### Sites

MUHC: Montreal Children’s Hospital

### Elective Description

This new elective is a unique opportunity for students interested in pediatric chronic pain. The elective includes learning in-clinic settings with peripheral and regional blocks, management of complicated chronic pain diagnoses, the multi-modal treatment pathways, the role of a multidisciplinary pain team, and how telemedicine can be used to supplement long term care for pediatric patients.

**Elective Duration: 2-weeks**

### Prerequisites

Students in their third and fourth year would be selected.
