Site			
Glen, Research Institute – The MUHC – McGill University Ocular Pathology & Translational Research Laboratory			
Elective Description			
Our Laboratory offers opportunities to learn the histopathological manifestations of ocular diseases, particularly intraocular and periocular tumors. Several techniques such as immunohistochemistry, cell culture, digital pathology are available for the students to learn.			
Elective Duration			
McGill students: 2, 3, 4 weeks			
Educational Objectives			
The students will learn clinical pathological correlation in ocular diseases, as well as participate in the translational research ongoing in the Laboratory.			
Prerequisites			
Preference will be given to medical students who have been exposed to translational & molecular biology research.			
Scope of Work			
Participation in laboratory meetings, opportunities to present and participate in research projects.			
Recommended Reading/Preparation			
The accepted student will receive selected literature to read in advance of the start of elective.
