.Sc. students in Psychiatry.) Current theories on the neurobiological basis of most well known mental disorders (e.g. schizophrenia, depression, anxiety, dementia). Methods and strategies in research on genetic, physiological and biochemical factors in mental illness will be discussed. Discussion will also focus on the rationale for present treatment approaches and on promising new approaches.

●PSYT 502 Brain Evolution and Psychiatry.

(3) (Fall) (Prerequisites: BIOL 115 or equivalent as authorized by instructor) The course will focus on the transcendental importance of evolution of nervous systems for normal and pathological behavior. Studies of allomeric brain growth and recent evolutionary theories of brain organization as they relate to normal and abnormal behavior will be emphasized.

REDM-Redpath Museum

Offered by: Redpath Museum

REDM 396 Undergraduate Research Project.

(3) (Restrictions: This course cannot be taken under the S/U option. Departmental permission required. Students cannot be supervised by the same instructor for two 396 Science courses. Open to students in programs offered by the Faculty of Science only.) (Note: Enrolment may be limited. Students are advised to start the application process well before the start of the term and to plan for an alternative course in the case that no suitable project is available. Individual projects will be suggested each term which may have project-specific prerequisites. Some projects may be accessible to students in other disciplines. See <http://www.mcgill.ca/science/ours> for more information about available projects and application forms and procedures.) Independent research project with a final written report.

REDM 399 Science Writing.

(1) (Prerequisite: Completion of U1 and permission of the instructor.) (Note: Preference given to students concurrently enrolled in Research Project course. To obtain permission, students should email the instructor, Linda.Cooper@mcgill.ca) Techniques for effective science writing, including elements of reader-based scientific manuscripts and Abstracts. Emphasis

on how to edit texts to make them logical, precise, and clear.

● **REDM 400 Science and Museums.**

(3) (Winter: Course consists of lectures, practical labs, field trips and individual term-projects.) (Prerequisites: A 200- or 300-level course that deals with diversity of specimens or objects relevant to Museum-based research and collections. e.g. BIOL, 215, BIOL 305, EPSC 210, EPSC 233, ANTH 208, ANTH 310, PLNT 358, WILD 212, WILD 313, or permission of instructor.) Natural history museums and their collections, how collections are created and maintained and how collections are used in scientific research. Context of natural history museums, collections-based research and curatorial methods.

Not all courses are offered every year, and changes are made after the printing of this calendar. Always check the Class Schedule at www.mcgill.ca/courses for the most up-to-date information on whether a course is offered.

* Denotes courses taught only in alternate years.

‡ Professional Practice (Stage) in Dietetics involving special prerequisites

◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.

† Denotes courses not available as Education electives.

□ Denotes courses with limited enrolment.

● Denotes courses not offered by the Faculty of Arts or Faculty of Science in 2008-09.

▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.

※ Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

COURSE INFORMATION, REGULATIONS AND DESCRIPTIONS (APPENDIX)

1 Course Information and Regulations

Students are advised to refer also to the General Information and Regulations section of this Calendar, in particular "Registration", section 3.3 and "Student Records", section 3.5.

The University reserves the right to make changes without prior notice to the information contained in this publication, including the revision or cancellation of particular courses or programs.

At the time this Calendar went to press, new courses and modifications to some existing courses were under consideration. Students preparing to register are advised to consult Class Schedule on the Web at www.mcgill.ca/courses for the most up-to-date information on courses to be offered in 2008-09.

Not all courses listed are offered every year.

1.1 Course Numbering

Each McGill course is assigned a unique seven-character course "number".

The first four characters (Subject Code) refer to the unit offering the course.

These codes were implemented in September 2002, replacing the three-number Teaching Unit Codes previously used. A complete list of Teaching Unit Codes and their Subject Code equivalents can be found on the Web at www.mcgill.ca/student-records/transcripts.

The three numbers following the Subject Code refer to the course itself, with the first of these indicating the level of the course.

- Courses numbered at the 100, 200, 300, and 400 levels are intended for undergraduate students. In most programs courses at the 300 level and 400 level are normally taken in the student's last two years.
- Courses at the 500 level are intended for graduate students, but may also be open to qualified senior undergraduate students.
- Courses at the 600 and 700 level are intended for graduate students only.

Two additional characters (D1, D2, N1, N2, J1, J2, J3) at the end of the seven-character course number identifies multi-term courses.

1.2 Multi-term Courses

Most courses at McGill are single term (Fall or Winter or Summer) courses with final grades issued and any credits earned recorded at the end of that term. Single term courses are identified by a seven-character course number.

A unit may, however, decide that the material to be presented cannot be divided into single term courses or it is preferable that the work to be done is carried out over two, or three, terms. Under such circumstances, courses are identified by a two-character extension of the course number.

In some cases, the same course may be offered in various ways: as a single term and/or in one or more multi-term versions. The course content and credit weight is equivalent in all modes, the only difference being the scheduling, and students cannot obtain credit for more than one version.

Courses with numbers ending in D1 and D2 are taught in two consecutive terms (most commonly Fall and Winter). Students must register for the same section of both the D1 and D2 components. When registering for a Fall term D1 course on Minerva, the student will automatically be registered for the Winter term D2 portion. No credit will be given unless both components (D1 and D2)

are successfully completed in consecutive terms, e.g., Fall 2008 and Winter 2009.

Courses with numbers ending in N1 and N2 are taught in two non-consecutive terms (Winter and Fall). Students must register for the same section of both the N1 and N2 components. No credit will be given unless both components (N1 and N2) are successfully completed within a twelve (12) month period.

Courses with numbers ending in J1, J2 and J3 are taught over three consecutive terms. Students must register for the same section of all three components (J1, J2, J3). No credit will be given unless all three components are successfully completed.

IMPORTANT CONDITIONS FOR MULTI-TERM COURSES

1. Students must be registered for each component of the multi-term course. Students must ensure that they are registered in the same section in each term of the multi-term course.
2. Students must successfully complete each component in sequence as set out in the multi-term course. Credit is granted only at the end of the multi-term course; no credit is given for partial completion.

1.3 Course Terminology

Prerequisite: Course A is prerequisite to course B if a satisfactory pass in course A is required for admission to course B.

Corequisite: Course A is corequisite to course B if course A must be taken concurrently with (or may have been taken prior to) course B.

Credits: The credit weight of each course is indicated in parentheses beside the course title. For D1 and D2 courses the credit weight is indicated after the course number. For further information refer to section 3.5.2 "Credit System".

COURSE NOMENCLATURE IN PROGRAM DESCRIPTIONS:

Required Courses: Courses that must be completed to fulfill the requirements of a major, minor, etc., unless the student receives exemptions. Students have no choices among required courses.

Complementary Courses: A set of alternative courses that can be taken to fulfill the requirements of a major, minor, etc. Students choose a specified number of courses from the set.

Elective Courses: Courses that do not count toward the fulfillment of the requirements of a major, minor, etc. They are often, but need not be, selected from outside a student's program of study. Some restrictions may apply, but students have the most choice in selecting elective courses. Some faculties also permit students to take elective courses using the satisfactory/unsatisfactory option. Consult your faculty regulations concerning elective courses.

1.4 First-Year Seminars

First-Year Seminars (FYS) are limited-enrolment credit courses offered by the Faculties of Arts and Science to students in their first year of undergraduate study at McGill, i.e., newly admitted students in U0 or U1. Students in any faculty can enrol in an FYS, subject to the conditions and/or restrictions of the program in which they are registered. Students may take only one FYS.

FYS classes are limited to a maximum of 25 students and are designed to provide closer interaction with the professor and better working relations with peers than are available in large introductory courses. The seminars endeavour to teach the latest scholarly developments and expose participants to advanced research methods. Registration is on a first-come, first-served basis.

COURSE INFORMATION, REGULATIONS AND DESCRIPTIONS (APPENDIX)

For a listing of First-Year Seminars, see Faculty of Arts, [section 5.12.1 "First-Year Seminars"](#), and Faculty of Science, [section 12.5.2.1 "Registration for First-Year Seminars"](#).

1.5 Faculty/School-Specific Information

All students **must** comply with the regulations and requirements contained in their Faculty section of this Calendar.

Agricultural and Environmental Sciences

Students should note that there are no supplemental examinations in Agricultural and Environmental Sciences, and that the final examination period timetable for the term is posted before the commencement of classes.

Arts

All Arts courses have limited enrolment.

Term(s) offered (Fall, Winter, Summer) may appear after the course credit weight to indicate when a course would **normally** be taught.

For Faculty specific program and course Information, refer to:

- [section 5.3.5 "Program Requirements"](#),
- [section 5.3.6 "Course Requirements"](#),
- [section 5.5.2 "Course Registration"](#)

Education

Some courses will be available in the evenings only, through the Centre for Continuing Education, or will be offered during the Summer term.

Students should give particular notice prerequisite and corequisite courses and registration for Field Experience courses.

Engineering

Most courses offered by the Faculty of Engineering are limited to Engineering students only. Non-Engineering students should obtain permission from the Associate Dean of their Faculty, and the Faculty Student Adviser in the Faculty of Engineering Student Affairs Office, to register for Engineering courses.

A limited number of School of Architecture (ARCH) courses are open to students not registered in the School. Please refer to individual course descriptions.

The average division of time for a course is indicated in hours in the course listing after the course credit. For example, (3) (3-0-6) indicates a three-credit course consisting of three lecture hours per week, no other contact hours and six hours of personal study per week.

Management

Management students should give particular notice to: [section 9.4 "BCom Degree Requirements"](#), [section 9.5 "BCom Program Credit Structure"](#) and, especially for students new to the program, [section 9.7 "Management Core"](#).

Science

All Science courses have limited enrolment.

Term(s) offered (Fall, Winter, Summer) may appear after the course credit weight to indicate when a course would **normally** be taught.

For Faculty specific program and course Information, refer to:

- [section 12.3.5 "Program Requirements"](#),
- [section 12.3.6 "Course Requirements"](#),
- [section 12.5.2 "Course Registration"](#).

1.6 Course Symbols

The symbols listed below may appear in front of courses described in this Calendar. When used, they represent the following information:

- ★ Denotes courses taught only in alternate years.
- ◆ Indicates that departmental approval/permission must be obtained by a student prior to registration.
- Denotes courses with limited enrolment.

Faculties of Arts and Science symbol:

- Denotes courses not offered in 2008-09.

Faculty of Education symbols:

- † Denotes courses not available as Education electives.
- ▲ Denotes courses offered by the Faculty of Education which, if appropriate to the student's program, may be included in the academic concentration.
- * Denotes courses which, because they are scheduled around practice teaching, are open only to Bachelor of Education students.

School of Dietetics and Human Nutrition symbol:

- ‡ Professional Practice (Stage) in Dietetics involving special prerequisites.

Please consult the Class Schedule on the Web at www.mcgill.ca/minerva for the most up-to-date information about courses that are being offered in a given term.
